

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE  
NEW ENCYCLOPÆDIA;  
OR,  
UNIVERSAL DICTIONARY  
OF  
ARTS AND SCIENCES.

IN WHICH

*The different Sciences and Arts are digested into the Form of distinct Treatises or Systems;*

Including the

LATEST DISCOVERIES AND IMPROVEMENTS;

WITH THE NATURAL, CIVIL, MILITARY, AND COMMERCIAL HISTORY, AND BIOGRAPHY OF EMINENT MEN,

OF ALL NATIONS;

A DESCRIPTION OF

ALL THE COUNTRIES, CITIES, SEAS, RIVERS, &c. OF THE KNOWN WORLD.

Including also

THE WHOLE OF DR. JOHNSON'S

DICTIONARY OF THE ENGLISH LANGUAGE.

COMPIL'D FROM EVERY SOURCE OF DOMESTIC AND FOREIGN LITERATURE; AND ILLUSTRATED WITH  
NEARLY THREE HUNDRED AND FORTY PLATES,

AND A COMPLETE AND ACCURATE ATLAS.

IN TWENTY THREE VOLUMES.

1807.

# ENCYCLOPÆDIA PERTHENSIS.

## H

(1.) \* **H** Is in English, as in other languages, a note of aspiration, sounded only by a strong emission of the breath, without any conformation of the organs of speech, and is therefore by many grammarians accounted no letter. The *h* in English is scarcely ever mute at the beginning of a word, or where it immediately precedes a vowel; as *house*, *behaviour*: where it is followed by a consonant it has no sound, according to the present pronunciation: but anciently, as now in Scotland, it made the syllable guttural; as, *rust*, *bought*.

(2.) **H** is used, 1. as a letter; 2. as an abbreviation; and, 3. as a numeral. I. As a letter, **H** is the 8th in our alphabet, and the 6th consonant. Nothing can be more ridiculous than to dispute its being a distinct sound, (See § 1.) and formed in a particular manner by the organs of speech, at least in our language: witness the words *all* and *hall*, *eat* and *beat*, *arm* and *harm*, *car* and *bear*, *at* and *hat*, &c. as pronounced with or without the *h*. It is pronounced by a strong expiration of the breath between the lips, closing, as it were, by a gentle motion of the lower jaw to the upper, and the tongue nearly approaching the palate. It seems to be agreed, that our *H*, which is the same with that of the Romans, derived its figure from the Hebrew *ח*. The Phœnicians, and most ancient Greeks and Romans, used the same figure with our *H*, which in the series of all these alphabets keeps its primitive place, being the 8th letter; tho' the *Θ* afterwards occupied its place in the Greek alphabet, and its form was changed to *X*; while its former figure, *H*, was used for the 7th letter *Eta*, or long *e*. (See *E*.) **H** subjoined to *c*, sometimes gives it the guttural sound, as in *hus*, sometimes the sound of *sh*, as in *Charlotte*; but more frequently that of *tsh*, as in *charity*, *chitinous*, *church*, &c. and not seldom that of *k*, as in *character*, *Achilles*, &c. though the latter and all other Greek proper names ought rather to have the guttural sound, agreeably to their original pronunciation. **H**, subjoined to *p* and *t*, also alters the sound of these letters; giving the former the sound of *f*, as in *philosophy*, &c. and the latter that of the Greek *θ*, as in *theology*, *truth*, &c. and in some English words, as *the*, *that*, *these*, &c. a still harder sound. II. As an abbreviation—

VOL. XI. PART I.

## H A B

tion, **H** was used by the ancients to denote *homo*, *heres*, *hora*, &c. Thus **H. B.** stood for *heres bonorum*; and **H. S.** corruptly for *L. L. S. ferre*; and **H. A.** for *Hadrianus*. III. As a numeral, **H** denotes 200; and with a dash over it, **H̄**, 200,000.

\* **HA.** *interject.* [*ha*, Latin.] 1. An expression of wonder, surprise, sudden question, or sudden exertion.—

You shall look fairer ere I give or hazard:  
What says the golden chest? *ha!* let me see.

*Shak.*

*Ha!* what art thou! thou horrid headless trunk!

It is my Hastings! *Rouse's Jane Shore.*

2. An expression of laughter. Used with reduplication.—He saith among the trumpets *ha, ha*, and he smelleth the battle afar off. *Job xxxix. 25.*

*Ha, ha,* 'tis what so long I wish'd and vow'd;  
Our plots and delusions

Have wrought such confusions,

That the monarch's a slave to the crown, *Dryd.*

**HAA**, an isle on the N. coast of Scotland,  $\frac{3}{4}$  miles SE. of Farout Head.

(1.) **HAAG**, or **HAG**, a town of Germany, in Bavaria, seated on a hill, on the W. side of the Inn. Lon. 12. 23. E. Lat. 48. 16. N.

(2, 3.) **HAAG**, 2 towns of Austria; 1. ten miles SE. of Ens: 2. eight m. WNW. of Schwanstadt.

(1.) \* **HAAK.** *n. f.* A fish. *Ainsworth.*

(2.) **HAAK.** See **GADUS**, N° 6; and **HAKK**, § 2.

**HAANO**, one of the **HAPARR** Islands discovered by Capt. Cook, in 1777, in the S. Pacific Ocean. Lon. 185. 43. E. Lat. 19. 41. S.

(1.) **HAARBURG**, a town and fort of Lunenburg Zell, seated on the Seeve, 7 miles S. of Hamburg. It was taken by the French, and retaken by the Hanoverians in 1757. Lon. 27. 21. E. of Ferro. Lat. 53. 33. N.

(2.) **HAARBURG**, a town of Suabia.

**HAAREN**, 2 towns of Germany, in Westphalia; 1. three miles NE. of Buren: 2. two miles E. of Hamm.

**HAARKIRCHEN**, a town of Germany, in Austria, 3 miles N. of Efferding.

**HABAKKUK**, [חַבְקֻק, Heb. *i. e.* a wrestler.] one of the 12 lesser prophets, whose prophecies are taken into the canon of the Old Testament.

A

There

There is no precise time mentioned in Scripture when he lived; but from his predicting the destruction of Jerusalem by the Chaldeans, it is evident that he prophesied before Zedekiah, probably about the time of Manasseh. He is reported to have been the author of several prophecies which are not extant: but all that are indisputably his are contained in three chapters. In these he complains pathetically of the vices of the Jews; foretells their punishment by the Chaldeans; the defeat of the vast designs of Jehoiakim; with the conquests of Nebuchadnezzar, his metamorphosis, and death. The 3d chapter is a prayer to God, whose majesty he describes with the utmost grandeur and sublimity of expression.

HABAR, a town of Persia, in Irak.

HADAS, a town of France, in the dep. of Landes, 30 miles S. of Dax, and 9 NW. of Orthez.

(1.) HABAT, a province of Barbary, in the kingdom of Fez; surrounded by the Mediterranean, the Straits of Gibraltar, and the Atlantic. The chief towns are Arzila and Tetuan. Ceuta is in possession of the Spaniards.

(2.) HABAT, a province of Morocco, 40 miles square. Saltee is the capital.

HABDALA, [Heb. *h*. *d*. distinction, from *h*ab, to separate,] a ceremony of the Jews observed on the sabbath evening. When all the family is come home, they light a taper or lamp, with two wicks at least. The master of the family then takes a cup, with some wine, mixed with fragrant spices, and having repeated a passage of scripture, (*e. g.* Psal. cxvi. 23. or Esth. vii. 16.) he blesses the wine and spices. Afterwards he blesses the light of the fire; and then casts his eyes on his hands and nails, as remembering that he is going to work; to signify, that the sabbath is over, and separated from the day of labour which follows. After the ceremony is over, and the company breaks up, they wish one another, not a *good night*, but a *good work*.

(1.).\* HABEAS CORPUS. [Latin.] A writ, the which, a man indicted of some trespass, being laid in prison for the same, may have out of the King's Bench, thereby to remove himself thither at his own costs, and to answer the cause there. *Covent.*

(2.) HABEAS CORPUS is the great remedy in cases of FALSE IMPRISONMENT. The incapacity of the 3 other remedies referred to under the article IMPRISONMENT, to give complete relief in every case, has almost entirely antiquated them, and caused a general recourse to be had, in behalf of persons aggrieved by illegal imprisonment, to this writ, the most celebrated in the English law. Of this there are various kinds made use of by the courts at Westminster, for removing prisoners from one court into another for the more easy administration of justice. Such is the *habeas corpus ad respondendum*, when a man hath a cause of action against one who is confined by the process of some inferior court; in order to remove the prisoner, and charge him with this new action in the court above. Such is that *ad satisfaciendum*, when a prisoner hath had judgment against him in an action, and the plaintiff is desirous to bring him up to some superior court to charge him with process of execution. Such are also those *ad prosecuendum*, *testificandum*, *deliberandum*, &c.; which

issue when it is necessary to remove a prisoner, in order to prosecute or bear testimony in any court, or to be tried in the proper jurisdiction wherein the fact was committed. Such is, lastly, the common writ *ad faciendum et recipiendum*, which issues out of any of the courts of Westminster-hall, when a person is sued in some inferior jurisdiction, and is desirous to remove the action into the superior court; commanding the inferior judges to produce the body of the defendant, together with the day and cause of his caption and detainer (whence the writ is frequently denominated an *habeas corpus cum causa*), to do and receive whatsoever the king's court shall consider in that behalf. This is a writ grantable of common right, without any motion in court: and it instantly supercedes all proceedings in the court below. But, to prevent the surreptitious discharge of prisoners, it is ordered by stat. 1 & 2 P. & M. c. 13. that no *habeas corpus* shall issue to remove any prisoner out of any goal, unless signed by some judge of the court out of which it is awarded. And, to avoid vexatious delays by removal of frivolous causes, it is enacted by stat. 21 Jac. I. c. 23. that, where the judge of an inferior court of record is a barrister of 1 year standing, no cause shall be removed from thence by *habeas corpus* or other writ, after issue or demurrer deliberately joined: that no cause, if once remanded to the inferior court by writ of *procedendo* or otherwise, shall ever afterwards be again removed: and that no cause shall be removed at all, if the debt or damages laid in the declaration do not amount to the sum of five pounds. But an *expedient* having been found out to elude the latter branch of the statute, by procuring a nominal plaintiff to bring another action for L. 5. or upwards (and then by the course of the court, the *habeas corpus* removed both actions together), it is therefore enacted by stat. 12 Geo. I. c. 29. that the inferior court may proceed in such actions as are under the value of L. 5, notwithstanding other actions may be brought against the same defendant to a greater amount. But the great and efficacious writ, in all manner of illegal confinement, is that of *habeas corpus ad subjiciendum*; directed to the person detaining another, and commanding him to produce the body of the prisoner, with the day and cause of his caption and detention, *ad faciendum, subjiciendum, et recipiendum* to do, submit to, and receive whatsoever the judge or court awarding such writ shall consider in that behalf. This is a high prerogative writ, and therefore by the common law issuing out of the court of king's bench, not only in term time, but also during the vacation, by a *ser* from the chief justice, or any other judge, and running into all parts of the king's dominions: for the king is at all times intitled to have an account why the liberty of any of his subjects is restrained, wherever that restraint may be inflicted. If it issues in vacation, it is usually returnable before the judge himself who awarded it, and he proceeds by himself thereon unless the term should intervene, and then it may be returned in court. Indeed, if the party were privileged in the courts of common pleas and exchequer, as being an officer or suitor of the court, an *habeas corpus ad subjiciendum* might also have been awarded from thence; and, if the cause

imprisonment

to award the usual writs *ad delibendum*, &c. whereby the prisoner was discharged at the Old Bailey. Other abuses had also crept into daily practice, which had in some measure defeated the benefit of this great constitutional remedy. The party imprisoning was at liberty to delay his obedience to the first writ, and might wait till a 2d. and 3d. called an *alias* and a *pluries*, were issued, before he produced the party: and many other vexatious shifts were practised to detain state prisoners in custody. But whoever will attentively consider the English history, may observe, that the flagrant abuse of any power, by the crown or its ministers, has always been productive of a struggle; which either discovers the exercise of that power to be contrary to law, or (if legal) restrains it for the future. This was the case in the present instance. The oppression of an obscure individual gave birth to the famous *habeas corpus* act, 31 Car. II. c. 2. which is frequently considered as another *MAGNA CHARTA* of the kingdom; and by consequence has also in subsequent times reduced the method of proceeding on these writs (though not within the reach of that statute, but issuing merely at the common law) to the true standard of law and liberty. (See ENGLAND, § 17.) The statute itself enacts, 1. That the writ shall be returned and the prisoner brought up, within a limited time according to the distance, not exceeding in any case 20 days. 2. That such writs shall be endorsed, as granted in pursuance of this act, and signed by the person awarding them. 3. That on complaint and request in writing, by or on behalf of any person committed and charged with any crime, (unless committed for treason or felony expressed in the warrant, or for suspicion of the same, or as accessory thereto before the fact, or convicted or charged in execution by legal process), the lord chancellor, or any of the 12 judges in vacation, upon viewing a copy of the warrant, or affidavit that a copy is denied, shall (unless the party has neglected for two terms to apply to any court for his enlargement) award a *habeas corpus* for such prisoner, returnable immediately before himself or any other of the judges; and upon the return made shall discharge the party, if bailable, upon giving security to appear and answer to the accusation in the proper court of judicature. 4. That officers and keepers, neglecting to make due returns, or not delivering to the prisoner or his agent within six hours after, demand a copy of the warrant of commitment, or shifting the custody of a prisoner from one to another without sufficient reason or authority. (Specified in the act,) shall for the first offence forfeit 100l. and for the 2d. 200l. to the party grieved, and be disabled to hold his office. 5. That no person, once delivered by *habeas corpus*, shall be recommitted for the same offence, on penalty of 500l. 6. That every person committed for treason or felony shall, if he requires it the first week of the next term, or the first day of the next session of *assizes* and *terminals*, be indicted in that term or session, or else admitted to bail; unless the king's witness cannot be produced at that time: and if acquitted, or if not indicted and tried in the 2d. term or session, he shall be discharged from his imprisonment for such imputed offence: but that no person, after the

*assizes* shall be opened for the county in which he is detained, shall be removed by *habeas corpus*, till after the *assizes* are ended; but shall be left to the justice of the judges of *assize*. 7. That any such prisoner may move for and obtain his *habeas corpus*, as well out of the chancery or exchequer, as out of the king's bench or common pleas; and the lord chancellor or judges denying the same, on sight of the warrant, or oath that the same is refused, forfeit severally to the party grieved the sum of 500l. 8. That the writ of *habeas corpus* shall run into the counties palatine, cinque ports, and other privileged places, and the islands of Jersey and Guernsey. 9. That no inhabitant of England (except persons contracting, or convicted praying to be transported; or having committed some capital offence in the place to which they are sent) shall be sent prisoner to Scotland, Ireland, Jersey, Guernsey, or any places beyond the seas, within or without the king's dominions: on pain that the party committing, his advisers, aiders, and assistants, shall forfeit to the party grieved a sum not less than 500l. to be recovered with treble costs; shall be disabled to bear any office of trust or profit; shall incur the penalties of *praemunire*; and shall be incapable of the king's pardon. This is the substance of that great and important statute: which extends only to the case of commitments for such criminal charge, as can produce no inconvenience to public justice by a temporary enlargement of the prisoner; all other cases of unjust imprisonment being left to the *habeas corpus* at common law. But even upon writs at the common law, it is now expected by the court, agreeable to ancient precedents and the spirit of the act of parliament, that the writ should be immediately obeyed, without waiting for any *alias* or *pluries*; otherwise an attachment will issue. By which admirable regulations, judicial as well as parliamentary, the remedy is now complete for removing the injury of unjust and illegal confinement. A remedy the more necessary, because the oppression does not always arise from the ill nature, but sometimes from the mere inattention, of government. For it frequently happens in foreign countries (and has happened in England during the temporary suspensions of the statute), that persons apprehended upon suspicion have suffered a long imprisonment, merely because they were forgotten.

HABEEBA, an island near Algiers.

(1.) \* HABERDASHER. *n. s.* [This word is ingeniously deduced by *Minsheu* from *hab* *ab* *dr* *days*, German, *have you this?* the expression of a shopkeeper offering his wares to sale.] One who sells small wares; a pedlar—Because these cunning men are like *haberdashers* of small wares, it is not amiss to set forth their shop. *Lucan*.—A *haberdasher*, who was the oracle of the collection, declared his opinion. *Addison*.

(2.) HABERDASHER. See BERDASH. This word is now used in a much more extensive sense than that above defined by Dr Johnson, § 1. Mr Creech, in his letters to Sir J. Sinclair, lays it “includes many trades, the purser, milliner, linen draper, hatter, busier, glover, and many others.” (*Stat. Acc.* VI. 393) The master and wardens of the company of haberdashers in London; calling

to their assistance one of the company of coppers, and another of the hat-makers, and mayors, &c. of towns, may search the wares of all hatters who work hats with foreign wool, and who have not been apprentices to the trade, or who dye them with any thing but copperas and galls, or woad and madder; in which cases they are liable to penalties by stat. 8 Eliz. cap. 7. and 3 Geo. II. c. 22.

\* **HABERDINE**. *n. f.* A dried salt cod. *Ainsw.*

**HABERE FACIAS SASINAM**, a writ judicial, which lies where a man has recovered lands, commanding the sheriff to give possession of them.

(1.) \* **HABERGEON**. *n. f.* [*haubergeon*, Fr. *haubergium*, low Lat.] Armour to cover the neck and breast; breast-plate; neck-piece; gorget.—

And halbert some, and some a *haubergeon*;  
So every one in arms was quickly dight. *Fairf.*

The shot let fly, and grazing

Upon his shoulder, in the passing,

Lodg'd in Magnano's brags *haubergeon*. *Hudib.*

(2.) **HABERGEON**, **HABERGETUM**, [from *haut* Fr. high, and *berg*, armour.] was a coat of mail; an ancient piece of defensive armour, in form of a coat, descending from the neck to the middle, and formed of little iron rings or meshes, linked into each other.

**HABESAN**, a town of Persia in Segestan.

**HABICOT**, Nicholas, a celebrated French surgeon, born at Ronny in Gatinois, who acquired great reputation by his skill, and by his writings. He wrote a treatise on the plague, and several other curious works. He died in 1624.

\* **HABILIMENT**. *n. f.* [*habiliment*, Fr.] Dress; clothes; garment.—

He the fairest Una found,  
Strange lady, in so strange *habiliment*,  
Teaching the satyres. *Fairy Queen.*

My riches are these poor *habiliments*,

Of which if you should here disurnish me,

You take the form and substance that I have. *Shak.*

—The clergy should content themselves with wearing *gowns* and other *habiliments* of Irish drapery. *Swift.*

\* **HABILITATE**. *v. n.* [*habiliter*, Fr.] To qualify; to entitle. Not in use.—Divers persons in the house of commons were attainted, and thereby not legal, nor *habilitate* to serve in parliament, being disabled in the highest degree. *Bacon.*

\* **HABILITATION**. *n. f.* [from *habilitate*.] Qualification.—The things are but *habilitations* towards arms; and what is *habilitation* without intention and act? *Bacon.*

\* **HABILITY**. *n. f.* [*habilité*, French.] Faculty; power; now *ability*.

**HABINGTON**, William, an English poet and historian, was the son of Thomas Habington, Esq. He was born in 1603, at Hendlip in Worcestershire; and educated at St Omer and Paris. He died in 1634, and left several MSS. In the hands of his son. His printed works are, 1. Poems under the title of *Castara*. 2. The queen of Arragon, a tragi-comedy. 3. Observations upon History. 4. The history of Edward IV. king of England, written in a very florid style, and published at the desire of Charles I.

(1.) \* **HABIT**. *n. f.* [*habitus*, Lat.] 1. State of any thing: 22. *habit* of body. 2. Dress; accoutrement; garment.—

I shifted

Into a madman's rage, I' assume a semblance  
The very dogs disdain'd; and in this *habit*  
Met I my father. *Shak.*

If you have any justice, any pity;

If ye be any thing, but churchmen's *habits*.  
*Shak.*

—Both the poets being dressed in the same English *habit*, story compared with story, judgment may be made betwixt them. *Dryden.*

The scenes are old, the *habits* are the same  
We wore last last year. *Dryden.*

—Changes there are in veins of wit, like those of *habits* or other modes. *Temple.*—There are among the statues several of Venus, in different *habits*.

*Addison.*—The clergy are the only set of men who wear a distinct *habit* from others. *Swift.* 3. *Habit* is a power or ability in man of doing any thing, when it has been acquired by frequent doing the same thing. *Locke.*—He hath a better bad *habit* of frowning than the count Palatine. *Shak.* 4. Custom; inveterate use.—The last fatal step is, by frequent repetition of the sinful act, to continue and persist in it, 'till at length it settles into a fixed confirmed *habit* of sin; which being that which the apostle calls the finishing of sin, ends certainly in death; death not only as to merit, but also as to actual infliction. *South.*

No civil brails have since his death arose,

But fashion now by *habit* does obey;

And wars have that respect for his repose,

As winds for haleyons when they breed at sea.  
*Dryden.*

—The force of education is so great, that we may mould the minds and manners of the young into what shape we please, and give the impressions of such *habits*, as shall ever afterwards remain. *Astlebury.*

(2.) **HABIT**, in philosophy, § 1. *def.* 3, 4. See Custom, § 1, 2. Custom and habit have such influence upon many of our feelings, by warping and varying them, that their operations demand the attention of all who would be acquainted with human nature. The subject, however, is intricate. Some pleasures are fortified by custom: and yet custom begets familiarity, and consequently indifference. In many instances, satiety and disgust are the consequences of reiteration: again, though custom blunts the edge of distress and of pain, yet the want of any thing to which we have been long accustomed is a sort of torture. Whatever be the cause, it is certain we are much influenced by custom: it has an effect upon our pleasures, upon our actions, and even upon our thoughts and sentiments. Habit makes no figure during the vivacity of youth: in middle age it gains ground; and in old age governs without control. In that period of life, generally speaking, we eat at a certain hour, take exercise at a certain hour, go to rest at a certain hour, all by the direction of habit: nay, a particular seat, table, bed, comes to be essential; and a habit in any of these cannot be controlled without uneasiness. Any slight or moderate pleasure, frequently reiterated for a long time, forms a peculiar connection between us and the thing that causes the pleasure. This connection termed *habit*, has the effect to awaken our desire for that thing when it returns not as usual.

usual. During the course of enjoyment, the pleasure rises insensibly higher and higher till a habit be established; at which time the pleasure is at its height. It continues not, however, stationary: the same customary reiteration which carried it to its height, brings it down again by insensible degrees. Those things which at first are but moderately agreeable, are the aptest to become habitual. Spirituous liquors, at first scarce agreeable, readily produce an habitual appetite: and custom prevails so far, as even to make us fond of things originally disagreeable, such as coffee, assafoetida, tobacco, opium, &c. A walk upon the quarter-deck, though intolerably confined, becomes however so agreeable by custom, that a sailor in his walk on shore confines himself commonly within the same bounds. Lord Kaims mentions a man who had relinquished the sea for a country life; in the corner of his garden he reared an artificial mount with a level summit, resembling most accurately a quarter deck, not only in shape but in size; and here he generally walked. In Minorca governor Kane made an excellent road the whole length of the island; and yet the inhabitants adhere to the old road, though not only longer but extremely bad. Gaming, at first barely amusing by the occupation it affords, becomes in time extremely agreeable; and is often prosecuted with avidity, as if it were the chief business of life. The same observation is applicable to the pleasures of the internal senses, those of knowledge and virtue in particular; children have scarce any sense of these pleasures; and men very little who are in the state of nature without culture: our taste for virtue and knowledge improves slowly; but is capable of growing stronger than any other appetite in human nature. To introduce an active habit, frequency of acts is not sufficient without length of time; the quickest succession of acts in a short time is not sufficient; nor a slow succession in the longest time. The effect must be produced by a moderate soft action, and a long series of easy touches, removed from each other by short intervals. Nor are these sufficient without regularity in the time, place, and other circumstances of the action: the more uniform any operation is, the sooner it becomes habitual. And this holds equally in a passive habit; variety in any remarkable degree, prevents the effect: thus any particular food will scarce ever become habitual where the manner of dressing is varied. The circumstances then requisite to augment a moderate pleasure, and at the long run to form a habit, are weak uniform acts, reiterated during a long course of time, without any considerable interruption; every agreeable cause that operates in this manner will grow habitual. Lord Kaims in his *Elements of Criticism* has treated this subject at considerable length. And Dr Cullen in his *Lectures on the Materia Medica*, (1st edit.) shows the effects of custom and habit on the animal economy.

(3.) HABIT, § 2. def. 2. The principal part of the dress worn by the Jews and Greeks was the *chiton* and the *chiton*. The *chiton* was an upper garment, consisting of a loose square piece of cloth wrapped round the body; the *chiton* was an under garment or tunic, which was fastened round

the body and embraced it closely, falling down to the middle of the thigh. A person divested of the upper garment, in the eastern language, was styled *naked*, and in this sense DAVID danced naked before the ark. The several sorts of garments in use with both sexes, amongst the Romans, were the toga, tunica, pelusa, lacerna, chlamys, paludamentum, iæna, stola, pallium or palla. See Toga, &c. For the habits of the priests amongst the Jews, Greeks, and Romans, see PRIESTS.

(4.) HABIT is particularly used for the uniform garments of the religious, conformable to the rule and order whereof they make profession: as the habit of St Benedict, of St Augustine, &c. In this sense we say absolutely, such a person *has taken the habit*; meaning he has entered upon a novitiate in a certain order. So he is said *to quit the habit*, when he renounces the order. See Vow. The habits of the several religious are not supposed to have been calculated for singularity or novelty: the founders of the orders, who were at first inhabitants of deserts and solitudes, gave their monks the habits usual among the country people. Accordingly the primitive habits of St Anthony, St Hilarion, St Benedict, &c. are described by the ancient writers as consisting chiefly of sheep skins, the common dress of the peasants of that time. The orders established in and about cities and inhabited places took the habit worn by other ecclesiastics at the time of their institution. What makes them differ so much from each other, as well as from the ecclesiastical habit of the present times, is, that they have always kept invariably to the same form; whereas the ecclesiastics and laics have been changing their mode on every occasion.

\* To HABIT. v. a. (from the noun.) To dress; to accoutre; to array.—

Present yourself and your fair princess

Before Leontes:

She shall be *habited* as it becomes

The partner of your bed. *Shak. Winter's Tale*.—Having called to his memory Sir George Villiers, and the cloaths he used to wear, in which at that time he seemed to be *habited*, he thought him to be that person. *Clarendon*.—They *habited* themselves like those rural deities, and imitated them in their rustick dances. *Dryden*.

\* HABITABLE. *adj.* (*habitable*, Fr. *habitabilis*, Lat.) Capable of being dwelt in; capable of sustaining human creatures.—By means of our solitary situation, we know well most part of the *habitable* world, and are ourselves unknown. *Bacon*.

That was her torrid and inflaming time;

This is her *habitable* tropique clime. *Dante*.

—The torrid zone is now found *habitable*. *Cowley*.

Look round the *habitable* world, how few

Know their own good, or knowing it, pursue. *Dryden*.

\* HABITABLENESS. *n. f.* (from *habitable*.) Capacity of being dwelt in.—The cutting of the Equinoctial line decides that controversy of the *habitableness* of the torrid zone. *Morr*.—Those ancient problems of the spherical roundness of the earth, the being of antipodes, and of the *habitableness* of the torrid zone, are abundantly demonstrated. *Ray*.

• HABIT:

• **HABITANCE.** *n. f.* [*habitatio*, Lat.] Dwelling; abode.—

What art thou, man, if man at all thou art.  
That here in desert hast thine *habitance*?  
And these rich heaps of wealth do'st hide apart  
From the world's eye, and from her right usance.  
*Spenser's Fairy Queen.*

• **HABITANT.** *n. f.* [*habitant*, Fr. *habitans*, Latin.] Dweller; one that lives in any place; inhabitant.—

Not to earth are those bright luminaries  
Officious; but to the earth's *habitant*. *Milton.*  
Pow'r's celestial to each other's view  
Stand still confest, though distant far they lie,  
Or *habitants* of earth, or sea, or sky. *Pope.*

• **HABITATION.** *n. f.* [*habitation*, Fr. *habitation*, Lat.] 1. The state of a place receiving dwellers.—

Amplitude almost immense, with stars  
Numerous, and every star perhaps a world  
Of destin'd *habitation*. *Milton.*

2. Act of inhabiting; state of dwelling.—

Palaces,  
For want of *habitation* and repair,  
Dissolve to heaps of ruins. *Denham.*  
—Rocks and mountains, which in the first ages  
were high and craggy, and consequently then inconvenient for *habitation*, were by continual denudation brought to a lower pitch. *Woodward.*  
3. Place of abode; dwelling.—Wisdom, to the end she might save many, built her house of that nature which is common unto all; she made not this or that man her *habitation*, but dwelt in us. *Hunter.*

God oft descends to visit men  
Unseen, and through their *habitations* walks  
To mark their doings. *Milton.*

• **HABITATOR.** *n. f.* [Lat.] Dweller; inhabitant.—The sun's presence is more continued unto the northern inhabitants; and the longest day in Cancer is longer unto us than that in Capricorn unto the southern *habitators*. *Brown.*

**HABITS AND REPUTE**, in Scots law, the common opinion of the people, among whom a person lives, with respect to any circumstance relating to him.

• **HABITUAL.** *adj.* [*habituel*, from *habit*, Fr.] Customary; accustomed; inveterate; established by frequent repetition. It is used for both good and ill.—

Sin, there in pow'r before

with so.—Men are first corrupted by bad counsel and company, and next they *habituate* themselves to their vicious practices. *Tillotson.*—Such as live in a rarer air are *habituated* to the exercise of a greater muscular strength. *Arbutnot.*

• **HABITUDE.** *n. f.* [*habitus*, Latin, *habitude*, Fr.] 1. Relation; respect; state with regard to something else.—We cannot conclude this complexion of nations from the vicinity or *habitude* they hold unto the sun. *Brown.*—The will of God is like a freight unalterable rule; but the various comportments of the creature, either thwarting this rule, or holding conformity to it, occasions several *habitudes* of this rule unto it. *Hale's Origin of Mankind.*—It results from the very nature of things, as they stand in such a certain *habitude*, or relation to one another. *South.*—As by the objective part of perfect happiness we understand that which is best and last, and to which all other things are to be referred; so by the formal part must be understood the best and last *habitude* of man toward that best object. *Norris.*

In all the *habitudes* of life

The friend, the mistress, and the wife,  
Variety we still pursue. *Swift.*

2. Familiarity; converse; frequent intercourse.—

His knowledge in the noblest useful arts,  
Was such dead authors could not give;  
But *habitudes* with those who live. *Dryden.*

—To write well, one must have frequent *habitudes* with the best company. 3. Long custom; habit; inveterate use. This is more properly *habit*.—Mankind is willing to continue in a pleasing error, strengthened by a long *habitude*. *Dryden.*

Thy ear, inur'd to charitable sounds,  
And pitying love, must feel the hateful wounds  
Of jest obscene, and vulgar ribaldry,  
The ill-bred question, and the loud reply,  
Brought by long *habitude* from bad to worse;  
Must hear the frequent oath, the direful curse. *Prior.*

4. The power of doing any thing acquired by frequent repetition.—It is impossible to gain an exact *habitude*, without an infinite number of acts and perpetual practice. *Dryden.*

• **HABNAB.** *adv.* [*hap ne hap*, or *nap*; as *would* *would*, or *ne would*; *will* *will*, or *ne will*; that is, *let it happen or not*.] At random; at the mercy of chance; without any rule or certainty of effect.—

He circles draws and squares,  
With cyphers, astral characters;  
Then looks 'em o'er to understand 'em,  
Although set down *habnab* at random. *Hudib.*

HABOST, a town of Persia, in Segekan.

(1.) HABSBUURG, or HAPSBUURG, an ancient castle and ci-devant bailiwick of the Helvetic republic, in the canton of Lucerne, near the lake, and E. of the town of Lucern. Lon. 8. 10. E. Lat. 47. 22. N.

(2.) HABSBUURG. See HAPSBUURG, N° 1.

HABSHEIM, a town of France, in the dep. of the Upper Rhine, 9 miles NNE. of Altkirch. It was burnt by the Swiss in 1468.

HABUR, an island in the Red Sea, 6 miles from the coast of Arabia.

HACHA, a sea port town of Terra Firma, seated at the mouth of the Hacha. Here the Spanish galleons

galleons touch at their arrival in S. America, and send expresses to all the settlements to give them notice. Lon. 72. S. W. Lat. 11. 28. N.

**HACHENBURG**, a town of Germany, in Westphalia and county of Sayn, 17 miles NE. of Coblenz.

**HACHILAH**, a hill in the SE. part of Judea, S. of Jeshimon, about 10 miles S. of Jericho. It was one of David's retreats from Saul: and Jonathan, the Maccabee, built the strong castle of Massada upon it.

**HACHOWKA**, a town of Poland, in Volhynia.

**HACHUT**, or **HANET**, a town of Hungary.

(1.) \* *To HACK*. *v. a.* [*baccan*, Saxon; *hacken*, Dutch; *bacher*, Fr. from *acafe*, an axe, Saxon.] 1. To cut into small pieces; to chop; to cut slightly with frequent blows; to mangle with unskilful blows. It bears commonly some notion of contempt or malignity.—He put on that armour, whereof there was no one piece wanting, though *backed* in some places, bewraying some fight not long since passed. *Sidney*.—What a slave art thou, to *back* thy sword as thou hast done; and lay it was in fight! *Shakespeare's Henry IV.*—

Richard the Second here was *back'd* to death.

*Shakespeare.*

I'll fight 'till from my bones my flesh be *backt*.

*Shakespeare.*

One flourishing branch of his most royal root  
Is *backt* down, and his summer leaves all faded,  
By envy's hand, and murder's bloody axe. *Shak.*

Burn me, *back* me, hew me into pieces. *Dryd.*

Not the *back'd* helmet, nor the dusty field,  
But purple vests and flow'ry garlands please.

*Addison.*

But fate with butchers plac'd thy priestly stall,  
Meek modern faith to murder, *back* and mawl.

*Pope.*

2. To speak unreadily, or with hesitation.—Disarm them, and let them question; let them keep their limbs whole, and *back* our English. *Shakespeare.*

(2.) \* *To HACK*. *v. n.* To hackney; to turn hackney or prostitute.

**HACKANBO**, a town of Sweden, in Upland.

**HACKEMBERG**, a mountain of the Helvetic republic, in the canton of Glaris, 6 m. N. of Schweitz.

**HACKERY**, *n. s.* a small covered carriage much used by the natives in Calcutta, chiefly by the ladies. It has two wheels and is drawn by bullocks.

**HACKET**, John, Bp. of Litchfield and Coventry, was born in 1592. In 1623, he was made chaplain to James I. prebendary of Lincoln, and obtained several other promotions, but lost them during the troubles, about 1645. He then lived retired at Cheam until the Restoration, when he recovered his preferments. In 1661 Charles II. made him Bp. of Litchfield and Coventry. Finding the cathedral almost battered to the ground, he in 8 years finished a complete church superior to the former, chiefly at his own expence of 20,000*l.* He also laid out 1000*l.* on a prebendal house. He died in 1670. He published, before he entered into orders, a comedy intitled *Loyola*, which was twice acted before king James I. After his death was published *A Century* of his ser-

mons on several remarkable subjects, and *The life of Abp. Williams*, both in folio.

**HACKETTOWN**, a town of New Jersey, 120 miles NE. of Philadelphia. Lon. 6. 18. E. of that city. Lat. 40. 32. N.

(1.) **HACKINSAC**, a river of New Jersey, which runs into the Atlantic, 6 miles N. of Staten Island.

(2.) **HACKINSAC**, a town of New Jersey, on the above river, 6 miles NNE. of Philadelphia.

\* **HACKLE**. *n. s.* Raw silk; any flimsy substance unspun.—Take the *hackle* of a cock or capon's neck, or a plover's top: take off one side of the feather, and then take the *hackle* silk, gold or silver thread, and make these fast at the bent of the hook. *Walton's Angler.*

\* *To HACKLE*. *v. a.* [from *back*.] To dress flax.

(1.) \* **HACKNEY**. *n. s.* [*bacnai*, Welsh; *hackneye*, Teuton. *baquenee*, Fr.] 1. A pacing horse.

2. A hired horse; hired horses being usually taught to pace, or recommended as good pacers.—Light and lewd persons were as easily suborned to make an affidavit for money, as post-horses and *hackneys* are taken to hire. *Bacon*.—

Who, mounted on a broom, the nag

And *hackney* of a Lapland nag,

In quest of you came hither post.

*Hudibras.*

3. A hireling; a prostitute.—

Three kingdoms rung

With his accumulative and *hackney* tongue.

*Roscommon.*

That is no more than every lover

Does from his *hackney* lady suffer.

*Hudibras*

Shall each spurgalled *hackney* of the day,

Or each new pension'd sycophant, pretend

To break my windows?

*Pope.*

4. Any thing let out for hire.—

A wit can study in the streets:

Not quite so well, however, as one ought;

A *hackney* coach may chance to spoil a thought.

*Pope.*

5. Much used: common†.—These notions young students in physick derive from their *hackney* authors. *Harvey.*

(1.) **HACKNEY**, a parish of Middlesex, on the NE. side of London, containing 12 hamlets. At the bottom of Hackney Marsh, there have been discovered the remains of a great stone causeway, which, by the Roman coins &c. found there, was no doubt one of the highways made by the Romans.

(2.) **HACKNEY**, a rich and populous village in the above parish, (N<sup>o</sup> 2.) nearly joined to London on the NNE. The church was founded in the reign of Edward II. The number of houses is near 800. It has 3 meeting-houses, a free school, a charity school, and 17 almshouses. From this place it is said the **HACKNEY COACHES** (§ 4.) first received that name, (though Dr Johnston gives a different derivation; see § 1.) for in the 17th century, many people having gone to see their friends at Hackney, it occasioned them often to hire horses or carriages, so that in time it became a common name for such horses, coaches, and chairs as were let to the people of London.

(4.) **HACKNEY COACHES**, coaches exposed to hire

† Of this last definition, Dr Johnson ought to have formed a separate article. **HACKNEY**, in this sense, is an adjective, as is evident from the citation from **HARVEY**, as well as from that above quoted from **ROSCOMMON**, and the second quotation from **HUDIBRAS**.

hire in the streets of London, and other great cities, at rates fixed by authority. See COACH, § 5. These first began to ply in London, in 1625, when they were only 20 in number; but in 1635 they were so much increased, that king Charles I. issued out an order of council to restrain them. In 1637, he allowed 50 hackney coachmen, each of whom might keep 12 horses. In 1652, their number was limited to 200; and in 1654, it was extended to 300. In 1661, 400 were licensed, at 5*l.* each annually. In 1694, 700 were allowed, and taxed by the 5 and 6 of W. & M. at 4*l.* a year each. By 9 Anne c. 23. 800 coaches were allowed in London and Westminster; but by 8 Geo. III. cap. 24. the number is increased to 1000, which are licensed by commissioners, and pay a duty of 5*s.* per week. On Sundays there were formerly only 175 hackney coaches allowed to ply; but their number is now unlimited. The fare of hackney coachmen in London, or within ten miles of it is, 12*s.* 6*d.* per day. By the hour it is 1*s.* 6*d.* for the first, and 1*s.* for every hour after; and 1*s.* for any distance not exceeding a mile and a half; or 1*s.* 6*d.* two miles. Hackney coachmen refusing to go on, or exacting more than their limited hire, are subject to a forfeit of from 10*s.* to 5*l.* which the commissioners have power to determine. Every hackney coach must have check strings, and every coachman plying without them incurs a penalty of 5*s.* The drivers must give way to persons of quality and gentlemen's coaches, under the penalty of 5*l.* The duty, arising from licences to Hackney coaches and chairs in London, forms a branch of the king's extraordinary and perpetual revenue, governed by commissioners, and is a public benefit; as the expence of it is not felt, and its regulations have established a competent jurisdiction, whereby a very refractory race of men are kept in order.

(5.) HACKNEY MARRIAGE. See N° 1.

TO HACKNEY. *v. a.* [from the noun.] To practise in one thing; to accustom, as to the road. He is long *hackney'd* in the ways of men.

*Shakspeare.*

\* HACQUETON. *n. s.* [*haquet*, old French, a little horse.] Some piece of armour.—You may see the very fashion of the Irish horseman in his long hose, riding shoes of costly cordwain, his *haqueton*, and his habergeon. *Spranger.*

HACQUEVILLE, a town of France, in the dep. of Eure, 5 miles W. of Gisors.

HACZAC, or ) a town and territory of Transylvania, 30 m. S. of Hunyad.

\* HAD. The preterite and part. pass. of *have*. I *had* better, you *had* better, &c. means the same as *it would be better for me or you*; or, *it would be more eligible*: it is always used potentially, not actually; nor is *have* ever used in that import. We say *thou wouldst*, *it had been better* or *worse*.—

I *had* rather be a country servant maid,  
Than a great queen with this condition. *Shak.*  
*Had* we not better leave this Uica?

To arm Numidia is our cause? *Add. Cato.*

HADAGIA, a town of Fez, 70 m. S. of Melilla.

HADAMAR, a town of Germany, the capital of Nassau-Hadamar, 15 m. SW. of Dillenburg; taken by the French under Kleber, 4th June, 1796.

VOL. XI. PART I.

HADAU, a town and castle of Bavaria.

HADDAM, a town of Connecticut, in Middlesex county, 12 miles S. of Middletown.

(1.) HADDINGTON, a parish of Scotland, in E. Lothian, 6 miles square, containing about 12,000 acres of ground, all arable, except a few hundred acres of billy ground, and some wood-lands. It is divided into 30 farms, of various soils, all inclosed and in high cultivation, except a few fields near the town. (N° 1.) The air is temperate and salubrious. The population in 1792, stated by the rev. Dr George Barclay of Middleton, in his report to Sir J. Sinclair, was 3,915, and had decreased 60 since 1755.

(2.) HADDINGTON, an ancient borough in the above parish, (N° 1.) which joins with Jedburgh, Dunbar, Lauder, and N. Berwick, in sending a member to parliament. It consists of 4 streets, which intersect each other nearly at right angles. It is governed by a provost, 3 bailies, dean of guild, treasurer, 12 counsellors, and 7 deacons. Its revenue is about 400*l.* a-year. It was the birth-place of J. Knox, our justly celebrated reformer. Before the reformation, it had an abbey now in ruins, founded in 1178, by Ada, mother of K. Malcolm IV. and William I. It has a manufacture of coarse woollens, 2 fairs, and a weekly market, the greatest in Scotland for grain. It has suffered often both by fire and water. On Oct. 4, 1775, the Tyne rose 17 feet, and overflowed half the town. It is 17 miles E. of Edinburgh. Lon. 2. 25. W. Lat. 55. 59. N.

(3.) HADDINGTON, or } See LOTHIAN, EAST.  
HADDINGTON-SHIRE, }

HADDO, a town of Scotland, in Aberdeenshire, 9 miles NNE. of Inverury.

(1.) \* HADDOCK. *n. s.* [*hadst*, Fr.] A sea fish of the cod kind, but small.—The coast is plentifully stored with pilchards, herrings, and *haddock*. *Carver.*

(2.) HADDOCK. See GADUS, N° 3.

HADDON, Dr Walter, a great restorer of the learned languages in England, was born in 1516. He distinguished himself by writing Latin in a fine style, which he acquired by a constant study of Cicero. He was a strenuous promoter of the reformation under Edward VI, and succeeded Bp. Gardiner in the mastership of Trinity-hall, Cambridge. He concealed himself in Mary's reign; but acquired the favour of Q. Elizabeth, who sent him one of the 3 agents to Bruges in 1566, to restore commerce between England and the Netherlands. He was also engaged with Sir John Croke in drawing up in Latin that useful code of ecclesiastical law, published in 1571 by the learned John Fox, under the title of *Reformatio legum ecclesiasticarum*; his other works are published under the title of *Lacubrations*. He died in 1572.

HADELAND, a town of Norway.

HADELN, a fertile territory of Germany, about 8 miles square, belonging to his majesty as elector of Hanover, near the Elbe and the duchy of Bremen. Its revenue is 10,000 rixdollars.

HADENMARSH, a town of Holstein.

HADEQUIS, a town of Morocco.

HADERSLÈBEN, a sea-port town of Denmark, in Sleswick, with a strong citadel, built upon

pon a small island, seated on a bay of the Baltic, with a well frequented harbour. Lon. 9. 35. E. Lat. 55. 24. N.

**HADERSTORP**, a town of Austria.

**HADES**, in scripture, sometimes signifies the invisible regions of the dead, sometimes the place of the damned, and sometimes the grave. In Greek authors it signifies the regions of the dead. See **HELL**.

**HADHRAMUT**. See **HADRAMAUT**.

**HADLEIGH**, a village in Essex, with an ancient ruinous castle, near Prittlewell, on the Thames.

(1.) **HADLEY**, a town of Suffolk, seated on the Preston. It has about 600 houses, with a handsome church, a chapel of ease, and a Presbyterian meeting-house. Large quantities of yarn are spun for the Norwich manufacture. On the top of the steeple, which affords a fine view of Essex, there is an iron pitch-pot, originally placed there as a beacon. Lon. 1. 6. E. Lat. 52. 7. N.

(2.) **HADLEY**, a town of Massachusetts, in Hampshire county, 97 miles W. of Boston.

**HADLEY'S QUADRANT**. See **QUADRANT**.

**HADMERSLEBEN**, a town of Magdeburg.

(1.) **HADRAMAUT**, a fertile province of Arabia Felix, bounded on the W. by Yemen, N. by the Desert, NE. by Oman, and SE. by the Sea; containing several large towns and sea ports.

(2.) **HADRAMAUT**, the capital of the above province, 150 miles W. of Caraccen. Lon. 45. 30. E. Lat. 15. 0. N.

**HADRANITÆNI**. See **ADRANITÆ**.

**ADRANUM**. See **ADRANUM**.

**HADRIAN**. See **ADRIAN**.

**HADRO**, a town of Turkey, in Kurdistan.

**HADSJAR**. See **LACHSA**.

**HÆBUDÆ**. See **HEBRIDES**, N° 1.

**HÆGALOS**, a woody hill near Athens.

**HÆMAGOGOS**, among physicians, a compound medicine, consisting of fetid and aromatic simples, mixed with black hellebore, and prescribed in order to promote the menstrua and hæmorrhoidal fluxes; as also to bring away the lochia.

**HÆMANTHUS**, the **BLOOD FLOWER**: A genus of the monogynia order, in the hexandria class of plants; and ranking under the 9th natural order, *Spathaceæ*. The involucre is hexaphyllous and multiflorous; the corolla sexpartite superior; the berry trilocular. There are 4 species.

1. **HÆMANTHUS CARINATUS**, with keel-shaped leaves, has a taller stalk and paler flowers than the **COCCINEUS**, (N° 2) its leaves are not flat, but hollowed like the keel of a boat.

2. **HÆMANTHUS COCCINEUS**, with plaintongue-shaped leaves, rises about a foot high, with a stalk supporting a cluster of bright red tubulous flowers. It has a large bulbous root, from which in autumn comes out two broad flat leaves of a fleshy consistence, shaped like a tongue, which turn backward on each side, and spread on the ground, so that they have a strange appearance all the winter. In the spring these decay; so that from May to the beginning of August they are destitute of leaves. The flowers are produced in the autumn just before the leaves come out.

3. **HÆMANTHUS PUNICUS**, with large spear-shaped waved leaves, grows about a foot high, and hath flowers of a yellowish red colour. These

are succeeded by berries, which are of a beautiful red colour when ripe. This species should be constantly kept in a dry stove.—All these plants are natives of the Cape of Good Hope, and do not propagate very fast in Europe, their roots seldom putting forth many off-sets. The best method of managing them is to have a bed of good earth in a bricked pit, where they may be covered with glasses, and in hard frost with mats and straw. The earth in the frame should be two feet deep, and the frame should rise two feet above the surface, to allow height for the flower-stems to grow. The roots should be planted 9 or 10 inches asunder; and in winter, if they are protected from frost, and not suffered to have too much wet, but in mild weather exposed to the air, they will flower every year, and the flowers will be much stronger than with any other management.

**HÆMARTYSIS**. See **HÆMORTYSIS**.

**HÆMATITES**, the **BLOOD-STONE**, a hard mineral substance, red, black, or purple, but the powder of which is always red. It is found in masses, spherical, semi-spherical, pyramidal, or cellular, &c. like a honeycomb. It contains a large quantity of iron: 40 lb. of this metal have been extracted from a quintal of stone; but the iron is of such a bad quality, that this ore is not commonly smelted. The great hardness of hæmatites renders it fit for burnishing metals.

**HÆMATOPUS**, the **SEA PUE**, in ornithology, a genus belonging to the order of grallæ. The beak is compressed, with an equal wedge-shaped point; the nostrils are linear; and the feet have three toes without nails. There is but one species, viz. the

**HÆMATOPUS OSTRALEGUS**, or **OYSTER-CATCHER**, a native of Europe and America. See *Plate CLXXII, fig. 1.* It feeds upon shell-fish near the sea shore, particularly oysters, and limpets. On observing an oyster which gapes wide enough for the insertion of its bill, it thrusts it in, and takes out the inhabitant: it will also force the limpets from their adhesion to the rocks with sufficient ease. It also feeds on marine insects and worms. With us these birds are often seen in considerable flocks in winter: in summer they are met with only in pairs, though chiefly near the sea or salt rivers. The females lay 4 or 5 eggs, on the bare ground, on the shore, above high-water mark: they are of a greenish grey, blotched with black. The young are said to be hatched in about 3 weeks. These birds are pretty wild when in flocks; yet are easily tamed, if taken young.

**HÆMATOXYLON**, or **LOGWOOD**, or **Cam**

**HÆMATOXYLUM** } *peachy Wood*; a genus of the monogynia order, belonging to the decandria class of plants, and in the natural method ranking under the 35th order, *Lomentaceæ*. The calyx is quinquepartite; the petals five; the capsule lanceolated, unilocular, and bivalved; the valves navicular or keeled like a boat. Of this genus there is only one species, viz.

**HÆMATOXYLUM CAMPECHIANUM**. It grows naturally in the bay of Campechy at Honduras and other parts of the Spanish West India, where it rises from 16 to 24 feet high. The stems are generally crooked, and seldom thicker than a man's thigh. The branches, which come out of

Fig 2. Harp.

Fig 1. Harp.

Fig 3. Harp.

Fig 5.

Fig 6.

Fig 7.

Fig 9. Harp.

each side, are crooked, irregular, and armed with strong thorns, garnished with winged leaves, composed of 3 pair of obscure lobes indented at the top. The flowers come in a racemus from the ends of the leaves, standing erect, and are of a pale yellowish colour, with a purple empalement. They are succeeded by flat oblong pods, each containing 1 or 2 kidney seeds. Dr Wright says, that this tree was introduced into Jamaica from Honduras in 1713; and is now too common, as it has over-run large tracts of land, so that it is very difficult to root out. It makes a beautiful and strong fence against cattle. If pruned from the lower branches, it grows to a sizeable tree, and, when old, the wood is as good as that from Honduras. The trees are cut up into billets or junks, the bark and white sap of which are chipped off, and the red part, or heart, is sent to England for sale. See LOGWOOD.

**HEMIMONS**, or } a province of ancient Il-  
**HEMIMONTUS**, } lyricum, on Mount Hæ-  
mæ.

**HEMOPTOE**, or } a spitting of blood. See

**HEMOPTYSIS**, } *MEDICINE, Index.*

**HEMORRHAGIA**, } [from *hæma*, blood, and

**HEMORRHAGY**, } *exsurgere*, to burst forth,] in  
medicine, a flux of blood at any part of the body;  
arising either from a rupture of the vessels, when  
too full or too much pressed; or from an erosion  
of them, when the blood is too sharp and corro-  
sive. Hemorrhagia among the ancient Greeks,  
was only used for a flux of blood at the nose; but  
the moderns extend the name to any flux of blood,  
whether by the nose, mouth, lungs, stomach, in-  
testines, matrix, or any other part. See *MEDICINE*  
and *STRABO*, *Indexes*.

**HEMORRHOIDAL**, an appellation given by  
anatomists to the arteries and veins going to the  
intestinum rectum.

**HEMORRHOIDS**, or **PILES**, an issue of  
blood from the hæmorrhoidal vessels. See *MEDICINE*,  
*Index*.

**HÆMUS**, in ancient geography, a vast ridge,  
running from Illyricum towards the Euxine, so  
high as to afford a prospect both of the Euxine  
and Adriatic seas.

**HÆN**, Anthony Dr. M. D. an eminent Ger-  
man physician of the 18th century. He was pri-  
vy counsellor and physician to the late empress  
Mary-Theresa, queen of Hungary and Bohemia.  
He was author of many works, of which the prin-  
cipal are his *Ratus Medendi*, in 17 vols 8vo, and a  
*Treatise on Magic*. He died in 1776.

**HERES**, a goddess to whom the ancient Ro-  
mans sacrificed upon becoming heir to a fortune.

**HERETICO CONDEMNANDO**, a writ which an-  
ciently lay against an heretic, who, having once  
been convicted of heresy by his bishop, and having  
abjured it, afterwards falling into it again, or in-  
to some other, was thereupon committed to the  
secular power. It is thought by some to be as an-  
cient as the common law itself; however, the con-  
viction of heresy by the common law was not in  
any petty ecclesiastical court, but before the arch-  
bishop in a provincial synod, and the delinquent  
was delivered up to the king to do with him as he  
pleased: so that the crown had a control over the

spiritual power. But by 2 Hen. IV. cap. 23. the  
diocesan alone, without the intervention of a synod,  
might convict of heretical tenets; and unless the  
convict abjured his opinions, or it after abjuration  
he relapsed, the sheriff was bound *ex officio*, if re-  
quired by the bishop, to commit the unhappy vic-  
tim to the flames, without waiting for the consent  
of the crown. This writ was actually executed  
on two Anabaptists in the 7th of Elizabeth, and  
on two Arians in the 9th of James I. Sir Ed-  
ward Coke was of opinion, that this writ did not  
lie in his time; but it is now taken away by stat.  
29 Car. II. cap. 9. But this statute does not take  
away or abridge the jurisdiction of Protestant arch-  
bishops or bishops, or any other judges of any ec-  
clesiastical courts, in cases of atheism, blasphemy,  
heresy, or schism, and other damnable doctrines  
and opinions; but they may prove and punish the  
same according to his majesty's ecclesiastical laws,  
by excommunication, deprivation, degradation,  
and other ecclesiastical censures not extending to  
death, in such sort and no other, as they might  
have done before the making of this act. Sec. 2.  
See **HERESY**.

(1.) **HÆRLEM**. See **HARLEM**.

(2.) **HÆRLEM MEER**, a large lake of the Bata-  
vian republic, in the dep. of Amstel, between  
Haerlem, Amsterdam, and Leyden; navigable by  
boats.

**HÆFAIVA**, one of the **FRIENDLY ISLANDS**.

**HAFAR**, a town of Persia, 108 m. S. of Susa.

**HAFDAEL**, a town of Norway.

**HAFSTADTEN**, or } a town of Saxony, in  
**HAFSTETTEN**, } Cobourg, 5 miles E.  
of Cobourg.

**HAFNERZELL**, a town of Bavaria.

\* **HAF**. *n. f.* [*haft*, Saxon; *best*, Dut. from  
*To have or hold*.] A handle; that part of any in-  
strument that is taken into the hand.—

This brandish'd dagger

I'll bury to the *haft* in her fair breast. *Dryden*.  
—These extremities of the joints are the *hafts* and  
handles of the members. *Dryden*—A needle is a  
simple body, being only made of steel; but a sword  
is a compound, because its *haft* or handle is made  
of materials different from the blade. *Watts*.

\* *To HAF*. *v. a.* [from the noun.] To set in  
a haft. *Ainsworth*.

(1.) \* **HAG**. *n. f.* [*bagge*, a goblin, Sax. *beckle*,  
a witch, Dutch.] 1. A fury; a she monster.—

Thus spoke th' impatient prince, and made  
a pause;

His foul *bags* rais'd their heads, and clapt their  
hands;

And all the powers of hell, in full applause,  
Flourish'd their snakes, and tost their flaming  
brands. *Crashaw*.

2. A witch; an enchantress.—Out of my door,  
you witch! you *bag*, you baggage, you poucat,  
you runnion! *Shak.* 3. An old ugly woman.—

Such affectations may become the young;  
But thou, old *bag*, of threescore years and three,  
Is shewing of thy parts in Greek for thee?

*Dryden*.

(2.) **HAG**, in zoology. See **MYRMEX**.

\* *To HAG*. *v. a.* [from the noun.] To torment;  
to harass with vain terror.—

That makes them in the dark see visions,  
And *bag* themselves with apparitions. *Hudibr.*  
—How are superstitious men *bagg*ed out of their  
wits with the fancy of omens, tales, and visions!  
*L'Estrange.*

HAGA COMITIS. See HAGUE.

HAGAR, [חַגַּר, Heb. *i. e.* a stranger.] a native  
of Egypt, the servant of Sarah, concubine of A-  
braham, mother of ISHMAEL, and ancestor of the  
ARABIANS. Her history, and the repeated di-  
vine interpositions for the preservation of her and  
her son, are recorded in Gen. xvi. and xxi.

\* HAGARD. *adj.* [*bogard*, Fr.] 1. Wild;  
unreclaimable.—

As *bogard* hawk, presuming to contend  
With hardy fowl above his able might,  
His weary pounces all in vain doth spend,  
To truss the prey too heavy for his flight.

*Fairy Queen.*

She's too disdainful;

I know her spirits are as coy and wild,

As *bogard* as the rock.

*Shak.*

4. [*Hager*, German.] Lean; rugged; perhaps,  
ugly. To this sense I have put the following pas-  
sage; for the author ought to have written *bogard*.  
—A *bagg*ed carion of a wolf, and a jolly sort of  
dog, with good flesh upon's back, fell into com-  
pany together. *L'Estrange.* 2. Deformed with  
passion; wildly disordered.—

Fearful besides of what in sight had pass'd,  
His hands and *bogard* eyes to heaven he cast.

*Dryden.*

Where are the conscious looks, the face now  
pale,

Now flushing red, the down-cast *bogard* eyes,  
Or fixt on earth, or slowly rais'd!

*Smith.*

HAGARENES, or } a branch or tribe of the  
HAGARITES, } descendants of Ishmael, so

named from his mother. Some make the name  
synonymous with ISHMAELITES, ARABIANS, and  
SARACENS; but Asaph, in Psalm lxxxiii, ver. 6.  
mentions them as distinct from the other Ishmael-  
ites. They dwell in Arabia Felix, according to  
Pliny. Strabo joins them with the Nabathians,  
and Chalybesians, whose habitation was rather in  
Arabia Deserta. Others think their capital was  
Petra, or Agra, and if so, they dwell in Arabia  
Petræa. The Reubenites, in the days of Saul,  
made war with the Hagarites, and became masters  
of their country E. of Gilead. This therefore was  
the true country of the Hagarenes. In the reign  
of Jeroboam II, 44,760 Israelites defeated them,  
and took 100,000 prisoners, with immense booty.  
(1 Chron. v. 10, 19—21.) When Tajan came into  
Arabia, he besieged the capital of the Hagarenes,  
but could not take it. The Hagarenes valued  
themselves upon their wisdom. See Baruch iii. 23.

HAGAR'S TOWN. See ELIZABETH, N° 10.

HAGEDORN, Frederick DE, a celebrated  
German poet, born at Hamburg, where his father  
was resident for Frederick IV. king of Denmark,  
in 1703. He finished his studies at Jena; and, in  
1723, published a number of poetical pieces in  
Germany, which were well received. He after-  
wards came to England, and, at his return, was  
made secretary to the English Hamburg Company,  
a lucrative employment that left him sufficient

time for cultivating the muses. In 1738, he pub-  
lished his *Fables and Tales*, the first German col-  
lection of the kind. He afterwards published Mo-  
ral Poems, Epigrams, and 5 books of Songs: which  
of all his poetical pieces are most esteemed. He  
died in 1754.

HAGEN, a towns of Germany, 1. in the Isle  
of Rugen in Upper Saxony, 16 miles SE. of Ber-  
gen: 2. in Westphalia, 6 miles NW. of Altena.

(1.) HAGENAU, a town of Saxony, in the du-  
chy of Schwerin, 26 miles SW. of Schwerin.

(2.) HAGENAU. See HAGUENAU.

HAGENBACH, a town of the French republic,  
in the dept. of the Lower Rhine, 4 miles N. of  
Lauterburg, and 12 SE. of Landau.

HAGENBRUNN, a town of Austria.

HAGENBURG, a towns of Germany: 1. in  
Austria, 9 miles NE. of Steyregg: 2. in Schauen-  
burg, 13 miles W. of Hanover.

HAGETMAU, a town of France, in the dep.  
of Landes, 7 miles S. of St Sever.

HAGGAI, [חַגַּי, Heb. *i. e.* Pleasant.] the 10th  
of the minor prophets, was born, in all probabi-  
lity, at Babylon, A. M. 3457, from whence he re-  
turned with Zerubbabel. By command from  
God (Ezra v. 1, 2, &c.) he exhorted the Jews,  
after their return from the captivity, to finish the  
rebuilding of the temple, which they had inter-  
mitted for 14 years. To encourage them, he as-  
sured them, that the glory of this latter house  
should be greater than the glory of the former;  
which was accordingly fulfilled, when Christ ho-  
noured it with his presence: for with respect to  
the building, the latter was nothing in comparison  
of the former. The Jews say, that he died in the  
last year of the reign of Darius, at the same time  
with the prophets Zechariah and Malachi. Epi-  
phanus says, he was buried at Jerusalem with the  
priests. The Greeks keep his festival on the 16th  
Dec. and the Latins on the 4th of July.

\* HAGGARD. *n. s.* 1. Any thing wild or ir-  
reclaimable.—

I will be married to a wealthy widow,  
Ere three days pass, which has as long lov'd me  
As I have lov'd this proud disdainful *baggard*.

*Shak.*

2. A species of hawk.—

Does the wild *baggard* tow'r into the sky.

And to the South by thy direction fly? *Sanders.*

—I enlarge my discourse to the observation of the  
aires, the brancher, the ramish hawk, and the  
*baggard*. *Walton.* 3. A bag. So Garth has used  
it for want of understanding it.—

Beneath the gloomy covert of an yew,  
In a dark grot, the baleful *baggard* lay,  
Breathing black vengeance and infecting day.

*Garth.*

\* HAGGARDLY. *adv.* [from *baggard*.] De-  
formedly; ugly.—

For her the rich Arabia sweats her gum;  
And precious oils from distant Indies come,  
How *baggardly* so'er she looks at home. *Dryden.*

HAGGED. See HAGARD.

HAGGEIN, a tremendous mountain of the  
Helvetic republic, in the canton of Schwytz,  
with a triple top.

\* HAGGESS. *n. s.* [from *bag* or *back*.] A ma-

of meat, generally pork chopped, and inclosed in a membrane. In Scotland it is commonly made in a sheep's maw of the entrails of the same animal, cut small, with suet and spices.

\* **HAGGISH.** *adj.* [from *bag*.] Of the nature of a bag; deformed; horrid.—

But on us both did *haggish* age steal on,  
And wore us out of act. *Shak.*

(1.) \* **To HAGGLE.** *v. n.* [corrupted from *hackle* or *hack*.] To cut; to chop; to mangle; always in a bad sense.—

Suffolk first died, and York all *haggled* o'er,  
Comes to him where in gore he lay insleep'd. *Shak.*

(2.) \* **To HAGGLE.** *v. n.* To be tedious in a bargain; to be long in coming to the price.

\* **HAGGLER.** *n. s.* [from *haggle*.] 1. One that cuts. 2. One that is tardy in bargaining.

**HAGI**, a kingdom of Africa, in the desert of Zantaga, on the bank of the river St John.

**HAGIAZ**, a town of Arabia, in Hedjaz.

**HAGIOGRAPHY**, [from *ἅγιος*, holy, and *γράφω*, to write.] those books of scripture, called by the Jews *Cetuvim*. The name is very ancient. St Jerom makes mention of it. The Jews divide the sacred writings into 3 classes: 1. The law, or the 5 books of Moses: 2. The Prophets, which they call *Neviim*: And the *Cetuvim* or *Scriptures*, called by the Greeks, &c. *Hagiographa*; comprehending the book of Psalms, Proverbs, Job, Daniel, Ezra, Nehemiah, Chronicles, Canticles, Ruth, Lamentations, Ecclesiastes, and Esther. Kimchi, Maimonides, and Elias Levita, call these books the *Writings*, by way of eminence, as being written by immediate inspiration of the Holy Spirit.

\* **HAGIOGRAPHER.** *n. s.* [from *ἅγιος*, and *γράφω*.] a holy writer. The Jews divide the Holy Scriptures of the Old Testament into the law, the prophets, and *hagiographers*.

**HAG's HEAD**, a cape of Ireland, on the W. coast of Clare county, 17 miles W. of Corrofin. Lon. 9. 25. W. Lat. 52. 55. N.

**HAG's TOWN**, a mountain of Ireland, in Kerry, N. of Cahir. It has several lakes, and is bounded with deer.

**HAGUE**, a town of the Batavian republic in the dep. of Delft; and late prov. of S. Holland. In Latin it is called *LAGA COMITIS*; in French, *La Haye*; in Dutch, *der Haag*, or *'S-Gravenhage*, i. e. the *Earl's Grove*, from the wood near which it is built, and in which the earls of Holland had a country house. It is one of the most considerable towns in the republic, pleasantly situated, and exceeding beautiful. It has a better air than the other cities, as it stands on a dry soil, somewhat higher than the rest of the country. It is surrounded by a moat over which there are many draw-bridges. Two hours are required to walk round it, and it contains about 40,000 or 50,000 souls. It is a place of much splendor and business, and there are many fine streets and squares in it. Before the revolution in 1795, it was the residence of the Stadtholder and foreign ambassadors. In the inner court all the high colleges and courts of justice held their assemblies; there also the foot guards did duty, as the horse guards in the outer, when the states were sitting. De Plant is an open airy place, in

form of a triangle, adorned with neat and beautiful buildings: the Vyverberg is an eminence, laid out into several shady walks, with the Vyver, a large basin of water, at the bottom: the Voorhout is the most celebrated part of the Hague, and consists of the mall, and 3 roads for coaches on each side, planted with trees, resembling St James's park at London: the palace of Opdam, or Walsenaar, is built in a very elegant taste: the prince and princess's grafts are fine streets: the Pleyn is a beautiful grove, laid out in several cross walks, and surrounded with stately houses. The Jewish synagogue and the ci-devant palaces of the Prince of Orange, the hotel of Spain, the new Woorhout, the mausoleum of the baron of Opdam, and the hospitals are much admired. The environs are exceedingly pleasant. This town was taken possession of by the French, under Gen. Pichegru, Jan. 23d, 1795. It is 12 miles NW. of Rotterdam, and 32 SW. of Amsterdam. Lon. 4. 23. E. Lat. 52. 4. N.

**HAGUENAU**, a town of France, in the dep. of the Lower Rhine, anciently an imperial town. It was taken by the French in 1673; the Imperialists retook it in 1702; after which it was several times taken and retaken by both parties; but at last the French got possession of it in 1706. It is divided by the Motter into two parts; and is seated in the Forest of Haguenau, 15 miles N. of Strasburg, and 255 E. of Paris. Near it, the French in Dec. 1793, defeated the allied army, and took 500 prisoners with 16 pieces of cannon. It has about 3,400 citizens. Lon. 7. 53. E. Lat. 48. 49. N.

**HAGYMAS**, a mountain of Hungary.

\* **HAH.** *Interj.* An expression of sudden effort.—

Her coats tuck'd up, and all her motions just,  
She stamps, and then cries *bab!* at ev'ry thrust. *Dryden.*

**HAHN**, Simon Frederick, a celebrated German historian. At ten years of age he was not only far advanced in the Latin, but understood several living languages. At 14, he delivered a speech on the origin of the cloyster at Bergen, his birth-place, which was printed; and in 1708, he published a Continuation of Meibomius's Chronicle of Bergen. After having for several years given public lectures at Hall, he became, at the age of 24, professor of history at Helmstadt; and was at length counsellor, historiographer, and librarian, to George I. He died in 1719, aged 37. Besides several other works, he wrote, 1. *The History of the Empire*, vol. 1. 2. *Collectio monumentorum veterum et recentium imperatorum*, 2 vols 8vo.

**HAHRAS**, a town of Egypt, 22 m. E. of Tineh.

**HAI**, a town of China, in the prov. of Kiangnan.

**HAICHBACH**, a town of Germany in Austria, 4 miles NNW. of Efferding.

**HAIDECK**, a town of Germany, in the circle and duchy of Bavaria, 20 miles S. of Nuremberg.

**HAIDING**, a town of Austria.

**HAIDUCKS**, a fierce and rapacious people of Maritime Austria, in Dalmatia, who live among the mountains and reside in caverns and woods. Four of them, (says Dr Oppenheim,) will attack and overcome 15 or 20 travellers.

**HAIFAR**,

**HAIFAR**, a town of Palestine, at the foot of Mount Carmel, on the S. side of a bay, 5 miles S.E. of Acre.

**HAIGERLOCH**, a town of Suabia, in the county of Hohenberg, 44 miles S.E. of Strasburg.

(1.) \* **HAIL**, *n. f.* [*hæil*, Sax.] Drops of rain frozen in their falling. *Locke*—

Thunder mix'd with hail,

Hail mix'd with fire, must send th' Egyptian sky.

(2.) **HAIL**, in natural history, a meteor generally defined *frozen rain*, but differing from it in that the hailstones are not formed of single pieces of ice, but of many little spherules agglutinated together. Neither are these spherules all of the same consistence; some being hard and solid like perfect ice; others soft, and mostly like snow hardened by a severe frost. Sometimes the hailstone has a kind of core of this soft matter; but more frequently the core is solid and hard, while the outside is formed of a softer matter. Hailstones are of various figures; some round, others pyramidal, crenated, angular, thin, and flat, and some stellated, with six radii like the small crystals of snow. Natural historians record various instances of surprising showers of hail, in which the hailstones were of extraordinary magnitude. Mezeray, speaking of the war of Lewis XII. in Italy, in 1510, relates, that there was for some time an horrible darkness, thicker than that of night; after which the clouds broke into thunder and lightning, and there fell a shower of hailstones, or rather (as he calls them) *pebble stones*, which destroyed all the fish, birds, and beasts of the country. It was attended with a strong smell of sulphur; and the stones were of a bluish colour, some of them weighing 100lb. *Hist. de France*, Tom. II. p. 339. At Lille in Flanders, in 1686, hailstones fell of a very large size; some of which contained in the middle a dark brown matter, which, thrown on the fire, gave a very great report. *Phil. Transf.* N° 303. Dr Halley and others relate, that in Cheshire, Lancashire, &c. April 29, 1697, a thick black cloud, coming from Caernarvonshire, disposed the vapours to congeal in such a manner, that for about the breadth of two miles, which was the limit of the cloud, in its progress for 60 miles, it did inconceivable damage; not only killing all sorts of fowls and other small animals, but splitting trees, knocking down horses and men, and even ploughing up the earth; so that the hailstones buried themselves under ground an inch or an inch and half deep. The hailstones, many of which weighed 5oz. and some 1lb. being 5 or six inches about, were of various figures: some round, others half round; some smooth, others embossed and crenated; the key substance of them was very transparent and hard, but there was a snowy kernel in the middle of them. In Hertfordshire, May 4, 1697, after a severe storm of thunder and lightning, a shower of hail succeeded, which far exceeded the former: some persons were killed by it, their bodies beat all black and blue; vast oaks were split, and fields of rye cut down as with a scythe. The stones measured from 10 to 13 or 14 inches about. Their figures were various, some oval, others picked, some flat. *Philos. Transf.* N° 329. Hail,

so far as has been discovered, never produces any beneficial effect. Rain and dew invigorate and give life to the whole vegetable tribe; frost, by expanding the water contained in the earth, pulverises and renders the soil fertile; snow covers and preserves the tender vegetables from being destroyed by too severe a frost. But hail does none of these. In winter, it does not sufficiently close to cover vegetables from the nipping frosts; and in spring and summer it not only has a chilling and blasting effect, but often does great damage to the more tender plants by the weight of the stones. In great hail storms the damage done in this manner is prodigious. Hail is one of the natural phenomena for which it is difficult to account in any satisfactory manner. It is certain, that on the tops of mountains hail stones, as well as drops of rain, are very small, and continually increase in bulk till they reach the lower grounds. It would seem, therefore, that during their passage through the air, they attract the congealed vapour which increases them in size. But here we are at a loss how they come to be solid hard bodies, and not always soft, and composed of many small flake like snow. The flakes of snow, no doubt, increase in size as they descend, as well as the drops of rain or hailstones; but why should the one be in soft crystals, and the other in large hard lumps, seeing both are produced from congealed vapour? Some modern philosophers ascribe the formation of hail to electricity. Signior Becaria supposes hail to be formed in the higher regions of the air, where the cold is intense, and where the electric matter is very copious. In these circumstances, a great number of particles of water are brought near together, where they are frozen, and in their descent collect other particles, so that the density of the substance of the hailstone grows less and less from the centre; this being formed first in the higher regions, and the surface being collected in the lower. Drops of rain and hail agree in this, that the more intense the electricity that forms them, the larger they are. Motion is known to promote freezing, and so the rapid motion of the electrified clouds may produce that effect. A more intense electricity also, he thinks, unites the particles of hail more closely than the more moderate electricity does those of snow. In like manner we see thunder clouds more dense than those that merely bring rain; and the drops of rain are larger in proportion, though they fall not from so great a height.

\* (3.) **HAIL**, *verb.* [*hæil*, health, Saxon; *hail*, therefore, is the same as *salve* of the Latins, or *dynon* of the Greeks, health be to you.] A term of salutation now used only in poetry; health be to you. It is used likewise to things inanimate.—

Hail, hail brave friend!

Say to the king the knowledge of the broil. *Shak.*

Her sick head is bound about with clouds:

It does not look as it would have a hail,

Or health wish'd in it, as on other morn.

*Ben Jonson.*

The angel hail

Bestow'd, the holy salutation us'd

Long after to blest Mary, second Eve. *Milton.*

Farewell, happy fields,

Where joy for ever dwells! hail horrors! hail infernal

Internal world ! and thou profoundest hell  
 Receive thy new possessor ! *Milton.*  
*All hail, he cry'd, thy country's grace and*  
*love ;*  
*Once first of men below, now first of birds above.*

*Dryden.*  
*Hail to the sun ! from whose returning light*  
*The cheerful soldier's arms new lustre shine.*

*Roscoe.*  
 (1.) \* To HAIL, *v. n.* [from the noun.] To  
 salute ; to call to.—A galley drawing near unto  
 the shore, was *hail'd* by a Turk, accompanied  
 with a troop of horsemen. *Kneller.*—

Thrice call upon my name, thrice beat your  
 breast,

And *hail* me thrice to everlasting rest. *Dryden.*

(2.) \* To HAIL, *v. n.* To pour down hail.—  
 My people shall dwell in a peaceable habitation  
 when it shall *hail*, coming down on the forest.  
*J. xxiii. 19.*

HAILBRON, a strong town of Germany in  
 Wittenberg, famous for its baths ; seated on the  
 Neckar, 5 miles NE. of Stuttgart. Lon. 9. 25.  
 E. Lat. 49. 19. N.

HAILES, Lord. See DALRYMPLE, N° 2.

HAILLAN, Bernard de Girard, lord of, a ce-  
 lebrated French historian. After having made  
 some figure in the literary world, Charles IX.  
 made him historiographer of France, in 1571.  
 His history of France extends from Pharamond  
 to the death of Charles VII. and is the first com-  
 plete history of that kingdom composed in the  
 French tongue. He was honoured by Henry III.  
 with several marks of favour. He died at Paris  
 in 1610.

HAILSHAM, or HALESHAM, a town of Suffex,  
 24 miles E. of Lewis, and 58 SSE. of London.

\* HAILSTOV. *n. s.* [*hail* and *shot*.] Small shot  
 scattered like hail.—The master of the artillery  
 did visit them sharply with murdering *hailshot*,  
 from the pieces mounted towards the top of the  
 hill. *Heywood.*

\* HAILSTONE. *n. s.* [*hail* and *stone*.] A particle  
 or single ball of hail.—

You are no sower, no,  
 This is the coal of fire upon the ice,  
 Or *hailstone* is the sun. *Shakespeare.*

Hard *hailstones* lie not thicker on the plain,  
 Nor shaken oaks such show'rs of acorns rain.

*Dryden.*

\* HAILY. *adj.* [from *hail*.] Consisting of hail.—

from E. to W. is between 60 and 70 leagues, and  
 from N. to S. 45 ; and about 480 miles in circums-  
 ference. KIUN-TEHROU-FOU is the capital. Two  
 different kinds of mandarins command here, the  
 literary and military. The greater part of the  
 island is under the emperor of China ; the rest is  
 independent, and inhabited by a free people, who  
 have never been subdued. Compelled to abandon  
 their plains and fields to the Chinese, they have  
 retreated to the mountains in the centre of the  
 island, where they are sheltered from their insults.  
 They formerly had a free correspondence with the  
 Chinese. Twice a-year they exposed, in an ap-  
 pointed place, the gold which they dug from their  
 mines, with their eagle wood and calamba, so much  
 esteemed by the Orientals. A deputy was sent to  
 the frontiers, to examine the cloths and other com-  
 modities of the Chinese, whose principal traders re-  
 paired to the place of exchange fixed on ; and after  
 the Chinese wares were delivered, they put into their  
 hands with the greatest fidelity what they had a-  
 greed for. The Chinese governors made immense  
 profits by this barter. The emperor Kang-hi, in-  
 formed of the prodigious quantity of gold which  
 passed through the hands of the mandarins by this  
 traffic, forbade his subjects, under pain of death,  
 to have any communication with these islanders ;  
 however, some private emissaries of the neighbour-  
 ing governors still find means to have intercourse  
 with them. The natives are very deformed, small  
 in stature, and of a copper colour : both men and  
 women wear their hair thrust through a ring on  
 their forehead ; and above they have a small  
 straw-hat, from which hang two strings that are  
 tied under the chin. Their dress consists of a piece  
 of black or dark blue cotton cloth, which reaches  
 from the girdle to their knees : the women have  
 robes of the same stuff, and mark their faces from  
 the eyes to the chin with blue stripes made with  
 indigo. Among their animals is a curious species  
 of large black apes, which have the shape and fea-  
 tures of a man ; they are said to be very fond of  
 women. There are also crows with a white ring  
 round their necks ; starlings which have a small  
 crescent on their bills ; black-birds of a deep blue  
 colour, with yellow ears rising half an inch ; and  
 a multitude of other birds, remarkable for their  
 colour or song. Besides mines of gold and lapis  
 lazuli, there are various kinds of curious and va-  
 luable wood. The predecessor of the late emper-  
 or Kien-Long caused some of it to be transport-  
 ed to Peking, at an immense expence, to adorn an  
 edifice which he intended for a mausoleum. The  
 most valuable is called by the natives HOALI, and  
 by the Europeans *rose* or *violet wood* from its  
 smell ; it is very durable, and of a beauty which  
 nothing can equal ; it is therefore reserved for the  
 use of the emperor. Hainan lies near San-cian,  
 between 18° and 20° Lat. N.

(1.) HAINAULT, a province of the Nether-  
 lands, formerly divided between France and Aus-  
 tria, but now wholly included in the French re-  
 public. It was bounded on the S. by Champagne  
 and Picardy ; on the N. by Flanders ; on the E.  
 by the duchy of Brabant, the county of Namur,  
 and the bishopric of Liege ; and on the W. by Ar-  
 tois and Flanders. Its extent from N. to S. was  
 about 45 miles, and about 48 from E. to W. The

air is temperate, and the soil fruitful: it abounds in rich pastures, corn-fields, woods, and forests; coal, iron, lead, marble, slates, &c. It is well watered by rivers and lakes, and breeds abundance of black cattle, and fine-woolled sheep. Its principal rivers are the Scheldt, the Selle, and the Den-gel. It contains 24 walled towns, and 950 villages. Under the old government it contained one duchy, several principalities, earldoms, and baronies; and 27 abbeys. The states consisted of the clergy, nobility, and commons, or deputies of the towns. This county had counts of its own, till 1436; when Philip the Good, D. of Burgundy, succeeded on the death of the countess Jaqueline, without issue. Before the revolution it was divided into Austrian and French Hainault.

1. HAINAULT, AUSTRIAN, the N. part of the above province, (N<sup>o</sup> 1.) was formerly divided into 330 communes. After the battle of Gemappes, the whole country submitted to the French; and on the 1d March, 1793, it was, at the request of the inhabitants, annexed to the French republic, and erected into the department of GEMAPPES. See GEMAPPES, N<sup>o</sup> 1 & 2. Mons is the capital.

2. HAINAULT, FRENCH, the S. part of the above province, was acquired under the old French government, partly by the peace of the Pyrenees, and partly by those of Nimeguen and Ryswick. Upon the revolution in 1789, it was erected, along with the ci-devant French Flanders, and Cambresis, into the department of the NORTH. Douay is the capital.

(II.) HAINAULT, a forest of England, in Essex, so named from its having been anciently stocked with deer from the above province, (N<sup>o</sup> 1.) There is a very large oak in it, called *Fairlop*, the branches whereof extend over an area of 300 feet in circumference, where an annual fair has been long held on the 22d of July. The *Hainault Foresters*, a society of the principal gentlemen and ladies in the country, march round this tree in their uniforms.

(1.) HAINBURG, or HAIMBURG, a town of Austria, on the Danube. In 1485, it was taken by Matthias K. of Hungary. It has a cloth manufacture, and lies 8 miles W. of Presburg, and 20 SSE. of Vienna. Lon. 34. 6. E. of Ferro. Lat. 48. 6. N.

(2.) HAINBURG, a town of Bavaria, 10 miles NW. of Velburg, and 20 WSW. of Amberg.

HAINÉ, or HAINNA, a river of the French republic, in the dep. of Gemappes, and ci-devant prov. of Austrian Hainault, which it runs through from E. to W. passing by Mons and St Glulau, and falls into the Scheldt at Condé.

HAINFELDEN, a town of Germany, in Austria, 20 miles SW. of Vienna.

HAINGEN, a town of Suabia, 21 miles SW. of Ulm.

HAINSTAL, a town of Austria, 4 m. E. of Laab.

(1.) \* HAIR. *n. f.* (*har*, Saxon.) 1. One of the common teguments of the body. It is to be found upon all the parts of the body, except the soles of the feet and palms of the hands. When we examine the hairs with a microscope, we find that they have each a round bulbous root, which lies pretty deep in the skin, and which draws their nourishment from the surrounding humours: that

each hair consists of 3 or 6 others, wrapt up in a common tegument or tube. They grow as the nails do, each part near the root thrusting forward that which is immediately above it, and not by any liquor running along the hair in tubes, as plants grow. *Quincy.*

My fence of woolly hair uncurls. *Shakspeare.*  
—Shall the difference of hair only, on the skin, be a mark of a different internal constitution between a changeling and a dril? *Locks.* 2. A single hair.

Naughty lady,  
These hairs which thou do'st ravish from my chin,

Will quicken and accuse thee. *Shak. King Lear.*

Much is breeding;  
Which, like the courser's hair, hath yet but life,  
And not a serpent's poison. *Shak. Ant. and Cleop.*

3. Any thing proverbially small.—  
If thou tak'st more

Or less than just a pound; if the scale turn  
But in the estimation of a hair,

Thou diest. *Shak. Merchant of Venice.*

—He judges to a hair of little indecencies, and knows better than any man what is not to be written. *Dezob.* 4. Coarse; order; grain; the hair falling in a certain direction.—He is a curer of souls, and you a curer of bodies: if you should fight, you go against the hair of your profession. *Shakspeare's Merry Wives of Windsor.*

(2.) HAIR, (§ 1, def. 1.) consists of small filaments issuing out of the pores of the skins of animals; and serving most of them as a covering. See ANATOMY, *Index.* Hair grows longest on the head, chin, and breast; in the arm pits, and about the privities. Hairs ordinarily appear round or cylindrical; but the microscope also discovers triangular and square ones; which diversity of figure arises from that of the pores, to which the hairs always accommodate their form. Their length depends on the quantity of the proper humour to feed them, and their colour on the quality of that humour: whence, at different stages of life, the colour usually differs. Their extremities split into 2 or 3 branches, especially when kept dry, or suffered to grow too long; so that what appears only a single hair to the naked eye, seems a brush to the microscope. The hair of a mouse, viewed by Mr Derham with a microscope, seemed to be one single transparent tube, with a pith made up of fibrous substance, running in dark lines, in some hairs transversely, in others spirally. The darker medullary lines, he observes, were small fibres convolved, and lying closer together than in the other parts of the hair. They run from the bottom to the top of the hair; and he imagines, may serve to make a gentle evacuation of some humour out of the body. Hence the hair of hairy animals, may not only serve as a fence against cold, &c. but as an organ of insensible perspiration. Citizen Monge has made some curious observations on hair and wool. The surfaces of these bodies (he says,) are not smooth; they seem to be formed either of small laminae placed over each other in a slanting direction from the root towards the point, like the scales of fish; or of zones placed one upon another, as in the horns of animals. When a hair is laid hold of by the root in one hand, and drawn between the fingers of the other, from the root towards

with the point, scarce any friction or resistance is found, and no noise is heard; but, if grasped in the point, it be passed to the same motion, the fingers of the other hand, from towards the root, a resistance is felt, a resistance evident to the touch, and a noise distinctly heard. It is obvious therefore, that the texture of the surface of hair is not the same from the root towards the point, as it is from the point towards the root. These observations are equally applicable to the filaments of the surface of these bodies is therefore not the same, but upon each other like the root to the point. And it is this which is the principal cause of the difference, which the hair of animals possesses. See HAT MAKING.

Hair, in surgery. See FARRIERY, PART I, PART III, Sect. XIV, § 1 & III.

Hair, ANCIENT AND MODERN OPINIONS CONCERNING. The ancients held the hair a sort of excrement, fed only with excrementitious matter, not a proper part of a living body. They considered it a generated of the fuliginous parts of the body, exhaled by the heat of the body to the surface, and there condensed in passing through the pores. Their chief reasons were, that the hair does not grow again, even in extreme old age, when life is very low; that in hectic and other fevers, where the rest of the body is wasting, the hair thrives; nay, that it grows again in dead carcases. They held, that hair does not feed and grow like the other parts, by intussusception, i. e. by a juice entering it; but, like the nails, by juxtaposition. But the moderns are agreed, that hair properly and truly lives, and requires to fill it like the other parts; whence hence, that the roots do not grow and persons looser than the extremities, and the whole changes colour at once; whence there is a direct communication, and all the parts are affected alike. In strict propriety, however, it must be allowed, that the growth of hairs is of a different kind from that of the rest of the body; and is not immediately and reciprocated therewith. The nature of vegetation. They compare it to plants, as some plants shoot from the roots of others; from which though they draw nourishment, yet each has, as it were, its own life and economy. They derive their food from the juices in the body, but not from the rest of the body; whence they may suppose the body be starved. Wulferus, in his *Physiologiae Collectione*, gives an account of a woman buried at Norimberg, whose grave being opened 43 years after her death, hair was found growing plentifully through the cloths of the coffin. The cover being removed, the whole appeared in its perfect shape; but, from the top of the head to the sole of the foot, covered with thick-set hair, long and curled. The woman going to handle the upper part of the head, the hair fell at once, leaving the body as bare as a handful of hair: there was neither flesh nor any other bone left; yet the hair was found and strong. Mr Arnold, in the same

collection, gives a relation of a man hanged for theft, who, in a little time, while he yet hung upon the gallows, had his body strangely covered over with hair. Bume, however, doubts the authenticity of these and similar instances.

(5.) HAIR, ANCIENT CUSTOMS RESPECTING THE WEARING OF. By the Jews hair was worn naturally long, just as it grew; but the priests had theirs cut every fortnight, while waiting at the temple; they used scissars only. The Nazarenes, while their vow continued, were forbidden to touch their heads with a razor. See NAZARITES. The falling off of the hair, or a change of its colour, was regarded amongst the Hebrews as a sign of the leprosy. Black hair was esteemed by them as the most beautiful. Absalom's hair was cut once a-year, and is said to have weighed 200 shekels, or 31 oz. The law of God gives no particular ordinances with respect to the hair. The hair of both Jewish and Grecian women engaged a principal share of their attention, and the Roman ladies seem to have been no less curious with respect to theirs. They generally wore it long, and dressed it in various ways, ornamenting it with gold, silver, pearls, &c. On the contrary, the men amongst the Greeks and Romans, and amongst the later Jews, wore their hair short, as may be collected from books, medals, statues, &c. This formed a principal distinction in dress between the sexes. This observation illustrates a passage in St Paul's epistle to the Corinthians, (1 Cor. xi. 4, 5, 6.) where he forbids the Corinthian women, when praying by divine inspiration, to have their hair dishevelled; because this made them resemble the heathen priestesses, when actuated by the pretended influence of their gods. Amongst the Greeks, both sexes, a few days before marriage, cut off and consecrated their hair as an offering to their favourite deities. It was also customary among them to hang the hair of the dead on the doors of their houses previous to interment. They likewise tore, cut off, and sometimes shaved their hair, when mourning for their deceased friends, which they laid upon the corpse or threw into the pile, to be consumed together with the body. The ancients imagined that no person could die till a lock of hair was cut off; and this act they supposed was performed by the invisible hand of death, or Iris, or some other messenger of the gods. This hair, thus cut off, they fancied consecrated the person to the infernal deities, under whose jurisdiction the dead were supposed to be. It was a sort of first fruits which sanctified the whole. (See Virg. *Æn.* 9. 694.) Whatever was the fashion, with respect to the hair, in the Grecian states, slaves were forbidden to imitate the freemen. Their hair was always cut in a particular manner, called *trichonotia*, which they no longer retained after they procured their freedom. Both the Greeks and Romans wore false hair. The ancient Gauls esteemed it an honour to have long hair; whence the appellation *Gallia Comata*. Julius Cæsar, on subduing the Gauls, made them cut off their hair as a token of submission. In imitation of this, such as afterwards quitted the world to live in cloisters had their heads shaven, to show that they bid adieu to all earthly ornaments, and made a vow of perpetual subjection

to their superiors. The ancient Britons were proud of the length and beauty of their hair, and were at much pains in dressing it. Some of them carried this to an extravagant height. A young warrior, who was taken prisoner and condemned to be beheaded, requested that no slave might be permitted to touch his hair, which was remarkably long and beautiful, and that it might not be stained with his blood. We hardly ever meet with a description of a fine woman or beautiful man in Ossian's Poems, but their hair is mentioned as one of their greatest beauties. Not content with the natural colour of their hair, which was commonly fair or yellow, they used washes to render it still brighter. One of these was a composition of lime, the ashes of certain vegetables, and tallow. They used various arts also to make the hair of their heads grow thick and long; which last was considered as a mark of dignity and noble birth. Boudicca, queen of the Iceni, is described by Dio with very long hair, flowing over her shoulders, and reaching down below the middle of her back. The Britons shaved their beards, all but their upper lips; the hair of which they, as well as the Gauls, allowed to grow to a very inconvenient length. In after-times, the Anglo Saxons and Danes also considered fine hair as one of their greatest ornaments, and were at great pains in dressing it. Young ladies before marriage wore their hair uncovered and untied, flowing in ringlets over their shoulders; but as soon as they were married they cut it shorter, tied it up, and put on a head-dress. To have the hair entirely cut off was so great a disgrace, that it was a punishment inflicted on women guilty of adultery. The Danish soldiers who were quartered upon the English, in the reigns of Edgar and of Ethelred II. were particularly attentive to the dressing of their hair; which they combed at least once every day, and thereby captivated the affections of the English ladies. Gregory of Tours assures us, that in the royal family of France, it was long the peculiar mark and privilege of kings and princes of the blood to wear long hair, dressed and curled: all others wore it polled, or cut round, in sign of inferiority. Some say that there were different cuts for all the different qualities and conditions; from the prince who wore it at full length, to the slave or villain who was quite cropped. — To cut off the hair of a prince under the first race of French kings, was to declare him excluded from the right of succeeding to the crown. In the 8th century, people of quality had their children's hair cut the first time by persons they had a particular esteem for; who hence were reputed a sort of spiritual parents or godfathers. And long before this, Constantine sent the pope the hair of his son Heraclius, as a token that he desired him to be his adoptive father.

(6.) HAIR, CLERICAL ZEAL AGAINST WEARING LONG. Pope Anicetus is said to have been the first who forbade the clergy to wear long hair: but the prohibition is of an older date in the churches of the east; and the letter, wherein that decree is written, is much later than that pope. The clerical tonsure is related by Isidorus Hispalensis, as of apostolical institution. Long hair was anciently held so odious, that there is a canon still extant, of 1096, importing, that such

as wore long hair should be excluded coming into church while living, and not be prayed for when dead. Luitprand made a furious declamation against the emperor Phocas, for wearing long hair. The French historians have been very exact in describing the hair of their kings. Charlemagne wore it very short; his sons shorter; Charles II. had none at all. Under Hugh Capet it began to appear again; but the priests excommunicated all who let their hair grow. Peter Lombard expostulated so warmly with Charles VI. that he cut off his hair; and his successors for some generations wore it very short. A professor of Utrecht, in 1630, wrote expressly on the question, Whether it be lawful for men to wear long hair? and concluded for the negative. — Another divine, named Reves, who had written for the affirmative, replied to him. The clergy, both secular and regular, were obliged to shave the crowns of their heads, and keep their hair short, which distinguished them from the laity; and several canons were made against their concealing their tonsure, or allowing their hair to grow long. The shape of this clerical tonsure was the subject of long and violent debates between the English clergy on the one hand, and those of the Scots and Picols on the other; that of the former being circular, and that of the latter only semicircular. Long flowing hair was universally esteemed a great ornament; and the tonsure of the clergy was considered as an act of mortification and self-denial, to which many of them submitted with reluctance, and endeavoured to conceal as much as possible. Some, who pretended to superior sanctity, inveighed with great bitterness against the long hair of the laity; and laboured to persuade them to cut it short, in imitation of the clergy. Thus St Wulfstan, Bp. of Worcester, declaimed with great vehemence against luxury of all kinds, but chiefly against long hair as most criminal and most universal. "When any of those vain people who were proud of their long hair, (says William of Malmesbury) bowed their heads before him to receive his blessing, before he gave it, he cut a lock of their hair with a little knife, which he carried about him for that purpose; and commanded them, by way of penance of their sin, to cut all the rest of their hair in the same manner. If any of them refused to comply with this command, he denounced the most dreadful judgments upon them, reproached them for their effeminacy, and foretold, that as they imitated women in the length of their hair, they would imitate them in their cowardice when their country was invaded; which was accomplished at the landing of the Normans." This continued to be long a topic of declamation among the clergy, who even represented it as one of the *greatest crimes*, and most certain marks of reprobation. Anselm Abp. of Canterbury went so far as to pronounce the then terrible sentence of excommunication against all who wore long hair, for which pious zeal he is very much commended. Serlo, a Norman bishop, acquired great honour by a sermon which he preached before Henry I. in 1104, against long and curled hair, with which the king and all his courtiers were so much affected, that they consented to resign their flowing ringlets, of which they had been so vain. The prudent prelate gave

them no time to change their minds, but immediately pulled a pair of shears out of his sleeve, and performed the operation with his own hand. Another incident happened about 25 years after, which gave a temporary check to the prevailing fad for long hair. "An event happened, A.D. 1129, (says a cotemporary historian) which seemed very wonderful to our young gallants; who, forgetting that they were men, had transformed themselves into women by the length of the hair. A certain knight, who was very proud of his long luxuriant hair, dreamed that a person dislocated him with its curls. As soon as he awoke, he cut his hair to a decent length. The report of this spread over all England, and almost all the knights reduced their hair to the proper standard. But the reformation was not of long continuance; for in less than a year all who wished to appear fashionable returned to their former wickedness, and contended with the ladies in length of hair. Those to whom nature had denied that ornament supplied the defect by art."

(7.) **HAIR, COMMERCE AND USES OF.** Hair makes a very considerable article in commerce, especially since perukes have been worn. The hair of the growth of Britain and other northern countries, is valued much beyond that of Italy, Spain, the south parts of France, &c. The goodness of hair consists in its being well fed, and neither too coarse nor too slender; the bigness rendering it less susceptible of the artificial curl, and disposing it rather to frizzle, and the smallness making its curl of too short duration. Its length should be about 25 inches; the more it falls short of this the less value it bears. There is no certain price for hair. It is sold at from 3s. to 5l. per lb. according to its quality. Hair is also used in various other arts and manufactures. The hair of beavers, horses, conies, &c. is the principle matter wherewith hats are made. Spread on the ground, and left to rotify on corn lands, hair, like all other animal substances, proves good manure.

(8.) **HAIR DISEASES OF THE.** Almost the only disease of the hair, besides the remarkable one called *PLAGA POLONICA*, is baldness, or its falling off. For this many remedies have been recommended, but scarce any of them can be depended upon. The juice of burdock, and the lixivial salts or emulsions, are said to be efficacious; also the powder of hermodactyla, and the decoction of hawthorn. A remarkable instance of the efficacy of this last is given under *BUXUS*, § 2. Some authors give instances of the hair changing its colour in a short time, through grief, a fright, &c.

(9.) **HAIR, DYEING, BLEACHING AND CURLING OF.** The scarcity of grey and white hair has made the dealers fall upon methods of reducing other colours to this. This is done by spreading the hair in a brush on the grass like linen, after first washing it out in a lixivious water. This lye, with the force of the sun and air, brings the hair to so perfect a whiteness, that the most experienced person may be deceived; there being scarce any way of detecting the artifice, but by boiling and drying it which leaves the hair of the colour of a dead mouse's tail. There is also a method of dyeing hair with bismuth, which renders such white hair as burdens too much upon the yellow of a

bright silver colour: boiling is the proof of this too, the bismuth not being able to stand it. Hair may also be changed from a red, grey, or other disagreeable colour, to a brown or deep black, by a solution of silver. The liquors sold under the name of *hair waters*, are at bottom only solutions of silver in aquafortis, largely diluted with water, with the addition perhaps of other ingredients, which contribute nothing to their efficacy. The solution should be fully saturated with the silver, that there may be no more acid in it than is necessary for holding the metal dissolved; and besides dilution with water, a little spirit of wine may be added for the further dulcification of the acid. It must be observed, that for diluting the solution, distilled water, or pure rain water, must be used; the common spring waters turning it milky, and precipitating a part of the dissolved silver. If the liquor touches the skin, it has the same effect on it as on the hair, changing the part moistened with it to an indelible black. Hair may also be dyed of any colour in the same manner as wool. See *DYEING*, PART II, *SECT. I.* Hair, which does not curl or buckle naturally, is brought to it by boiling and baking it, thus: After having picked and sorted the hair, and disposed it in parcels according to its lengths, they roll them up and tie them tight down upon little cylindrical instruments, either of wood or earthen ware, a quarter of an inch thick, and hollowed a little in the middle, called *pipes*; in which state they are put in a pot over the fire, there to boil for about two hours. When taken out, they let them dry; and when dried, they spread them on a sheet of brown paper, cover them with another, and thus send them to the pastry cook; who making a crust around them of common paste, sets them in an oven till the crust is about 1/4th baked. The end by which a hair grew to the head is called the *head of the hair*; and the other, with which they begin to give the buckle, the *point*. Formerly the peruke-makers made no difference between the ends, but curled and wove them by either indifferently; but this made them unable to give a fine buckle; hair woven by the point never taking a right curl. Foreigners own themselves obliged to the English for this discovery, which was first carried abroad by a British peruke-maker.

(10.) **HAIR, INSTANCES OF THE INTERNAL GROWTH OF.** Though the external surface of the body is the natural place for hairs, we have many well attested instances of their being found also on the internal surface. Amatus Lusitanus mentions a person who had hair upon his tongue. Pliny and Valerius Maximus say, that the heart of Aristomenes the Messenian was hairy. Celsus Rhodiginus relates the same of Hermogenes the rhetorician; and Plutarch, of Leonidas, king of Sparta. Hairs are said to have been found in the breasts of women, and to have occasioned the distemper called *trichiasis*; but some authors are of opinion, that these are small worms and not hairs. There have been, however, various and indisputable observations of hairs found in the kidneys, and voided by urine. Hippocrates says, that the glandular parts are the most subject to hair; but bundles of hair have been found in the muscular parts of beef, and in parts of the human body equally firm.

Hair has been often found in abscesses and imposthumes. Schultetus, opening the abdomen of a woman, found 12 pints of water, and a large lock of hair swimming loose in it. But of all the internal parts, there is none so much subject to an unnatural growth of hair as the ovaries of females. Of this Dr Tyken relates 3 remarkable instances: two of these were young women; the other was a bitch. The animal had been much emaciated in its hinder parts; the hair was about an inch and a half long: but the most remarkable particular was, that hair was also found lying loose in the cavities of the veins. There are instances of mankind being affected in the same manner. Cardan relates, that he found hair in the blood of a Spaniard: Sionavius in that of a gentlewoman of Cracovia; and Schultetus declares from his own observation, that those people, who are afflicted with the *plica polonica*, have very often hair in their blood.

(11.) HAIR OF PLANTS, or DOWN, a general term expressive of all the hairy and glandular appearances on the surface of plants, to which they are supposed to serve the double purpose of defensive weapons and vessels of secretion. These hairs are minute threads of greater or less length and solidity; some of them visible to the naked eye; whilst others are rendered visible only by the help of glasses. Examined by a microscope, almost all the parts of plants, particularly the young stalks or stems, appear covered with hairs. These appear under various forms; in the leguminous plants, they are generally cylindric; in the malvæ tribe, terminated in a point; in agrimony, shaped like a fish-hook; in nettle, awl-shaped and jointed; and in some compound flowers with hollow or funnel-shaped florets, they are terminated in two crooked points. Probable as some experiments have rendered it, that the hairs on the surface of plants contribute to some original secretion, their principal use seems to be, to preserve the parts in which they are lodged from the bad effects of violent frictions, from winds, from extremes of heat and cold, and such like external injuries. M. Guettard who established a botanical method, from the form, situation, and other circumstances of the hairy and glandular appearances on the surface of plants, has demonstrated, that these appearances are generally constant and uniform in all the plants of the same genus. The same uniformity seems to characterise all the different genera of the same natural order. The different sorts of hair, which form the down upon the surface of plants, were imperfectly set down by Grew in 1682, and by Malpighi in 1686. M. Guettard was the first who examined the subject both as a botanist and a philosopher. His observations were published in 1747.

(1.) \* HAIRBELLS. *n. s.* The name of a flower; hyacinth.

(2.) HAIRBELLS. See HYACINTHUS.

\* HAIRBRAINED. *adj.* [This should rather be written *hairbrained*, unconstant, unsettled, wild as a hare.] Wild; irregular; nonsensy.—

Let's leave this town; for they are *hairbrained* raves,

And hunger will enforce them to be more eager.

Shak.

\* HAIRBREADTH. *n. s.* [hair and breadth.] A very small distance; the diameter of a hair.—Seven hundred chosen men left handed could sing from an *hairbreadth*, and not miss. *Judges* 12. 16.—

I spoke of most disastrous chances,

Of moving accidents by flood and field;

Of *hairbreadth* 'scapes in the imminent deadly breach.

Shak.

(1.) \* HAIRCLOTH. *s. f.* [hair and cloth.] See made of hair, very rough and prickly, worn sometimes in mortification.—It is composed of root and part of plants woven together like a piece *haircloth*. *Grew's Museum*.

(2.) HAIR CLOTHS, in military affairs, are large pieces of cloth made with half hair; used for covering the powder in waggons, and upon batteries; also charged bombs, hand grenades, &c. magazines.

\* HAIRINESS. *n. s.* [from hairy.] The state of being covered with hair, or abounding with hair.

\* HAIRLACE. *n. s.* [hair and lace.] The fil with which women tie up their hair.—Some wear are commonly resembled to a woman's *hair* or fillet, thence called *tenia*. *Harvey*.—

If Molly happens to be careless,

And but neglects to warm her *hairlace*,

She gets a cold as sure as death.

Shak.

\* HAIRLESS. *adj.* [from hair.] Wanting hair. White beards have arm'd their chin and *hairless* scalps

Against thy majesty.

Shak.

HAIR-POWDER. See STARCH.

HAIR-WORM. See GORRION, N° II. § 1.

\* HAIRY. *adj.* [from hair.] 1. Overgrown with hair; covered with hair.—

She his *hairy* temples then had rounded

With coronet of flowers.

Shak.

—Children are not *hairy*, for that their skin more perspirable. *Baron*. 2. Consisting of hairs.

Storms have fled

From thence the *hairy* honours of their head

Dry

HAIRNET. See HAIR.

HAIRNEAU, a river of the French republic which runs into the Haine at Condé.

HAIR-TANG, a beautiful Chinese shrub, usually brought from the bottom of the rocks which border the sea-coast. It has been cultivated in China for more than 24 centuries; and is cited as often in the works of the Chinese poets and liars as in those of ours. Painters and embroiderers ornament all their works with it like and flowers. The stalk of the hair-tang a cylindric form, and shoots forth a number of branches of a purple tint towards their base, full of knots, which are also of a purple colour round the edges. It produces a number of flowers the tallest of which are about 2½ feet high. The leaves, which are much indented, of an oval shape, and full of small prickles, grow almost opposite one another on the branches, and at some distance as the knots. Their colour at first a deep green; that below is much lighter, and most effaced by their fibres, which are large of a delicate purple: all these leaves together a beautiful effect. The flowers grow in hu-

at the extremities of the branches. Each flower is composed of 4 petals, two great and two small, resembling in colour the bloom of a peach tree, and which have almost the same figure as the blossom of our cherry trees. The two large are cemented one upon the other, in the form of a purse; and when they blow, the two small blow also in their turn; and then the whole 4 represent a cross. The pistil is composed of very bright yellow grains, which separate gradually one from another by the lengthening of the filaments to which they adhere; they then open into little bells, and compose a small yellow tuft, supported by a slender stalk, which rises above the petals. The calyx, which sustains each of the flowers, is composed of two purple-coloured leaves, united in form of a purse. In proportion as the flowers grow and increase in size, the two leaves of the calyx open, become pale and dry, and drop off. The flowers, supported by small stalks, separate one from the other, and produce of themselves other flowers which rise up from a new calyx. This plant is propagated from seed, but with difficulty. It thrives best in a sandy soil; dung or mould destroys it; and great care must be taken to refresh it with the purest water. As it cannot endure the sun in any season, it is always planted below walls that are exposed to the north. It generally begins to flower about the end of August. After it has produced seed, all its branches are cut; and it commonly shoots forth new ones before the spring following; but it is necessary to keep up gravel and pieces of brick round its roots, to prevent them from rotting. Notwithstanding all the care that is taken to cultivate this tree at Peking, it does not thrive so well there as in the eastern provinces. The smell of its leaves has a affinity both to that of the rose and the violet; but is weaker, and never extends to any great distance.

**HAI-TCHUW**, a town of China, in Fo-kien.

**HATTETSKULA**, a town of Croatia, 14 miles E. of Novi.

**HAI-YEW**, a town of China, in Tche-kiang.

**HAIYKAN**, a country of Indostan, on the W. side of the Sind, between Meccan and Moultan.

(1.) \* **HAKE**. *n. s.* A kind of fish.—The coast abounded with mackerel and *bake*. *Carver*.

(2.) **HAKK**, is the English name of a fish common in the British sea, called by some Zoologists, *HALIOTIS* and *LUCIUS MARINUS*. These fish were used of old dried and salted. Hence the proverb in Kent, *As dry as a bake*. See *GADUS*, p. 6.

**HAKELSDORF**, a town of Bohemia.

(1.) **HAKEWILL**, George, a learned English divine, the son of a merchant in Exeter, where he was born in 1579. He was educated at Oxford, became fellow of Exeter College, and was afterwards elected rector of it. He was appointed chaplain to Prince Charles, archdeacon of Surrey and rector of Heanton; but was never promoted higher on account of his zealous opposition to Fr. Charles's marriage with the infant of Spain, for which he was imprisoned in 1611. His chief work is, "An Apology or Declaration of the Power and Providence of God, in the Govern-

ment of the World." fol. 1639. He died at Heanton in 1649.

(2.) **HAKWILL**, William, elder brother to George, (N<sup>o</sup> 1.) was educated at Exeter college; whence he removed to Lincoln's Inn, and became eminent in the Law. He was a Puritan, and had great interest with the republican party during the civil war. He wrote several tracts: particularly, "The liberty of the subject against the pretended power of impositions; 1641. 4to.

**HAKINGO**, a town of Austria, 6 miles W. of Vienna.

**HAKLOPEN**, a town of Bohemia.

**HAKLUYT**, Richard, a naval historian, supposed to have been born in London about 1533, and descended of a genteel family in Herefordshire. He was educated at Westminster, and in 1570, removed to Oxford; where he applied to the study of cosmography, and read public lectures in that science. Sir Edward Stafford being sent ambassador to France in 1583, Mr Hakluyt was one of his attendants. He was at this time M. A. and professor of divinity. In 1585, he was made prebendary of Bristol, during his residence at Paris. In searching the French libraries, he found a valuable history of Florida, which he published at his own expence, in French, and soon after revised and republished Peter Martyr's book *De orbe novo*. After 5 years residence in France, he returned to England. In 1589, he published his *Collection of Voyages*, in one vol. fol. which, in 1598, was republished in three. In 1605, he was made prebendary of Westminster, which, with the rectory of Wetheringset, was the summit of his preferment. He died in 1616. He was a faithful historian. His works, besides those above mentioned, are, 1. A *Collection of Voyages and Discoveries*, a small volume. 2. *The Discoveries of the World, from the Original to the Year 1535*, written in the Portugal tongue by Ant. Galvano; corrected, much amended, and translated into English, by Richard Hakluyt. 3. *Virginia richly valued by the Description of the Main Land of Florida, her next Neighbour, &c.* written by a Portugal gentleman of Elvas, and translated, by Richard Hakluyt. Besides these, he left several MSS. which were printed in Purchas's collection.

**HAKMAN**, a town of Ceylon, 80 m. S. of Candi.

\* **HAKOT**. *n. s.* [from *bake*.] A kind of fish. *Abusworth*.

\* **HAL**, in local names, is derived like *al* from the Saxon *halla*, i. e. a hall, a palace. In Gothic *hal* signifies a temple, or any other famous building. *Gibson's Camden*.

**HALAI**, a village of Abyssinia, on the top of Mount Taranta, inhabited by shepherds.

**HALBAU**, a town of Lusatia.

**HALBENDORF**, a town of Silesia.

(1.) \* **HALBERD**. *n. s.* [*kalebrar*, Fr. *halle-barde*, Dutch, from *barde*, an axe, and *halle*, a court, halberds being the common weapons of guards.] A battle axe fixed to a long pole.—

Advance thy halberd higher than my breast.

*Shak.*

Our halberds did shut up his passage. *Shak.*

Four knives in garbs succinct, a trusty band,

*C. 12*

Cape on their heads, and *halberds* in their hand,  
Drawn forth to combat on the velvet plain.

*Pope.*

(1.) **HALBERDS**, or **HALBERTS**, are a kind of spears, carried by the sergeants of foot and dragoons. The shaft is about 5 feet long, and made of ash or other wood. The head is armed with a steel point, not unlike the point of a two-edged sword. Besides this sharp point which is in a line with the shaft, there is a cross piece of steel, flat and pointed at both ends; but generally with a cutting edge at one extremity, and a bent sharp point at the other; so that the halbert serves equally to cut down or to push withal. It is also useful in determining the ground between the ranks, and adjusting the files of a battalion. It was anciently a common weapon in the army, where there were companies of halberdiers. It is said to have been used by the Amazons, and afterwards by the Rhætians and Vindelicians about A. D. 570. It was called the *Danish ax*, because the Danes bore an halbert on the left shoulder. From the Danes it came to the Scots, from the Scots to the English Saxons, and from them to the French.

• **HALBERDIER**. *n. s.* [*halberdier*, Fr. from *halberd*.] One who is armed with a halberd.—The duchess appointed him a guard of 30 *halberdiers*, in a livery of murrey and blue to attend his person. *Bacon*.—The king had only his *halberdiers* and fewer of them than used to go with him. *Clarendon*.

(1.) **HALBERSTADT**, a principality of Germany, in the circle of Lower Saxony, bounded on the NE. by the duchy of Magdeburg, on the S. by the principality of Anhalt, on the W. by the diocese of Hildesheim, on the E. by the Electorate of Saxony, and on the N. by Wolfenbuttel. It is near 40 miles long and 30 broad. The soil is fertile in corn and flax; and there are some woods, though fuel is scarce. There are 3 large towns in it, which send representatives to the diet; 20 small ones; and 91 county towns and villages. The number of the inhabitants is computed at about 300,000; the greatest part of them are Lutherans; but there are also Calvinists, Jews, and Roman Catholics. The manufactures are chiefly woollen, sheep being numerous; the exports are grain, and a kind of beer called *broihun*. The annual revenue amounts to 900,000 rix-dollars. By the treaty of Westphalia, in 1648, this country was transferred to the house of Brandenburg. It is entitled to a vote in the diets of the empire and the circle. The chief towns are HALBERSTADT, (N° 1.) Groningen, Oschersleben, and Osterwick.

(1.) **HALBERSTADT**, the capital of the above principality, (N° 1.) is seated near the Motheim. It has a cathedral, 15 churches, and other handsome buildings. It has an inn which is said to be the largest and to have the best accommodations of any in Europe. In 1179, it was burnt by Henry the Lion. In 1803, it was walled and moated. In 1759, the French demolished its gates, and part of the walls. It lies 30 miles SW. of Magdeburg, and 34 SSE. of Brunswick. Lon. 11. 29. E. Lat. 51. 54. N.

**HALBERT**, or **HALBAR**. See **HALBERD**.

(1.) • **HALCYON**. *n. s.* [from the noun.] Placid; quiet; still; peaceful.—

When great Augustus made war's tempest cease,

His *halcyon* days brought forth the arts of peace.

*Drabam.*

—No man can expect eternal serenity and *halcyon* days from so incompetent and partial a cause, as the constant course of the sun in the equinoctial circle. *Bratley*.

(1.) • **HALCYON**. *n. s.* [*halcyon*, Lat.] A bird, of which it is said that she breeds in the sea, and that there is always a calm during her incubation.

Such smiling rogues, as these, sooth ev'ry passion,

Bring oil to fire, snow to their colder moods;  
Renege, affirm, and turn their *halcyon* beaks  
With ev'ry gale and vary of their masters. *Shak.*

Amidst our arms as quiet you shall be,

As *halcyons* brooding on a Winter sea. *Dryden.*

(3) **HALCYON**. See **ALCYON**.

(4.) **HALCYON DAYS**, in antiquity, a name given to seven days before and as many after the winter solstice; when the halcyon, invited by the calmness of the weather, laid her eggs in nests built in the rocks, close by the brink of the sea. Hence the phrase became proverbial.

**HALCZYN**, a town of Poland, in Bracław.

**HALDANE**, John, a very eccentric genius of the 18th century, born in Edinburgh about the end of the 17th. He was one of the old Covenanters, commonly called CAMERONIANS, or CARCILLITES; (See these articles.) and adhered to their principles, both religious and political, in their most rigid form; of which he gave evidence by publishing various pamphlets in support of them. Of these the most remarkable was entitled *The active Testimony, of the true Presbyterians of Scotland, against the late unright invasion by Charles pretended Prince of Wales, and William pretended Duke of Cumberland, &c.* published at Edinburgh, in 1744, 8vo. He died about 1770.

**HALDE**, John Baptist Du, a learned French Jesuit, born at Paris in 1674. He was well versed in Asiatic geography, and compiled a work entitled *Grand description de la Chine & de la Tartarie*, from original memoirs of the Jesuitical missionaries, in 4 vols folio. He was also concerned in a collection of letters begun by father Gobien, called *Des Lettres Edifiantes*, in 18 vols; and published some Latin poems and orations. He died in 1743.

**HALDENSLEBEN**, a town of Germany, in Lower Saxony, 12 miles N. of Magdeburg.

(1.) **HALDENSTEIN**, a ci-devant barony of the Grisons, 2 miles N. of Coire, now included in the Helvetic republic; containing a village and 400 citizens.

(2.) **HALDENSTEIN**, a village of the Helvetic republic, in the above barony.

(1.) **HALE**, Sir Matthew, lord chief justice of the King's Bench in the reign of Charles II. was the son of Robert Hale, Esq; a barrister of Lincoln's Inn, and was born in 1609. He was educated at Oxford, where he made a considerable progress in learning; but was afterwards diverted from his studies by the levities of youth. From these he was reclaimed by Mr John Glanvill serjeant at law; and applying to the study of the law,

law, entered into Lincoln's Inn. Noy, the attorney general, and Mr Selden took much notice of him. During the civil wars, he behaved so well as to gain the esteem of both parties. He was employed in his practice by the king's party; and was appointed by the parliament one of the commissioners to treat with the king. King Charles's death gave him very sensible regret. However, he took the engagement; and was appointed with several others, to consider of the reformation of the law. In 1653, he was by writ made sergeant at law, and soon after appointed one of the justices of the Common Pleas. Upon the death of Oliver Cromwell, he refused to accept of the new commission offered him by Richard his successor. He was returned for Gloucestershire in the parliament which called home Charles II. Soon after he was made lord chief baron of the exchequer; but declined the honour of knighthood, till lord chancellor Hyde, sending for him upon business when the king was at his house, said, "There is your majesty's modest chief baron;" upon which he was unexpectedly knighted. He was one of the principal judges that sat in Clifford's Inn, about settling the differences between landlord and tenant, after the fire of London, in which he behaved to the satisfaction of all parties concerned. In his post of chief baron he acted with inflexible integrity. He dismissed a duke, who wished to pre-  
 judice him in favour of a cause he was to bring before him, with a proper reprimand. The duke complained of his rudeness to the king, who told him he verily believed he would have used him no better, had he gone to solicit him in his own cause. In one of his circuits, a gentleman who had a trial at the assizes sent him a buck for his table. When judge Hale therefore heard his name, he asked "if he was not the person who had sent him the venison?" and finding he was, told him, "that he could not suffer the trial to go on till he had paid him for his buck." The gentleman answered, that "he never sold his venison; and that he had done nothing to him which he did not do to every judge who had gone that circuit;" which was confirmed by several gentlemen present. The lord chief baron, however, paid for the present; upon which the gentleman withdrew the record. In 1671, he was advanced to be lord chief justice of the king's bench; but about 4 years after this promotion his health declining, he resigned his post in Feb. 1675-6, and died in Dec. following. This excellent man, who was an ornament to the bench, to his country, and to human literature, wrote, 1. An Essay on the Gravitation and Non-gravitation of Fluid Bodies. 2. Observations touching the Torricellian Experiment. 3. Contemplations, moral and divine. 4. The Life of Pomponius Atticus, with political and moral reflections. 5. Observations on the Principles of natural Motion. 6. The primitive Origination of Mankind. He also left a great number of MSS. in Latin and English, upon various subjects; among which are, his Pleas of the Crown, since published by Mr Bayly in two volumes folio; and his Original Institution, Power and Jurisdiction of Parliaments.

(1.) \* *Hale, adj.* [This should rather be writ-

ten *hail*, from *hal*, health.] Healthy; sound hearty; well complexioned.—

My feely sheep like well below,  
 For they been *hale* enough I trow,  
 And liken their abode.

*Spranger.*

—Some of these wise partizans concluded the government had hired two or three hundred *hale* men to be pinioned, if not executed, as the pretended captives. *Addison.*—

His stomach too begins to fail;  
 Last year we thought him strong and *hale*,  
 But now he's quite another thing:  
 I wish he may hold out 'till Spring.

*Swift.*

(3.) *HALE*, in geography, a river of England, in Cornwall, which runs into the sea near St Ives.

(4.) *HALE*, a town of Holstein, 6 miles E. of Kremp.

(5.—10.) *HALE* is also the name of 6 English villages, in Cornwall, Cumberland, Hampshire, Lancashire, Middlesex and Norfolk.

\* *To HALE, v. a.* [*halen*, Dutch; *haler*, Fr.] To drag by force; to pull violently and rudely.

Fly to your house;  
 The plebeians have got your fellow tribune,  
 And *hale* him up and down.

*Shak.*

My third comfort,  
 Starr'd most unluckily, is from my breast  
 Haul'd out to murder.

*Shak.*

—Give diligence that thou mayest be delivered from him, lest he *hale* thee to the judge. *Luke.*—

He by the neck hath *haul'd*, in pieces cut,  
 And set me as a mark on every butt.

*Sandys.*

Thither by harpy-footed furies *haul'd*,  
 At certain revolutions, all the damn'd  
 Are brought.

*Milton.*

—This Gnistrous gravity is drawn that way by the great artery, which then subsideth, and *hauleth* the heart unto it. *Brown.*—Who would not be disgusted with any recreation, in itself indifferent, if he should with blows be *haled* to it when he had no mind? *Locke.*—In all the tumults at Rome, though the people proceeded sometimes to pull and *hale* one another about, yet no blood was drawn till the time of the Gracchi. *Swift.*

*HALEC*, the hearing. See *CLUPRA*, N° 4.

*HALEM*, or } a town of the French republic,  
*HALEN*, } in the dept. of the Dyle, and

late prov. of Austrian Brabant, seated on the Geete, 4 miles SE. of Dieft, and 14 W. of Maestricht. Lon. 5. 4. E. Lat. 50. 58. N.

*HALENDORP*, a town of Germany, in Holstein, 11 miles ENE. of Eutyn.

\* *HALER, n. s.* [from *hale*.] He who pulls and hales.

(1.) *HALES*, Lord. See *DALRYMPLE*, N° 2.

(2.) *HALES*, Stephen, D. D. and F. R. S. a celebrated divine and philosopher, born in 1677. He was the 6th son of Thomas Hales, Esq; the eldest son of Sir Robert Hales, and Mary the heiress of Richard Langley of Abbots-Wood in Hertfordshire. In 1696, he was entered at Bennet college, Cambridge; admitted a fellow in 1703, and became B. D. in 1711. He soon discovered a genius for natural philosophy. Botany was his first study, which he often prosecuted among Gogmagog hills, along with Dr Stukely. He also collected fossils and insects, having contrived a curi-

ous

our instrument for catching such of the latter as have wings. He likewise studied astronomy, chemistry and anatomy; and invented a curious method of obtaining a representation of the lungs in lead. Having made himself acquainted with the Newtonian system, he contrived a machine for showing the phenomena on much the same principles with that of the Orrery, afterwards made by Mr Rowley. About 1710 he was presented to the perpetual cure of Teddington near Twickenham; afterwards to the living of Porlock in Somersetshire, which he exchanged for that of Faringdon in Hampshire. Soon after, he married Mary, the daughter and heiress of Dr Newce. On the 13th March 1718, he was elected F. R. S. and on the 5th March, 1719, he exhibited an account of some experiments he had made on the effect of the sun's warmth in raising the sap in trees, which procured him the thanks of the society. On the 14th of June 1725, he exhibited a treatise on the same subject, which, being highly applauded by the society, he enlarged and improved; and, in April 1727, published it under the title of *Vegetable Statics*. This work he dedicated to the prince of Wales; afterwards K. George II; and he was the same year chosen one of the council of the Royal Society. A second edition of this work was published in 1731; in the preface to which, he promised a sequel, which he published in 1733 under the title of *Statistical Essays*, &c. In 1732 he was appointed one of the trustees for establishing a new colony in Georgia. On the 5th of July 1733, the university of Oxford made him D. D. although he had been educated at Cambridge. In 1734, he published anonymously; A friendly Admonition to the Drinkers of Brandy and other Spirituous Liquors; and a sermon preached at St Bride's before the rest of the trustees for establishing the colony in Georgia. His text was in Gal. vi. 2. In 1739, he printed Philosophical Experiments on Sea-water, Corn, Flesh, and other Substances; 8vo. dedicated to the lords of the admiralty. In 1739, he also exhibited to the Society an account of some experiments towards the discovery of medicines, for dissolving the stone in the kidneys and bladder, and preserving meat in long voyages; for which he received Sir Godfrey Copley's gold medal. In 1740, he published some account of Experiments and Observations on Mrs Stephens's Medicines for dissolving the Stone, in which their dissolvent power is inquired into and demonstrated. In 1741, he read before the Society an account of a *VENTILATOR*, for conveying fresh air into mines, hospitals, prisons, and the close parts of ships. See *AIR-PUMP*, and *VENTILATION*. In 1743, he read before the Society a description of a method of conveying liquors into the abdomen during the operation of Tapping; afterwards printed in their Transactions. In 1745, he published some experiments and observations on tar-water, which he had been induced to make by the publication of a work called *Seris*, in which Dr Berkley, B. of Cloyne, had recommended tar-water as an universal medicine. In the same year he communicated to the public, by a letter to the editor of the *Gentleman's Magazine*, a description of the *hawk-beaver*, for winnowing and cleaning corn. He also, by the same channel,

communicated a cheap and easy way to preserve corn sweet in sacks; an invention of great benefit to farmers. He also published directions how to keep corn sweet in heaps without turning it, and to sweeten it when musty. He published a long paper, containing an account of several methods to preserve corn by ventilators; with a description of several sorts, illustrated by a cut, so that the machine may be constructed by any carpenter. He published also, but anonymously, a detection of the fallacious boasts concerning the efficacy of the liquid shell in dissolving the stone in the bladder. In 1746, he communicated to the Royal Society a proposal for bringing small passable stones soon, and with ease, out of the bladder. In the *Gen. Mag.* for July 1747, he published an account of a very considerable improvement of his hawk-beaver, by which it became capable of clearing corn of the very small grain, seeds, blacks, smut balls, &c. to such perfection as to make it fit for seed-corn. In 1748 he communicated to the Society a proposal for checking the progress of fires; with 2 memoirs, one on ventilators, and the other on some experiments in electricity. All these papers were printed in the R. Society's Transactions. In 1749 his ventilators were fixed in the Savoy prison; and the benefit was so great, that though from 80 to 100 in a year often died of the gaol distemper before, yet from 1749 to 1752 inclusive, only 4 persons died, and of those 4, one died of the small-pox, and another of intemperance. In 1750, he published some considerations on the causes of earthquakes; (occasioned by the shocks felt that year in London;) and exhibited an examination of the strength of several purging waters, especially that of *Jessop's* well. Both these are printed in the *Philos. Transf.* He had now been several years honoured with the friendship of Frederick Prince of Wales; who frequently visited him at Teddington. Upon that prince's death in 1750, he was appointed almoner to the Princess Dowager. In 1751 he was chosen by the college of physicians to preach the sermon called *Crowne's* lecture: Dr W. Crowne having left a legacy for a sermon to be annually preached on "the wisdom and goodness of God displayed in the formation of man." Dr Hales's text was in Job xii. 12. In the end of 1752, his ventilators, worked by a windmill, were fixed in Newgate with branching trunks to 24 wards, and it appeared that the disproportion of those that died in the gaol before and after this establishment was as 16 to 7. He published also a farther account of their success, and some observations on the great danger arising from foul air, exemplified by a narrative of several persons seized with the gaol fever by working in Newgate. In 1753, Dr Hales was elected a member of the Academy of Sciences at Paris. This year he published in the *Gen. Mag.* farther considerations about means to draw the foul air out of the sick rooms of occasional army hospitals, and private houses in town; with many other curious particulars on the use of ventilators; also a description of a sea gage, which he invented, to measure unfathomable depths. This paper he had drawn up about 1735 or 1736, for the late Colin Campbell, Esq; who employed the ingenious Mr Hawksbee to make the machine; and describe

describes, which was tried in various depths, and answered with great exactness, but was at last lost near Bermuda. In 1754, he communicated to the Society some experiments for keeping water and fish sweet with lime-water; an account of which was published in the *Philos. Trans.* He continued to enrich their memoirs with many useful articles from this time till his death, particularly a method of forwarding the distillation of fresh from salt water, by blowing showers of fresh air up through the latter during the operation. In 1757, he communicated to the *Genl. Mag.* an easy method of purifying the air, and regulating its heat in melon-frames and green-houses; also further improvements in his method of distilling sea-water. Being nominated by K. George II. a counsellor of Windsor, he engaged the prince to request his majesty to recal his nomination. But he has been justly blamed for this, as indicating a want of benevolence: for if he had no wish for more for himself, a liberal mind would surely have been highly gratified by the distribution of so considerable a sum as a canonry of Windsor would have put into his power, in the reward of industry, the alleviation of distress, and the support of helpless indigence. He was, however, remarkable for social virtue and sweetness of temper; his life was not only blameless, but exemplary. He died at Teddington, in 1761, aged 84; and the princess of Wales erected a monument to his memory in Westminster abbey.

**HALESIA**, in botany: A genus of the monogynous order, belonging to the dodecandria class of plants; and in the natural method ranking under the 18th order, *Bicornes*. The calyx is quadrilateral, superior; the corolla quadricid; the petal quadrangular and dispermous.

**HALLS-OWEN**, a town of Salop, inclosed by Wutcherh. famous for nails; 8 m. SW. of Birmingham, and 124 NW. of London.

**HALESWORTH**, a town of Suffolk, seated on an alluvium between two branches of the Blith, being a trade in linen yarn and sail-cloth. It has one large church, and about 700 good houses; but the streets are narrow. Near it is raised a great deal of hemp. It is 32 miles NE. of Ipswich, and 101 of London. Lon. 1. 40. E. Lat. 52. 25. N.

(L.) \* **HALF**. *n. f.* plural *halves*. [*healf*, Sax. and all the Teutonic dialects. The *l* is often not sounded.] 1. A moiety; one part of two; an equal part.—An *half* acre of land. 1 Sam. xiv. 14. —Many might go to heaven with *half* the labour they go to hell, if they would venture their industry the right way. Ben Jonson.—

Well chosen friendship, the most noble  
Of virtues, all our joys makes double,  
And into *halves* divides our trouble. Denham.

Or what but riches is there known  
Which man can solely call his own;  
In which no creature goes his *half*,  
Unless it be to squint and laugh? Hudibras.

No mortal tongue can *half* the beauty tell;  
For none but hands divine could work so well. Dryden.

—Of our manufactures foreign markets took off  
One *half*, and the other *half* were consumed at  
home ourselves. Locke.—The council is made up

Vol. XI. PART I.

*half* out of the noble families, and *half* out of the plebeian. Addison on Italy.—*Half* the misery of life might be extinguished, would men alleviate the general curse by mutual compassion. Addison.

Her beauty in thy softer *half*,  
Bury'd and lost, she ought to grieve. Prior.  
—Natural was it for a prince, who had proposed to himself the empire of the world, not to neglect the sea, the *half* of his dominions. Arbuthnot.  
2. It sometimes has a plural signification when a number is divided.—

Had the land selected of the best,  
*Half* had come hence, and let the world provide the rest. Dryden.

(2.) \* **HALF**. *adv.* 1. In part; equally.—  
I go with love and fortune, two blind guides,  
To lead my way; *half* loth, and *half* consenting. Dryden.

2. It is much used in composition to signify a thing imperfect, as the following examples will show:

(1.) \* **HALF-BLOOD**. *n. f.* One not born of the same father and mother.—Which shall be heir of the two male twins, who, by the dissection of the mother, were laid open to the world? Whether a sister by the *half-blood* shall inherit before a brother's daughter by the whole-blood. Locke.

(2.) **HALF-BLOOD**, in law. See CONSANGUINITY and INHERITANCE.

\* **HALF-BLOODED**. *adj.* [*half* and *blood*.] Mean; degenerate.—

The let alone, lies not in your good will.  
—Nor in thine, lord.

—*Half blooded* fellow, yes. Shak. K. Lear.

\* **HALF-CAP**. *n. f.* Cap imperfectly put off, or faintly moved.—

With certain *half-caps* and cold moving nods,  
They froze me into silence. Shak.

\* **HALF-DEAD**. *n. f.* [*half* and *dead*, Saxon.] Part. Spenser.

\* **HALF-FACED**. *adj.* [*half* and *facied*.] Showing only part of the face; small faced: in contempt.

Proud encroaching tyranny  
Burns with revenging fire, whose hopeful colours  
Advance, a *half-faced* sun striving to shine. Shak.

—This same *half-faced* fellow, Shadow; give me this man: he presents no mark to the enemy; the foeman may with as great aim level at the edge of a penknife. Shak.

\* **HALF-HATCHED**. *adj.* [*half* and *hatch*.] Imperfectly hatched.—

Here, thick as hailstones pour  
Turnips, and *half hatch'd* eggs, a mingled shower,  
Among the rabble rain. Gay.

\* **HALF-HEARD**. *adj.* Imperfectly heard; not heard to an end.—

Not added years on years my task could close;  
Back to thy native islands might'st thou sail,  
And leave *half-heard* the melancholy tale. Pope.  
**HALF-MERK**, a noble, or 6s. 8d.

(1.) \* **HALF-MOON**. *n. f.* 1. The moon in its appearance when at half increase or decrease. 2. Any thing in the figure of a half-moon.—

See how in warlike muster they appear,  
In rhombs and wedges, and *half-moons* and wings. Milton.

(2.) **HALF-MOON**, in fortification; an outwork composed of two faces, forming a salient angle,

D (100)

whose gorge is in form of a crescent, whence the name. See *FORTIFICATION, Part II. Sect. V.*

\* *HALF-PENNY. n. s. plur. half-pence. [half and penny.]* 1. A copper coin, of which two make a penny.—Bardolph stole a lute-case, bore it twelve leagues, and sold it for three *half-pence*. *Shak.*—I thank you; and sure, dear friend, my thanks are too dear of a *half-penny*. *Shak.*—

He cheats for *half-pence*, and he doffs his coat  
To save a farthing in a ferryboat. *Dryden.*  
—Never admit this pernicious coin, no not so much as one single *half-penny*. *Swift.* 2. It has the force of an adjective conjoined with any thing of which it denotes the price.—There shall be in England seven *half-penny* loaves sold for a penny. *Shak.*—You will wonder how Wood could get his majesty's broad seal for so great a sum of bad money, and that the nobility here could not obtain the same favour, and make our own *half-pence* as we used to do. *Swift.*

\* *HALF-PIKE. n. s. [half and pike.]* The small pike carried by officers.—The various ways of paying the salute with the *half-pike*. *Tatler.*

\* *HALF-PINT. n. s. [half and pint.]* The fourth part of a quart.—

One *half-pint* bottle serves them both to dine;  
And is at once their vinegar and wine. *Pop.*

\* *HALF-SCHOLAR. n. s.* One imperfectly learned.—We have many *half-scholars* now-a-days, and there is much confusion and inconsistency in the notions and opinions of some persons. *Watts.*

\* *HALF-SEAS OVER. A* proverbial expression for any one far advanced. It is commonly used of one half drunk —

I am *half-seas o'er* to death;

And since I must die once, I would be loth

To make a double work of what's half finish'd.

*Dryden.*

\* *HALF-SIGHTED: adj. [half and sight.]* Seeing imperfectly; having weak discernment.—The officers of the king's household had need be provident, both for his honour and thrift: they must look both ways, else they are but *half-sighted*. *Bacon.*

\* *HALF-SPHERE. n. s. [half and sphere.]* Hemisphere.—

Let night grow blacker with thy plots; and day,  
At shewing but thy head forth, start away

From this *half-sphere*. *Ben Jonson.*

\* *HALF-STRAINED. adj. [half and strain.]* Half bred; imperfect.—

I find I'm but a *half-strain'd* villain yet,

But mungrel-mischievous; for my blood boil'd

To view this brutal act. *Dryden.*

\* *HALF-SWORD. n. s.* Close fight; within half the length of a sword.—I am a rogue, if I were not at *half-sword* with a dozen of them two hours together. *Shak.*

\* *HALF-WAY. adv. [half and way.]* In the middle.—

Fearless he sees, who is with virtue crown'd,  
The tempest rage, and hears the thunder sound;  
Ever the same, let fortune smile or frown;  
Serenely as he liv'd resigns his breath;  
Meets destiny *half-way*, nor shrinks at death.

*Granville.*

\* *HALF-WIT. n. s. [half and wit.]* A blockhead; a foolish fellow.—

*Half-wits* are flesh, so little and so light,  
We scarce could know they live, but that they bite. *Dryden.*

\* *HALF-WITTED. adj. [from half-wit.]* Imperfectly furnished with understanding.—I would rather have trusted the refinement of our language, as to sound, to the judgment of the women than of *half-witted* poets. *Sev.*—Jack had passed for a poor, well-meaning, *half-witted*, crack-brain'd fellow; people were strangely surpris'd to find him in such a roguery. *Arbutnot.*—When *half* is added to any word noting personal qualities, it commonly notes contempt.

*HALIBUTS.* See *FALCO, N° 9.*

*HALI-BEIGH*, first dragoman or interpreter at the Grand Signior's court in the 17th century, was born of Christian parents in Poland; but having been taken by the Tartars when a boy, they sold him to the Turks, who brought him up in their religion in the seraglio. His original name was *Bobowki*. He learnt many languages, and Sir Paul Ricaut owns he was indebted to him for several things, which he relates in his *Present State of the Ottoman empire*. He held a great correspondence with the English, and intended to return into the Christian church, but died in 1675, before he could accomplish his design. Dr Hyde published his book *Of the liturgy of the Turks, their pilgrimages to Mecca, &c.* at Oxford, 1691. He translated the catechism of the church of England, and the bible, into the Turkish language. The MS. is lodged in the library of Leyden. He wrote likewise a Turkish grammar and dictionary.

\* *HALIBUT. n. s.* A sort of fish. *Ainsworth.*

*HALIBUT ISLAND*, an island in the N. Pacific Ocean, discovered by Capt. Cook, the coasts of which abound with halibuts, weighing from 20 to 100 lb. each. It is 12 miles in circumference, but low and barren. Lon. 164. 15. W. Lat. 54. 48. N.

*HALICARNESSENSIS*, } the *HALICARNASS-*  
*HALICARNASSEUS*, or } *SIAN*, the gentili-  
tious name of Herodotus and Dionysius. See *DIONYSIUS, N° 5;* and *HERODOTUS.*

*HALICARNASSUS*, in ancient geography, a principal town of Caria, built by the Argives, and situated between two bays, the Ceramicus and Janus. It was anciently called *ZEPHYRAA*, and was the royal residence of Mausolus. See *ARTEMISIA, N° H.*

*HALICZ.* See *HALITZ.*

\* *HALIDOM. n. s. [haligdom, holy judgment or halig and dame, for lady.]* Our blessed lady. In this sense it should be *Halidam*.—

By my *halidom*, quoth he,

Ye a great master are in your degree. *Hubb. Tal.*

*HALIEUTICA*, } (*ΑΛΙΕΥΤΙΚΑ*, formed of *αλι* and

*HALIEUTICS*, } *fisherman*, from *αλι*, *sea*  
books treating of fishes, or the art of fishing. The *halieutics* of Oppian are still extant.

(1.) *HALIFAX*, a parish of England, in the W. riding of Yorkshire, famous for the clothier trade, said to be the most populous, if not the most extensive, in England. It contains above 12,000 people, and is above 30 miles in circumference. Besides the established church at Halifax, and meeting houses, it has 12 chapels, two of which are parochial. All the meeting-houses, except that of the quakers, have bells and burying grounds.

The waddes principally manufactured are kersees and shalloons. Of the former it is affirmed, that a dealer sent by commission 40,000l. worth yearly to Holland and Hamburgh; and of the latter, 100,000 picces are made in this parish yearly. The inhabitants here and in the neighbouring towns are so entirely employed in these manufactures, that agriculture is little minded. All of their provisions are brought from the West of England, and from Lancashire, Cheshire, Nottinghamshire, and Warwickshire. The streets are much crowded.

**HALIFAX**, a town in the above parish, situated in the Calder, among hills. The houses are of stone, but irregularly built. The cloths, at the suggestion of the woollen manufacturers, having been stolen in the night, a law was made, which the magistrates of Halifax were empowered to execute all offenders, if they were taken red-handed, or owned it, or if the stolen cloth was found upon them, provided the crime was committed, and the criminal apprehended, within the limits of the forest of Hardwick. Those found guilty were thus executed: an axe was drawn by a rope to the top of a wooden engine, and fastened to a pulley, which being pulled out, the axe fell down in contact. If they had stole an ox, horse, or any other beast, it was led with them to the scaffold, and there fastened by a cord to the pin, that held up the axe; and when the signal was given by the sheriff, who were the first burghers within the forest of the forest, the beast was driven away, and the pin plucked out, upon which the axe fell, and beheaded the criminal. This is said to be the first species of the GUILLOTINE. The true and summary course of justice gave occasion to a prayer still common among the vagabonds of these parts; "From Hell, Hull, and Halifax, good Lord deliver us:" though both the manner and manner of proceeding are now out of use. Halifax lies 16 miles SW. of Leeds, 40 of York, and 197 NNW. of London. Lon. 1. 45. W. Lat. 53. 45. N.

**HALIFAX**, the capital of Nova Scotia. It was founded in 1749, to secure the British settlements from the French and Indians. It was divided into 33 squares, each containing 16 lots of 4 by 60 feet; with one established church, and a meeting-house. It was surrounded by picket-tops, and guarded by forts on the outside; and has been very strongly fortified. Along the Chebucto, S. of the town, are buildings and fish flakes for at least two miles, and N. on the river for about one mile. The plan, however, was contrived and improved by the earl of Halifax. The proclamation issued for this settlement, in March 1749, offered such favourable terms to settlers, that in May, 1750 persons had offered themselves. They accordingly embarked, and established themselves in the bay of Chebucto; calling their city Halifax, after their patron. Before the end of October, 350 comfortable wooden houses were built, and as many more during the winter. Government granted the settlers 40,000l. for their expenses. In 1750, they granted them 37,581l. 17s. 2½d.; in 1751, 53,027l. 14s. 4d.; in 1752, 61,492l. 12s. 4d.; in 1753, 94,615l. 12s. 4d.; in 1754, 114,471l. 2s.; and in 1755, 49,458l. 7s. 8d.—The

city has at length attained a degree of splendour that bids her to rival the first cities in the United States; for which it has been equally indebted to the late war, to the great increase of population from the exiled loyalists, and the softening care of Great Britain. The harbour is perfectly sheltered from all winds at the distance of 12 miles from the sea, and is so spacious, that 1000 ships may ride in it without the least danger. Upon it there are many commodious wharfs, which have from 12 to 18 feet water at all tides. The streets are regularly laid out, and cross each other at right angles; the whole rising gradually from the water upon the side of a hill, whose top is regularly fortified. Many considerable merchants reside at this place, and are possessed of shipping to the amount of several thousand tons, employed in a flourishing trade with Europe and the West Indies. There is a small but excellent careening yard for ships of the royal navy that may come in to refit, and take water, fuel, or provisions on board, in their passage to and from the West Indies. It is well provided with naval stores; and ships of the line are here down and repaired with the greatest ease and safety. Several batteries of heavy cannon command the harbour, particularly those upon George's Island, which being very steep and high, and situated in mid-channel, below the town, is well calculated to annoy vessels in any direction. Above the careening yard, which is at the upper end of the town, there is a large basin, or piece of water, communicating with the harbour below, near 30 miles in circumference, and capable of containing the whole navy of England, entirely sheltered from all winds, and having only one narrow entrance, which leads into the harbour. There are many detached settlements formed by the loyalists upon the basin; the lands at a small distance from the water being generally thought better than those near Halifax. An elegant building is erected near the town for the convalescence of the navy; but the healthiness of the climate has as yet prevented many persons from becoming patients, scarcely any ships in the world being so free from complaints of every kind, in regard to health, as those that are employed upon this station. There is a good light-house, standing upon a small island, just off the entrance of the harbour, which is visible, either by night or day, 6 or 7 leagues off. Lon. 63. 26. W. Lat. 44. 40. N.

(4.) **HALIFAX**, a town of the United States, in Massachusetts, 13 miles SSE. of Boston.

(5.) **HALIFAX**, a town of N. Carolina, 60 miles N. of Newbern, and 75 S. of Richmond.

(6.) **HALIFAX**, a town of Virginia, 9 miles SW. of Richmond.

(7.) **HALIFAX**, Earl of. See SAVILLE.

(8.) **HALIFAX**, John. See SACROSCOCO.

(9.) **HALIFAX BAY**, a bay on the E. coast of Hispaniola. Lon. 61. 30. W. Lat. 15. 40. N.

(10.) **HALIFAX BAY**, a bay on the NE. coast of New Holland. Lat. 18. 49. S.

(11.) **HALIMASS**, s. f. [*halig* and *mass*.] The feast of All-souls.—

She came adorned hither like sweet May;  
Sent back like *halimass* or shorter day. *Spenser*.

(12.) **HALIMASS**, or **HALLAMASS**, Nov. 1, 11.

one of the cross quarters of the year, which was computed, in ancient writings, from Hallmas to Candlemas.

• **HALLMOTE.** See **HALMOTE.**

**HALIOTIS**, the *SAR-SHEL*, a genus of insects belonging to the order of vermes testacei. This is an animal of the snail kind, with an open shell resembling an ear. There are 7 species, distinguished by the figure of their shells. See *Plate CLXXII*, fig. 1.

• **HALITUOUS.** *adj.* [*halitus*, Lat.] Vaporous: fumous.—We speak of the atmosphere as of a peculiar thin and *halitus* liquor, much lighter than spirit of wine. *Boyle.*

**HALITZ**, or } a town and territory of Poland,  
**HALITZCH**, } in Red Russia, with a castle; seated on the Dniester: seized by the Emperor Joseph II, in 1773, and included in his new kingdom of GALICIA. The town is 38 miles S.E. of Lemberg. Lon. 25. 19. E. Lat. 49. 20. N.

**HALIZONES.** See **CHALYZES.**

**HALKETSTEIN**, a town of the Batavian Republic, in the dep. of the Rhine, and ci-devant prov. of Guelderland; 10 m. S. of Harderwyck.

**HALKET**, Lady. See **MURRAY**, N.º 2.

**HALKETS**, a town of New Jersey, 19 miles W. of Morristown.

(1.) **HALKIRK**, a parish of Scotland, in Caithness, including the ancient parish of SKINNET, 14 miles long from N. to S.W. and from 7 to 12 broad. The soil is good, though various; the surface mostly level, with a few small hills; the climate cold, inconstant, and stormy, yet extremely salubrious. Instances of longevity are frequent. There are several lakes and rivulets, and a mineral spring in the parish. The river THURSO runs through it; and it abounds with hme-stone and marl, hares, otters, foxes, woodcocks, snipe, partridges, moorfowls, wild geese, ducks, swans, &c. The population, in 1791, stated by the rev. Jo. Cameron in his report to Sir J. Sinclair, was 3180, and had increased 205 since 1755. The number of horses was 1650, sheep 2290, black cattle 4963, goats 130, and swine 190. The annual produce in bear and oatmeal is 15,500 bolls, of which 1800 are exported, and 1000 head of cattle. There are many antiquities in the parish. Sir John Sinclair has introduced many improvements into it; but services and short leases still prevail.

(2.) **HALKIRK**, a town of Scotland in the above parish, 5 miles S. of Thurso.

**HALKSHEAD**, a cape of Denmark, on the E. coast of Sleswick, 10 miles ESE. of Haldensleben. Lon. 9. 42. E. Lat. 55. 12. N.

(1.) **HALL**, John, an English surgeon, who flourished in the reign of Q. Elizabeth, at Maidstone in Kent. He was born in 1529, and published, 1. a *Compendium of Anatomy*; and, 2. A *Collection of Hymns*, with musical notes, in 1565: besides several tracts on medicine and surgery.

(2.) **HALL**, John, a poet of distinguished learning, born at Durham, in 1617, and educated at Cambridge, where he was esteemed the brightest genius in that university. In 1646, when he was but 29 years of age, he published his *Flora Lætica*, or *Essays*; and the same year came out his poems. He translated from the Greek "Hierocles upon the golden verses of Pythagoras;" to which is pre-

fixed an account of the translator and his works, by John Davies of Kidwelly. He also translated Longinus, and died in 1656, aged 39.

(3.) **HALL**, Joseph, an eminent English prelate, born at Ashby de la Zouch, in 1574, and educated at Cambridge. He became professor of rhetoric in that university, and was made rector of Halsted, prebendary of Wolverhampton, dean of Worcester, Bp. of Exeter, and lastly of Norwich. His works testify his zeal against Popery, and are much esteemed. He lamented the divisions of the Protestants, and wrote on the means of putting an end to them. In July 1616, he attended Lord Doncaster into France, and upon his return was appointed by K. James one of the divines who should attend him into Scotland. In 1628 he was sent to the synod of Dort, and appointed to preach a Latin sermon before that assembly. Being obliged to return before the synod broke up, on account of his health, he was by the states presented with a gold medal. He wrote, 1. Miscellaneous epistles. 2. *Mundus alter et idem*. 3. A just censure of travellers. 4. The Christian Seneca. 5. Satires, in six books. 6. A century of meditations; and many other works, which, besides the satires, make 5 vols. in folio and 4to. He died in 1656.

(4.) • **HALL**. *n. f.* [*hal*, Saxon; *halle*, Dutch.]

1. A court of justice; as Westminster Hall.—

O lost too soon in yonder house or hall. *Pope.*  
2. A manour-house so called, because in it were held courts for the tenants.—Captain Sentry, my master's nephew, has taken possession of the hall, the house, and the whole estate. *Addison.* 3. The public room of a corporation.—

With expedition on the beadle call,  
To summon all the company to the hall. *Garth.*  
4. The first large room of a house.—

That light we see is burning in my hall. *Shak.*  
Courtesy is sooner found in lowly sheds  
With smoky rafters, than in tap'stry halls  
And courts of princes. *Milton.*

(5.) **HALL**, in architecture. See § 4. *def.* 4. Vitruvius mentions 3 kinds of halls; the tetrastyle, with 4 columns supporting the platform or ceiling; the Corinthian, with columns all round let into the wall, and vaulted over; and the Egyptian, which had a peristyle of insulated Corinthian columns, bearing a second order with a ceiling. The hall is properly the finest as well as first member of an apartment: and in the houses of ministers of state, magistrates, &c. is the place where they dispatch business, and give audience. In very magnificent buildings, where the hall is larger and nobler than ordinary, and placed in the middle of the house, it is called a *saloon*. The length of a hall should be at least twice and a quarter its breadth; and in great buildings, three times its breadth. The height may be two thirds of the breadth; and, if made with an arched ceiling, it will be much handsomer, and less liable to accidents by fire. In this case, its height is found by dividing its breadth into 6 parts, 5 of which will be the height from the floor to the under side of the key of the arch.

(6.) **HALL**, § 4. *def.* 1. See **WESTMINSTER HALL**.

(7.) **HALL**, in geography, a town of Germany in Suria, 3 miles N. of Rottenmahn.

(8.) **HALL**,

(8.) HALL, a town of Austria, 8 miles WSW. of Steyr.

(9.) HALL, or HALLE, an imperial town of Germany, in Sambia, on the Kocher, surrounded with mountains, which abound in salt springs, that yield 3 oz. of salt from 16 oz. of water. It is 46 mi SE. of Heidelberg, and 30 NE. of Stuttgart. Lon. 9. 35. E. Lat. 49. 10. N.

(10.) HALL, a town of Sweden, in Upland, 20 mi NE. of Stockholm.

(11.) HALL, or HALLE, a town of Tirol, on the Inn, famous for its salt works, which produce a clear profit of 200,000 crowns a-year. The salt is dug in large blocks out of a mountain; then put in salt pits, whence it is conveyed in a fluid state to Inspruck, where it is boiled to a due consistence. Hall is 6 miles E. of Inspruck, and 24 SW. of Kufstein. Lon. 11. 33. E. Lat. 47. 12. N.

HALLA, or HELLA, a town of Asia, in the Arabian tract, seated on both sides of the Euphrates, with a bridge of communication, supposed to be built in the site of the ancient BABYLON. It abounds with fruit trees, and lies 55 miles SSW. of Bagdad, and 216 NW. of Bassora.

HALLACHORES, an unfortunate tribe in the East Indies, destined to misery from their birth, and termed the *refuse of all tribes*. They are held in such abomination; that, on the Malabar side of India, if one of them chance to touch a Hindu of superior rank, the latter draws his sabre and cuts him down on the spot, without any check, either from his own conscience, or the laws of the country.

HALLAGE, *n. s.* a fee or toll paid for cloth brought to be sold in Blackwell-hall, London.

HALLAMAS. See HALIMAS, § 2.

HALLAND, a province of Sweden, in the island of Scania, lying along the sea-coast, at the entrance of the Baltic, opposite to Jutland. It is 60 mi long the coast, but not above 12 broad. Helsingborg is the capital.

HALLATON, a town of Leicestershire, seated 11 mi S. of Leicester, and 90 N. by rd of London. Lon. 0. 50. E. Lat. 52. 35. N.

HALLE, a town of the French republic, in the dept. of Gemappes, and late province of Auvergne. The church of Notre Dame contains an image of the Virgin Mary, long held in veneration. Lon. 3. 15. E. Lat. 50. 44. N.

HALL, a town of Germany, in the circle of Upper Saxony, and duchy of Magdeburg, with a university and salt-works. It was often besieged and taken in the 15th, 16th, and 17th centuries. It now belongs to the king of Prussia; has about 14,000 inhabitants, and is seated in a fertile plain on the Saale; 25 miles NW. of Magdeburg, and 56 S. of Magdeburg. Lon. 12. 23. E. Lat. 51. 36. N.

HALL, a town of Westphalia, in the county of Ravensberg, 6 miles NW. of Bielefeld.

HALL. See HALL, N° 9 & 11.

HALL, Anthony, professor of eloquence at Caen, in Normandy, was born in 1592. He published several good Latin poems and a Latin grammar, and died in 1675, aged 83.

HALL, Peter, a French poet and lawyer, was born in 1611. He was king's poet

and regius professor of canon law; but is more famed for his writings on that subject and civil law, than for his Latin poems, though the latter have merit. He died in 1689.

HALLEBAST, a town of the French republic in the dept. of the Lys, and late prov. of Austrian Flanders, 3 miles SW. of Ypres.

HALLEIN, a town of Germany, in the circle of Bavaria, and archbishopric of Salzburg; seated on the river Saltza, among the mountains, wherein are mines of salt, which are the chief riches of the town and country. Lon. 12. 15. E. Lat. 47. 33. N.

(1.) \* HALLELUJAH. *n. s.* [*Hebrew*] *Praise ye the Lord.* A song of thanksgiving.—

Then shall thy saints

Unfained *hallelujahs* to Thee sing,

Hymns of high praise.

*Milton.*

—Singing those devout hymns and heavenly anthems, in which the church militant seems ambitious to emulate the triumphant, and echo back the solemn praises and *hallelujahs* of the celestial choirs. *Bayle.*

HALLELUJAH, or ALLELUJAH, is a term of rejoicing, first introduced into the church service, by St Jerome, from the synagogue. It occurs in several of the Psalms, particularly from Ps. cxlv. to cl. It also occurs in Rev. xix. 1, 3, 4, 6. For a considerable time it was only used once a year in the Latin church, viz. at Easter; but in the Greek church it was much more frequent. St Jerome mentions its being sung at the interments of the dead, which still continues to be done in that church, and on some occasions in Lent. Gregory the Great appointed it to be sung all the year round in the Latin church, which raised some complaints against him; as introducing the ceremonies of the Greek church into the Roman. But he excused himself by saying that it had been the ancient usage of Rome, and introduced under pope Damasus.

HALLENBERG, a town of Germany, in Westphalia, 7 m. S. of Medebach, and 61 E. of Cologne.

HALLENCOURT, a town of France, in the dep. of Somme, 7½ miles S. of Abbeville.

(1.) HALLER, Albert VAN, an eminent physician, born at Bern, on the 16th Oct. 1708. He was the son of an advocate and the youngest of five. He very early shewed a great genius for literature, but it is surprising that it was not crushed in the bud, for his tutor, *Abraham Bilete*, was such a tyrant, that the accidental sight of him, at any after period of life, excited in Haller almost all his former terrors. Yet the progress of Haller's studies was rapid almost beyond belief. When other children were beginning only to read, he was studying Bayle and Moreri; and at 9, he was able to translate Greek, and beginning to study Hebrew. His education was somewhat interrupted by the death of his father, when he was in his 13th year. After this he was sent to the public school at Bern, where he was not only distinguished for his knowledge in Greek and Latin, but also for his poetical genius. His poetical essays, published in the German language, were read and admired throughout the empire. In his 16th year, he began to study medicine.

Heine at Tubingen, under Duvernoy and Camerarius; and continued there for two years, when the great reputation of Boerhaave drew him to Leyden. Ruysch was also still alive, and Albinus was rising into fame. Animated by such examples, he spent all the day, and great part of the night, in the most intense study; and the proficiency which he made, gained him universal esteem both from his teachers and fellow-students. From Holland, in 1717, he came to England, where he was honoured with the friendship of Douglas, Chefelden, and Sir Hans Sloane, P. R. S. He next went to France; where, under Wiffow and Le Dran, he had new opportunities of prosecuting anatomy. But his zeal was greater than popular prejudice, even in the enlightened city of Paris, could admit of. An information being lodged against him for dissecting dead bodies, he was obliged to make a precipitate retreat to Basle, where he became a pupil to the celebrated Bernoulli. Thus improved by the most distinguished teachers of that period, and endued with uncommon natural abilities, he returned to Bern, in his 16th year, where he stood candidate, first for the office of physician to an hospital, and afterwards for a professorship. But he was disappointed in both; and it was even with difficulty that he obtained the appointment of keeper of a public library at Bern. This office, though by no means suited to his great abilities, afforded him an opportunity for that extensive reading by which he has been so justly distinguished. The neglect of his merit neither diminished his ardour for medical pursuits, nor detracted from his reputation at home or abroad. Soon after he was nominated a professor in the university of Gottingen, by King George II. The duties of this important office he discharged, with honour to himself and advantage to the public, for 17 years. Impressed with the great diversity of opinions respecting the economy of the human body, and sensible that the only means of investigating truth, was by careful experiments, he undertook the arduous task of exploring the phenomena of the human fabric; and there was hardly any function of the body on which his experiments did not reflect either a new or a stronger light. Nor was it long necessary for him, in this arduous undertaking, to labour alone. The example of the preceptor was followed by his pupils. Zinn, Zimmerman, Caudani, and many others, laboured to prosecute and to perfect the discoveries of their great master. The mutual exertions of the teacher and his students, not only forwarded the progress of medical science, but placed the philosophy of the human body on a more sure, and an almost entirely new, basis. But the labours of Dr Haller, during his residence at Gottingen, were not confined to one department of science. To him, the Anatomical Theatre, the School of Midwifery, the Chirurgical Society, and Royal Academy of Sciences at Gottingen, owe their origin. Such distinguished merit could not fail to meet with a suitable reward. King George II. not only honoured him with every mark of attention himself, but procured him letters of nobility from the emperor. On the death of Lillienus, he had an offer of the professorship of botany at Oxford; the States of Holland invited

him to the chair of the younger Albinus, and the K. of Prussia was anxious that he should be the successor of Maupertuis at Berlin. Marshal Keith wrote to him in the name of his sovereign, offering him the chancellorship of the university of Halle. Count Orlov invited him to Russia, in the name of the empress, offering him a distinguished place at St Petersburg. The king of Sweden conferred on him an unsolicited honour, by raising him to the rank of knight of the polar star; and the emperor of Germany honoured him with a personal visit; during which he passed some time with him in the most familiar conversation. Thus honoured and esteemed, he had it in his power to have held the highest rank in the republic of letters. Yet, declining all the offers made to him, he continued at Gottingen, anxious to extend the rising fame of that medical school. But after 17 years residence in that university, as a state of health rendering him less fit for the important office which he held, he obtained permission from the regency of Hanover to return to Bern. His fellow citizens were now as sensible as others of his superior merit. A pension was settled upon him for life, and he was elected into the most important offices in the state. These occupations however, did not diminish his ardour for useful improvements. He was the first president, as well as the greatest promoter, of the Oeconomical Society at Bern; and he may be considered as the founder of the Orphan Hospital there. Declining health, however, restrained his exertions; and for many years he was confined entirely to his oratory; where, with indefatigable industry, he continued to write till within a few days of his death; which happened in his 70th year, on the 12th Dec. 1777. His *Elementa Physiologiae* and *Methodus Medicae*, afford undeniable proofs of penetrating genius, and solid judgment. But he was not less distinguished as a philosopher than as a man; and he was not more eager for his improvement in every department of medical science, than for his piety to God, and benevolence to mankind.

(s.) HALLER, in geography, a town of the Free republic, in the dep. of the Dyle, and late part of Austrian Brabant; 10 miles S. of Tirlemont. Lon. 5. 18. E. Lat. 50. 41. N.

HALLERIA, in botany, AFRICAN *PLT* HON SUCKLE, a genus of the angiosperma order, belonging to the didynamia class of plants; and the natural method ranking under the 40th or *Perfoarata*. The calyx is trid; the corolla divided; the filaments longer than the corolla; the berry inferior and bilocular.

HALLERMUND, a county of Westphalia, united to the principality of Calenberg.

HALLEY, Dr Edmund, an eminent astronomer, was the only son of a soap-boiler in London, was born in 1656. He first studied the languages and sciences, but at length devoted himself entirely to astronomy. In 1674, he went to the island of St Helena to complete the catalogue of fixed stars by the addition of those which lie near the S. pole, and having delineated a planisphere, in which he laid them all down in their exact places, he returned to England in 1678. In 1680 he took a tour through Europe, accompanied by the

lived Mr Nelson. Between Calais and Paris, he had a sight of the famous comet in its return from the sun. He had in November before seen it in its descent; and now hastened to complete his observations upon it, from the royal observatory of France. His design in this part of his tour was to settle a correspondence between the royal astronomers of Greenwich and Paris; and to improve himself under the great Cassini. He went thence to Italy, where he spent great part of 1681; but affairs calling him home, he returned to England. In 1683, he published his *Theory of the variation of the magnetical compass*; in which he supposes the globe to be a great magnet, with 4 magnetical poles, or points of attraction: but afterwards thinking that this theory was liable to great exceptions, he procured an application to be made to K. William, who appointed him commander of the *Porpoise* Pink, with orders to seek by observations the discovery of the rule of variations, and to lay down the longitudes and latitudes of his country's settlements in America. He set out on this attempt on the 24th Nov. 1698; but having crossed the line, his men grew sickly; and his lieutenant dying, he returned home in June 1699. Having got the lieutenant tried and cashiered, he sailed a 2d time in Sept. following, with the same ship, and another of less bulk, of which he had also the command. He now traversed the vast Atlantic from one hemisphere to the other, as far as the season would permit him; and having made observations at St Helena, Brazil, Cape Verd, Barbadoes, the Madras, the Canaries, the coast of Barbary, and many other latitudes, arrived in Sept. 1700; and published a general chart, in 1701, showing at once the variation of the compass in all those parts. Capt. Halley had been at home little more than half a year, when he was sent by the king, to observe the course of the tides, with the ion, and lat. of the principal head-lands in the British channel; which having executed with his usual accuracy, he published a large map of the Channel. Soon after, the Emperor of Germany resolving to make a convenient harbour for shipping in the Adriatic, Capt. Halley was sent by queen Anne to survey two ports on the coast of Dalmatia. He sailed on the 22d Nov. 1703; passed over to Sicily; and going through Germany to Vienna, he proceeded to Istria: but the Dutch opposing the design, it was laid aside. The emperor made him a present of a rich diamond ring from his finger, and honoured him with a letter of recommendation; written with his own hand, to queen Anne. Soon after his return, he was sent again on the same business; when passing through Hanover, he stopped with the electoral prince, afterwards king George I. and his sister the queen of Prussia. On his arrival at Vienna, he was the first person presented to the emperor, who sent him chief engineer to attend him to Istria, where they repaired and added new fortifications to those of Trieste. Mr Halley returned to England in 1707; was made professor of geometry in the university of Oxford, and received the degree of LL. D. He was scarcely settled at Oxford, when he began to translate into Latin from the Arabic, *Apollonius de sectione rationis*; and to restore Apollonius's books *De sectione spatii*, from the account

given of them by Pappus; and he published the whole work in 1706. Afterwards he had a share in preparing for the press Apollonius's Conics; and ventured to supply the whole 8th book, the original of which is also lost. He likewise added Severus on the section of the cylinder and cone, printed from the original Greek, with a Latin translation, and published the whole in folio. In 1713, he was made secretary of the Royal Society; in 1720, king's astronomer at the royal observatory at Greenwich; and, in 1729, a member of the Academy of Sciences at Paris. He died at Greenwich in 1742. His principal works are, 1. *Catalogus stellarum australium*. 2. *Tabula astronomica*. 3. An abridgment of the astronomy of comets, &c. He also published several works of Sir Isaac Newton, who had a particular friendship for him, and to whom he frequently communicated his discoveries.

**HALLER'S QUADRANT.** See **QUADRANT**.

**HALLIARDS**, *n. s.* [corrupted from *haul* and *yard*.] the ropes or tackles usually employed to hoist or lower any sail upon its respective mast or stay. See **JEARS**.

**HALLIFAX**, Samuel, a learned English bishop, born at Chesterfield, in 1730, and educated at Cambridge, where he was regius professor of civil law. In 1781, he was made Bp. of Gloucester, and in 1789 Bp. of St Asaph. He published an Analysis of civil law, and Sermons on the prophecies. He died in 1790, aged 60.

**HALLING**, a lake of Norway, 64 miles NNW. of Christiania.

**HALLINGDAL**, a river of Norway, which runs into the Bay of Christiania, near Holmestrand.

**HALLNAS**, a town of Sweden, in Upland.

**HALLOES**, a town of Germany, in Holstein.

\* **HALLOO**. *interj.* [The original of this word is controverted: some imagine it corrupted from *a lui*, to him! others from *allous*, let us go! and *Skinner* from *halter*, to draw.] A word of encouragement when dogs are let loose on their game.—

Some popular chief,

More noisy than the rest, but cries *halloo*,  
And, in a trice, the bellowing herd come out.

*Dryden.*

(3.) \* **To HALLOO**. *v. a.* [*haler. French.*] To encourage with shouts.—

If, whilst a boy, Jack ran from school,  
Fond of his hunting-horn and pole,  
Though gout and age his speed detain,  
Old John *halloo*; his hounds again.

*Prior.*

2. To chase with shouts.—

If I fly, Marcius,

*Halloo* me like a hare. *Shakespeare's Coriol.*

3. To call or shout to.—

When we have found the king, he that first  
lights on him,

*Halloo* the other. *Shakespeare's King Lear.*

(2.) **To HALLOO**. *v. n. s.* To cry as after the dogs.—

A cry more tunable

Was never *halloo'd* to, nor cheer'd with horn;  
*Shakespeare.*

2. To treat as in contempt.—Country folks *hallooed* and houted after me, as the arrantest coward that ever showed his shoulders to his enemy. *Sidon.*

\* **To**

\* **To HALLOW.** *v. a.* [*halgian, halig, Sax. holy.*] 1. To consecrate; to make holy.—When we sanctify or *hallow* churches, it is only to testify that we make them places of publick resort; that we invest God himself with them, and that we sever them from common use. *Hooker.*—It cannot be endured to hear a man profess, that he putteth fire to his neighbour's house, but yet so *halloweth* the same with prayer, that he hopeth it shall not burn. *Hooker.*—

Is't Cade that I have slain, that monstrous traitor?

Sword, I will *hallow* thee for this thy deed,  
And hang thee o'er my tomb, when I am dead.  
*Shakspeare.*

My prayers

Are not words duly *hallow'd*, nor my wishes  
More worth than vanities; yet pray'rs and wishes  
Are all I can return. *Shakspeare. Henry VIII.*

God from work

Now resting, blest'd and *hallow'd* the seventh day,  
As resting on that day from all his works,  
But not in silence holy kept. *Milton.*

Then banish'd faith shall once again return,  
And vestal fires in *hallow'd* temples burn. *Dry.*

No satyr lurks within this *hallow'd* ground;  
But nymphs and heroines, kings and gods a-  
bound. *Græve.*

2. To reverence as holy; *hallowed* be thy name.

(1.) **HALLSTATT**, a town of Austria, on the Halstatter, with a salt mine, 15 m. S. of Gemunde.

(2.) **HALLSTATT**, a town of Franconia, at the conflux of the Main and Rednitz, 3 miles N. of Bamberg.

**HALLSTATTER**, or **HALLSTATTER SEE**, a lake of Austria, 6 miles S. of Gemunden.

\* **HALLUCINATION.** *n. f.* [*hallucinatio, Lat.*] Error; blunder; mistake; folly.—A walking of flesh, without cause, is frequently termed a bewitched disease; but unquestionably a mere *hallucination* of the vulgar. *Harvey.*—This must have been the *hallucination* of the transcriber, who probably mistook the dash of the I for a T. *Addison.*

**HALLUIN**, a town of France in the dept. of Oise; 10 miles SE. of Breteuil.

\* **HALM.** *n. f.* [*halme, Saxon.*] Straw: pronounced **HAWM**: which see.

**HALMOTTE**, or **HALIMOTTE**, *n. f.* is the same with **COURT BARON**, the word implying a meeting of the tenants of the same hall or manor. The name is still retained at Luston, and other places in Herefordshire. See **COURT**, N° 1, § 4; and **MOTE**.

**HALMSTADT.** See **HELMSTADT**.

**HALNA**, a town of Sweden in W. Gothland.

(1.) \* **HALO.** *n. f.* A red circle round the sun or moon.—If the hail be a little flatted, the light transmitted may grow so strong, at a little less distance than that of 26 degrees, as to form a *halo* about the sun or moon; which *halo*, as often as the hailstones are duly figured, may be coloured. *Newton.*—I saw by reflexion, in a vessel of stagnating water, three *halo's*, crowns or rings of colours about the sun, like three little rainbows, concentrick to his body. *Newton.*

(2.) **HALO**, or **CORONA**, in optics, is a luminous circle, surrounding the sun, moon, planets, or fixed stars. Sometimes these circles are white,

and sometimes coloured, like the rainbow. Sometimes one only is visible, and sometimes several concentrick halos appear at the same time. Those which have been seen about Sirius and Jupiter were never more than 3°, 4°, or 5°; in diameter; those which surround the moon are, also sometimes no more than 3° or 5°; but these, as well as those which surround the sun, are of very different magnitudes, viz. of 12° 0', 22° 35', 30° 0', 38° 0', 42° 2', 45° 0', 46° 24', 47° 0', and 90° or even larger than this. Their diameters also sometimes vary during the time of observation and the breadths both of the coloured and white circles are very different, viz. of 2, 4, or 7 degrees.—Their colours are more diluted than those of the rainbow; and they are in a different order, according to their size. (See § 10.) Mr Huygens observed red next the sun, and a pale blue outwards. Sometimes they are red on the inside and white on the outside. M. Weidler observed one that was yellow on the inside and white on the outside. In France, one was observed in 1683, the middle of which was white; after which followed a border of red, next to it was blue, then green, and the outermost circle was a bright red. In 1728 one was seen of a pale red outwardly, then followed yellow, and then green, terminated by white. In Holland, M. Muschenbroeck says, it may be seen in the day time, almost every year but they are difficult to be observed, except the eye be so situated, that not the body of the sun, but only the neighbouring parts of the heavens can be seen. Mr Middleton says, that this phenomenon is very frequent in North America; for there is generally one or two about the sun every week, and as many about the moon every month. Halos round the sun are very frequent in Russia. M. Lepius says, that from the 23d April 1756, to the 20th Sept. he himself had observed no less than 26, and that he has sometimes seen twice as many in the same space of time.

(3.) **HALOS**, APPEARANCES SIMILAR TO. Similar, in some respects, to the halo, was the remarkable appearance which M. Bouguer describes, as observed on the top of Mount Pichinca, in the Cordilleras. When the sun was just rising behind them, so as to appear white, each of them saw his own shadow projected upon it, and no other. The distance was such, that all the parts of the shadow were easily distinguishable, as the arm, the leg, and the head; but what surprised them most was, that the head was adorned with a kind of glory, consisting of 3 or 4 small concentrick crowns of a very lively colour, each exhibiting all the varieties of the primary rainbow, and having the circle of red on the outside. The intervals between these circles continued equal, though the diameter of them all were constantly changing. The last of them was very faint, and at a considerable distance was another great white circle, which surrounded the whole. As near as M. Bouguer could compute, the diameter of the first of these circles was about 5½ degrees, that of the second 11, that of the third 17, and so on; but the diameter of the white circle was about 76°. This phenomenon never appeared but in a cloud consisting of frozen particles, and never in drops of rain like the rainbow. When the sun was not in the horizon

Head of a Ship.

only part of the white circle was visible, as M. Bagny frequently observed afterwards. Similar to the curious appearance was one seen by Dr M'Int in Scotland; who observed a rainbow round his shadow in the mist, when he was upon a eminence above it. In this situation the whole country round seemed buried under a vast deluge, and nothing but the tops of distant hills appeared here and there above the flood. In those upper regions the air, he says, is at that time very pure and agreeable. At another time he observed a double range of colours round his shadow. The colours of the outermost range were broad and very distinct, and every where about two feet distant from the shadow. Then there was a darkish interval, and after that another narrower range of colours, closely surrounding the shadow, which was very much contracted. He thinks that these ranges of colours are caused by the inflection of the rays of light, the same that occasioned the ring of light which surrounds the shadow of all bodies, observed by M. Maraldi, and this author. *Edin. Essays*, Vol. I. p. 128.

(4.) HALOS, ARTIFICIAL. Halos may be produced by placing a lighted candle in the midst of steam in cold weather. If glass windows be brushed upon, and the flame of a candle be placed some feet from it, while the spectator is also at the distance of some feet from another part of a window, the flame will be surrounded with a coloured halo. And if a candle be placed behind a glass window, when air is admitted into the vacuum within it, at a certain degree of density, the vacuum with which it is loaded will make a coloured halo round the flame. This was observed by Otton Guericke. In Dec. 1756, M. Muschenbroeck observed, that when the glass windows of his room were covered with a thin plate of ice on the inside, the sun appearing through it was surrounded with a large and variously coloured halo; and, opening the window, he found that it arose entirely from this thin plate of ice, for none was seen except through it. Dr Kotelnikow, having, like Dr Hally, made very accurate observations to discover the number of possible rainbows, considers the coloured halo which appears about a candle, as the same thing with one of these bows which is formed near the body of the sun, but which is not visible on account of his excessive splendor.

(5.) HALOS, DESCARTES AND GASSENDI'S THEORY OF. M. Descartes observes, that the halo never appears when it rains; from which he concludes that this phenomenon is occasioned by refraction of light in the round particles of ice, which are then floating in the atmosphere; and though these particles are flat when they fall to the ground, he thought they must be protuberant in the middle, before their descent; and according to this protuberancy he imagined that the diameter of the halo would vary.—In treating of meteors, Gassendi supposed, that a halo is of the same nature with the rainbow, the rays of light being in both instances refracted and once reflected within each drop of rain or vapour, and that all the difference there is between them arises from their different situation with respect to the observer. For, when the sun is behind the spectator, and con-

sequently the rainbow before him, his eye is in the centre of the circle; when he views the halo, with his face towards the sun, his eye is in the circumference of the circle; so that according to the known principles of geometry, the angle, under which the object appears in this case, must be just half of what it is in the other.

(6.) HALOS, EXPERIMENTS AND THEORY OF DECHALES RESPECTING. M. Dechales endeavours to show that the generation of the halo is similar to that of the rainbow. If, says he, a sphere of glass or crystal, AB, *Plate CLXXIII. fig. 1.* full of water, be placed in the beams of the sun shining from C, there will not only be two circles of coloured light on the side next the sun, and which constitute the two rainbows; but there will also be another on the part opposite to the sun, the rays belonging to which, meeting at E, afterwards diverge, and form the coloured circle G, as will be visible, if the light that is transmitted through the globe be received on a piece of white paper. The colours also will appear to an eye placed in any part of the surface of the cone PEG. Measuring the angle FEH, he found it to be 23 degrees. They were only the extreme rays of this cone that were coloured like those of the rainbow. This experiment he thought sufficiently illustrated the generation of the halo; so that whenever the texture of the clouds is such, as not entirely to intercept the rays of the sun or moon, and yet have some degree of density, there will always be an halo round them, the colours of the rainbow appearing in those drops which are 23° distant from the sun or moon. If the sun be at A, and the spectator in B. (*fig. 2.*) the halo will be the circle DEF, DAB being 46° or twice 23. The reason why the colours of the halo are more dilute than those of the rainbow, he says, is owing principally to their being formed not in large drops of rain, but in very small vapour; for if the drops of water were large, the cloud would be so thick, that the rays of the sun could not be regularly transmitted through them; and, on the other hand, he observed, that when the rainbow is formed by very thin vapours, the colours hardly appear. As for those circles of colours which are sometimes seen round candles, it was his opinion that they are owing to nothing but moisture on the eye of the observer; for that he could never produce this appearance by means of vapour only, if he wiped his eyes carefully; and he had observed that such circles are visible to some persons and not to others, and to the same persons at one time and not at another.

(7.) HALOS, HUYGENS'S THEORY OF. The most considerable and generally received theory, respecting halos, is that of Mr Huygens. Sir Isaac Newton mentions it with respect, and Dr Smith, in his *Complete System of Optics*, does not hint at any other. The occasion of M. Huygens publishing his thoughts on this subject was the appearance of a halo at Paris, on the 24th May 1667, of which he gave an account in a paper read at the Royal Academy in that city, which was afterwards translated, and published in the *Engl. Philof. Transf. See Loiusleop's Abridgment*, Vol. II. p. 189. This article contains the heads of a discourse, which he afterwards completed, but never published.

quite finished, and which has been translated, with some additions, by Dr Smith, from whom the following account is chiefly extracted. M. Huygens was first led to think particularly upon this subject, by the appearances of 5 suns at Warsaw, in 1658; after which, he says, he hit upon the true cause of halos, and mock suns. If we can conceive any kind of bodies in the atmosphere, which, according to the known laws of optics, will, either by reflection or refraction, produce the appearance in question, when nothing else can be found that will do it, we must acquiesce in the hypothesis, and suppose such bodies to exist, even though we cannot give a satisfactory account of their generation. Two such bodies are assumed by M. Huygens; one of them a round ball, opaque in the centre, but covered with a transparent shell; and the other is a cylinder, of a similar composition. By the help of the former he endeavours to account for halos, and by the latter for those appearances which are called mock suns. Those bodies which M. Huygens requires, in order to explain these phenomena, are not, however, a mere assumption; for some such, though of a larger size than his purpose requires, have been actually found, consisting of snow within and ice without. They are particularly mentioned by Descartes. The balls with the opaque kernel, which he supposed to have been the cause of them, he imagines not to exceed the size of a turnip-seed; but, in order to illustrate this hypothesis, he gives a figure of one, of a larger size, in ABCDEP, *Pl.* 173, *Fig. 3.* representing the kernel of snow in the middle of it. If the rays of light, coming from GH, fall upon the side AD, it is manifest they will be so refracted at A and D, as to bend inwards; and many of them will strike upon the kernel EF. Others, however, as GA and HD, will only touch the sides of the kernel; and being again refracted at B and C, will emerge in the lines BK, CK, crossing each other in the point K, whose nearest distance from the globule is somewhat less than its apparent diameter. If, therefore, BK and CK be produced towards M and L, *Fig. 4.* it is evident that no light can reach the eye placed within the angle LKM, but may fall upon it when placed out of that angle, or rather the cone represented by it. For the same reason, every other of these globules will have a shadow behind it, in which the light of the sun will not be perceived. If the eye be at N, and that be conceived to be the vertex of a cone, the sides of which NR, NQ, are parallel to the sides of the former cone KL, KM, it is evident that none of the globules within the cone QNR can send any rays of the sun to the eye at N. But any other globule out of this cone, as X, may send those rays, which are more refracted than XZ, to the eye; so that this will appear enlightened, while those within the cone will appear obscure. It is evident from this, that a certain area, or space, quite round the sun, must appear dark; and that the space next to this area will appear luminous, and more so in those parts that are nearest to the obscure area; because, he says, it may easily be demonstrated, that those globules which are nearest to the cone QNR exhibit the largest image of the sun. It is plain, also, that a corona ought to be

produced in the same manner whatever be the sun's altitude, because of the spherical figure of the globules. To verify this hypothesis, M. Huygens advises us to expose to the sun a thin glass bubble, filled with water, and having some opaque substance in the centre of it; and he says we shall find, that we shall not be able to see the sun through it, unless at a certain distance from a place opposite to the centre of it; but as soon as we do perceive the light, the image of the sun will immediately appear the brightest, and coloured red, for the same reason as in the rainbow. These halos, he says, often appear about the moon; but the colours are so weak as to appear only white. Such white coronas he had also seen about the sun, when the space within them appeared scarce darker than that without. This he supposes to happen when there are but few of those globules in the atmosphere; for the more plentiful they are, the more lively the colours of the halo appear; at the same time also the area within the corona will be the darker. The apparent diameter of the corona, which is generally about  $45^\circ$  depends upon the size of the dark kernel; for the larger it is with respect to the whole globule, the larger will be the dark cone behind it. The globules that form these halos, Mr Huygens supposes to have consisted of soft snow, and to have been rounded by continual agitation in the air, and thawed on their outsides by the heat of the sun. To make the diameter of the halo  $45^\circ$  he demonstrates that the semidiameter of the globule must be to the semidiameter of the kernel of snow very nearly as 1000 to 480, and that to make a corona of  $100^\circ$  it must be as 1000 to 680.

(8.) HALOS, MARIOTTE'S THEORY OF. M. Mariotte accounts for the formation of the small coronas by the transmission of light through aqueous vapours, where it suffers two refractions without any intermediate reflection. He shows that light which comes to the eye, after being refracted in this manner, will be chiefly that which falls upon the drop nearly perpendicular; because more rays fall upon any given quantity of surface in that situation, fewer of them are reflected with small degrees of obliquity, and they are not so much scattered after refraction. The red will always be outermost in these halos, as consisting of rays which suffer the least refraction. And where, as he had seen, when the clouds were driven briskly by the wind, halos round the moon, varying frequently in their diameter, being sometimes of  $2^\circ$ , sometimes of  $3^\circ$ , and sometimes of  $4^\circ$ ; sometimes also coloured, sometimes only white, and sometimes disappearing entirely; he concluded that all these variations arose from the different thickness of the clouds, through which sometimes more and sometimes less light was transmitted. He supposed, also, that the light which formed them might sometimes be reflected, and at other time refracted. As to those coronas which consist of two orders of colours, he imagined that they were produced by small pieces of snow, which when they begin to dissolve, form figures which are little convex towards their extremities. Sometimes, also, the snow will be melted in different shapes; and in this case, the colours of several halos will be intermixed and confused; and such

be first, he had sometimes observed round the sun. M. Mariotte then proceeds to explain the larger ones, viz. those that are about  $45^\circ$  in diameter, and for this purpose he has recourse to equiangular prisms of ice, in a certain position with respect to the sun; and he takes pains to trace the progress of the rays of light for this purpose: but this hypothesis is very improbable. In some cases he thought that these large coronas were caused by hail stones, of a pyramidal figure; because after two or three of them had been seen about the sun, there fell the same day several such pyramidal hailstones. M. Mariotte explains parhelia by the help of the same suppositions. See PARHELION.

(9.) HALOS, MUSCHENBROECK'S THEORY OF. M. Muschenbroeck concludes his account of coronas with observing, that some density of vapour, or some thickness of the plates of ice, divides the light in its transmission through the small globules of water, or their interstices, into its separate colours; but what that density was, or what was the size of the particles which composed the vapour, he could not determine.

(10.) HALOS, SIR ISAAC NEWTON'S THEORY OF. This great philosopher considered the larger and less variable appearances of this kind as proceeding according to the common laws of refraction, but that the less and more variable appearances depend upon the same cause with the colours of the plates. He concludes his explication of the rainbow with the following observation on halos and parhelia. "The light which comes through drops of rain by two refractions, without any reflection, ought to appear the strongest at the distance of about  $26^\circ$  from the sun, and to decay gradually both ways as the distance from him increases. And the same is to be understood of light transmitted through spherical hailstones: and if the hail be a little flatted, as it often is, the refracted light may be so strong, at a little less distance than that of  $26^\circ$  as to form a halo about the sun or moon; which halo, as often as the hailstones are duly figured, may be coloured, and then it must be red within by the least refrangible rays, and blue without by the most refrangible ones; especially if the hailstones have opaque globules of snow in their centres to intercept the light within the halo, as Mr Huygens has observed, and make the inside of it more distinctly defined than it would otherwise be. For such hailstones, though spherical, by terminating the light by the snow, may make a halo red within, and colourless without, and darker within the red than without, as halos use to be. For of those rays which pass close by the snow, the red-making ones will be the least refracted, and so come to the eye in the straightest lines." Some farther thoughts of Sir Isaac Newton's on halos are subjoined to the account of his experiments on the colours of thick plates of glass, which he conceived to be similar to those which are exhibited by thin ones. "As light reflected by a lens quick silvered on the back side makes the rings of the colours above described, so it ought to make the like rings in passing through a drop of water. At the first reflexion of the rays within the drop, some colours ought to be transmitted, as in the case of a lens, and others to be reflected back to the eye.

For instance, if the diameter of a small drop or globule of water be about the goodth part of an inch, so that a red making ray, in passing through the middle of this globule, has 250 fths of easy transmission within the globule, and all the red-making rays, which are at a certain distance from this middle ray round about it, have 249 fths within the globule, and all the like rays at a certain farther distance round about it have 248 fths, and all those at a certain farther distance 247 fths, and so on, these concentric circles of rays, after their transmission, falling on a white paper, will make concentric rings of red upon the paper; supposing the light which passes through one single globule strong enough to be sensible, and in like manner the rays of other colours will make rings of other colours. Suppose now that in a fair day the sun should shine through a thin cloud of such globules of water or hail, and that the globules are all of the same size, the sun seen through this cloud ought to appear surrounded with the like concentric rings of colours, and the diameter of the first ring of red should be  $7\frac{1}{2}^\circ$  degrees, that of the second  $10\frac{1}{2}^\circ$ , that of the third  $12^\circ 33'$ , and according as the globules of water are bigger or less, the ring should be less or bigger." This curious theory our author informs us was confirmed by an observation which he made in 1692. He saw by reflexion, in a vessel of stagnating water, 3 halos, crowns, or rings of colours about the sun, like 3 little rainbows concentric to his body. The colours of the first, or innermost, were blue next the sun, red without, and white in the middle, between the blue and red. Those of the 2d crown were purple and blue within, and pale red without, and green in the middle. And those of the third were pale blue within, and pale red without. These crowns inclosed one another immediately, so that their colours proceeded in this continual order from the sun outward; blue, white, red; purple, blue, green, pale yellow, and red; pale blue, pale red. The diameter of the second crown, measured from the middle of the yellow and red on one side of the sun, to the middle of the same colour on the other side, was  $9\frac{1}{2}^\circ$  degrees or thereabouts. The diameters of the first and third he had not time to measure; but that of the first seemed to be about  $5^\circ$  or  $6^\circ$ , and that of the 3d about  $12^\circ$ . The like crowns appear sometimes about the moon: for in the beginning of the year 1664, on Feb. 19th at night, he saw two such crowns about her. The diameter of the first, or innermost, was about  $3^\circ$ , and that of the 2d about  $5\frac{1}{2}^\circ$ . Next about the moon was a circle of white; and next about that the inner crown, which was of a bluish green within, next the white, and of a yellow and red without; and next about these colours were blue and green on the inside of the outer crown, and red on the outside of it. At the same time there appeared a halo at the distance of about  $22^\circ 15'$  from the centre of the moon. It was elliptical; and its long diameter was perpendicular to the horizon, verging below farthest from the moon. He was told that the moon has sometimes 3 or more concentric crowns of colours encompassing one another next about her body. The more equal the globules of water or ice are to one another, the more

crowns of colours will appear, and the colours will be the more lively. The halo, at the distance of  $22\frac{1}{2}$  degrees from the moon, is of another sort. By its being oval, and more remote from the moon below than above, he concludes that it was made by refraction in some kind of hail or snow floating in the air in an horizontal posture, the refracting angle being about 50 or 60 degrees. Dr Smith, however, makes it sufficiently evident, that the reason why this halo appeared oval, and more remote from the moon towards the horizon, is a deception of sight, and the same with that which makes the moon appear larger in the horizon.

(11.) HALOS, WEIDLER'S THEORY OF. Mr Weidler, in his *Commentary on parhelion*, published at Wirtemberg in 1731, observes that it is very improbable that such globules as Mr Huygens's hypothesis requires, (§ 7.) with nuclei of such a precise proportion, should exist; and if there were such bodies, he thinks they would be too small to produce the effects ascribed to them. Besides, he observes that appearances exactly similar to halos are not uncommon, where fluid vapours alone are concerned; as when a candle is placed behind the steam of boiling water in frosty weather, or in the midst of the vapour issuing copiously from a bath, or behind a receiver when the air is so much rarefied as to be incapable of supporting the water it contains. The rays of the sun twice reflected and twice refracted within small drops of water are sufficient, he says, without any opaque kernel, to produce all the appearances of the halos that have the red light towards the sun, as may be proved by experiment. That the diameter of the halos is generally half of that of the rainbow, he accounts for as Cassendi did before him. See § 3.

HALORAGUS, in botany; a genus of the tetragynia order, belonging to the oclandria class of plants. The calyx is quadrid above; there are 4 petals; a dry plum, and a quadrilocular nut.

HALPACH, a river of Germany, in Austria.

HALPO, a town of Mexico, in Tabasco.

HALS, a town and county of Bavaria.

HALSE, a town of Norway, in Drontheim.

\* HALSENING. *adj.* [*hals*, German; *hals*, Scottish, the neck] Sounding harshly; inharmonious in the throat or tongue. Not in use.—This ill *halsening* horny name hath, as Cornuto in Italy, opened a gap to the scoffs of many. *Carew*.

\* HALSER. *n. s.* [from *hals*, neck, and *seel*, a rope. It is now in marine pronunciation corrupted to *hawser*.] A rope less than a cable.—

A beechen mast then in the hollow bafe  
They hoisted, and with well-wreath'd *halfers*  
hoise

Their white sails. *Chapman*.

No *halfers* need to bind these vessels here,  
Nor bearded anchors, for no storms they fear.

*Dryden*.

HALSTEAD, a town of Essex, seated on a rising ground, on the Coln, 47 miles NE. of London. It has an old church, the steeple of which was once burnt down by lightning, but rebuilt at the expence of Robert Fiske, Esq. The town consists of about 600 houses. The inhabitants are about 4000, and manufacture says, bays, calimancoes, &c. It has a free school for 40 boys, and

a very antique Bridewell. Its market on Friday is noted for corn. Lon.  $52^{\circ} 45'$  E. Lat.  $51^{\circ} 59'$  N.

(1.) \* HALT. *adj.* [from the verb.] Lame; crippled.—Bring in hither the poor, the maimed, the *hals*, and the blind. *Luke*.

(2.) \* HALT. *n. s.* [from the verb.] 1. The act of limping; the manner of limping. 2. [*Alte*, Fr.] A stop in a march.—

The heav'nly bands

Down from a sky of jasper lighted now  
In Paradise, and on a hill made *halt*. *Milton*.

Scouts each coast light armed scour  
Each quarter to descry the distant foe,  
Where lodg'd, or whither fled, or if for fight  
In motion, or in *halt*. *Milton*.

—Without any *halt* they marched between the  
two armies. *Clarendon*.—He might have made a  
*halt* till his foot and artillery came up to him  
*Clarendon*.

\* To HALT. *v. n.* [*healt*, Sax. lame; *Healtan* to limp.] 1. To limp; to be lame.—

And will she yet debase her eyes

On me, that *halt* and am misshapen thus? *Sh.*

Thus inborn broils the factions would engage,  
Or wars of exil'd heirs, or foreign rage,  
"Till *balting* vengeance overtook our age. *Dryd.*

Spenser himself affects the obsolete,  
And Sidney's verse *balts* ill on Roman feet.

*Pope*.

2. To stop in a march.—I was forced to *halt* in  
this perplexicular march *Addison*. 3. To hesitate; to stand dubious.—How long *halt* ye between  
two opinions? *1 Kings*. 4. To fail; to falter.

Here's a paper written in his hand;

A *balting* sonnet of his own pure brain,  
Fashion'd to Beatrice. *Shak.*

—All my familiars watched for my *balting*, saying, peradventure he will be enticed, and we shall prevail against him. *Jeremiah*.

(1.) \* HALTER, *n. s.* [from *halt*.] He who limps.

(2.) \* HALTER, *n. s.* [*halsfre*, Sax. from *hals*, the neck] 1. A rope to hang malefactors.—

He's fled, my lord, and all his pow'rs do yield  
And humbly thus, with *halters* on their necks  
Expect your highness' doom of life or death.

*Shak.*

—They were to die by the sword if they stood upon defence, and by the *halter* if they yielded wherefore they made choice to die rather as soldiers than as dogs. *Harward*.—

Were I a drowty judge, whose dismal note  
Disgorgeth *halter* as a juggler's throat

Doth ribbands. *Clarendon*

He gets renown, who, to the *halter* near,  
But narrowly escapes, and buys it dear. *Dryd.*

2. A cord; a strong string —

Whom neither *halser* binds nor burthen  
barge. *Sney*.

(3.) HALTER, in antiquity, [*halsus*, Gr. *hals*, Latin.] a peculiar kind of discus. See *Disc*, N° 1; *Discus* N° 1; and *HALTERISTA*.

(4.) HALTER, in the manege, a head stall for horse, of Hungary leather, mounted with one and sometimes two straps, with a second throat band if the horse is apt to unhalter himself.

\* To HALTER. *v. n.* [from the noun.] To bind with a cord: to catch in a noose.—He might have

hav

has employed his time in the frivolous delights of catching moles and haltering frogs. *Atterbury.*

**HALIA-CAST**, is an excoriation of the palm, occasioned by the halter's being entangled about a bird's foot, upon his endeavouring to rub his neck with his hinder feet. For the cure, anoint the place morning and evening, with equal quantities of linseed oil and brandy, well mixed.

**HALTEREN**, a town of Germany, in the bishopric of Munster, on the Lippe; 30 miles SW. of Munster. Lon. 7. 27. E. Lat. 51. 40. N.

**HALTERISTÆ**, in antiquity, a kind of playmen or discus. Some take the discus to have been a leaden weight or ball, which the vaulters bore in their hands, to secure and keep themselves the more steady in their leaping. Others say the **HALTERISTÆ** was a lump of lead or stone, with a hole, or handle fixed to it, by which it might be carried. *Mercurialis*, in his treatise *De arte gymnastica*, l. c. 12. distinguishes two kinds of halterists; for though there was but one halter, there were two ways of applying it. The one was to throw a pail at it; the other only to hold it out as a shield, and in this posture to give themselves several motions, twinging the hand backwards and forwards, according to the engraven figures thereof given us by *Mercurialis*. The halter was of a cylindrical figure, smaller in the middle, where it was held, by one diameter, than at the two ends. It was above a foot long, and there was one for each hand: it was either of iron, steel, or lead. *Galen*, *De tuncid. valetud.* lib. 1. c. 12. speaks of this exercise, and shows of what use it is in purging the body of peccant humours, making it equivalent both to purgation and phlebotomy.

1. **HALTON**, or **HAULTON**, (i. e. *High Town*), a town of Cheshire, 23 miles NE. of Chester, and 126 NW. of London. It stands on a hill, where a castle was built A. D. 1071, and is a member of the duchy of Lancaster; which contains a large jurisdiction in the county round it, by the name of *Halton Fee*, or the *honour of Halton*, having a court of record, &c. within its limits. It is situated near a canal by which it has communication with the rivers Mersey, Dee, Ribblesdale, Trent, Darwent, Severn, Mumber, Tames, Avon, &c. which navigation, including the canals, extends above 300 miles, in the counties of Lincoln, Nottingham, York, Lancashire, Westmoreland, Stafford, Warwick, Leicester, Litchfield, Worcester, &c.

2. **HALTON**, the name of 8 English villages; viz. 1. in Lancashire. 2. in Lincolnshire. 3. in Northumberland. 4. in Salop. 5. and 6. in Somersetshire. 7. E. and 8. W. in Yorkshire.

**HALTWEZEL**, or } a well built town of  
**HALTWHISTLE**, } England, in Northumberland, on the S. Tyne, 37 miles W. of Newcastle, and 314 NW. of London. It was plundered by the Scots, in the reign of Q. Elizabeth. Lon. 2. 17. E. Lat. 55. 2. N.

**HALVA**, } or **CHAULAN**, a Town of Fez,  
**HALVAN**, } on the Cebus, 8 miles from Fez. Lon. 5. 1. W. Lat. 33. 32. N.

\* **HALVE**, v. a. (from *half*, *halves*.) To divide into two parts.

\* **HALVES**, *interj.* (from *half*, *halves* being the

plural.) An expression by which any one lays claim to an equal share.—

Have you not seen how the divided dam  
Runs to the summons of her hungry lamb?

But when the twin cries *halves*, she quits the  
first. *Cleveland.*

**HALUNTINI**, the ancient inhabitants of *Aluntium*. See *ALUNTIVM*.

**HALYMOTE**, *s. f.* properly signifies an *holy* or ecclesiastical court. See *HALMOTS*. There is a *halymote* held in London, before the Lord Mayor and sheriffs, for regulating the bakers. It was anciently held on Sunday before St Thomas's day, and hence called the *Holy Mote* or *Holy Court*.

**HALYS**, in ancient geography, the noblest river of the Hither Asia, through which it has a long course, was the boundary of *Croesus's* kingdom on the east. Running down from the foot of mount *Taurus*, through *Cataonia* and *Cappadocia*, it divided almost the whole of the Lower Asia, from the sea of *Cyprus* down to the *Euxine*, according to *Herodotus*; who seems to extend its course too far. According to *Strabo*, who was a *Cappadocian*, it had its springs in Great *Cappadocia*. It separated *Paphlagonia* from *Cappadocia*; and received its name *αὐρὴν ἅλιν*, from salt, because its waters were of a salt taste, from the soil over which they flowed. It is famous for the defeat of *Croesus* king of *Lydia*, who was misled by this ambiguous response of the oracle; *ἄνθρωπος ἅλιν δαίμων περὶ ἅλιν ἔλεγε*; i. e. If *Croesus* passes over the *Halys* he shall destroy a great empire. That empire proved to be his own. See *CROESUS* and *LYDIA*.

**HALYWERCPOLE**, in old writers, persons who enjoyed land, by the pious service of repairing some church, or defending a sepulchre. It also signified persons in the diocese of *Durham*, who held their lands to defend the corpse of St *Cuthbert*, and thence claimed the privilege of not being forced to go out of the bishopric.

(1.) **HAM**, (from *Heb.* i. e. *crafty*.) the youngest son of *Noah*, and father of *Cush*, *Misraim*, *Phut*, and *Canaan*; each of whom possessed the countries peopled by them. *Ham*, it is believed, had all Africa for his inheritance, and peopled it with his posterity. He himself, it is thought, dwelt in *Egypt*, but *M. Bagnage* is of opinion, that neither *Ham* nor *Misraim* ever were in *Egypt*, but that their posterity settled in this country, and called it by the name of their ancestor. He also doubts of his having been worshipped as a god, by the name of *Jupiter Hammon*. Be that as it may, *Africa* is called the *Land of Ham*, in *Psalms* lxxviii. 51. cv. 23. cvi. 22. In *Plutarch*, *Egypt* is called *Chemia*; and there are traces of the name of *Ham* or *Chem*, in *Psechemmis*, and *Pstta-chemmis*, which are cantons of *Egypt*. See *EGYPT*, § 3.

(2.) ? **HAM**, *s. f.* (*ham*, *Saxon*; *hamme*, *Dutch*.) 1. The hip; the hinder part of the articulation of the thigh with the knee.—The *ham* was much relaxed; but there was some contraction remaining. *Wifeman*. 2. The thigh of a hog salted.—

Who has not learn'd, fresh surgeon and bone  
pye

Are no rewards for want and infamy? *Pope.*

(3.) **HAM**, in commerce, &c. See § 1, *sup.* 2. *West-*

**Westphalia** hams are prepared by salting them with salt-petre, pressing them in a press eight or ten days, then steeping them in juniper water, and drying them by the smoke of juniper wood. A ham may be salted in imitation of those of Westphalia, by sprinkling a ham of young pork with salt for one day, to fetch out the blood; then wiping it dry, and rubbing it with a mixture of 1 lb. of brown sugar,  $\frac{1}{2}$  lb. of saltpetre,  $\frac{1}{2}$  pint of bay salt, and 3 pints of common salt, well stirred in an iron pan over the fire, till moderately hot: let it lie three weeks in this salting; turn it often; then dry it and hang it up.

(4.) **HAM**, whether initial or final, is no other than the Saxon *ham*, a house, farm, or village. *Gibson's Camden*.

(5.) **HAM** signifies also a narrow meadow.

(6.) **HAM**, or **CHAM**, in ancient geography, the country of the Zuzima. Gen. xiv. 5. Its situation is not now known.

(7.) **HAM**, or **HAMM**, in modern geography, a city of Germany, in the circle of Westphalia, capital of the county of Mark, and subject to the K. of Prussia. It is seated on the Lippe, on the frontiers of Munster. It was formerly a Hanse town, but is now reduced. Lon. 7. 53 E. Lat. 51. 41. N.

(8.) **HAM**, a town of France, in the dep. of Somme, and late prov. of Picardy, seated on the Somme, among marshes. It has a strong castle, and a round tower whose walls are 36 feet thick. It was taken by the Spaniards in 1557, but restored by treaty. It lies 10 miles N. of Noyons, and 48 of Paris. Lon. 3. 9. E. Lat. 49. 45 E.

(9.) **HAM**, a village of Surrey, between Peterham and Kingston, 11 miles WSW. of London. The houses surround a pleasant common.

(10.—19.) **HAM**, is also the name of ten other villages; viz. of two in Dorsetshire, two in Kent; and of one each in Cornwall, Gloucester, Herefordshire, Surrey, Worcester, and Wilts.

(20. 21.) **HAM**, **EAST**, and **WEST**, 2 villages in Essex, on the Lea, 4 miles E. by N. of London: near which is a spring well, remarkable for never freezing.

(22.) **HAM**, **THE LAND OF**. See N° 1, and **AFRICA**.

**HAMADA**, a town of Arabia, in Yemen.

**HAMADAN**. See **AMADAN**.

**HAMADRYADES**, (from *ama*, together, and *dryas*, an oak,) a kind of inferior deities revered among the ancient heathens, and believed to preside over woods and forests, and to be inclosed under the bark of oaks. They were supposed to live and die with the trees they were attached to; as is observed by Servius on Virgil, *Ecol.* x. ver. 62. after Moschachus, the scholiast of Apollonius, &c. who mentions other traditions relating to them. The poets often confound the Hamadryades with the **NASADS**, **NAPÆÆ**, and rural nymphs in general. See Catullus, *Carm.* lxxviii. v. 23. Ovid, *Fast.* iv. 229. *Met.* i. v. 695. xiv. v. 628. Propertius, *Elég.* xx. 32. Virg. *Ecl.* x. 64. *Georg.* iv. 382, 383. Festus calls them **QUSAQUSTULANÆ**, as being sprung from oaks. Pherenicus, in Athenæus, lib. iii. calls the vine, fig-tree, and other fruit-trees, *hamadryades*. This idea among the ancients, of intellectual beings annexed to trees, accounts for their worship of trees. Livy speaks of an am-

bassador addressing himself to an old oak, as to an intelligent person and a divinity. Lib. iii. § 25.

**HAMAH**, a town of Asiatic Turkey, in Syria. By some travellers it is corruptly called *Amar* and *Amant*. Some mistake it for the ancient **APAMEA**, now called *Afamiyah*, but that town is a day's journey from Hamah. Hamah is seated among hills, and has a castle on one of them. It has always been a considerable place, and in the 13th and 14th centuries had princes of its own. Among these **ISMÄEL ABULFEDA** was famous for his skill in geography. It is very large, and being seated on the ascent of a hill, makes a fine appearance; but like other towns under the Turkish government, is going to decay. Many of the houses are half ruined; but those which are still standing, as well as the mosques and castle, have their walls built of black and white stones, disposed so as to form various figures. The river *Asi*, the ancient **ORONTES**, runs by the castle, and fills the ditch round it, which are cut very deep into the rock; passes through the town from S. to N. and in its course turns 18 great wheels, called *saki*, which raise great quantities of water to a considerable height, and throw it into canals supported by arches, which run into the gardens. There are some pretty good market-places in Hamah. Linen is manufactured there, and sent to Tripoli to be exported into Europe. Lon. 36. 15. E. Lat. 35. 15. N.

**HAMAMELIS**, **WITCH HAZEL**; a genus of the digynia order, belonging to the tetrandria class of plants; and in the natural method ranking with those of which the order is doubtful. The *husa lucrum* is triphyllous, the proper calyx tetraphyllous; there are four petals; the nut horned and bilocular. There is but one species, a native of Virginia. It has a shrubby or woody stem, branching 3 or 4 feet high; oval, indented, alternate leaves, resembling those of common hazel; and flowers, growing in clusters from the joints of the young branches, but not succeeded by seeds in this country. It is hardy, and is admitted as a variety in our gardens. Its flowers are remarkable for appearing in November and December, when the leaves are fallen. It may be propagated either by seeds or layers.

**HAMAMET**, a town of Barbary, on the E. coast of Tunis, and N. side of the Gulf of Hamamet, 30 miles S. of Tunis. Lon. 10. 15. E. Lat. 36. 35. N.

**HAMAMLEEF**, a town 12 miles E. of Tunis, noted for its hot baths, which are famed for curing rheumatism and many other complaints. The Bey has a very fine bath, which he permits the consuls and others to use.

**HAMAN**, (10th. Heb. *s. e.* making an uproar, the son of Hammedatha, an **AGAGITE**, or Amalekite, the prime minister of Persia and favourite of K. Ahasuerus; was one of the most barbarous and vindictive monsters that ever existed, who, to gratify his haughty vengeance against a single individual, planned the massacre of the whole nation of the Jews. His diabolical scheme, repeated disappointments and deserved death, are recorded in Esther, ch. iii, vi, and vii.

**HAMAR**, a town of Norway, in Aggerhuys, 53 miles NE. of Christiania. Lon. 11. 5. E. Lat. 60. 30. N.

**HAMARS**, a town of France, in the dept. of Calvados, 13 miles SSW. of Caen, and 14 WNW. of Falaise.

\* **HAMATED**, *adj.* [*hamatus*, Lat.] Hooked; set with hooks.

(1.) **HAMATH**, in ancient geography, a kingdom of Syria. Toi one of its monarchs cultivated the friendship of David. 1 Sam. viii. 9.

(2.) **HAMATH**, the capital of the above kingdom, was seated on the Orontes. "The entering into Hamath," spoken of in Josh. xiii. 5. Judges iii. 3. 1 Kings xv. 15. and 2 Chr. vii. 8, is the narrow pass leading from the land of Canaan through the valley between Libanus and Antilibanus. This entrance is set down as the N. boundary of Canaan, in opposition to its southern limits, the Nile. Josephus and St. Jerom believed Hamath to be Epphanias. But Theodoret and other good geographers maintain it to be Emessa in Syria. Joshua (xv. 35.) assigned Hamath to the tribe of Naphtali. It was taken by the kings of Judah, and retaken from the Syrians by Jeroboam II. 1 Kings xiv. 18. The kings of Assyria at last took it, and transported the inhabitants into Samaria. 2 Kings xvii. 34. and xviii. 34, &c.

**HAMAXOBIANS**, } [from *hamaxo*, a chariot,  
**HAMAXOBII**, or } and *bios*, life.] a people  
**HAMAXOBITÆ**, } who had, no houses, but  
lived in carriages. They were an ancient people of Scythia Europæa, inhabiting the southern part of Moldavia, and instead of houses had a sort of tents made of leather, fixed on carriages to be ready for travelling. Some say they inhabited the countries now called *Bessarabia*, *Moldavia*, *Wallachia*, and part of *Transylvania*.

(1.) **HAMBACH**, a town of the French republic, in the dept. of Mont Tonnerre, and late palace of the Rhine, 5 miles NE. of Landau, and 16 SW. of Manheim.

(2.) **HAMBACH**, a town of the French republic, in the dept. of the Rhenish, and ci-devant duchy of Juliers, 1 mile SE. of Juliers. Lon. 23. 58. E. of Ferro. Lat. 50. 57. N.

(3.) **HAMBACH**, a town of Germany, in the Upper Palatinate, 3 miles NE. of Sulzbach, and 6 WNW. of Amberg.

**HAMBATO**, a town of Peru, in Quito.

**HAMBEN**, John. See **HAMPDEN**.

(1.) **HAMBERGER**, George Albert, an eminent mathematician, born in Franconia. He wrote several esteemed works in Hydraulics and Optics, and died at Jena, in 1726.

(2.) **HAMBERGER**, George Christopher, a voluminous German author, born in 1726, and best known as the editor of Orpheus's works. He was a member of the university of Gottingen, and died 1773, aged 74.

**HAMBERS**, a town of France, in the department of Maine, 10 miles SE. of Maine.

**HAMBIE**, a town of France, in the department of the Channel, 7 miles SE. of Coutances.

**HAMBLE**, a river of England, in Hampshire.

\* **To HAMBLE**, *v. m.* [from *ham*.] To cut the fibres of the thigh; to hamstring.

(1.) **HAMBLEDON**, a town of Hampshire, 10 miles SW. of Petersfield, and 63 WSW. of London.

(2.) **HAMBLEDON**, a village in Bucks, near Henley.

(3.) **HAMBLEDON HILL**, a hill of Dorsetshire,

near Sturminster, upon which was an ancient Roman camp. It extends  $\frac{1}{2}$  of a mile from E. to W. and affords a fine view of Blackmore. Many Roman coins have been dug up in it.

(1.) **HAMBURG**, or } an imperial city of Ger-

(2.) **HAMBURGH**, } many. Its name is derived from the old German word *Hamme*, signifying a wood, and *Burg*, a castle; and stands on the N. side of the Elbe, where it is 4 miles broad, and forms two spacious harbours. It also runs through most part of it in canals. It flows above Hamburg many miles; but when the tide is accompanied with NW. winds, much damage is done by its inundations. There are many bridges over the canals, which are mostly on a level with the streets, and some of them have houses on both sides. In 833, Lewis the Pious erected Hamburg into a bishopric, and afterwards into an archbishopric. Adolphus III. duke of Saxony, among other privileges, granted it the right of fishing in the Elbe, 8 miles above and below the city. It was declared a free imperial city in 1618. The kings of Denmark, since they succeeded to the counts of Holstein, have claimed the sovereignty of this place, and often compelled the citizens to pay large sums to purchase the confirmation of their liberties. It has more than once paid homage to the king of Denmark; who, notwithstanding, keeps a minister in it, which is an acknowledgment of its independency and sovereignty. By their situation among a number of poor princes, the Hamburgers are continually exposed to their rapaciousness, especially that of the Danes, who have extorted vast sums from them. The city is very populous in proportion to its bulk; for though one may walk with ease round the ramparts in two hours, yet its population is estimated at 250,000 people. It has many charitable foundations, but all persons found begging in the streets are committed to the house of correction. There is an hospital into which unmarried women may be admitted for a small sum, and comfortably maintained for life. The number of hospitals is greater in proportion to its bigness than in any other Protestant city in Europe. The revenue of the orphan-house alone is said to amount to between 50 and 60,000*l.* There is a large sumptuous hospital for receiving poor travellers that fall sick. In one of their work-houses, those who have not performed their task are hoisted up in a basket over the table in the common hall, while the rest are at dinner, that they may be tantalized with the sight and smell of what they cannot taste. The established religion of Hamburg is Lutheranism; the Calvinists and the Roman-catholics go to the ambassadors' chapels. The churches, which are ancient large fabrics, are open thoroughfares, and in some of them there are booksellers' shops. The church of St. Nicholas has fine chimes, which play every morning early and at one P. M. The pulpit of St. Catherine's is of marble, curiously carved and adorned with figures of gold. Its organ, reckoned one of the best in Europe, has 6000 pipes. The cathedral is very ancient, and its tower leans as if just going to fall; yet, on account of the singularity and beauty of its architecture, the danger attending it has been hitherto overlooked. There is still a dean and chapter belonging

belonging to this church, though secularized; from whose court there lies no appeal, but to the imperial chamber at Wetzlar. The chapter consists of a provost, dean, 13 canons, 8 minor canons, and 30 *vicarii immunes*. The cathedral, with the chapter, and a number of houses belonging to them, are under the immediate protection of his Britannic majesty as duke of Bremen, who disposes of the prebends that fall vacant, in six months of the year, alternately with the chapter. Hamburg is almost of a circular form, and six miles in compass. It has 6 gates, and 3 entrances by water, viz. two from the Elbe and one from the Alster, being divided into the old and new towns, which are strongly fortified with moats, ramparts, bastions, and out-works. The ramparts are very lofty, and planted with trees, and so broad that several carriages may go a-breast. In the new town, towards Altona, are several streets inhabited by Jews. Through that entrance from the Elbe, called *the lower Baum*, all ships pass and repass. Every morning, at the opening of it, is seen a multitude of boats and small barks, loaded with milk, fruits, and all kinds of provisions. There are several convents, which, having been secularized, are now possessed by the Lutherans. One of them holds its lands by this tenure, "That they offer a glass of wine to every malefactor who is carried by it for execution." There is a fine exchange, though not equal to that of London. A citizen, when he dies, must leave the 10th of his estate to the city; and foreigners, not naturalized, must pay a certain sum annually for liberty to trade. The carts here are only a long pulley laid upon an axle-tree between two wheels, and drawn not by horses, but by men, of whom a dozen or more are sometimes linked to these machines, with rings across their shoulders. Such of the senators, principal elders, divines, regular physicians, and graduates in law, as assist at funerals, have a fee. The hangman's house is the common prison for all malefactors; on whom sentence is passed on Friday, and on Monday they are executed. As, by the laws, no criminal is punishable unless he plead guilty, they have five different kinds of torture to extort such confession. The government is vested in the senate and three colleges of burghers. The former exercise almost every act of sovereignty, except that of laying taxes and managing the finances, which are the prerogatives of the latter. The magistracy is composed of 4 burgomasters, 4 syndics, and 24 aldermen, of whom some are lawyers and some merchants. Any person elected into the magistracy, and declining the office, must leave the city. No burgher is admitted into any of the colleges, unless he dwells in a house of his own within the city, and is possessed of 1000 rixdollars in specie, over and above the sum for which the house may be mortgaged; or 1000 in moveable goods, within the jurisdiction of the same. For the administration of justice, there are several inferior courts, from which an appeal lies to the Obergericht, or high court, and from that to the aulic council and other imperial colleges. For naval causes there is a court of admiralty, which, jointly with the city treasury, has also the care of the navigation of the Elbe, from the city to the river's mouth. In con-

sequence of this, 120 large buoys, some white, and others black, are kept constantly floating in the river in summer; but in winter, there are machines like those called *ice-breakers*, to point out the shoal and flats. At the mouth of the Elbe is a vessel with pilots ready to put on board the ships. At the mouth of the river also is a good harbour, called Cuxhaven, belonging to Hamburg; a light house; and several beacons, some of them very large. For defraying the expence of these, certain duties were formerly granted by the emperor to the city. There is a canal by which a communication is opened with the Trave, and thereby with Lubeck and the Baltic, without the hazard and expence of going about by the Sound. The trade of Hamburg is exceeding great, in exporting all the commodities and manufactures of the city and states of Germany, and supplying them with whatever they want from abroad. Its exports consist of linens of several sorts and countries; lawns, diapers, Osnaburgs, dowlas, &c. linen yarn, tin-plates, iron, brass, and steel wire, clap-board, pipe staves, wainscot boards, oak planks, timber, kid skins, corn, beer, flax, honey, wax, aniseed, linseed, drugs, wine, tobacco, and metals. Its principal imports are the woollen manufactures and other goods of Great Britain. By a list published at Hamburg in Dec. 1800, the total imports from Britain, between 1st Oct. 1799 and 1st Oct. 1800, amounted to 10½ millions Sterling; those from America to 4½ millions; and those from France, Spain, Portugal, Italy, Russia, and other countries to about 9 millions; in all about 24 millions Sterling in value: yet with all this immense commerce there is not a single manufacture of any extent carried on in it. This trade has been hitherto mostly carried on in British bottoms. Their whale fishery is also very considerable, 50 or 60 ships being generally sent out every year in this trade. The inland trade of Hamburg is superior to that of any in Europe, except those of Amsterdam and London. There is a periodical paper published here called the *Preis Courant*, specifying the course of exchange, with the prices which every commodity and merchandise bore last upon the exchange. There is also a board of trade, for advancing every project for the improvement of commerce. The bank, established in 1619, has a flourishing credit. To supply the poor with coin at a low price there are public granaries, in which great quantities of grain are laid up. By charters from several emperors, the Hamburgers exercise the right of coinage. The English merchants, or *Hamburgh company*, enjoy great privileges. They hold court with particular powers, and a jurisdiction among themselves, and have a church and minister of their own. This city has a district belonging to it of considerable extent, which abounds with excellent pastures, intermixed with several large villages and noblemen's seats. A small bailiwick called *Bergedorf*, belongs to this city and Lubeck. Though Hamburg has an undoubted right to seat in the diet of the empire, and is regularly summoned to it, yet as it pays no contributions to the military chest in time of war, and is unwilling to incur the resentment of Denmark, it makes no use of that privilege. There is a gymnasium, well endowed, with six able professors, who read lectures

in it at the universities. There are also several free schools, and a great number of libraries. The public order has always a prodigious stock of old books, which brings in a considerable revenue. Besides the militia, there is an establishment of regiments, consisting of 12 companies of infantry, and one troop of dragoons, under the command of an officer usually a foreigner. There is also an artillery company, and a guard; the last of which is posted at night all over the city, and calls the town. The city was taken possession of by 5,000 Danes, under Prince Charles, of Hesse, on the 19th March, 1801; but was evacuated within two months after. It lies 38 miles SW. of Lubec, and 51 NE. of Bremen. Lon. 9. 55. E. Lat. 52. 30. N.

(1) HAMBURG, a town of Pennsylvania, at the foot of the Blue Mountains, 50 miles NW. of Philadelphia.

HAMBURGERBERG, a suburb of HAMBURG, (N. 1.) which extends as far as Altona, being separated from it only by a ditch.

HANCHEU, a town of China, in Tche-kien.

(1) HANDEN, John. See HAMPDEN.

(2) HANDEN, a town of the United States in Connecticut, 17 miles SW. of Middleton.

(3) HANDEN, a township of the district of Maine, in Hancock county, W. of the Penobscot.

(5) HANDEN, LITTLE, } village, and *den*, a  
township.] Two villages in Bucks, near Wenden.

(1) \* HAME. *n. f.* (*hama*. Sax.) The collar by which a horse draws in a waggon.

(2) HAME, a village in Hants, near Andover.

(3) HAMEL, a town of France, in the dep. of Oise, 3 miles SE. of Grandvillier.

(4) HAMEL, a river of Germany in Lower Saxony, which joins the Weser at Hamelin.

(5) HAMEL. See HAMLET, N. 3.

(6) HAMEL, John Baptiste DU, a learned French philosopher of the 17th century. At 18 he wrote a treatise, in which he explained in a very simple manner Theodorus's 3 books of optics; to which he added a tract upon trigonometry, extremely perspicuous, and designed as an introduction to astronomy. Natural philosophy, as then taught, was only a collection of vague, knotty, and barren questions; when he undertook to establish it upon right principles, and published his *Astronomie Physique*. In 1666 Mr. Colbert proposed to Lewis XIV. a scheme for establishing a royal academy of sciences; and appointed Du Hamel secretary. He was also regius professor of philosophy, and published a great number of books. He died at Paris in 1706, aged 49. He wrote Latin with purity and elegance.

(7) HAMEL DU MONCEAU, Henry Lewis DU, a French author, born at Paris in 1700. He was appointed inspector of the Marine, an office, which he executed with reputation. He wrote *Elements of Agriculture*, *Treatises on Trees*, on *Naval Architecture* and other subjects. He died in 1781.

HAMELSBURG, a town of Franconia, in Fulda, on the Saale, 16 miles W. of Suhlwardt, and 43 E. of Fulda. Lon. 10. 12. E. Lat. 50. 16. N.

HAMELIN, or HAMEL, a strong town of Germany, in the duchy of Calenberg, in Lower Saxony.

ony, situated at the extremity of the duchy of Brunswick, to which it is the key, near the confluence of the Hamel and Weser; 18 miles SE. of Minden, and 28 SW. of Hanover. It belongs to his Majesty, as elector of Hanover. But the Prussians took possession of it, April 9th 1801. Lon. 9. 35. E. Lat. 52. 10. N.

HAMELLIA, in botany: A genus of the monogynia order, belonging to the pentandria class of plants, and in the natural method ranking in the dubious order. The corolla is quinquefid; the berry quinquelocular, inferior, polyspermous.

HAMER, a town of Poland, in Posnania.

HAMESECKEN, } BURGLARY, or NOCTUR-  
HAMESOKEN, } NAL HOUSE-BREAKING, was by the ancient English law called *Hamseschen*, as it still is in Scotland. Violating the privilege of a man's house in Scotland is as severely punished as ravishing a woman.

(1) HAMI, a country of Asia, subject to the Chinese, situated NE. of China, at the extremity of that desert which the Chinese call *Chamo*, and the Tartars *Cobi*; 90 leagues distant from the most westerly point of the province of Chenfi. This country was anciently inhabited by a wandering people, named *Lung*. About A. A. C. 950, they sent deputies to pay homage to the emperor of China, and presented some fabrics by way of tribute. The civil wars by which China was torn, about the end of the dynasty of Teheou, having prevented assistance from being sent, they fell under the dominion of the *Hiongnu*, who appear to have been the same with the Huns, who were then a formidable nation. The Chinese several times lost and recovered the country of Hami. In A. D. 131 (the 6th year of the reign of Chuntz, of the dynasty of the eastern Han), the emperor kept an officer there in quality of governor. Under the following dynasties, the same vicissitudes were experienced: Hami was sometimes united to Chenfi, sometimes independent of it, and sometimes even of the whole empire. The situation of these people, separated by vast deserts from China, to which they had no relation, in language, manners, or customs, greatly facilitated these revolutions. All the tributary states having revolted in 610, that of Hami followed their example; but it again submitted to the yoke, under Tai-tsung, who paid particular attention to his new conquest. He divided it into 3 districts, and connected its civil and military government in such manner to that of Chenfi and other neighbouring countries, that tranquillity prevailed during his reign and several of those that followed. Through Hami all the caravans which went from the W. to China, or from China to the W. were obliged to pass. Luxury having weakened the dynasty of Tang, the Mahometans (who had made a rapid progress in all the countries between Persia, Cobi, and the Caspian sea) advanced as far as Hami, and conquered it. This country afterwards had princes of its own, but dependent on the Tartars. The Yuen or Mogul Tartars again united it to Chenfi; and this reunion subsisted until 1360, when the emperor formed it into a kingdom, on condition of its princes doing homage and paying tribute. The king of Hami was honoured with a new title in 1404, and obtained a golden seal.

feal. After a contest of several years for the succession to the throne, Hami fell a prey to the king of Tou-eulh-fan. This yoke soon became uneasy to the people, who revolted from their new masters, and made conquests from them in their turn. Their new king did not long possess the throne, being conquered and killed in a bloody battle with the king of Tou-eulh-fan, who perished some time after. Hami has been since successively exposed to anarchy, or governed by its own princes. The prince who filled the throne in 1696, acknowledged himself a vassal of the empire, and sent as tribute to Peking camels, horses, and labres. Kanghi established the rank that the king of Hami should hold among the tributary princes, the time when he should come to render homage, the nature of the presents necessary for his tribute, the number of auxiliaries to be furnished in time of war, and the manner of his appointing a successor. These regulations have subsisted till this time. Hami, though surrounded by desert, is accounted one of the most delightful countries in the world. The soil produces grain, fruits, leguminous plants, pasture, &c. in plenty. The rice is particularly esteemed in China; and the pomegranates, oranges, peaches, raisins, and prunes, have a most exquisite taste; the jujubes are so juicy, and have so delicious a flavour, that the Chinese call them *perfumed jujubes*. There is no fruit more in request than the melons of Hami, which are carried to Peking for the emperor's table. They are much more wholesome than those of Europe; and have this singular property, that they may be kept fresh during great part of the winter. But the most useful production of this country is its raisins. These are of two kinds: The first, which are much used in the Chinese medicine, have a perfect resemblance to those known in Europe by the name of *Corbisson*. The second which are in much greater request for the table, are smaller and more delicate than those of Provence. The Chinese authors agree with Messrs Lemery and Geoffroy, respecting the virtue and qualities of these dried grapes; but they attribute more efficacy to those of Hami than to those of China. They say that an infusion of the first is of great service in facilitating an eruption of the small pox about the 4th day, when the patient is too weak; and promotes a gentle perspiration in some kinds of pleuritis or malignant fevers. The emperor caused plants to be transported from Hami to his gardens in Peking. The raisins produced by them are exceedingly sweet, and have a most exquisite flavour. Although Hami lies farther N. than several of the departments of France, its climate is more favourable to the culture of vines, and gives a superior degree of quality to the grapes. It never rains at Hami; even dews and fogs are scarcely ever seen there; the country is watered only by the snow which falls in winter, and by the water of this snow when melted, which is collected at the bottoms of the mountains, and preserved with great care. Hami contains a great number of villages and hamlets; but it has properly only one city, which is its capital. (See N° 2.) This country is very abundant in fossils and valuable minerals: the Chinese have for a long time procured diamonds and a great

deal of gold from it; at present it supplies them with a kind of agate, on which they set a great value. The inhabitants are brave, capable of enduring fatigue, very dexterous in all bodily exercises, and make excellent soldiers; but they are sickle and soon irritated, and when in a passion are extremely ferocious and sanguinary.

(2.) HAMU, the capital of the above kingdom, is surrounded by lofty walls, half a league in circumference, and has two gates, one fronting the E. and the other the W. which make a fine appearance at a distance. The streets are straight, and well laid out; but the houses (which contain only a ground-floor, and are almost all constructed of earth) make very little show: however, as the city enjoys a serene sky, and is situated in a beautiful plain, watered by a river, and surrounded by mountains which shelter it from the N. winds, it is a most delightful place. On whatever side one approaches it, gardens may be seen which contain every thing that a fertile and cultivated soil can produce in the mildest climates. All the surrounding fields are enchanting, but do not extend far; for on several sides they terminate in dry plains, where a number of beautiful horses are fed, and a species of excellent sheep, which have large flat tails that sometimes weigh three pounds. This city is 1045 miles NW. of Peking. Lon. 111. 30. E. of Ferro. Lat. 41. 13. 10. N.

HAMIEZ, a town of Barbary, in Fez.

HAMILCAR, the father of Hannibal. See AMILCAR, and CARTHAGE, § 5.

(1.) HAMILTON, a parish of Scotland, in Lanarkshire, 6 miles long from N.E. to S.W. and broad from N.W. to S.E. The Clyde nearly bounds it on the E. and N. The surface is mostly arable; the soil of the low grounds deep and fertile; that of the higher parts mostly clay; wheat, oats, pease, beans, barley, hay, flax and potatoes &c. the produce. The air is dry and salubrious; longevity is frequent. A married couple die lately, the one aged 103 and the other 106. The ground is mostly inclosed, but improvements are retarded by high rents. Lime-stone abounds; all lime works have been carried on for above 2 centuries. Coals, free-stone, yellow ochre, fuller and potters earth, are also found, and there are several petrifying springs in the parish. The population in 1791, stated by Mr John Naismith in his report to Sir J. Sinclair, was 3017, and increased 3103 since 1755. There are relics of Roman tumulus, and of several ancient castles besides that of Capzow, in the parish; and there are old oaks in the duke's park, which measure above 27 feet round.

(2.) HAMILTON, a town in the above parish (N° 1.) seated on the Clyde, in the middle of a very agreeable plain, on the E. side of a large island near 7 miles in circumference, inclosed with a high wall, full of deer and other game, below to the D. of Hamilton. The original name of this place, was CAPZOW, or *Cadyow*, a barony granted to an ancestor of the noble owner, on the following occasion: In the time of Edward lived Sir Gilbert de Hamilton, or *Hamptoe*, an Englishman of rank; who happening at court to speak in praise of Robert Bruce, received an order from John de Spenser, chamberlain to the

when he fought and flew. Dreading the resentment of that potent family, he fled to the Scottish monarch; who established him at the place possessed by the duke of Hamilton. In aftertimes the name changed from *Cadmoan* to *Hamilton*; and in 1245 the lands were erected into a lordship, and the then owner Sir James sat in parliament as lord Hamilton. He founded the collegiate church at Hamilton in 1251; and the town was made a burgh of barony in 1436. The population, in 1791, was 7521. Weaving is the chief manufacture. Hamilton palace is at the end of the town; a large pile, with two deep wings at right angles with the centre: the gallery is of great extent; and furnished with most excellent paintings. Hamilton is 21 miles SE. of Glasgow, and 13 NNW. of Lanark. Lon. 1. 40. W. Lat 55. 40. N.

(1.) HAMILTON, Anthony, count, descended from a noble family in Scotland, was born in Ireland, and settled in France. He wrote several poetical pieces; and was the first who composed romances in an agreeable taste, without imitating the burlesque of Scarron. He is also said to be the author of the *Memoirs of the count de Grammont*, one of the best written pieces in the French language. His works were printed in 6 vols 12mo. He died at St Germain en Laye, in 1720.

(2.) HAMILTON, George, earl of Orkney, a brave warrior, was the 5th son of William earl of Sutherland. Being made colonel in 1689—90, he distinguished himself by his bravery at the battle of Boyne; and soon after, at those of Aghrim, Smulst, and Landen, and at the sieges of Athlone, Limerick, and Namur. His eminent services in Ireland and Flanders, recommended him so highly to K. William III. that, in 1696, he created him earl of Orkney; and his lady, the sister of Edward viscount Vilhera, afterwards earl of Jersey, had a grant made to her, under the great seal of Ireland, of almost all the private estates of the late king James. Upon the accession of queen Anne, he was promoted to the rank of major-general in 1702, and in 1703, to that of lieutenant-general, and was likewise made K. T. He afterwards served under the duke of Marlborough; and contributed by his bravery and conduct to the glorious victories of Blenheim and Malplaquet. In 1710, he was sworn of the privy-council, and made general of the foot in Flanders. In 1712, he was made colonel of the royal regiment of Fusiliers, and served in Flanders under the duke of Ormonde. In 1714, he was appointed gentleman extraordinary of the bed-chamber to king George I. and afterwards governor of Virginia. At length he was appointed governor of Edinburgh castle, and lieutenant of Clydesdale, and field-marshal. He died at his house in Albemarle-street, in 1737.

(3.) HAMILTON, John, the 24th bishop of St Andrews, to which he was translated from Dunblane. He was natural son of James, the first earl of Argyll; was one of Q. Mary's privy council, and a steady adherent to her interest. He baptised her son, and was made lord privy seal and lord treasurer. The queen had reason to lament her not following his advice, after the fatal battle of Langside, not to trust her person in England. By the regent earl of Murray, he was declared a traitor, and obliged to seek shelter among his

friends. Being in the castle of Dumbarton when it was taken, he was carried to Stirling, where on April 1. 1570 he was hanged on a tree. The following sarcastic lines were written upon it:

*Vive diu, felix arbor, semperque vireto  
Frendibus, ut nobis talia ponia ferat.*

(6.) HAMILTON, Sir Gilbert. See N° 2.

(7.) HAMILTON, William, of Bangour, a celebrated Scots poet, the friend and poetical correspondent of Allan Ramfay, was born at Bangour, in Lanthgowshire, in the beginning of the 18th century, and was for some time a Lieutenant in the Royal Navy. His mother was sister to Col. Thomas Hamilton of Oliveston, and after the death of her first husband, Mr Hamilton of Bangour, was married to Sir Hugh Dalrymple of North Berwick, Lord President of Session, whom she survived. Lieutenant Hamilton lived many years at Gilbertfield in Lanarkshire, and afterwards at Lattrick, where he died 24th May 1751. His works were printed at Edinburgh, in 12mo, in 1760.

HAMILTON'S BAWN, a village of Ireland, in the county of Armagh, Ulster.

HAMIN, a town of Arabia; in Oman.

HAMING, a town of Sweden, in Sudermania.

(1.) HAMLET, a prince of Denmark, whose history has been rendered interesting, by being the subject of one of the noblest tragedies of Shakespeare. Adjoining to a royal palace, which stands about half a mile from Cronburg in Elsinour, is a garden, which, Mr Coxe informs us, is called *Hamlet's Garden*, and is said to be the spot where his father was murdered. The house is of modern date, and is situated at the foot of a sandy ridge near the sea. The garden occupies the side of the hill, and is laid out in terraces rising above each other. The original history, from which the poet derived the principal incidents of his play, is founded upon facts, but so deeply buried in remote antiquity that it is difficult to discriminate truth from fable. Saxo Grammaticus, who flourished in the 12th century, is the earliest historian of Denmark who relates the adventures of Hamlet. His account is much altered, by Belleforest, a French author, a translation of whose romance was published under the title of *the History of Hamlet*; from which Shakespeare formed the ground-work of his play. The following short sketch of Hamlet's history, is recorded in the Danish annals. Long before the introduction of Christianity into Denmark, Horwendillus, king of Jutland, was married to Gertrude, daughter of Roric king of Denmark, by whom he had a son called *Amletus*, or *Hamlet*. Penco murders his brother Horwendillus, marries Gertrude, and ascends the throne. Hamlet, to avoid his uncle's jealousy, counterfeits insanity, but is such an abhorrer of falsehood, that though he constantly frames the most evasive and even absurd answers, yet he artfully contrives never to deviate from truth. Penco, suspecting the reality of his madness, endeavours by various methods to discover the real state of his mind. Among others, he places a young woman in his way, upon which Shakespeare's *Opheelia* is grounded. At last Penco departs from Elsinour, conceals a meeting between Hamlet and Gertrude, concluding that the former would not conceal his sentiments from his

his own mother; and orders a courtier to conceal himself, unknown to both, to overhear their conversation. The courtier repairs to the queen's apartment, and hides himself under a heap of straw. Hamlet, upon entering the cabinet, suspecting the presence of some spy, imitates, after his usual affectation of folly, the crowing of a cock, and, shaking his arms like wings, jumps upon the heap of straw; till, feeling the courtier, he draws his sword, and instantly dispatches him. He then cuts the body to pieces, bolls it, and gives it to the hogs. He then avows to his mother that he only personated a fool, reproaches her for her incestuous marriage with the murderer of her husband; and concludes his remonstrances by saying, "Instead, therefore, of condoling my insanity, deplore your own infamy, and the deformity of your own mind." The queen is silent; but is recalled to virtue by these admonitions. Fengo returns to Elsinore, sends Hamlet to England under the care of two courtiers, and requests the king by a letter to put him to death. Hamlet discovers and alters the letter; so that, upon their arrival in England, the king orders the two courtiers to immediate execution, and betroths his daughter to Hamlet, who gives many astonishing proofs of a most transcendent understanding. At the end of the year he returns to Denmark, and alarms the court by his unexpected appearance; as a report of his death had been spread, and preparations were making for his funeral. Having re-assumed his affected insanity, he purposely wounds his fingers in drawing his sword, which the bystanders immediately fasten to the scabbard. He afterwards invites the principal nobles to an entertainment, makes them intoxicated, and in that state covers them with a large curtain, which he fastens to the ground with wooden pegs: he then sets fire to the palace; and the nobles, being enveloped in the curtain, perish in the flames. During this transaction he repairs to Fengo's apartment; and, taking the sword which lay by the side of his bed, puts his own in its place: he instantly awakes him and informs him, that Hamlet is come to revenge the murder of his father. Fengo starts from his bed, seizes the sword; but, being unable to draw it, falls by the hand of Hamlet. The next morning, when the populace were assembled to view the ruins of the palace, Hamlet summons the remaining nobles; and in a masterly speech, lays open the motives of his own conduct, and proves his uncle to have been the assassin of his father. This speech had the desired effect; the greater part of the assembly shed tears, and all present unanimously proclaim him king amid repeated acclamations. Hamlet soon after this sails to England, and orders a shield to be made on which the principal actions of his life are represented. The king receives him with a feigned joy, falsely assures him that his daughter is dead, and avows him to repair to Scotland as his ambassador, and to pay his addresses to the queen Gertrude. He gives this insidious advice in the hopes that Hamlet may perish in the attempt; as the queen who was remarkable for her chastity and civility, had such an aversion to all proposals of marriage, that not one of her suitors had escaped falling a sacrifice to her vengeance. Hamlet,

in opposition to all difficulties, performs the embassy; and, by the assistance of his shield, which inspires the lady with a favourable opinion of his wisdom and courage, obtains her in marriage, and returns with her to England. Informed by the princess to whom he had been betrothed that her father meditates his assassination, Hamlet avails his fate by wearing armour under his robe; puts to death the king of England; and sails to Denmark with his two wives, where he is afterwards killed in a combat with Vigletus, the son of Roric. This Roric, whom Alstedius calls *Roricus*, is ranked by him as the 14th king of Denmark from *Don*, who, he says, flourished A. M. 2898, and A. A. C. 1030.

(1.) \* HAMLET. *n. f.* [*ham*, Saxon, and *let*, the diminutive termination.] A small village.—Within the self-same lordship, parish, or hamlet, lands have divers degrees of value. *Baron.*—

He pitch'd upon the plain

His mighty camp, and, when the day return'd,  
The country wasted and the hamlets burn'd.

*Dr. de.*

(3.) HAMLET, HAMEL, or HAMPEL, was formerly used for part of a village or parish. *Splendeman* makes a difference between *villam integram*, *villam dimidiam*, and *hamletum*; and *Stow* compounds it to be the seat of a freeholder. Several county towns have hamlets.

HAMM, or HAM. See HAM, N° 7.

HAMMAMLIU, a town of Turkey, in *Natcha*.

(1.) \* HAMMER. *n. f.* [*hamer*, Saxon; *smi*, *mer*, Danish.] 1. The instrument consisting of a long handle and heavy head, with which any thing is forged or driven.—

The armourers,

With busy hammers closing rivets up,

Give dreadful note of preparation. *Sh.*

—The stuff will not work well with a hammer. *Baron.*—It is broken not without many blows, and will break the best anvils and hammers of *Br.* *Brown's Vulgar Errors.*—Every morning he is fresh to his hammer and his anvil. *South.*—

The smith prepares his hammer for the strike

*Dryden's Journal*

2. Any thing destructive.—That renowned poet of truth and hammer of heresies, *St. Augustin* *Blakevall on Providence.*

(2.) A HAMMER has an iron head, fixed crosswise upon a handle of wood. There are several sorts of hammers used by blacksmiths; as, 1. The hand hammer, which is of such weight that it may be wielded with one hand at the anvil. 2. The up-hand sledge hammer used with both hands and seldom lifted above the head. 3. The down sledge hammer, which is the biggest of all, is held by both hands at the farthest end of the handle; and being swung at arms length over the head, is made to fall upon the work with as heavy a blow as possible. The smallest hammer used by smiths is called a *riveting hammer*, but is seldom used at the forge unless upon small work. These and a great variety of other hammers of different sizes are used by goldsmiths and jewellers. Watchmakers, saddlers, carpenters and joiners have likewise hammers accommodated to their several purposes.

(4.) HA

(3.) HAMMER in geography. See HAMAR.

(4.) HAMMAR ISLAND, an isle of Sweden in the Baltic, near the coast of Blekingen, 4 miles E. of Cadzow.

(5.) HAMMER, LITTLE, a town of Norway, in Agder, 76 miles N. of Christiania.

(1.) \* To HAMMER, v. a. [from the noun.] 1. To beat with a hammer.—

His bones the *hammer'd* steel in strength surpass.  
Sands.

2. To forge to form with a hammer.—

Some *hammer* helmets for the fighting field.  
Dryden.

Drudg'd like a smith, and on the anvil beat,  
Till he had *hammer'd* out a vast estate. Dryd.  
—I must pay with *hammered* money instead of gold. Dryden. 3. To work in the mind; to come by intellectual labour: used commonly in contempt.—

Wilt thou still be *hammering* trenchery,  
To tumble down thy husband and thyself? Shaks.  
—He was nobody that could not *hammer* out of him some invention by this witchcraft, and perform accordingly. Camden.—Some spirits, by whom they were stirred and guided in the name of the people, *hammered* up the articles. Hayw.

(2.) \* To HAMMAN, v. a. 2. To work; 'to be busy: in contempt.—

How need'st thou much importune me to that,  
Whereon this month I have been *hammering*.  
Shaks.

I have been studying how to compare  
The prison where I live unto the world;  
And, for because the world is populous,  
And here is not a creature but myself,  
I cannot do it; yet I'll *hammer* on't. Shaks.

3. To be in agitation.—

Torment is in my heart, death in my hand;  
Blood and revenge are *hammering* in my head.  
Shaks.

\* HAMMERER, s. f. [from *hammer*.] He who works with a hammer.

\* HAMMERHARD, s. f. [*hammer* and *hard*.] *Hammerhard* is when you harden iron or steel with such hammering on it. Moxon.

HAMMERHUS, a fort of Denmark, in the island of Bornholm.

1. HAMMERING, *part.* the act of extending and fashioning a body under the hammer. When it is performed on iron heated for the purpose, the verbs call it *forging*.

2. HAMMERING, in coining. A piece of money or medal is said to be *hammered*, when the impression is given with a hammer and not with a mill.

3. HAMMERMAN, s. f. a smith; one who works with the hammer.

4. HAMMARMAN, in the polity of the royal boroughs of Scotland, the name of an incorporation, which comprehends most of those artificers who make use of hammers; such as goldsmiths, ironers, watch-makers, coppersmiths, braziers, blacksmiths, tin-plate workers, cutlers, gunsmiths, saddlers, &c. In Edinburgh, however, the *Coopers*, by the act of the burgh, form a distinct incorporation, which ranks 2d in order, next to the *fargers*; while the other artificers above mentioned form the 3d incorporation, under the title of *Hammermen*.

HAMMERSMITH, a large village 4 miles W. of London, in the parish of Fulham. It has two charity schools, a workhouse, a Presbyterian meeting-house, and a fair, May 1. There are several handsome seats about it, particularly the late lord Melcombe's, which is very elegant, and contains a marble gallery finished at a great expence. It lies N. of the Thames.

HAMMERSTEIN, a fortress of Germany, on the Rhine, opposite to Coblenz.

(1.) \* HAMMOCK, s. f. [*hamaca*, Saxon.] A swinging bed.—Prince Maurice of Nassau, who had been accustomed to *hammocks*, used them all his life. Temple.

(2.) HAMMOCKS, or HAMACS, are suspended between two trees, posts, hooks, or the like, and are much used throughout the West Indies, as well as on board of ships. The Indians hang their hammocks to trees, to secure themselves from wild beasts and insects. According to F. Pluimier, who has often made use of the hammock in the Indies, it consists of a large strong coverlet or sheet of coarse cotton, about six feet square: on two opposite sides are loops of the same stuff, through which a string is run, and thereof other loops are formed, all which are tied together with a cord; and thus the whole is fastened to two neighbouring trees in the field, or two hooks in houses. This kind of couch serves at the same time for bed, quilts, sheets, pillow, &c. The hammock used on board of ships is made of a piece of canvas 6 feet long and 1 wide, drawn together at the ends. There are usually from 14 to 20 inches in breadth allowed between decks for every hammock in a ship of war; but this space must in some measure depend on the number of the crew, &c. In time of battle the hammocks and bedding are firmly corded and fixed in the nettings on the quarter deck, to preserve the men from the fire of the enemy.

HAMMON, a surname of Jupiter. See AMMON, N° 4. and HAM, N° 1.

(1.) HAMMOND, Anthony, Esq; an ingenious English poet, descended from a good family of Somerham-Place in Huntingdonshire, was born in 1668. After a liberal education at St John's college, Cambridge, he was chosen M. P. and soon distinguished himself as a fine speaker. He became a commissioner of the royal navy, which place he quitted in 1712. He published A Miscellany of poems by the most eminent hands; in which he himself had a considerable share. He wrote the life of his friend Walter Moyle, Esq; prefixed to his works; and died about 1726.

(2.) HAMMOND, Henry, D. D. one of the most learned English divines in the 17th century, was born in 1605. He studied at Oxford, and in 1629 entered into holy orders. In 1632, he was made rector of Penshurst in Kent; in 1643 archdeacon of Chichester; and in 1645 a canon of Christ-church, Oxford, and chaplain to king Charles I. He was also chosen public orator of the university. In 1647, he attended the king in his confinement at Woodburn, Cavesham, Hampton-Court, and the Isle of Wight. On his return to Oxford he was chosen sub-dean; and continued there till the parliament visitors ejected and imprisoned him. During this confinement he began his *Annotations on the*

*the New Testament.* On the 4th April 1660, he was seized by a fit of the stone, of which he died on the 25th of that month, aged 55. He wrote many other works, which have been published together in 4 vols. folio.

(3.) HAMMOND, James, author of the *Love Elegies* which, some years after his death, were published by the earl of Chesterfield, was the son of Anthony Hammond, (N° 1.) and was equerry to Frederick prince of Wales, which he held till an unfortunate passion he entertained for a lady, who would not return it, deprived him of his senses; upon which he wrote those love elegies which have been so much celebrated for their tenderness, and which he composed before he was 22 years of age. He was M. P. for Truro in Cornwall; and died in June 1647, at Stow, the seat of lord Cobham, who, as well as the earl of Chesterfield, honoured him with a particular intimacy. His mistress, who was bed-chamber woman to the queen, died in 1779, unmarried.

HAMOAZE, a creek in the British Channel, which forms a harbour for the Royal Navy, capable of containing 100 vessels, in 3 tiers, at from 13 to 15 fathoms water. It is the W. branch of the TAMAR, which falls into Plymouth Sound.

HAMON, John, M. D. a French physician, born at Cherbourg, in 1618. He wrote several works on religious subjects in an elegant style, and died in 1687, aged 69.

HAMONT, or HELMONT, a town of the French republic, in the dep. of the Lower Meuse, and ci-devant bishopric of Liege; 17 miles W. of Ruremond, and 36 N. of Liege. Lon. 5. 31. E. Lat. 51. 17. N.

HAMOSE. See HAMOAZE.

HAMÔTE, a long island in Q. Charlotte's Sound, between the two islands of New Zealand.

HAMPDEN, John Esq. of Hamden, a celebrated patriot, descended of an ancient family in Buckinghamshire, was born at London in 1594. He was cousin german to Oliver Cromwell, his mother being Oliver's aunt. In 1609 he was sent to Magdalen College Oxford, whence he went to the inns of court, where he made a considerable progress in the law. He was elected a member of the parliament which began at Westminster Feb. 5. 1626; and served in all the succeeding parliaments in the reign of Charles I. In 1636 he became universally known, by his refusal to pay shipmoney, as being an illegal tax; upon which he was prosecuted, and his conduct throughout this transaction gained him a great character. When the long parliament began, the eyes of all men were fixed on him as their *pater patriæ*. On Jan. 3, 1644, the king ordered articles of high treason and other misdemeanours to be prepared against Lord Kimbolton, Mr Hampden, and 4 other members of the House of Commons, and went to that house to seize them: but they had retired. Mr Hampden afterwards made a speech in the house to clear himself of the charge laid against him. In the beginning of the civil war he commanded a regiment of foot, and was of great service to the parliament at the battle of Edge-hill. He received a mortal wound in the shoulder in an engagement with Prince Rupert, on the 18th June 1643, at Chalgravefield in Oxfordshire; and died on the 24th. He had the art of

Socrates; of interrogating, and under the pretence of doubts, insinuating objections, so that he infused his own opinions into those from whom he appeared to learn them. He was a very wise man and of great parts; and possessed of the most absolute spirit of popularity to govern the people, that ever was in any country: He was master over all his appetites and passions, and had thereby a very great ascendant over those of other men: He was of an industry and vigilance never to be tired out, of parts not to be imposed upon by the most subtle, and of courage equal to his best parts; and, above all, was a man of the most inflexible integrity.

(1.) \* HAMPER. *n. f.* [Supposed by *Minsheu* to be contracted from *band panier*; but *banaperium* appears to have been a word long in use, whence *banaper*, *hamper*.] A large basket for carriage.

What powder'd wigs! what flames and darts!

What *hampers* full of bleeding hearts! *Swift.*

(2.) HAMPER. See HANAPER, § 2.

\* To HAMPER, *v. a.* [The original of this word, in its present meaning, is uncertain: *Janus* observes that *bampigns* in Teutonic is a quarrel: others imagine that *hamper* or *banaper*, being the treasury to which fines are paid, to *hamper*, which is commonly applied to the law, means originally to fine.] 1. To shackle; to entangle, as in chains or nets.—

O loose this frame, this knot of man untie!

That my free soul may use her wing,

Which now is pinion'd with mortality,

As an entangl'd, *hamper'd* thing. *Herbert.*

We shall find such engines to assail,

And *hamper* thee, as thou shalt come of force. *Milt. r.*

—What was it, but a lion *hamper'd* in a net! *L'Ej.*

Wear under vizard-masks their talents,

And mother wits before their gallants;

Until they're *hamper'd* in the noose,

Too fast to dream of breaking loose. *Hudibras.*

—They *hamper* and entangle our souls, and hinder their flight upwards. *Tillotson.* 2. To ensnare; to inveigle; to catch with allurements.—

She'll *hamper* thee, and dandle thee like a baby. *Swift.*

3. To complicate; to entangle.—

Engend'ring heats, these one by one unwind,

Stretch their small tubes, and *hamper'd* nerves unwind. *Blackmore.*

4. To perplex; to embarrass by many lets and troubles.—

And when they're *hamper'd* by the laws,

Release the lab'ers for the cause. *Hudibras.*

HAMPFIEN, a town of Germany in Austria, 14 miles SW. of Steyr.

HAMPNET, a village in Gloucestershire.

(1.) HAMPSHIRE, or HANTS, or SOUTHAMPTON, a county of England, bounded on the W by Dorsetshire and Wiltshire, on the N. by Berkshire, on the E. by Surry and Sussex and on the S. by the British Channel. It extends 55 miles in length from N. to S. 40 in breadth from E. to W and is about 220 miles in circumference. It is divided into 39 hundreds, and contains 9 forests, 2 parks, one city, 20 market towns, 253 parishes above 36,000 houses, 1062 villages, and 200,000 inhabitants; who elect 26 members of parliament two for the county, two for Winchester, and two each

rich for Southampton, Portsmouth, Petersfield, Yarmouth, Newport, Stockbridge, Andover, Whitechurch, Lymington, Christchurch, and Newton. The soil is very pure, especially upon the downs, on which vast flocks of sheep are kept and bred. In the campaign part of the county, the soil is very fertile, producing all kinds of grain. Besides many woods on private estates in which there are not quarters of well-grown timber, there is the new forest of great extent, belonging to the crown, and studded with venerable oaks. In these woods and forests, great numbers of hogs run at large, and feed on the acorns; whence the Hampshire bacon is so far exceeds that of most other countries. The rivers are the Avon, Anton, Arle, Test, Itchen, and others; besides several smaller streams, all abounding in fish. As its sea coast is of considerable extent, it has many good ports and harbours, and is well supplied with salt-water fish. Much honey is produced in this county, and a great deal of mead and metheglin made. It also abounds in game. The manufacture of cloth and leather is considerable, and employs great numbers of the poor. The new canal from Basingstoke to the Wyre in Surrey, and from thence to the Thames, is of great advantage to the county. To carry it into execution above £86,000 were raised amongst 150 proprietors in 1789. It extends 5½ miles.

(1) HAMPSHIRE, a mountainous county in Massachusetts 50 miles long from N. to S. and 42 broad; divided into 59 townships. Springfield and Northampton are the chief towns.

(2) HAMPSHIRE, a fertile county of Virginia, 42 miles long and 30 broad; containing 6,893 citizens in 1790, and 454 slaves. It contains iron and coal mines.

(3) HAMPSHIRE, New, one of the United States of North America, bounded on the N. by Lower Canada; NE. by the district of Maine; SE. by the Atlantic; & by Massachusetts; W. and NW. by the Connecticut, which divides it from Vermont. It is 141 miles long, and between 19 and 90 broad, when resembling an open fan; the Connecticut being the curve, the S. line the shortest, and the E. the longest side. It contains 9,461 square miles, or 6,174,240 acres, of which about 100,000 acres are under water. It is divided into 5 counties, viz. Rockingham, Stafford, Hillsborough, Cheshire, and Grafton, which are subdivided into 114 townships of about 6 miles square each. The chief town is PORTSMOUTH. There are two great rivers, the PISCATAQUA and the MERRIMACK, which unite about 8 miles from the mouth of the former, and form one broad, deep, rapid stream, navigable for ships of the largest burden. This river forms the only port of New Hampshire. The land next to the sea is generally low; but upon ascending into the country, it rises into hills. Some parts of the state are mountainous. The WHITE MOUNTAINS are the highest part of a range which extends NE. and SW. to a length not yet ascertained. The air is serene and healthful. The weather is not so subject to change as in some southern climates. This state embracing a number of very high mountains, and lying in the neighbourhood of others whose towering summits are covered with snow and ice three quarters of the year, is intensely cold in winter. The heat

of summer is great, but of short duration. The cold braces the constitution, and renders the labouring people healthful and robust. On the sea coast, which extends 18 miles along the SE. corner, and many places inland, the soil is sandy, but affords good pasturage. The intervals at the foot of the mountains are greatly enriched by the freshets, which bring down the soil upon them, forming a fine mould, and producing corn, grain, and herbage, in the most luxuriant plenty. The back lands which have been cultivated are generally very fertile, and produce various kinds of grain, fruits, and vegetables. The uncultivated lands are covered with extensive forests of pine, fir, cedar, oak, walnut, &c. This state affords all the materials necessary for ship-building. The population of this state has increased rapidly: In 1767 it was estimated at 32,700; in 1787 at 103,000; but by the census in 1790, it was found to be 142,885; of whom only 158 were slaves. The ancient inhabitants were emigrants from England. Their posterity, mixed with emigrants from Massachusetts, fill the lower and middle towns. Emigrants from Connecticut compose the largest part of the inhabitants of the western towns adjoining the Connecticut. The Negroes, who were never numerous in New Hampshire, are almost all free. In Hanover there is a college; (See HANOVER, N. 5.) at Exeter an academy; at Portsmouth a grammar school; and all the towns are bound by law to support schools. The inhabitants of this state are chiefly Congregationalists. The other denominations are Presbyterians, Baptists, and Episcopalians. The first discovery made by the English of any part of New Hampshire was in 1614, by Capt. John Smith, who ranged the shore from Penobscot to Cape Cod. On his return to England, he published a description of the country, with a map of the coast, which he presented to prince Charles. The first settlement was made in 1623. New Hampshire was for many years under the jurisdiction of the governor of Massachusetts, but had a separate legislature. It bore a proportional share of the expences and levies in all enterprises, expeditions, and military exertions, whether planned by the colony or the crown. In every stage of the opposition that was made to the encroachments of the British parliament, the people, who had always a high sense of liberty, cheerfully bore their part. In 1791, a canal was cut through the marshes from Hampton to the Merrimack, for 8 miles. This state lies between 43° 41' and 45° 29' Lon. E. of Philadelphia; and between 42° 41' and 45° 30' Lat. N.

HAMPSTEAD, a pleasant village of Middlesex, 4 miles NW. of London, on a fine rise, at the top of which is a heath of about a mile square, adorned with several seats, in a most romantic situation. It has a most extensive prospect over London, into Bucks, Hertfordshire, Northamptonshire, Essex, Kent, Surrey, Berks, &c. with an uninterrupted view of Shooter's Hill, Barking Downs, and Windsor Castle. Its church was anciently a chapel of ease to Hendon, till 1478. This village was formerly much resorted to for its mineral waters; the wells are still frequented. It is crowded with good buildings, even on the very top of the hill. It has a new church, and a handsome chapel near

the wells, built by the contribution of the inhabitants.

(1.) HAMPTON, a town of England, in Gloucestershire, on the Cotswold hills. Lon. 2. 15. W. Lat. 51. 38. N.

(2.) HAMPTON, a town of Middlesex, on the Thames, 15 miles WSW. of London, and two from Richmond and Kingstown. It is chiefly famous for its royal palace, called HAMPTON COURT, which is the finest in Britain. It was built by cardinal Wolsey, who furnished it richly, and had 280 silk beds for strangers. The buildings, gardens, and the two parks, to which William III. made considerable additions, are about 4 miles in circumference, and are watered on 3 sides by the Thames. The inner court, built by king William, forms a piazza, the pillars of which are so low, that it looks more like a cloyster than a palace; however, the apartments make ample amends, being extremely magnificent, exactly disposed, and adorned with most elegant furniture. Lon. 0. 9. W. Lat. 51. 35. N.

(3.) HAMPTON, a sea port of New Hampshire, in Strafford county, 40 miles N. of Boston; containing 451 citizens in 1795. Lon. 74. 0. W. Lat. 43. 5. N.

(4.) HAMPTON, a sea port of Virginia, the capital of the county of Elizabeth-city, seated on a bay near the mouth of the James: 18 miles SE. of York-Town, and 371 SSW. of Philadelphia. Lon. 1. 19. W. of that city. Lat. 37. 10. N.

(5-18.) HAMPTON is also the name of 14 English villages; viz. of one each, in Cheshire, Devonshire, Gloucester, Herefordshire, Kent, Salop, Somersetshire, and Wilts; and of two each, in Oxford, Warwick, and Worcester-shires.

(19.) HAMPTON COURT, a town in Herefordsh.

(20.) HAMPTON COURT. See N° 2.

HAMRACHI, a town of Persia, in Segestan.

HAMSA, a celebrated Mussulman doctor, who had the courage to write a book in opposition to the Koran. His work is remarkable for elegance and purity of style. He flourished about A.D. 1020.

\* HAMSTRING. *n. f.* [*ham* and *string*.] The tendon of the ham.—

A player, whose conceit

Lies in his *hamstring*, doth think it rich

To hear the wooden dialogue, and sound

'Twixt his stretch'd footing and the scaffoldage.

*Shakspeare.*

—On the hinder side it is guarded with the two *hamstrings*. *Wife-man.*

\* To HAMSTRING. *v. a.* preter. and part. pass. *hamstrung*. [from the noun.] To lame by cutting the tendon of the ham.—

*Hamstring'd* behind, unhappy Gyges dy'd;

Then Phalaris is added to his side. *Dryden.*

HAM-TCHIN, a town of China, in Petcheli.

(1.) \* HAN for *hane*, in the plural. Obsolete. *Spenser.*

(2.) HAN, in geography, a town of China, in the province of Se-tchuen. Lon. 122. 41. E. Ferro. Lat. 31. 0. N.

(3.) HAN, a river of China, in Chenfi.

HANAMINE, an island on the W. coast of Ireland, and county of Galway, 2 miles NW. of Kraveel Point.

(1.) \* HANAPER. *n. f.* [*hanaperium*, low Lat.]

A treasury; an exchequer. The clerk of the *hanaper* receives the fees due to the king for the seal of charters and patents.—The fines for all original writs were wont to be immediately paid into the *hanaper* of the Chancery. *Bacon.*

(2.) The HANAPER, or HAMPER, is an office in exchequer, under the direction of a master, his deputy and clerks, comptroller, &c. answering, in some measure, to the  *Fiscus* among the Romans.

(3.) HANAPER, THE CLERK OR WARDEN OF THE, (§ 1. *def.* 1.) receives also all money due for commissions, and writs; and attends the keeper of the seal daily in term time, and at all time of sealing; and takes into his custody all sealed charters, patents, &c. which he receives into bags, but anciently, it is supposed, into *hampers*, which gave name to the office.

(1.) HANAU, or HANAU MUNZENBERG, a county of Germany, bounded by the electorine of Mentz, the bishopric of Fulda, the lordships of Reineck, Isenburg, and Solms; the territories of Hesse-Homburg, Friedburg, and Frankfurt. Its length is 45 miles; its greatest breadth not above 15. It is very fertile in corn, wine, and fruits; and has salt springs, with mines of copper, silver, and cobalt. The chief rivers are, the Mayne, the Kinzig, and the Nidda. The prevailing religion is Calvinism, but Lutherans and Catholics are tolerated. The country is populous, and trade and manufactures flourish in it. In 1736, the whole male line of the counts of Hanau failing in John Reinard, William VIII, landgrave of Hesse Cassel, by a treaty of mutual succession between the families of Hanau and Hesse Cassel, took possession of the county, after satisfying the house of Saxony for their claims; and in 1754 transferred it to prince William, eldest son to the then hereditary prince Frederic, afterwards landgrave. The revenues of the last count, arising from this and other territories, are said to have amounted to 500,000 florins. The chief towns are Hanau, Burgun, Steinau, and Glenhausen.

(2.) HANAU, a town of Germany, and capital of the above county, (N° 1.) pleasantly situated on the Kinzig, near its confluence with the Mayne, which divides it into the old and new towns, both fortified. The new town, which was built by French and Flemish refugees, is regular and handsome. The castle stands in the old town, is fortified, and has a fine garden, with commodious apartments. The Jews are tolerated. Here is an university, with several manufactures, particularly of tobacco, and a considerable traffic. Hanau lies 8 miles E. of Frankfurt, and 18 NE. of Darmstadt. Lon. 8. 45. E. Lat. 50. 3. N.

HANAZO, a river of Abyssinia.

HANBOROUGH, two villages in Oxfordshire.

(1.) \* HANCES. *n. f.* [In architecture.] The ends of elliptical arches; and these are the arches of smaller circles than the scheme, or middle part of the arch. *Harris.*—The sweep of the arch will not contain above fourteen inches, and perhaps you must cement pieces to many of the courses in the *hance*, to make them long enough to contain 14 inches. *Moxon.*

(2.) \* HANCES. [In a ship.] Falls of the life-rail placed on bannisters on the poop and quarter-deck down to the gangway. *Harris.*

HANCKEN

**HANCKENBUTTEL**, a town of Lower Saxony, in the duchy of Lüneburg, 24 m. E. of Zell.

(1.) **HANCOCK**, a county of the United States in the district of Maine, bounded on the E. by Washington county, S. by the Atlantic, W. by Lincoln county, and N. by Lower Canada, containing 18 townships, and 9549 citizens in 1790. Portland is the capital.

(2.) **HARCOCK**, a town of Maryland, in Washington county, on the N. side of the Potomac, 4 miles from Bath, in Virginia, and 205 W. by S. of Philadelphia. Lon. 3. 2. W. of that city. Lat. 39. 19. N.

(3.) **HAND**. *n. f.* [*hand, hand, Saxon, and in all the Teutonic dialects.*] 1. The palm with the fingers; the member with which we hold or use any instrument.—They laid *hands* upon him, and bound him *hand* and foot. *Kneller's History*.—

They *hand* in *hand*, with wandering steps and slow,

Through Eden took their solitary way. *Milton*.

—That wonderful instrument the *hand*, was it

ask to be idle? *Berkley*. 2. Measure of four

inches; a measure used in the matches of horses;

3. Side, right or left.—For the other side

of the court-gate on this *hand*, and that *hand*, were

hangings of fifteen cubits. *Exod. xxxviii. 15.* 4.

Part; quarter; side.—It is allowed on all *hands*,

that the people of England are more corrupt in

their morals than any other nation this day under

the sun. *Swift*. 5. Ready payment with respect

to the receiver.—Of which offer the bazaar accep-

ted, receiving in *hand* one year's tribute. *Kneller's*

*History*.—These two must make our duty very

easy; a considerable reward in *hand*, and the as-

surance of a far greater recompence hereafter.

*Tales*. 6. Ready payment with regard to the

pay.—Let not the wages of any man tarry with

thee, but give it him out of *hand*. *Lev. xv. 14.*

7. *Law*; *price*.—Time is the measure of business;

money of wares: business is bought at a dear *hand*,

where there is small dispatch. *Bacon*. 8. Terms;

conditions; rate.—With simplicity admire and ac-

cept the mystery; but at no *hand* by pride, igno-

rance, interest, or vanity wrest it to ignoble senses.

*Taylor's Worship Communicant*.—It is either an ill

effect, or an ill effect, and therefore at no *hand* con-

sidered with homily. *Taylor's Rule of Living holy*.

9. *Law*; *deed*; *external action*.—Thou sawest the

contradiction between my heart and *hand*. *King*

*Chorus*. 10. Laborer; act of the hand.—Alas!

he was a very idle fellow, that never would set

his *hand* to any business during his father's life.

*Alfisa*.—I rather suspect my own judgment than

believe a fault to be in that poem, which lay

long under Virgil's correction, and had his last

refuge in it. *Addison*. 11. Performance.—

Where are these porters,

These lazy knaves? Y'ave made a fine *hand*!

*Shakespeare*.

That's a trim rabble let in. *Shakespeare*.

12. Power of performance.—He had a great mind

to try his *hand* at a Spectator, and would fain

have one of his writings in my works. *Addison*.—

A friend of mine has a very fine *hand* on the vio-

la. *Alfisa*. 13. Attempt; undertaking.—Out

of them you dare take in *hand* to lay open the o-

rgans of such a nation. *Speiser on Ireland*. 14.

Vol. XI. PART I.

Manner of gathering or taking.—As her majesty hath received great profit, so may she, by a moderate *hand*, from time to time reap the like. *Bacon*. 15. Workmanship; power or act of manufacturing or making.—An intelligent being, coming out of the *hands* of infinite perfection, with an aversion or even indifference to be reunited with its Author, the source of its utmost felicity, is such a shock and deformity in the beautiful analogy of things, as is not consistent with finite wisdom and perfection. *Chrysos*. 16. Manner of acting or performing.

The master saw the madness rise;

His glowing cheeks, his ardent eyes;

And while he heav'n and earth defy'd,

Chang'd his *hand*, and check'd his pride. *Dryden*.

17. Agency; part in action.—God must have set

a more than ordinary esteem upon that which Da-

vid was not thought fit to have an *hand* in. *South*.

18. The act of giving or presenting.—Let Tamar

dress the meat in my sight, that I may eat it at

her *hand*. *1 Sam. xiii. 5.*

To-night the poet's advocate I stand,

And he deserves the favour at my *hand*. *Addison*.

19. Act of receiving any thing ready to one's hand,

when it only waits to be taken.—His power reaches

no farther than to compound and divide the ma-

terials that are made to his *hand*; but can do no-

thing towards the making or destroying one atom

of what is already in being. *Locke*.—Many, whose

greatness and fortune were not made to their

*hands*, had sufficient qualifications and opportu-

nities of rising to these high posts. *Addison*. 20.

Care; necessity of managing.—Jupiter had a farm

a long time upon his *hands*, for want of a tenant

to come up to his price. *L'Estrange*.—

When a statesman wants a day's defence,

Or envy holds a whole week's war with sense,

Or simple pride for flattery makes demands,

May dunce by dunce be whistled off my *hands*.

*Pope*.

21. Discharge of duty.—Let it therefore be re-

quired, on both parts, at the *hands* of the clergy,

to be in manners of estate like the apostles; at

the *hands* of the laity, to be as they who lived un-

der the apostles. *Hooker*. 22. Reach; nearness;

as, at *hand*, within reach, near, approaching.—

Your husband is at *hand*, I hear his trumpet.

*Shakespeare*.

Cousins, I hope the days are near at *hand*

That chambers will be safe. *Shakespeare*.

He is at *hand*, and Pindarus is come

To do you salutation. *Shakespeare*.

—The sight of his mind was like some sights of

eyes; rather strong at *hand* than to carry afar off.

*Bacon*.—Any light thing that moveth, when we

find no wind, sheweth a wind at *hand*. *Bacon*.—

A very great sound near *hand* hath stricken many

deaf. *Bacon*.—It is not probable that any body

should expect that at a distance, which, nearer *hand*,

it cannot perform. *Brown*.—When mineral or

metal is to be generated, nature needs not to have

at *hand* salt, sulphur, and mercury. *Boyle*. 23.

Manual management.—

Nor swords at *hand*, nor hissing darts afar,

Are doom'd to avenge the tedious bloody war.

*Dryden*.

24. State of being in preparation.—

Where is our usual manager of mirth?

*Wha-*

What revels are in *band*? Is there no play,  
To ease the anguish of a torturing hour? *Shak.*

25. State of being in present agitation —

I look'd upon her with a soldier's eye;  
That lik'd, but had a rougher task in *band*  
Than to drive liking to the name of war. *Shak.*

—It is indifferent to the matter in *band* which way  
the learned shall determine of it. *Locke.* 26. Cards  
held at a game.—There was never a *band* drawn,  
that did double the rest of the habitable world,  
before this. *Bacon.* 27. That which is used in op-  
position to another.—

He would dispute,  
Confute, change *bands*, and still confute. *Hudibr.*  
28. Scheme of action.—

Consult of your own ways, and think which  
*band*  
Is best to take. *Ben Jonson.*

—They who thought they could never be secure,  
except the king were first at their mercy, were  
willing to change the *band* in carrying on the war.  
*Clarendon.* 29. Advantage; gain; superiority.—  
The French king, supposing to make his *band* by  
those rude ravages in England, broke off his treaty  
of peace and procured hostility. *Hayward.* 30.  
Competition; contest.—

She in beauty, education, blood,  
Holds *band* with any princess in the world. *Shak.*  
31. Transmission; conveyance; agency of convey-  
ance.—The salutation by the *band* of the Paul.  
*Col.* 18. 32. Possession; power.—Sacraments  
serve as the moral instruments of God to that pur-  
pose; the use whereof is in our *hands*, the effect  
in his. *Hooker.*—

And tho' you war, like petty wrangling states,  
You're in my *band*; and when I bid you cease,  
You shall be crush'd together into peace. *Dryd.*  
—Between the landlord and tenant there must be  
a quarter of the revenue of the land constantly in  
their *hands*. *Locke.*—It is fruitless pains to learn a  
language, which one may guess by his temper he  
will wholly neglect, as soon as an approach to  
manhood, setting him free from a governor, shall  
put him into the *hands* of his own inclination.  
*Locke.*—Vestigales Agri were *hands* taken from the  
enemy, and distributed amongst the soldiers, or left  
in the *hands* of the proprietors under the condi-  
tion of certain duties. *Arbutnot.* 33. Pressure of  
the bridle.—

Hollow men, like horses hot at *band*,  
Make gallant show and promise of their mettle.  
*Shakesp.*

34. Method of government; discipline; restraint.  
—Menelaus bare an heavy *band* over the citizens,  
having a malicious mind against his countrymen.  
*2 Mac.* v. 23.—He kept a strict *band* on his nobil-  
ity, and chose rather to advance clergymen and  
lawyers. *Bacon's Henry VII.*—However strict a  
*band* is to be kept upon all desires of fancy, yet  
in recreation fancy must be permitted to speak.  
*Locke.* 35. Influence; management.—

Flattery, the dang'rous nurie of vice,  
Got *band* upon his youth, to pleasures bent.  
*Daniel.*

36. That which performs the office of a hand in  
pointing.—The body, though it moves, yet not  
changing perceivable distance with other bodies,  
as fast as the ideas of our own minds do naturally

follow one another, the thing seems to stand still;  
as is evident in the *bands* of clocks and shadows  
of sun-dials. *Locke.* 37. Agent; person employ-  
ed; a manager.—The wisest prince, if he can save  
himself and his people from ruin, under the worst  
administration, what may not his subjects hope  
for when he changeth *bands*, and maketh use of the  
best? *Swift.* 38. Giver and receiver.—This tra-  
dition is more like to be a notion bred in the mind  
of man, than transmitted from *band* to *band*  
through all generations. *Tillotson.* 39. An act; a  
workman; a soldier.—

Your wrongs are known: impose but your  
commands,

This hour shall bring you twenty thousand  
*bands.* *Dryden.*

—Demetrius appointed the painter guards, plea-  
sed that he could preserve that *band* from the bar-  
barity and insolence of soldiers. *Dryden.*—A dic-  
tionary containing a natural history requires too  
many *bands*, as well as too much time, ever to  
be hoped for. *Locke.* 40. Catch or reach with-  
out choice.—The men of Israel smote as well the  
men of every city as the beast, and all that came  
to *band*. *Judges.*—

A sweaty reaper from his tillage brought  
First fruits, the green ear, and the yellow sheaf  
Uncull'd as came to *band.* *Milton.*

41. Form or cast of writing.—

Here is th' indictment of the good lord Hark-  
ings,

Which in a set *band* fairly is engross'd;  
Eleven hours I've spent to write it o'er. *Shak.*  
—Solyman shewed him his own letters-intercep-  
ted, asking him if he knew not that *band*, if he  
knew not that seal? *Knolles.*—Being discovered by  
their knowledge of Mr Cowley's *band*, I happily  
escaped. *Denham.*—

If my debtors do not keep their day  
Deny their *bands*, and then refuse to pay,  
I must attend. *Dryden.*

—Whether men write court or Roman *band*, or  
any other, there is something peculiar in every  
one's writing. *Cockburn.*—The way to teach to  
write, is to get a plate graved with the character  
of such *band* you like. *Locke.*—Constantia saw that  
the *band* writing agreed with the contents of the  
letter. *Addison.*—I present these thoughts in an  
*band*; but scholars are bad penmen: we seldom  
regard the mechanick part of writing. *Felton.*  
*the Classics.*—They were wrote on both sides  
and in a small *band.* *Arbutnot.* 42. HAND over  
*head.* Negligently; rashly; without seeing what  
one does.—So many strokes of the alarm bell  
fear and awaking to other nations, and the facility  
of the titles, which, *band over head*, have serv'd  
their turn, doth ring the peal so much the louder.  
*Bacon.*—A country fellow got an unlucky tumble  
from a tree: Thus 'tis, says a passenger, what  
people will be doing things *band over head*, with-  
out either fear or wit. *L'Estrange.* 43. HAND  
HAND. Close fight.—

In single opposition, *band to band*,  
He did confound the best part of an hour. *Shak.*  
He issues, ere the fight, his dread commands  
That flings afar, and poniards *band to band*,  
He banish'd from the field. *Dryden.*

44. HAND in HAND. In union; conjointly.—

the late Marlborough's element, the war had been followed there, to the advantage of the country, which would then have gone *hand in hand* with his own. *Scots.* 45. *HAND IN HAND.* *Fr. pat.*—As fair and as good, a kind of *hand in hand* comparison, had been something too fair and too good for any lady in Brittany. *Scots.* 46. *Hand to mouth.* As want requires—I can get bread from *hand to mouth*, and make even at the year's end. *L'Esfrange.* 47. *To bear in hand.* To keep in expectation; to elude.—A rascally yeoman knave, to *bear in hand*, and then stand upon security. *Scots.* 48. *To be hand and glove.* To be intimate and familiar; to suit one another.

1. *HAND*, a member of the human body (§ 1, def. 1); at the extremity of the arm. See *ANATOMY, INDEX.* The mechanism of the hand is excellently fitted for the various uses and occasions we have for it, and the great number of arts and manufactures it is to be employed in. It consists of compages of nerves, and little bones joined into osseous, which give it a great degree of strength, and at the same time an unusual flexibility, to enable it to handle adjacent bodies, lay hold of them, and grip them, in order either to draw them towards or thrust them off. Anaxagoras is said to have maintained that man owes all his wisdom, knowledge, and superiority over other animals, to the use of his hands. But Galen more justly remarks, that man is not the wisest creature, because he has hands; but he had hands given him because he was the wisest creature; for it was not our hands that taught us arts, but our reason. The hands are the organs of reason, &c. In scripture, the word *hand* is variously applied. To pour water on any one's hand, signifies to serve him. To wash the hands was a ceremony used to denote innocence from murder or manslaughter. To kiss the hand was a sign of adoration. To fill the hand signified a possession of the priesthood, and performing functions. To lean upon any one's hand was a sign of familiarity and superiority. To give the hand signifies to grant peace, swear friendship, promise security, or make alliance. The right hand was the place of honour and respect.—Amongst the Greeks and Romans it was customary for inferior to walk on the left hand of superiors, that the right hand might be ready to afford protection and defence to their left side, which was, on account of the awkwardness of the left hand, more exposed to danger.

2. *HAND*, in falconry, is used for the foot of the hawk. To have a clean, strong, slender, glutinous hand, well clawed, are good qualities of a hawk or falcon.

3. *HAND*, in the manege. See § 1. def. 2. It is also used for the fore foot of a horse; also for a division of the horse into two parts, with respect to the rider's hand. The fore hand includes the head, neck, and fore quarters; the hind hand is all the rest of the horse.

4. *HAND*, in painting, sculpture, &c. is figuratively used for the style of a master.

5. *HAND* is much used in composition for that which is manageable by the hand, as a *handsaw*; or born in the hand, as a *handbarrow*.

6. *HANDS* are born in coat armour, *dexter* and *sinister*; that is, right and left, expanded or open;

and after other manners. A bloody hand in the centre of the escutcheon is the badge of a baronet of Great Britain.

7. *HANDS*, IMPOSITION OF. See IMPOSITION. *To HAND*. *v. a.* [from the noun.] 1. To give or transmit with the hand.—Judas was not far off, not only because he dipped in the same dish, but because he was so near that our Saviour could *hand* the sop unto him. *Brown's Vindictive Errors.*—I have been shewing a written prophecy that is *handed* among them with great secrecy. *Addison.* 2. To guide or lead by the hand.—

Angels did *hand* her up, who next God dwell.

*Down.*

—By safe and insensible degrees he will pass from a boy to a man, which is the most hazardous step in life; this therefore should be carefully watched, and a young man with great diligence *handed* over it. *Locke.* 3. To seize; to lay hands on.

Let him, that makes but trifles of his eyes,

First *hand* me; on mine own accord, I'll pass, *Shak.*

4. To manage; to move with the hand,

'Tis then that, with delight I rove,

Upon the boundless depth of love;

I bless my chains, I *hand* my oar,

Nor think on all I left on shore.

*Prior.*

5. To transmit in succession, with *down*; to deliver from one to another.—They had not only a tradition of it in general, but even of several the most remarkable particular accidents of it likewise, which they *handed* downwards to the succeeding ages. *Wood.*—I know no other way of securing these monuments, and making them numerous enough to be *handed down* to future ages. *Addison.*—Arts and sciences consist of scattered theorems and practices, which are *handed* about amongst the masters, and only revealed to the *filii artis*, 'till some great genius appears, who collects these disjointed propositions, and reduces them into a regular system. *Arbutnot.*—One would think a story so fit for age to talk of, and infancy to hear, were incapable of being *handed down* to us. *Pope.*

*HANDA*, [Celt. *Anda*, i. e. the isle of one colour.] an inhabited island of Scotland, on the coast of Sutherland, 1 mile square. It has a large tremendous rock on the N. from 20 to 100 fathoms high, much frequented by sea fowls.

6. *HAND-BARROW*. *n. f.* A frame on which any thing is carried by the hands of two men, without wheeling on the ground.—A *handbarrow*, wheelbarrow, shovel, and spade. *Tupper.*—Set the board whereon the hive standeth on a *hand barrow*, and carry them to the place you intend. *Mortimer.*

7. *HAND-BASKET*. *n. f.* A portable basket.—You must have woollen yarn to tie grafts with, and a small *hand-basket* to carry them in. *Mortimer.*

8. *HAND-BELL*. *n. f.* A bell rung by the hand.—The strength of the percussion is a principal cause of the loudness or softness of sounds; as in ringing of a *hand-bell* harder or softer. *Bacon.*

*HAND-BOROW*. See *HAND-BOROUGH*, § 2.

9. (1.) *HAND-BREADTH*. *n. f.* A space equal to the breadth of the hand; a palm.—A border of an *hand breadth* round about. *Exod. xxx. 25.*—The eastern people determined their *hand breadth* by the breadth of barley-corns, six making a digit, and 24 a *hand's breadth*. *Arbutnot.*

(2.) *HAND-BREADTH*, a measure of 3 inches.

• **HANDED.** *adj.* [from *hand*.] 1. Having the use of the hand left or right.—Many are right handed, whose livers are weakly constituted; and many use the left, in whom that part is strongest. *Brown's Vulg. Err.* 2. With hands joined.—

Into their inmost bow's

Handed they went.

*Milton.*

(1.) **HANDEL**, George Frederic, a most eminent master and composer of music, born at Hall, in Upper Saxony, 24th Feb. 1684. His father was a physician in that city, and was upwards of 60 years of age when he was born. During his infancy young Handel amused himself with musical instruments, and made considerable progress before he was 7 years of age, without instruction. His propensity for music at last became so strong, that his father, who designed him for the law, forbade him to touch a musical instrument. Handel however got a little clavichord privately conveyed to a room in the uppermost story of the house, to which he constantly stole when the family were asleep; and thus made such advances in his art, as enabled him to play on the harpsichord. He was first taken notice of by the duke of Saxe Weissenfels on the following occasion. His father went to see another son by a former wife, who was valet de chambre to the duke. Young Handel, being then in his 7th year, begged leave to go along with him; but being refused, he followed the chaise on foot, and overtook it. His father, after chiding him for his disobedience, took him into the chaise. While he was in the duke's court, it was impossible to keep him from harpsichords; and he sometimes got into the organ-loft at church, and played after service was over. On one of these occasions, the duke happening to go out later than usual, found something so uncommon in Handel's manner of playing, that he inquired of his valet who it was; and receiving for answer that it was his brother, he desired to see him. The duke was so much taken with the musical genius shown by young Handel, that he persuaded his father to let him follow his inclination. He made the boy a present; and told him, that if he minded his studies, no encouragement should be wanting. On his return to Hall, Handel was placed under one Zackaw, the organist of the cathedral, and was even then able to supply his master's place in his absence. At 9 years of age he began to compose church-services for voices and instruments, and continued to compose one every week for 3 years. At 12, he far excelled his master, as he himself owned; and he was sent to Berlin, where he had a relation about the court, on whose care his parents could rely. The opera was then flourishing, being encouraged by Frederick I. K. of Prussia, and under the direction of Buononcini, Attilio, and other eminent Italian masters. Buononcini, being of a haughty disposition, treated Handel with contempt; but Attilio behaved to him with great kindness, and he profited much by his instructions. His abilities soon recommended him to the king, who frequently made him presents. After this he went to Hamburg, where the opera was but inferior to that of Berlin. Soon after his arrival his father died; and his mother being left in narrow circumstances, he thought it necessary to procure some scholars,

and to accept a place in the orchestra; by which means, instead of being a burden, he became a great relief to her. At this time, the first harpsichord in Hamburg was played by one Keler, who also excelled in composition; but he, having involved himself in debt, was obliged to abscond. Upon this vacancy, the person who had been used to play the second harpsichord claimed the first by right of succession; but was opposed by Handel, who founded his claim upon his superior abilities. After much dispute, it was decided in favour of Handel; but his antagonist, as they were coming out of the orchestra, made a push at Handel's breast with a sword, which must undoubtedly have killed him, had there not fortunately been a music-book in the bosom of his coat. Handel, though yet but in his 15th year, became composer to the house; and the success of *Almira*, his first opera, was so great, that it ran 30 nights without interruption. Within less than a year after this, he set two others, called *Florinda* and *Admetus*, which were received with equal applause. During his stay here, which was about 4 or 5 years, he also composed a considerable number of sonatas, which are now lost. Here his abilities procured him the acquaintance of many persons of note, particularly the prince of Tuscany, brother to John Gaston de Medias the grand duke. The prince pressed him to go with him to Italy, where he assured him that no convenience should be wanting; but this offer Handel declined, being resolved not to give up his independency for any advantage that could be offered him. In his 17th year, Handel took a journey to Italy, where he was received with the greatest kindness by the prince of Tuscany, as well as by the grand duke, who was impatient to have something composed by so great a master; and notwithstanding the difference between the style of the Italian music and the German, to which Handel had hitherto been accustomed, he set an opera called *Rodrigue*, which pleased so well, that he was rewarded with 1000 guineas and a service of plate. After staying about a year in Florence, he went to Venice, where it is said to have been first discovered at a street-trade. He was playing on a harpsichord in a room, when Scarlatti, a famous performer, cried out, that the person who played must be either the famous Saxon or the devil. Here he composed his opera called *Agrippina*, which was performed 10 nights successively, with the highest applause. From Venice he proceeded to Rome, where he became acquainted with cardinal Ottoboni and many other dignitaries, by whom he was frequently attacked on account of his religion; but Handel declared he would live and die in the religion in which he had been educated. Here he composed an oratorio called *Esther*, and 130 sonatas, besides some sonatas, and other music. Ottoboni also continued to have a trial of skill between him and Domenico Scarlatti. When they came to the organ, Scarlatti himself yielded the superiority to Handel. From Rome Handel went to Naples; after which he paid a second visit to Florence; and at last, having spent six years in Italy, set out for his native country. In his way thither, he was introduced at the court of Hanover by baron Kilmarsack.

when the Elector, (afterwards K. George I.) offered him a pension of 1500 crowns a-year as an incitement for him to continue there. This generous offer he declined on account of his having been obliged to visit the court of the Elector Palatine. The Elector being made acquainted with this objection, graciously ordered him to be told, that the acceptance of the pension should not restrain him from his promise, but that he should be at full liberty to be absent a year or more if he chose it, to go wherever he thought fit. Soon after, his old master of the chapel was bestowed in Holland; and having visited his mother, who was aged and blind, and his old master at Utrecht, and spent some time at the court of the Electress, he set out for England, where he arrived in 1710. Operas were then a new entertainment in England, and were conducted in a different manner; but Handel soon put them in a new footing; and set a drama called *Rinaldo*, which was performed with uncommon success, having lived a year in England, he returned to Germany; but in 1713 he again came over to England, and the peace of Utrecht being concluded a few months afterwards, he composed a *Drum and Tuba* on the occasion. He was solicited by the nobility very desirous that he should direct the opera house in the Strand, and Queen Anna having added her own solicitations, and conferred on him a pension of L. 200 a-year, he remained in England till the death of the queen in 1714, and the accession of King George I; who added a pension of L. 1000 a-year to that bestowed by Queen Anna, which was soon after increased to L. 2000, and appointed to teach the young prince. In 1715, Handel composed his *Agrippa*; but from that time to 1720 he composed *Tobias and Esther*, *Bucconcini*, and then composers for the operas. A project was formed by the nobility of erecting a kind of Academy at the Haymarket, to secure to themselves a constant supply of operas to be composed by Handel, and performed under his direction. No less than L. 50,000 was subscribed for this scheme, of which the king contributed L. 1000, and it was proposed to continue for 14 years. Handel went to Italy, to engage singers, and returned with *Senesino* and *Dorivanti*. *Bucconcini* and *Agrippa* still a strong party, but not equal to Handel; and therefore in 1720 he obtained a license to perform his opera of *Rodamonte*. The house was crowded, that many sat on the floor; and the offer of a seat in the gallery was not offered by some for a seat in the gallery. Handel's party and that of the two Italians; upon which Dean Swift with his usual wit wrote the following epigram:

That signior *Bucconcini*  
 Compared to Handel's a mere ninny;  
 Who do swear that to him Handel  
 Hardly fit to hold the candle.  
 And that such high contests should be  
 Between *Torvaldo* and *Favos*!

It was determined that the rivals should be employed in making an opera, in which each should take a distinct act, and he who by the

general suffrage was allowed to have given the best proof of his abilities should be put in possession of the house. This opera was called *Maria Scervola*, and Handel set the last act. It is said that Handel's superiority was owned even in the overture; but when the act was performed, there remained no pretence of doubt. The academy was now firmly established, and Handel conducted it for nine years with great success; but about that time an irreconcilable enmity took place between Handel and *Senesino*. *Senesino* accused Handel of tyranny, and Handel accused *Senesino* of rebellion. The nobility became mediators for some time, but having failed in this, they at last became parties in the quarrel. Handel resolved to dismiss *Senesino*, and the nobility resolved not to permit him. The haughtiness of Handel's temper would not allow him to yield, and the affair ended in the dissolution of the academy. Handel now found that his abilities, great as they were, could not support him against such powerful opposition. His audience dwindled away, and Handel entered into an agreement with *Heidegger* to carry on operas in conjunction. New singers were engaged from Italy; but the offended nobility raised a subscription against him, to carry on operas in the play-house in Lincoln's-Inn fields. Handel bore up 4 years against this opposition: first in partnership with *Heidegger*, and one by himself; but though his musical abilities were superior to those of his antagonists, the astonishing powers of the voice of *Fainelli*, whom the opposite party had engaged, determined the victory against him. At last Handel, having spent all he was worth in a fruitless opposition, desisted; but his disappointment had such an effect upon him, that for some time his mind was deranged, and at the same time his right arm was rendered useless by a stroke of the palsy. In this deplorable situation, he was sent to the baths of Aix-la-Chapelle; from which he received such extraordinary and sudden relief, that his cure was looked upon by the men as miraculous. In 1736, he returned to England, and soon after his *Alexander's Feast* was performed with applause at Covent Garden. The success and splendor of the Hay Market was by this time so much reduced by repeated mismanagements, that Lord Middlesex undertook the direction of it himself, and applied to Handel for composition. He accordingly composed two operas called *Faramondo* and *Alessandro Scervo*, for which in 1737, he received L. 1000. In 1738 he received L. 1500 from a single benefit, and nothing seemed wanting to retrieve his affairs, except such concessions on his part as his opponents had a right to expect. These concessions, however, he could not be prevailed upon to make; and that he might no longer be under obligations to act as he was directed by others, he refused to enter into any engagements upon subscription. After having tried a few more operas at Covent Garden without success, he introduced another species of music called *oratorios*, which he thought better suited to the native gravity of an English audience. But as the subjects of these pieces were taken from sacred history, it was by some thought a profanation to perform them at a play-house. From this prejudice, the oratorios met with little success; and in

• **HANDED.** *adj.* [from *hand*.] 1. Having the life of the hand left or right.—Many are right handed, whose lives are weakly constituted; and many use the left, in whom that part is strongest. *Broom's Poly. Err.* 2. With hands joined.—  
Into their inmost bow'r

*Flourish'd they went.*

*Milton.*

(1.) **HANDEL,** George Frederic, a most eminent master and composer of music; born at Hall, in Upper Saxony, 24th Feb. 1684. His father was a physician in that city, and was upwards of 60 years of age when he was born. During his infancy young Handel amused himself with musical instruments, and made considerable progress before he was 7 years of age, without instruction. His propensity for music at last became so strong, that his father, who designed him for the law, forbade him to touch a musical instrument. Handel however got a little clavicord privately conveyed to a room in the uppermost story of the house, to which he constantly stole when the family were asleep; and thus made such advances in his art, as enabled him to play on the harpsichord. He was first taken notice of by the duke of Saxe Weissenfels on the following occasion. His father went to see another son by a former wife, who was valet de chambre to the duke. Young Handel, being then in his 7th year, begged leave to go along with him; but being refused, he followed the chaise on foot, and overtook it. His father, after chiding him for his disobedience, took him into the chaise. While he was in the duke's court, it was impossible to keep him from harpsichords; and he sometimes got into the organ-loft at church, and played after service was over. On one of these occasions, the duke happening to go out later than usual, found something so uncommon in Handel's manner of playing, that he inquired of his valet who it was; and receiving for answer that it was his brother, he desired to see him. The duke was so much taken with the musical genius shown by young Handel, that he persuaded his father to let him follow his inclination. He made the boy a present; and told him, that if he mislaid his studies, no encouragement should be wanting. On his return to Hall, Handel was placed under one Zackaw, the organist of the cathedral, and was even then able to supply his master's place in his absence. At 9 years of age he began to compose church-services for voices and instruments, and continued to compose one every week for 3 years. At 14, he far excelled his master, as he himself owned; and he was sent to Berlin, where he had a relation about the court, on whose care his parents could rely. The opera was then flourishing, being encouraged by Frederick I. K. of Prussia, and under the direction of Buononcini, Arillo, and other eminent Italian masters. Buononcini, being of a haughty disposition, treated Handel with contempt; but Arillo behaved to him with great kindness, and he profited much by his instructions. His abilities soon recommended him to the king, who frequently made him presents. After this he went to Hamburg, where the opera was in its infancy to that of Berlin. Soon after his arrival his father died; and his mother being left in narrow circumstances, he thought it necessary to procure some scholars,

and to accept a place in the orchestra; by which means, instead of being a burden, he became a great relief to her. At this time, the first harpsichord in Hamburg was played by one Keler, who also excelled in composition; but he, having involved himself in debt, was obliged to abscond. Upon this vacancy, the person who had been used to play the second harpsichord claimed the first by right of succession; but was opposed by Handel, who founded his claim upon his superior abilities. After much dispute, it was decided in favour of Handel; but his antagonist, as they were coming out of the orchestra, made a push at Handel's breast with a sword, which must undoubtedly have killed him, had there not fortunately been a music book in the bosom of his coat. Handel, though yet but in his 15th year, became composer to the house; and the success of *Almira*, his first opera, was so great, that it ran 30 nights without interruption. Within less than a year after this, he set two others, called *Florinda* and *Acis and Galatea*, which were received with equal applause. During his stay here, which was about 4 or 5 years, he also composed a considerable number of sonatas, which are now lost. Here his abilities procured him the acquaintance of many persons of note, particularly the prince of Tuscany, brother to John Gaston de Medicis the grand duke. The prince pressed him to go with him to Italy, where he assured him that no convenience should be wanting; but this offer Handel declined, being resolved not to give up his independency for any advantage that could be offered him. In his 17th year, Handel took a journey to Italy, where he was received with the greatest kindness by the prince of Tuscany, as well as by the grand duke, who was impatient to have something composed by so great a master; and notwithstanding the difference between the style of the Italian music and the German, to which Handel had hitherto been accustomed, he set an opera called *Admetus*, which pleased so well, that he was rewarded with 1000 *scudi* and a service of plate. After staying about a year in Florence, he went to Venice; where it is said to have been first discovered at a *café*. He was playing on a harpsichord in his room, when Scarlatti, a famous performer, cried out, that the person who played must be either the famous Saxon or the devil. Here he composed his opera called *Agrippina*, which was performed 19 nights successively, with the highest applause. From Venice he proceeded to Rome, where he became acquainted with cardinal Ottoboni and many other dignitaries, by whom he was frequently attacked on account of his religion; but Handel declared he would live and die in the religion in which he had been educated. Here he composed an oratorio called *Esther*, and 150 cantatas, besides some sonatas, and other music. Ottoboni also contrived to have a trial of skill between him and Domenico Scarlatti. When they came to the organ, Scarlatti himself yielded the superiority to Handel. From Rome Handel went to Naples; after which he paid a second visit to Florence; and at last, having spent six years in Italy, set out for his native country. In his way thither, he was introduced at the court of Hanover by baron Kilmarsack

When the Elector, (afterwards K. George I.) offered him a pension of 1500 crowns a-year as an inducement for him to continue there. This generous offer he declined on account of his having promised to visit the court of the Elector Palatine. The Elector being made acquainted with this objection, generously ordered him to be told, that his acceptance of the pension should not restrain him from his promise, but that he should be at full liberty to be absent a year or more if he chose it, and to go wherever he thought fit. Soon after, the place of master of the chapel was bestowed upon Handel; and having visited his mother, who was now aged and blind, and his old master Zuckow, and staid some time at the court of the Elector Palatine, he set out for England, where he arrived in 1710. Operas were then a new entertainment in England, and were conducted in a very staid manner; but Handel soon put them on a better footing; and set a drama called *Rinaldo*, which was performed with uncommon success. Having staid a year in England, he returned to Hanover; but in 1712 he again came over to England, and the peace of Utrecht being concluded a few months afterwards, he composed *Acis and Galatea* and *Judas* on the occasion. He obtained the nobility very desirous that he should direct the direction of the opera house in the Hay Market; and queen Anne having added her authority to their solicitations, and conferred on him a pension of L. 200 a-year, he remained in London till the death of the queen in 1714, and the accession of king George I; who added a pension of L. 100 a-year to that bestowed by queen Anne, which was soon after increased to L. 400, and he being appointed to teach the young princes. In 1715, Handel composed his opera *Amadis*; but from that time to 1740 he composed only *Tedo* and *Passor Fido*, Buononcini and Lully being then composers for the operas. About this time a project was formed by the nobility to erect a kind of Academy at the Hay Market, to secure to themselves a constant supply of operas to be composed by Handel, and performed under his direction. No less than L. 50,000 was subscribed for this scheme, of which the king subscribed L. 1000, and it was proposed to continue the undertaking for 14 years. Handel went to Dresden, to engage singers, and returned with Senesino and Durastanti. Buononcini and Lully still a strong party, but not equal to Handel; and therefore in 1720 he obtained leave to perform his opera of *Rodamonte*. The theatre was so crowded, that many fainted; and at one offered by some for a seat in the gallery. The contention, however, still ran very high between Handel's party and that of the two Italians; upon which Dean Swift with his usual wit wrote the following epigram:

Some say thatignor Buononcini  
Compar'd to Handel's a mere ninny:

Others do swear that to him Handel

Is hardly fit to hold the candle.

Strange that such high contests should be

'Twixt *Favonius* and *Favonius*!

It was determined that the rivals should be jointly employed in making an opera, in which each should take a distinct act, and he who by the

general suffrage was allowed to have given the best proof of his abilities should be put in possession of the house. This opera was called *Masque Scavola*, and Handel set the last act. It is said that Handel's superiority was owned even in the overture; but when the act was performed, there remained no pretence of doubt. The academy was now firmly established, and Handel conducted it for nine years with great success; but about that time an irreconcilable enmity took place between Handel and Senesino. Senesino accused Handel of tyranny, and Handel accused Senesino of rebellion. The nobility became mediators for some time, but having failed in this, they at last became parties in the quarrel. Handel resolved to dismiss Senesino, and the nobility resolved not to permit him. The haughtiness of Handel's temper would not allow him to yield, and the affair ended in the dissolution of the academy. Handel now found that his abilities, great as they were, could not support him against such powerful opposition. His audience dwindled away, and Handel entered into an agreement with Heidegger to carry on operas in conjunction. New singers were engaged from Italy; but the offended nobility raised a subscription against him, to carry on operas in the play house in Lincoln's-Inn fields. Handel bore up 4 years against this opposition: first in partnership with Heidegger, and one by himself; but though his musical abilities were superior to those of his antagonists, the astonishing powers of the voice of Farinelli, whom the opposite party had engaged, determined the victory against him. At last Handel, having spent all he was worth in a fruitless opposition, desisted; but his disappointment had such an effect upon him, that for some time his mind was deranged, and at the same time his right arm was rendered useless by a stroke of the palsy. In this deplorable situation, he was sent to the baths of Aix-la-Chapelle; from which he received such extraordinary and sudden relief, that his cure was looked upon by the news as miraculous. In 1736, he returned to England, and soon after his *Alexander's Feast* was performed with applause at Covent Garden. The success and splendor of the Hay Market was by this time so much reduced by repeated mismanagements, that Lord Middlesex undertook the direction of it himself, and applied to Handel for composition. He accordingly composed two operas called *Faramondo* and *Alessandro Severo*, for which in 1737, he received L. 1000. In 1738 he received L. 1500 from a single benefit, and nothing seemed wanting to retrieve his affairs, except such concessions on his part as his opponents had a right to expect. These concessions, however, he could not be prevailed upon to make; and that he might no longer be under obligations to act as he was directed by others, he refused to enter into any engagements upon subscription. After having tried a few more operas at Covent Garden without success, he introduced another species of music called *oratorios*, which he thought better suited to the native gravity of an English audience. But as the subjects of these pieces were taken from sacred history, it was by some thought a profanation to perform them at a play-house. From this prejudice, the oratorios met with little success; and in

In 1741, Handel found his affairs in such a bad situation, that he quitted England, and went to Dublin, where he was received in a manner suitable to his great merit. His performing his oratorio called the *Messiah*, for the benefit of the city-prison, brought him into universal favour. In nine months he had brought his affairs into a better situation; and on his return to England in 1743, he found the public more favourably disposed. His oratorios were now performed with great applause: his *Messiah* became a favourite performance; and Handel, with a generous humanity, determined to perform it annually for the benefit of the foundling hospital, which at that time was only supported by private benefactions. In 1743, he had a return of his paralytic disorder; and in 1753 became quite blind by a *gutta serena*. This last misfortune sunk him into the deepest despondency; but at last he became resigned, after having without any relief undergone some very painful operations. Finding it impossible to manage his oratorios alone, he was assisted by Mr Smith, with whose aid they were continued till within 8 days of his death. During the latter part of his life, his mind was often disordered; yet at times it appears to have resumed its full vigour, and he composed several songs, choruses, &c. From October 1758, his health declined very fast, and his appetite, which had been remarkably keen, failed. On the 6th April, 1759, his last oratorio was performed, at which he was present, and he died on the 14th. On the 30th he was buried in Westminster abbey, where a monument was erected to his memory. With regard to his character, he was a great epicure; in his temper he was very haughty, but was never guilty of mean actions. His pride was uniform; he was not by turns a tyrant and a slave. He appears to have had a most extravagant love for independence; in so much, that he would, for the sake of liberty, do things the most prejudicial to his own interest. He was liberal even when poor, and did not forget his former friends when he was rich. His musical powers are best expressed by Arbuthnot's reply to Pope, who seriously asked his opinion of him as a musician; "Conceive (said he) the highest you can of his abilities, and they are much beyond any thing you can conceive."

(3.) **HANDEL, COMMEMORATION OF,** a musical exhibition instituted in 1784, a century after his birth, and the grandest of the kind ever attempted in any nation. Of the rise and progress of the design, together with the manner in which the first celebration was executed, an accurate and authentic detail is given, by Dr Burney in the 4th vol. of his *History of Music*. "Few circumstances (says the Dr) will perhaps more astonish veteran musicians, than to be informed, that there was but one general rehearsal for each day's performance; an undisputable proof of the high state of cultivation, to which practical music is at present arrived in this country; for if good performers had not been found ready made, a dozen rehearsals would not have been sufficient to make them so. At this general rehearsal above 500 persons found means to obtain admission; in spite of every endeavour to shut out all but the performers; for fear of interruption, and perhaps of failure, in

the first attempts at incorporating and consolidating such a numerous band: consisting not only of the regulars, both native and foreign, which a capital could furnish, but of all the irregulars; that is, dilettanti, and provincial musicians of character, who could be mustered, many of who had never heard or seen each other before. This intrusion suggested the idea of turning the eagerness of the public to some profitable account for the charity, by fixing the price of admission to a guinea for each person. The public did a manifest great eagerness in securing tickets till after this rehearsal, Friday May 21, which allowed even the performers themselves by its correctness and effects. But so interesting did the undertaking become by this favourable rumour, that from the great demand of tickets it was found necessary to close the subscription. Many miles, as well as individuals, were attracted to the capital by its celebrity; and it was never remembered to have been so full, except at the coronation of his present majesty. Many performers came, unsolicited, from the remotest parts of the kingdom at their own expence: some of them, however, were afterwards reimbursed, or had a small gratuity, in consideration of the use they were kept from their families by the two unexpected additional performances. Foreigners, particularly the French, must be much astonished at so numerous a band moving in such exact unison, without the assistance of a Coryphaeus to beat the time, either with a roll of paper, or noisily baton, or a truncheon. Rousseau says, "the more time is beaten, the less it is kept," and it is certain, that when the measure is broken, the fury of the musical general, increasing with disobedience and confusion of his troops, he becomes more violent, and his strokes and gesticulations more ridiculous, in proportion to their disorder. As this commemoration is not only the first instance of a band of such magnitude being assembled together, but of any band at all numerous, performing in a similar situation, without the assistance of a conductor to regulate the measure, the performances in Westminster abbey may be safely pronounced no less remarkable for the multiplicity of voices and instruments employed than for accuracy and precision. When all the wheels of that huge machine, the orchestra, were in motion, the effect resembled clock work in every thing but want of feeling and expression. And the power of gravity and attraction in bodies is proportioned to their mass and density, so it seems, if the magnitude of this band had commanded or impelled adhesion and obedience beyond that of any other of interior force. The pulsations in a very limb, and ramifications of veins and arteries in an animal, could not be more reciprocal, synchronous, and under the regulation of the heart than the members of this body of musicians under that of the conductor and leader. The vastity of sound seemed to proceed from one voice as one instrument; and its powers produced not only new and exquisite sensations in judges and lovers of the art, but were felt by those who never received pleasure from music before. These effects run the risk of being doubted by all but those who heard them, and the present description is

being pronounced fabulous if it should survive the present generation."

\* **HANDER.** *n. f.* [from *hand*.] Transmitter; conveyor in succession.—

They would assume, with won'drous art,  
Themselves to be the whole, who are but part,  
Of that vast frame the church; yet grant they  
were

The *handlers* down, can they from thence infer  
A right 'interpret? Or would they alone,  
Who brought the present, claim it for their  
own? *Dryden.*

\* **HANDFAST.** *n. f.* [*hand* and *fast*.] Hold; closely. Obsolete.—If that shepherd be not in  
sight, let him fly. *Shak.*

**HAND-FASTING**, an ancient custom which formerly took place at an annual fair, in the parish of Eskdalemuir in Dumfries-shire, thus described by the rev. Mr W. Brown in his Statistical Account of that parish: "At that fair it was the custom for unmarried persons of both sexes, to choose a companion with whom they were to live till the time next year. If they were pleased with each other at that time, then they continued together for life; if not, they separated, and were free to make another choice as at first. The fruit of their connection, if there were any, was always attached to the disaffected person. A priest, whom they named *Book & bosom*, (because he carried in his bosom a bible, or a register of the marriages) came from time to time to confirm the marriages." Mr Brown traces this custom from the Romans. See *J. Simlair's Stat. Acc.* vol. xii, p. 615.

\* **HANDFUL.** *n. f.* [*hand* and *full*.] 1. As much as the hand can gripe or contain.—I saw a country gentleman at the side of Rosamond's pond, pulling a *handful* of oats out of his pocket, and gathering the ducks about him. *Addis. Freeholder.* 2. A palm; a hand's breadth; four inches.—Take one vessel of silver and another of wood, each full of water, and knap the tongs together about an *handful* from the bottom, and the sound will be more resembling from the vessel of silver than that of wood. *Bacon.*

The peaceful scabbard where it dwelt,  
The moor of its edge had felt;  
For of the lower end two *handful*  
It had devour'd, it was so manful. *Hudibras.* 3. A small number or quantity.—He could not, with such a *handful* of men, and without cannon, people reasonably to fight a battle. *Clarendon.* 4. As much as can be done.—Being in possession of the town, they had their *handful* to defend themselves from firing. *Maltrigh.*

\* **HAND-GALLOP.** *n. f.* A slow easy gallop, in which the hand presses the bridle to hinder increase of speed.—Ovid, with all his sweetness, has a little variety of numbers and sound as he: he always upon a *hand-gallop*, and his verse runs upon carpet ground. *Dryden.*

\* **HAND-GUN.** *n. f.* A gun wielded by the hand.—Guns have names given them, some from the shape or ravenous birds, as culverines or colubines; others in other respects, as cannons, demiguns, *hand-guns*, and muskets. *Camden.*

**HANDICRAFT.** *n. f.* [*hand* and *craft*.] 1. Manual occupation; work performed by the hand. —Particular members of convents have excellent

mechanical geniuses, and divert themselves with painting, sculpture, architecture, gardening, and several kinds of *handicrafts*. *Addison.* 2. A man who lives by manual labour.—

The cov'nants thou shalt teach by candle-light,

When plying smiths, and ev'ry painful trade  
Of *handicrafts*, in peaceful beds are laid. *Dryden.* —The nurseries for children of ordinary gentlemen and *handicrafts* are managed after the same manner. *Gulliver's Trav.*

\* **HANDICRAFTSMAN.** *n. f.* [*handicraft* and *man*.] A manufacturer; one employed in manual occupation.—O miserable age! virtue is not regarded in *handicraftsmen*. *Shak.*—He has simply the best wit of any *handicraftsman* in Athens. *Shak.*—The principal bulk of the vulgar natives are tillers of the ground, free servants, and *handicraftsmen*; as smiths, masons, and carpenters. *Bacon.*—The profaneness and ignorance of *handicraftsmen*, small traders, servants, and the like, are to a degree very hard to be imagined greater. *Swift.*—It is the landed man that maintains the merchant and shopkeeper, and *handicraftsmen*. *Swift.*

\* **HANDILY.** *adv.* [from *bandy*.] With skill; with dexterity.

\* **HANDINESS.** *n. f.* [from *bandy*.] Readiness; dexterity.

\* **HANDWORK.** *n. f.* [*bandy* and *work*.] Work of the hand; product of labour; manufacture.—In general they are not repugnant unto the natural will of God, which wisheth to the works of his own hands, in that they are his own *handwork*, all happiness; although perhaps, for some special cause in our own particular, a contrary determination have seemed more convenient. *Hooker.*—As proper men as ever trod upon neat-leather have gone upon my *handwork*. *Shak.*—The heavens declare the glory of God, and the firmament sheweth his *handwork*. *Psalms.*—He parted with the greatest blessing of human nature for the *handwork* of a taylor. *L'Estrange.*

\* **HANDKERCHIEF.** *n. f.* [*hand* and *kerchief*.] A piece of silk or linen used to wipe the face, or cover the neck.—She found her sitting in a chair, in one hand holding a letter, in the other her *handkerchief*, which had lately drunk up the tears of her eyes. *Sidney.*—He was torn to pieces with a bear: this avouches the shepherd's son, who has not only his innocence, but a *handkerchief* and rings of his, that Paulina knows. *Shak.*—The Romans did not make use of *handkerchiefs*, but of the lacinia or border of the garment, to wipe their face. *Arbutnot.*

\* **HANDLE.** *n. f.* [*handle*, Sax.] 1. That part of any thing by which it is held in the hand; a haft.—

No hand of blood and bone

Can gripe the sacred *handle* of our sceptre,  
Unless he do profane, steal, or usurp. *Shak.* —Fortune turneth the *handle* of the bottle, which is easy to be taken hold of; and after the belly, which is hard to grasp. *Bacon.*—There is nothing but hath a double *handle*, or at least we have two hands to apprehend it. *Taylor.*—A carpenter, that had got the iron work of an axe, begged only so much

such wood as would make a *handle* to it. *L'Estrange*.—

Of bone the *handles* of my knives are made,  
Yet no ill taste from thence affects the blade,  
Or what I carve; nor is there ever left  
Any unsav'ry hant-goust from the haft. *Dryden*.

A beam there was, on which a beechen pail  
Hung by the *handle* on a driven nail. *Dryden*.  
s. That of which use is made.—They overturned  
him in all his interests by the sure but fatal *handle*  
of his own good nature. *South*.

\* To HANDLE. v. a. [*handelen*, Dutch, from  
*hand*.] 1. To touch; to feel with the hand.—  
The bodies which we daily *handle* make us per-  
ceive, that whilst they remain between them, they  
hinder the approach of the part of our hands that  
press them. *Locke*. 2. To manage; to wield.—  
That fellow *handles* his bow like a crowkeeper.  
*Shak*. 3. To make familiar to the hand by fre-  
quent touching.—An incurable shyness is the ge-  
neral vice of the Irish horses, and is hardly ever  
seen in Flanders, because the hardness of the win-  
ters forces the breeders there to house and *handle*  
their colts six months every year. *Temple*. 4. To  
treat; to mention in writing or talk.—

He left nothing fitting for the purpose  
Untouch'd, or slightly *handled* in discourse.

*Shak*.

Her eyes, her hair, her cheek, her gait her  
voice,

Thou *handlest* in thy discourse. *Shak*.

—Leaving to the author the exact *handling* of e-  
very particular, and labouring to follow the rules  
of abridgment. 1. *Mar*.—Of a number of other  
like instances we shall speak more, when we  
*handle* the communication of sounds. *Bacon*.—By  
Guido Ubaldus, in his treatise, for the explica-  
tion of this instrument, the subtleties of it are  
largely and excellently *handled*. *Wilkin's Dialectus*.  
—In an argument, *handled* thus briefly, every  
thing cannot be said. *Atterbury*. 5. To deal with;  
to practise.—They that *handle* the law know me  
not. *Jer*. ii. 8. 6. To treat well or ill.—

Talbot, my life, my joy, again return'd!

How wert thou *handled*, being prisoner? *Shak*.  
—They were well enough pleased to be rid of an  
enemy that had *handled* them so ill. *Clarendon*.  
7. To practise upon; to transact with.—Pray you,  
my lord, give me leave to question; you shall see  
how I'll *handle* her. *Shak*.

\* HANDLESS. adj. [*hand* and *less*.] Without a  
hand.—

Speak, my Lavinia, what accursed hand  
Hath made thee *handless*? *Shak*.

His mangled myrmidons,  
Noseless, *handless*, hackt and clipt, come to him,  
Crying on Hector. *Shak*.

\* HANDMAID. n. f. A maid that waits at hand.  
Brave Burgundy, undoubted hope of France!  
Stay, let thy humble *handmaid* speak to thee.

*Shak*.

She gave the knight great thanks in little  
speech,

And said she would his *handmaid* poor remain.

*Fairfax*.

—I will never set politicks against ethicks, espe-  
cially for that true ethicks are but as a *handmaid*  
to dignity and religion. *Bacon*.—

Heav'n's youngest teamed star  
Hath fix'd her polish'd ear,  
Her sleeping Lord with *handmaid* lamp atten-  
ing.

Love led them on; and faith, who led  
them best

Thy *handmaids*, clad them o'er with pur-  
beams

And azure wings, that up they flew so dress'd  
And speak the truth of thee on glorious thes-  
Before the judge.

Those of my family their master slight,  
Grown despicable in my *handmaid's* sight.

By viewing nature, nature's *handmaid*,  
Makes mighty things from small begin-  
great;

Thus fishes first to shipping did impart,  
Their tail the rudder, and their head the prow.

—Since he had placed his heart upon widow  
health, wealth, victory and honour should alway  
wait on her as her *handmaids*. *Addison*.—

Then criticism the muse's *handmaid* prove  
To dress her charms and make her more beloved.

\* HANDMILL. n. f. [*hand* and *mill*.] A mill  
moved by the hand.—

Oft the drudging ass is driv'n with toil;  
Returning late, and loaden home with gain  
Of harter'd pitch, and *handmills* for the grain.

*Dryden*

HANDO, a country of Africa, in Quoja.

\* HANDSAILS. n. f. Sails managed by the  
hand.—The seamen will neither stand to the  
*handsails*, nor suffer the pilot to steer. *Temple*.

\* HANDSAW. n. f. Saw manageable by the  
hand.—My buckler cut through and through, as  
my sword hack'd like a *handsaw*. *Shak*.—To per-  
form this work, it is necessary to be provided  
with a strong knife and a small *handsaw*. *Mortimer*.

\* HANDSEL. n. f. [*handsele*, a first gift, Dutch]  
The first act of using any thing; the first act of  
sale. It is now not used, except in the dialect  
trade.—The apostles term it the first pledge of  
inheritance, and the *handsele* or earnest of that which  
is to come. *Hooker*.—

Thou art joy's *handsele*; heav'n lies flat in the  
Subject to every mounter's bended knee.

*Herbert*

\* To HANDSEL. v. a. To use or do any thing  
the first time.—

In timorous deer he *handseles* his young pair  
And leaves the rugged bear for firmer claws.

*Cowley*

I'd show you

How easy 'tis to die, by my example,  
And *handsele* fate before you.

*Dryden*

\* HANDS OFF. A vulgar phrase for keep  
forbear.—They cut a flag into parts; but as they  
were entering upon the dividend, *hands off*, said  
the lion. *L'Estrange*.

\* HANDSOME. adj. [*handsoem*, Dutch, re-  
dexterous.] 1. Ready; gainly; convenient.—  
a thief it is so *handsome*, as it may seem it was  
invented for him. *Spenser*. 2. Beautiful with  
nity; graceful.—A great man entered by fire  
into a peasant's house, and, finding his wife  
hand,

*handful*, turned the good man out of his dwelling. *Addison*. 3. Elegant; graceful.—That easy and *handsome* address in writing is hardest to be attained by persons bred in a meaner way. *Idem*. 4. Ample; liberal: as, a *handsome* fortune. 5. Generous; noble: as, a *handsome* action.

\* *TO HANDSOME*. *v. a.* [from the adjective.] To render elegant or neat.—

Him all repute

For his device in *handfoming* a suit;

To judge of lace he hath the best conceit. *Downe*.

\* *HANDSOMELY*. *adv.* [from *handsome*.]

1. Conveniently; dexterously.—Under it he may easily convey any fit pillage that cometh *handsomely* in his way. *Spenser*.—

Where the kind nymph, changing her faultless shape,

Becomes unhandfome, *handsomely* to 'scape.

*Waller*.

2. Beautifully; gracefully. 3. Elegantly; neatly.

—A carpenter, after he hath sawn down a tree, hath wrought it *handsomely*, and made a vessel thereof. *Widdow*. 4. Liberally; generously.—I am

looking out a convenient place for an almshouse,

which I intend to endow very *handsomely* for a dozen superannuated husbandmen. *Addison*.

\* *HANDSOMENESS*. *n. f.* [from *handsome*.]

Beauty; grace; elegance.—Accompanying her moving garments with a doleful countenance,

rather forgetting *handsomeness* in her mourning garments, nor sweetness in her doleful countenance. *Sidney*.—For *handsomeness*' sake, it were

good you hang the upper glass upon a nail. *Bacon*.

In cloths, cheap *handsomeness* doth bear the bill.

*Herbert*.

—Toins of the fairer sex like that *handsomeness* to which they find themselves to be the most

loved. *Boyle*.

*HANDSPEC*, or } *n. f.* a lever made of strong

*HANDSPIKE*, } wood, for raising great

weights by the hand. It is 5 or 6 feet long, cut

thick and crooked at the end, that it may get between or under things that require to be separated.

It is preferable to the iron crow, as being lighter and of a better poise.

\* *HANDVICE*. *n. f.* [hand and vice.] A vice to hold small work in. *Maron*.

\* *HANDWRITING*. *n. f.* [hand and writing.] A

kind or form of writing peculiar to each hand.—

That you beat me at the mart, I have your hand to show;

If the skin were parchment, and the blows you gave me ink,

Your own *handwriting* would tell you what I think. *Shak.*

—To no other cause than the wise providence of God can be referred the diversity of *handwritings*. *Cathartes*.

\* *HANDY*. *adj.* [from *hand*.] 1. Executed or performed by the hand.—They were but few,

yet they would easily overthrow great numbers of them, if ever they came to *handy* blows. *Keble*.—

Both parties now were drawn so close,

Almost to come to *handy* blows. *Hudibras*.

2. Ready; dexterous; skilful.—

She stript the stalks of all their leaves; the best

She cull'd, and them with *handy* care she dress'd.

*Dryden*.

The servants wash the platter, scour the plate;

And each is *handy* in his way. *Dryden*.

3. Convenient; ready to the hand.—The strike-block is a plane shorter than the jointer, and is more *handy* than the long jointer. *Maron*.

\* *HANDYDANDY*. *n. f.* A play in which children change hands and places.—See how yond

justice rails upon yond simple thief! Hark in thine ear: change places; and, *handydandy*, which is

the justice, which is the thief? *Shak.*—Neither cross and pile, nor ducks and drakes, are quite so

ancient as *handydandy*. *Arbutnot and Pope*.

HANEKER, a town of Suffex.

HANEOYE, a lake in New York.

HANFA, See HANIFAH.

HANFORD, 5 villages; viz. 2 each in Cheshire, Dorsetshire, and Staffordshire, and 1 in Middlesex.

HANG, a town of Sweden in E. Gothland.

(2.) \* *TO HANG*. *v. a.* preter. and part. pass. *hang'd* or *hung*, anciently *hang* [*hangan*, Saxon.]

1. To suspend; to fasten in such a manner as to be sustained, not below, but above.—

Strangely visited people he cures;

*Hanging* a golden stamp about their necks,

Put on with holy prayers. *Shak.*

—His great army is utterly ruined, he himself slain in it, and his head and right hand cut off,

and *hung* up before Jerusalem. *South*. 2. To place without any solid support.—

Thou all things hast of nothing made,

That *hang*'st the solid earth in fleeting air,

Vein'd with clear springs, which ambient seas repair. *Sandys*.

3. To choke and kill by suspending by the neck, so as that the ligature intercepts the breath and circulation.—

He hath commission from thy wife and me

To *hang* Cordelia in the prison. *Shak.*

*Hanging* supposes human soul and reason;

This animal's below committing treason:

Shall he be *hang'd*, who never could rebel?

That's a preferment for Achitophel. *Dryden*.

4. To display; to show aloft.—This unlucky mole missed several coxcombs; and, like the *hanging*

out of false colours, made some of them converse with Rosalinda in what they thought the spirit of

her party. *Addison*. 5. To let fall below the proper situation; to decline.—There is a wicked man

that *hangeth* down his head sadly: but inwardly he is full of deceit. *Ecclef. xix. 26*.—

The beauties of this place should mourn;

Th' immortal fruits and flow'rs at my return

Should *hang* their wither'd head; for sure my breast

Is now more pois'nous. *Dryden*.

The rose is fragrant, but it fades in time;

The violet sweet, but quickly past the prime;

White lilies *hang* their heads, and soon decay;

And whiter snow in minutes melts away. *Dryd.*

The cheerful birds no longer sing;

Each drops his head, and *hangs* his wing. *Prior*.

6. To fix in such a manner as in some directions to be moveable.—The gates and the chambers

they renewed, and *hang'd* doors upon them, 1 *Mac. iv. 57*. 7. To cover or charge by any thing suspended.—

H . . . . . *Harry*

*Hang* be the heav'ns with black, yield day to night !  
Shak.

The pavement ever foul with human gore ;

Heads and their mangled members *hung* the door.  
Dryden.

8. To furnish with ornaments or draperies fastened to the wall.—Musick is better in chambers wainscotted than *hanged*. Bacon —

If e'er my pious father for my sake

Did grateful off'rings on thy altars make,

Or I increas'd them with my sylvan toils,

And *hung* thy holy roofs with savage spoils,

Give me to scatter these. Dryden.

—Sir Roger has *hung* several parts of his house with the trophies of his labours. Addison.

(2.) \* To HANG. v. n. 1. To be suspended ; to be supported above, not below.—

Over it a fair portcullis *hangs*,

Which to the gate directly did incline,

With comely compass and compacture strong.  
Spenser.

2. To depend ; to fall loosely on the lower part ; to dangle.—

Upon her shoulders wings she wears,  
Like *hanging* sleeves, lin'd through with ears.  
Hudibras.

If gaming does an aged fire entice,

Then my young master swiftly learns the vice,  
And shakes in *hanging* sleeves the little box and dice.  
Dryden.

3. To bend forward.—By *hanging* is only meant a posture of bending forward to strike the enemy. Addison. 4. To float ; to play.—

And fall these sayings from that gentle tongue,  
Where civil speech and soft persuasion *hang* ?  
Prior.

5. To be supported by something raised above the ground.—Whatever is placed on the head may be said to *hang* ; as we call *hanging* gardens such as are planted on the top of the house. Addison.

6. To rest upon by embracing.—

She *hung* about my neck, and kiss on kiss  
She vied. Shak.

To-day might I, *hanging* on Hotspur's neck,

Have talk'd of Monmouth's grave. Shak.

—Faustina is described in the form of a lady sitting upon a bed, and two little infants *hanging* about her neck. Peacham. 7. To hover ; to impend.—

He hath a heavenly gift of prophecy ;

And sundry blessings *hang* about his throne,

That speak him full of grace. Shak.

—Odious names of distinction, which had slept while the dread of popery *hung* over us, were revived. Atterbury. 8. To be loosely joined.—

Whither go you ?

—To see your wife : is she at home ?

—Ay, and as idle as she may *hang* together.  
Mallet.

9. To drag ; to be incommodiously joined.—

In my Lucia's absence

Life *hangs* upon me, and becomes a burden.  
Addison.

10. To be compact or united : with *together*.—In the common cause we are all of a piece ; we *hang* together. Dryden—Your device *hangs* very well together ; but is it not liable to exceptions ? Addison.

11. To adhere, unwelcomely or incommodiously.

—A cheerful temper shines out in all her conversation, and dissipates those apprehensions which *hung* on the timorous or the modest, when admitted to her presence. Addison.—Shining landscapes, gilded triumphs, and beautiful faces, disperse that gloominess which is apt to *hang* upon the mind in those dark disconsolate seasons. Addison.

12. To rest ; to reside.—

Sleep shall neither night nor day

*Hang* upon his penthouse lid. Shak.

13. To be in suspense ; to be in a state of uncertainty.—Thy life shall *hang* in doubt before thee, and thou shalt fear day and night, and shalt have none assurance of life. Deut. 14. To be delayed ; to linger.—

A noble stroke he lifted high,

Which *hung* not, but so swift with tempest fell  
On the proud crest of Satan. Milton.

She thrice essay'd to speak : her accents *hang*,  
And fault'ring dy'd unfinish'd on her tongue.  
Dryden.

15. To be dependant on.—

Oh, how wretched

Is that poor man that *hangs* on princes' favours !  
Shak.

Great queen ! whose name strikes haughty monarchs pale,  
On whose just sceptre *hangs* Europa's scale.  
Prior.

16. To be fixed or suspended with attention.—

Though wond'ring senates *hung* on all he spoke,  
The club must hail him master of the joke. Pope.

17. To have a steep declivity.—Suffex maritima itself on the middle of the sides of *hanging* grounds. Mortimer. 18. To be executed by the halter.—

The court forsakes him, and sir Balaam *hangs*.  
Pope.

19. To decline ; to tend down.—

His neck obliquely o'er his shoulders *hangs*,  
Press'd with the weight of sleep that tames the strong.  
Pope.

HANGCLIFF, a remarkable point of land on the east coast of the largest of the Shetland Islands. It is frequently the first land seen by ships in northern voyages. Captain Phipps determined its situation to be in Lon.  $0^{\circ} 36' 30''$  W. Lat.  $60^{\circ} 4' N$ . (1.) \* HANGER. n. f. [from *hang*.] That by which any thing hangs : as, the pot *hangers*.

(2.) \* HANGER. n. f. [from *hang*.] A broad sword.

HANGER HILL, a hill in Middlesex.

\* HANGER-ON. n. f. [from *hang*.] A dependant one who eats and drinks without payment.—the wife or children were absent, their rooms were supplied by the umbræ or *hangers-on*. Brown Vulgar-Errors.—They all excused themselves for two, which two he reckoned his friends, and the rest *hangers-on*. L'Esrange.—He is a perpetual *hanger-on*, yet nobody knows how to be without him. Swift.

HANGEST, a town of France, in the dept. Somme, 7 miles N. of Mondidier.

(1.) \* HANGING. n. f. [from *hang*.] 1. Dismembered or fastened against the walls of rooms by way of ornament.—

Like rich *hangings* in an homely house,  
So was his will in his old feeble body. Shak.

—Being informed that his breakfast was ready.

down towards the door, where the hangings were laid up. *Clarendon*.—

Now purple hangings cloath the palace walls,  
And sumptuous seals are made in splendid halls.

*Dryden*.

—Leon Van Leyden has infected all Europe with his designs for tapestry, which, by the ignorant, are called ancient hangings. *Dryden*.—

Rome oft has heard a cross haranguing,

With prompting priest behind the hanging. *Prior*.

1. Any thing that hangs to another. Not in use.

A storm, or robbery, call it what you will,

Shook down my mellow hangings, nay, my leaves,

And left me bare to weather.

*Shak.*

(2.) \* HANGING, *participial adj.* [from *hang*.]

2. Foreboding death by the halter.—Surely, sir, a good favour you have; but that you have a hanging; look. *Shak.*—

What Ethiops lips he has!

How full a snout, and what a hanging face!

*Dryden*.

3. Requiring to be punished by the halter; a hanging man.

(3.) HANGING, *part. n. f.* the method of inflicting death on criminals by suspending them by the neck. Physicians are not agreed as to the manner in which death is brought on by hanging. De Haen hanged three dogs, whom he afterwards opened. In one, nothing remarkable appeared in the lungs. In another, from whom half an ounce of blood was taken from the jugular vein, the duum and pia mater were of the natural appearance; but the lungs were much inflamed. In the third, the meninges were found, and there was no effusion of blood in the ventricles of the brain, but the left lobe of the lungs was turgid with blood.

Wepf, Latreus, Alberti, Bruhierus, and Boerhaave, affirm that hanged animals die apoplectic. Their arguments for this are chiefly drawn from the red colour of the face; from the turgescency of the vessels of the brain; the inflammation of the eyes; and from the sparks of fire which those who have survived hanging allege they have seen before their eyes. Bonetus, Petit, Haller, and Lancisi, observing that death is occasioned by any body falling upon the glottis, have ascribed it to the stoppage of respiration. Others, deeming both these causes ill-founded, have ascribed it to a laceration of the vertebrae of the neck. De Haen adduces the authority of many eminent authors to prove the possibility of recovering hanged persons; and observes, in general, that with bleeding the jugular vein, and anointing the neck with warm oil, the same remedies are to be employed in this case as for the recovery of drowned people. See DROWNING, § 4—8.

(4.) HANGINGS, PAPER. See PAPER HANGINGS.

(5.) HANGING, WOVEN. See TAPESTRY.

HANGINGSHAW LAW, a hill of Scotland, in Scotland. 4½ miles N. of Selkirk.

\* HANGMAN. *n. f.* [*hang* and *man*.] 1. The public executioner.—This monster sat like a hangman upon a pair of gallows; in his right hand he was painted holding a crown of laurel, and in his left hand a purse of money. *Sidney*.—Who makes that noise there! who are you?—Your friend,

fir, the hangman: you must be so good, fir, to rise, and be put to death. *Shak.*—

Men do not stand

In so ill case, that God hath with his hand  
Sign'd kings black charters to kill whom they hate;

Nor are they vicars, but hangmen to fate. *Donne*.

—I never knew a crick, who made it his business to lash the faults of other writers, that was not guilty of greater himself; as the hangman is generally a worse malefactor than the criminal that suffers by his hand. *Addison*. 2. A term of reproach, either serious or ludicrous.—

One cried, God bless us! and Amen! the other;

As they had seen me with these hangman's hands;

Litening their fear, I could not say Amen,

When they did say God bless us. *Shak.*

—He hath twice or thrice cut Cupid's bow-string, and the little hangman dare not shoot at him. *Shak.*

HANGMAN'S POINT, a cape of Ireland, at the entry of Kinsale harbour, 2 miles S. of Kinsale.

HANG-TAN, a town of China, in Petcheli.

HANG-TCHEOU-FOU, the metropolis of the province of TCHÉ-KIANG in China. It is, according to the Chinese, the paradise of the earth; and may be considered as one of the richest, best situated, and largest cities of the empire. It is 12 miles in circumference, exclusive of its suburbs; and the number of its inhabitants amounts to more than a million. It is computed that there are 20,000 workmen within its walls employed in manufacturing silk. A small lake, called Si *hou*, washes the bottom of its walls on the W. side; its water is pure, and its banks are covered with flowers. Halls and open galleries, supported by pillars, and paved with large flag stones, are erected on piles upon its banks, for the convenience of walking; causeways, cased with cut stone, intersect the lake in different directions; and the openings which are left in them at intervals, for the passage of boats, are covered by handsome bridges. In the middle of the lake are two islands, in which a temple and several pleasure-houses have been built. The emperor has a small palace in the neighbourhood. This city has a garrison of 3000 Chinese, under the command of the viceroy, and 3000 Tartars, commanded by a general of the same nation. It has under its jurisdiction 7 cities of the 2d and 3d class.

HANG-TCHING, a town of China in Chenli.

HANHAM, a village in Gloucestershire.

HANIFAH, or HANFA, Aba, surnamed *Al N'souma*, the most celebrated Doctor of the orthodox Mussulmans. He was the son of Thabet, and was born at Cousah in the 80th year of the Hegira. He founded the sect of the HANIFITES, which continues to be the most popular of the 4 principal sects among the Mussulmans. Like other teachers of new opinions, he suffered persecution during his life, being imprisoned at Bagdad till he died, by the khalif Almanfor, for refusing to subscribe to the doctrine of absolute predestination. But his opinions were afterwards brought into such credit, by Abou Joseph, a sovereign judge under the khalif Hadi, that to be a *Hanifite* was reckoned synonymous with being a good Mussulman: and about 335 years after his death, which happened in the

150th year of the Hegira, Schaw Melick, in the 185th year of that era, and of the Christian, 1095, built a magnificent monument to his memory, and a college, which he appropriated solely to the professors of Aba Hanifah's doctrines. The most eminent of his successors were Achmed Ben Ali, Al Gaffas, and Al Razzi. A mosque in the temple of Mecca is appropriated to them.

HANIPITES. See the last article.

\* HANK. *s. f.* [*hank*, Islandick, a chain or coil of rope.] 1. A stem of thread. 2. A try; a check; an influence. A low word.—Do we think we have the *hank* that some gallants have on their trusting merchants, that, upon peril of losing all former scores, we must still go on to supply. *Decay of Piety.*

\* To HANKER. *v. a.* [*hankeret*, Dutch.] To long importunately; to have an incessant wish; it has commonly *after* before the thing desired. It is scarcely used but in familiar language.—

And now the saints began their reign,  
For which th' had yearn'd so long in vain,  
And felt such bowel *hankerings*,

To see an empire all of kings.  *Hudibras.*

—Among women and children, care is to be taken that they get not a *hankering* after these juggling astrologers and fortune tellers. *L'Estrange.*

—The shepherd would be a merchant, and the merchant *hankers* after something else. *L'Estrange.*

—Do'st thou not *hanker* after a greater liberty in some things? If not, there's no better sign of a good resolution. *Calamy.*—The wife is an old coquette, that is always *hankering* after the diversions of the town. *Addison.*—The republick that fell under the subjection of the duke of Florence, still retains many *hankerings* after its ancient liberty.

HANKIUS, Martin, professor of history at Breslaw, in the 17th century, was born in 1633. He was author of several works of erudition; the most celebrated of which is his treatise *De Romanorum rerum Scripturis*. He died in 1709, aged 76.

HANLEY; 1. a village in Derbyshire; 2. in Northamptonsh. 3 and 4. two in Worcestershire.

(1.) HANMER, Jonathan, M. A. a learned English divine, born at Barnstable about 1605, and educated at Cambridge. He was minister of Bishop's Tawton, and lecturer of Barnstable; but ejected for non-conformity in 1662. He wrote *A View of Ecclesiastical Antiquity*, and *a Discourse on Conscience*. He died in 1687.

(2.) HAMMER, Sir Thomas, an eminent English author and statesman, born in 1696, and educated at Westminster and Oxford. He was early elected M. P. for Suffolk, and in 1713, was chosen Speaker, an office which he discharged with great impartiality. He published a superb edition of Shakespeare, in 6 vols. 4to, at Oxford, in 1744, with elegant engravings by Gravelot. He died at Suffolk, April 5, 1746.

HANMORE, a fertile island of Ireland, in Lough Derg, between Galway and Tipperary; containing above 100 acres of well cultivated ground.

HANNA, a town of Lithuania, in Brzelsk.

HANNACHREEN, a town on the W. coast of Ireland, 20 miles W. of Reavell Point.

HANNAH'S TOWN, a town of Pennsylvania, 4 miles NNE. of Greensburgh, and 21 E. of Pittsburgh.

HANNAR, a town of Sweden, in Smaland.

(1.) HANNEKEN, Memnon, a Lutheran divine, born at Oldenburg in 1595. He was professor of Oriental languages at Marburg, and wrote a Hebrew Grammar and other works. He died in 1671.

(2.) HANUSSEY, Philip Lewis, son of the preceding, was professor of Hebrew and rhetoric at Gießen, and wrote several learned works. He died in 1706.

HANNIBAL, the son of Hamilcar, a famous Carthaginian general. See AMILCAR; CARTHAGE, § 5, 6; and ROME. After having lost a sea fight with the Rhodians, through the cowardice of Apollonius one of the admirals of Antiochus the Great, he fled into Crete, to avoid falling into the hands of the Romans. On his arrival in this island, he took sanctuary among the Gortyni; but as he had brought great treasure along with him, and knew the avarice of the Cretans, he secured his riches by the following stratagem. He filled several vessels with melted lead, just covering them over with gold and silver. These he deposited in the temple of Diana, in presence of the Gortyni, with whom, he said, he trusted all his treasure: Justin tells us, that he left this with them as a security for his good behaviour, and lived for some time very quietly in these parts. He took care, however, to conceal his riches in hollow statues of brass, which he left exposed as things of little value. At last he retired to the court of Prusias king of Bithynia, where he found means to unite several of the neighbouring states with that prince in to a confederacy against Eumenes king of Pergamus, an ally of the Romans; and during the subsequent war gave Eumenes several defeats, more through the force of his own genius than the valour of his troops. The Romans hearing of these important services, dispatched T. Quintilius Flaminius as an ambassador to Prusias, in order to procure his destruction. At his first audience, he complained of the protection given to that famous general, representing him "as the most inveterate and implacable enemy the Romans ever had; a one who had ruined both his own country and Antiochus, by drawing them into a destructive war with Rome."—Prusias, to ingratiate himself with the Romans, immediately sent a party of soldiers to surround Hannibal's house. The Carthaginian had contrived seven secret passages from his house, to evade the machinations of his enemies. But guards being posted at all these, he could not fly. Perceiving, therefore, no possibility of escaping, he had recourse to poison, which he had long reserved for such a melancholy occasion. Then taking it in his hand, "Let (said he) deliver the Romans from the disquietude with which they have long been tortured, as they have not patience to wait for an old man's death. Flaminius will not acquire any glory, a victory gained over a betrayed and defenceless person. This single day will be a lasting testimony of the degeneracy of the Romans. Their ancestors gave Pyrrhus intelligence of a design to poison him, that he might guard against the

poisoning dagger, even when he was at the head of a powerful army in Italy; but they have deputed a person of consular dignity to excite Prusias impatiently to murder one who has taken refuge in his dominions, a violation of the laws of hospitality."

The living denounced dreadful imprecations against Prusias, he drank the poison, and expired at the age of 70 years. Cornelius Nepos says, that he put an end to his life by a subtle poison which he kept in a rag. With respect to his character, it appears to have been in military affairs absolutely perfect. Rollin has contrasted his character with that of Scipio Africanus. He enumerates the qualities which make a complete general; and having given a summary of what historians have related of both commanders, is inclined to give the preference to Hannibal. "There are, however, (he says) two difficulties which hinder him from deciding; one drawn from the characters of the persons whom Hannibal vanquished; the other from the errors he committed." These have been noticed by Mr Hooke, who has taken some pains to vindicate Hannibal's character, by fully and fairly comparing it with that of Scipio Africanus, and other Roman commanders. He shows, that Hannibal was not guilty of any of the faults laid to his charge as a general; and having compared the moral characters of the two generals, he is content, that as a man, as well as a general, Hannibal had greatly the advantage of his rival. See Hooke's *Rom. Hist.* vol. p. 351. & seq.

**HANNIBALIANUS**, Flavius Claudius, nephew of Constantine the Great, was by him appointed king of Pontus, Cappadocia, and Armenia Minor, but was murdered by Constantine II. A.D. 338.

**HANNIGSDORF**, a town of Silesia.

**HANNO**, a general of the Carthaginians, who sailed round Africa. He entered the ocean through the Straits of Gibraltar, and discovered the continent of America. He would have continued his voyage, had he not run short of provisions. He wrote an account of his voyage, which Sigismond Gelenus published in Greek at Basil, in 1595. He lived, according to Pliny, when the Carthaginians were in the most flourishing condition.

Hanno was also the name of other two Carthaginian generals. See *CARTHAGE*, N° 1, § 4.

One of them tamed a lion so effectually, that he moved him like a dog: for which the jealous republicans banished him, fearing lest his power, and that of such allies, might prove dangerous to the state.

**HANNONIA**, the ancient name of HANAU.

**HANNONVILLE**, a town of France in the prov. of Meuse, 16 miles SE. of Verdun.

**HANNOYS**, an islet in the English Channel, 12 miles W. of Guernsey.

**HANNUYE**, or **HANUZE**, a town of the French republic, in the dep. of the Dyle, and chief town of Austrian Brabant; 20 miles E. of Louvain, and 20 miles W. of Liège. Lon. 51° 14' W. Lat. 50° 42' N.

**HANOSPALVA**, a town of Hungary.

(1.) **HANOVER**, an electoral state of Germany, of which the king of Great Britain is elector. Though the house of Hanover is the last that has

been raised to the electoral dignity in the empire, it may vie with any in Germany for the antiquity and nobleness of its family. It is likewise very considerable for the extent of its territories, which at present are, The duchy of Calenberg, in which are the cities of Hanover, Calenberg, Hamelen, Neustadt, Göttingen, &c.; the duchy of Grubenhagen, the county of Diepholt, the county of Hoya, in the bishoprick of Hildesheim; the bailiages of Coldingen, Luther, Badenburg, and Westershausen, with the right of protection of the city of Hildesheim; and the county of Danneberg, ceded by the dukes of Wolfenbüttele to the dukes of Lüneburg, as an equivalent for their pretensions on the city of Brunswick. The elector possesses likewise the county of Delmenhorst, and the duchies of Bremen and Verden, sold by the king of Denmark in 1715: the right of possessing alternatively the bishopric of Osnabrück belongs solely to this electoral branch: but if it shall happen to fail, the dukes of Wolfenbüttele are to enjoy the same right. This electorate has no navy, but a considerable marine on the great rivers Elbe and Weser. In consideration of the great services performed by Ernest Augustus, duke of Brunswick Lüneburg, in the wars which the emperor Leopold had with Lewis XIV. that emperor conferred the dignity of an elector of the holy Roman empire upon him and his heirs male, of which he received the investiture on the 19th of December 1693. This new creation met with great opposition both in the electoral college and the college of princes: at last, by a conclusion of the three colleges on the 30th of Jan. 1708, it was unanimously determined that the electoral dignity should be confirmed to the duke of Hanover and his heirs male; but it was added, that if, while that electoral dignity subsisted, the Palatine electorate should fall into the hands of a Protestant prince, the first Catholic elector should have a supernumerary vote. The princes of this house have their seat in the college of princes, immediately after those of the electoral houses; each branch having a vote. The elector, besides his seat in the electoral college, was invested with the office of arch standard-bearer of the empire; but this being disputed with him by the duke of Württemberg, the elector Palatine having obtained the office of arch-steward, yielded that of arch-treasurer to the elector of Hanover, who was confirmed in this dignity by a decree of the diet of the 13th of January 1710. The sovereign power is administered by the lords of the regency appointed by the elector. Throughout all the provinces they possess a considerable share of freedom, the people being represented in the assemblies of the states. No government can be more mild; and an air of content is spread over all the inhabitants. The *Conseil Intimé*, the High Court of Justice, and the Regency, are the principal courts of justice; besides which, every province has its municipal administration with the inferior divisions into bailiwicks, &c. The police is excellent, and justice fairly administered. The elector enjoys the right *de non appellando* in all criminal affairs, but in civil processes only as far as 1000 florins. Lutheranism is the established religion; but all others are freely tolerated, and publicly exercised. Dissent in religious sentiments gives no interrup-

tion to that harmony which should subsist among fellow citizens. There are 750 Lutheran parishes, 14 Reformed communities, a Romish college, a convent, and some Catholic churches. Literature is in a very advanced state throughout these dominions. The university of Göttingen is deservedly celebrated; and contains about 800 students of different nations, and 60 professors. There are also several colleges, and many well established schools. In general, education is much attended to. Although there are various tracts of heath and marshy ground, the soil in general produces abundance of corn, fruits, hemp, flax, tobacco, madder, and some wine. There are several large salt works. A good deal of cattle are reared, and a great number of excellent horses. Most metals and minerals are found here. The forests furnish sufficient timber, and large quantities of pitch and tar. The natural productions furnish ample materials for commerce, so as to prevent the balance being against them, although their manufactures are not sufficient for consumption. Cattle, horses, salt, wrought iron, and fuel, are principal articles of export. The clear revenue of the electorate is estimated at above half a million Sterling. Bremen is one of the greatest commercial towns in Germany. The whole of this electorate is at present (August 1801,) in the possession of the Prussians. The elector of Hanover is descended from the ancient family of the Guelphs, dukes and electors of Bavaria; one of whom, Henry the Lion, in 1140, married Maude, eldest daughter of K. Henry II. of England. Their son William succeeded to Brunswick Lunenburg, and his son Otho was created duke thereof. The dominions descended in a direct line to Ernest, who divided them upon his death, in 1546, into two branches, that of Brunswick Lunenburg Wolfenbüttele, and Brunswick Lunenburg Zell. The possessor of the latter, Ernest Augustus, was head of the college of German princes, and married Sophia, daughter of Frederic elector Palatine and king of Bohemia, by Elizabeth, daughter of James I. king of Great Britain. Sophia being the next Protestant heir to the house of Stuart, the parliament fixed the crown upon her on queen Anne's demise; and George Lewis her eldest son became king of Great Britain in consequence thereof: since which the electors of Hanover have filled the British throne. See ENGLAND, § 76; and GEORGE I.

(1.) HANOVER, the capital of the above electorate, (N<sup>o</sup> 1.) is agreeably situated in a sandy plain on the Lyne. It is a large well-built town, and pretty well fortified. It has suffered greatly by the French, who got possession of it in 1757, but were soon after driven out. It is noted for a particular kind of beer, reckoned excellent in these parts. The city was the residence of the elector before he ascended the throne of Great Britain. The palace makes no great show outwardly, but within it is richly furnished. The regency is administered in the same manner as if the sovereign were present. Hanover was taken possession of by the Prussian troops in March 1801. It lies 25 miles W. of Brunswick, and 38 SE. of Bremen. Lon. 9. 41. E. Lat. 52. 27. N.

(2.) HANOVER, a large island in the Pacific Ocean, opposite the NW. extremity of New Ire-

land, and E. of the Admiralty Islands, 30 miles in length. It is high, and being covered with trees and plantations, has a beautiful appearance. The SW. part of it is situated in Lon. 178. 27. E. Lat. 2. 49. S.

(4.) HANOVER, a county in Jamaica.

(5.) HANOVER, a town of the United States, Grafton county, New Hampshire, on the E. m. of the Connecticut, containing about 800 citizens. It has an elegant college, called *Dartmouth College*, seated on a beautiful plain, about half a m. E. of the Connecticut. It was named after William Earl of Dartmouth, one of its principal benefactors. It was founded in 1769, for the education of youth, and instructing those of the Indian tribe in reading, writing, and all parts of learning necessary for civilizing and christianizing the chiefs of Payana, as well as in arts and sciences. Though situated in a frontier country, and expelled during the American war to many inconveniences, it flourished, and is now one of the most prosperous seminaries in the United States. It was completed in 1786; and extends 150 feet by 50, being 34 feet high, and consisting of 36 rooms. It contains above 150 students, under a president, two professors, and two tutors; and has 12 trustees, who are a body corporate. Its funds are very considerable, 85,000 acres of land being allotted to it, which 42,000 lie in the North parts of the State and 2000 in the State of Vermont. In 1771, 4 students had received degrees in it. The library is elegant, and contains a large collection of valuable books; with an apparatus of instruments, for mathematical and philosophical experiments. The town lies 115 miles NW. by W. of Portsmouth and 178 NE. by N. of Philadelphia. Lon. 2. 5 E. of that city. Lat. 43. 35. N.

(6.) HANOVER, or McALISTER'S TOWN, a town of Pennsylvania, in York county, containing about 1800 citizens, in 1795. It lies 18 miles NW. of York, and 106 W. by S. of Philadelphia. Lon. 2. 48. W. of that city. Lat. 39. 46. N.

(7.) HANOVER, a rich and populous county of Virginia, 48 miles long and 22 broad; containing 6,531 citizens and 8,323 slaves in 1790.

(8.) HANOVER, a town of Virginia, in the above county, (N<sup>o</sup> 7.) on York river, W. of the Pamunkey. It has an academy, and lies 25 miles NE. E. of Richmond.

(9.) HANOVER BAY, a bay of N. America, of the Spanish province of Yucatan, in Mexico.

(10.) HANOVER, NEW, a county of N. Carolina, in Wilmington district, extending from the Fear river NE. along the Atlantic. It contained 3,093 citizens and 3,738 slaves in 1790. Wilmington is the capital.

(11.) HANOVER, NEW, a township of New Jersey, in Burlington county, containing 12,000 acres of unimproved land, besides a great deal uncultivated. The chief town is New Mills; 13 miles from Burlington, and 27 from Philadelphia.

(12.) HANOVER, NEW, a township of Pennsylvania, in Morgan county.

(13.) HANOVER, NORTH, a town of New Jersey, 4 miles NE. of Morristown.

(14.) HANOVER, SOUTH, a town of New Jersey, 3 miles SE. of Morristown.

HANROW, a town of Holslein, E. of Meissen.

HANE. See HANSE.

HANBACH, a town of Bohemia, in the circle of Lomnitz, with manufactures of paper, cotton, &c. 12 miles N. of Kamnitz.

1. HANSE, an ancient name for a society or company of merchants; particularly that of certain cities in Germany, &c. hence called HANSE Towns. See § 2. The word is obsolete High Dutch or Teutonic; and signifies *alliance, confederacy, or association*. Some derive it from the German words, *am see*, that is, *on the sea*; as the first hanse towns were all situated on the sea coast: whence they are said to have been first called *am see-lans*, i. e. cities on the sea; and afterwards, by abbreviation, *hansee*, and *hanse*.

2. The HANSE TOWNS, or The HANSEATIC CITIES were several maritime cities of Germany, who united into a league for the mutual protection of their commerce. Bremen and Amsterdam were the two first that formed it; whose trade received such advantage by their fitting out two hundred war in each to convoy their ships, that soon cities continually entered into the league: princes and princes made treaties with them, and were often glad of their assistance and protection, by which means they grew so powerful both by sea and land, that they raised armies as well as cities, enjoyed countries in sovereignty, and made peace or war, though always in defence of their trade, as if they had been an united state or commonwealth.—At this time also many cities, though they had no great interest in trade, or intercourse with the ocean, came into their alliance for the protection of their liberties: so that in 1200, we find more than 75 cities in the list of the Hanse Towns; particularly Bremen, Amsterdam, Antwerp, Rotterdam, Dort, Bruges, Ostend, Dunkirk, Middelburgh, Calais, Rouen, Rochelle, Bourdeaux, Bayonne, Bilbao, Lisbon, Seville, Cadix, Cartagena, Barcelona, Marseilles, Leghorn, Riga, Messina, London, Lubec, Rostock, Stralsund, Sietin, Wismar, Konigsberg, Dantzic, Elbing, and Marienburg.

3. HANSE TOWNS, HISTORY OF THE. The Hanse was now so powerful, that their ships of war were often hired by other princes to assist against their enemies. They not only aided, but often defeated, all that opposed their commerce; and, particularly in 1338, they took such advantage of the Danish fleet in the Sound, for interrupting their commerce, that Waldemar II. king of Denmark, for the sake of peace, gave them up all Schonen for 16 years; by which they commanded the passage of the Sound in their own right.—In 1428 they made war on Erick IX. king of Denmark with 250 sail, carrying on board 10,000 men. These so ravaged the coast of Jutland, that the king was glad to make peace with them. Many privileges were bestowed upon the Hanse towns by Lewis XI. Charles VIII. Lewis XII. and Francis I. kings of France; as well as by the emperor Charles V, who had divers loans of money from them; and by king Henry III. who also incorporated them into a trading body, in acknowledgment for money which they advanced him, as well as for the good services they did him by their naval forces in 1206. These towns exercised a jurisdiction among themselves;

for which purpose they were divided into 4 colleges or provinces, distinguished by the names of their four principal cities, viz. Lubec, Cologne, Brunswick, and Dantzic, wherein were held their courts of judicature. They had a common stock or treasury at Lubec, and power to call an assembly as often as necessary. They kept warehouses for the sale of their merchandises in London, Bruges, Antwerp, Bergen in Norway, Revel in Livonia, and Novogorod in Muscovy; which were exported to most parts of Europe, in English, Dutch, and Flemish bottoms. One of their principal magazines was at London, where a society of German merchants was formed, called the *North-yard company*. To this company great privileges were granted by Edward I. but revoked by act of parliament in 1352, in the reign of Edward VI. on a complaint of the English merchants that this company had so engrossed the cloth trade, that in 1351 they had exported 50,000 pieces, while all the English together had shipped off but 1200. Q. Mary I, who ascended the throne the year following, having resolved to marry Philip the emperor's son, suspended the execution of the act for three years: but after that term, whether by reason of some new statute, or in pursuance of that of king Edward, the privileges of that company were no longer regarded, and all efforts of the hanse towns to recover this loss were in vain. Another accident that happened to their mortification was while Q. Elizabeth was at war with the Spaniards. Sir Francis Drake happening to meet 60 ships in the Tagus, laden with corn, belonging to the hanse towns, took out all the corn as contraband goods which they were forbid to carry by their original patent. The hanse towns having complained of this to the diet of the empire, the queen sent an ambassador thither to declare her reasons. The king of Poland likewise interested himself in the affair, because the city of Dantzic was under his protection. At last, though the queen strove hard to preserve the commerce of the English in Germany, the emperor excluded the English company of merchant adventurers, who had considerable factories at Stade, Embden, Bremen, Hamburg, and Elbing, from all trade in the empire. In short, the hanse towns, in Germany in particular, were not only in so flourishing, but in so formidable a state, from the 14th to the 16th centuries, that they gave umbrage to all the neighbouring princes, who threatened a strong confederacy against them; and, as the first step towards it, commanded all the cities within their dominion or jurisdiction to withdraw from the hanse, or union, and be no farther concerned therein. This immediately separated all the cities of England, France, and Italy, from them. The hanse, on the other hand, prudently put themselves under the protection of the empire: and as the cities just now mentioned had withdrawn from them; so they withdrew from several more, and made a decree among themselves, that none should be admitted into their society but such as stood within the limits of the German empire, or were dependent thereon; except Dantzic, which continued a member, though in no wise dependent on the empire, only it had been summoned formerly to the imperial diet. By these means they maintained

maintained their confederacy for the protection of their trade, as it was begun, without being any more envied by their neighbours. Hereby likewise they were reduced to Lubec, Bremen, Hamburgh, and Dantzic; in the first of which they kept their register, and held assemblies once in 3 years at least. But this union has for some time been dissolved; and now every city carries on a trade separately for itself, according to the stipulation in such treaties of peace, &c. as are made for the empire betwixt the emperor and other potentates.

**HANSFELDEN**, a town of Germany, in Silesia, 8 miles NNW. of Judenburg.

**HANSPIKE**. See **HANSPICE**.

\* **HAN'T**, for *has not*, or *have not*.—That roguish leer of your's makes a pretty woman's heart ache: you *han't* that simper about the mouth for nothing. *Addison*.

**HAN-TCHEOU**, a town of Corea.

**HAN-TCHONG**, a city of China, in the prov. of Chen-si, on the Han, in a fertile country surrounded by mountains. Its chief trade is in honey, wax, musk, and cinnabar. It is 625 miles SW. of Peking. Lon. 124. 30. E. of Ferro. Lat. 32. 59. N.

**HAN-TCHUEN**, a town of China, of the 3d rank, in the province of Hon-Quang, on the Han, 25 miles W. of Han Yang.

**HANTONIA**, the ancient name of **HAMPTON**.

**HAN-TOU-HOTUN**, a town of Chinese Tartary.

**HANTS**. See **HAMPSHIRE**, N° 1.

**HANVEC**, a town of France, in the dept. of Finistère, 7½ miles S. of Landernau.

**HANUYE**. See **HANUYS**.

**HANUZISZKI**, a town of Lithuania.

**HANWAY**, Jonas, a gentleman eminent for his benevolent designs and useful writings, was born at Portsmouth in Hampshire, on the 12th of August 1718. His father, Mr Thomas Hanway, was an officer in the naval service. He lost his life by an accident; and left a widow with four children, Jonas, William, Thomas, and Elizabeth, all very young. Mrs Hanway, coming to London after the death of her husband, put Jonas to school, where he learned writing and accounts, and made some proficiency in Latin. At the age of 17 he was sent to Lisbon, and was bound apprentice to a merchant in that city, in June 1739. His early life was marked with that attention to business, and love of neatness and regularity, which afterwards distinguished his character. On the expiration of his apprenticeship, he entered into business at Lisbon as a merchant, but not long after returned to London. He afterwards connected himself as a partner in Mr Dingley's house in St Petersburg; where he arrived on the 20th of June 1743. The trade of the English over the Caspian Sea into Persia at this period had been entrusted to the care of Mr Elton, who, had injudiciously engaged in the service of Nadir Shah, to build ships on the Caspian after the European manner. This had alarmed the merchants in the Russian trade, who resolved to send one of their body into Persia. On this occasion Mr Hanway offered his service, which was accepted. He set out on the 10th Sept.; and, after experiencing various dangers in that kingdom during 28 months, returned to St Petersburg, Jan. 2, 1745, without

being able to establish the intended trade by the Caspian; partly through the jealousy of the Russian court on account of Elton's connections with the Persians, and partly by the Persian revolutions. Though Mr Hanway's conduct during this expedition seems to have been directed by strictest integrity, yet some difficulties arose in settling his demands on his employers. These were referred to the determination of impartial arbiters, who at length decided in his favour. He now settled at St Petersburg; where he remained 5 years, and interested himself greatly in concerns of the merchants who had engaged in Caspian trade: But having a desire to see his native country, he left St Petersburg on the 9th July 1750. On his arrival in London he employed himself some time as a merchant; but afterwards, more beneficially to the world, as an author. In 1753, he published "An Historical Account of the British Trade over the Caspian Sea with a Journal of Travels from London through Russia into Persia; and back again through Russia, Germany, and Holland: To which are added, the Revolutions of Persia during the present Century, with the particular History of the great Usurper Nadir Kouli;" 4 vols 4to. In 1754, he published "A Letter to Mr John Spranger, on an excellent Proposal for Paving, Cleansing, and Lightening the Streets of Westminster, &c." 8vo. A few years afterwards, many of Mr Hanway's ideas thrown out in this pamphlet, were adopted. In 1756, he printed "A Journal of Eight Days Journey from Portsmouth to Kingston upon Thames with an Essay on Tea;" which was reprinted 2 vols 8vo, in 1757. At this juncture, Great Britain being on the eve of a war with France, he published "Thoughts on the Duty of a good Citizen with Regard to War and Invasion, in a Letter from a Citizen to his Friend," 8vo. About the same time, several gentlemen formed a plan, which was matured and perfected by Mr Hanway, for providing the navy with sailors, by furnishing poor children with necessaries to equip them for the service of their country. Mr Hanway published 3 pamphlets on this subject, and the treasury, the Society, accompanied by Mr Hanway, had waited on the king, the Society received 1000l. from his majesty, 400l. from the Prince of Wales and 400l. from the Princess Dowager. This excellent institution was the favourite object of Mr Hanway's care, and continued to flourish under his auspices. In 1758, he became an advocate of the Magdalen Charity, and published "A Letter to Robert Dingley, Esq. being a proposal for the Relief and Employment of friendless Orphans and penitent Prostitutes," 4to. He also printed several other tracts on the same subject. In 1759, he wrote "Reasons for an Augmentation of at least Twelve Thousand Mariners, to be employed in the Merchants Service and Coasting Trade, in Letters to Charles Gray, Esq. of Colchester." 8vo. In 1760, he published several treatises: viz. 1. "A candid historical Account of the Hospital for the Reception of exposed and deserted young Children: representing the present Plan of it as productive of many Evils, and not adapted to the Genius and Happiness of this Nation" 8vo; which being answered by an anonymous

Letter from Halifax in "Candid Remarks, &c., 1746." Mr Hanway replied to it, and the Remarks replied. 1. "An Account of the Society for the Improvement of the British Troops in Germany and North America, &c." 8vo. 2. "Eight Letters — Duke of —, on the Custom of Faltering in England," 8vo. See VAIL. In 1746, Mr Hanway produced "Reflections, Essays, and Meditations on Life and Religion; with a Collection of Proverbs, and 12 Letters written occasionally on several Subjects," in 3 vols 8vo. The many useful and public-spirited plans, which Mr Hanway had promoted, had now rendered his character most respectably popular; while his disinterestedness, and the sincerity of his intentions, were conspicuous to all. Five citizens of London, of whom the late Mr Hoare the banker was one, voted on Lord Bute, then prime minister; and requested that some notice might be taken of a man, who, at the expence of his own private fortune, and by the most unremitting application, had rendered such meritorious services to his country. Accordingly he was, in July 1762, appointed one of the commissioners for victualling the army; a post which he held above 12 years. The seal of public beneficence, in which he excelled, was the collection of money for the sufferers by the fire at Montreal, in Quebec, in May, 1765, when a 4th part of the city was consumed. On this occasion Mr Hanway, in conjunction with several gentlemen, collected £415 l. In 1766, a dreadful fire broke out in Bridge-Town in Barbadoes, which consumed property to the amount of over 100,000 l. A subscription was opened, in which Mr Hanway was a principal actor, and much was collected, and transmitted to the distressed sufferers. At subsequent periods he continued to interest himself in various other plans for relieving the distressed of different parts of the community, and particularly those of the chimney-sweepers. Besides those distresses which are open to general observation, such as a contortion of their limbs, and prevention of their growth, they are liable to a peculiar disease, called the *chimney-sweeper's cancer*. After much enquiry, he published, in 1773, "The State of the Chimney-sweepers Young Apprentices; showing the wretched Condition of the distressed Boys; the ill Conduct of such Masters who do not observe the Obligation of Indentures; the Necessity of a strict Inquiry to support the civil and religious Rights of these Apprentices." This small pamphlet was productive of advantage to the objects intended to be benefited by it. In 1774, he enlarged a former publication, entitled "Advice from a Farmer to his Daughter, &c." and republished it under the title of "Virtue a happy Life: containing Reflections on the special Duties of the Wealthy and Indigent, the Master and the Servant," 2 vols 8vo; a work deserving the particular attention of every magistrate. He reprinted it in 24to vols. with a dedication to Mrs Montague. In 1783, finding his health decayed, he resigned his office at the victualling board, and immediately received a grant of his whole salary by way of a pension, for life. This favour he owed to the esteem which his majesty, whom he was personally known, entertained

of him. Being now released from his most material business, he engaged again in behalf of the chimney-sweepers boys; and promoted, by every means in his power, the establishment of Sunday schools, since very generally adopted. He likewise promoted a subscription for the relief of the many black poor people who wandered about the metropolis in extreme distress; and the lords of the treasury seconded the design, by directing 14 l. a head, to be issued to the committee, to enable them to send the blacks to such places abroad as might be fixed on. After encountering many obstacles, about 300 negroes were sent, properly accommodated with necessaries, to Africa, under the conduct of a person approved for that station. In summer 1786, Mr Hanway's health declined visibly. He had long felt the approach of a disorder in the bladder, which, increasing by degrees, caused a strangury; and at length, on the 5th Sept. 1786, put a period to a life spent almost entirely in the service of his fellow creatures. On the 13th he was interred in the family vault at Hanwell, where a superb monument is erected to his memory. Mr Hanway was of the middle size, of a thin spare habit, but well shaped: his limbs were fashioned with the nicest symmetry. When he went first to Russia at the age of 30, he was called the *Handsome Englishman*. In his dress, as far as was consistent with his health, he accommodated himself to the prevailing fashion; but being very susceptible of cold, he wore flannel under the linings of all his clothes, and usually 3 pairs of stockings. He was the first man in Britain who carried an umbrella over his head. After carrying one near 30 years, he saw them come into general use. The precarious state of his health, when he arrived in England from Russia, made him use the utmost caution. After Dr Lieberkyn, physician to the king of Prussia, had recommended milk as a proper diet to restore his strength, he made it the chief part of his food for 30 years. His mind was active; always on the wing, but never appearing to be weary. He rose in summer at 4 or 5, and in winter at 7. He was constantly employed till the time of retiring to rest; and, when in health, was commonly asleep within two minutes after lying down in bed. Writing was his favourite employment, and when the number of his literary works is considered, and that they were the produce only of those hours which he was able to snatch from public business, some idea may be formed of his application. His style is plain and unornamented, without the appearance of art or the affectation of singularity. Its greatest defect is a want of conciseness; its greatest beauty, an unaffected simplicity. He spoke French and Portuguese, and understood the Russ and modern Persic imperfectly. Latin he had been taught at school, but had not much occasion to cultivate it. Mr Hanway having early in life met with a refusal from a young lady in Lisbon, who had captivated his affections, was never married; yet he was an advocate for marriage, and recommended it to all young people. He thought it the most effectual restraint on licentiousness, and that an increase of unhappiness was by no means the natural consequence of an increase of domestic cares. The society of a sensible woman, the choice of unbiased affection, he

esteemed the most engaging persuasive to virtue, order and economy; without which life must be perturbed and unhappy. The lady who engaged his first affection was uncommonly handsome; and it is probable he was prevented from marrying only by his unalterable attachment to her; for he loved the society of women, and in the parties which visited at his house the ladies usually made the greater portion of the company. In his transactions he was always open, candid, and sincere. He adhered to strict truth, even in the manner of his relation; and no brilliancy of thought could induce him to vary from the fact: but although so frank in his own proceedings, he had seen too much of life to be easily deceived by others. In his department of commissioner for victualling the navy he was uncommonly assiduous, and from those who had dealings with the office, he would not accept of the smallest present. When any were sent him, he always returned them, with some mild answer; such as, "Mr Hanway returns many thanks to Mr ——— for the present he intended him; but he has made it a rule not to accept any thing from any person engaged with the office: A rule which, whilst he acknowledges Mr ———'s good intentions, he hopes he will not expect him to break through." Mr Hanway's publications amounted altogether to between 60 and 70. A list of them is given by his biographer Mr Pugh.

HANWAY'S POINT, a cape on Egmont island.

HAN-YANG, a city of China, in the province of Hon Quang, at the conflux of the Han and Yang-Tse, 587 miles W. of Peking. Lon. 131. 30. E. Ferro! Lat. 30. 36. N.

HAN-YU, a town of China, in Chen si province.

HAN YU, a town of China, in Kiangnan.

\* HAP. *n. f.* [*anhop*, in Welsh, is misfortune.]

1. Chance; fortune.—

Whether art it were, or heedless *hap*,

As through the flow'ring forest path she fled.

In her rude hairs sweet flowers themselves did lap,

And flourishing fresh leaves and blossoms did cawrap. *Stenfer.*

2. That which happens by chance or fortune.—

Curst be good *haps*, and curst be they that build

Their hopes on *hops*, and do not make despair  
For all these certain blows the surest shield. *Sidney.*

—To have ejected whatsoever that church doth make account of, without any other crime than that it hath been the *hap* thereof to be used by the church of Rome, and not to be commanded in the word of God, might haply have pleased some few men, who, having begun such a course themselves, must be glad to see their example followed. *Hook.*  
—Things casual do vary, and that which a man doth but chance 'o think well of cannot still have the like *hap*. *Hooker.*—Solyman commended them for their valour in their evil *hops*, more than the victory of others got by good fortune. *Knelles.*—A fox had the *hap* to fall into the walk of a lion. *J. Esfrange.* 3. Accident; casual event; misfortune.—

Nor feared she among the bands to stray  
Of armed men, for often had she seen

The tragick end of many a bloody fray:  
Her life had full of *hops* and hazards been.

*Fairfax.*

(1.) \* To HAP. *v. n.* [from the noun.] 1. To happen; to have the casual consequence.—It will be too late to gather ships or soldiers, which may need to be presently employed, and whose want may *hap* to hazard a kingdom. 2. To come by chance: to befall casually.—

Run you to the citadel,

And tell my lord and lady what hath *hap'd*. *Shak.*

—In destructions by deluge, the remnant which *hap* to be reserved are ignorant people. *Bacon.*

(2.) To HAP, or HAPPE, *v. a.* in law, signifies to catch or snatch a thing. Thus we meet with, to hap the possession of a deed-poil. Littleton, fol. 8 also, to hap the rent. If partition be made between two parceners, and more land be allowed the one than the other, she that hath most of the land charges it to the other, and happeth the rent whereon assize is brought.

HAPAEI, a cluster of four of the FRIENDLY ISLANDS (which see) in the S. Pacific Ocean. They are connected by a reef of coral rocks, dry at low water. They are fertile and have numerous extensive plantations, the fences of which, running parallel, form spacious public roads. They extend about 19 miles between Lon. 185. 36. and 185. 45. E. Lat. 19. 39. to 19. 53. S.

\* HAP-HAZARD. *n. f.* Chance, accident; perhaps originally *hap hazards*.—The former of these is the most sure and infallible way; but so hard that all shun it, and had rather walk as men do in the dark by *hap-hazard*, than tread so long and intricate mazes for knowledge' sake. *Hooker.*—We live at *hap-hazard*, and without any insight into causes and effects. *L'Esfrange.*—We take our principles at *hap-hazard* upon trust, and then believe a whole system, upon a presumption that they are true. *Locke.*

HAPIRCAN, a town of Chinese Tartary.

\* HAPLESS. *adj.* [from *hap*.] Unhappy; unfortunate; luckless; unlucky.—

*Hapless* Ægeon, whom the fates have mark'd  
To bear the extremity of dire mishap! *Shak.*

Here *hapless* Icarus had found his part,  
Had not the father's grief restrain'd his art. *Dryden.*

Did his *hapless* passion equal mine,  
I would refuse the bliss. *South.*

HAPLIN COURT, a town of France, in the dept. of the Straits of Calais, 4 m. E. of Bapaume.

\* HAPLY. *adv.* [from *hap*.] 1. Perhaps; per- adventure; it may be.—

This love of theirs myself have often seen,  
*Haply* when they have judg'd me fast asleep. *Shak.*

To warn

Us, *haply* too secure, of our discharge  
From penalty, because from death releas'd  
Some days *Alfieri.*

Then *haply* yet our breast remains untouch'd  
Though that seems strange. *Ross.*

—Let us now see what conclusions may be found for instruction of any other state, that may be labour under the like circumstances. *Swift.* 1. b. chance; by accident.—

Leviathan, which God of all his works  
 Created hugest, that swim the ocean stream,  
 Him *haply* slumb'ring on the Norway foam,  
 The pilot of some small night-founder'd skiff  
 Drowning some island oft, as seamen tell,  
 Who fix'd an anchor in his scaly rind,  
 Moors by his tide. *Milton.*

To Happ. See To HAP, N° 2.

\* To HAPPEN. v. n. (from *hap*.) 1. To fall  
 out; to chance; to come to pass.—Bring forth  
 your strong reasons, and shew us what shall *happen*.  
*Shak.*—Say not I have sinned, and what harm  
 hath *happened* unto me? *Eccles. v. 4.*—If it so fall  
 out that thou art miserable for ever, thou hast no  
 reason to be surprized, as if some unexpected  
 thing had *happened* to thee. *Tillotson.* 2. To light;  
 to fall by chance—I have *happened* on some other  
 accounts relating to mortalities. *Gravel.*

\* HAPPILY. adv. (from *happy*.) 1. Fortu-  
 nately; luckily; successfully.—

I come to wive it wealthily in Padua:

If wealthily, then *happily* in Padua. *Shak.*

Perter'd by conquest, *happily* o'erthrown,

Falling they rise to be with us made one. *Waller.*

—Neither is it so trivial an undertaking to make a  
 tragedy end *happily*; for 'tis more difficult to save  
 the end. *Dryden.* 2. Addressfully; gracefully;  
 without labour.—

Form'd by thy converse, *happily* to steer

From grave to gay, from lively to severe. *Pope.*  
 3. In a state of felicity; as, he lives *happily*. 4.  
 By chance; peradventure. In this sense *happily*  
 written erroneously for *haply*.—One thing more  
 I bid with you to desire of them, who *happily*  
 may peruse these two treatises. *Digbi.*

(1.) \* HAPPINESS. n. f. (from *happy*.) 1. Fe-  
 licity; state in which the desires are satisfied.—  
*Happiness* is that estate whereby we attain, so far  
 as possibly may be attained, the full possession of  
 that which simply for itself is to be desired, and  
 content in it after an eminent sort, the content-  
 ment of our desires, the highest degree of all our  
 perfection. *Hooker.*—

Oh! *happiness* of sweet retir'd content,

To be at once secure and innocent. *Drum.*  
 —Philosophers differ about the chief good or hap-  
 piness of man. *Temple.*—The various and contra-  
 ry choices that men make in the world, argue that  
 the same thing is not good to every man alike;  
 the variety of pursuits shews, that every one does  
 not place his *happiness* in the same thing. *Locke.*  
 2. Good luck; good fortune. 3. Fortuitous ele-  
 ment; unstudied grace.—Certain graces and hap-  
 piness, peculiar to every language, gave life and  
 energy to the words. *Drum.*—

Some beauties yet no precepts can declare;

For there's a *happiness* as well as care. *Pope.*

Form'd by some rule that guides but not con-  
 strains,

And smil'd more through *happiness* than pains. *Pope.*

(2.) HAPPINESS, or FELICITY, absolutely ta-  
 ken, denotes the durable possession of good with-  
 out any mixture of evil, or the enjoyment of pure  
 pleasure unalloyed with pain; or a state in which  
 all the wishes are satisfied; in which sense, Happi-  
 ness is known only by name upon the earth. The

word *happy*, when applied to any state or condi-  
 tion of human life, will admit of no positive de-  
 finition, but is merely a relative term: that is,  
 when we call a man happy, we only mean that he  
 is happier than some others with whom we com-  
 pare him; than the generality of others; or than he  
 himself was in some other situation. This interest-  
 ing subject has been treated by many eminent wri-  
 ters, but by none has it been set in a clearer point  
 of view than by Archdeacon Paley, in the sixth  
 chap. of his *Principles of Philosophy*. "In strict-  
 ness (says that elegant writer), any condition may  
 be denominated happy in which the amount or  
 aggregate of pleasure exceeds that of pain; and  
 the degree of happiness depends upon the quanti-  
 ty of this excess. And the greatest quantity of it,  
 ordinarily attainable in human life, is what we  
 mean by happiness, when we inquire or pronounce  
 what human happiness consists in." In the pro-  
 secution of this subject, Mr Paley shows, 1st,  
 That happiness does not consist in the pleasures of  
 sense, in whatever profusion or variety they be  
 enjoyed: 2dly, That it does not consist in an  
 exemption from pain, labour, care, business, sus-  
 pense, molestation, and "those evils which are  
 without;" such a state being usually attended  
 not with ease, but with depression of spirits,  
 a tastelessness in all our ideas, imaginary anxieties,  
 and the whole train of hypochondriacal affections.  
 And 3dly, That it does not consist in greatness,  
 rank, or elevated station. He next proceeds to  
 show, that happiness *does* consist, 1. In the exer-  
 cise of the social affections; 2. In the exercise of  
 our faculties, either of body or mind, in the pur-  
 suit of some engaging end; 3. In setting the ha-  
 bits in such a manner, that every change may be a  
 change for the better: and 4. in health, which he  
 defines "not only freedom from bodily distempers,  
 but also that tranquillity, firmness, and alacrity of  
 mind, which we call *good spirits*." When we are  
 in perfect health and spirits, we feel in ourselves  
 a happiness independent of any outward gratifi-  
 cation whatever, and of which we can give no ac-  
 count. This is an enjoyment which the Deity  
 has annexed to life; and probably constitutes, in  
 a great measure, the happiness of infants and  
 brutes, especially of the lower and sedentary or-  
 ders of animals, as of oysters, periwinkles, and  
 the like." After illustrating these various sources  
 of human happiness, Mr Paley draws two con-  
 clusions; viz. 1. "That happiness is pretty equal-  
 ly distributed amongst the different orders of civil  
 society; and 2. That vice has no advantage over  
 virtue, even with respect to this world's happi-  
 ness."

\* HAPPY. adj. (from *hap*; as *lucky* from *luck*.)  
 1. In a state of felicity; in a state where the de-  
 sire is satisfied.—

At other end Uran did Strephon lend  
 Her *happy* making hand. *Sidney.*

Am I *happy* in thy news?

—If to have done the thing you gave in charge,  
 Beget your happiness, be *happy* then;

For it is done. *Shak.*

Truth and peace, and love, shall ever shine  
 About the supreme throne

Of him, t' whose *happy* making light alone,  
 Our heav'nly guided soul shall climb. *Milton.*

↓ 2 . Though

Though the presence of imaginary good cannot make us *happy* the absence of it may make us miserable. *Addison*. 2. Lucky; successful; fortunate.—Chymists have been more *happy* in finding experiments than the causes of them. *Boyle*.—

Yet in this agony his fancy wrought,  
And fear supply'd him with this *happy* thought,  
*Dryden*.

3. Addressful: ready.—One gentleman is *happy* at a reply, and another excels in a rejoinder, *Swift*.

HAPSAL, a sea-port of Russia, in Esthonia, on the coast of the Baltic, 5 miles SW. of Revel, opposite Dago isle. Lon. 22. 47. E. Lat. 59. 4. N.

(1.) HAPSBURG, an ancient castle of the Helvetic republic, in the canton of Bern, seated near Schintnach, on a hill, upon the right bank of the Aar, 3 miles above Bruck. It was the cradle of the house of AUSTRIA, having been built by Count Vernor bishop of Strasburg, in the 11th century, and by him given to his brother Radbad, whose son Vernor first took the title of Count Hapsburg, which his descendants continued to bear till the elevation of Rodolph I. to the imperial throne. (See GERMANY, § 15.) It was then given as a fief to the lords of Waldeck, but fell under the dominion of the Bernois in 1415, when they conquered Argow. This castle commands a most extensive prospect, but is now in ruins, and inhabited by peasants. It is often confounded with the castle of HABSBURG, in Lucerne. It lies 5 miles N. of Lenzburg.

(2.) HAPSBURG. See HABSBURG, N° 1.

(3.) HAPSBURG, a village in Norfolk.

HAQUE, *n. f.* in old statutes, a little hand-gun, prohibited to be used for destruction of game, &c. by 33 Hen. VIII. cap. 6. and 2 & 3 Edw. VI. cap. 14. There is also the demi-haque, or half-haque, within the said acts.

\* HAQUETON. *n. f.* A coat of mail. *Spens.*

(1.) HARA, a river of Chinese Tartary.

(2.) HARA, a lake of Asia, in Thibet.

HARAKER, a town of Sweden, in Westmania.

HARAM. See SERAGLIO.

HARAN, CHARRAN, or CHARRÆ, a city of Mesopotamia, celebrated for having been the place where Abraham retreated, after he left Ur (Gen. xi. 31, 32); where Terah his father, died and was buried; whither Jacob retired, when he fled from Esau: (id. xxvii. 45. xxviii. 10, &c.) and where Crassus the Roman general was defeated and killed by the Parthians. It was situated between the Euphrates and the Chebar, at a good distance from their junction.

(1.) \* HARANGUE. *n. f.* [*harangue*, French. The original of the French word is much questioned: *Ménage*, thinks it a corruption of *beating*, English; *Junius* imagines it to be *discours au rang*, to a circle, which the Italian *arringo* seems to favour. Perhaps it may be from *orare*, or *oratione*, *orationer*, *ararer*, *oranger*, *haranguer*.] A speech; a popular oration.—

Gray-headed men, and grave, with warriors mix'd,

Assembled, and *harangues* are heard, but soon  
In factious opposition. *Milton*.

—Nothing can better improve political schoolboys  
Than the art of making plausible or implausible *ha-*

*rangues*, against the very opinion for which they resolve to determine. *Swift*.—Many preachers neglect method in their *harangues*. *Watts*.

(2.) HARANGUES were anciently made by the generals, previous to an engagement both amongst the Greeks and Romans. See ALLOCUTIO. The word is often used in an ill sense, viz. for a too pompous, prolix, or unseasonable speech or declamation.

(1.) \* To HARANGUE. *v. a.* [*haranguer*, Fr.] To address by an oration; as, he *harangued* the troops.

(2.) \* To HARANGUE. *v. n.* To make a speech; to pronounce an oration.

\* HARANGUER. *n. f.* [from *harangue*.] An orator; a publick speaker: generally with some mixture of contempt.

\* HARASS. *n. f.* [from the verb.] Waste; disturbance.—

The men of Judah, to prevent

The *harass* of their land, beset me round. *Milt.*

\* To HARASS. *v. a.* [*harasser*, French, from *harasse*, a heavy buckler, according to *DuCange*.] To weary; to fatigue; to tire with labour and uneasiness.—These troops came to the army but the day before, *harassed* with a long and wearisome march. *Bacon*.—

Our walls are thinly mann'd, our best men  
slain;

The rest, an heartless number, spent with  
watching,

And *harass'd* out with duty. *Dryden*,

Nature oppress'd, and *harass'd* out with care,  
Sinks down to rest. *Addison*.

—*Out* increases the force of the verb.

HARBACH, a river of Wirtemberg.

(1.) \* HARBINGER. *n. f.* [*berberger*, Dutch, one who goes to provide lodgings or an *barbour* for those that follow.] A forerunner; a precursor.—

Make all our trumpets speak, give them all  
breath,

Those clam'rous *harbingers* of blood and death. *Shak.*

I'll be myself the *harbinger*, and make joyful  
The hearing of my wife with your approach. *Shak.*

Sin, and her shadow death, and misery,  
Death's *harbinger*. *Milton*.

And now of love they treat, 'till th' evening star,  
Love's *harbinger* appear'd. *Milton*.

Before him a great prophet, to proclaim  
His coming, is sent *harbinger*, who all  
invites. *Milton*.

As Ormond's *harbinger* to you they run;  
For Venus is the promise of the Sun. *Dryden*.

(2.) HARBINGER, in the king's household, an officer who has 4 yeomen under him, who ride a day's journey before the court when it travels, to provide lodgings, &c.

HARBO, a town of Sweden, in Westmania.

HARBONNIERES, a town of France, in the dep. of Somme, 15 miles E. of Amiens, and 11 N. of Mondidier.

(1.) HARBOROUGH, or MARKET HARBOROUGH, a town of Leicestershire, on the road to Derby, near the source of the Welland. It is a great thoroughfare, and was famous, in *Camden's* time, for its fairs, where the best horses and

columns fill fold. They are held April 29. and Oct. 19. The market is on Tuesday. The Earl of Harbrough built a neat market-house at his own expense, about 12 years ago. The town lies 14 m. S. of Leicester, and 83 NNW. of London. Lat. 52. W. Lat. 52. 28. N.

(1.) **HARBOROUGH**, a town in Lincolnshire.

(2.) **HARBOROUGH**, a village in Warwickshire.

**HARBOTTLE**, a village in Northumberland, was the site in Ridgedale valley, with a manor and castle; formerly the residence of Margaret Tudor, the sister of K. Henry VII. and queen dowager of Scotland.

(3.) \* **HARBOUR**. *n. f.* [*berberge*, French; *bergh*, Dutch; *albergo*, Italian.] 1. A lodging; a place of entertainment.—

For *harbour* at a thousand doors they knock'd;  
Not one of all the thousand but was lock'd.

*Dryden.*

Doubly curs'd

Be all these easy fools who give it *harbour*.

*Rowe.*

2. A port or haven for shipping.—

Three of your argosies

Are richly come to *harbour* suddenly. *Shak.*

They leave the mouths of Po,

That all the borders of the town o'erflow;

And spreading round in one continu'd lake,

A spacious hospitable *harbour* make. *Addison.*

3. An asylum; a shelter; a place of shelter and security.

4. **HARBOUR** is also used for any place convenient for mooring shipping, though at a great distance from the sea. The qualities requisite in a good harbour are, that the bottom be entirely free from rocks or shallows; that the opening be of sufficient extent to admit the entrance or departure of large ships without difficulty; that it should have good anchoring ground, and be easy of access; that it should be well defended from the violence of the wind and sea; that it should have room and convenience to receive the shipping of different nations, and those which are laden with different merchandises; that it should be provided with a good light-house, and have variety of proper rings, posts, moorings, &c. in order to remove or secure vessels contained therein; and, finally, that it have plenty of wood, and other materials for firing, besides hemp, iron, masts, &c.

5. \* **To HARBOUR**. *v. a.* [from the noun.] 1. To entertain; to permit to reside.—My lady bid me tell you, that though she *harbours* you at her uncle's, she's nothing allied to your disorder. *Shak.*

Knows I know, which in this plainness  
Enriches more craft, and more corrupter ends,  
Than twenty silky ducking observants. *Shak.*

Let not your gentle breast *harbour* one thought  
Of outrage from the king. *Rowe.*

We owe this old house the same kind of gratitude that we do an old friend, who *harbours* us in a declining condition, nay even in his last extremity. *Pope.*—How people, so greatly warmed by a sense of liberty, should be capable of *harbouring* such weak superstition; and that so much misery and so much folly can inhabit the same walls! *Pope* 2. To shelter; to secure.—*Har-*

*bour* yourself this night in this castle: this country is very dangerous for murdering thieves to trust a sleeping life among them. *Sidney.*

(2.) \* **To HARBOUR**. *v. n.* To receive entertainment; to sojourn; to take shelter.—

This night let's *harbour* here in York. *Shak.*

They are sent by me,

That they should *harbour* where their lord  
would be. *Shak.*

Southwards they bent their flight,

And *harbour'd* in a hollow rock at night,

Next morn they rose, and set up every sail;

The wind was fair, but blew a mack'el gale.

*Dryden.*

Let me be grateful; but let far from me

Be fawning cringe, and false dissembling look,

And servile flattery that *harbours* oft

In courts and gilded roofs. *Philips.*

\* **HARBOURAGE**. *n. f.* [*berbergage*, French; from *harbour*.] Shelter; entertainment.—

Let in us your king, whose labour'd spirits,

Forewearied in this action of swift speed,

Crave *harbourage* within your city walls. *Shak.*

\* **HARBOURER**. *n. f.* [from *harbour*.] One that entertains another.

\* **HARBOURLESS**. *adj.* [from *harbour*.] Wanting harbour; being without lodging; without shelter.

\* **HARBROUGH** for *harbour*. *Spenser.*

(1.) **HARBURG**. See **HAARBURG**, N° 1.

(2.) **HARBURG**, a town of Germany, in the circle of the Lower Rhine, 9 miles SE. of Duderstadt.

**HARBURN**, a river of Devonshire.

(1.) **HARCOURT**, a town of France, in the dept. of Calvados, and late prov. of Normandy, 11 miles NW. of Falaise, and 12 S. of Caen.

(2.) **HARCOURT**, a town of France, in the dept. of Eure, 9 miles NE. of Bernay, and 3 NW. of Evreux.

(1.) \* **HARD**. *adj.* [*beard*, Saxon; *bard*, Dutch.] 1. Firm; resisting penetration or separation; not soft; not easy to be pierced or broken.

Repose you there, while I to the *bard* house,

More *bard* than is the stone whereof 'tis rais'd;

Which ev'n but now, demanding after you,

Denied me to come in. *Shak.*

2. Difficult; not easy to the intellect.—Some diseases, when they are easy to be cured, are *hard* to be known. *Sidney.*—The *bard* causes they brought unto Moses; but every small matter they judged themselves. *Exodus.*—

When *hard* words, jealousies, and fears,

Set folks together by the ears. *Hudibras.*

'Tis *hard* to say if Clymene were mov'd

More by his pray'r, whom she so dearly lov'd,

Or more with fury fir'd. *Dryden.*

—As for the *hard* words which I was obliged to use, they are either terms of art, or such as I substituted in place of others that were too low. *Arbutnot.* 3. Difficult of accomplishment; full of difficulties.—Is any thing too *hard* for the Lord? *Genesis.*—

Possess

As lords a spacious world, t' our native heav'n  
Little inferior, by my adventure *hard*

With peril great achiev'd,

*Milton.*

Long

Long is the way

And *hard*, that out of hell leads up to light :

Our prison strong.

*Milton.*

—He now discern'd he was wholly to be on the defensive, and that was like to be a very *hard* part too. *Clarendon*.—Nervous and tendinous parts have worse symptoms, and are *harder* of cure, than fleshy ones. *Hijeman*.—

The love and pious duty which you pay

Have pass'd the perils of so *hard* a way. *Dryden.*

4. Painful ; distressful, laborious action or suffering.—Rachel travailed, and she had *hard* labour. *Genesis*.—

Worcester's horse came but to-day :

And now their pride and mettle is asleep,

Their courage with *hard* labour tame and dull,

That not a horse is half of himself. *Shak.*

—Continual *hard* duty, with little fighting, lessened and diminished his army. *Clarendon*.—

When Sebastian weeps, his tears

Come *harder* than his blood. *Dryden.*

—A man obliged to *hard* labour is not reduced to the necessity of having twice as much victuals as one under no necessity to work. *Cleynr.*

5. Cruel ; oppressive ; rigorous : as, a *hard* heart.

—The bargain of Julius III. may be accounted a very *hard* one. *Broqua's Vulgar Errors*.—

Whom scarce my sheep, and scarce my painful plough,

The needful aids of human life allow ;

So wretched is thy son, so *hard* a mother thou.

*Dryden.*

—If you thought that *hard* upon you, we would not refuse you half your time. *Dryden*.—A loss of one third of their estates will be a very *hard* case upon a great number of people. *Locke*.—No people live with more ease and prosperity than the subjects of little commonwealths ; as, on the contrary, there are none who suffer more under the grievances of a *hard* government than the subjects of little principalities. *Addison*.—To find a bill that may bring punishment upon the innocent, will appear very *hard*. *Swift*. 6. Sour ; rough ; severe.—What, have you given him any *hard* words of late ? *Shak*.—Rough ungovernable passions hurry men on to say or do very *hard* or offensive things. *Atterbury*. 7. Unfavourable ; unkind.—

As thou lov'st me, do him not that wrong,

To bear a *hard* opinion of his truth. *Shak.*

—Absalom and Achitophel he thinks is a little *hard* on his fanatick patrons. *Dryden*.—Some *hard* rumours have been transmitted from t'other side the water, and rumours of the severest kind. *Swift*.—8. Insensible ; inflexible.—

If I by chance succeed

In what I write, and that's a chance indeed,

Know I am not so stupid, or so *hard*,

Not to feel praise, or fame's deserv'd reward.

*Dryden.*

9. Unhappy ; vexatious.—It is a very *hard* quality upon our soil or climate, that so excellent a fruit, which prospers among all our neighbours, will not grow here. *Temple*. 10. Vehement ; keen ; severe : as, a *hard* Winter ; *hard* weather. 11. Unreasonable ; unjust.—It is a little *hard*, that in an affair of the last consequence to the very being

of the clergy, this whole reverend body should be the sole persons not consulted. *Swift*.—It is the *hardest* case in the world, that Steele should take up the reports of his faction, and put to rest off as additional fears. *Swift*. 12. Forced ; easily granted.—If we allow the first couple, the end of one hundred years, to have left a pair of breeders, which is no *hard* supposition, there would arise from these, in fifteen hundred years, a greater number than the earth was capable of. *Burnet*. 13. Powerful ; forcible.—The stag was too *hard* for the hound, and the hound flies for succour to the man that's too *hard* for him, and rides the one to death, and outrights the other. *L'Esrange*.—Let them consider the vexation they are treasuring up for themselves, struggling with a power which will be always *hard* for them. *Addison*.—A disputant, when finds that his adversary is too *hard* for him, w flyness turns the discourse. *Watts*. 14. Auster rough, as liquids.—In making of vinegar, vessels of wine over against the noon sun, which callesth out the more oily spirits, and leaveth spirit more sour and *hard*. *Bacon*. 15. Harsh ; constrained.—Others, scrupulously tied to the practice of the ancients, make their figures *harder* than even the marble itself. *Dryden*.—16. Not plentiful ; not prosperous.—There are bonfires decreed ; and, if the times were not been *hard*, my billet should have burnt to. *Dryden*. 17. Avaricious ; faultily sparing.—

(2.) \* *HARD*. adv. [*hardo*, very old German]

1. Close : near : often with *by*.—*Hard by* was a house of pleasure, built for a summer retirement. *Sidney*.—They doubted a while what should be, 'till it was cast up even *hard* betwixt them ; at which time they fully saw it was as. *Sidney*.—

A little lowly hermitage it was,

Down in a dale *hard by* a forest's side,

Far from resort of people that did pass

In travel to and fro. *Spenser*

Scarce had he said, when *hard* at hand

Spie

That quicksand nigh, with water covered.

*Spenser*

—When these marshal the way, *hard* at hand comes the master and main exercise. *Shak*.—A melech went *hard* unto the door of the tower, burn it with fire. *Judges*.—The Philistines folked *hard* upon Saul. 2 *Samuel*.—

*Hard by* a cottage chimney smokes,

From betwixt two aged oaks.

*Milton*

2. Diligently ; laboriously ; incessantly ; vehemently ; earnestly ; importunately.—

Geneura rose in his defence,

And pray'd so *hard* for mercy from the prince

That to his queen the king th' offender gave

*Dryden*

—An ant works as *hard* as a man who should carry a very heavy load every day four leagues. *Addison*.—Whoever my unknown correspondent be, he presses *hard* for an answer, and is earnest in that point. *Atterbury*. 3. Unusually ; unusually.—When a man's servant shall play the

with him, look you it goes *hard*. *Shak.* 4. Difficultly; so as to raise difficulties.—The question is hard set, and we have reason to doubt. *Brown.*—A flag, that was *hard* set by the huntsmen, betwixt himself to a stall for sanctuary. *L'Estrange.* 5. Fat; sumpily; vehemently. —The wolves scampt away as *hard* as they could drive. *L'Estr.* 6. With difficulty; in a manner requiring labour. —Sold bodies foreshow rain, as boxes and pegs of wood when they draw and wind *hard*. *Bacon.* 7. Tempestuously; boisterously.—When the North wind blows *hard*, and it rains sadly, none but fools sit down in it and cry; wise people defend themselves against it. *Taylor.*

**HARDAN**, a river of Saxony, which runs into the Elbe, near Uitzan, in Lunenburg.

**HARDANGER**, mountains of Norway in the prov. of Bergen; 60 miles E. of Bergen.

**HARDANGER, GULF OF**, a bay in the North Sea, on the coast of Norway. Lon. 6. 0. E. Lat. 59. 10. N.

**HARBERG**, a town of Germany in Stiria, 10 miles SW. of Fridberg, and 52 S. of Vienna.

**HARBOUND**. *adj.* [*hard* and *bound*.] Coative.

Let wiles to make his barrenness appear,  
And drive from *hardbound* brains eight lines a-year. *Pope.*

**HARDECK**, a town of Hungary.

**HARDECK**, or } a town of Austria, 7 m.

**HARDEGG**, } W. of Znaim, and 40 NW. of Vienna.

**HARDEGEN**, a town of Saxony, in Calenberg, 10 miles NW. of Gottingen.

**HARDENHAUSEN**, a town of Westphalia, in the diocese of Paderborn, 5 miles NW. of Warburg.

**HARDEN**, the name of 4 English villages: 1. in Oxford, N. of Stockport: 2. in Durham, NW. of Harpool: 3. in Kent, N. of Elham: and 4. in Yorkshire: NW. of Bradford.

**HARDEN**. *v. a.* [from *hard*.] 1. To make hard; to indurate.—

See he, who first the passage try'd,  
In *hard*'d oak his heart did hide,  
And ribs of iron arm'd his side. *Dryden.*

—Specie of the *hardened* marl. *Woodward.* 2. To make in frontery; to make impudent. 3. To make in wickedness; to make obdurate.—But

mean one another daily, lest any of you be *hardened* through the deceitfulness of sin. *Hebrews.*—He *hardened* his neck, and *hardened* his heart from

going unto the Lord. 2 *Chron.*—It is a melancholy consideration, that there should be several men so *hardened* and deluded as to think an

improper subject for a jest. *Addison.* 4. To make insensible; to stupify.—Religion sets before us the example of a stupid Stoick, who had

ultimate principles *hardened* himself against all sense of pain, but an example of a man like ourselves, that had a tender sense of the least suffering,

and yet patiently endured the greatest. *Tillotson.*—Years have not yet *hardened* me, and I have an

addition of weight on my spirits since we lost him. *Swift to Pope.* 5. To make firm; to endure with

firmness.—Then should I yet have comfort? yes, I would *harden* myself in sorrow. *Job.*—One raises the soul, and *hardens* it to virtue; the other softens it again, and unbends it into vice. *Dryden.*

**HARDEN**. *v. n.* [from *hard*.] To grow hard.—The powder of loadstone and flint, by the addition of whites of eggs and gum-dragon, made into paste, will in a few days *harden* to the hardness of a stone. *Bacon.*

**HARDENBERG**, a town of Germany, in the duchy of Berg, 13 m. ENE. of Dusseldorp.

**HARDENBURG**, or } a town of the Batavian Republic, in the dept. of Yssel and ci-devant prov. of Overijssel, seated on the Vecht, 10 miles S. of Coevorden.

**HARDENER**. *n. s.* [from *harden*.] One that makes any thing hard.

**HARDENING**, the giving a greater degree of hardness to bodies than they had before. There are several ways of hardening iron and steel, as by hammering them, quenching them in cold water, &c. See CASE-HARDENING, and STEEL.

**HARDENS**, a town of the United States, in Kentucky, 82 miles WSW. of Frankfort.

**HARDERWICK**, or } a town of the Batavian Republic, in the dept.

of the Rhine, and late prov. of Dutch Guelderland. It was only a village till 1229, when Otho surrounded it with walls. It was afterwards one of the HANSE TOWNS. In 1503, it was mostly burnt down, but was soon after rebuilt, with 7 gates. In 1511, it was taken by Charles D. of Guelders: in 1552, by the troops of Charles V., and in 1572 by the confederates. It has an university founded in 1518: and the church of St. Martin is much admired. It is seated on the Zuyder Zee, 19 miles W. of Deventer and 25 NE. of Utrecht. Lon. 5. 40. E. Lat. 52. 22. N.

**HARDFAVOUR'D**. *adj.* [*hard* and *favour*.] Coarse of feature; harsh of countenance.—

When the blast of war blows in your ears,  
Stiffen the sinews, summon up the blood,  
Disguise fair Nature with *hardfavour'd* looks,  
Then lend the eye a terrible aspect. *Shak.*

—The brother a very lovely youth, and the sister *hardfavoured*. *L'Estrange.*—When Vulcan came into the world, he was so *hardfavoured* that both his parents frowned on him. *Dryden.*

**HARDHANDED**. *adj.* [*hard* and *hand*.] Coarse; mechanick; one that has his hands hard with labour.—

—*Hardbanded* men that work in Athens here,  
Which never labour'd in their minds 'till now. *Shak.*

**HARDHEAD**. *n. s.* [*hard* and *head*.] Class of heads; manner of fighting in which the combatants dash their heads together.—I have been at *hardhead* with your butting citizens; I have routed your herd, I have dispers'd them. *Dryden.*

**HARDHEARTED**. *adj.* [*hard* and *heart*.] Cruel; inexorable; merciless; pitiless; barbarous; inhuman; savage; uncompassionate.—

*Hardhearted* Clifford, take me from the world;  
My soul to heav'n. *Shak.*

Can you be so *hardhearted* to destroy  
My ripening hopes, that are so near to joy? *Dryden.*

—John Bull, otherwise a good-natured man, was very *hardhearted* to his sister Peg. *Arbutnot.*

**HARDHEARTEDNESS**. *n. s.* [from *hardhearted*.] Cruelty; want of tenderness; want of compassion.—*Hardheartedness* and cruelty is not only an inhu-

man vice, but worse than brutal. *L'Esperance*.—How black and base a vice ingratitude is, may be seen in those vices which it is always in combination with, pride and *hardheartedness*, or want of compassion. *South*.—*Hardheartedness* is an essential in the character of a libertine. *Clarissa*.

**HARDICANUTE.** See ENGLAND, § 18.

\* **HARDHEAD.** } *n. f.* [from *hardy*.] Stoutness;

\* **HARDHOOD.** } bravery. Obsolete.

Enflam'd with fury and fierce *hardyhead*,  
He seem'd in heart to harbour thoughts unkind.  
And nourish bloody vengeance in his bitter mind.

*Spenser.*

Boldly assault the necromancer's hall,  
Where if he be, with dauntless *hardibood*. *Milt.*  
**HARDILY.** *adv.* boldly; stoutly.

\* **HARDIMENT.** *n. f.* [from *hardy*, *bardiment*, *adv.* French.] Courage; stoutness; bravery. Not in use.—

But full of fire and greedy *bardiment*,  
The youthful knight could not for aught be  
flaid.

*Spenser.*

On the gentle Severn's sedgey bank,  
In single opposition, hand to hand,  
He did confound the best part of an hour  
In changing *bardiment* with great Glendower.

*Shak.*

Zeal was the spring whence flowed her *bardiment*.

*Fairf.*

\* **HARDINESS.** *n. f.* [*bardiesse*, French; from *hardy*.] 1. Hardship; fatigue.—They are all valiant and hardy; great endurers of cold, hunger, and all *bardiness*. *Spenser*. 2. Stoutness; courage; bravery.—

If we, with thrice such powers left at home,  
Cannot defend our own doors from the dog,  
Let us be worried; and our nation lose

The name of *bardiness* and policy.

*Shak.*

—Perkin had gathered together a power of all nations, neither in number, nor in the *bardiness* and courage of their persons contemptible. *Bacon*.—He has the courage of a rational creature, and such an *bardiness* we should endeavour by custom and use to bring children to. *Locke*.—Criminal as you are, you avenge yourself against the *bardiness* of one that should tell you of it. *Spectator*. 3. Effrontery; confidence.

(1. **HARDING**, John, author of an English Chronicle, flourished in the 13th century, and died in 1461.

(2.) **HARDING**, Thomas, D. D. one of those time-serving priests, whose versatile conduct reflect no honour on any profession, was born in Devonshire, in 1512. He was educated at Winchester; chosen fellow of New College Oxford, in 1536; and appointed professor of Hebrew by king Henry VIII, whose *half-reforming* principles he adopted. On the accession of Edward VI, he became a complete protestant; but on that of the bloody Mary, he saw his error, recanted and became a confirmed Papist; whereupon he was made prebendary of Winchester, and treasurer of the cathedral of Salisbury. Being deprived of his preferments on the accession of Q. Elizabeth, he went to Louvaine, where he began his famous controversy with Bishop Jewel, against whom he wrote 7 tracts in favour of Popery, between 1555

and 1567. He died in 1570. His works shew him to have been a man of learning and abilities.

**HARDINGE**, Nicholas, Esq; of Canbury, Surry, grandson of Sir Robert Hardinge, was a law of King's College, Cambridge, M. P. Eye in Suffolk, and a secretary of the Treasury. He was well versed in history, law and antiquity and his poems are much admired. His Latin poems, in every measure and stile, are published the *Muse Anglicana*. In Dec. 1738, he married J. Pratt, sister to Lord Camden; and died 9th Aug. 1785.

**HARDINGHEN**, a town of France in the dept. of the Straits of Calais, 15 m. NE. of Boulogne.

**HARDINGS**, a town of the United States Virginia; 17 miles SW. of Washington.

**HARDION**, James, an ingenious French author, and member of the Academy of Inscription born at Tours, in 1626. He published an Universal History in 18 vols. and a Treatise on French Poetry and Rhetoric. He died in 1766.

**HARDISLEBEN**, a town of Upper Saxony.

**HARDKNOT HILL**, a steep mountain of Cumberland, SE. of Copeland Forest.

\* **HARDLABOURED.** *adj.* [*hard* and *labour*] Elaborate; studied; diligently wrought.—

How cheerfully the hawkers cry

A satire, and the geutry buy!

While my *hardlabour'd* poem pines,

Unfold upon the printer's lines.

*Stev.*

\* **HARDLY.** *adv.* [from *hard*.] 1. With difficulty; not easily.—Touching things which generally are received, although in themselves they most certain, yet, because men presume themselves granted of all, we are *hardly* able to bring forth proof of their certainty as may satisfy gainstayers when suddenly and besides expectation they require the same at our hands. *Hooker*.—There are but a few, and they endued with great ripeness of wit and judgment, free from all such affairs as might trouble their meditations, instructed in the sharpest and subtlest points of learning; who have and that very *hardly*, been able to find out but only the immortality of the soul. *Hooker*.—God hath delivered a law as sharp as the two-edged sword, piercing the very closest and most inaccessible corners of the heart, which the law of nature can *hardly*, human laws by no means, possibly reach unto. *Hooker*.—There are in living creatures parts that nourish and repair easily, and parts that nourish and repair *hardly*. *Bacon*.—The bark of those trees are more close and soft than those of oak and ashies, whereby the moss can the *hardly* get out. *Bacon*.—

The father, mother, daughter they invite  
*Hardly* the dame was drawn to this repast. *Dry.*

Recov'ring *hardly* what he lost before,  
His right endears it much, his purchase more.

*Dry.*

—False confidence is easily taken up, and *hardly* laid down. *South*. 2. Scarcely; scant; not easily; with no likelihood.—

The fish that once was caught, new bait will  
*hardly* bite.

*Fairy.*

They are worn, lord consul, so  
That we shall *hardly* in our ages see  
Their banners wave again.

*Scot.*

—*Her.*

—Hardly shall you find any one so bad, but he  
desires the credit of being thought good. *South.*

1. Almost not; barely.—

The wand'ring breath was on the wing to part,  
Weak was the pulse, and hardly beat'd the  
heart. *Dryden.*

—There is hardly a gentleman in the nation, who  
has not a near alliance with some of that body.

*Just.* 4. Grudgingly; as an injury.—

If I unwittingly

Have aught committed that is hardly born

By me in this presence, I desire

To reconcile me.

*Shak.*

5. Severely; unfavourably.—If there are some rea-  
sons inducing you to think hardly of our laws, are  
those reasons demonstrative, are they necessary,  
or are possibilities only? *Hooker.* 6. Rigorous-

ly, oppressively.—Many men believed that he  
was hardly dealt with. *Clarendon.*—They are now

in prison, and treated hardly enough; for there  
are fifteen dead within two years. *Addison.*—They

have begun to say, and to fetch instances, where  
it has in many things been hardly used. *Swift.*

7. Unwelcomely; harshly.—Such information  
conveyed hardly and harshly to a grown man;

and, however softened, goes but ill down. *Locke.*

8. Not softly; not tenderly; not delicately.—  
Heaven was her canopy; bare earth her bed;

So hardly lodg'd.

*Dryden.*

HARDMARK, a town of Norway.

\* HARDMOUTHED. *adj.* [*hard* and *mouth*.]

Disobedient to the rein; not sensible of the bit.

'Tis use my hardmouth'd courier to controul,  
As to run not, and transgress the goal. *Dryden.*

But who can youth, let loose to vice, restrain?  
When once the hardmouth'd horse has got the rein,  
He's put thy power to stop. *Dryden.*

2. \* HARDNESS. *n. f.* [*from hard*.] 1. Du-

tility; power of resistance in bodies.—Hardness is a  
condition of the parts of matter that make up

matters of sensible bulk, so that the whole does not  
easily change its figure. *Locke.*—From the various

collocations of these corpuscles happen all the  
various of the bodies formed out of them, in co-

lour, taste, smell hardness, and specific gravity.

2. \* HARDNESS. 1. Difficulty to be understood.—  
This label on my bosom

Is so from lack in hardness, that I can  
Make no collection of it. *Shakespeare.*

3. Difficulty to be accomplished.—It was time  
for me ever to sharpen my intention to pierce

through the hardness of this enterprise. *Sidney.*—  
Concerning the duty itself, the hardness thereof is

such as needeth much art. *Hooker.*—4. Scar-

city, penury.—  
The tenants poor, the hardness of the times,  
Are all excuses for a servant's crimes. *Swift.*

5. Moderacy; profligateness.—Every communion  
introduces into the soul a certain degree of

weakness, and an aptness to continue in that sin.

6. Coarseness; harshness of look.—By  
their various behaviour they compensate the hard-

ness of their labour, and by the pulchritude of  
their souls make up what is wanting in the beauty

of their bodies. *Ruy.* 7. Vehemence of  
word or action.—If the hardness of the Win-

ter should spoil them, neither the lips of seed

nor labour will be much. *Mortimer.* 8. Cruelty  
of temper; savageness; harshness; barbarity.

We will ask,

That if we fail in our request, the blame  
May hang upon our hardness. *Shakespeare.*

They quicken sloth, perplexities untie,  
Make roughness smooth, and hardness mollify.

*Denham.*

9. Stiffness; harshness.—Sculptors are obliged to  
follow the manners of the painters, and to make

many ample folds, which are insufferable hardnesses,  
and more like a rock than a natural garment. *Dryd.*

10. Faulty parsimony; stinginess.

(2.) HARDNESS (*§ 1. def. 1.*) in bodies, is a  
property directly opposite to fluidity, by which

they resist the impression of any other substance,  
sometimes in an extreme degree. As fluidity has

been found to consist in the motion of the parti-  
cles of a body upon one another, in consequence

of a certain action of the universal fluid, or elemen-  
tary fire, among them; we must conclude that hard-

ness consists in the absence of this action, or a de-  
ficiency of what is called latent heat. This is con-

firmed by observing, that there is an intermediate  
state betwixt hardness and fluidity, in which bo-

dies will yield to a certain force though they still  
make a considerable resistance. This is principal-

ly observed in the metals, and is the foundation  
of their ductility. It appears, indeed, that this

last property, as well as fluidity, is entirely depen-  
dent on a certain quantity of latent heat absorbed,

or otherwise acting within the substance itself; for  
all the metals are rendered hard by hammering,

and soft by being put again into the fire and kept  
there for some time. The former operation ren-

ders them hot as well as hard; probably, as Dr  
Black observes, because the particles of metal are

thus forced nearer one another, and those of fire  
squeezed out from among them. By keeping

them for some time in the fire, that element in-  
filtrates itself again among the particles; and ar-

ranges them in the same manner as before, so that  
the ductility returns. By a second hammering

this property is again destroyed, returning on a  
repetition of the heating, or annealing, as it is cal-

led; and so on, as often as we please. Hardness

appears to diminish the cohesion of bodies in some  
degree, though their fragility does by no means

keep pace with their hardness. Thus, glass is  
very hard and very brittle; but flint, though still

harder than glass, is much less brittle. Among  
the metals, however, these two properties seem

to be more connected, though even here the con-  
nection is by no means complete. Steel, the hard-

est of all the metals, is indeed the most brittle;  
but lead, the softest, is not the most ductile. Nei-

ther is hardness connected with the specific gravi-  
ty of bodies; for a diamond, the hardest substance

in nature, is little more than half the weight of  
the lightest metal. As little is it connected with

the coldness, electrical properties, or any other  
quality with which we are acquainted: so that

though the principle above laid down may be ac-  
cepted as a general foundation for our inquiries,

a great number of particulars remain yet to be  
discovered before we can offer any satisfactory ex-

planation. All bodies become harder by cold;  
but

but this is not the only means of their doing so, for some become hard by heat as well as cold. Thus, water becomes hard by cold when it is frozen, but it becomes much harder when its steam is passed over red hot iron, and it enters the substance of the metal, by an union with which it becomes almost as hard as glass.

(3.) **HARDNESS AND GRAVITY OF DIFFERENT SUBSTANCES.** Mr Quist and others have constructed tables of the hardness of different substances. The method pursued in constructing these tables was, by observing the order in which they were able to cut or make any impression upon one another. The following table, extracted from M. Magellan's edition of Cronstedt's Mineralogy, was taken from Dr Quist, Sir T. Bergman, and Mr Kirwan. The first column shows the hardness, and the second the specific gravity.

Diamond from Ormus	-	20	—	3,7
Pink diamond	-	19	—	3,4
Bluish diamond	-	19	—	3,3
Yellowish diamond	-	19	—	3,3
Cubic diamond	-	18	—	3,3
Ruby	-	17	—	4,2
Pale ruby from Brazil	-	16	—	3,5
Ruby spinell	-	13	—	3,4
Deep blue sapphire	-	16	—	3,8
Ditto paler	-	17	—	3,8
Topaz	-	15	—	4,1
Whitish ditto	-	14	—	3,5
Bohemian ditto	-	11	—	2,8
Emerald	-	12	—	2,8
Garnet	-	12	—	4,4
Agate	-	11	—	2,6
Onyx	-	11	—	2,6
Sardonyx	-	12	—	2,6
Occidental amethyst	-	11	—	2,7
Crystal	-	11	—	2,6
Cornelian	-	11	—	2,7
Green jasper	-	11	—	2,7
Reddish yellow ditto	-	9	—	2,6
Schoerl	-	10	—	3,6
Tourmaline	-	10	—	3,0
Quartz	-	10	—	2,7
Opal	-	10	—	2,6
Chrysolite	-	10	—	3,7
Zeolyte	-	8	—	2,1
Fluor	-	7	—	3,5
Calcareous spar	-	6	—	2,7
Gypsum	-	5	—	2,3
Chalk	-	3	—	2,7

\* **HARDOCK.** *n. f.* I suppose the same with *hardock*.—

Why he was met ev'n now,  
Crown'd with rank sumiter and furrow weeds,  
With *hardocks*, hemlock, nettles, cuckoo-flowers.  
*Shaksp.*

**HARDOUIN**, John, a learned French Jesuit in the 18th century, remarkable for the paradoxes he advanced in his writings; in particular, That all the works of the ancient profane writers, except Cicero's works, Virgil's Georgics, Horace's satires and epistles, and Pliny's natural history, are mere forgeries. He died at Paris in 1729, aged 83. His principal works are, 1. An edition of Pliny's natural history, with notes, which is much esteemed. 2. An edition of the councils, which made much noise. 3. Chronology restored by

medals, &c. 4. A commentary on the New Testament, folio; in which he pretends that our Saviour and his apostles preached in Latin, &c.

**HARDOYE**, a town of the French republic, in the dept. of Lys, and ci-devant province of Austrian Flanders, 2½ miles NNE. of Rousselaer.

\* **HARDS.** *n. f.* The refuse or coarser part of flax.

\* **HARDSHIP.** [from *hard*.] 1. Injury; oppression.—They are ripe for a peace, to enjoy what we have conquered for them; and so are we, to recover the effects of their *hardships* upon us. *Swift*. 2. Inconvenience; fatigue.—They were exposed to *hardship* and penury. *Spratt*.—

You could not undergo the toils of war,  
Nor bear the *hardships* that your leaders bore.

*Addison*.

In journeys or at home, in war or peace,  
By *hardships* many, many fall by ease. *Prior*.

\* **HARDWARE.** *n. f.* [*hard* and *ware*] Manufactures of metal.

\* **HARDWAREMAN.** *n. f.* [*hardware* and *man*.] A maker or seller of metalline manufactures.—One William Wood, an *hardwareman*, obtains by fraud a patent in England to coin copper to pass in Ireland. *Swift*.

(1.) **HARDWICK**, a town of the United States, in Georgia, at the mouth of the Ogeechee, 21 miles S. by W. of Savannah.

(2-29.) **HARDWICK**, the name of 27 English towns and villages: viz. of one each in the counties of Bedford, Buckingham, Cambridge, Derby, Huntingdon, Monmouth, Northampton, Nottingham, Rutland, Stafford, Surry, Warwick, and York; of 2 each in those of Durham, Gloucester, Hereford, and Salop; and of 3 each in Norfolk and Oxford shires: also of a forest near Halifax, York-shire.

**HARDWICKE**, Earl of. See **YORKE**.

(r.) **HARDY**, Alexander, a French dramatic author, of considerable merit, who is said to have wrote 600 pieces, of which however only 41 were published. He died in 1630.

(2, 3.) **HARDY**, Sir Charles, a late eminent British admiral, grandson of a celebrated English naval commander of the same name, who flourished in Q. Anne's reign. Sir Charles commanded the channel fleet in 1779, when he died at Spithead. See **ENGLAND**, § 100.

(4.) \* **HARDY.** *adj.* [*hardi*, Fr.] 1. Bold; brave; stout; daring; resolute.—Try the imagination of some in cock fights, to make one cock more *hardy* and the other more cowardly. *Bacon*.—

**Recite**

The feats of Amazons, the fatal fight  
Betwixt the *hardy* queen and hero knight.  
—Who is there *hardy* enough to contend with the reproach which is prepared for those, who dare venture to dissent from the received opinions of their country? *Locke*.—

Could thirst of vengeance, and desire of fame  
Excite the female breast with martial flame?

And shall not love's diviner pow'r inspire  
More *hardy* virtue, and more gen'rous fire? *Prior*

2. Strong; hard; firm.—Is a man consider' of his present strength? An unwholesome blast may shak in pieces his *hardy* fabrick. *South*. 3. Confident; impudent; viciously stubborn.

(1.) **HARE**, Dr Francis, an English bishop, b. 1641.

at the school, and a member of King's college, Cambridge; where he had the tuition of the marquis of Blandford, only son of the illustrious duke of Marlborough, who appointed him chaplain general to the army. He afterwards obtained the deanery of Worcester, and from thence was promoted to the bishopric of Chichester, which he held with the deanery of St Paul's to his death, in 1740. He was dismissed from being chaplain to George I. in 1718, from party prejudices. About the end of queen Anne's reign he published a remarkable pamphlet, entitled, *The difficulties and discouragements which attend the study of the scriptures in the way of private judgment*: in order to shew, that since such a study of the scriptures is an indispensable duty, it concerns all Christian leaders to remove, as much as possible, those discouragements. In this work, his manner appeared to be so ludicrous, that the convocation fell upon him, as if he had been really against the study of the holy scriptures. He published many poems against bishop Hoadly, in the Bangorian Controversy; and other learned works, which were collected after his death, and published in 4 vols. 8vo. 1. An edition of Terence, with notes, 4to. 2. The book of Psalms in the Hebrew, set into the original poetical metre, 4to. In this last work, he pretends to have discovered the Hebrew metre, which was supposed to be irretrievably lost. But his hypothesis, though defended by some, has been confuted by Dr Lowth in his *Metus Harana brevis confutatio*, annexed to his *De Sacra Poet. Hebraeorum*.

(2.) \* HARE and HERR, differing in pronunciation only, † signify both an army and a lord. So *Herr* is a general of an army, *Hareman*, a chief man in the army; *Herewin*, a victorious army; which are much like *Stratagies*, *Polemarchus*, and *Agathos* among the Greeks. *Gibson's Camden*.

(3.) HARE, in geography, an island near the coast of Norway, 20 miles in circumference. *Lon. 61. E. Lat. 62. 20. N.*

(4.) \* HARE. *s. f.* [*bare*, Saxon; *harb*, Erse.] A small quadruped, with long ears and a short tail, that moves by leaps, remarkable for timidity, swiftness, and fecundity; the common game of hunters.—

Dismay'd not this

Our captains Macbeth and Banquo?

As sparrows, eagles; or the hare, the lion. *Shak.*  
—We view in the open champaign a brace of swift grey-hounds coursing a good stout and well-breathed hare. *Mars.*—Your dressings must be with hare's fat. *Wifeman.*

Poor is the triumph o'er the timid hare. *Thomf.*  
A constellation.—

The hare appears, whose active rays supply  
A nimble force, and hardly wings deny. *Greech.*

(5.) HARE, in zoology. See *LAPUS*. The hare is a beast of venery, but peculiarly so termed in its 1d year. There are reckoned 4 sorts of them, from the places of their abode; viz. the mountain, the field, the marsh, and the wandering hares. The mountain hares are the swiftest; the field hares are not so nimble; those of the marshes are

the slowest: but the wandering hares are the most dangerous to follow; for they are cunning in the ways and mazes of the fields, and, knowing the nearest ways, run up the hills and rocks, to the confusion of the dogs, and the discouragement of the hunters. See *HUNTING*. Hares and rabbits are very mischievous to nurseries and new planted orchards, by peeling off the barks of the young trees: to prevent which, some bind ropes about the trees up to such a height as they are able to reach; some daub them with tar; but though this keeps off the hares, it is itself mischievous to the trees; but this hurtful property of it is in some degree taken off by mixing any kind of fat or grease with it, and incorporating them well over the fire. This mixture is to be rubbed over the lower part of the trees in November, and will preserve them till that time next year, without any danger from these animals. It is only in winter, when other food is scarce, that these creatures feed on the barks of trees. Those who have the care of warrens, have an odd way of fattening hares, viz. stopping up their ears with wax, and rendering them deaf. The hare is so timorous, that she continually listens after every noise, and will run a long way on the least suspicion of danger; so that she always eats in terror, and runs herself out of flesh continually. These are both prevented by her feeding in a safe place, without apprehension.

(6.) HARE, JAVA. See *CAVIA*, N° II, 63.

(7.) HARE, PATAGONIAN. See *CAVIA*, N° VI.

\* To HARE. *v. n.* [*harer*, Fr.] To fright; to hurry with terror.—To hare and rate them, is not to teach but vex them. *Locke*.

(1.) \* HAREBELL. *s. f.* [*bare* and *bell*.] A blue flower campaniform.—

Thou shalt not lack

The flow'r that's like thy face, pale primrose;  
nor

The asur'd harebell, like thy veins. *Shaksp.*

(2.) HAREBELL. See *HYACINTHUS*.

\* HAREBRAINED. *adj.* [from *bare* the verb and *brain*.] Volatile; unsettled; wild; fluttering; hurried.—That harebrained wild fellow begins to play the fool, when others are weary of it. *Bacon*.

\* HAREFOOT. *s. f.* [*bare* and *foot*.] 1. A bird. *Ainsworth*. 2. An herb. *Ainsworth*.

HARELINLAND. See *HARRIA*.

(1.) \* HARELIP. *s. f.* A fissure in the upper lip with want of substance, a natural defect. *Quincy*.—

The blots of nature's hand

Shall not in their issue stand;

Never mole, barelip, nor scar,

Shall upon their children be. *Shakspere*.

—The third stitch is performed with pins or needles, as in barelips. *Wifeman*.

(2.) HARELIP. See *SURGERY*, *Index*.

HARENE, a town of Sweden, in W. Gothland.

HARENGUS. See *CLUPA*, N° 4.

HARESBURY, an ancient borough of Wiltshire, on the Willy, near Warminster, 94 miles from London, in old records called *Heightsbury*, or *Heytsbury*; and now written HATCHBURY. It was once the seat of the empress Matildis; and has fairs May 14, and Sept. 15. It has sent mem-

K 2

bers

† Dr JOHNSON seems not to have adverted, that these words differ in orthography as well as in pronunciation. *Interdum dormitat bonus Homerus!*

sent to parliament ever since Henry VI. It has an almshouse for 12 poor men and a woman; a collegiate church with 4 prebendaries, and a free school; and is governed by a bailiff and burgesses.

(1.) \* **HARESEAR**, *n. f.* [*bupleurum*, Latin.] A plant. *Miller*.

(2.) **HARE'S EAR**, in botany. See **BUPLEURUM**.

(3.) **HARE'S EAR, BASTARD**. See **PHYLLIS**.

**HARE'S LETTUCE**. See **SONCHUS**.

**HARFAN**, a town of Hungary, 4 m. E. of Siclos.

**HARFLEUR**, an ancient town of France, in the dept. of Lower Seine, and late prov. of Normandy. Its fortifications have been demolished, and its harbour choked up. It was taken by the English, by assault, in 1415, and 1440. Its population is about 2,400. It is seated on the Lizarda, near the Seine, 3 miles from Havre de Grace, 26 NW. of Rouen, and 106 of Paris. Lon. 0. 17. E. Lat. 49. 30. N.

(1.) **HARFORD**, a county of Maryland, on the Western shore.

(2.) **HARFORD, or BUSHTOWN**, a town in the above county, (N<sup>o</sup> 1.) seated on Bush Creek, 25 miles E. by N. of Baltimore, and 77 SW. of Philadelphia.

**HARG**, a sea port of Sweden, in Upland.

**HARGENOW**, a town of Mecklenburg.

**HARIDI**, a serpent, worshipped at Achmim in Upper Egypt. "Upwards of a century ago (says Mr Savary,) a religious Turk called *Scheilk Haridi* died here. He passed for a saint among the Mahometans; who raised a monument to him, covered with a cupola, at the foot of the mountain. The people flocked from all parts to offer up their prayers to him. One of their priests, profiting by their credulity, persuaded them that God had made the soul of Scheilk Haridi pass into the body of a serpent. Many of these are found in the Thebais, which are harmless; and he had taught one to obey his voice. He appeared with his serpent, dazzled the vulgar by his surprising tricks, and pretended to cure all disorders. Some lucky instances of success, due to nature alone, and sometimes to the imagination of the patients, gave him great celebrity. He soon confined his serpent Haridi to the tomb, producing him only to oblige princes and persons capable of giving him a handsome recompence. The successors of this priest, brought up in the same principles, found no difficulty in giving sanction to so profitable a fraud. They added to the general persuasion of his virtue that of his immortality. They had the boldness even to make a public proof of it. The serpent was cut in pieces in presence of the Emir, and placed for two hours under a vase. At the instant of lifting up the vase, the priests, no doubt, had the address to substitute one exactly resembling it. A miracle was proclaimed, and the immortal Haridi acquired a fresh degree of consideration. This knavery procures them great advantages. The people flock from all quarters to pray at this tomb; and if the serpent crawls out from under the stone, and approaches the suppliant, it is a sign that his malady will be cured. It may be imagined, that he does not appear till an offering has been made proportioned to the quality and sickness of the different persons. In extraordinary

cases, where the sick person cannot be cured without the presence of the serpent, a *pure virgin* must come to solicit him. To avoid inconveniences on this head, they take care to choose a *very young girl indeed*. She is decked out in her best clothes, and crowned with flowers. She puts herself in a praying attitude; and as the priests are inclined, the serpent comes out, makes circles round the young suppliant, and goes and reposes on her. The virgin, accompanied by a vast multitude, carries him in triumph amidst the general acclamation. No human reasoning would persuade these ignorant and credulous Egyptians that they are the dupes of a few impostors; they believe in the serpent Haridi as firmly as in the prophet."

**HARJEDALEN**, a province of Sweden in Nordland, about 100 miles long, and from 40 to 50 broad; abounding in pastures, cattle, woods, mines, lakes, rivers, and fish.

(1.) \* **HARIER**, *n. f.* [from *hare*.] A dog for hunting hares. *Ainsworth*.

(2.) **HARIERS, or HARRIERS**, are endowed with an admirable gift of smelling, and are very bold in the pursuit of game. See **CANIS**, § 1, vi; N<sup>o</sup> 6.

**HARING**, a town of Germany, in the bishopric of Brixen, 6 miles SSW. of Brixen.

(1.) **HARIOT, or HERTOT**, in law, a due belonging to a lord at the death of his tenant, consisting of the best beast, either horse, or cow, or ox, which he had at the time of his death; and in some manors the best goods, piece of plate, &c. are called harints.

(2.) **HARIOT, Thomas**. See **HARBOT**.

**HARISHON, Aaron**, a learned rabbi, and **KARITE**, in the 15th century; who wrote a Hebrew grammar, printed at Constantinople, in 1511; probably the same with **AARON**, the Carate, a Jewish physician at Constantinople, who, about 1294, wrote a Commentary on the Pentateuch, printed at Jena, in folio, in 1710, and of which there is an original MS. copy in the National Library at Paris.

\* **HARK**, *Interj.* [It is originally the imperative of the verb *bark*.] Lift! hear! listen!—

What harmony is this? My good friends, *bark!*

*Shakespeare.*

—The butcher saw him upon the gallop with a piece of flesh, and called out, *Hark ye, friend, you may make the best of your purchase. L'E<sup>d</sup>.*

*Hark!* methinks the roar that late pursued me,  
Sinks like the murmurs of a falling wind. *Roar*

*Hark!* how loud the woods

Invite you forth!

*Thomson.*

\* **To HARK**, *v. n.* [Contracted from *bark*.] To listen.—

The king,

To me inveterate, *barks* my brother's suit. *Sin.*

Pricking up his ears, to *bark*

If he could hear too in the dark.

*Hadibras.*

\* **HARL**, *n. f.* 1. The filaments of flax. 2. Any filamentous substance.—The several sorts are wicker hives, made of privet, willow, or *barl*, daubed with cow-dung. *Mortimer.*

(1.) **HARLE**, *n. f.* the bark of flax, which, when separated from the useless woody part; called the *boon*, by proper dressing, becomes itself the useful commodity well known by the name of **FLAX**.

(2, 3.) **HARLE**,

(1.) **HARLE**, in geography, two rivers of Germany, viz. 1. in Silesia, which runs into the Baltic, 1 mile E. of Hermsdorf: 2. in Westphalia, rising 3 miles SSW. of Wittmund, and running into the sea, 8 miles N. of that town.

**HARLEBECK**, a town of the French republic, in the dep. of Lys, and ci-devant prov. of Austrian Flanders, 4 miles NE. of Courtray. Lon. 3. 31. E. Lat. 50. 36. N.

**HARLECH**, or **HARLEIGH**, a town of N. Wales, in Merionethshire; seated on a rock, on the shore. It is but a poor place, though the seat of a town, and sends a member to parliament. It has a ancient castle, built by Edward I. which is still entire; and was in 1460, the retreat of Richard of Anjou, Henry VI's queen, before her flight to Scotland. It was used as a garrison for James I. in the civil wars. A garrison is still kept in it. It has 4 annual fairs and a weekly market, and is governed by a mayor. It lies 24 miles S. of Caernarvon, and 113 NW. of London. Lon. 4. 6. W. Lat. 52. 48. N.

**HARLEY**. See **HARLOF**.

**HARLEIAN COLLECTION**, a most valuable collection of useful and curious MSS. begun near the end of the last century, by R. HARLEY of Exeter Bryan, Esq; afterwards E. of Oxford, who conducted upon the plan of the great Sir Robert Cotton. In August 1705, he published his first considerable collection, and in less than ten years he got together near 2500 rare and curious MSS. Soon after this, the celebrated Dr George Hickes, Mr Aulus Garter king at arms, bishop Nicholson, and many other eminent antiquaries, not only offered him their assistance in procuring MSS. but presented him with several that were very valuable. Being thus encouraged to perseverance by his friends, he kept many persons employed in purchasing MSS. for him abroad, giving them every assistance for their conduct. By these means the MS. library was, in 1721, increased to near 4000 books, 14,000 original charters, and 10,000 rolls. His son Edward, E. of Oxford, still further enlarged the collection; so that when he died, June 10th 1741, it consisted of 3000 vols. of these containing distinct and independent treatises, besides many loose papers which he has since sorted and bound up in volumes; and some 40,000 original rolls, charters, letters, &c., grants, and other deeds and instruments of great antiquity. The principal design of making this collection was the establishment of a MS. library, and the rescuing from oblivion such national records as had eluded the diligence of preceding collectors: but lord Harley's plan was more extensive; for his collection was also with curious MSS. in every science. This collection is now in the British Museum, and an enumeration of its contents may be seen in the Annual Register, vi. 140, &c.

(1.) **HARLEM**, or **HARLEM**, a large and populous city of the Batavian republic, in the dep. of Amstel, and ci-devant prov. of Holland, situated on the Spertsen. It stands near the lake, called **HARLEM MEERS**, with which it has a communication, as well as with Amsterdam and Leyden, by several canals. It was burnt in 1347 and 1351. It was besieged by the Spaniards for ten months

in 1572-3; the townsmen, before they capitulated, being reduced to eat the vilest animals, and even leather and grass. Their brave resistance irritated the bloody D. of Alva so much, that he put to death the governor, his deputy, the magistrates, the ministers, the principal citizens, and 1700 soldiers; besides exacting a fine of 100,000 florins. But in spite of all this barbarity the inhabitants joined the union in 1577. Harlem claims the invention of printing; and the first essays of the art are indisputably to be attributed to Laurentius, a magistrate of it. See **LAURENTIUS**, and **PRINTING**. It has 12 churches; one of which is the largest in the republic, and has the finest organ in Europe; consisting of 8000 pipes, the largest 38 feet long, and 16 inches diameter; with 68 stops. One of these pipes imitates the human voice. An academy of sciences was founded in 1752. Vast quantities of linen and thread are bleached here, the waters of the lake being peculiarly fit for that purpose. The number of houses is about 8,000, and that of the citizens 40,000. Harlem lies 10 miles W. of Amsterdam. Lon. 4. 35. E. Lat. 52. 25. N.

(2.) **HARLEM MERE**. See **HARLEM**, N° 2.

(1.) \* **HARLEQUIN**. *n. f.* [This name is said to have been given by Francis of France to a busy buffoon, in ridicule of his enemy Charles le Quint: *Ménage* derives it more properly from a famous comedian that frequented Mr Harley's house, whom his friends called *Harlequino*, little Harley, *Trev.*] A buffoon who plays tricks to divert the populace; a Jack pudding; a zani. The joy of a king for a victory must not be like that of a *harlequin* upon a letter from his mistress. *Dryden*.—

The man in graver tragick known,  
Though his best part long since was done,

Still on the stage desires to tarry;

And he who play'd the *harlequin*,

After the jest still loads the scene,

Unwilling to retire, though weary. *Prior*.

(2.) **HARLEQUIN**, in the Italian comedy, a buffoon, dressed in party-coloured cloaths; answering much the same purpose as a merry andrew in our drolls, on mountebanks stages, &c. Upon our theatres also, harlequin is introduced, and is a standing character in modern pantomime entertainments.

(1.) **HARLESTON**, a town of Norfolk, seated on the Waveney, 16 miles S. of Norwich, and 190 NE. of London. It has a great market on Wednesday. Lon. 1. 30. E. Lat. 52. 16. N.

(2—5.) **HARLESTON**, 4 villages in Devonshire, Middlesex, Northamptonshire, and Suffolk.

(1.) **HARLEY**, Robert, E. of Oxford and Mortimer, was the eldest son of Sir Edward Harley, and born in 1662. At the Revolution, Sir Edward and his son raised a troop of horse at their own expence; and after the accession of K. William and Q. Mary, he obtained a seat in parliament. His promotions were rapid: in 1703, he was chosen speaker of the house of commons; in 1704, he was sworn of queen Anne's privy council, and made secretary of state; in 1706, he was one of the commissioners for the treaty of Union; and in 1710, was appointed a commissioner of the treasury, and chancellor of the exchequer. A daring attempt was made on his life, March 8, 1711, by

the mistress of Galsard, a French papist; who, when under examination before a committee of the privy council, stabbed him with a penknife. Of this wound, however, he soon recovered; and was the same year created B. of Oxford, and lord high treasurer, which office he resigned just before the queen's death. In 1715, he was impeached of high treason, and committed to the Tower; but was cleared by trial, and died on the 12th May, 1744. He was not only an encourager of literature, but the greatest collector in his time of curious books and MSS. his collection of which makes a capital part of the British Museum. See **HARLEIAN COLLECTION**.

(2.) **HARLEY**, a town in Salop, E. of Aston.

(1.) **HARLING**, or **HERLING**, a handsome town in Norfolk, seated on a rivulet between Buckenham and Thetford; with a market and manufacture of linen, 24 miles SW. of Norwich, and 88 NE. of London. Lon. 1. 0. E. Lat. 52. 28. N.

(2.) **HARLING, MIDDLE**, } Two villages in Nor-

(3.) **HARLING, WEST**, } folk, near Harling, N. 1.

**HARLINGEN**, a sea port town of the Batavian republic, in the dept. of the Bema, and late province of W. Friesland. It stands on the coast of the Zuyder sea, at the mouth of a large canal. It was only a hamlet till 1234, when it was destroyed by the sea; and being afterwards rebuilt, became a considerable town. In 1543, and 1579, it was enlarged by William prince of Orange. It is now well fortified, and is naturally strong, as the adjacent country can easily be laid under water. The city is square; and the streets are handsome, straight, and clean, with canals in the middle. It has 5 gates; 4 towards the land, and one towards the sea; but though the harbour is good, vessels of great burden cannot get into it until they are lightened. The admiralty college of Friesland has its seat here. The manufactures are salt, bricks, and tiles; a considerable trade is also carried on in all sorts of linen cloth, and the adjacent country yields abundance of corn and good pastures. The town lies 14 miles W. of Lewarden. Lon. 3. 55. E. Lat. 53. 17. N.

**HARLINGTON**, 2 villages: 1. in Middlesex, N. of Hounslow Heath: 2. near Ampthill, Bedfordshire.

**HARLUNGA**, a town of Sweden, in W. Gothland.

**HARLOCH**, or **HARLEICH**. See **HARLSCH**.

**HARLOF**, or **HARLEY**, a river of Germany, in the circle of the Upper Rhine, which rises about 4 miles E. of Laubach, and runs into the Nidda, near Studen.

(1.) **HARLOF**. *s. f.* [*harlot*, Welsh, a girl. Others from *whorelet*, a little whore. Others from the name of the mother of William the Conqueror. *Harlot* is used in Chaucer for a low male drudge.] A whore; a strumpet.—

Away, my disposition, and possess me with  
Some *harlot's* spirit. *Shak.*

—They help thee by such aids as geese and *harlots*. *Ben Jonson.*

The barba'rous *harlots* crowd the publick place;  
Go, fools, and purchase an unclean embrace. *Dryden.*

(2.) **HARLOTS** were tolerated amongst the Jews,

Greeks, and Romans. Fornication indeed was prohibited among the Jews, under several severe penalties; but these they explained as extending only to women of their own nation. The public stews were therefore stocked with foreign prostitutes, who seem to have been taken under the protection of government. Hence the word *harlot* is often used to signify a harlot. Prostitutes at first wore veils or masks; but afterwards laying aside this affected modesty, they went abroad bare-faced. At Athens the prostitutes were generally strangers; and such as debauched an Athenian female were liable to a penalty. The frequent the public stews was not held disgraceful. The wisest of the heathen sages allowed it! So permitted common whores to go publicly to young men who had engaged them, and encouraged the youth of Athens to gratify their lust with them, rather than debauch the wives and daughters of citizens. Cato the Censor was of the same sentiments; and Cicero challenges any person to name a time, when men were either reprov'd for the practice, or not countenanced in it. Among Jews, the harlots used to ply in the highways, streets of cities; at Athens they frequented the *cunicus*, *scirus*, and the old forum. In some cities they were distinguished by their dress. Corinth was a remarkable nursery of harlots, and gave birth to the noted Lais. Their accomplishments were often great, in all the polite and elegant parts of female education, viz. philosophy, dancing, singing, rhetoric, &c. Aspasia, the mistress of Pericles, was admired by Socrates for her learning. The more accomplished prostitutes frequently amassed great fortunes. Phryne offered to build the walls of Thebes, when destroyed by Alexander, on condition that they would perpetuate her memory and profession by an inscription. Prostitutes at Rome were obliged to fix a ball on their doors, indicating their character and profession. It was also customary for them to change their names, after they had signified to the public their intention of leading such a dissolute life. They did, because their trade was unbecomable to birth and condition; but they reassumed their truly names when they quitted their infamous mode of living. Women whose grandfather, father, husband, had been a Roman knight, were forbidden by the laws to make a public profession of lewdness.

\* **HARLOTRY**. *s. f.* [from *harlot*.] 1. trade of a harlot; fornication.—

—Nor shall,

From Rome's tribunal, thy harangues proceed  
'Gainst *harlotry*, while thou art clad so the *Dr.*

2. A name of contempt for a woman.—

A peevish self-will'd *harlotry*,  
That no persuasion can do good upon.

**HARLOW**, a town in Essex, 17 miles N. of Chelmsford and 23 NE. of London. It has a fair held on a common two miles distant, on 9th Sept. for cattle. Lon. 0. 12. E. Lat. 53.

**HARLOW HILL**, a hill in Yorksh. near Le

**HARLSTON**, a town 5 m. S. of Cambridge.

**HARLTON**, 1. a town NW. of Grimsby, colnsh. 2. a village 7 miles from Cambridge.

**HARLYN**, a town in Cornwall, W. of Pad

**HARM** *n. s.* [*harmen*, *Saxon.*] 1. Injury; crime; wickedness. 2. Mischief; detriment; hurt.—

We, ignorant of ourselves,

Begin our own harms, which the wise Powers  
Do us for our good. *Shak.*

How are we happy still in fear of harm?

As harm precedes not sin.

*Milton.*

—They should be suffered to write on: it would  
keep them out of harm's way, and prevent them  
from evil courses. *Swift.*

\* *To harm*. *v. a.* To hurt; to injure.—

What leak had I of her stol'n hours or lust?  
I had not, thought it not, it harm'd not me.

*Shak. Othello.*

Pillions we've could grow

To harm another, or impeach your rest. *Waller.*

—When the young are hatched, they brood them  
in their wings, lest the cold, and sometimes  
birds, should harm them. *Ray.*

**HARMA**, [*Gr.* *ἄρμα*, a chariot,] an ancient  
town of Lycia, said to have been built on the  
spot where Amphiarus was swallowed up with  
his chariot: whence the name.

**HARMANSTORF**, a town of Germany, in  
the duchy of Silesia, 3 miles SE. of Glog.

**HARMATTAN**, a remarkable periodical wind  
which blows from the interior parts of Africa to-  
wards the Atlantic ocean. Of this wind we have  
the following account in the *Philos. Transf.* vol. 71.

Related by Mr Norris, a gentleman who had fre-  
quent opportunities of observing its singular prop-  
erties &c. "On that part of the coast of Africa  
situated between Cape Verd in Lat. 15° N. and  
Cape Lopez in Lat. 1° S. an easterly wind prevails  
during December, January, and February, which  
is called *harmattan*, a nation on the Gold coast, is called  
the *harmattan*. The coast between these two capes  
runs in a direct direction nearly from WSW. to  
ENE. through a range of upwards of 200 miles.

At the Cape de Loos, which are a little to the N. of  
Cape Lopez, and to the S. of Cape Verd, it blows  
from the ENE. on the Gold coast from the NE.  
towards Cape Lopez, and the river Gabon, from  
the ENE. This wind is by the French and Por-  
tuguese, who frequent the Gold coast, called *harmattan*.

It is a NE. wind, the quarter from which it  
blows. The English adopt the *Pantee* word *Jhar-  
attan*. It comes on indiscriminately at any hour  
of the day, at any time of the tide, or at any period  
of the moon, and continues sometimes only a day  
or two, sometimes 5 or 6 days, and it has been  
known to last 15 or 16. There are generally 3 or  
4 seasons of it every season. It blows with a mo-  
derate force, not quite so strong as the sea-breeze  
which every day during the fair season from the  
S. by W. and S.W.; but somewhat stronger than  
the land wind at night from the N. and NNW.

It is one of the peculiarities which always ac-  
companies the *harmattan*. The gloom occasioned  
by it is so great, as sometimes to make even  
the objects obscure. The English fort at Why-  
dah stands about the midway between the French  
and Portuguese forts, and not quite a quarter of  
the way from either, yet very often from thence  
the other forts can be discovered. The  
sun, concealed the greatest part of the day, ap-  
pears only a few hours about noon, and then of  
a mild red, exciting no painful sensation on the  
eye. Extreme dryness makes another extraordi-  
nary property of this wind. No dew falls during  
its continuance, nor is there the least appearance  
of moisture in the atmosphere. Vegetables of ev-  
ery kind are very much injured; all tender plants,  
and most of the productions of the garden, are de-  
stroyed; the grass withers, and becomes dry like  
hay; the vigorous evergreens likewise feel its pern-  
icious influence; the branches of the lemon, orange,  
and lime-trees droop; the leaves become flaccid, wi-  
ther, and, if the *harmattan* continues to blow for 10 or  
15 days, are so parched, as to be easily rubbed to  
dust between the fingers: the fruit of these trees,  
deprived of its nourishment, and stunted in its  
growth, becomes yellow and dry, without acqui-  
ring half its usual size. The parching effects of  
this wind are likewise evident on the external parts  
of the body. The eyes, nostrils, lips, and palate,  
are rendered dry and uneasy, and drink is often  
required, not so much to quench thirst, as to re-  
move a painful aridity in the fauces. The lips  
and nose become sore, and even chapped; and  
though the air be cool, yet there is a troublesome  
sensation of prickling heat on the skin. If the *har-  
mattan* continues 4 or 5 days, the scarf skin peels  
off, first from the hands and face, and afterwards  
from the other parts of the body if it continues a  
day or two longer. Mr Norris observed, that  
when sweat was excited by exercise on those parts  
which were covered by his cloaths from the wea-  
ther, it was peculiarly acrid, and tasted, on ap-  
plying his tongue to his arm, something like spirits  
of hartshorn diluted with water. Salubrity forms  
a third peculiarity of the *harmattan*. Though  
this wind is so very prejudicial to vegetable life,  
and occasions such disagreeable parching effects on  
the human species, yet it is highly conducive to  
health. Those labouring under fluxes and inter-  
mitting fevers generally recover in an *harmattan*.  
Those weakened by fevers, and sinking under eva-  
cuations for the cure of them, particularly bleed-  
ing, which is often injudiciously repeated, have  
their lives saved, and vigour restored, in spite of  
the doctor. It stops the progress of epidemics: the  
small pox, remittent fevers, &c. not only dis-  
appear, but those labouring under these diseases  
when an *harmattan* comes on, are almost certain  
of a speedy recovery. Infection appears not then  
to be easily communicated even by art. In 1770,  
there were on board the *Unity*, at Whydah, a-  
bove 300 slaves; the small pox broke out among  
them, and it was determined to inoculate; those  
who were inoculated before the *harmattan* came  
on, got very well through the disease. About 70  
were inoculated a day or two after the *harmattan*  
set in, but not one of them had either sickness or  
eruption. It was imagined that the infection was  
effectually dispersed, and the ship clear of the dis-  
order; but in a very few weeks it began to appear  
among those 70. About 50 of them were inocu-  
lated the second time; the others had the disease  
in a natural way: an *harmattan* came on, and they  
all recovered, excepting one girl, who had an ugly  
ulcer on the inoculated part, and died some time  
afterwards of a locked jaw." This account differs  
remarkably

remarkably from that given by Dr Lind, who calls the harmattan a malignant and fatal wind. See his *Diseases of Hot Climates*. As to the nature of the soil over which it blows, it appears, that excepting a few rivers and some lakes, the country about and beyond Whydah is covered for 400 miles back with verdure, open plains of grass, clumps of trees, and some woods of no considerable extent. The surface is sandy, and below that a rich reddish earth: it rises with a gentle ascent for 150 miles from the sea, before there is the appearance of a hill, without affording a stone of the size of a walnut. Beyond these hills there is no account of any great ranges of mountains.

**HARMER**, Thomas, an eminent dissenting clergyman, born at Norwich in 1715, and settled at Wheatfield in Suffolk. He was famed for his skill in antiquities and oriental learning. His most admired works are, 1. *Outlines of a Commentary on Solomon's Song*, 8vo, 1768: and 2. *Observations on divers Passages of Scripture*, in four vols. 1777 and 1787. He was a man of unaffected piety and very liberal sentiments. He died at Wheatfield, 27th Nov. 1788.

\* **HARMFUL**. *adj.* [*harm* and *full*.] Hurtful; mischievous; noxious; injurious; detrimental.—

His dearly loved squire

His spear of heben-wood behind him bare,

Whole *harmful* head, thrice heated in the fire,

Had riven many a breast with pike head square.

*Spenser.*

—Let no man fear that *harmful* creature leis, because he sees the apostle safe from that poison. *Hall*.—The earth brought forth fruit and food for man without any mixture of *harmful* quality. *Raleigh*.—

For flax and oats will burn the tender field,  
And sleepy poppies *harmful* harvests yield. *Dryd.*

\* **HARMFULLY**. *adv.* [from *harmful*.] Hurtfully; noxiously; detrimentally.—A scholar is better occupied in playing or sleeping, than spending his time not only vainly, but *harmfully* in such kind of exercise. *Ascham*.

\* **HARMFULNESS**. *n. s.* [from *harmful*.] Hurtfulness; mischievousness; noxiousness.

\* **HARMLESS**. *adj.* [from *harm*.] 1. Innocent; innoxious; not hurtful.—Touching ceremonies *harmless* in themselves, and hurtful only in respect of number, was it amiss to decree that those things that were least needful, and newest come, should be the first that were taken away? *Hooker*.

She, like *harmless* lightning throws her eye

On him, her brothers, me, her master; hitting

Each object with a joy. *Shak.*

2. Unhurt; undamaged.—The shipwright will be careful to gain by his labour, or at least to save himself *harmless*, and therefore suit his work slightly according to a slight price. *Raleigh*.

\* **HARMLESSLY**. *adv.* [from *harmless*.] Innocently; without hurt; without crime.—He spent that day free from worldly trouble, *harmlessly*, and in a recreation that became a churchman. *Warton*.—Bullets batter the walls which stand inflexible, but fall *harmlessly* into wood or feathers. *Deay of Piety*.

\* **HARMLESSNESS**. *n. s.* [from *harmless*.] Innocence; freedom from tendency to injury or hurt:—

When, through tasteless fat humility,  
In dough-bak'd men some *harmlessness* we see  
'Tis but his phlegm that's virtuous, and not he

*Don*

—Compare the *harmlessness*, the credulity, the tenderness, the modesty, and the ingenuous plainness to virtuous counsels, which is in youth tainted, with the mischievousness, the slyness, the craft, the impudence, the falsehood, and the confirmed obliquity, in an aged long-practised knave.

**HARMODIUS**, the friend of Aristogiton who delivered his country from the tyrant of the Pisistratids. See **ARISTOGITON**, a **ATTICA**, § 10. The Athenians, to reward the patriotism of these illustrious citizens, made law that no person (according to some,) or, at least with more probability affirm, no *free*, should ever after be named Aristogiton or Harmodius.

**HARMONDSWORTH**, a village of Middlesex, 15 miles W. of London, and 2 E. of Co. brook, remarkable for one of the largest barns in England. Its pillars are of stone, and almost very ancient.

**HARMONIA**, or **HERMIONE**, in fabulous story, the wife of Cadmus, both of whom were turned into serpents. See **CADMUS**, N° 1. These many ancient authors make Harmonia a princess of divine origin, the daughter of Mars and Venus. Athenæus, quoting Eubemerus, tells us, that she was only a player on the flute, in the service of the prince of Zidon previous to her departure with Cadmus. This circumstance renders it probable that as Cadmus brought letters into Greece, his wife brought HARMONY thither.

**HARMONIC**. See **HARMONICAL**.

(1.) **HARMONICA**. This word, when originally appropriated by Dr Franklin to that peculiar form or mode of musical glasses, which he himself, after a number of happy experiments had constituted, was written **ARMONICA**. It derived from the Greek word *harmonia*. The root word is *agoo*, to put or fit one thing to another. By the word *agoo* the Greeks expressed *agreement* in various kinds; and from the use which they made of that expression, we have reason to conclude that it was intended to import the highest degree of refinement and delicacy in those relations which it was meant to signify. Relations or aptitudes of sound, in particular, were understood by it; and in this view, Dr Franklin could not have selected a name more expressive of its nature and power for the instrument we are now to describe: perhaps, no musical tone can possibly be so fine nor consequently susceptible of juster concert than those which it produces. The Doctor, in his letter to F. Beccaria, has given a minute and elegant account of the Harmonica. “Perhaps (says he) it may be agreeable to you, as you are in a musical country, to have an account of a new instrument lately added here to the great number that charming science was possessed of before. As it is an instrument that seems peculiarly adapted to Italian music, especially to the soft and plaintive kind, I will endeavour to give you such a description of it, and of the manner of constructing it, that you or any of your friends may be enabled to imitate it, if you wish.”

just to do, without being at the expence and trouble of the many experiments I have made in endeavouring to bring it to its present perfection. You have doubtless heard the sweet tone that is drawn from a drinking glass, by pressing a wet finger round its brim. One Mr Puckeridge, a gentleman from Ireland, was the first who thought of playing tunes formed of these tones. He collected a number of glasses of different sizes; fixed them near each other on a table; and tuned them, by putting into them water more or less as each note required. The tones were brought out by pressing his fingers round their brims. He was unfortunately burnt here, with his instrument, in a fire which consumed the house he lived in. Mr L. Delaval, a most ingenious member of our Lyric Society, made one in imitation of it with a better choice and form of glasses, which was the first I saw or heard. Being charmed with the beauty of its tones, and the music he produced from it, I wished to see the glasses disposed in a more convenient form, and brought together in a narrower compass, so as to admit of a greater number of tones, and all within reach of hand to a person sitting before the instrument; which I accomplished after various intermediate trials, and in commodious forms, both of glasses and construction in the following manner. The glasses are blown as near as possible in the form of hemispheres, having each an open neck or socket in the middle. The thickness of the glass near the brim is about the tenth of an inch, or hardly quite so much, but thicker as it comes nearer the neck; and the largest glasses is about an inch deep, and an inch and a half wide within; these dimensions, rising as the glasses themselves diminish in size, except that the neck of the smallest ought not to be shorter than half an inch.—The largest glass is six inches diameter, and the smallest three inches. Between these are 33 different sizes, differing from each other a quarter of an inch in diameter. To make a single instrument there should be at least 33 glasses blown of each size; and out of the number one may probably pick 37 glasses (which are different for three octaves with all the notes) that will be each either the note one semitone, or a little sharper than that note, and all fitting as well into each other as to taper pretty exactly from the largest to the smallest. It is true there are not 37 sizes; but it often happens that two of the same size differ a note or half a note in tone, by reason of a difference in thickness, and they may be placed in the other without sensibly losing the regularity of the taper form. The glasses being chosen, and every one marked with a number the note you intend it for, they are to be tuned by diminishing the thickness of those that are too sharp. This is done by grinding them from the neck towards the brim, the breadth of one or two inches as may be required; then trying the glass by a well tuned harpsichord, comparing the note drawn from the glass by your finger with the note you want, as sounded by that string of the harpsichord. When you come near the matter, be careful to wipe the glass dry, and dry before each trial, because the water is something flatter when the glass is wet.

than it will be when dry;—and grinding a very little between each trial, you will thereby tune to great exactness. The more care is necessary in this, because if you go below your required tone there is no sharpening it again but by grinding somewhat off the brim, which will afterwards require polishing, and thus increase the trouble. The glasses being thus tuned, you are to be provided with a case for them, and a spindle on which they are to be fixed. My case is about three feet long, eleven inches every way wide within at the biggest end, and five inches at the smallest end; for it tapers all the way, to adapt it better to the conical figure of the set of glasses. This case opens in the middle of its height, and the upper part turns up by hinges fixed behind. The spindle is of hard iron, lies horizontally from end to end of the box within, exactly in the middle, and is made to turn on brass gudgeons at each end. It is round, an inch in diameter at the thickest end, and tapering to a quarter of an inch at the smallest.—A square shank comes from its thickest end through the box, on which shank a wheel is fixed by a screw. This wheel serves as a fly to make the motion equable, when the spindle, with the glasses, is turned by the foot like a spinning wheel. My wheel is of mahogany, 18 inches diameter, and pretty thick, so as to conceal near its circumference about 25 lb. of lead.—An ivory pin is fixed in the face of this wheel, about four inches from the axis. Over the neck of this pin is put the loop of the string, that comes up from the moveable step to give motion. The case stands on a neat frame with four legs. To fix the glasses on the spindle, a cork is first to be fitted in each neck pretty tight, and projecting a little without the neck, that the neck of one may not touch the inside of another when put together, for that would make a jarring. These corks are to be perforated with holes of different diameters, so as to suit that part of the spindle on which they are to be fixed. When a glass is put on, by holding it stiffly between both hands, while another turns the spindle, it may be gradually brought to its place. But care must be taken that the hole be not too small, lest in forcing it up the neck should split; nor too large, lest the glass, not being firmly fixed, should turn or move on the spindle, so as to touch or jar against its neighbouring glass. The glasses thus are placed one in another; the largest on the biggest end of the spindle, which is to the left hand: the neck of this glass is towards the wheel; and the next goes into it in the same position, only about an inch of its brim appearing beyond the brim of the first; thus proceeding, every glass when fixed shows about an inch of its brim (or three quarters of an inch, or half an inch, as they grow smaller) beyond the brim of the glass that contains it; and it is from these exposed parts of each glass that the tone is drawn, by laying a finger on one of them as the spindle and glasses turn round. My largest glass is G a little below the reach of a common voice, and my highest G, including three complete octaves.—To distinguish the glasses more readily to the eye, I have painted the apparent parts of the glasses within-side, every semitone white,

white, and the other notes of the octave with the seven prismatic colours; viz. C, red; D, orange; E, yellow; F, green; G, blue; A, indigo; B, purple; and C, red again;—so that the glasses of the same colour (the white excepted) are always octaves to each other. This instrument is played upon by sitting before the middle of the set of glasses, as before the keys of a harpsichord, turning them with the foot, and wetting them now and then with a sponge and clean water. The fingers should be first a little soaked in water, and quite free from all greasiness; a little fine chalk is sometimes useful, to make them catch the glass and bring out the tone more readily. Both hands are used, by which means different parts are played together.—(b)serve, that the tones are best drawn out when the glasses turn *from* the ends of the fingers, and not when they turn *to* them. The advantages of this instrument are, that its tones are incomparably sweet beyond those of any other; that they may be swelled and softened at pleasure by stronger or weaker pressures of the finger, and continued to any length; and that the instrument, being once well tuned, never again wants tuning." A farther account of this instrument, is inserted in the *Annual Register*, vol. iv. p. 149. The author proposes to use cork instead of the finger, but this substitute does not seem capable of producing the same mellowness and equality of tone with the finger. Alum water is also thought preferable to chalk. From what has already been said, it will easily be perceived, that this instrument requires to be tuned with the nicest degree of delicacy which the laws of temperament will possibly admit. See MUSIC, and TEMPERAMENT. The same rules, however, which are observed in tuning a harpsichord, will be equally effectual in tuning the *Harmonica*; with this only difference, that greater delicacy in adjusting the chords should, if practicable, be attempted. On Plate clxxi. *Fig. 3*, is represented an instrument of this kind, made by Mr Dobb of St Paul's church yard London.

(2.) HARMONICA, New. Dr Edmund Cullen of Dublin, has made what he reckons an improvement on this instrument; but it is objected by connoisseurs, that a full bass cannot be executed upon it; and that the complete bass, practicable on the *Harmonica*, is greatly preferable to the chords with which the Dr proposes to grace each emphatic note, and with which, they allege, he deludes instead of satisfying the ear. Dr Cullen, however, insists, that, his instrument "is the most exquisite and noble present the lovers of true harmony have ever yet received;" and that "the thrilling softness of its tones, inimitable by any other," show it "to be an instrument more in the true style of music, of that music which the heart acknowledges, than any that either chance or ingenuity has hitherto produced. It is indeed incapable (he admits) of that whimsical subdivision to which the taste of modern composers, that sworn enemy to harmony and real music, leads; which serves no end but to exhibit the wonderful executions of a favourite performer, and to overwhelm his hearers with stupid admiration. This is not music; and upon these occasions, though I acknowledge the difficulty of doing what I see done, I lament that the honest man has taken so much

trouble to so little purpose. Our instrument is incapable of this (at least not in so exquisite a degree as the harpsichord, violin, and a few others; yet if the true and original intent of music be not to astonish but to please, if that instrument which most readily and pleasingly seizes the heart to the ears is the best, I have not a moment's hesitation in setting it down the first of all musical instruments."

\* HARMONICAL. *adj.* *harmonique*; *arm.* (1.) *HARMONICK.* *figue*, *Fr.* 1. Relating to music; susceptible of musical properties to each other.—After every three whole notes, nature requirith, for all *harmonical* use, one to be interposed. *Bacon.* 2. Concomitant musical; proportioned to each other: less properly.—*Harmonical* sounds, and discordant sounds are both active and positive; but blackness and darkness are, indeed, but privatives. *Bacon.*

So swells each wind-pipe; also intones to all  
Harmonick twang of leather, horn, and lute.

(2.) HARMONICA, *n. f.* the concomitant or necessary sounds, which, upon the principles resulting from the experiments made on inorganic bodies, attend any given sound, whatever, and render it agreeable. Thus all the aërial parts of a musical string produce harmonics, or *harmonical* sounds.

\* HARMONIOUS. *adj.* (*harmonious*, *Fr. f.* *harmony*.) 1. Adapted to each other; having the parts proportioned to each other; symmetrical.

All the wide-extended sky,  
And all th' *harmonious* worlds on high,  
And Virgil's sacred work shall dye.  
—God has made the intellectual world *harmonious* and beautiful without us; but it will never come into our heads all at once; we must bring it home piece-meal. *Locke.* 2. Having sounds concordant to each other; musical; symphonic.

Thoughts that voluntary move, *harmonious* numbers.

—The verse of Chaucer is not *harmonious* to us, they who lived with him, thought it musical. *Dryden.*

\* HARMONIOUSLY. *adv.* (*from harmonious*.) 1. With just adaptation and proportion to each other.—

Not chaos-like, together crush'd and built;  
But as the world *harmoniously* confus'd:  
Where order in variety we see,  
And where, though all things differ they agree.

—That all these distances, motions, and qualities of matter should be so accurately and *harmoniously* adjusted in this great variety of our system is above the fortuitous hits of blind material causes, and must certainly flow from that eternal fountain of wisdom. *Bentley.* 2. Musically; in concord of sounds.—If we look upon the world as a musical instrument, well tuned, and *harmoniously* struck, we ought not to worship the instrument, but him that makes the music. *Stirling.*

\* HARMONIOUSNESS. *n. f.* (*from harmonious*.) Proportion; musicalness.

\* To HARMONIZE. *v. a.* (*from harmonious*.) To adjust; in fit proportions; to make musical.

Love first invented verse, and form'd the  
chime,

The musick measur'd, harmoniz'd the chime.

Dryden.

2. HARMONY. *n. f.* [*harmonia*; *harmonie*, *frank*] 1. The just adaptation of one part to another.—The pleasures of the eye and ear result the effects of equality, good proportion, or correspondence; so that equality and correspondence are the causes of *harmony*. Bacon.—

The *harmony* of things,

As well as that of sounds, from discord springs.

Denham.

—For infinite wisdom must accomplish all its  
virtues with conformable *harmony*, proportion, and  
equity. Chene. 2. Just proportion of sound;  
musical concord.—

The sound

Stupendous, of ten thousand harps that tun'd  
Anglic harmonies.

Milton.

—*Harmony* is a compound idea, made up of dif-  
ferent sounds united. Watts. 3. Concord; cor-  
respondent sentiment.—

In us both one soul,

Harmony to behold in wedded pair!

More grateful than harmonious sounds toth' ear.

Milton.

Is sooner in my heart divin'd,

My heart, which by a secret *harmony*

Shall move with thine, join'd in connexion  
sweet!

Milton.

3. HARMONY. The sense which the Greeks  
put to this word in their music, is not easy to be  
learned, because, the word itself being origin-  
ally a substantive proper, it has no radical words  
by which we might analyse it, to discover its ety-  
mology. In the ancient treatises that are extant,  
*harmony* appears to be that department whose ob-  
ject is the agreeable succession of sounds, merely  
considered as high or low; in opposition to the  
two others called *rhythmica* and *metrica*, which  
have their principle in time and measure. This  
being our idea concerning that aptitude of sound  
agreeable and undetermined; nor can we fix them  
without studying for that purpose all the rules of  
music; and even after we have done so, it will  
be very difficult to distinguish harmony from me-  
lody, unless we add to the last the ideas of rhyth-  
mics and measure; without which, in reality, no  
melody can have a distinguishing character: where-  
as harmony is characterised by its own nature, in-  
dependent of all other quantities except the chords  
or intervals which compose it. It appears by a  
passage of Nicomachus, and by others, that they  
gave the name of *harmony* to the chord  
of a octave, and to concerts of voices and instru-  
ments, which performed in the distance of an oc-  
tave one from the other, and which is more com-  
monly called ANTIPHONY.

3.] HARMONY, according to the moderns, is  
a succession of chords agreeable to the laws of  
modulation. For a long time this harmony had  
no other principal but such rules as were almost  
arbitrary, or solely founded on the approbation  
of a practised ear, which decided concerning the  
agreeable or disagreeable succession of chords, and  
whose determinations were at last reduced to cal-  
culation. But P. Mercenne and M. Savour having

found that every sound, however simple in appear-  
ance, was always accompanied with other sounds  
less sensible, which constitute with itself a perfect  
chord major; with this experiment M. Rameau  
set out, and upon it formed the basis of his har-  
monic system, which he has extended to many  
volumes, and which at last M. D'Alembert has  
taken the trouble of explaining to the public. Sig-  
nior Tartini, taking his route from an experiment,  
which is newer and more delicate, yet not less  
certain, has reached conclusions similar to those  
of Rameau, by pursuing a path whose direction  
seems quite opposite. According to M. Rameau,  
the treble is generated by the bass; Signior Tar-  
tini makes the bass result from the treble. One  
deduces harmony from melody, and the other  
supposes quite the contrary. To determine from  
which of the two schools the best performances  
are likely to proceed, no more is necessary than  
to investigate the end of the composer, and disco-  
ver whether the air is made for the accompani-  
ments, or the accompaniments for the air. At  
the word SYSTEM in Rousseau's *Musical Diction-  
ary*, is given a delineation of that published by  
Signior Tartini. Here he continues to speak of  
M. Rameau, whom he has followed through  
this whole work, as the artist of greatest authority  
in the country where he writes. He thinks him-  
self obliged, however, to declare, That this sys-  
tem, however ingenious it may be, is far from  
being founded upon nature; an affirmation which  
he incessantly repeats: "That it is only establish-  
ed upon analogies and congruities, which a man  
of invention may overturn to-morrow, by substi-  
tuting others more natural: that, in short, of the  
experiments from whence he deduces it, one is  
detected fallacious, and the other will not yield  
him the consequences which he would extort from  
it. In reality, when this author took it in his  
head to dignify with the title of *demonstration* the  
reasonings upon which he established his theory,  
every one turned the arrogant pretence into ridi-  
cule. The Academy of Sciences loudly disap-  
proved a title so ill founded, and so gratuitously  
assumed; and M. Etive, of the Royal Society at  
Montpellier has shown him, that even to begin  
with this proposition. That according to the law  
of nature, sounds are represented by their octaves,  
and that the octaves may be substituted for them,  
there was not any one thing demonstrated, or e-  
ven firmly established, in his pretended demon-  
stration." He returns to his system. "The mechan-  
ical principle of resonance presents us with nothing  
but independent and solitary chords; it neither  
prescribes nor establishes their succession. Yet a  
regular succession is necessary; a dictionary of  
selected words is not an oration, nor a collection  
of legitimate chords a piece of music; there must  
be a meaning, there must be connections in music  
as well as in language: it is necessary that what  
has preceded should transmit something of its na-  
ture to what is subsequent, so that all the parts  
conjoined may form a whole, and be stamped with  
the genuine character of unity. Now, the complex  
sensation which results from a perfect chord must  
be resolved into the simple sensation of each parti-  
cular sound which composes it, and into the sen-  
sation of each particular interval which forms it,

ascertained by comparison one with another. Beyond this there is nothing sensible in any chord; from whence it follows, that it is only by the relation between sounds, and by the analogy between intervals, that the connection now in question can be established; and this is the genuine, the only source, from whence flow all the laws of harmony and modulation. If, then, the whole of harmony were only formed by a succession of perfect chords major, it would be sufficient to proceed by intervals similar to those which compose such a chord; for then some one or more sounds of the preceding chord being necessarily protracted in that which is subsequent, all the chords would be found sufficiently connected, and the harmony would, at least in this sense, be one. But besides that these successions must exclude all melody by excluding the diatonic series which forms its foundation, it would not arrive at the real end of the art; because, as music is a system of meanings like a discourse, it ought, like a discourse, to have its periods, its phrases, its suspenses, its cadences, its punctuation of every kind; and because the uniformity of a harmonical procedure implies nothing of all this, diatonic procedures require that major and minor chords should be intermixed; and the necessity of dissonances has been felt in order to distinguish the phrases, and render the cadences sensible. Now, a connected series of perfect chords-major can neither be productive of perfect chords minor nor of dissonances, nor can sensibly mark any musical phrase, and the punctuation must there be found entirely defective. M. Rameau being absolutely determined, in his system, to deduce from nature all the harmony practised among us, had recourse, for this effect, to another experiment of his own invention, which by a different arrangement is taken from the first. He pretended, that any simple sound whatever afforded in it multiplies a perfect minor or flat chord, of which it was the dominant or fifth, as it furnished a perfect chord-major by the vibration of its aliquot parts, of which it is the tonic or fundamental sound. He has affirmed as a certain fact, that a vocal string caused two others lower than itself to vibrate through their whole extent, yet without making them produce any sound, one to its twelfth major and the other to its seventeenth; and from this joined to the former fact, he has very ingeniously deduced, not only the application of the minor mode and of dissonances in harmony, but the rules of harmonic phrases and of all modulation." This experiment M. Rousseau says, is false. But without quoting his arguments, which are too long for insertion, we readily grant, that the *system of harmony* by M. Rameau is neither demonstrated, nor capable of demonstration. But it will not follow, that any man of invention can so easily and so quickly subvert those aptitudes and analogies on which the system is founded. Every hypothesis is admitted to possess a degree of probability proportioned to the number of phenomena for which it offers a satisfactory solution. The first experiment of M. Rameau is, that every sonorous body, together with its principal sound and its octave, gives likewise its twelfth and seventeenth major above; which being approximated

as much as possible, even to the chords immediately represented by them, return to the third fifth, and octave, or, in other words, produce perfect harmony. This is what nature when solicited, spontaneously gives; this is what the human ear, unprepared and uncultivated imbibes with ineffable avidity and pleasure. Can any thing which claims a right to our attention and acceptance from nature, be impressed with more genuine or more legible signatures of a sanction than this? We do not contend for the truth of M. Rameau's second experiment. Nor is it necessary we should. The first, expanded and carried into all its consequences, resolves the phenomena of harmony in a manner sufficient to establish its authenticity and influence. The difficulties for which it affords no solution are too few and trivial either to merit the regard of an artist, a philosopher, or M. D'Alembert in his *dream* has clearly shown. The facts with which M. Rousseau confronts this principle, the armies multiplied harmonies generated in *instrumentum*, which he draws up in formidable array against it, will show the thin partitions which sometimes divide philosophy from whim. For, as bodies infinitely divisible, according to the philosophy now established, or as, according to every philosophy, they must be indefinitely divided each infinitesimal of any given mass, which is only harmonics to other principal sounds, will have fundamental tones and harmonics peculiar to themselves; so that, if the reasoning of M. Rameau has any force against M. Rameau's experiment, the ear must be continually distracted by a chaos of inappreciable harmonies, and music itself must be lost in the confusion. But there is, that, there is such a conformity established between our senses and their proper objects, as to prevent all these disagreeable effects. Rousseau and his opponent are agreed in this, that the harmonics conspire to form one predominant tone, and are not to be detected but by the most organs, applied with the deepest attention. It is equally obvious, that, in an artificial harmony by a proper management of this wise imitation of nature, dissonances themselves may be entirely concealed or considerably softened; that, since by nature sonorous bodies in vibration are predisposed to exhibit perfect harmony; and since the human ear is fabricated in such a manner as to perceive it, the harmonic chaos of M. Rousseau has in fact no existence. Nor does it avail him to pretend, that before harmonics can be distinguished, sonorous bodies must be impelled with a force which alters chords, and destroys the purity of the harmonies for this position is equally false both in theory and practice. In theory, because an impulse however forcible, must proportionally operate on all the parts of any sonorous body, so far as it extends: in practice, because the human ear actually perceives the harmony to be pure. We effects his various manoeuvres upon the organs we have, we leave to such as have leisure and curiosity enough to try the experiments; but it is apprehended, that when tried, their results will leave the system of Rameau, particularly as modelled by D'Alembert, in its full force.

all the whims and paradoxes maintained by this philosopher, none is more extravagant than his assertion, that every chord, except the simple unison, is displeasing to the human ear: nay, that we are only reconciled to octaves themselves by being mured to hear them from our infancy. Strange, that nature should have fixed this invaluable proportion between male and female voices, whilst at the same time she inspired the hearer with such violent prepossessions against it as were invincible but by long and confirmed habit! See farther on this subject, under CHORD, § II, III; DISCORD, § II; ENHARMONIC; FUNDAMENTAL BASS; MODULATION; MUSIC, &c.

(4.) HARMONY, DIRECT, is that in which the bass is fundamental, and in which the upper parts preserve among themselves, and with that fundamental bass, the natural and original order which ought to subsist in each of the chords that compose this harmony.

(5.) HARMONY, INVERTED, is that in which the fundamental or generating sound is placed in some of the upper parts, and when some other sound of the chord is transferred to the bass beneath the others.

(6.) HARMONY OF THE SPHERES, OR CELESTIAL HARMONY, an ideal sort of music, much talked of by many of the ancient philosophers and fathers, supposed to be produced by the motions of the planets. This harmony they attributed to the various proportionate impressions of the heavenly globes upon one another, acting at proper intervals. It is impossible they alleged, that such prodigious large bodies, moving with such rapidity, should be silent; on the contrary the atmosphere continually impelled by them, must yield a set of sounds proportionate to the impressions it receives; consequently, as they do not all run the same circuit, nor with one and the same velocity, the different tones arising from the diversity of motions, directed by the hand of the Almighty, must form an admirable concert. They therefore supposed, that the stars, being the lowest of the planets, corresponded to *mi*; Mercury, to *fa*; Venus, to *sol*; the sun, to *la*; Mars, to *si*; Jupiter, to *re*; Saturn, to *re*; and the orb of the fixed stars, as being the highest of all, to *mi*; or the octave.

(7.) HARMONY, in geography, a town of Pennsylvania, 124 miles N. of Philadelphia.

HARMOSTA, or } [*Agarmus*, Gr. from *agao*, to  
HARMOSTES, } adapt.] in antiquity, a magistratus among the Spartans, whereof there were several, whose business was to look to the building of citadels, and repairing the forts and fortifications.

HARMOSYNIAHS, [*agarmus*,] in antiquity, magistrates among the Spartans, who, after the death of Lycurgus, were appointed to enforce the observance of that law, which required married women to wear veils in the streets; whereby they were distinguished from single females, who were allowed to go abroad with their faces uncovered.

HARNAD-NEMETI, a town of Hungary.

(1.)<sup>a</sup> HARNESS, *n. s.* [*barnois*, Fr. supposed from *arn* or *burn*, Runick; *blairn*, Welsh and Irish, iron.] 1. Armour; defensive furniture of war. Somewhat antiquated.—

A godly knight, all dress'd in *barneis* weeds  
That from his head no place appeared to his  
feet. *Spenser.*

Of no right, nor colour like to right,  
He doth fill fields with *barneis*. *Shakespeare.*

Were I a great man, I should fear to drink:  
Great men should drink with *barneis* on their  
throats. *Shakespeare.*

2. The traces of draught horses, particularly of carriages of pleasure or state: of other carriages we say gear.—

Or wilt thou ride? Thy horses shall be trapp'd,  
Their *barneis* studded all with gold and pearl.

*Shakespeare.*

Their steeds around,  
Free from their *barneis*, graze the flow'ry ground.

*Dryden.*

(2.) HARNESS (§ 1. *def.* 1.) comprehends the whole equipage and accoutrements of a cavalier heavily armed: as casque, cuirass, &c. Some derive the word from the Greek *arnes*, a lamb's skin, because they anciently covered themselves therewith. Du Cange observes, that the word HARNESUM is used in the corrupt Latin in the same sense, and that it comes from the High Dutch *barneis* or *barneis*. Others derive it from the Italian *arnese*; others from the Celtic *barneis*, a cuirass.—Under king Richard II. (Stat. 7. c. 13.) it was expressly forbidden to ride in harness with launcegays. In stat. 2. Henry VI. c. 14. harness seems to include all kinds of furniture for offence as well as defence, both of men and horses; as swords, buckles for belts, girdles, &c.

\* To HARNESS, *v. a.* [from the noun.] 1. To dress in armour.—

He was *harnest* light, and to the field goes he.

*Shakespeare.*

Full fifty years, *harnest*'d in rugged steel,

I have endur'd the biting Winter's blast. *Keats.*

2. To fix horses in their traces.—

Before the door her iron chariot stood,

All ready *harnest*ed for journey new. *Spenser.*

—*Harnest* the horses, and get up the horsemen,  
and stand forth with your hamlets. *Jer. xvi. 4.*

When I plow my ground, my horse is *harnest*ed  
and chained to my plough. *Hall's Origin of Man.*

To the *harnest*ed yoke

They lend their shoulder, and begin their toil.

*Thomson.*

HARNIT, or ARNA, an islet in the English Channel, 2 m. from Guernsey, and 1 from Sark.

(1.) HARO, a town of Spain, in Old Castile, on the Ebro, surrounded with walls; containing 3 parishes and 700 families: 7 miles N. of Cabzada, and 33 NE. of Burgos. Lon. 2. 23. W. Lat. 39. 40. N.

(2.) HARO, } or HAROU, or *Glamour de Haro*, in  
HAROL, } the Norman customs, was a cry or formula of invoking the assistance of justice against the violence of some offender, who, upon hearing the word *hara*, was obliged to desist, on pain of being severely punished for his outrage, and to go with the party before the judge. The word is commonly derived from *ha* and *roul*, as being supposed an invocation of the sovereign power, to assist the weak against the strong; from *Raul* first duke of Normandy, who, about A. D. 912, rendered himself venerable by his strict justice; so that

that they called on him even after his death when they suffered any oppression. Some derive it from Harold king of Denmark, who, in 826, was made grand conservator of justice at Mentz. Others from the Danish *as rau*, q. d. *help me*; a cry raised by the Normans in flying from a king of Denmark, named Roux, who made himself duke of Normandy. The letters of the ci devant French chancery had usually this clause, *Nor obstant clamour de haro*, &c. The haro had anciently such vast power, that a poor man of Caen, named Asselin, in virtue of it, arrested the corps of William the Conqueror, in the middle of the funeral procession, till his son Henry paid the value of the land whereon the chapel was built, in which he was interred.

HAROLD I. and II. See ENGLAND, § 18.

HARON-ADAB, a town of Persia, in Irak.

HARONIA, a town of Turkey, in the Arabian Irak, 45 miles N. of Bagdad.

HAROUÉ, a town of France, in the dept. of Meurthe, 4 miles E. of Vezelize, and 13½ SW. of Luneville.

HAROUN AL RASHID. See BAGDAD, § 5.

(1.) \* HARP. *n. f.* [*bearp*, Sax. *harpe*, Fr. It is used through both the Teutonic and Roman dialects, and has been long in use.—*Romanus* q; *lyra* *plaudat tibi*, *Barbarus* *harpa*. Ven. Fort.] 1. A lyre; an instrument strung with wire and commonly struck with the finger.—

Arion, when through tempests cruel wreck  
He forth was thrown into the greedy sea,

Thro' the sweet musick which his harp did  
make,

Allur'd a dolphin him from death to ease. *Spenser.*

They touch'd their golden harps, and hymn-  
ing prais'd

God and his works. *Milton.*

Nor wanted tuneful harps, nor vocal quire;

The muses sung, Apollo touch'd the lyre. *Dryd.*

2. A constellation.—

Next shines the harp, and thro' the liquid skies  
The shell, as 'greatest, first begins to rise;

Thus when sweet Orpheus struck, to lilt'ning  
rocks

He senses gave, and ears to wither'd oaks. *Creech.*

(2.) The HARP (§ 1. def. 1.) is of a triangular figure, and held upright between the legs of the performer. Papiaz, and Du Cange suppose its name derived from the *Arpi*, a people of Italy, who invented it; and from whom, they say, it was borrowed by other nations. Menage, &c. derive the word from the Latin *harpa*, and that from the German *berp* or *harp*. Others trace it from the Latin *carpe*, because thrummed with the fingers. Dr Hickes derives it from *harpa* or *bearpa*, which signify the same thing in the Cimbric and Anglo-Saxon. The harp was the favourite musical instrument of the Britons and other northern nations in the middle ages; as is evident from their laws, and various passages in their history. By the laws of Wales, a harp was one of the 3 things that were necessary to constitute a gentleman, or a freeman: and none could pretend to that character who had not one of these favourite instruments, or could not play upon it. To prevent slaves from pretending to be gentlemen, it was expressly forbidden to teach, or to permit,

them to play upon the harp; and none but the king, the king's musicians, and gentlemen, were allowed to have harps in their possession. A gentleman's harp was not liable to be seized for debt because the want of it would have degraded him from his rank, and reduced him to that of a slave. The harp was in no less estimation and universal use among the Saxons and Danes. Those who played upon this instrument were declared gentlemen by law; their persons were esteemed inviolable, and secured from injuries by very severe penalties; they were readily admitted into the highest company, and treated with distinguished marks of respect wherever they appeared. King David is usually painted with a harp, but we have no testimony in all antiquity that the Hebrew harp which they called *CHINOR*, was any thing like ours. On a Hebrew medal of Simon Maccabeus we see two sorts of musical instruments; but they are both very different from our harp, and consist of only 3 or 4 strings. All authors agree, that our harp is very different from the lyra, cithara, or barbiton, used among the Romans. Fortunatus lib. vii. carn. 8. (quoted above by Dr Johnson, § 1.) mentions it as an instrument of the barbarians.

(3.) HARP, EOLIAN. See ACOUSTICS, p. 129.

(4.) HARPS, ANCIENT;—Fig. 5, Plate CLXXII represents a TRIGONUM or triangular harp, taken from an ancient painting in the museum of the king of Naples, in which it is placed on the shoulder of a little dancing Cupid, who supports the instrument with his left hand and plays upon it with his right. The trigonum is mentioned by Athenæus, lib. iv. and by Julius Pollux, lib. vii. cap. 9. According to Athenæus, Sophocles call it a *Phrygian instrument*; and one of his disciples tells us, that a certain musician, named *Alexander Alexandrinus*, was such an admirable performer upon it, and had given such proofs of his abilities at Rome, that he made the inhabitants *periphrastice*, "musically mad." Fig. 6 and 7, are varieties of the same instrument. Fig. 8 is the Theban harp, according to a drawing made from an ancient painting in one of the sepulchral monuments of the first kings of Thebes, and communicated by Mr Bruce to Dr Burney. The performer is clad in a habit made like a shirt, such as the women still wear in Abyssinia, and the men in Nubia. It reaches down to his ancles; his feet are without sandals, and bare; his neck and arms are also bare; his loose white sleeves are gathered about his elbows; and his head is close shaved. His left hand seems employed in the upper part of the instrument among the notes in *alto*, as if in an *alto* peggio; while, stooping forwards, he seems with his right hand to be beginning with the lower string, and promising to ascend with the most rapid execution: this action, so obviously represented by an indifferent artist, shows that it was a common one in his time; or, in other words, that great hands were then frequent, and consequently that music was well understood and diligently followed. On this instrument Dr Burney makes some plausible conjectures. See his *Hist. of Mus.* p. 224.

(5.) HARP, THE BELL, a musical instrument of the string kind, thus called from the players on swinging it about, as a bell on its bobs. It is a

but 3 feet long; its strings, which are of no determinate number, are of brass or steel wire, fixed at one end, and stretched across the sound board by levers fixed at the other. It takes in 4 octaves, according to the number of the strings, which are struck only with the thumbs, the right hand playing the treble and the left hand the base; and in order to draw the sound the clearer, the thumbs are armed with a little wire pin. This may perhaps be the *lyra*, or *cithara* of the ancients; but we find no mention made of it under the name it now bears, which must be allowed to be modern.

1. **HARP, THE IRISH**:—*Plate CLXXII, Fig. 4.* represents the harp of Brian Boru, king of all Ireland, slain in battle with the Danes A. D. 1014, at Clontarf. His son Donagh having murdered his brother Teig, A. D. 1021, and being deposed by his nephew, retired to Rome, and carried with him the crown, harp, and other regalia of his father, which he presented to the Pope in order to obtain absolution. Adrian IV. alleged this as one of his principal titles to this kingdom, in his bull transferring it to Henry II. These regalia were kept at the Vatican till the Pope sent the harp to Henry VIII. with the title of Defender of the Faith; but kept the crown, which was of massive gold. Henry gave the harp to the first earl of Clarendon; in whose family it remained till the beginning of the 18th century, when it came by a lady of the De Burgh family into that of MacMahon of Clonagh in the county of Clare, after whose death it passed into the possession of commissioner McNamara of Limerick. In 1782 it was presented to the Rt. Hon. William Conyngham, who deposited it in Trinity college library. It is 32 inches high, and of extraordinary good workmanship; the sounding board is of oak, the arms of red silver; the extremity of the uppermost arm is part silver, extremely well wrought and polished. It contains a large crystal set in silver, and under it was another stone now lost. The bottom or ornamental knobs at the sides of this arm are of silver. On the front arm are the arms, dated 1587, of the O'Brien family, the bloody hand supported by lions. On the sides of the front arm within two circles are two Irish wolf heads in the wood. The holes of the sounding board where the strings entered are neatly ornamented with escutcheons of brass carved and gilt; the larger sounding holes have been ornamented, probably with silver, as they have been the object of theft. This harp has 28 keys, and as many string holes, consequently there were as many pegs. The foot-piece or rest is broken off, and the pegs round which it was joined are very rotten. The whole bears evidence of an expert artist.

2. **HARP, THE WELSH, OR THE TRIPLE HARP**, has 47 strings or chords in 3 rows, extending from the tenor clef to double G in alt, which make 3 octaves: the middle row is for the semitones, and the two outside rows are perfect unisons. On the back side, which is played with the right hand, there are 36 strings; on the treble side, 26; and on the middle row, 35 strings. There are two rows of pins or screws on the right side, serving to keep the strings tight in their holes, which are turned at the other end to 3 rows of pins on the other side. The harp, within the last 60 years,

has been in some degree improved by the addition of 8 strings to the unison, viz. from E to double F in alt. This instrument is struck with the finger and thumb of both hands. Its music is much like that of the spinet, all its strings going from semitone to semitone; whence some call it an *inverted spinet*. It is capable of a much greater degree of perfection than the lute.

\* **To HARP**, v. n. [*harper*, Fr. from the noun.]

3. To play on the harp.—I heard the voice of harpers *harping* with their harps. *Rev.*—Things without intermingling sound, whether pipe or harp, except they give a distinction in the sounds, how shall it be known, what is piped or *harped*? 2 Cor.

The helmed cherubim,

And sworded seraphim,

Are seen in glitt'ring ranks with wings display'd,  
*Harping* in loud and solemn quire,

With unexpressive notes to heav'n's new-born  
beir. *Milton.*

—You *harp* a little too much upon one string.  
*Collier.* 2. To touch any passion, as the harper touches a string; to dwell on a subject.—

Oracious duke,

*Harp* not on that, nor do not basish reason  
For inequality; but let your reason serve  
To make the truth appear. *Shakspeare.*

For thy good caution, thanks:

Thou'lt *harp* d my fear aright. *Shak.*

He seems

Proud and disdainful, *harping* on what I am,  
Not what he knew I was. *Shak.*

**HARPAGINEA**, [*ἁρπαγία*,] in antiquity, were hooks of iron, hanging on the top of a pole, which, being secured with chains to the masts of ships, and then let down with great velocity into the enemy's vessels, caught them up into the air. By way of defence against these machines, they covered their ships with hides, which broke and blunted the force of the iron. The harpagines were invented by Anacharsis the Scythian philosopher.

**HARPAGIUS**. See **ΑΡΠΑΓΙΟΥΣ**.

**HARPAGUS**, the preserver of Cyrus, according to Herodotus, and afterwards one of his generals, who subdued Asia Minor. See **PERSIA**.

**HARPALUS**, a Greek astronomer, who flourished about A. A. C. 480, corrected the cycle of 8 years invented by Cleostratus; and proposed a new one of 9 years, in which he imagined the sun and moon returned to the same point. But Harpalus's cycle was afterwards altered by Meton, who added ten full years to it. See **CHRONOLOGY**, *Index*.

**HARPALYCE**, in fabulous history, the daughter of Lycurgus king of Thrace, and queen of the Amazons, who, by her valour set her father at liberty, after he had been taken prisoner by the Getae.

**HARPAREN**, a town of France, in the dep. of the Lower Pyrenees, 7½ miles E. of Ustaritz, and 10 Sk. of Bayonne.

**HARPASA**, a town of Caria, on the Harpasus, famous for an immense rocking stone, which was moveable by the finger, but could not be displaced by any force.

**HARPASUS**, a river of Caria.

**HARPETH**, a river of the United States, in Tennessee

Tennessee, which runs into the Cumberland, 24 miles SE. of Clarksville.

**HARPE**, in mythology, a crooked sword where-with Mercury cut off Argus's head, and Perseus that of Medusa.

• **HARPER**. *n. f.* [from *harp*.] A player on the harp.—

Never will I trust to speeches penn'd,  
Nor to the motion of a schoolboy's tongue;  
Nor wooe in rhyme, like a blind *harper's* song.

*Shakspeare.*

I'm the god of the harp: stop, my fairest!—  
in vain;

Nor the harp, nor the *harper*, could fetch her  
again.

*Tickell.*

**HARPER'S FIELD**, a post town of New York, in Otsego county, 322 m. N. by E. of Philadelphia.

**HARPIES**. See **HARPY**, and **HARPYIAE**.

(1.) • **HARPING IRON**. *n. f.* [from *harpage*, Lat.] A bearded dart with a line fastened to the handle, with which whales are struck and caught.—

The boat, which on the first assault did go,  
Struck with a *harping iron* the younger foe;  
Who, when he felt his side so rudely gor'd,  
Loud as the sea that nourish'd him he roar'd.

*Waller.*

(2.) **HARPING IRON**. See **HARPOON**.

**HARPINGS**, *n. f.* the fore parts of the wales which encompass the bow of a ship, and are fastened to the stem, being thicker than the after part of the wales, in order to reinforce the ship in this place, where she sustains the greatest shock of resistance in plunging into the sea, or dividing it, under a great pressure of sail.

**HARPOCRATES**, in mythology, the son of Isis and Osiris; an Egyptian deity, represented with his fingers applied to his mouth, denoting that he is the god of SILENCE. His statue was fixed in the entrance of most of the Egyptian temples, and he was commonly exhibited under the figure of a young man naked, crowned with an Egyptian mitre, holding in one hand a cornucopia, and in the other the flower of lotus, and sometimes bearing a quiver.

**HARPOCRATION**, Valerius, a celebrated ancient rhetorician of Alexandria, who wrote an excellent *Lexicon upon the ten orators of Greece*. Aldus first published this lexicon in Greek at Venice in 1603. Many learned men have laboured upon it; but the best edition was given by James Gronovius at Leyden in 1696.

• **HARPONEER**. *n. f.* [*harponneur*, Fr. from *harpon*.] He that throws the harpoon in whale-fishing.

(1.) **HARPONELLY**, a district of Indostan, in the Myfore country.

(2.) **HARPONNELLY**, the capital of the above district, 65 miles NNE. of Bedamore, and 152 NNW. of Seringapatam. Lon. 75. 28. E. Lat. 14. 40. N.

(1.) • **HARPOON**. *n. f.* [*harpon*, Fr.] A harping iron.

(2.) **The HARPOON**, or **HARPING IRON**, is a spear or javelin used to strike the whales in the Greenland fishery. It is furnished with a long staff, having at one end a broad and flat triangular head, sharpened at both edges, so as to penetrate the whale with facility: to the head of this weapon is fastened a long cord, called the *whale line*,

which lies carefully coiled in the boat, in such manner as to run out without being interrupted or entangled. See **WHALE-FISHERY**.

(3.) **HARPOON, GUN**, a kind of fire-arm for discharging harpoons at whales, and thereby killing them more easily and expeditiously than formerly when the harpoons were thrown by the hand. Though this method was projected many years ago, it has but lately come into use; and premiums have been annually offered by the society for encouraging arts, &c. to the persons who first struck a fish in this manner. In the Transactions of that society for 1786, we have an account of the first fish struck in this manner in 1784. The gun was of the blunderbuss construction, loaded with 4 common tobacco pipes full of glazed powder; the fish was shot at the distance of ten fathoms, the harpoon going into her back up to the ring; and she was killed in about an hour. In 1785, 3 whales were killed in this manner; 4 in 1786, and 3 in 1787. Since that time the gun harpoon has come more into use, and will probably soon supersede the other method entirely. In the *Phil. Transf.* for 1789, we have accounts of a number of whales killed in this manner. The instrument appears to be extremely useful in calm weather, as the whale, though a timorous creature, will frequently allow a boat to approach within 20, 15, or even 10 fathoms, all of whose distances are within reach of the gun harpoon though not within reach of that thrown by the hand. The greatest inconvenience was in case of rain or snow, by which the lock was apt to get wet. To remedy this, a case of leather was made to fit round the gun and over the lock, lined with tin, and big enough to fire the gun when it was on. The fish struck with an harpoon discharged in this manner are soon killed, by reason of its penetrating their bodies to the depth of 5 or 6 feet, which no man's strength would be able to accomplish. In the volume just quoted, we have an account of one which was shot through the tail. The harpoon broke in the slit, but 5 fathoms line went through the tail. The fish was killed 8 hours, which is perhaps the only instance of fish struck in that part being caught. In another the harpoon carried six feet of line into its body; the creature died in ten minutes. Others were killed in 15 minutes or half an hour, and one had a rib broken by the violence of the stroke. In the Transactions of the Society for 1790, there are other accounts similar to the foregoing, all agreeing as to the great usefulness of the instrument, both for striking the fish at a considerable distance, and for killing them in a very short time.

(1.) • **HARPSICHORD**. *n. f.* A musical instrument, strung with wires, and played by brass keys.

(2.) **The HARPSICHORD** is the most harmonious of all the musical instruments of the string kind. It is played on after the manner of the organ, and is furnished with a set, and sometimes with 16 sets of keys; the touching or striking of these keys moves a kind of little jacks, which also move a double row of strings, of brass or iron, stretched over 4 bridges on the table of the instrument.

**HARPSFELD**, a town of Westphalia, in the county of Hoya, 22 miles WNW. of Hoya.

(1.) • **HARP**

(1.) **HARPY.** *n. f.* [*harpyia*, Lat. *harpie*, *harpye*, Fr.] 1. The *harpyes* were a kind of birds which had the faces of women, and foul long claws, very sharp features; which, when the table was furnished for Phœbus, came flying in and devouring away the greater part of the victuals, till he felt the rest that they could not be endured. *Idolat.*—That an *harpy* is not a centaur is by this way as much a truth, as that a square is not a circle. *Locke.* 2. A ravenous wretch; an extortioner.—I will do you any ambassage to the powers, rather than hold three words conference with this *harpy*. *Shakespeare.*

(2.) **HARPIES**, the **HARPIES**, [*ΑΡΠΙΑΙ*,] in mythology, (1.) *def. 1.* were a rapacious impure sort of monsters, with wings, ears like bears, bodies like women, faces like women, and feet and hands hooked like the talons of birds of prey. The ancients believed the harpies to be gnomes or demons. Some make them the daughters of Oceanus and Terra, *et æmæ et æræ*; whence Servius says, that they inhabited an island, half on land and half in water. Valerius Flaccus makes them the daughters of Typhon. There were three harpies, *Æello*, *Ocyrops*, and *Celæno*, which last Homer calls *Παρυγέ*. Hesiod, in his *Theogony*, ver. 267. only mentions two, *Æello* and *Ocyrops*, and makes them the daughters of Thaumias and Electra, affirming that they had wings, and went with the rapidity of the wind. Zephyrus begat of them *Balius* and *Lamias*, Achilles's horses. Pherecydes relates, that the Boræades expelled them from the *Ægean* sea, and pursued them as far as the island which he calls *Phia* and Homer *Calyx*; *see also Strabon.* Vossius (*De Idolis*, lib. iii. cap. 9. p. 6.) thinks, that the ancients, by the harpies, could mean nothing else but the winds; and that it was on this account they were made daughters of Electra, the daughter of Oceanus. Such is the opinion of the scholiasts of Apollonius, Hesiod, and Eustathius. Mr Bryant supposes that they were priests in Bithynia, who on account of their repeated acts of violence and cruelty, were driven out of the country: their temple was called *Harpyia*, and the environs *Arpiæ*, and he observes that *Harpyia*, *Arpiæ*, was of old the name of a place.

(2.) **HARQUEBUSS.** *n. f.* [*See ARQUEBUSS.*]

A *harquebuss* is of the length of a musket, usually cocked with a wheel. It carries a ball weighing 1½ oz. There was also a larger sort, called the great *harquebuss*, used for the defence of many places, which carried a ball of about 3½ lb. They are now little used, except in some castles and garisons.

**HARQUEBUSSIER.** *n. f.* [*from harquebuss.*] Armed with a *harquebuss*.—Twenty thousand *harquebussiers* were ranged in length, and in six in a rank. *Kneller.*

**HARRA**, a town of Persia, in Segestan.

**HARRAD**, a town of Arabia Felix, in Yemen.

**HARRAN**, a town of Turkey, in Diarbekir.

**HARRASS**, a town of Austria, 4 m. S. of Laab.

**HARRY**, a parish of Scotland, in Orkney,

and with that of Birsay. *See BIRSA*, § 1. 2.

It is 6 miles long, and 3½ broad; and contains 21 square miles. It is flat and swampy, be-

lieve corrected by numerous rivulets, whose wa-

ter often swell and rush down in torrents from the hills. The soil is very various, partly fertile, partly barren; and the air is moist. Barley and oats are the chief produce. Within these 80 years, a water spout fell, during a thunder storm, which, by removing the earth down to the rock, left a great gulf many yards broad and a quarter of a mile long. The population, in 1793, stated by the rev. Geo. Low, in his report to Sir J. Smollett, was 663: the number of horses above 17s, and of black cattle, 238. There were also a few sheep.

**HARRIA**, or **HARBLINLAND**, a province of Livonia, NW. of the Gulf of Finland. Revel is the capital.

**HARRICANAW**, a river of Canada, which runs into Hannab Bay.

**HARRIDAN.** *n. f.* [*corrupted from haridelle*, a worn out worthless horse.] A decayed strumpet.

She just endur'd the Winter she began,  
' And in four months a batter'd *harridan*;

Now nothing's left, but wither'd, pale, and shrunk,

To bawd for others, and go shares with punk.

*Swift.*

**HARRIER.** *See HARRIER*, § 1 and 2.

(1.) **HARRINGTON**, James, a most eminent English writer in the 17th century, the son of Sir Sapcote Harrington, by Jane daughter of Sir William Samuel of Upton, in Northamptonshire. He was born at Upton, bred at Oxford, travelled into Holland, France, Denmark, and Germany, and learned the languages of those countries. Upon his return to England, he was admitted one of the privy chamber extraordinary to Charles I. Though democratic in his principles, he served the king with great fidelity, and endeavoured to get matters accommodated with all parties. He found means to see the king at St James's; and attended him on the scaffold, when he received a token of his majesty's affection. After the death of king Charles, he wrote his *Orcana*: a kind of political romance, in imitation of Plato's *Commonwealth*, which he dedicated to Oliver Cromwell. It is said, that when Oliver perused it, he declared, that "the gentleman had written very well, but must not think to cheat him out of his power and authority; for that what he had won by the sword, he would not suffer himself to be scribbled out of." This work was attacked by several writers, against whom he defended it. Besides writing to promote republican principles, he instituted a nightly Club, of several ingenious men in the New Palace-Yard, Westminster: which was called the *Rota*, and continued till the secluded members of parliament were restored by Gen. Monk. In 1661, he was committed to the tower for treasonable practices; and chancellor Hyde, at a conference with the lords and commons, charged him with being concerned in a plot. But the committee could make nothing of it. He was conveyed to St Nicholas's island, and from thence to Plymouth, where he fell into an uncommon disorder of the imagination, owing, it is said, to his having drunk great quantities of guaiacum. Having obtained his liberty by means of the earl of Bath, he was carried to London, and died in 1677. He published several other works, which were first collected by Toland, in one vol. fol. in 1700. but

a more complete edition was published, in 1737, by the rev. Dr Birch.

(2.) HARRINGTON, Sir John, an ingenious English poet, the son of John Harrington, Esq. who was committed to the tower by queen Mary for holding a correspondence with her sister Elizabeth; who, when she came to the crown, found godmother to this son, and afterwards knighted him. Before he was 30, he published a translation of Ariosto's *Orlando Furioso*. A collection of his works have been printed, entitled *Nuga Antiquæ*. He was created a knight of the bath by James I. and in 1603, a baron by the title of Lord Harrington. He attended the princess Elizabeth, after her marriage with the elector palatine, to Heidelberg, in April 1613, and died at Worms, Aug. 24, 1613, aged 51.

(3.) HARRINGTON, Sir John, Lord Harrington, son to the preceding, (N<sup>o</sup> 2.) was the intimate friend of Prince Henry, son to king James I. and was remarkable for his humanity, piety, and virtue, as well as for his learning. He was created a knight of the Bath, in 1604. He is said to have kept an exact diary of his life, and to have examined himself weekly as to his progress in virtue. There are several letters extant which passed between him and prince Henry on classical subjects. He died in Feb. 1614.

(4.) HARRINGTON, in geography, a sea-port of Cumberland, 4 miles from Workington, and 6 from Whitehaven. Its chief trade arises from the colliery and ship-building.

(5—7.) HARRINGTON, 3 English villages; 1. in Cumberland, near Carlisle: 2. in Lincolnshire, near Alford: 3. in Worcestersh. N. of Evesham.

HARRIPOUR, a town of Indostan, in Orissa, 105 miles WSW. of Calcutta.

HARRIOT, Thomas, an eminent algebraist, born at Oxford in 1560, where he took the degree of B. A. in 1579. Being distinguished for his mathematical learning, he was recommended to Sir Walter Raleigh, who, in 1585, sent him with the colony, under Sir Richard Grenville to Virginia. After having remained there about a year, he published a topographical description of it. About 1588, he was introduced by his patron Sir Walter Raleigh, to Henry earl of Northumberland, who allowed him a pension of 150*l.* per annum. He spent many years in Sion college; where he died in July 1631, of a cancer in his lip, and was buried in the church of St Christopher, where a handsome monument was erected to his memory. Anthony Wood tells us, he was a deist. He was one of the first mathematicians of the age in which he lived, and will always be remembered as the inventor of the present improved method of algebraical calculation; which was adopted by Des Cartes, and for a considerable time imposed upon the French nation as his own invention; but the theft was at last detected by Dr Wallis, in his *History of Algebra*, where our author's invention is accurately specified. His works are, 1. A brief and true report of the New found land of Virginia; of the commodities there found, and to be raised, &c. 2. *Artis analytica praxis ad æquationes algebraicas non expeditas, et generalis methodus resolvendas, et posthumiis Thoma Harrioti, &c.* 3. *Epistola de astronomia*; MS. in the library of Sion

college. He left several other MSS. which were inspected by Dr Zach, astronomer to the duke Saxe-Gotha, in 1784, at Petworth in Sussex, a seat of the earl of Eversmont, a descendant of Henry earl of Northumberland. Dr Zach publishes an account of them in the *Astronomical Ephemeris* for 1788: from which it appears, that Harriot made great discoveries in astronomy; particularly that he had observed the spots in the sun so early as Dec. 8, 1610; which was 18 months earlier than Galileo's first published observations respecting them; and that he had also discovered the satellites of Jupiter, and made drawings of their positions and calculations of their revolutions, in Jan. 1610, the same month when Galileo discovered them. Dr Zach adds, that Harriot's observations of the comet of 1607 are still of use.

(1.) HARRIS, James, Esq. an English gentleman of very uncommon parts and learning, the son of James Harris, Esq. by a sister of Lord Shaftsbury, author of *The Characters*. He was born at Salisbury, in 1709; and educated there. In 1721 he was removed to Wadham college in Oxon. He was member for Christ-church, 11 years, in several successive parliaments. In 1763, he was appointed a lord commissioner of the admiralty, and soon after removed to the board of treasury. In 1774 he was made secretary and comptroller to the queen, which post he held until his death. He died Dec. 21. 1780, in his 72d year, after a long illness. He was author of some valuable works. 1. *Three Treatises: concerning Art; Manners; Painting, and Poetry; and Happiness*, 1745, 8vo. 2. *Hermes; or, A Philosophical Enquiry concerning Universal Grammar*. 3. *Philosophical Arrangements*. 4. *Philological Inquiries*; 1782, vols. 8vo. published since his death.

(2.) HARRIS, William, a protestant dissenting minister of eminent abilities, who resided at Ilton in Devonshire. On Sept. 20, 1765, the degree of D. D. was unanimously conferred on him by the university of Glasgow. He published an Historical and Critical account of the lives of James I. Charles I. and Oliver Cromwell, in 5 vols. 8vo. after the manner of Mr Bayle. He was preparing a similar account of James II. He also wrote the life of Hugh Peters; besides many fugitive pieces occasionally, for the public prints, in support of liberty and virtue. All his works (says his patron Mr Hollis,) have been well received; and those who differ from him in principle, still value him on point of industry and faithfulness. He died at Ilton, Feb. 4, 1770.

(3.) HARRIS, in geography, [Gael. *Nà Hèrradh*, *Hardubb*, i. e. the heights.] a parish of Scotland in Invernesshire, 48 miles long, and from 6 to broad; consisting of 7 large inhabited islands, BENNERAY, Pabbay, Calligray and Ensay, on the S.; and Taransay, Scalpay, and Scarp, on the N. (see these articles:) besides the peninsula, N. and above 30 lesser isles uninhabited. Of the islands some produce good crops of oats, barley and potatoes, and all of them pasture; but the soil is general in poor, and the greater part not arable. The population in 1793, stated by the Rev. John McLeod, in his report to Sir J. Sinclair, was 2,536, and had increased 567 since 1755, owing chiefly to early marriages. The number of the

(which range unheeded through the mountains and commons,) was about 11,000; that of goats 310; of horses, 1000; of black cattle, 2460; and of deer, 800. All these animals are small in size; but the beef and mutton are delicious, and the wool extremely fine. About 350 persons are employed in making from 400 to 500 tons of kelp annually.

(4.) **HARRIS**, a peninsula of the Hebrides in the above parish, (N<sup>o</sup> 3.) forming with Lewis one of the Western Islands of Scotland. (See **LEWIS**, N<sup>o</sup> 1.) Harris is 20 miles long, and 10 broad. Upon the E. side it is mostly rock; but on the W. there are some tolerable farms, and the number of people amounts to 2000. It has Lewis on the N. and North Uist on the S. from which it is separated by the Sound. (See N<sup>o</sup> 5.) Harris abounds on the E. side in excellent bays, and its shores on both sides form one continued fishery.

(5.) **HARRIS, SOUND OF**, a navigable channel between Harris and N. Uist, 9 miles broad and 9 long. It is the only passage between the Butt of Lewis and Barra, for vessels of burden passing to and from the W. side of Long Island. It requires a skillful pilot, being greatly encumbered with rocks and islands. The fish on this coast are more numerous, and of larger dimensions, than those on the opposite continent; on which account, two royal fishing stations were begun in the reign of Charles I. one in Loch Maddie, and the other in the Sound of Harris. A phenomenon is remarked by the rev. Mr M'Leod, in the tides of the Sound:—"From the autumnal to the vernal equinox, the current in neap tides passes all day from E. to W. and all night in the contrary direction. Immediately after the vernal equinox, it changes this course, going all day from W. to E. and the contrary at night. In spring tides the current corresponds nearly to the common course." *Ann. Ac.* Vol. X. p. 373.

(6.) **HARRISBURGH**, a town of the United States, in N. Carolina, 47 miles W. of Halifax.

(7.) **HARRISBURGH**, or **LOUISBURG**, a post town of Pennsylvania, and the capital of Dauphin county, seated on the Susquehanna, 80 miles W. of Philadelphia. Lon. 1. 42. W. of that city. Lat. 40. 16. N.

(8.) **HARRISON**, John, one of the regicide judges, who sat upon the trial of K. Charles I. and one of the ten who were executed for that act, after the restoration. See **ENGLAND**, § 35. He was the son of a butcher, and had been raised to the rank of colonel, and afterwards of general, in the army of the parliament. Dr Goldsmith gives the following account of his behaviour at his trial and execution: "Gen. Harrison, who was first brought to his trial, pleaded his cause with that unflinching firmness which he had shewn through life. 'What he had done, he said, was from the impulse of the Spirit of God. He would not, for any benefit to himself, hurt a hair of the poorest man or woman upon earth; and during the usurpation of Cromwell, when all acknowledged his right, or bowed down to his power, he had boldly upbraided the usurper to his face; and all the terrors of imprisonment, and allurements of ambition, had not been able to bend him to a com-

pliance to that detestful tyrant.' Harrison's death was marked with the same admirable constancy which he shewed at his trial.—Some circumstances of scandalous barbarity attended the execution. Harrison's entrails were torn out, and thrown into the fire before he expired. His head was fixed on the sledge that drew Coke and Peters to the place of execution with the face turned towards them." Vol. III. p. 311, 312.

(9.) **HARRISON**, John, the celebrated inventor of the famous **TIME-KEEPER** for ascertaining the longitude at sea, and also of the compound, or, as it is commonly called, the *gridiron pendulum*; was born at Foulby, near Pontefract in Yorkshire, in 1693. The vigour of his natural abilities, if not strengthened by want of education, which confined his attention to few objects, at least amply compensated for it; as appeared from the astonishing progress he made in that branch of mechanics to which he devoted himself. His father was a carpenter, in which he assisted, and occasionally surveyed land, and repaired clocks and watches. He was, from his childhood, attached to any machinery moving by wheels, as appeared while he lay sick of the small-pox about the 6th year of his age, when he had a watch placed open upon his pillow, to amuse himself by contemplating the movement. In 1700, he removed with his father to Harrow in Lincolnshire; where he eagerly improved every incident from which he might collect information; frequently employing great part of his nights in writing or drawing; and he always acknowledged his obligations to a clergyman who lent him a MS. copy of professor Saunderson's Lectures; which he carefully transcribed, with all the diagrams. In 1726, he had constructed two clocks, mostly of wood, in which he applied the escapement and compound pendulum of his own invention: these surpassed every thing then made, scarcely erring a second in a month. In 1728, he came up to London with the drawings of a machine for determining the longitude at sea, in expectation of being enabled to execute one by the Board of Longitude. Upon application to Dr Halley, he referred him to Mr George Graham; who advised him to make his machine before he applied to the Board. He returned home to perform this task; and in 1735 came to London with his first machine; with which he was sent to Lisbon the next year for a trial of its properties. In this short voyage he corrected the dead reckoning about a degree and a half; which success procured him both public and private encouragement. About 1739, he completed his 2d machine, of a construction much more simple than the former, and which answered much better: this, though not sent to sea, recommended him still more to patronage. His 3d machine in 1749, was still less complicated than the 2d, and superior in accuracy, erring only 3 or 4 seconds in a week. This he conceived to be the *plus ultra* of his attempts; but in an endeavour to improve pocket watches, the principles he applied surpassed his expectations so much, as to encourage him to make his 4th time-keeper, which is in the form of a pocket watch, about six inches diameter. With this time-keeper his son made two voyages, the one to Jamaica, and the other to Bar-

badges: In both which experiments it corrected the longitude within the nearest limits required by the act of the 1st of Q. Anne; and the inventor therefore, at different times, though not without great trouble, received the proposed reward of 20,000l. These 4 machines were given up to the Board of Longitude. The three former were now of no use, as all their advantages were comprehended in the last; they were worthy, however, of being carefully preserved as mechanical curiosities, in which might be traced the gradations of ingenuity executed with the most delicate workmanship. They are kept in the royal observatory at Greenwich. The 4th machine, emphatically called *The time-keeper*, has been copied by the ingenious Mr Kendal; and that duplicate, during a 3 years circumnavigation of the globe in the southern hemisphere by Captain Cook, answered as well as the original. The latter part of Mr Harrison's life was employed in making a 5th improved time-keeper on the same principles with the preceding one; which, at the end of a ten weeks trial, in 1772, at the king's private observatory at Richmond, erred only 4½ seconds. Within a few years of his death, he had frequent fits of the gout, a disorder that never attacked him before his 77th year: he died at his house in Red-Lion Square, in 1776, aged 83. His recluse manner of life in the unremitting pursuit of his favourite object, was not calculated to qualify him as a man of the world; and the many discouragements he encountered, in soliciting the legal reward of his labours, still less disposed him to accommodate himself to the humours of mankind. In conversing on his profession, he was clear, distinct, and modest; but found a difficulty in explaining his meaning by writing; in which he adhered to a peculiar and uncouth phraseology. This was evident in his *Description concerning such mechanism as will afford a sure or true mensuration of time*, &c. 8vo. 1773; in which he obstinately refused to accept of any assistance whatever. This work contains also an account of his new musical scale; or mechanical division of the octave, according to the proportion which the radius and diameter of a circle have respectively to the circumference. He had in his youth been the leader of a distinguished band of church singers; had a very delicate ear for music; and his experiments on sound, with a most curious monochord of his own improvement, are reported to have been no less accurate than those he was engaged in for the mensuration of time.

(3.) HARRISON, William, a writer much patronised by the literati of his time. He was fellow of New College, Oxford, and was some time tutor to the duke of Queensberry's son. Dr Swift, by his interest with Mr St John, obtained for him the employment of secretary to lord Raby, ambassador at the Hague, and afterwards earl of Strafford. A letter of his dated Utrecht, Dec. 26. 1712, is printed in the Dean's works. Mr Harrison did not long enjoy his rising fortune. He was sent to London with the Barrier treaty, and died Feb. 24. 1712-23. Dr Swift laments his loss in his Journal to Stella. Mr Tickle mentions him with respect in his *Proposals of Peace*; and Dr Young in the close of an *Epistle to Lord Lunsdowne*, bewails his loss. Dr Birch, who has given a cu-

rious note on Harrison's Letter to Swift, has confounded him with Thomas Harrison, M. A. of Queen's-college. In Nichols's Select Collection are some pleasing specimens of his poetry; which, with Woodstock Park in Dodley's Collection, and an Ode to the Duke of Marlborough, 1703, in Duncombe's Horace, are all the poetical writings that are known of this excellent young man; who figured both as a humourist and a politician in the 5th vol. of the Tatler, of which (under the patronage of Bulingbroke, Heuley, and Swift) he was professedly the editor. See the Supplement to Swift.

(4.) HARRISON, William, another writer in Q. Anne's reign, was author of the *Pilgrim, or the Happy Convert*, a pastoral tragedy, published in 1709.

(5.) HARRISON, in geography, a county of Virginia, bounded on the N.E. by Monongalia, & by Greenviller, S.W. by Kanbawa, and N. by Ohio county. It is 120 miles long, and 80 broad; and had 2013 citizens and 63 slaves in 1795. CLARKSBURG is the capital.

HARRISTOWN, a town of Ireland, in Kildare, Leinster, 18 miles S.W. of Dublin.

HARRODSBURG, or a town of Kentucky, HARRODSTOWN, } in Mercer county, 25 m. S.W. of Lexington, and 82½ from Philadelphia. Lon. 10. 22. W. of that city. Lat. 37. 48. N.

HARROGATE, or HARROWGATE, a village in the W. Riding of Yorkshire, in the parish of Knaresborough, remarkable for three medicinal springs, all different in their qualities, notwithstanding their vicinity: viz. 1. The *Tram water* or *Sweet Spa*, a vitriolic spring, of a sort of milky taste, used in gravelly cases, discovered by Mr Slingsby, in 1638. 2. The *Striking or Sulphur spring* useful in dropical, scorbutic, and gouty cases. It rises in the town, and is received in 4 basins under 4 different buildings; at one it is drunk at the others used for hot or cold baths. It is perfectly clear, and very salt; but the taste and smell resemble those of a mixture of rotten eggs, sulphur and sea water. Bathing is the most general mode of using it. It is the strongest sulphur water in Great Britain; and does not lose the sulphureous smell even when exposed to almost a boiling heat. In distilling it, when 3 pints had been taken off from a gallon of it, the last was as strong as the first, and stunk intolerably. It is discutient and attenuating, and a warm bath of it is of great benefit in pains, strains, and lameness; dissolving hard swellings, curing old ulcers and scrophulous complaints, and cleansing the stomach and bowels. 3. *St Mungo's well*, is so called from St Mungo, or St Kentigern, a Scotch saint much honoured hereabouts. See KARRIGER. The Harrogate season is from May to Michaelmas; and the company lodge in large houses or mansions on the beach, a mile from the village, each house having a long room and an ordinary. Harrogate lies 3 miles W. of Knaresborough, and 28 N. of London.

HAROLD, a village near Bedford.

(2.) \* HARROW. *n. f.* [*harroon*, Fr. *harth*, German, a rake.] A frame of timbers crossing each other, and set with teeth, drawn over sowed ground to break the clods, and throw the earth over the seed.—

The land with daily care

Incens'd, and with an iron war

Of rites and *barrows*.

*Dryden.*

Two small *barrows*, that clap on each side of the side, harrow it right up and down. *Mortimer.*

(2.) *HARROW*, in agriculture. See *HUSBANDRY*.

(3.) \* *HARROW*, *interj.* An exclamation of sudden distress. Now out of use.†—

*Harrow* now, out and weal away! he cried;

What dismal day hath sent this cursed light,

To see my lord so deadly dampify'd? *Spenser.*

(4.) *HARROW HILL*, a hill in Worcestershire, 2 miles from Evesham.

(5.) *HARROW ON THE HILL*, a town of Middlesex, with a church and lofty spire, seated on the top of the highest hill in the county, 10 miles N.W. of London. It is noted for a free school, founded in the reign of queen Elizabeth. A *silver arrow* is shot for annually, on Aug. 4. by the scholars, dressed in the habit of archers.

\* *To HARROW*, *v. a.* [from the noun.] 1. To cover with earth by the harrow.—

Friend, *barrow* in time, by some manner of means,

Not only thy peason, but also thy beans. *Tupper.*

2. To break with the harrow.—Canst thou bind the unicorn with his band in the furrow? or will he *harrow* the valleys after thee? *Job.*—

Let the Volscians

Plow Rome, and *barrow* Italy.

*Shak.*

3. To tear up; to rip up.—

I could a tale unfold, whose lightest word  
Would *barrow* up thy soul, freeze thy young blood,

Make thy two eyes, like stars, start from their spheres.

*Shak.*

Imagine you behold me bound and scourg'd,

My aged muscles *barrow'd* up with whips;

Or hear me groaning on the rending rack.

*Rome.*

4. To pilage; to strip; to lay waste. See *HARASS*, which in Scottish is the same thing.—As the king did excel in good common wealth laws, so he had to secret a design to make use of them, as well in collecting of treasure as for correcting of mankind; and so meaning thereby to *barrow* his people, did accumulate them the rather. *Bacon.* 5. To invade; to harass with incursions. [From *harra*, Saxon.] Obsolete.—

And he that *barrow'd* hell with heavy stowre,  
The faulty souls from thence brought to his heavenly bowre.

*Fairy Queen.*

Most glorious Lord of life, that on this day  
Dost make thy triumph over death and sin;  
And having *barrow'd* hell didst bring away  
Ignority thence captive us to win.

*Spenser.*

6. To disturb; to put into commotion. [This word rather be written *barry*, *barer*, French.]

Most like: it *barrows* me with fear and wonder.

*Shak.*

Amaz'd I stood, *barrow'd* with grief and care.

*Milton.*

*HARROWBRIDGE*, a village in Devonshire.

† *HARROW*, or (as it is pronounced,) *AKRAW*, is still very much in use among the Irish, though it was to be used by them as an unmeaning kind of expletive, or as most an exclamation of surprise, rather than of sudden distress.

\* *HARROWER*, *n. s.* [from *barrow*] 1. He who harrows. 2. A kind of hawk. *Ainsworth.*

*HARROWGATE*. See *HARROGATE*.

*HARROW-WEALD*, a village in Middlesex, at the foot of Harrow hill.

\* *To HARRY*, *v. a.* [*barer*, Fr.] 1. To tease; to hare; to ruffle.—

Thou must not take my former sharpness ill.

—I repent me much

That I so *barry'd* him.

*Shak.*

2. In Scotland it signifies to rob, plunder, or oppress: as, *one harried a nest*; that is, he took the young away: as also, *he harried me out of house and home*; that is, he robbed me of my goods, and turned me out of doors. See *To HARROW*.

*HARRY, BLIND*. See *HENRY*, N° 31.

*HARRY ISLAND*, an island of the United States near the mouth of the Santee, on the coast of S. Carolina.

\* *HARSH*, *adj.* [*bervische*, German, *Skinner*.] 1. Austere; roughly sour.—

Our nature here is not unlike our wine;

Some sorts, when old, continue brisk and fine:

So age's gravity may seem severe,

But nothing *harsh* or bitter ought t' appear.

*Denham.*

—Sweet, bitter, sour, *harsh* and salt, are all the epithets we have to denominate that numberless variety of relishes. *Locke*.—The same defect of heat which gives a fierceness to our natures, may contribute to that roughness of our language, which bears some analogy to the *harsh* fruit of colder countries. *Swift*. 2. Rough to the ear.—

A name unmusical to Volscian ears,

And *harsh* in sound to thine.

*Shak.*

Age might, what nature never gives the young,

Have taught the smoothness of thy native tongue;

But satire needs not that, and wit will shine

Through the *harsh* cadence of a rugged line.

*Dryden.*

—The unnecessary consonants made their spelling tedious, and their pronunciation *harsh*. *Dryden*.

Thy lord commands thee now,

With a *harsh* voice, and supercilious brow,

To servile duties.

*Dryden.*

3. Crabbed; morose; peevish.—He was a wise man and an eloquent; but in his nature *harsh* and baughty. *Bacon*.—Bear patiently the *harsh* words of thy enemies, as knowing that the anger of an enemy admonishes us of our duty. *Taylor*.—

No *harsh* reflection let remembrance raise;

Forbear to mention what thou canst not praise.

*Prior.*

—A certain quickness of apprehension inclined him to kindle into the first motions of anger; but, for a long time before he died, no one heard an intemperate or *harsh* word proceed from him. *Atterbury*. 4. Rugged to the touch; rough.—Black feels as if you were feeling needle's points, and some *harsh* sand: and red feels very smooth. *Boyle*. 5. Unpleasing; rigorous.—

With

With eloquence innate his tongue was arm'd;  
Though *harsh* the precept, yet the preacher  
charm'd. *Dryden.*

• **HARSHLY.** *adv.* [from *harsh*.] 1. Sourly; austere to the palate, as unripe fruit. 2. With violence; in opposition to gentleness, unless in the following passage it rather signifies unripely.—

'Till, like ripe fruit, thou drop  
Into thy mother's lap; or be with ease  
Gather'd, not *harshly* pluck'd. *Milton.*

3. Severely; morosely; crabbedly.—I would rather he was a man of a rough temper, that would treat me *harshly*, than of an effeminate nature. *Addison.* 4. Unpleasantly to the ear—

My wife is in a weyward mood to-day;  
I tell you, 'twould sound *harshly* in her ears. *Shak.*

Get from him why he puts on this confusion,  
Grating so *harshly* all his days of quiet  
With turbulent and dangerous lunacy. *Shak.*  
The rings of iron that on the doors were hung,  
Sent out a jarring sound, and *harshly* rung. *Dryden.*

• **HARSHNESS.** *n. f.* [from *harsh*.] 1. Sourness; austere taste.—Take an apple and mill it upon a table hard: the rolling doth soften and sweeten the fruit, which is nothing but the smooth distribution of the spirits into the parts; for the unequal distribution of the spirits maketh the *harshness*. *Bacon.* 2. Roughness to the ear.—Neither can the natural *harshness* of the French, or the perpetual ill accent, be ever refined into perfect harmony like the Italian. *Dryden.*—Cannot I admire the height of Milton's invention, and the strength of his expression, without defending his antiquated words, and the perpetual *harshness* of their sound? *Dryden.*—

'Tis not enough no *harshness* gives offence;  
The sound must seem an echo to the sense. *Pope.*

3. Ruggedness to the touch.—*Harshness* and ruggedness of bodies is unpleasant to the touch. *Bacon.* 4. Crabbedness; moroseness; peevishness. Thy tender hafterd nature shall not give  
Thee o'er to *harshness*; her eyes are fierce, but thine  
Do comfort and not burn. *Shak.*

**HARSKIRCH**, a town of Germany, in the circle of the Upper Rhine, and late county of Nassau Saarbrück; annexed to the French republic, and included in the dep. of Sarre and Moselle, in 1795; and finally ceded to it by the treaty of Lunéville in 1801. It lies 30 m. SSW. of Deux Ponts.

**HARSLA**, a town of Sweden, in W. Gothland.

**HARSLET.** See **HASLET**.

**HARSO**, an island in the Baltic, near the coast of Sweden. Lon. 17. 16. E. Lat. 58. 44. N.

(1.) • **HART.** *n. f.* [*hart*, Sax.] A he deer of the large kind; the male of the roe.—

That instant was I turn'd into a *hart*,  
And my desires, like fell and cruel hounds,  
E'er since pursue me. *Shak.*

The deer.

And fearful *harts* do wander every where  
Amidst the dogs. *Mey's Virgil.*

(2.) **HART**, a stag, or male deer, in the 6th year. See **CERVUS**, N° vi.

(3.) **HART'S**, HORNS OF, the horns of the male

deer.—The scrapings or raspings of these, medicinal, and used in decoctions, pills, &c. The horns of harts yield by distillation a very penetrating volatile spirit called *Fœnalis Alkali Ammoniac*; which is also procured in equal section from the horns, bones, &c. of other mammals. See **ALKALI**, § 6; **ALKALINE SALTS** 7—10; **CHEMISTRY**, *Index*; and **HARTSHORN** § 1. 4. 5.

(4.) **HARTS**, KING OF THE. See **CAPRA** VII, N° 16.

**HART-BEEST.** See **CAPRA**, § VII, N° 1.

**HARTE**, a town on the coast of Durham.

**HARTENSDORF**, a town of Saxony, in circle of Erzgebürg, 4 miles ESE. of Zwickau.

**HARTENSTAIN**, a town of Germany, in Austria, 12 miles W. of Crema.

**HARTENSTEIN**, a town of Saxony, in Schönbürg, 6 m. SE. of Zwickau, and 12 E. of Greibitz.

**HARTEY**, a town in the isle of Sheppey.

**HARTFIELD**, a village in Suffex.

(1, 2.) **HARTFORD**, a town and county England, so named from the harts with which latter anciently abounded, being then overgrown with woods. See **HARTFORD**.

(3—5.) **HARTFORD**, 3 English villages: 1. Cheshire, NW. of Northwich: 2. near Huntingdon: 3. in Yorksh. near Ravensworth.

(6.) **HARTFORD**, a populous and busy town of Connecticut, bounded on the E. by Tolland, S. by Newhaven and part of Middlesex, and W. by Litchfield counties; on the N. by Massachusetts. It is divided into 14 townships, and in 1792 contained 37,766 citizens, and 263 slaves.

(7.) **HARTFORD**, a flourishing city in the same county, (N° 6.) and one of the capitals of the State, seated on the W. side of the Connecticut River, over which there is a bridge, with high and romantic banks on each side. It contained 1800, above 500 houses, 5000 citizens, and 12 churches; and has a bank, a State house, court house, distillery, and several manufactures of cloth, glass, iron, paper, powder, &c. It lies 50 miles W. of Boston, and 90 NE. of New York. Lon. 2. 4. E. of Philadelphia. Lat. 41. 44. N.

(8.) **HARTFORD**, a town of N. of Carolina, 10 miles E. of Halifax.

(9.) **HARTFORD**, a town of Vermont, 8 m. NW. of Windsor.

(10.) **HARTFORD**, EAST, a town of Connecticut, on the E. side of the Connecticut, 3 m. S. of HARTFORD, N° 7.

**HARTFORDSHIRE.** See **HARTFORDSHIRE**.

**HARTHA**, a town of Saxony, 5 miles SW. of Dobeln.

**HARTHAM**, a town of Austria, 4 miles E. of Biberach.

**HARTHEIM**, a town of Franconia, 12 m. S. of Wertheim.

**HARTLAND**, a market town in Devonshire, near the Bristol channel, 28 miles W. of Barnstaple, and 213 W. by S. of London.

**HARTLAND POINT**, a cape at the entrance of the Bristol channel. Lon. 4. 45. W. Lat. 51. 9. N.

(1.) **HARTLEBURY**, a town near Worcester.

(2.) **HARTLEBURY**, a town 4 miles from Gloucester.

(3.) **HART**

**HARTLEPOOL**, a sea-port town in Durham, built on a promontory, and almost encompassed by the sea. It is an ancient corporation, governed by a mayor and aldermen, with other subordinates. In the reign of Edward III, it supplied ships to the navy. It depends chiefly on the fish trade; and its harbour is much frequented by colliers passing to and from Newcastle. It is 10 miles N. of Stockton, and 234 W. of London. Lon. 1. 16. W. Lat. 54. 38. N.

(1.) **HARTLEY**, David, M. A. an eminent physician, born in 1704, at Ilkington, where his father was curate. He received his academical education at Jesus college, Cambridge, of which he was a fellow. He first practised physic at Newmarket upon Trent; afterwards at London; and then went to Bath, where he died in 1757, aged 53, leaving two sons and a daughter. He published "A view of the evidence for and against STEPHEN'S MEDICINES as a solvent for cancer, containing 155 cases with some experiments and observations;" London, 1739. He also had to have written against Dr Warren, of Linsod's-bury, in defence of inoculation; and his letters of his are to be met with in the *Philosophical Transactions*. His chief literary production is "Observations on man, his frame, his duty, and his expectations, in two parts;" London, 1749, 2 vols.

(2.) **HARTLEY**, Thomas, M. A. rector of Winton, in Northamptonshire, an English clergyman of great piety, charity and universal philanthropy. He was born in 1707; wrote *A treatise of the Millennium*, and several sermons; and translated the works of Baron Swedenbourg into English. He died at E. Malling in Kent, Dec. 10th 1781, aged 78.

(3.) **HARTLEY**, a river of Northumberland which runs into the S. Tyne at Featherstonehaugh.

(4.) **HARTLEY**, a town of Northumberland, on the coast, NW. of Tynemouth, and 12 miles NE. of Newcastle; where Lord Delaval has constructed a pretty haven, whence coals are sent to London. Here are large salt, copperas, and glass works; which yield 30,000 l. a-year to Lord Delaval. A canal is cut through a solid rock to the sea, 52 feet deep, 30 broad, and 900 long.

(5.) **HARTLEY**, 3 villages: 1. in Dorsetshire, near Bants, near Selborn.

(6.) **HARTMANN**, George, a German mathematician, who, in 1540, wrote a book on perspective.

(7.) **HARTMANN**, John Adolphus, a learned diplomatist and historian, born at Munster in 1680. After being a Jesuit for several years, he became a monk at Cassel, in 1715; and soon after was professor of philosophy and poetry, and in 1725 professor of history and eloquence, at Marburg, where he died in 1744. The most esteemed of his works are, 1. *The state of the sciences in Germany*, in German. 2. *Historia Hassiaca*, 3 vols. 3. *Præcepta eloquentiæ rationalis*, &c.

(8.) **HARTMANN**, Wolfgang, a German historian, who, in 1596, composed *Annals of Augsburg*.

**HARTOGIA**, in botany; a genus of the pentandria order, belonging to the monocotyledonous class of plants; and in the natural method ranking under the 4th order, *Aggregata*. The male calyx is

pentaphyllous, the petals five; the female only triphyllous, with 5 petals, and 5 barren and 5 castrated stamens. There are 3 capsules; and the seeds are arillated, or inclosed in a deciduous case.

**HARTON**, 5 English villages: 1. in Devonshire, near Hartland; 2. in Durham, S. of Shields; 3. in Salop, NW. of Diddlebury; 4 and 5. in Yorkshire, near Flaxton.

**HARTPURY**, a town 4 m. NW. of Gloucester.

(1.) \* **HART ROYAL**. n. s. A plant. A species of buckthorn plantain.

(2.) **HART ROYAL**. See **PLANTAGO**.

**HARTS HILL**, a hill in Warwickshire.

**HARTSHOLM**, a village near Lincoln.

(1.) \* **HARTSHORN**. n. s. — *Hartshorn* is a drug that comes into use many ways, and under many forms. What is used here are the whole horns of the common male deer, which fall off every year. This species is the fallow deer; but some tell us, that the medicinal *hartshorn* should be that of the true hart or stag. The salt of *hartshorn* is a great sudorific, and the spirit has all the virtues of volatile alkalies: it is used to bring people out of faintings by its pungency, holding it under the nose, and pouring down some drops of it in water. *Hill*. — Rameose concretions of the volatile salts are observable upon the glass of the receiver, whilst the spirits of vipers and *hartshorn* are drawn. *Woodward*.

(2.) \* **HARTSHORN**. n. s. An herb. *Ainsworth*,

(3.) **HARTSHORN**. in geography, a village in Derbyshire, N. of Ashby de la Zouch.

(4.) **HARTSHORN**, CALCINED, or coal of *hartshorn*, a very white earth, procured by calcining the horns of harts, in a long continued and strong fire. This earth is employed in medicine, as an absorbent, and when levigated, is the basis of Sydenham's white decoction, which is commonly prescribed in dysenteries.

(5.) **HARTSHORN JELLY** is nutritive and strengthening, and is sometimes given in diarrhoeas; but a decoction of burnt hartshorn in water is more frequently used for this purpose, and is called *hartshorn drink*.

(6.) **HARTSHORN PLANTAIN**. {See **PLANTAGOS**

(7.) **HARTSHORN**, SALT OF. } See § 1; AL-

(8.) **HARTSHORN**, SPIRIT OF. } KALI, § 6; ALKALINE SALTS, § 7—10; and **CHEMISTRY**, *Index*.

**HARTSOEKER**, Nicholas, a Dutch philosopher, born at Gouda, in 1656. He received a liberal education from his father, who was a minister among the Remonstrants, and became so eminent in natural philosophy and mathematics, that Peter the Great invited him to Moscow, but he declined the honour. He became professor of philosophy at Heidelberg, and mathematician to the Elector Palatine. He wrote a course of Natural Philosophy, in 4to with some other works; and died in 1725.

\* **HARTSTONGUE**. n. s. [*lingua cervina*, Lat.] A plant.—It commonly grows out from the joints of old walls and buildings, where they are moist and shady. There are very few of them in Europe. *Miller*. — *Hartstongue* is propagated by parting the roots, and also by seed. *Mortimer*.

**HARTUNGUS**, John, a German author of the 16th century. He was professor of Greek at Heidelberg;

delberg; translated Apollonius into Latin; published notes on Homer's *Odyssey*; and died in 1579.

(1.) \* **HARTWORT**. *n. f.* [*tordylium*, Lat.] An umbelliferous plant. *Miller*.

(2.) **HARTWORT**. See **TORDYLIUM**.

(3.) **HARTWORT**, ETHIOPIAN SHRUBBY. See **BUPLEURUM**.

(4.) **HARTWORT**, MARSHMILLS. See **SESELL**.

**HARTY**, an island of Kent, near Sheppey.

(1.) **HARTZ**, [Germ. *i. e.* resinous, or pine trees.] A forest of Germany in Brunswick, which forms a part of the ancient **HARCYNIAN FOREST**.

(2.) **HARTZ**, a mountain of Upper Saxony, in the principality of Anhalt Bernburg.

**HARTZEROETH**, a town of Germany, in the circle of the Lower Rhine, and lately in the electorate of Treves; now included in the French republic, and dep. of the Rhine and Nahe: 8 miles NE. of Treves.

**HARTZGEROD**, a town of Upper Saxony, in Anhalt Bernburg, with a castle, near Mount **HARTZ**: 24 m. SW. of Bernburg, and 44 WSW. of Dessau. The houses and walls are built of a kind of marble. Lon. 28. 48. E. of Ferro. Lat. 51. 46. N.

**HARTZIGRODA**, a town of Upper Saxony, in the county of Mansfeld, 2 m. W. of Hettstadt.

**HARVA**, a town of Sweden, in W. Gothland.

**HARVARD**, a village in Middlesex.

(1.) \* **HARVEST**. *n. f.* [*harvest*, Sax.] 1. The season of reaping and gathering the corn.—

As it ebbs, the seedman

Upon the slime and ooze scatters his grain,

And shortly comes to *harvest*. *Shak.*

—With *harvest* work he is worse than in Spring. *L'Estrange*. 2. The corn ripened, gathered and inned.—

From Ireland come I with my strength,  
And reap the *harvest* which that rascal sow'd.

*Shak.*

When the father is too fondly kind,  
Such seed he sows, such *harvest* shall he find.

*Dryden*.

3. The product of labour.—

Let us the *harvest* of our labour eat:

'Tis labour makes the coarsest diet sweet.

*Dryden*.

(2.) **HARVEST**, in the Saxon, (§ 1.) signifies *herb feast*.

\* **HARVESTER**. *n. f.* [from *harvest*.] One who works at the harvest.

**HARVEST FLY**, in zoology, a large four-winged fly of the cicada kind, very common in Italy, and erroneously supposed to be a grasshopper. See **CICADA**.

(1.) **HARVEST-HOME**. *n. f.* 1. The song which the reapers sing at the feast made for having inned the harvest.—

Your hay it is mow'd, and your corn is reap'd;

Your barns will be full, and your hovels heap'd;

Come, my boys, come,

Come, my boys, come,

And merrily roar out *harvest-home*. *Dryden*.

2. The time of gathering harvest.—

At *harvest-home*, and on the shearing-day,  
When he should thanks to Pan and Pales pay.

*Dryden*.

3. The opportunity of gathering treasure.—My wife I will use as the key of the cuckoldy rogue's coffer; and there's my *harvest-home*. *Shak.*

(2.) **HARVEST-HOME**. See **DECEMBER**, § 2.

\* **HARVEST-LOD**. *n. f.* The head reaper at the harvest.—

Grant *harvest-lod* more by a penny or two,  
To call on his fellows the better to do. *Tupper*

\* **HARVESTMAN**. *n. f.* [*harvest* and *man*.] A labourer in harvest.—

Like to a *harvestman* that's task'd to mow

Or all, or lose his hire. *Shak.*

(1.) **HARVEY**, Dr William, an eminent English physician of the 17th century, took his degree of M. D. at Cambridge; was afterwards admitted into the college of physicians in London and was appointed lecturer of anatomy and chirurgery in that college. In these lectures he opened his discovery relating to the circulation of the blood; which, after a variety of experiments, he communicated to the world in his *Exercitationes anatomicae de motu cordis et sanguinis*. He was physician to king James I. and to king Charles I. and adhered to the royal cause. His discovery has eternized his memory. In 1651, he published his *Exercitationes de generatione animalium*, a very curious work. His papers were destroyed during the civil wars. In 1654, he was chosen president of the college of physicians in his absence: but as he could not discharge the duty of that office, he desired them to choose Dr Pringle. As he had no children, he settled his paternal estate upon the college. In 1653 he built a library, and a museum; and in 1656 he brought the deeds of his estate, and presented them to the college. He was then present at the first feast, instituted by himself, together with a commemoration speech in Latin, to be spoken on the 18th of October annually in honour of the benefactors to the college; and he appointed a handsome stipend for the orator, and also for the keeper of the library and museum, which are still called by his name. He died in 1657. This great physician had the happiness, in his lifetime, to find the clamours of ignorance, envy, and prejudice, against his doctrine, totally silenced, and to see it universally established. It is of the utmost importance in medicine; as it is perhaps impossible to define health and sickness in fewer words, than that the one is a free, and the other an obstructed, circulation.—Dr Harvey was not only an excellent physician, but an excellent man: his modesty, candour, and piety, were equal to his knowledge; the farther he penetrated into the wonders of nature, the more he venerated the Author of it.

(2.) **HARVEY**, Gideon, M. D. an English physician, born in Surrey. He studied at Leyden, and was admitted fellow of Exeter College, in 1655. He was physician to Charles II. during his exile, and to the English army in Flanders. After the revolution he was made physician of the Tower. He wrote several works on medicine, but of no esteem. He died about 1700.

**HARVEY'S ISLAND**, an island in the S. Pacific Ocean composed of 3 or 4 small isles united by submarine rocks, and about 20 miles in circumference, discovered by Capt. Cook, in 1773. See **COOK**, N° III, § 9, 10.

**HARVIE**,

**HARVEY**, Alexander, a native of Scotland, who pretends to be commemorated in a *Dictionary of Arts*, for having, at the imminent risk of his life, first introduced the inclle manufacture into Britain. He went over to Holland about 1732, and, in spite of the care, which the Dutch took to conceal their methods of manufacturing, brought over from Haarlem two of their inclle looms, and one of their workmen; by whose assistance he established the first inclle manufactory at Glasgow, which has since been copied at Manchester, &c. See *J. Sinclair's Stat. Acc.* vol. V. p. 503.

**HARUM**, a village in Yorkshire.

**HARUN**, a town of Persia, in Segestan.

**HARUSPICES**, or **ARUSPICES**, pretend to divine by certain signs or omens among the *Ænea*. The Roman aruspices were at first all taken from Etruria; afterwards young Romans were sent there to be brought up in the science. See *ARUSPICES*, and next article.

**HARUSPICY**, *s. f.* The art of divination. See *Divination*, § II. 1, 2. It consisted in foretelling futurities by attending to various circumstances of phenomena. 1. It was an ill omen if the victim needed to be dragged to the altar, if it broke its legs, fled away, avoided the stroke, struggled when after it, made a great bellowing, was long in bleeding, or bled but little. 2. Presages were drawn from inspecting the noble parts, as the heart, lungs, spleen, and especially the liver. If all these were sound, if the top of the liver was large and well made, and if its fibres were strong, it presaged well. 3. They were also drawn from the manner in which the fire consumed the victim. If the flame brightened immediately, was pure and clear, rose out till the victim was consumed, these were happy signs. 4. The smoke also was considered, whether it whirled about in curls, or spread itself to the right or the left, or gave a smell different from the common one of broiled meat. 5. It was a lucky omen if the incense they burned smoked all at once, and gave a most agreeable smell.

(1.) **HARWICH**, a populous and well built town of Essex, 70 miles NE. of London. It has a great maritime trade, is almost encompassed by the sea, and has strong works. It is walled, and the streets are paved for the most part with clay, which is crumbling down from the cliff, where there is a flowing water between the town and Bacon-hill, soon grows as hard as stone; and the inhabitants boast that the wall is as strong and the streets as clean as those that are of real stone. The harbour or bay is very large, safe, and deep; and is defended by a strong fort on the Suffolk side. There is a dock belonging to government, with all the conveniences for building, cleaning, and refitting ships of war. Near the town, on *Bacon-hill*, is a very fine light house, which is seen at a great distance, and is very useful on this dangerous coast. See *BACON-HILL*, N° 2.) At this place the packet boats between England and Holland are stationed. The bay is so spacious, by the influx of the river from Manningtree, and the Orwell from Ipswich, and such use was made of it in the Dutch war, that 100 men of war have been seen here at one time, with their tenders, besides 200 or 400 colliers; for it is a perfect harbour to  
Vol. XI. PART I.

within two miles of Ipswich, and able to receive ships of 100 guns all the way. The inns are good, but the accommodations dear. Harwich was first made a free borough, and had a grant of its market on Tuesdays, in the reign of Edward II. Its government was settled by charter of king James I. in a mayor, chosen yearly, November 10, out of 8 aldermen, who with 24 capital burgesses, the electors, and the recorder, make the corporation. By this charter it had also a power to elect two burgesses to parliament, the grant of its Friday market, and its two fairs on May-day and October 18, which are each for three days. The town has also an admiralty jurisdiction within its liberties, and the return of all writs, fines, &c. Though the entrance into the sea here is between 2 and 3 miles wide at high water, yet the channel where the ships must keep to come to the harbour, which is on the Suffolk side, is deep and narrow; so that all ships that come in or go out are commanded by the guns of Landguard Fort on that side. This town was fortified heretofore on the land side, but in the reign of king Charles I. the fortifications were demolished. It has since been ordered to be refortified. The sea makes frequent encroachments on the land here. Lon. 1. 25. E. Lat. 52. 0. N.

(2.) **HARWICH**, a town of Massachusetts, on Barnstable Bay. Lon. 70. 5. E. Lat. 41. 43. N.

(3.) **HARWICH**, a town of Vermont, 25 miles N. of Bennington.

**HARWINGTON**, a town of Connecticut, 18 miles W. of Hartford, and 209 from Philadelphia. Lon. 1. 37. W. of that city. Lat. 41. 41. N.

(1.) **HARWOOD**, Edward, D. D. a learned dissenting clergyman, born in Lancashire, in 1729. He was pastor of a congregation at Bristol, whence he was obliged, on account of his zeal in the Arian controversy, to remove to London; where he taught the classics. He published a Translation of the New Testament; a view of the various editions of the Greek and Roman classics; and many other books and pamphlets. He died at London of a paralytic complaint, which had confined him to the house for 14 years, and deprived him of the use of his left side; Jan. 14. 1794, aged 65.

(2.) **HARWOOD**, a small but neat town in the N. Riding of Yorkshire, with a costly stone bridge of 11 arches over the Wharfe, which runs in a bed of stone, and is as clear as rock water. Near it are the ruins of an ancient castle, built soon after the conquest; and which was a neat strong building in Cambden's time. It had a variety of masters; one of whom, in the reign of king John, obtained a grant for a market and fair here. In the reign of Edward III. it was valued at 400 marks a year. This castle was ruined in the civil wars. It has 8 or 9 dependent constabularies, wherein are many antiquities. The remains of the castle are still in a condition to last long. It covered near an acre of ground. Near it is *Harwood House*, one of the first houses in the county for elegance, built on part of the site of *Gawthorp Hall*. In the church are some ancient monuments, particularly that of lord chief justice Gascoigne, who committed Henry, Prince of Wales, to prison for

N.

Striking

striking him on the bench. See ENGLAND, § 32, and GASCOIGNE, N° 2.

(3.—5.) HARWOOD, 3 villages: 1. in Bucks, N. of Winslow; 2. in Hertfordshire, W. of Roß; 3. in Lancashire, S. of Clithero.

(6.) HARWOOD, GREAT, } 2 villages in Lac-

(7.) HARWOOD, LITTLE, } cash. N. of Black-

HARZ, a large mountain of Upper Saxony, covered with a forest, 48 miles long and 20 broad; extending from Langlestheim in Wolfenbüttele, through Grubenhagen, Wernigerode and Blankenburg, to Hohnstein and Stolberg, as far as Hartzgerode. The air is so cold that the winters usually last 6 months. The forest consists of oak, beech, ash, alder, birch, pine and fir trees. The mines afford gold, and abound with silver, copper, lead, iron, zinc, cobalt, borax, sulphur, yellow ochre, nitre, lapis calaminarius, &c. The value of the gold amounts to 2,880 rixdollars a year; and is coined into ducats on the spot; the silver, which is also coined on the Harz, amounts to 801,800 rix-dollars annually; and the whole product of the mines to 1,174,730; which, after deducting all charges, leave a profit of 425,274 rix-dollars.

(1.) HAS, a district of Arabia in Yemen.

(2.) Has, the capital of the above district, 40 m. N. of Mocha. Lon. 43. 15. E. Lat. 14. 58. N.

HASAB, a town of Candahar.

HASAKLU, a town of Turkey, in Natolia.

HASAU, a town of Courland, 6 miles W. of Pskyn.

HASBAIN, or } a country of Germany, in  
HASBEIN, } Westphalia, in the ci-devant  
Bishoprick of Liege, now annexed to the French Republic, and included in the department of the Ourte. Vifet and St Tron are the chief towns.

HASBERG, a fort of Germany, in Carniola.

HASBET, a town of Egypt, on the E. side of the Nile opposite to Rosetta.

HASCK, a town of Arabia, in Hadramaut.

HASCUSIE, a small island of Scotland, in Shetland, between Fetlar and Yell.

(1.) HASE, a river of Germany, which rises in Osnaburg, and runs into the Ems at Meppin.

(2, 3.) HASE, James and Theodore, two learned German writers of the 18th century, brethren, and authors of Dissertations and other classical works. Theodore was professor of Hebrew at Bremen, and died in 1731, aged 49. James died in 1721.

HASEL, a river of Franconia, which runs into the Werra, 3 miles SE. of Meiningen.

HASELDORF, a town of Holstein.

HASELOCH, a town of Germany, in the circle of the Lower Rhine, 12 miles SW. of Mannheim; now included in the French republic and dept. of Mont Torpère.

HASELOE, an island of Denmark, in the Cate-gate, 12 miles from Zealand. Lon. 12. 45. E. Lat. 56. 12. N.

HASENDORF, a town of Austria, 8 miles WSW. of Tulln.

HASER, a town of Egypt, 15 m. SE. of Tineh.

• To HASH. v. n. (*hacher*, Fr.). To mince; to chop into small pieces, and mingle.—

He rais'd his arm

Above his head, and rain'd a storm

Of blows so terrible and thick,

As if he meant to *hash* her quick. *Hudib.*

—What have they to complain of but too great variety, though some of the dishes be not set in the exactest order, and politeness; but *hash* up in haste? *Gentle.*

• HASK. n. s. This seems to signify a case habitation made of rushes or flags. Obsolete.

Phœbus, weary of his yearly task,

Establish'd hath his seeds in lowly lay,

And taken up his inn in fishes' *hask*. *Spex.*

HASLACH, 2 towns of Germany: 1. in Atria, 6 miles E. of Aigen; 2. in Suabia, on Kinzig.

HASLAU, or HASSEL. See HASSELA.

HASLED, a town of Sweden, in W. Gothia.

HASLEMERE, a town of Surrey, on the E. of the county, next Hampshire, 43 miles from London. It is an ancient place, and was once destroyed by the Danes. It is a borough by prescription, and has sent 2 members to parliament since the reign of Edward IV. chosen by a baron and burgage-tenners. It is said to have had parish churches formerly, though now but one; that it then stood upon a hill more to the south. It now lies 19 miles N. of Chichester, and 42 SE. of London. Lon. 0. 35. W. Lat. 51. 7. N.

• HASLET, HASLETT. n. s. [*hasle*, Island; a bundle; *buttel*, *butereau*, *basier*, Fr.] The heart, liver, and lights of a hog, with the wind pipe and part of the throat to it.

HASLI, a district of the Helvetic Republic, the canton of Bern, in a fine valley SE. of the Brientz, and watered by the Aar; famous for cheese, which the citizens export to Italy.

HASLINDEN, or } a town of Lancashire,

HASLIGDON, } miles N. of Manchester  
and 196 NNW. of London. Lon. 2. 24. W. Lat. 53. 41. N.

HASLOE. See HASSELOE.

(1.) • HAST. n. s. [*hast*, Saxon, whence is from provinces it is yet called *hast*.] A clasp folded over a staple, and fastened on with a padlock.—Have doors to open and shut at pleasure, with *hasts* to them. *Mortimer.*

(2.) HAST AND STAPLE, in Scots law, a symbol commonly used in burgage tenements for entering and infefting an heir, by delivering in his hands the hast and staple of the door.

• To HAST. v. n. [from the noun.] To hasten with a hast.

HASPARAN, a town of France, in the dept. of the Lower Pyrenees, 7 miles SE. of Bayona.

HASSAN, a town of Persia, 87 miles NE. of Amadan.

HASSEL, a town of Hanzu, 11 m. E. of Hanzu.

HASELBACH, a river of Upper Saxony.

HASELBECH, a village in Northampton.

HASELBIERG, a town of Holstein.

HASELFELDE, a town of Lower Saxony, Blankenburg, 11 miles S. of Blankenburg.

HASELINE a town of Germany, in the Bishopric of Munster, 7 miles E. of Meppin.

HASELQUIST, Frederick, M. D. an eminent Swedish naturalist, born at Tournalla, in E. Goetland, in 1712, and educated at Upsal, under the great Linnæus. By the advice of that eminent botanist, with the assistance of the University of

**HALL**, who granted him a salary for the purpose, he set out upon a voyage to Palestine, in summer 1743, with the view of investigating the natural history of that country, and thereby illustrating etymology, and elucidating many passages in the Old Testament. In this enterprise he also received pecuniary aid, by private subscriptions. By the exert of Counsellor Lagerstroem, he obtained a free passage in a Swedish E. Indiaman, to Smyrna, where he arrived in Dec. 1749, and was most graciously received by M. A. Rydel, the Swedish consul. In Jan. 1750, he set out for Egypt, and remained 9 months at Cairo, whence he transmitted to Linnæus some specimens of his discoveries, which were published with great approbation. One of his letters to Linnæus is inserted under the title BOTANY, § 14. A collection of 10,000 specimens was then made to enable him to continue his travels and researches. In spring 1751, he passed through Jaffa to Jerusalem, Jericho, &c. returning through Rhodes and Scio to Smyrna. Thus completed the object of his mission, but unfortunately fell a sacrifice to the heat of the climate, which in his travels through Arabia, had affected him severely, that he died at Smyrna Feb. 8, 1751, aged 30. The Turks, with their usual avarice, seized his collections, were prevented from selling them by the Swedish consul, who wrote home an account of his death and circumstances, whereupon Q. Louisa Ulrica generally sent 14,000 dollars to redeem them; and a whole collection, consisting of numerous animals, fishes, birds, insects, serpents, Arabian plants, &c. arrived in good preservation at Stockholm, and was lodged in the cabinets at Ulrichsbach, and Drottningholm; duplicates of many of them being also sent to Linnæus at Upsal, who published an account of his deceased friend's voyage and discoveries, and named a plant after him. See *not rich*.

**HASELOQUISTIA**, in botany, a genus of the 15th order, belonging to the pentandria class of plants; and in the natural method ranking under the 15th order, *Umbellata*. The fruits are smooth; the seeds of the radius oval, plane, pointed, and convex in the middle; those in the middle hemispherical and uncoelated, or bladder-

**HASSETT**, a handsome town of the Batavian republic, in the dep. of Yssel, and late prov. of Overijssel; seated on the Vecht, 10 miles E. of Amsterdam. Lon. 6. 3. E. Lat. 53. 46. N.

**HASSETT**, a town of the French republic, in the dep. of Ourte, and ci-devant territory of the Electorate of the Demer, which runs through the dep. NNW. of Liege, and 14. NW. of Amsterdam. Lon. 5. 30. E. Lat. 50. 34. N.

**HASSELONE**. See **HASSELING**.

**HASSELWICK**, a town of Norway.

**HASI**, a town of Turkey, in Macedonia.

**HASSIDEANS**. See **ASSIDEANS**.

**HASSOCK** n. s. [*hassock*, German. *Skinner*.] A thick mat on which men kneel at church. He found his parishioners very irregular; and in order to make them kneel, and join in the service, he gave every one of them a *hassock* and a prayer book. *Addison*. 4. In Scotland it is applied to any thing made of rushes or privet,

on which a person may sit: it is therefore probable that *hassock* and *hask* are the same.

**HAST**. The second person singular of *have*.  
(1.) **HASTA**, or **HASTA PURA**, among medalists, signifies a kind of spear or javelin, not shod or headed with iron; or rather an ancient sceptre, somewhat longer than ordinary, occasionally given to all the gods.

(2.) **HASTA**, in some countries, is a measure or quantity of ground amounting to thirty paces; thus called according to M. Du Cange, from the *hasta* or rod wherewith it was measured.

**HASTATA FOLIA**. } See **BOTANY**, *Glossary*.  
**HASTATED LEAVES**. }

**HASTATI**. See **BATTLE**, § 3.

**HASTE**. n. s. [*haste*, Fr. *haste*, Dutch.] 1. Hurry; speed; nimbleness: precipitation.—

Spare him, death!

But O, thou wilt not, canst not spare!

*Haste* hath never time to hear. *Crafter*.

Our times reform'd, and not compos'd in *haste*,

Pow'd like marble, would like marble last;

But is the present, so the last age writ;

In both we find like negligence and wit. *Waller*.

—In as much *haste* as I am, I cannot forbear giving an example. *Dryden*.—

The wretched father, running to their aid

With pious *haste*, but vain, they next invade.

*Dryden*.

2. Passion; vehemence.—I said in my *haste*, all men are liars. *Psalms*.

(1.) **HASTE**. **TO HASTEN**. v. n. [*haster*, Fr. *haster*, Dutch.] 1. To make haste; to be in a hurry; to be busy; to be speedy.—I have not *hastened* from being a pastor to follow thee. *Jer*.

2. To move with swiftness; eagerness; or hurry.

'Tis Cinna, I do know him by his gait;

He is a friend. Cinna, where *haste* you so? *Shak*.

—They were troubled and *hasted* away. *Psalms*.

—All those things are passed away like a shadow, and as a post that *hasted* by. *Wisdom*.—

*Hasting* to pay his tribute to the sea,

Like mortal life to meet eternity. *Dennis*.

These rites perform'd, the prince, without delay,

*Hastes* to the netherworld, his destin'd way. *Dryd*.

To distant Sparta, and the spacious waste

Of sandy Pyle, the royal youth shall *haste*. *Pope*.

Soon as the sun awakes, the sprightly court

Leave their repose, and *hasten* to the sport. *Prior*.

(2.) **HASTE**. } v. a. To push forward;

**TO HASTEN** } to urge on; to precipitate;

to drive to a swifter pace.—Let it be so *hasted*, that supper be ready at the farthest by five of the clock. *Shakespeare*.—

All hopes of succour from your arms is past;

To save us now, you must our ruin *haste*. *Dryd*.

Each sees his lamp with diff'rent lustre crown'd;

Each knows his course with diff'rent periods

bound;

And in his passage through the liquid space,

Nor *hastes*, nor retards his neighbour's race.

*Prior*.

**HASTENBECK**, a town of Lower Saxony, in

Calenberg, 5 miles S. of Hameln; near which the

the French under Marth. D'Estrees defeated the

British under the D. of Cumberland, in 1757. See

**ENGLAND**, § 32.

**HASTE** **HASTENER**

**HASTENER.** *n. s.* [from *hasten*.] One that hastens or hurries.

**HASTILY.** *adv.* [from *hasty*.] 1. In a hurry; speedily; nimbly; quickly.—

A voice that called loud and clear,  
Come hither, hither, O come *hastily*! *Spenser*.

If your grace incline that we should live,

You must not, sir, too *hastily* forgive. *Waller*.

The next to danger, hot pursu'd by fate,

Half cloth'd, half naked, *hastily* retire. *Dryd.*

2. Rashly; precipitately.—Without considering consequences, we *hastily* engaged in a war which hath cost us sixty millions. *Swift*. 3. Passionately; with vehemence.

**HASTINESS.** *n. s.* [from *hasty*.] 1. Haste; speed. 2. Hurry; precipitation.—A fellow being out of breath, or seeming to be for haste, with humble *hastiness* told Basilus. *Sidney*. 3. Rash eagerness.—The turns of his verse, his breakings, his propriety, his numbers, and his gravity, I have as far imitated as the poverty of our language, and the *hastiness* of my performance, would allow. *Dryden*.—There is most just cause to fear, lest my *hastiness* to embrace a thing of so perilous consequence, should cause posterity to feel those evils.

*Hamlet*. 4. Angry stiffness; passionate vehemence.

**HASTING PEAR**, a name given by the gardeners to a species of pear, called also by some *green chisel pear*. This is a moderately large pear, and is longish towards the pedicle; its skin is thin, and of a whitish green; the pulp is melting, and of a sugary flavour. It ripens in July. See *Pears*.

(1.) **HASTINGS**, a town of Sussex, 64 miles S.E. of London. It is the chief of the cinque ports; and was formerly obliged to find 22 ships, within 20 days after the king's summons, well furnished and armed for service, and to maintain the crews a fortnight at its own charge. This town is said to have been named from Hastings, the famous Danish pirate. In king Athelstan's reign it had a mint. It had charters from Edward the Confessor, William I. and II. Henry II. Richard I. Henry III. Edward I. and Charles II. exempting it from toll, and empowering it to hold courts of judicature on life and death. It has about 600 handsome houses, and 3000 inhabitants; but frequent storms have rendered the harbour indifferent, though a vast sum of money has been laid out upon it. Hastings has sent members to parliament ever since Edward III. It supplies London with great quantities of fish, taken on the coast. It lies between two high cliffs towards the sea, and as high a hill on the land side, having two streets, and in each a parish church, divided by a stream called *the Bourn*. About 1377, this town was burnt by the French; and after it was rebuilt, it was divided into two parishes. It has two charity schools, for teaching 200 or 300 children. An ancient castle on the hill, which overlooked the town, is now in ruins. The markets are on Wed. and Sat. the fairs on Tues. and Wed. in Whitsun-week, and July 28, October 23, and 24. It had formerly a priory, and was a barony in the Huntington family, now in that of Rawdon. Hastings is remarkable for a battle fought in its neighbourhood, between Harold II. K. of England and William D. of Normandy, on the 13th Oct. 1066, in which the former was defeated and killed; and

by his death William became king of Eng. (See ENGLAND, § 18, 19.) The night before battle, the aspect of things was very different the two camps. The English spent the night in riot, jollity, and disorder; the Normans in order. The next day both armies prepared for battle. The duke divided his army into 3 lines: the first headed by Montgomery, consisted of archer light armed infantry: the 2d, commanded by himself, was composed of his bravest battalions, well-armed, and ranged in close order: his castle at whose head he placed himself, formed the line; and were so disposed, that they stood beyond the infantry, and flanked each wing of the army. Having given the signal of battle, the whole army moved at once, and singing the name of Roland, the famous peer of Charlemagne, advanced with alacrity towards the enemy. He had seized the advantage of a rising ground, having drawn some trenches to secure himself; he resolved to stand upon the defensive, and avoid all action with the cavalry, in which he was inferior. The Kentish men were placed in the van, the Londoners guarded the flank; the king, accompanied by his valiant brother Godwin and Leofwin, dismounting from horse, placed himself at the head of his infantry, and pressed his resolution to conquer or perish. The first attack of the Normans was desperate, and was received with equal valour by the English; and after a furious combat, which remained undecided, the former, overcome by the fertility of the ground, and hard pressed by the English, began first to relax their vigour, then to give ground; and confusion was spreading among their ranks, when William hastened, with a shout to the relief of his dismayed footmen. His presence restored their courage; the English were obliged to retreat; and the duke, ordering his army to advance, renewed the attack with fresh vigour, with redoubled vigour. Finding that they were aided by the advantage of ground, and encouraged by the example of their prince, the English made a desperate resistance, he commanded his troops to make a hasty retreat, and to allure the enemy to follow him by the appearance of flight. This succeeded; the inexperienced troops, without the action, and sanguine in their hopes, instantly followed the Normans into the plain. William ordered the infantry to fall about the ears of the pursuers, and the cavalry to make an attack the same instant upon their wings, and to pursue the advantage which the surprise and terror of the enemy must give them in that moment. The English were repulsed with slaughter, and driven back to the hill; when, being rallied again by the brave Harold, they standing their loss, they maintained the fight, and continued the combat. The duke tried the stratagem a second time with the same success, but even after this double advantage, he lost a great body of the English, who, as time seemed determined to dispute the victory to the last. He ordered his heavy-armed troops to make the assault upon them; while he remained behind, called the enemy, who were opposed by the situation of the ground. By this position he at last prevailed. Harold was

snarow, while combating with great bravery at the head of his men. His brothers shared the same fate; and the English, discouraged by their fall, gave ground on all sides, and were pursued with great slaughter by the victorious Normans. The day gained the decisive victory of Hastings, after a battle fought from morning till sunset, wherein the utmost valour was displayed by both armies, and by both commanders. William had 5,000 men killed under him; and near 15,000 Normans fell in the action. The loss was still more considerable on that of the vanquished; besides the death of the king and his two brothers. The dead body of Harold was brought to Wilham, who restored it without ransom to his mother. Hastings lies 24 m. E. of Lewes, and 40 of Brighton. Lon. 0. 34. E. Lat. 50. 50. N.

1.) **HASTINGS**. *n. f.* [from *hasty*.] Peas that come early.—The large white and green *hastings* are not to be set till the cold is over. *Mortimer*.

2.) **HASTINGS**, lady Elizabeth, daughter of Theophilus Earl of Huntingdon, a lady equally eminent for piety and charity. In the 31d N<sup>o</sup> of the *Tales*, a fine character is drawn of her under the name of *Alpasia*, by Mr Congreve. She died in 1740, unmarried, aged about 55.

**HASTINGUES**, a town of France, in the dep. of Landes, 10 miles S. of Dax.

**HASTIVE**, *adj.* a French term, used in English for early, forward, or before the ordinary season, as *hastive* peas, &c. The *hastive* fruits are strawberries and cherries.

**HASTY**, *adj.* [*hasty*, Fr. from *haste*; *hasty*, Ital.] 1. Quick; speedy.—

Is this the counsel that we two have shar'd,  
The sisters' vows, the hours that we have spent,  
When we have chid the *hasty* footed time  
Imparting us! *Shakespeare*.

2. *Adjective*; vehement.—He that is slow to wrath is of great understanding; but he that is *hasty* of wrath smiteth folly. *Proverbs*. 3. Rash; precipitate.—Seest thou a man that is *hasty* in his words? There is more hope of a fool than of him. *Proverbs*.—Be not rash with thy mouth, and let not thine heart be *hasty* to utter any thing before God. *Ecclesiastes*. 4. Early ripe.—Beauty shall be a fading flower, and as the *hasty* fruit before the Summer. *Isaiah*.

**HASTY-PUDDING**. *n. f.* A pudding made of oatmeal and flower, boiled quick together; as also of oatmeal and water boiled together.—

Sure *hasty-pudding* is thy chiefest dish,  
With bullock's liver, or some stinking fish.

*Dorset*.

**HASWELL**, a town in Somersetshire.

1.) **HAT**. *n. f.* [*hats*, Saxon; *hatt*, German.] A cover for the head.—She's as big as he is; and here's her thrum *hat*, and her muffler too. *Shakespeare*.

Out of mere ambition you have made  
Your holy *hat* be stamp'd on the king's coin. *Shakespeare*.  
—The *hat* was like a helmet, or Spanish montero. *Bacon*.

Hermes o'er his head in air appear'd,  
And with soft words his drooping spirits cheer'd;  
His *hat* adorn'd with wings disclos'd the god,  
And in his hand he bore the sleep-compelling rod. *Dryden*.

2.) **HAT** is also figuratively used for the dignity of an official, or a promotion to that dignity. Pope

Innocent IV. first made the hat the symbol or ensign of the cardinals, enjoining them to wear a red hat at the ceremonies and processions, in token of their being ready to spill their blood for Jesus Christ.

3.) **HATS** (§ 1.) are said to have been first used by men, about A. D. 1400, for country wear, riding, &c. But the hatters have a tradition among them, that the origin of their art, at least of that branch of it called *felting*, is much more ancient. The tradition is, that while St Clement, the 4th bishop of Rome, was flying from his persecutors, his feet became blistered; in consequence of which he was induced to put wool between the soles of his feet and the sandals which he wore. The consequence was, that in continuing his journey, the wool, by the sweat and motion of his feet, became as completely felted as if wrought on purpose. When he afterwards settled at Rome, he improved the discovery, and hence the origin of felting and hat-making. The hatters in Ireland, as well as in several catholic countries, still hold a festival on St Clement's day. Whatever truth may be in the above tradition, P. Daniel relates, that when Charles II. made his public entry into Rouen, in 1449, he had on a hat lined with red velvet, and surmounted with a plume or tuft of feathers: he adds, that it is from this entry, or at least under this reign, that the use of hats and caps is to be dated, which henceforward began to take place of the chaperons and hoods that had been worn before. In process of time, from the laity, the clergy also took this part of the habit; but it was looked on as a great abuse, and several regulations were published, forbidding any priest or religious person to appear abroad in a hat without coronets, and enjoining them to keep to the use of chaperons, made of black cloth, with decent coronets; if they were poor they were at least to have coronets fastened to their hats, and this upon penalty of suspension and excommunication. Indeed the use of hats is said to have been of a longer standing among the ecclesiastics of Britanny, by 100 years, and especially among the canons; but these were only a kind of caps, and from hence arose the square caps worn in colleges, &c. Lobineau observes, that a bishop of Dol, in the 12th century, zealous for good order, allowed the canons alone to wear such hats; enjoining, that if any other person come with them to church, divine service should immediately be suspended. Hats make a very considerable article in commerce: the finest, and those most valued, are made of the hair of the beaver. See **BEAVER** and **CASTOR**, N<sup>o</sup> IV, § 1.

4.) **HATS, METHOD OF MAKING**. Considerable improvements have been made in the art of **HAT-MAKING** within these 30 years. The following, which is chiefly extracted from the ingenious Mr *Nicholson's Philosophical Journal*, we are assured by an intelligent artist in this city, is the method now generally practised by the principal hat-makers in Scotland, as well as by Messrs Collinsons, hatters in Gravel-lane, Southwark, whose manufactory Mr Nicholson visited. "The materials for making hats are rabbits fur cut off from the skin, after the hairs have been plucked out, together with wool and beaver. The two former

are mixed in various proportions, and of different qualities, according to the value of the article intended to be made; and the latter is universally used for facing the finer articles, and seldom for the body or main stuff. Experience has shewn, that these materials cannot be evenly, and well felted together, unless all the fibres be first separated, or put into the same state with regard to each other. This is the object of the first process, called *bowing*. The material, without any previous preparation, is laid upon a platform of wood, or of wire, somewhat more than 4 feet square, called a *hurdle*, which is fixed against the wall of the workshop, and is enlightened by a small window, and separated by two side partitions from other hurdles, which occupy the rest of the space along the wall. The hurdle, if of wood, is made of deal planks, not quite 3 inches wide, disposed parallel to the wall, and at the distance of one 40th or one 50th of an inch from each other, for the purpose of suffering the dust and other impurities of the stuff, to pass through; a purpose still more effectually answered by the hurdle of wire. The workman is provided with a bow, a bow-pin, a basket, and several cloths. The bow is a pole of yellow deal wood, between 7 and 8 feet long, to which are fixed two bridges, somewhat like that which receives the hair in the bow of the violin.† Over these is stretched a catgut, about one 12th of an inch in thickness. The bow-pin is a stick with a knob, and is used for plucking the bow-string. The basket is a square piece of osier work, consisting of open straight bars with no crossing or interweaving. Its length across the bars may be about two feet, and its breadth 18 inches. The sides into which the bars are fixed are slightly bended into a circular curve, so that the basket may be set upright on one of these edges near the right hand end of the hurdle, where it usually stands. The cloths are linen. Besides these implements, the workman is also provided with brown paper. The *bowing* commences by shovelling the material towards the right hand partition with the basket, upon which, the workman holding the bow horizontally in his left hand, and the bow pin in his right, lightly places the bow-string, and gives it a pluck with the pin. The string, in its return, strikes part of the fur, and causes it to rise, and fly partly across the hurdle in a light open form. By repeated strokes, the whole is thus subjected to the bow; and this beating is repeated, till all the original clots or masses of the filaments are perfectly opened and obliterated. The quantity thus treated at once is called a *batt*, and

never exceeds half the quantity required to make one hat. When the batt is sufficiently bowed, it is ready for *basening*; which term denotes the first commencement of felting. The prepared material being evenly disposed on the hurdle, is first pressed down by the convex side of the batt, then covered with a cloth, and pressed successively in its various parts by the hands of the workman. The pressure is gentle, and the hands are very slightly moved back and forwards at the same time through a space of perhaps a quarter of an inch, to favour the hardening or entangling of the fibres. This pressure brings the hairs against each other, and multiplies their points of contact; the agitation of them gives to each hair a progressive motion towards the root; by means of this motion the hairs are twisted together, and the *lamina* of each hair, by fixing themselves to those of other hairs which happen to be directed the contrary way, keep the whole in that compact state which the pressure makes it acquire. In proportion as the mass becomes compact, the pressure of the hands should be increased; not only to make it more close, but also to keep up the progressive motion and twisting of the hairs, which then take place with greater difficulty: but throughout the whole of this operation, the hairs fix themselves only to each other, and not to the cloth with which they are covered, the fibres of which are smooth, and have no disposition to felting. (See *Hair*, § 2.) “In a short time the stuff acquires sufficient firmness to bear careful handling. The cloth is then taken off, and a sheet of paper, with its corners doubled in, so as to give it a triangular outline, is laid upon the batt, which last is folded over the paper as it lies, and its edges, meeting one over the other, form a conical cap. The joining is soon made good by pressure with the hands on the cloth. Another batt, ready hardened, next laid on the hurdle, and the cap before mentioned placed upon it, with the joining downwards. This last batt being also folded up, consequently have its place of junction diametrically opposite to that of the inner felt, which must therefore greatly tend to strengthen. The principal part of the hat is thus put together, and now requires to be worked with the hands a considerable time upon the hurdle, the cloth being so occasionally sprinkled with clear water. During the whole of this operation, which is called *basening* † the article becomes firmer and firmer, and contracts in its dimensions. It may easily be understood, that the chief use of the paper is to prevent the sides from felting together. The

† Mr Nicholson's correspondent, who is an experienced hatter, says that the bow is best made of ash; that it is composed of the *long* or handle; that the bridge at the smaller end, or that which is nearest the window in the act of bowing, is called the *cock*; and that the other bridge, which is nearest to the workman's hand, is called the *brack*.

‡ Mr Nicholson's correspondent says, that after bowing, and previous to the basening, a *hardening* is made, that is, a large piece of skin, about 4 feet long and 3 feet broad, of leather alumed or half tanned, is pressed upon the batt, to bring it by an easier gradation to a compact appearance; after which it is basened, being still kept upon the hurdle. This operation, the basening, derives its name from the process or *mode of working*, being the same as that practised upon a wool hat after bowing; the last being done upon a piece of cast metal 4 feet across, of a circular shape, called a *basin*: the joining of each batt is made good here by shuffling the hand, that is, by rubbing the edges of each batt folded over the other, to excite the progressive motion of each of the filaments in felting, and to join the two together.

being followed by a still more effectual continuation of the felting, called working. § This is done in another shop, at an apparatus called a *hurn*, consisting of a *trickle* (containing water slightly acidulated with sulphuric acid, to which, for better hats, a quantity of the grounds of beer is added, or else plain water for rinsing out), and 3 planks of wood joined together in the form of a frustum of a pyramid, and meeting in the middle at the bottom. The outer or upper edge of each plank is about 2 feet broad, and rises a little more than 2 feet and a half above the ground; and the slope towards the kettle is considerably rapid, so that the whole battery is narrower than six feet in diameter. The quantity of sulphuric acid added to the liquor is not sufficient to give a sour taste, but only renders it rough to the tongue. In this liquor, heated rather higher than unpractised hands could bear, the hat is dipped from time to time, and then rolled on the planks with a roller, and also by being rolled up, and opening it again; in which a certain degree of care is at first necessary, to prevent the sides from felting together; and which, in the more advanced stages of the operation, there is no danger. The imperfections of the hat now present themselves to the eye of the workman, who picks out knots and other hard substances with a bodkin, and adds more felt upon all hot parts as require strengthening. This addition is patted down with a wet brush, and soon harmonises with the rest. The beaver is laid on towards the conclusion of this kind of working. Mr Robinson could not distinctly learn why the *hurn* pump was used with beaver hats. Some persons said, that by rendering the liquor more viscous, the hat was enabled to hold a greater quantity of it for a longer time; but others said, that the acid and water would not adhere to the lower face, but would roll off immediately when the article was laid on the plank. It is probable, as he observes, that the manufacturers who follow the established practice, may not have considered the inconveniences this addition is calculated to remove." Several objections have been urged against the use of vitriol, or sulphuric acid, by some who prefer the use of the dregs; and such objections from experience are found to be unfounded. And from repeated discoveries and experiments made within these 30 years, it has been found that vitriol occasions a very great injury to the stuff, many parts of which are now rendered useless, by the sulphuric acid, which were formerly thrown away as of no value. But to be sure, "It must be remembered, (says Mr Robinson,) that our hat still possesses the form of a dome, and that the whole of the several actions it has undergone have only converted it into a soft pliable felt, capable of being extended, tho' with some difficulty, in every direction. The next thing to be done is to give it the form required by the crown. For this purpose, the workman turns up

the edge or rim to the depth of about an inch and a half, and then returns the point back again through the centre or axis of the cap, so far as not to take out this fold, but to produce another inner fold of the same depth. The point being returned back again in the same manner, produces a third fold; and thus the workman proceeds, until the whole has acquired the appearance of a flat circular piece, consisting of a number of concentric undulations or folds, with the point in the centre. This is laid upon the plank, where the workman, keeping the piece wet with the liquor, pulls out the point with his fingers, and presses it down with his hand, at the same time turning it round on its centre in contact with the plank, till he has, by this means rubbed out a flat portion equal to the intended crown of the hat. In the next place, he takes a block, to the crown of which he applies the flat central portion of the felt, and by forcing a string down the sides of the block, he causes the next part to assume the figure of the crown, which he continues to wet and work, until it has properly disposed itself round the block. The rim now appears like a flounced or puckered appendage round the edge of the crown; but the block being set upright on the plank, the requisite figure is soon given by working, rubbing, and extending this part. Water only is used in this operation of fashioning or blocking; at the conclusion of which it is pressed out by the blunt edge of a copper implement for that purpose. Previous to the dyeing, (see § 5.) the nap of the hat is raised or loosened out with a wire brush, or carding instrument. The fibres are too rotten after the dyeing to bear this operation. The dyed hats (after being dried) are taken to the finishing shop. One workman, assisted by a boy, does this part of the business. He has two vessels, or boilers, the one containing the grounds of strong beer, which costs 7s. per barrel, and the other vessel containing melted glue, a little thinner than it is used by carpenters. The beer grounds are applied in the inside of the crown to prevent the glue from coming through to the face, and to give the requisite firmness at a less expence than could be produced by glue alone. If the glue were to pass through the hat in different places, it might be more difficult to produce an even gloss upon the face in the subsequent finishing. The glue stiffening is applied after the beer grounds are dried, and then only upon the lower face of the flap, and the inside of the crown. For this purpose, the hat is put into another hat, called a stiffening hat, the crown of which is notched, or slit open in various directions. These are then placed in a hole in a deal board, which supports the flap, and the glue is applied with a brush. The dry hat, after this operation, is very rigid, and its figure irregular." The next operation therefore, is *clearing* with soap and boiling water, to cleanse the glue from the nap or pile. It is then dried; and "the last dressing is given by the application

§ The intelligent writer, repeatedly quoted, says, that before this operation is begun, the hat is dipped into the boiling kettle, and allowed to lie upon the plank until cold again; this is called *soaking*, that is, being perfectly saturated with the hot liquor: if they are put in too hastily in this state, they are then only bowed and haloned, they would burst from the edges, each hat not being sufficiently soaked into the other.

application of moisture and heat, and the use of the brush, and a hot iron, somewhat in the shape of that used by tailors, but shorter and broader on the face. The hat being softened by exposure to steam, is drawn upon a block, to which it is securely applied by the former method of forcing a string down from the crown to the commencement of the rim. The judgment of the workman is employed in moistening, brushing, and ironing the hat, in order to give and preserve the proper figure. When the rim of the hat is not intended to be of an equal width throughout, it is cut by means of a wooden, or perhaps metallic pattern; but as no such hats are now in fashion, Mr Nicholson saw only the tool for cutting them round. The contrivance is very ingenious and simple. A number of notches are made in one edge of a flat piece of wood for the purpose of inserting the point of a knife, and from one side or edge of this piece of wood, there proceeds a straight handle, which lies parallel to the notched side, forming an angle somewhat like that of a carpenter's square. When the legs of this angle are applied to the outside of the crown, and the board lies flat on the rim of the hat, the notched edge will lie nearly in the direction of the radius, or line pointing to the centre of the hat. A knife being therefore inserted in one of the notches, it is easy to draw it round by leaning the tool against the crown, and it will cut the border very regular and true. This cut is made before the hat is quite finished. When completely finished, the crown is tied up in gauze paper, which is neatly ironed down. It is then ready for the subsequent operations of lining, &c.

(5.) **HATS, METHODS OF DYING.** According to Dr Lewis, the best proportion of ingredients for dying hats is as follows: 100 lb. of logwood, 11 lb. of gum, and 6 lb. of galls are boiled in a proper quantity of water for some hours; after which, about 6 lb. of verdigris and 10 of green vitriol are added, and the liquor kept just simmering, or of a heat a little below boiling: 10 or 11 doz. of hats are immediately put in, each on its block, and kept down by cross bars for about an hour and an half: they are then taken out and aired, and the same number of others put in their room. The two sets of hats are thus dipped and aired alternately, 3 times each; the liquor being refreshed each time with more of the ingredients, but in less quantity than at first. This process (says Dr Lewis) affords a very good black on woollen and silk stuffs as well as on hats, as we may see in the small pieces of both kinds which are sometimes dyed by the hatters. The workmen lay great stress upon the verdigris, and affirm that they cannot dye a black hat without it: it were to be wished that the use of this ingredient were more common in the other branches of the black dye; for the hatter's dye, both on silk and woollen, is reckoned a finer black than what is commonly produced by the woollen and silk dyer. The present practice among the hatters, however, is to leave out the galls and verdigris, on account of the late advance in the price, and to use blue vitriol instead of them, in the proportion of 3 lb. to 11 dozen of hats, which is found to answer the purpose equally well.

(6.) **HATS, WOMEN'S.** Hats are also made for

women's wear, not only of the above stuffs, (§ 4. but of chips, straw, or cane. by plating, and sewing the plaits together; beginning with the centre of the crown, and working round till the whole is finished. They are also wove and made of horse-hair, silk, &c.

**HATA**, a large river of S. America, in Chili.

**HATA-HORUM**, a town of Chinese Tartary.

\* **HATBAND**. *n. f.* [*hat* and *band*.] A string tied round the hat.—They had hats of blue velvet, with fine plumes of divers colours, set round like *hatbands*. *Baron*.—

Room for the noble gladiator! see

His coat and *hatband* shew his quality. *Dryden*

**HATBOROUGH**, a town of Pennsylvania, in Montgomery county, 17 miles NNE. of Philadelphia, and 11 NE. of Norristown. It has a public library.

\* **HATCASE**. *n. f.* [*hat* and *case*.] A slight box for a hat.—I might mention a *hatcase*, which would not exchange for all the beavers in Great Britain. *Addison*.

(1.) \* **HATCH**. *n. f.* [from the verb.] 1. brood excluded from the egg. 2. The act of exclusion from the egg. 3. Disclosure; discovery.

Something's in his soul,

O'er which his melancholy sits on brood:

And, I do doubt, the *batch* and the disclosure  
Will be some danger. *Shak. Hamlet*

4. [*Hacca*, Saxon; *becker*, Dutch, a bolt.] A bolt door; a door with opening over it: perhaps *batcher*, to cut, as a *batch* is part of a door cut two.—

Something about, a little from the right.

In at the window, or else o'er the *batch*. *Shak.*

5. [In the plural.] The doors or openings, by which they descend from one deck or floor of a ship to another.—

To the king's ship, invisible as thou art,

There shalt thou find the mariners asleep  
Under the *batches*. *Shak. Temp.*

There she's hid;

The mariners all under *batches* stow'd. *Shak.*

So seas, impell'd by winds with added power  
Assault the sides, and o'er the *batches* too.

A ship was fasten'd to the shore;

The plank was ready laid for safe ascent.

For shelter there the trembling shadow bent.

And skip'd and sculk'd, and under *batch*  
went. *Dryden*

6. *To be under HATCHES.* To be in a state of ignominy, poverty, or depression.—He assures how this fatherhood continued its course, in the captivity in Egypt, and then the poor fatherhood was under *batches*. *Locke*. 7. *Hatches*. Flood gates. *Ainsworth*.

(2.) **HATCH**, (§ 1, def. 5.) or **HATCHWAY**, square or oblong opening in the DECK of a ship of which there are several, forming the passage from one deck to another, and into the hold or lower apartments. See *Plate CLXXIII*, fig. 1, where A represents the main hatchway of the lower deck; NN the fore hatchway; and OO the after hatchway. There are likewise *hatches* of a smaller kind, called *scuttles*. See *UU* in the same figure; also the article *SCUTTLE*.—*Hatch* is also, though improperly, a name applied by sailors to the covers or lids of the hatchway.

(3.) **HATCH**

(3.) **HATCHES** (§ 1. *def.* 7.) are flood-gates set in a river, &c. to stop the current of the water; particularly dams or mounds made of rubbish, dry, earth, to prevent the water that issues from the stream works and tin-washes in Cornwall from running into the rivers.

(c) **HARROWS**, in mining, a term used in Cornwall, to express any of the openings of the earth *either* into mines or in search of them. The fruitless openings are called *effay batches*; the real mouths of the veins, *tin batches*; and the places where they wind up the buckets of ore, *wind batches*.

(1.) \* *To HATCH*. *v. n.* [*hechen*, German, as *Shew* thinks, from *heben*, *egben*, *eg* egg, *hax*.] *†* To produce young from eggs by the warmth of incubation.—

He kindly spreads his spacious wing,  
And hatches plenty for th' ensuing Spring. *Denb.*  
The tepid caves, and fens and shores,  
Teem brood as numerous *hatch* from th' eggs,  
that soon

being with kindly rapture, forth disclos'd  
 The callow young. Milton.

2. To quicken the egg by incubation.—When they have laid such a number of eggs as they can conveniently cover and *hatch*, they give over, and begin to sit. *Key*.—Others *hatch* their eggs and tend the birth, 'till it is able to shift for itself.

3. To produce by precedent action.—What thing they very well know, and, I doubt not, will easily confess, who live to their great scandal and grief, where the blasphemies of Arius are renewed by them; who, to *bathe* their

hook, have chosen those churches as fittest nests  
where Athanasius's creed is not heard. Hooker

4. To form by meditation; to contrive.—He was a warmhearted and faithful, and one who never backed his hopes prejudicial to the king, but always intended his safety and honour. *Hayward* 5. [From *hack*, to cut.] To shade by lines in

Who first shall wound, through arms, his  
blood appearing fresh.

Behold this sword, silver'd and batcht. Chap.  
 lach as Agamemnon and the hand of Greece

bold hold up high in brass; and such again  
dearable Nestor, hatch'd in silver.

Should with a bond of air, strong as the axle  
tree

On which heav'n rides, knit all the Grecian ear  
To his experienc'd tongue. *Shat.*

Thick tender hairs, and those *hatching* strokes pencil, which make a kind of mixed mea-

Spouting, are never able to deceive the fight

1) \* To HATCH. v. n. 1. To be in the state of hatching quick.—He observed circumstances in

2. To be in a state of advance toward

HATCHBURY. See HARBESBURY.

(1.) \* **HATCHEL** *n. f.* [from the verb; *backen* Germ.] The instrument with which flax is beaten.

(1.) **Tar Hatchel**, or **Hatchel**, in the manufacture of flax, hemp, &c. is a tool, like a card

It consists of sharp-pointed iron pins, or teeth, set

Vol. XI Part. I

stry for this purpose is nearly the same with that marked 32 on his thermometer, or 96 on Fahrenheit's. This degree of heat is nearly that of the skin of the hen, and of all other domestic fowls, and probably of all other kinds of birds. The degree of heat, which brings about the development of the cygnet, the gosling, and the turkey pout, is the same as that which fits for hatching the canary songster, and, in all probability, the smallest humming bird: the difference is only in the time during which this heat ought to be communicated to the eggs of different birds. It will bring the canary bird to perfection in 11 or 12 days, while the turkey pout will require 27 or 28. After many experiments, Mr Reaumur found, that fowls heated by means of a baker's oven, succeeded better than those made hot by layers of dung: and the furnaces of glass-houses and those of the melters of metals, by means of pipes to convey heat into a room, might, no doubt, be made to answer the same purpose. As to the form of the stove, no great nicety is required. A chamber over an oven will do very well. Nothing more is necessary but to ascertain the degree of heat, by melting a lump of butter of the size of a walnut, with half as much tallow, and putting it into a phial. This serves to indicate the heat with sufficient exactness: for when it is too great, this mixture will become as liquid as oil; and when the heat is too small, it will remain fixed in a lump: but it will flow like a thick syrup, upon inclining the bottle, if the stove be of a right temper. Great attention therefore should be given to keep the heat always at this degree, by letting in fresh air if it be too great, or shutting the stove more close if it be too small: and that all the eggs in the stove may equally share the irregularities of the heat, it will be necessary to shift them from the sides to the centre; and thus to imitate the hens, who are frequently seen to make use of their bills, to push to the outer parts those eggs that were nearest to the middle of their nests, and to bring into the middle such as lay nearest the sides. Mr Reaumur has invented a sort of low boxes, without bottoms, and lined with furs. These, which he calls *artificial parents*, not only shelter the chickens from the injuries of the air, but afford a kindly warmth, so that they take the benefit of their shelter as readily as they would have done under the wings of a hen. After hatching, it will be necessary to keep the chickens, for some time, in a room artificially heated and furnished with these boxes; but afterwards they may be safely exposed to the air in the court-yard, in which it may not be amiss to place one of these artificial parents to shelter them, if there should be occasion for it. They are generally a whole day after being hatched, before they take any food at all. A few crumbs of bread may then be given them for a day or two, after which they will pick up insects and grubs for themselves. But to save the trouble of attending them, capons may be taught to watch them in the same manner as hens do. Mr Reaumur says he has seen above 200 chickens at once, all led about and defended only by 3 or 4 capons. Nay, cocks may be taught to perform the same office; which they, as well as the capons, will continue to do all their lives after.

(2.) HATCHING, or HACHING, in design &c. the making of lines with a pen, pencil, graver, or the like; and intersecting or going across those lines with others drawn a contrary way, called *counter hatching*. The depths and shadows of draughts are usually formed by hatching. Hatching is of singular use in heraldry, to distinguish the several colours of a shield, without tincture illuminated: thus, gules or red is hatched by lines drawn from the top to the bottom, and by lines drawn across the shield; and so of other colours.

HATCHLAND, two villages: 1. in Dorset near Netherby: 2. in Surrey, 4 miles from Guildford.

(1.) \* HATCHMENT. *n. f.* [Corrupted from *achievement*. See *ACHIEVEMENT*.] Armorial cutcheon placed over a door at a funeral.—

His means of death, his obscure funeral,  
No trophy, sword, nor *hatchment* o'er his bone  
No noble rites nor formal ostentation,  
Cry to be heard.

(2.) HATCHMENT, in heraldry, is the coat of arms of a person dead, usually placed on the front of a house, whereby may be known what rank the deceased person was of when living: it is whole distinguished so as to enable the beholder to know whether he was a bachelor, married man or widower; with the like distinctions for women.

(1.) \* HATCHWAY. *n. f.* [*hatchel* and *way*.] The way over or through the hatches.

(2.) HATCHWAY. See HATCH, § 2.

\* HATE. *n. f.* [*bate*, Saxon.] Malignity; detestation; the contrary to love.—

Speak then to me, who neither beg nor fret  
Your favours nor your *bate*.

*Hate* to Mezentius, arm'd five hundred years  
Dread

—Nausicaa teaches that the afflicted are always the objects of divine *bate*. *Broome's Notes on the Odyssey*.

\* To HATE. *v. a.* [*batian*, Saxon.] To detest; to abhor; to abominate; to regard with the passion contrary to love.—

You are I think, assur'd I love you not.

—Your majesty hath no just cause to *bate* me.

Do all men kill the thing they do not love?  
—*Hates* any man the thing he would not kill?

—Every offence is not a hate at first.

—Those old inhabitants of thy holy land thou *batest* for doing most odious works. *Wyd. xii. 4*

But whatso'er our jarring fortunes prove,  
Though our lords *bate*, methinks we two must love.

\* HATEFUL. *adj.* [*bate* and *full*.] 1. That which causes abhorrence; odious; abominable detestable.—

My name's Macbeth.

—The devil himself could not pronounce a title  
More *bateful* to mine ear.

—There is no vice more *bateful* to God and man than ingratitude. *Peacham*.—

What owe I to his commands

Who *bates* me, and hath hither thrust me down  
To sit in *bateful* office here confin'd,  
Inhabitant of heav'n, and heav'nly born?

I hear the tread  
Of *hateful* steps: I must be *viewless* now.

Milton.

But *Umbriel*, *hateful* gnome! forbears not to;  
He breaks the vial whence the sorrows flow.

Pope.

1. That which feels abhorrence; abhorrent; detestable; malignant; malevolent.—

Palamon, compell'd

No more to try the fortune of the field;

And, worse than death, to view with *hateful* eyes

His rival's conquest.

Dryden.

\* **HATEFUL**, *a. adj.* [from *hateful*.] 1. Odiously; abominably. 2. Malignantly; maliciously.—

All their beaks flood *hatefully* appall'd

Long since.

Chapman

—They shall deal with thee *hatefully*, take away  
thy labour, and leave thee naked and bare.

Ezek. xxi. 29.

\* **HATEFULNESS**, *n. s.* [from *hateful*.] Odiousness.

\* **HATER**, *n. s.* [from *hate*.] One that hates; a hater; a detester.—I of her understood of  
that most noble constancy, which whosoever loves  
her, shows himself to be a *hater* of virtue, and  
unworthy to live in the society of mankind. Sidney.

Whilst he stood up and spoke,

He was my master, and I wore my life

To spend upon his *haters*.

Shak.

—An enemy to God, and a *hater* of all good.  
—They never wanted so much knowledge,  
to inform and convince them of the unlawfulness  
of a man's being a murderer, an *hater* of  
God, and a covenant-breaker. South.

(1.) **HATFIELD**, or **BISHOP'S HATFIELD**, a town of Hertfordshire, 19½ miles N. of London. It was called *Bishop's Hatfield*, because it belonged to the Bishops of Ely. Theodore Abp. of Canterbury held a synod in it, A. D. 681, against the *Eutychian* heresy. It had once a royal palace, where Prince William, son of Edward III. was born, and whence Edward VI. and Q. Elizabeth were conducted to the throne. King James I. exchanged the manor with Sir Robert Cecil, afterwards Lord Salisbury, for Theobalds; and the lordship still remains in that noble family, who have a fine seat here. The rectory is reckoned worth £300 a-year. Here are two charity schools, and a market on Thursdays, with fairs in April and October. Hatfield is 7 miles WSW. of Hertford. Lon.  $\alpha$ . 10. W. Lat. 51. 48. N.

(2.) **HATFIELD**, a village of Herefordshire.

(3.) **HATFIELD**, a town in the W. riding of Yorkshire, 4 miles from Doncaster; with its *chase*, famous for deer hunting. There are many intrenchments near the town, as if it had been the camp of some great army. It is said that no rats were ever seen in this town.

(4.) **HATFIELD**, a town of the United States, in Massachusetts; 4 miles S. of Deerfield.

(5.) **HATFIELD BROAD-OAK**, } KING'S HAT-

(6.) **HATFIELD REGIS**, or } FIELD, a town of Essex, seated on a branch of the Lea, 19 miles NNE. of London; so called from the nature of the soil, from its tenure by king William the Conquer-

or and his successors, and from a broad oak growing in the town. It has a market on Saturday and a fair in August. It lies 8 miles SW. of Dunmow. Lon.  $\alpha$ . 25. E. Lat. 51. 56. N.

**HATFORD**, a town of E. Faringdon, Berks.

**HATHERLEY**, a town of Devonshire, near the conflux of the Towridge and Ock. It has a considerable woollen manufacture, and markets on Tuesday and Friday. It is 18 miles WNW. of Exeter, and 121 W. of London. Lon. 4. 9. W. Lat. 50. 52. N.

**HAT MAKING**, *n. s.* the art of making hats. See **HAT**, § 4.

\* **HATRED**, *n. s.* [from *hate*.] Hate; ill will; malignity; malevolence; dislike; abhorrence; detestation; abomination; the passion contrary to love.—*Hatred* is the thought of the pain which any thing present or absent is apt to produce in us. Locke.—

I wish I had a cause to seek him there,

To oppose his *hatred* fully.

Shak.

—*Hatred* is the passion of defiance, and there is a kind of aversion and hostility included in its very essence; but then, if there could have been *hatred* in the world when there was scarce any thing odious, it would have acted within the compass of its proper object. South.—*Hatreds* are often begotten from slight and almost innocent occasions, and quarrels propagated in the world. Locke.—Retain no malice nor *hatred* against any! be ready to do them all the kindness you are able. Watts.—She is a Presbyterian of the most rank and virulent kind, and consequently has an inveterate *hatred* to the church. Swift.—*Hatred* has in it the guilt of murder, and just the guilt of adultery. Sherlock.

**HATTEM**, or **HATTEN**. See **HATTEN**, N° 1.

**HATTEMISTS**, in ecclesiastical history, a modern Dutch sect, so called from Pontian Van Hatten, a minister in Zealand, towards the close of the 17th century, who being addicted to the sentiments of Spinoza, was degraded from his pastoral office. The Verschorists and Hattemists resemble each other in their religious systems, though they never formed one communion. The founders of these sects deduced from the doctrine of absolute decrees a system of uncontrollable necessity; they denied the difference between moral good and evil, and the corruption of human nature; whence they concluded, that mankind were under no obligation to correct their manners, improve their minds, or obey the divine laws; that the whole of religion consisted not in acting, but in suffering; and that all the precepts of Jesus Christ are reducible to this one, that we bear with cheerfulness and patience the events that happen to us through the divine will, and make it our constant and only study to maintain a permanent tranquillity of mind. Thus far they agreed; but the Hattemists farther affirmed, that Christ made no expiation for the sins of men by his death, but had only suggested to us by his mediation, that there was nothing in us that could offend the Deity; this, they say, was Christ's manner of justifying his servants, and presenting them blameless before the tribunal of God. It was one of their distinguishing tenets, that God does not punish men for  
O 2 their

their fins, but *by* their fins. These two sects, says Mosheim, still subsist, though they no longer bear the names of their founders.

(1.) **HATTEN**, a town of the Batavian republic, in the dept. of Yssel, and late prov. of Guelderland. It was taken by the French in 1672, and its fortifications destroyed. It is seated on the Yssel, 5 miles SW. of Zwoll, 9 SE. of Cambray, and 13 N. of Deventer. Lon. 6. 10. E. Lat. 52. 30. N.

(2.) **HATTEN**, a town of France in the dep. of the Lower Rhine, 7 miles NE. of Haguenau.

**HATTENGEN**. See **HATTINGEN**.

**HATTENHEIM**, a town of the French republic and dept. of the Rhine and Nahe, lately in the electorate of Mentz; 12 miles W. of Mentz.

\* **HATTER**. *n. s.* [from *bat.*] A maker of hats — A *batter* sells a dozen of hats for five shillings a-piece. *Swift*.

\* To **HATTER**. *v. a.* [Perhaps corrupted from *batter*.] To harass; to weary; to wear out with fatigue.

He's *batter'd* out with penance. *Dryden*.

**HATTERAS**, CAPE, a cape on the coast of N. Carolina. Lon. 75. 54. W. Lat. 35. 8. N.

**HATTEREL MOUNTAINS**, mountains between England and Wales, on the borders of Monmouth and Brecknock shires.

**HATTER'S FORM**. See **FORM**, § V. N° 1.

**HATTERSTORFF**, a town of Germany, in Austria. 11 miles ESE. of Laab.

**HATTINGEN**, a town of Germany, in the circle of Westphalia, and county of Mark, 16 m. NE. of Dusseldorf. Lon. 7. 32. E. Lat. 51. 20. N.

(1.) \* **HATTOCK**. *n. s.* [atlock, Erse.] A shock of corn. *DiB*.

(2.) A **HATTOCK** contains 12 sheaves. Some make it only 3 sheaves laid together.

(1.) **HATTON**, Sir Christopher, lord chancellor of England, under Q. Elizabeth. It is remarkable, that, though he was promoted to this high office, he was not bred to the law; but his conduct was irreproachable. He was a man of great learning and a consummate statesman. He died in 1591.

(1—13.) **HATTON**, the name of 12 English villages; viz. of 2 in Cheshire, 4 in Shropshire, and one each in Derby, Kent, Lincoln, Middlesex, Warwick, and York shires.

**HATTON CHATEL**, a town of France, in the dep. of the Meuse, 8 miles NE. of St Michael.

**HATUAN**, or } a town and fort of Upper Hun-

**HATVANY**, } gary, in the county of Novigrad. It was taken by the Imperialists in 1685. It is seated on a mountain. Lon. 19. 48. E. Lat. 47. 52. N.

**HATZFELD**, a town of Germany, in Hesse, 29 miles SW. of Waldeck, and 36 SW. of Cassel.

**HAVANNAH**, a city and sea-port town of the island of Cuba, on the N. coast, opposite to Florida. It is famous for its harbour, which is in every respect one of the best in the West Indies, and perhaps in the world. It is entered by a narrow passage, upwards of half a mile in length, which afterwards expands into a large basin, forming 3 Cul de Sacs; and is sufficient, in extent and depth, to contain 1000 sail of the largest ships, having almost six fathom water throughout, and

being perfectly covered from every wind. The town was built by Diego de Velasquez, who conquered the island. It was named originally the port of Carenas; but afterwards, when the city increased, it was called *St Christopher of the Havannah*. In 1536, it was so inconsiderable, that being taken by a French pirate, he ransomed for 700 dollars. Some time after it was taken by the English, and a second time by the French, nor was its value understood, or any care taken to put it in a posture of defence, till the reign of Philip II. But since the accession of the House of Bourbon to the Spanish crown, it has been completely fortified. It stands on the W. side of the harbour, in a pleasant plain; and is the residence of the governor of Cuba, and of the royal officers &c. The buildings are elegant, built of stone, and some of them superbly furnished. There are 11 churches and monasteries, and a handsome hospital. Near the middle of the town is a spacious square, surrounded with uniform buildings. The churches are rich and magnificent; the lamps, candlesticks, and ornaments for the altars be of gold and silver; some of the lamps are of most curious workmanship, and weigh near 100 lbs. The Recolects church has 12 beautiful chapels in it, and in the monastery are cells for fathers. The church of St Clara has 7 altars, adorned with plate, and the nunnery contains 12 women and servants, clothed in blue. The church of the Augustines has 13 altars; that of St Jo de Dios 9, with an hospital for soldiers, of 11,000 dollars revenue. It is not a bishop's see, though the bishop of St Jago resides here, whose revenue is not less than 50,000 dollars a-year. In 1700, inhabitants were computed at 16,000, and has greatly increased since. They are more polite and social than those of any of the Spanish ports on the continent; and imitate the French in the dress and manners. The city is supplied with water by the LAGUNA, which runs through it by 6 streams. The entrance to the harbour is defended on the E. side by a strong castle called *El Morro*, situated on a high rock; and on the walls and bastions are mounted 40 pieces of cannon. On the faces of the SW. bastion of the *Morro*, and within the entrance of the harbour, is a battery of stone called the *Twelve Apostles*, almost level with the water, and the guns of which carry each ball of 36 lb. A little higher, and opposite to the Point gate, is the *Divina Pastora*, or Shepherd's Battery, of 14 guns, level with the water. On the W. side of the entrance, at the point, is a square fort called the *Punta*, with 4 bastions, mounted with cannon, about 200 yards from the Punta gate. On the bastions of the town, near the harbour, are a number of cannon; and about the middle of the city is the *Puerta*, a square tower with 4 bastions, mounted with 12 pieces of cannon. In this last the governor resides, and the king of Spain's treasures are deposited till the galleons arrive. On the land side, from the Punta gate to the dock-yard, there is a rampart with bastions, faced with stone, and earthen parapets with a ditch, which in several places is fallen in, and is almost tiled up, particularly behind the Punta and land gates, near the stone quarries, which, if joined to one another, might be of great

defence to the place in case of a siege, as a lodgement might be made in them. The ground here rises with an easy ascent to the land gate; and is either pasture or garden ground, well stored with the cabbage tree. Before the land gate is a rock. The hill on a rising ground from this gate (which is the highest part of the town) to the dock-yard, is steeper than on the other side. The situation of the Havannah, though strong, have many defects; and from the situation of the town and forts, are commanded by many eminences, of which an enemy would take advantage. On the E. side of the harbour, the Cavannas, on a part of which the Moro is built, commands in a particular manner that fort, but absolutely commands the town, the Fuerte, and the whole N.E. part of the city, which is the best fortified. On the W. side runs a suburb, called *Guadalupe*, whose church is situated on an eminence about half a mile from the land gate, with which it is on a level, and higher than any other part of the fortification. From the N. side of this rising ground, the land gate may be flanked; and from the S.E. side the dock-yard is commanded. Along the N. side runs an aqueduct, which falling into the ditch at the land gate, runs down to the dock-yard, both for watering the ships and turning a saw-mill. About half a mile from the church, is a bridge made of a mole that runs into the bay about 100 rods. That road leads to the centre of the island, and extends to Havana, above 600 miles distant. From the bridge to the Lazaretto, is about two miles, over a rising ground betwixt them. A road runs up between these two places would cut off the communication with the town by land. From these observations it plainly appears, that the Havannah is not impregnable. The Havannah has greatly contributed to the maritime strength of Spain, many ships having been built here within these few years, from 60 to 80 guns, the island producing the best materials, such as oak, pine, mahogany, &c. The only defect of the place is the narrowness of its entry: for though there are many bars and shoals, yet only one ship at a time can enter it; from which circumstance the place has more than once been insulted, and has often been taken, at the mouth of the harbour, the ships not being able to afford them any assistance. Upon the rupture with Spain in 1763, the British ministry sent a Squadron and army against the place, under admiral Pocock and lord Albemarle. The Spaniards had in the harbour at the time of 13 sail of the line, two of them but old, and two more on the stocks nearly finished, and several merchant ships. The men of war were almost ready for sea; but no account was taken of the governor of the intended attack, the place, however, was gallantly defended, and after a siege of two months and 8 days before it could be reduced; when a capitulation was signed, and along with the city was yielded a dishonour to the W. This conquest was of great consequence, and in its consequences the loss of any we had made since the beginning of the war; and in no operation were the courage and perseverance of the British troops, or the conduct of their leaders, more conspicuous. The acquisition of this place united in itself

all the advantages which can be acquired in war. It was a military achievement of the highest class. By its effect on the Spanish marine it was equal to the greatest naval victory, and in the plunder it equalled the produce of a national subsidy. Nine line-of-battle ships were taken; 3 capital ships had been sunk by the Spaniards at the beginning of the siege; two more were in forwardness upon the stocks, and were afterwards destroyed by the captors. The Spaniards on this occasion lost a whole fleet of ships of war, besides a number of considerable merchant ships; and in ready money, in tobacco collected at the Havannah on account of the king of Spain, and other valuable merchandize, the sum lost did not fall short of three millions sterling. Havannah was restored by the peace of 1763; and is of the greatest importance to Spain, being the rendezvous for all their fleets to return from America to Europe, lying at the mouth of the gulph of Florida, through which they are all obliged to pass. Here the navy of Spain stationed in the West Indies ride; and here the galleons, the flota, and merchant ships from other ports, meet in September, to take in provisions and water, with great part of their lading, and for the convenience of returning to Spain in a body. A continual fair is held till their departure, which generally happens before the end of the month, when proclamation is made, forbidding any person belonging to the fleet to stay in town on pain of death; and accordingly, on firing the warning gun, they all retire on board.—The commerce carried on in this port, which is very considerable, may be distinguished into the particular commerce of the island of Cuba, and that more general by the galleons and flota. The former consists in hides, which are of great value; excellent sugar and tobacco, &c. A contraband commerce is carried on brisker here than at Vera Cruz. Some little trade is also carried on by other ports of Cuba. The Havannah is regularly supplied with European goods only by the register ships from Cadiz and the Canaries. The flota and galleons bring there only the remains of their cargoes, which they had not been able to dispose of at Carthagena, Puerto Velo, or Vera Cruz. When the fleet is in the harbour, provisions are excessively dear on shore, and money so plenty, that a Spaniard expects half a dollar a day from a male slave, and a quarter from a female, out of what they earn for their labour. The fleet generally sails from thence, through the channel of Bahama, in September, and is the richest in the world; as in silver and merchandize, there are seldom less than 30 millions of dollars on board, or 6,550,000l. sterling. Since its last capture, many new works have been added, to prevent a similar disaster in future. Lon. 82. 13. W. Lat. 23. 13. N.

HAVANT, a town of Hampshire, near the coast, 9 miles W. of Chichester, and 66 S.W. of London. Lon. 0. 58. E. Lat. 51. 12. N.

\* HAUDERK. *n. f.* [*hauberg*, old French.] A coat of mail; a breastplate.—

Him on the *hauberk* struck the princely fore,  
That quite disparted all the linked frame,  
And pierced to the skin. *Fairy Queen.*

*Hauberts* and helms are hew'd with many a wound;

The mighty maces with such haste descend,  
They

They break the bones, and make the solid armour bend. *Dryden.*

HAUBO, a town of Sweden in W. Gothland.

HAUBOURDIN, a town of France, in the dep. of the North, 3 miles SW. of Lille.

HAUDERBY, a village in Yorkshire.

HAVE, or LE HAVE, an island near the SE. coast of Nova Scotia. Lon. 64. 10. W. Lat. 44. 15. N.

\* To HAVE. *v. a.* in the present I *have*, thou *hast*, he *hath*; we, *ye*, they *have*; pret. and part. pass. *had*. [*haben*, Gothick; *habban*, Saxon; *hebben*, Dutch; *avoir*, French; *avere*, Ital.] 1. Not to be without.—I have brought him before you, that after examination *had*, I might *have* somewhat to write. *Acts*, xxv. 26. 2. To carry; to wear.—Upon the mast they saw a young man, who sat as on horseback, *having* nothing upon him. *Sidney*. 3. To make use of.—I *have* no Levite to my priest. *Judges*. 4. To possess.—He that gathered much *had* nothing over, and he that gathered little *had* no lack. *Exod.* xvi. 18. 5. To obtain; to enjoy; to possess.—Now, O Father, glorify me with thine own self, with the glory which I *had* with thee before the world was. *Jo.* xvii. 5. 6. To take; to receive.—A secret happiness, in Petronius, is called *curiosa felicitas*, and which I suppose he *had* from the *felicitas audere* of Horace. *Dryden*. To be in any state; to be attended with or united to as accident or concomitant.—*Have* I need of madmen, that ye have brought this fellow? 1 *Sam.* xxi. 15. 8. To put; to take—

That done, go and cart it, and *have* it away. *Taff.*

9. To procure; to find.—I would *have* any one name to me that tongue, that one can speak as he should do, by the rules of grammar. *Locke*. 10. Not to neglect; not to omit.—I cannot speak; if my heart be not ready to burst! Well, sweet Jack, *have* a care of thyself. *Shak.*

Your plea is good; but still I say beware:

Laws are explain'd by men; so *have* a care. *Pope*.

11. To hold; to regard.—Of the maid servants shall I be *had* in honour. 1 *Sam.*—The proud *have* *had* me greatly in derision. *Psalms*. 12. To maintain; to hold opinion.—Sometimes they will *have* them to be natural heat, whereas some of them are crude and cold; and sometimes they will *have* them to be the tangible parts, whereas they are things by themselves. *Bacon*. 13. To contain.—You have of these pedlars that *have* more in 'em than you'd think, sister. *Shakespeare*.—I will never trust a man again for keeping his sword clean; nor believe he can *have* every thing in him, by wearing his apparel neatly. *Shakespeare*. 14. To require; to claim.—

What would these madmen *have*?

First they would bribe us without pence,

Deceive us without common sense,

And without pow'r enslave. *Dryden*.

15. To be a husband or wife to another.—If I had been married to him, for all he was in woman's apparel, I would not have *had* him. *Shakespeare*.

16. To be engaged, as in a task or employment.—If we maintain things that are established, we *have* to strive with a number of heavy prejudices, deeply rooted in the hearts of men. *Hooker*.—The Spaniards captain never *hath* to meddle with his soldi-

ers pay. *Spenser on Ireland*.—Of the evils which hindered the peace and good ordering of that land, inconvenience of the laws was the first which I *had* in hand. *Spenser on Ireland*.—Kings *have* deal with their neighbours, their wives, their children, their prelates or clergy, their nobles, merchants and their commons. *Bacon*. 17. wish; to desire: in a lax sense.—I *had* rather a door keeper in the house of my God, than dwell in the tents of wickedness. *Psalms*.—I *have* *have* no man discouraged with that kind of his series of actions, in which the choice of *ad* or his own necessities, may *have* engaged him. *Addison*. 18. To buy.—If these trifles were only by art and artfulness, we should *have* them much cheaper. *Collier*. 19. It is most used in English, as in other European languages, as an auxiliary verb to make the tenses; *have*, *hast*, and *has*, the preterperfect; and *had* and *hath* preterpluperfect.—If there *had* been words between them to *have* expressed provocation, *had* gone together by the ears. *Congreve*.—I heard one of the greatest geniuses this age *had*, deduced, who *had* been trained up in all the studies of antiquity, assure me, upon his being obliged to search into records, that he at last had an incredible pleasure in it. *Addison*.—I *have* here considered custom as it makes things *but* as it renders them delightful; and though they *have* made the same reflections, it is possible they may not *have* drawn those uses from it. *Addison*.—That admirable precept which Pythagoras is said to *have* given to his disciples, which that philosopher must *have* drawn from the observation I *have* enlarged upon. *Johnson*.—The gods *have* placed labour before us. *Addison*.—This observation we *have* made ourself. *Addison*.—Evil spirits *have* contracted in their habits of lust and sensuality, malice and revenge. *Addison*.—Their torments *have* already taken in them. *Addison*.—That excellent author shewn how every particular custom and habit of virtue will, in its own nature, produce the heart or a state of happiness, in him who shall but practise it. *Addison*. 20. HAVE AT, or WITH, an expression denoting resolution to make an attempt. They seem to be imperative expressions; *have this at you*; *let this reach you*, or *this*; *have with you*; *take this with you*; but will not explain *have at it*, or *have at him*, which must be considered as more elliptical, as we *have* a trial *at it*, or *at him*.—He that will give with me for a thousand marks, let him lead the money, and *have at him*. *Shakespeare*.—I bear my part; 'tis my occupation: *have at it* you. *Shakespeare*.—I never was out at a mad lick, though this is the maddest I ever undertook. *have with you*, lady mine; I take you at a word. *Dryden*.

HAVEL, a river of Germany which rises in a lake in Mecklenburg, and runs N. into the Elbe near Werben in Brandenburg.

HAVELBERG, a town of Upper Saxony, Brandenburg, situated on the Havel which turns it, 17 miles NW. of Brandenburg, and 11 N. of Stendal. Lon. 12. 26. E. Lat. 52. 51. N.

(1.) \* HAVEN. *s. f.* [*haven*, Dutch; *port*, French.] 1. A port; a harbour; a station for ships.

—Love was threatened and promised to him, and his cousin, as both the tempest and *haven* of their best year. *Sidney*.—

Order for sea is given :

They have put forth the *haven*. *Shakespeare*.

—After an hour and a half sailing, we entered into a good *haven*, being the port of a fair city. *Act*.—

The queen beheld, as soon as day appear'd,  
The navy under sail, the *haven* clear'd. *Denham*.

We may be shipwreck'd by her breath ;

Love, favour'd once with that sweet gale,

Doubles his haste, and fills his sail,

'Till he arrive, where she must prove

The *haven*, or the rock of love. *Waller*.

A *haven*; an asylum.—

All places, that the eye of Heaven visits,

Are to a wife man ports and happy *havens*.

*Shakespeare*.

(1.) *HAVEN*. See *HARBOUR* and *PORT*.

(2.) *HAVEN*; *NEW*. See *NEW-HAVEN*.

\* *HAVENER*. *n. s.* [from *haven*.] An overseer of a port.—These earls and dukes appointed special officers, as receiver, *havener*, and *havener*. *Carew*.

*HAVENSTEIN*, a town of Suabia, capital of a country of that name seated on the Rhine, 3 miles E. of Laufenburg, and 13 NW. of Baden.

(1.) \* *HAVER*. *n. s.* [from *have*.] Possessor ; holder.—

Valor is the chiefest virtue, and

Not dignifies the *haver*. *Shakespeare*.

(2.) \* *HAYER* is a common word in the north-  
country for oats ; as, *hayer* bread for oaten  
bread ; perhaps properly *aven*, from *avena*, Latin.

—When you would anneal, take a blue stone,  
And they make *hayer* or oat cakes upon, and  
lay upon the cross bars of iron. *Peacham*.

*HAYRA*, a small island of Shetland, half a  
mile S. of Barra and Papa.

*HAYRCAMP*, Sigibert, a celebrated Dutch  
author and critic, professor of history, eloquence,  
and Greek, at Leyden. He was the author of  
several works on medals ; and published  
editions of several Greek and Latin au-  
thors. He died at Leyden in 1742, aged 58.

(1.) *HAYERFORD*, a township of Pennsylv-  
ania, in Delaware county.

(2.) *HAYERFORD WEST*, a neat, well-built and  
prosperous town of S. Wales, in Pembrokeshire ; on  
the side of a hill, which forms a part of the W.  
end of the Dongledye, 256 miles from London.

Incorporated town and county of itself, go-  
vern'd by a mayor, sheriff, town-clerk, two bailiffs,  
and other officers. The mayor is admiral, coro-  
nator, and clerk of the markets. The people  
carry on a good trade. The town enjoys several pri-  
vileges, and has its own courts : and the county  
sessions are held in it. It has 4 churches, a com-  
modious quay for ships of burden, a customhouse,  
and a fine stone bridge over the Dongledye, with  
a good free school, a charity school, and an almsh-  
ouse. It was formerly fortified with a rampart  
and castle, now demolished. Lon. 5. 0. W. Lat.  
51. 20. N.

*HAYERHILL*, a post town of Massachusetts  
in Essex county, on the N. side of the Merrimack ;  
which is an elegant Bridge with 3 arches,

connecting it with Bradford, 650 feet long, and  
34 broad. It contained 2408 inhabitants in 1795 ;  
and lies 32 miles N. by W. of Boston, and 380  
from Philadelphia. Lon. 3. 58. E. of that city.  
Lat. 42. 46. N.

(2.) *HAYERHILL*, a town of New Hampshire,  
capital of Grafton county, on the E. side of the  
Connecticut, opposite Newbury, 32 miles above  
Dartmouth college, and 496 NE. of Philadelphia.  
Lon. 3. 5. E. of that city. Lat. 44. 6. N.

*HAYERILL*, a town of England, partly in Ef-  
sex, and partly in Suffolk. It has a considerable  
manufactory of checks, cottons, and fustians. It  
is 20 miles SE. of Cambridge, and 50 NNE. of  
London. Lon. 0. 30. E. Lat. 52. 10. N.

*HAYERS*, Clopton, an English physician, who  
published a curious treatise on the *Bones*, in 1691.  
He died about the beginning of the 18th century.

*HAYERSER*, an island of Scotland, near the W.  
coast of the isle of Skye. Lon. 3. 17. W. of Edin-  
burgh. Lat. 57. 22. N.

(1.) *HAYERSHAM*, or } a township of New  
(1.) *HAYERSTRAW*, } York, in Orange  
county, on the west side of the Bay (N<sup>o</sup> 2.) 53  
miles N. of New York, containing 4,588 citizens  
in 1795, and 238 slaves.

(2.) *HAYERSTRAW BAY*, a bay of the United  
States in Hudson's River, 38 miles above New  
York, 10 miles long, and 3 broad.

*HAYER*, two islands of Scotland, near the  
W. coast of Shetland. Lon. 1. 33. E. of Edinburgh.  
Lat. 59. 59. N.

(1.) *HAUGH*. See *HAW*, § 1. *def.* 3.

(2.) *HAUGH*, a town NW. of Rotherham, Yorksh.

\* *HAUGHT*. *adj.* [*haut*, Fr.] 1. Haughty ;  
insolent ; proud ; contemptuous ; arrogant. Ob-  
solete.—

The proud insulting queen,  
With Clifford and the *haught* Northumberland,  
Have wrought the easy melting king, like wax.  
*Shakespeare*.

No lord of thine, thou *haught* insulting man ;  
Nor no man's lord. *Shakesf.*

High ; proudly magnanimous.—

His courage *haught*,  
Desir'd of foreign foemen to be known,  
And far abroad for strange adventures sought.  
*Spenser*.

\* *HAUGHTILY*. *adv.* [from *haughty*.] Proud-  
ly ; arrogantly ; contemptuously.—

Her heav'nly form too *haughtily* she priz'd ;  
His person hated, and his gifts despis'd. *Dryd.*

\* *HAUGHTINESS*. *n. s.* [from *haughty*.] Pride ;  
arrogance ; the quality of being haughty.—By the  
head we make known our supplications, our  
threatenings, our mildness, our *haughtiness*, our  
love, and our hatred. *Dryden*.

*HAUGHTON*, 8 English villages ; viz. one  
each in Cumberland, Lancash. Northumberland,  
Salop, Staffordsh. and Suffex ; and two in Durham.

\* *HAUGHTY*. *adj.* [*hautaine*, Fr.] 1. Proud ;  
lofty ; insolent ; arrogant ; contemptuous.—His  
wife, being a woman of a *haughty* and imperious  
nature, and of a wit superior to his, quickly re-  
sented the disrespect she received from him. *Clar-  
endon*.—

I shall sing of battles, blood and rage,  
And *haughty* souls, that mov'd with mutual hate,

In fighting fields pursu'd and found their fate.

Dryden.

2. Proudly great.—

Our vanquish'd wills that pleasing force obey;  
Her goodness takes our liberty away;  
And *haughty* Britain yields to arbitrary sway.

Prior.

3. Bold; adventurous; of high hazard. Obsolete.—

Who now shall give me words and sound  
Equal unto this *haughty* enterprize!

Or who shall lend me wings, with which from  
ground

My lowly verse may loftily arise? *Fairy Queen*,  
**HAUGSTORFF**, a town of Germany in Austria, 5 miles E. of Rotz.

\* **HAVING**. *n. f.* [from *have*.] 1. Possession; estate; fortune.—

My *having* is not much;

I'll make division of my present with you:

Hold, there's half my coffer.

Shakspeare.

2. The act or state of possessing.—Of the one side was alleged the *having* a picture, which the other wanted; of the other side, the first striking the shield. *Sidney*.—

Thou art not for the fashion of these times,  
Where none will sweat but for promotion;

And having that, do choak their service up,  
Even with the *having*.

Shakspeare. *As you like it*.

3. Behaviour; regularity. This is still retained in the Scottish dialect. It may possibly be the meaning here.—The gentleman is of no *having*: he kept company with the wild prince and Poinz; he is of too high a region; he knows too much.

Shakspeare.

\* **HAVIOUR**. *n. f.* [for *behaviour*.] Conduct; manners. Not used.—

Their ill *haviour* garres men mislay

Both of their doctrines and their lay. *Spenser*.

**HAVIXBEECK**, a town of Westphalia, in the bishopric of Munster, 6 miles SE. of Horstmar.

**HAUKEDAL**, a town of Norway, 70 miles N. of Bergen.

\* **HAUL**. *n. f.* [from the verb.] Pull; violence in dragging.—

The leap, the flap, the *haul*.

Thomson.

(1.) \* **To HAUL**. *v. a.* [*baler*, French, to draw.]

To pull; to draw; to drag by violence. A word which, applied to things, implies violence; and, to persons, awkwardness or rudeness. This word is liberally exemplified in *bale*; etymology is regarded in *bale*, and pronunciation in *haul*.—

Thy Dol, and Helen of thy noble thoughts,  
Is in base durance and contagious prison,

*Haul'd* thither by mechanick dirty hands. *Shakspeare*.

The youth with songs and rhimes,  
Some dance, some *haul* the rope.

Denham.

Some the wheels prepare,

And fasten to the horses feet; the rest

With cables *haul* along th' unwieldy beast. *Dryden*.

—In his grandeur he naturally chuses to *haul* up others after him whose accomplishments most resemble his own. *Swift*.—

Thither they bent, and *haul'd* their ships to  
land;

The crooked keel divides the yellow sand. *Pope*.

Romp-loving misa

In *haul'd* about in gallantry robust. *Thomson*.

(2.) **To HAUL**, among seamen, implies to pull

a single rope, without the assistance of blocks or other mechanical powers. When a rope is otherwise pulled, as by the application of tackles, the connection with blocks, &c. the term is changed into *bowing*.

(3.) **To HAUL THE WIND**, is to direct the ship's course nearer to that point of the compass from which the wind arises. Thus, supposing a ship to sail SW. with the wind northerly, and for particular occasion requires to haul the wind more westward; to perform this operation, it is necessary to arrange the sails more obliquely with the keel; to brace the yards more forward, by slackening the starboard and pulling in the larboard braces, and to haul the lower sheets further aloft, and, finally, to put the helm a-port, *i. e.* over the larboard side of the vessel. As soon as the head is turned directly to the westward, and the sails are trimmed accordingly, she is said to have hauled the wind four points; that is to say, from SW. to W. She may still go two points near to the direction of the wind, by disposing her sails according to their greatest obliquity, or, in the sea phrase, by *trimming all sharp*; and in this situation she is said to be close hauled, *as sail* WNW.

**HAULTON**. See **HALTON**, N° 1.

\* **HAUM**. *n. f.* [or *hame*, or *balm*; *bealm*, Scotch; *balm*, Dutch and Danish.] Straw.—

In champion countries a pleasure they take  
To mow up their *haume* for to brew and to bake  
The *haume* is the straw of the wheat or the rye  
Which once being reaped, they mow by and by

—Having stripped off the *haum* or binds from the poles, as you pick the hops, stack them up. *Shakspeare*.

(1.) \* **HAUNCH**. *n. f.* [*baucke*, Dutch; *hanche*, French; *anca*, Italian.] 1. The thigh: the back of the hip.—

Hail, groom! didst thou not see a bleeding haunch  
Whose right *haunch* bearst my steadfast arrow-strake

Spenser.

—To make a man able to teach his horse to stop and turn quick and rest upon his *haunches*, is to use to a gentleman both in peace and war. *Latham*.

2. The rear; the hind part.—

Thou art a Summer bird,

Which ever in the *haunch* of Winter sings  
The lifting up of day.

Shakspeare.

(2.) **The HAUNCH**, or **HANCH**, is that part of the body between the last ribs and the thigh.

(3.) **The HAUNCHES OF A HORSE** are two bones if when standing in the stable he limps, with his hind legs farther back than he ought; and when the top of his tail is not in a perpendicular line with the tip of his hocks, as it always is in horses whose haunches are of a just length. Some horses though they have too long haunches, yet commonly walk well: such are good to climb hills, but are not so sure upon a descent; for they cannot ply the hams, and never gallop slowly, but always rear upon a full speed. The art of riding has not more necessary lesson than that of putting a horse upon his haunches; which is called *coupling him well*, or putting him well together, or *coupling*. A horse that cannot bend or lower his haunches throws himself too much upon his shoulder, and lies heavy upon the bridle.

HAUNCH

**HAUNOLSTAIN**, a town of Austria, 6 miles W. of St. Pölten.

\* **HAUNT**. *n. s.* [from the verb.] 1. Place in which one is frequently found.—We set toils, nets, snares and traps, for beasts and birds in their own haunts and walks. *L'Esrange*.—

To me pertains not, she replies,  
To know or care where Cupid flies;  
What are his haunts, or which his way,  
Where he would dwell, or whither stray. *Prior*.

A scene where, if a god should cast his sight,  
A god might gaze and wonder with delight!  
Joy touch'd the messenger of heav'n; he stay'd  
Estrang'd, and all the blissful haunts survey'd.

*Pope*.

2. Habit of being in a certain place.—The haunt you have got about the courts will one day or another bring your family to beggary. *Arbutnot*.

(1.) \* **HAUNT**. *v. a.* [*haunter*, Fr.] 1. To frequent; to be much about any place or person.—A man who for his hospitality is so much *haunted*, that no news stir but come to his ears. *Sidney*.—Now we being brought known unto her, after we were acquainted, and acquainted we were sooner than ourselves expected, she continually *haunted* us. *Sidney*.—

I do *haunt* thee in the battle thus,  
Because some tell me that thou art a king. *Shak*.

She this dangerous forest *haunts*,  
And in sad accents utters her complaints. *Waller*.

Earth now  
Scar'd like heav'n, a seat where gods might dwell,

Or wander with delight, and love to *haunt*  
Her sacred shades. *Milton*.

Celestial Venus *haunts* Idalia's groves;  
Dona Cynthia, Ceres Hybla loves. *Pope*.

2. Haunted frequently in an ill sense of one that is unwelcome.—

You wrong me, sir, thus still to *haunt* my house;  
Told you, sir, my daughter is dispos'd of. *Shak*.

Oh, could I see my country-seat!  
There leaning near a gentle brook,

Sleep, or peruse some ancient book;  
And there in sweet oblivion drown

Those cares that *haunt* the court and town. *Swift*.

3. Eminent used of apparitions or spectres that appear in a particular place.—

Foul spirits *haunt* my resting place,  
And ghastly visions break my sleep by night. *Fairf*.

All these the woes of Oedipus have known,  
Your fates, your furies, and your *haunted* town.

*Pope*.

(4.) \* **HAUNT**. *v. n.* To be much about; to appear frequently.—

I've charged thee not to *haunt* about my doors;  
An honest plainness thou hast heard me say,

My daughter's not for thee. *Shak. Othello*.

Where they most breed and *haunt*, I have observed

The air is delicate. *Shak. Macbeth*.

\* **HAUNTER**. *n. s.* [from *haunt*.] Frequent;

one that is often found in any place.—The ancient Grecians were an ingenious people, of

whom the vulgar sort, such as were *haunters* of theatres, took pleasure in the conceits of Aristophanes. *Holton on Education*.—

Vol. XL Part I.

O goddess, *haunter* of the woodland green,  
Queen of the nether skies! *Dryden*.

(1.) \* **HAVOCK**. *n. s.* [*basog*, Welsh, devastation.] Waste; wide and general devastation; merciless destruction.—Having been never used to have any thing of their own, they make no spare of any thing, but *havock* and confusion of all they meet with. *Spenser on Ireland*.—Saul made *havock* of the church. *Ad. viii. 3*.—

Ye gods! what *havock* does ambition make  
Among your works! *Addison's Cato*.

—The Rabbins, to express the great *havock* which has been made of the Jews, tell us, that there were such torrents of holy blood shed, as carried rocks of a hundred yards in circumference above three miles into the sea. *Addison*.—If it had either air or fuel, it must make a greater *havock* than any history mentions. *Cheyne*.

(2.) \* **HAVOCK**. *interj.* [from the noun.] A word of encouragement to slaughter.—

Why stand these royal trouts amazed thus?  
Cry *havock*, kings! *Shakesp*.

Até by his side,  
Cries *havock*! and lets loose the dogs of war.

*Shakesp*.

\* **TO HAVOCK**. *v. a.* [from the noun.] To waste; to destroy; to lay waste.—Whatever they leave, the soldier spoileth and *havocketh*; so that, between both, nothing is left. *Spenser*.—

See with what heat these dogs of hell advance,  
To waste and *havock* yonder world, which I

So fair and good created! *Milton*.

**HAUPMANSGRUN**, a town of Up. Saxony.

**HAUPOUL MAZAMET**, a town of France, in the dep. of Tarn, 10 miles E. of Castres.

(1.) **HAVRE**, [Fr.] in geography, a haven.

(2.) **HAVRE DE GRACE**, a sea-port town of France, in the dep. of Lower Seine and ci devant prov. of Normandy, on the English Channel, in a large plain at the mouth of the Seine. It is a fortified town, nearly of a square figure, divided into two parts by the harbour, surrounded with walls and other works, and defended by a very strong citadel and arsenal. It is one of the most important places in France, on account of its foreign trade and convenient harbour. It was seized in 1562 by the Protestants, who delivered it to Q. Elizabeth; but it was surrendered in 1563. In 1694 it was bombarded by the English under lord Berkley, and some houses destroyed. In 1759, it was again bombarded by the British, who set fire to it, and destroyed a number of flat-bottomed boats, intended for invading England. It lies 45 miles W. of Rouen, and 12 NW. of Paris. Lon.

o. 11. E. Lat. 49. 31. N.

(3.) **HAVRE DE GRACE**, a town of Maryland, in Hartford county, on the west side of the Sut-

quehanna, at its influx into Chesapeake bay: 37 miles NE. of Baltimore, and 65 WSW. of Philadelphia. Lon. 1. 2. W. of that city. Lat. 39. 39. N.

(4.) **HAVRE DE ROSEL**, a bay on the NE. coast of Jersey, 5 miles NNE. of St Helier.

(5.) **HAVRE GIFFART**, a bay on the N. coast of Jersey, 5 miles N. of St Helier.

**HAURIANT**, *adj.* in heraldry, a term peculiar to fishes; signifying their standing upright, as if refreshing themselves by sucking in the air.

**HAUS.** two towns of Germany; 1. in Austria, 4 miles NW of Steyregg; 2. in Stiria, 20 miles NNW. of Muhran.

**HAUSAY**, an island of Scotland, one of the Skerries, 16 miles E. of Shetland.

**HAUSEBERG**, a town of Germany, in Westphalia, and county of Minden; 3 m. S. of Minden.

**HAUSEGO**, a town of Austria.

**HAUSEN**, a town and lordship of Suabia, on the Kinzig; 26 miles SE. of Strasburg.

**HAUSLEITEN**, a town of Austria.

**HAUSSEN**, a town of Germany, in the electorate of Mentz, near Salminster, 3 m. N. of Orbe.

**HAUSTOTTEN**, a town of Germany, in Stiria, 2 miles SSE. of Graz.

(1.) \* **HAUTBOY**. *n. f.* [*baut* and *bois*.] A wind instrument.—I told John of Gaunt he beat his own name; for you might have truſt'd him and all his apparel into an eel ſkin: the caſe of a treble *bautboy* was a manſion for him. *Shakeſpeare*.

Now give the *bautboys* breath; he comes, he comes. *Dryden*.

(2.) The **HAUTBOY** is ſhaped much like the lute; only it ſpreads and widens towards the bottom, and is ſounded through a reed. The treble is two feet long; the tenor goes a 5th lower when blown open: it has only 8 holes; but the baſs, which is 5 feet long, has 11.—The name is French, *baut bois*, *q. d. high wood*; and is given to this inſtrument becauſe the tone of it is higher than that of the violin.

(3.) \* **HAUTBOY STRAWBERRY**. See **STRAWBERRY**.

(4.) **HAUTBOY STRAWBERRY**. See **FRAGARIA**.

**HAUTECOMBE**, a town of the French republic, in the dep. of Mont Blanc, and late duchy of Savoy; W. of lake Bourget, 12 miles NNE. of Chambery, and 17 S. of Seiffel.

**HAUTE FEUILLE**, John, an ingenious mechanic, born at Orleans in 1647. Though he was an eccleſiaſtic, and enjoyed ſeveral benefices, he applied almoſt his whole life to mechanics, in which he made a great progreſs. He had a particular taſte for clock-work, and made ſeveral diſcoveries in it that were of ſingular uſe. He found out the ſecret of moderating the vibration of the balance by means of a ſmall ſteel ſpring, which has ſince been made uſe of. This diſcovery he laid before the members of the Academy of Sciences in 1674; and theſe watches are called *pendulum watches*, not that they have real pendulums, but becauſe they nearly approach to the juſtneſs of pendulums. M. Huygens perfected this happy invention; but having declared himſelf the inventor, and obtained from Lewis XIV. a patent for making watches with ſpiral ſprings, the abbé Feuſille oppoſed the registering of this privilege, and published a piece on the ſubject againſt M. Huygens. He wrote a great number of other pieces, moſt of which are ſmall pamphlets conſiſting of a few pages, but very curious; as, 1. The perpetual pendulum; 4to. 2. New inventions; 4to. 3. The art of breathing under water, and the means of preſerving a flame ſhut up in a ſmall place. 4. Reflections on machines for raiſing water. 5. On the different ſentiments of Malebranche and Regis, relating to the appearance of the moon when

ſeen in the horizon. 6. The magnetic balance. 7. A placet to the king on the longitude. 8. Letter on the ſecret of the longitude. 9. A new ſyſtem on the flux and reflux of the ſea. 10. The means of making ſenſible experiments that prove the motion of the earth; and many other pieces. He died in 1724.

**HAUTEFORTS**, a town of France, in the dep. of Dordogne, 18 miles NE. of Perigueux.

**HAUTELUCE**, a town of the French republic, in the dep. of Mont Blanc, (ci-devant duchy of Savoy,) 13 miles NE. of Conflans.

(1.) **HAUTE RIVE**, a town of France, in the dep. of Drome, 13½ miles N. of Romans.

(2.) **HAUTE-RIVE**, a town of France, in the dep. of Upper Garonne, and late prov. of Languedoc, on the Arriege; 10 miles S. of Toulouſe. Lon. 1. 26. E. Lat. 43. 26. N.

**HAUTE-RIVOIRE**, a town of France, in the dep. of Rhone and Loire, 18 miles W. of Lyons, and 15 NE. of Montbrison.

(1.) **HAUTEVILLE**, a town of France, in the department of Aine, 6 miles E. of St Rambert.

(2.) **HAUTEVILLE**, a town of France, in the department of Marne, 15 miles SE. of Vitry.

(3.) **HAUTEVILLE LA GUICHARD**, a town of France, in the department of the Channel, 7 miles NE. of Coutances.

**HAUTGOR**, a town of Indoſtan, in Cicacole.

**HAUTPOUL**, a town of France, in the dep. of Tarn, 10½ miles SE. of Caſtres.

**HAUT-THORAME**, a town of France, in the dep. of the Lower Alps, 15 miles N. of Caſſelle.

**HAUT-VILLIERS**, a town of France, in the dep. of Marne, and late prov. of Champagne; ſituated on the Marne; 3 miles N. of Epernay, and 20 from Rheims.

**HAUTZENHEIM**, a town of Tirol, 1 m. S. of Zell.

**HAUTZENTAL**, a town of Austria, 6 miles S. of Sonneberg.

**HAUZEMBERG**, a town of Bavaria, in the biſhopric of Paſſau; 6 miles NE. of Paſſau.

**HAUZ-HORMOZ**, a town of Perſia, in Kerman.

(1.) \* **HAW**. *n. f.* [*bag*, Sax.] 1. The berry and ſeed of the hawthorn.—

The ſeed of the bramble with kernel and *haw*.

—Store of *haws* and hips portend cold Winter. *Bacon's Nat. Hiſt.*—His quarrel to the hedge was that his thorns and his brambles did not bring forth raiſins, rather than *haws* and blackberries. *L'Eſſay*. 2. An excreſcence in the eye. 3. [*bag*, Saxon; *haw*, a garden, Daniſh.] A ſmall piece of ground adjoining to an houſe. In Scotland they call it **HAUGH**.—Upon the *haw* at Plymouth is cut out in the ground the portraiture of two men, with clubs in their hands, whom they term Gog and Magog. *Carraw*.

(2.) **HAW**, § 1, *def.* 1. See **CRATÆGUS**, N° 1.

(3.) **HAW**, § 1, *def.* 2. See **FARRIERY**, Part IV. *ſect.* I.

(4.) **HAW**, § 2, *def.* 3. Sir Edward Coke, in an ancient plea concerning Feverſham in Kent, ſays *haws* are houſes.

(5, 6.) **HAW**, two villages in Kent and Surry. \* **To HAW**. *v. n.* [Perhaps corrupted from *haw* or *back*.] To ſpeak ſlowly with frequent intermiſſion.

and hesitation.—'Tis a great way; but yet, after a little humming and *hawing* upon't, he agreed to undertake the job. *L'Estrange*.

**HAWES**, a river of Wales, which runs into the Sever, 2 miles below Newtown.

**HAW-FINCH**. See **LOXIA**, N° 5.

**HAWFORD**, a village in Warwickshire.

**HAWGH**, or **HAWGH**, *n. s.* a word used in Scotland, and in the north of England, for a green plot in a valley.

(1.) **HAWICK**, a parish of Scotland, in Roxburghshire, about 15 miles long from N. to S. and 4½ broad. The climate and soil are various: but the ground in general is fertile, producing plentiful crops of oats, barley, turnips, potatoes, clover, and rye-grass; besides pasture on the hills. The population, in 1793, stated by the rev. Mr Robert Gillan, in his report to Sir J. Sinclair, was 1924, and had increased 215, since 1755. The number of sheep was about 8000. There are remains of ancient camps in the parish, particularly one called *Catrail*, and a conical earthen mound called the *Mote*.

(2.) **HAWICK**, a town in the above parish, (N° 1.) formed into a burgh of barony at a very early period, though its most ancient charters are lost. Mary renewed its privileges, by a charter dated 1545. It is governed by 2 bailies, 15 merchant and 14 trades councillors. Its chief manufactures are carpets, kerges, table covers, rugs, narrow cloths, tapes, twists, hose, &c. and winnowing machines, made by the descendants of Andrew Belpur, who first invented them in 1737. The population in 1793, was 2320. Hawick is seated at the conflux of the Tiviot and the Slitbridge; the latter of which rose 22 feet above its usual level, in Aug. 1767, owing to a cloud bursting at its base, and carried off part of the surface of a hill, with 15 houses and a corn mill. Two persons were drowned by it. Hawick lies 15 miles SW. of Edin.

(3.) **HAWK**. *n. s.* [*hæwæg*, Welsh; *hæfer*, Sax. *hawp*, Lat.] 1. A bird of prey, used much anciently in sport to catch other birds.—

Do'st thou love hawking? Thou hast *hawk* will soar

Above the morning lark. *Shak.*

—It can be no more disgrace to a great lord to draw a picture, than to cut his *hawk's* meat. *Poacham.*

Whence born on liquid wing

The sounding culver shoots; or where the *hawk*,  
High in the beetling cliffs, his airy builds.

*Thompson.*

2. [*Hæch*, Welsh.] An effort to force phlegm up the throat.

(4.) **HAWK**. See **FALCO**, N° 19, 20, 23, 24, 25—26.

3. **To HAWK**. *v. n.* [from *hawk*.] 1. To fly parts at fowls; to catch birds by means of a hawk.—

Ride unto St Alban's,

Where the king and queen do mean to *hawk*.

*Shakespeare.*

—One follow'd study and knowledge, and another *hawking* and hunting. *Locke*.—He that *hawks* at birds and sparrows has no less sport, though a much less considerable quarry, than he that flies at a soldier game. *Locke*.—

A false Henry is, when Emma *hawks*:  
With her of tarts and of lures he talks. *Prior*

2. To fly at; to attack on the wing.—

A falcon tow'ring in her pride of place,  
Was by a mousing owl *hawk'd* at and kill'd.

*Shakespeare.*

Whether upward to the moon they go,  
Or dream the Winter out in caves below,  
Or *hawk* at flies elsewhere, concerns us not to know.

*Dryden.*

3. [*Hæch*, Welsh.] To force up phlegm with a noise.—Come, sit, sit, and a song.—Shall we clap into't roundly, without *hawking* or spitting, or saying we are hoarse, which are only the prologues to a bad voice? *Shakespeare*.—She complained of a stinking tough phlegm which she *hawked* up in the mornings. *Wise man*.—Blood, cast out of the throat or windpipe, is spit out with a *hawking* or small cough; that out of the gums is spit out without *hawking*, coughing, or vomiting. *Harvey*.—

4. To sell by proclaiming it in the streets. [From *hæch*, German, a saleman.]—

His works were *hawk'd* in every street;

But seldom rose above a sheet.

*Swift.*

**HAWKCHURCH**, a village in Dorsetshire.

(1.) **HAWKE**, Edward, Lord Hawke, a brave British admiral, was the son of an eminent barrister, and entered into the navy at an early age. In 1734, he obtained the command of a man of war, and distinguished himself by his bravery in the famous engagement in 1744, wherein the British fleet was commanded by Matthews, Lestock, and Rowley. (See **ENGLAND**, § 80.) In 1747, he was made rear-admiral of the White, when he defeated a large French fleet, and captured 5 ships of the line; on which he was created a knight of the Bath. In 1759, he defeated admiral Coassans of Belleisle, and was rewarded with a pension of 2,000 l. a-year. In 1765, he was appointed vice-admiral of Great Britain, and first lord of the admiralty. In 1776, he was created a British Peer, and died in 1781.

(2.) **HAWKE**, an island near the E. coast of Labrador. Lon. 55. 30. W. Lat. 53. 10. N.

(3.) **HAWKE**, a township of New Hampshire, in Rockingham county.

**HAWKEBURY**, a town in Warwickshire.

\* **HAWKED**. *adj.* [from *hawk*.] Formed like a hawk's bill.—Flat noses seem comely unto the Moor, an aquiline or *hawked* one unto the Persian, a large and prominent nose unto the Roman. *Brown's Vulgar Errors*.

(1.) \* **HAWKER**. *n. s.* [from *hawk*, Germ.] One who sells his wares by proclaiming them in the street.—I saw my labours, which had cost me so much thought *hawked* about by common *hawkers*, which I once intended for the consideration of the greatest person. *Swift*.—

To grace this honour'd day, the queen proclaims,

By herald *hawkers*, high heroick games:

She summons all her sons; an endless band

Pours forth, and leaves unpeopled half the land.

*Pope.*

(2.) **HAWKERS** anciently were fraudulent persons, who went from place to place buying and selling brass, pewter, and other merchandize, which ought to be uttered in open market. In

this sense the word is mentioned, 25 Hen. VIII. cap. 6. and 33, cap. 4. The appellation seems to have arisen from their uncertain wandering, like those who, with hawks, seek their game where they can find it. The term is now used as synonymous with pedlar; a person who travels about the country selling wares. Every hawker must take out an annual licence, for which he must pay 4 l. and if he travels with a horse, ass, or mule, for every one of them 8 l. If he travels without a licence, or contrary to it, he forfeits for every offence to the informer, and the poor of the parish where discovered, 10 l. The acts relating to hawkers do not extend to makers of goods or their agents; or to those who sell goods in fairs or markets; to the sellers of fish, fruit, or other victuals; nor to the vendors of books and newspapers: 9 and 20 W. cap. 27. 3 and 4 Anne, cap. 4. But hawkers shall not, by virtue of such licence, sell or offer to sale any tea or spirituous liquors, though with a permit, under the penalty of having the same seized, and imprisonment and prosecution of the offender. 9 Geo. II. cap. 35. Hawkers who were licensed on June 23, 1785, may set up any business in the place where they are resident inhabitants, brought up thereto. Additional duties, are, however, imposed upon hawkers, by acts, 29 Geo. III. c. 26. and 35 Geo. III. c. 91.

**HAWKESBURY**, a town in Gloucestershire, NW. of Radminton, and 4 miles from Sodbury.

**HAWKESHEAD**. See **HAWKSHED**.

**HAWKESWORTH**, John, LL. D. a celebrated English writer, born in 1715, and brought up to the profession of a watchmaker. He was a Presbyterian, and a member of the celebrated Brathbury's meeting, from which he was expelled for irregularity. He afterwards devoted himself to literature, and became an author of considerable eminence. In the early part of his life his circumstances were rather confined. He resided some time at Bromley in Kent, where his wife kept a boarding school. He afterwards became known to a lady who had great property and interest in the East India company, and through her means was chosen a director of that body. His *Adventurer* is his capital work, and its merits procured him the degree of LL. D. from Alb. Herring. When the design of compiling a narrative of the discoveries in the South Seas was on foot, he was recommended as a proper person to be employed on the occasion: but the performance did not answer the public expectation. Works of taste and elegance, where imagination and the passions were to be affected, were his province; not works of dry, cold, accurate narrative. However, he executed his task, and received for it the enormous sum of 6000 l. He died in 1773, some say of high living, others, of chagrin from the ill reception of his *Narrative*; for he was a man of the keenest sensibility. On a handsome marble monument at Bromley in Kent is the following inscription, the latter part of which is taken from the last number of *The Adventurer*:

To the memory of  
JOHN HAWKESWORTH, LL. D.  
Who died the 16th of November  
MDCCLXXIII, aged 58 years.  
That he lived ornamental and useful

To society in an eminent degree;  
Was among the boasted felicities

Of the present age;

That he laboured for the benefit of society,  
Let his own pathetic admonitions  
Record and realize.

"The hour is hasting, in which whatever praise or censure I have acquired will be remembered with equal indifference. Time, who is impatient to date my last paper, will shortly moulder the hand which is now writing it in the dust, and fill the breast that now throbs at the reflection. But let not this be read as something that relates only to another; for a few years only can divide the eye that is now reading from the hand that has written."

**HAWKHURST**, a populous parish and village in Kent, near Benenden.

(1.) **HAWKING**, *n. s.* the art, or exercise of taking wild fowl by means of hawks. The method of reclaiming, manning, and bringing up a hawk to this exercise, is called **FALCONRY**.

(2.) **HAWKING**, *HISTORY OF*. Hawking was anciently a favourite amusement in Britain, and to carry a hawk was esteemed a distinction of a man of rank. The Welsh had a saying, that you may know a gentleman by his hawk, horse, and greyhound. In those days a person of rank seldom went without one on his hand. Even the ladies were not without them; for in an ancient sculpture in the church of Milton Abbas, in Dorsetshire, appears the consort of King Athelstan, with a falcon on her royal fist tearing a bird. There are only two countries in the world, however, where we have any evidence that the exercise of hawking was very anciently in vogue. These are, Thrace and Britain. In the former Pliny tells us, (lib. x, 8.) it was merely the diversion of a particular district. But the primeval Britons had a peculiar taste for hawking; and every chief among them maintained a considerable number of birds for that sport. It appears also from a passage in Ossian, (Vol. I. p. 215.) that it was fashionable at a very early period in Scotland. He tells us, that a place was endeavoured to be gained by the proffer of "100 managed steeds, 100 foreign captives, and 100 hawks with fluttering wings, that fly across the sky." To the Romans this diversion was scarce known in the days of Vespasian; yet it was introduced soon after. Probably they adopted it from the Britons; but they greatly improved it by the introduction of spaniels into the island. In this state it appears among the Roman Britons in the 6th century. Ovidas, in his first epistle, speaking of Maglocennus, on his relinquishing ambition, and taking refuge in a monastery, compares him to a dove, that with various turns and windings takes her flight from the talons of the hawk. In after times, hawking was the principal amusement of the English: a person of rank scarce appeared out without his hawk on his hand; which, in old paintings, is the criterion of nobility. Harold, afterwards king of England, when he went on an embassy into Normandy, is painted embarking with a bird on his fist, and a dog under his arm; and in an ancient picture of the nuptials of Henry VI. a nobleman is represented in the same manner; for in those days it was thought sufficient

to allow to waste their time, and to carry their  
 back far, and leave study and learning to the chil-  
 dren of men people! In short, this diversion was,  
 among the ancient English, the pride of the rich,  
 and the privilege of the poor; no rank of men  
 seems to have been excluded the amusement: we  
 know from the book of St Alban's, that every de-  
 gree of the peculiar hawk, from the emperor down  
 to the low-water clerk. Vast was the expence  
 in sometimes attended this sport. In the reign  
 of King I. Sir Thomas Monson is said to have gi-  
 ven a hawk for a cast of hawks: we are not then to  
 wonder at the rigour of the laws made to preserve  
 that which was carried to such an extravagant  
 point. In the 34th of Edward III. it was made  
 felony to steal a hawk; to take its eggs even in a  
 man's own ground, was punishable with im-  
 prisonment for a year and a day, besides a fine at  
 the king's pleasure: in queen Elizabeth's reign,  
 imprisonment was reduced to 3 months; but  
 a hawk was to find security for 7 years, or  
 a year till he did. Such was the state of  
 England, during the whole day, the gentry  
 were devoted to hawking or hunting; in the e-  
 vening they celebrated their exploits with the  
 most dissipated and brutish sottishness; while the  
 lower sort of people, by the most unjust and ar-  
 bitrary laws, were liable to capital punishments,  
 fines, and loss of liberty, for destroying the  
 property of the feathered tribe. According  
 to the laws, the diversion of hawking is more fol-  
 lowed by the Tartars and Persians than ever it  
 was in Europe. *Un'y avoit point de butte* (says he)  
*un y avoit point de faucon.* The falcons or  
 hawks were in use in these kingdoms, are  
 bred in Wales, and in North Bri-  
 tain. The peregrine falcon inhabits the  
 mountains of Cornwall. The same species and  
 the kestrel, the gentil, and the go-hawk, are  
 bred in Scotland, and the lanner in Ireland. (See  
 Sec. 1. 31, 32, 33, 35, and 40.) The Nor-  
 man bred, was, in old times, in high esteem  
 among them: they were thought bribes worthy a  
 Countess Fitzpierre, gave two good Nor-  
 man hawks to King John, to obtain for his friend  
 the liberty of exporting 100 wt.  
 of wool; and Nicholas the Dane was to give the  
 king every time he came into England, that  
 he might have free liberty to traffic throughout  
 the king's dominions. They were also made the  
 price, in which some nobles held their estates  
 of the crown. Thus Sir John Stanley had a  
 hawk of the life of Man from Henry IV. to be  
 divided by his heirs, and successors, by ho-  
 noring the service of two falcons, on the day  
 of their coronation. And Philip de Hasting  
 the son of Combertoun in Cambridgeshire,  
 was the price of keeping the king's falcons.

**HAWKING, METHOD OF TRAINING BIRDS**  
 1. When a hawk or falcon is taken, she must  
 be kept (See § 4.) in such a manner, that, as the  
 bird sits, she may see what provision lies  
 before her; but care ought to be taken, not to  
 keep her too hard. A falcon or hawk newly taken  
 must have all new furniture, as new jesses of  
 red leather, mailed leashes with buttons at the  
 end, and new bewets. There should also be pro-  
 vided a small round stick, to stroke the hawk; be-

cause, the oftener this is done, the sooner and bet-  
 ter will she be manned. She must also have two  
 large bells, that she may be found when she scat-  
 tereth. Her hood should be well fashioned, raised,  
 and embossed against her eyes, deep, and yet  
 firm enough beneath, that it may fasten about  
 her head without hurting her; and her beak and  
 talons must be a little coped, but not so near as to  
 make them bleed. A soar falcon, which has pas-  
 sed the seas, will be harder to reclaim, but will  
 prove the best of falcons. Her food must be good  
 and warm, and given twice or thrice a-day, till  
 she be full gorged: the best for this purpose is pi-  
 geons, larks, or other live birds; because she must  
 be broken off by degrees from her accustomed feed-  
 ing. When she is fed, you must hoop and lure,  
 that she may know when you intend to give her  
 meat. On this occasion she must be unhooded  
 gently; and after giving her two or three bits, her  
 hood must be put on again, when she is to get  
 two or three bits more. Care must be taken that  
 she be close seeled; and after 3 or 4 days her  
 diet may be lessened; the falconer setting her e-  
 very night to perch by him, that he may awaken  
 her often in the night. In this manner he must  
 proceed, till he find her grow tame and gentle;  
 and when she begins to feed eagerly, he may give  
 her a sheep's heart. He may now begin to unhood  
 her in the day time, but it must be far from com-  
 pany, first giving her a bit or two, then hooding  
 her gently, and giving her as much more. When  
 she is sharp set, he may now unhood her, and  
 give her some meat just against his face and eyes,  
 which will make her less afraid of the countenances  
 of others. She must be born continually on the  
 fist, till she is properly manned, causing her to  
 feed in company, giving her in the morning, a-  
 bout sun-rise, the wing of a pullet; and in the e-  
 vening, the foot of a hare or coney, cut off the  
 joint, head and laid in water, which being squeez-  
 ed, is to be given her with the pinion of a hen's  
 wing. For two or three days give her washed  
 meat, and then plumage in more or less quantity  
 as she is thought to be more or less foul within.  
 After this, being hooded again, she is to get no-  
 thing till she has gleamed and cast, when a little  
 hot meat may be given her in company; and, to-  
 wards evening, she may be allowed to plume a  
 hen's wing in company also. Cleanse the feathers  
 of her casting, if foul and slimy; if she be clean  
 within, give her gentle castings; and when she is  
 reclaimed, manned, and made eager and sharp  
 set, feed her on the lure. Three things are to be  
 considered before the lure be showed her; 1. That  
 she be bold and familiar in company, and not afraid  
 of dogs and horses. 2. Sharp set and hungry, ha-  
 ving regard to the hour of morning and evening,  
 when you would lure her. 3. Clean within, and  
 lure well garnished with meat on both sides;  
 and when you intend to give her the length of a  
 leash, you must abscond. She must also be un-  
 hooded, and have a bit or two given her on the  
 lure as she sits on your fist; afterwards take the  
 lure from her, and hide it that she may not see it;  
 and when she is unseeled, cast the lure so near her,  
 that she may catch it within the length of her  
 leash, and as soon as she has seized it, use your  
 voice, feeding her upon the lure, on the ground,  
 with

with the heart and warm thigh of a pullet. Having so lured your falcon, give her but little meat in the evening; and let this luring be so timely, that you may give her plumage, and a juck of a joint next morning on your fist. When she has cast and gleamed, give her a little warm meat. About noon, tie a creance to her leath; and going into the field, there give her a bit or two upon her lure; then unwind the creance, and draw it after you a good way; and let him who has the bird hold his right hand on the tassel of her hood, ready to unhood her as soon as you begin to lure; to which if she come well, stoop roundly upon it, and hastily seize it, let her cast two or three bits thereon. Then, unseizing and taking her off the lure, hood her and give her to the man again; and going farther off, till she is accustomed to come freely and eagerly to the lure; after which she may be lured in company, taking care that nothing affright her. When she is used to the lure on foot, she is to be lured on horseback; which may be effected the sooner, by causing horsemen to be about her when lured on foot. When she has grown familiar to this way, let somebody on foot hold the hawk, and the person on horseback must call and cast the lure about his head, the holder taking off the hood by the tassel; and if she seize eagerly on the lure without fear of man or horse, then take off the creance, and lure her at a greater distance. If you would have her love dogs as well as the lure, call dogs when you give her her living or plumage. After this, she may be allowed to fly, in a large field, unencumbered with trees. To excite her to fly, whistle softly; unhood her, and let her fly with her head to the wind; as she will thus the more readily get upon the wing, and fly upwards. The hawk sometimes flies from the falconer's fist, and takes stand on the ground: this is a fault very common with soar falcons. To remedy this, fright her up with your wand; and when you have forced her to take a turn or two, take her down to the lure, and feed her. But if this does not do, then you must have in readiness a duck scaled, so that she may see no way but backwards, and that will make her mount the higher. Hold the duck in your hand, by one of the wings near the body; then lure with the voice, to make the falcon turn her head; and when she is at a reasonable pitch, cast your duck up just under her; when, if she strike, stoop, or truss the duck, permit her to kill it, and reward her by giving her a reasonable gorge. After you have practised this a or 3 times, your hawk will leave the stand, and, delighted to be on the wing, will be very obedient. It is not convenient, for the first or second time, to show your hawk a large fowl; for such often escape from the hawk, and she takes after them: this gives the falconer trouble, and frequently occasions the loss of the hawk. But if she happens to pursue a fowl, and being unable to recover it, gives it over, and comes in again directly, then cast out a scaled duck; and if she stoop and truss it across the wings, permit her to take her pleasure, rewarding her also with the heart, brains, tongue, and liver. If you have not a quick duck, take her down with a dry lure, and let her plume a pullet and feed upon it. A hawk

will thus learn to give over a fowl that takes and on hearing the falconer's lure, will make again, and know the better how to hold in head. Some hawks have a disdainful eye, proceeding from their being high fed: such hawk must not be rewarded though she does kill, but may be allowed to plume a little: Taking a sheep's heart cold, or the leg of a let, when the hawk is busy in pluming, let her of them be conveyed into the body of the fowl, that it may savour of it; and when hawk has eaten the heart, brains, and tongue of the fowl, take out what is inclosed, call her your fist, and feed her with it; afterwards, let her some of the feathers of the fowl's neck, scour her, and make her cast. If she be a high-flying hawk, she ought not to take more than one flight in a morning; and if she be made the river, let her not fly more than twice; when she is at the highest, take her down with your lure; and when she has plumed and broken fowl a little, feed her, by which means you keep her a high flyer, and fond of the lure.

(4.) **HAWKING, TERMS USED IN.** Various terms are used in hawking, which it is proper to explain, though the exercise is now much less used than formerly. The legs, from the hip to the foot, are called *arms*; the toes, *perty fingers*; the claws, the *powers*; the nails are called the *fauls*; the long feather between the *beams*; the two longest, the *principal feathers*; those next thereto, the *flues*. The tail is called the *train*; the breast feathers, the *mantles*; those behind the thigh, the *pendant feathers*. When the feathers are not yet full grown, they are said to be *unsummed*; when they are coming, she is *summed*: The crop, or crop, is called the *gorge*: The pipe next the fundament, where the excrements are drawn down, is called the *per*. The slimy substance lying in the pannel is called the *glut*: The upper and crooked part of the tail is called the *beak*; the nether part the *clap*; the low part between the beak and the eye, the *eye* or *face*; the two small holes therein the *eyes*. As to furniture, the leathers with bells buttoned on her legs are called *bravits*. The leath thong, whereby the falconer holds the hawk is called the *leath* or *leath*; the little straps, by which the leath is fastened to the legs, *jeffes*; and a or pack-thread fastened to the leath, to discipline her, a *creance*. A cover for her head, to keep her in the dark, is called a *hood*: a large wide hood open behind, to be wore at first, is called a *great hood*: To draw the string that the hood may be in readiness to be pulled off, is called *unfastening the hood*: The blinding a hawk just taken, by passing a thread through her eye lids, and then drawing them over the eyes, to prepare her for being hooded, is called *feeling*. A figure or resemblance of a fowl, made of leather and feathers, is called a *lure*. Her resting-place, when off the falconer's fist, is called the *perch*. The place, where meat is laid, is called the *beck*; and that where in she is set, while her feathers fall and come again, the *new*. Something given a hawk, to keep and purge her gorge, is called *casting*. Small things given her to make her call, are called

*Alap*: Gravel given her to help to bring down her snatch, is called *snatch*: Her throwing up her foot from the gorge after calling, is called *gleaming*: The purging of her grease, &c. *ensnaming*. A long stuffed is called *gurgating*. The inserting a feather in her wing, in lieu of a broken one, is called *ensnaming*. The giving her a leg, wing, or gun of a fowl to pull at, is called *string*: The act of a bird the hawk preys on, is called the *prey*. What the hawk leaves of her prey, is called the *pull or pelf*. There are also proper terms for her several actions. When she flutters with her wings, as if striving to get away, either from her prey or bird, she is said to *dart*. When standing before, they fight with each other, it is called *winging*: When the young ones quiver and shake their wings, in obedience to the elder, it is called *winging*: When she wipes her beak after feeding, she is said to *feed*: When she sleeps she is said to *sleep*. From the time of changing her coat, till she turns white again, is called her *intermewing*: Tending is called *creeping*: When she stretches out her wings after her legs, and then the other, it is called *mantling*: Her dung is called *droppings*, when she does it directly down, instead of turning backwards, she is said to *stare*; and if she drops it, it is called *dropping*. When she hears, it is called *snatching*. When she raises and turns herself, she is said to *turn*: When, after pulling, she crosses her wings, over her back, she is said to *wardle*. When a hawk seizes, she is said to *seize*: When after seizing, she pulls off her prey, she is said to *plume*. When she raises a bird aloft, and at length descends with it to the ground, it is called *trussing*. When being aloft, she seems to strike her prey, it is called *snatching*. When she flies out too far from the game, she is said to *roar*. When, forsaking her proper prey, she flies at pyes, crows, &c. that chance to come by, it is called *check*. When, missing her prey, she betakes herself to the next check, she is said to *fly on head*. The fowl or game she is said to *quarry*. The dead body of a fowl killed by the hawk, is called a *pelt*. When she flies away with the quarry, she is said to *carry*. When in swooping she turns two or three times on the wing, to recover herself ere she seizes, it is called *considering*. When she hits the prey, yet does not truss it, it is called *rust*. The bringing a hawk tame and gentle, is called *reclaiming*. The bringing her to endure company is called *training*. An old Raunch hawk, used to fly and hunt with a young one, is called a *mate hawk*.

(H) **HAWKINS**, Sir John, a brave English admiral, under Q. Elizabeth, born in Devonshire. He was admiral of the Fleet which he sent against the Spanish armada, and had a great share in that glorious victory. He was afterwards made treasurer of the Navy. But his memory is disgraced by his having been the first European, who carried off slaves from the coast of Africa, and introduced that inhuman traffic into the West Indies. Elizabeth herself, while she honoured his bravery by knight-hood, threatened him with the disgrace of a public execution for this practice. He died in the year 1595.

(L) **HAWKINS**, Sir John, a late celebrated author, and a lineal descendant of the admiral, (N° 1.)

was born in London, March 30th 1719. He was the youngest son of Mr Hawkins, a house-carpenter and builder in London, and was bred to the law. Though deeply engaged in that study, in his younger years, and afterwards in the practice, he found leisure to exercise his genius by writing Essays on various subjects, for the Gentleman's Magazine, Universal Spectator, and Westminster Journal; some of which particularly his Essays on *Swearing and Honesty*, attracted the attention of the public. The latter appeared in the *Gen. Mag.* for March 1739, and gave rise to a controversy, which was carried on in that work for several months, between him and his fellow clerk Mr Calamy. He formed an early intimacy with Dr Samuel Johnson which continued through life. About 1741, he became a member of two Musical Societies, and in 1741 published 6 Cantatas, the poetry of 3 of which was written by himself, and the music composed by his friend Mr Stanley. These having succeeded beyond expectation, he published other 6 soon after, which proved the means of making his fortune, by introducing him to the acquaintance of Peter Storer Esq. of Highgate, whose youngest daughter Sidney he married in 1753, and with her received a handsome fortune, as well as a very large addition to it, on the death of her brother in 1759. Having early entertained a fondness for angling, he now gave up business, and purchased a house at Twickenham, on the Thames, where he could enjoy his favourite amusement. In 1760, he published a new edition of *Walton's Complete Angler*, in 8vo with notes; to which he prefixed a Life of Walton. In 1768 he was appointed a Justice of the Peace for Middlesex, in which station he formed the benevolent resolution of taking no fees. But finding upon trial, that this indulgence was abused, by increasing the number of trifling litigations about petty quarrels, he altered his method, and accepted his legal fees; but kept them in a separate purse, and at the end of each session delivered the whole amount to the clergyman of the parish, to be distributed among the poor. In 1763 he published in 8vo, *Observations on the State of the Highways, and on the laws for amending and keeping them in repair*: to which he subjoined the draught of a bill, which was afterwards passed into a law; and which is so complete, that, after an experience of near 40 years, it has never required any amendment. In 1764, he distinguished himself by opposing an enormous claim of the City of London, which, in a bill presented to Parliament, had proposed to subject the county of Middlesex to two 3ds of the expence of rebuilding the jail of Newgate, estimated at 40,000 l. Mr Hawkins drew a petition against the bill with such success, that it was withdrawn by the city Members. In 1765, he was elected chairman of the quarter Session. In 1763 and 1769, during the riots at Brentford and Moorfields, he acted with so much spirit, activity and propriety, that, in 1779, his majesty conferred on him the honour of knighthood. In 1773 and 1778, he enriched Dr Johnson's and Mr Stevens's edition of *Shakespeare*, with those notes which bear his name. In 1776, he published his *General History of the Science and Practice of Music* in 5 vols 4to, dedicated to the King, and which he presented to him personally.

personally, at Buckingham House. The collecting of the materials for this work had cost him 16 years labour. In 1784, he met with one of the severest losses a literary man can sustain, by the destruction of his valuable library by fire, wherein were many rare books and other articles, that could never be supplied. In 1787, he published the Life and works of Dr Johnson, in 11 vols 8vo dedicated to the King. He died at Westminster of an apoplexy, on the 11th May 1789; leaving the character of an active magistrate, an affectionate husband and parent, a firm friend, and a sincere Christian.

(3.) **HAWKINS**, a county of Tennessee, in the district of Washington, containing 6,970 citizens in 1795. Rogersville is the capital.

**HAWKLEY**, a town in Hampshire.

**HAWKSHEAD**, a town of Lancashire, seated in a woody valley, surrounded by hills, on the W. side of the lake Windermere, 38 miles N. of Lancaster, and 273 NNW. of London. Lon. 3. 6. W. Lat. 54. 24. N.

**HAWKSLEY**, a town in Northumberland, on the coast, opposite Coquet Island.

**HAWKSWORTH**, a town near Otley, Yorks.

(1.) \* **HAWKWEED**. *n. f.* A plant.—Oxtongue is a species of this plant. *Miller*.

(2.) **HAWKWEED**. See **CREPIS**, & **HIERACIUM**.

(1.) **HAWKWOOD**, Sir John, a famous English general, was the son of a tanner at Heddingham Sibil in Essex, where he was born in the reign of Edward III. He was bound apprentice to a tailor in London; but being fortunately pressed into the army, was sent abroad, where his genius soon expanded. He signalized himself as a soldier in France and Italy, and particularly at Pisa and Florence. He commanded with great ability and success in the army of Galeacio duke of Milan; and was in such high esteem with Barnabas his brother, that he gave him Domitia his natural daughter in marriage, with an ample fortune. He died at Florence, full of years and military fame, in 1394.

(2, 3.) **HAWKWOOD**, 2 towns in Essex & Suffex.

**HAWLEY**, a town SE. of Blackwater, Hants.

**HAWM**, or **HALM**. See **HAUM**.

(1.) **HAWS**, a river of N. Wales, in Montgomeryshire.

(2.) **HAWS**, a river of S. Wales, in Radnorshire.

(3.) **HAWS**, or } a lake of Westmoreland W.

**HAWS WATER**, } of Penrith, 3 miles long, and half a mile broad, but nearly divided in the middle by a promontory.

**HAWSE**, or **HAUSE**, *n. f.* implies the situation of the cables before the ship's stem, when she is moored with two anchors out from forward, viz. one on the starboard and the other on the larboard bow. Hence it is usual to say, *she has a clear hawse*, or *a foul hawse*. It also denotes any small distance *a-head* of a ship, or between her head and the anchors employed to ride her, as, *He has anchored in our hawse*, *The brig fell athwart our hawse*, &c. A ship is said to ride with a *clear hawse*, when the cables are directed to their anchors, without lying athwart the stem; or crossing, or being twisted round each other by the ship's winding about, according to the change of the wind, tide, or current. A *foul hawse*, on the

contrary, implies that the cables lie across stem, or bear upon each other, so as to be rub and chafed by the motion of the vessel.

*hawse* accordingly is foul, by having either a cr an elbow, or a round turn. If the larboard cable lying across the stem, points out on the starboard side, while the starboard cable at the same grows out on the larboard side, there is a *cr* the *hawse*. If, after this, the ship, without turning to her former position, continues to w about the same way, so as to perform an *ev* revolution, each of the cables will be twisted r the other, and then directed out from the oppa bow, forming what is called a round turn. *elbow* is produced when the ship stops in the dle of that revolution, after having had a *cr* or, in other words, if she rides with her h northward with a clear *hawse*, and afterw turns quite round so as to direct her head w ward again, she will have an *elbow*.

**HAWSE-HOLES**. See **HAWSES**.

**HAWSE PIECES**, the foremost timbers of a whose lower ends rest on the knuckle timber, the foremost of the cant timbers. They are rally parallel to the stem, having their upper sometimes terminated by the lower part of a beak-head; and otherwise by the top of the b particularly in small ships and merchantmen.

**HAWSER**, *n. f.* a large rope which holds middle degree between the *cable* and *snapper*, any ship whereto it belongs, being a size m than the former, and as much larger than the ter. See **HALSER**.

(1.) \* **HAWSES**. *n. f.* [of a ship.] Two r holes under the ship's head or beak, thro which the cables pass when she is at anchor. *See*

(2.) **HAWSES**, or **HAWSE-HOLES**, are for on each side by the **HAWSE PIECES**.

(1.) \* **HAWTHORN**. *n. f.* [*bag thorn*, &c.] A species of medlar; the thorn that bears the white thorn.—The use to which it is ap in England is to make hedges: there are two three varieties of it about London; but the which produces the smallest leaves is *præf* because its branches always grow close to. *Miller*.—There is a man haunts the finest, buscs our young plants with carving *Kolins* their barks; hangs odes upon *hawthorns*, and legies on brambles. *Shak.*—

Some in their hands, beside the lance and shield,

The boughs of woodbine or of *hawthorn* *h*

Now *hawthorns* blossom, now the *u* *h*

The *hawthorn* whitens. *Shak.*

(2.) **HAWTHORN**. See **CRATÆGUS**.

(3.) **HAWTHORN**, AMERICAN. See **VIBURN**

(4.) \* **HAWTHORN FLY**. *n. f.* An insect.—*hawthorn fly* is all black, and not big. *Waller*

**HAWYE**, a river of S. Wales, which runs to the Yther in Radnorshire.

**HAXBY**, a village in York, S. of Calverton.

**HAXTON**, 2 towns in Bedfordshire and Wilts.

(1.) **HAY**, William, Esq. an agreeable English writer, born at Glenburne, in Suffex, about 1710 and educated at Headley. In 1730, he published a *po*

a poem, called *Mount Caburn*, dedicated to the duchess of Newcastle; in which he describes the beauties of his native country, and celebrates the virtues of his friends. In 1734, when lord Hardwicke was created a peer, he was chosen to succeed him as M. P. for Seaford, which he continued to represent during his life. He defended the measures of Sir Robert Walpole, and was supposed to be author of a ministerial pamphlet, intitled, *A Letter to a Freeholder on the late Reduction of the Land-tax to one Shilling in the Pound*; printed in 1732. In 1735, he published *Remarks on the Laws relative to the Poor*, with Proposals for their better Relief and Employment; and brought in a bill for that purpose, but without effect. In May 1738, he was appointed a commissioner of the Victualling office. In 1753, appeared his *Religio Philosophi*; or, the Principles of Morality and Christianity, illustrated from a View of the Universe, and of Man's Situation in it. This was followed, in 1754, by his *Essay on Deformity*; in which he rallies his own imperfections with much liveliness and good humour. "Lilly deformity (says he), is very rare. Among 518 gentlemen in the House of Commons, I am the only one that is so. Thanks to my worthy constituents, who never objected to my person, and I hope never to give them cause to object to my behaviour." See DEFORMITY, § 2. In 1754 he also translated Hawkins Browne *De Immortalitate Animi*. In 1755, he translated and modernized some Epigrams of Martial. A little time before, he had been appointed keeper of the books in the Tower; and it is said that his attention and assiduity during the few months he held that office were eminently serviceable to his function. He died Jan. 19, 1755; leaving a son who inherited the imperfect form of his father. This gentleman went into the service of the East India company, where he acquired rank, fortune, and reputation; but being one of those who opposed Cassim Aly Kawn, and unfortunately falling into his hands, was, with other gentlemen, put to death at Patna, Oct. 5, 1763.

(4.) HAY, *n. f.* (*bieg, big, Sax. bey, Dutch.*) Hay dried to fodder cattle in Winter.—Make by the sun shine. *Cumden's Remains*.—

Make poor men's cattle break their necks;  
So fire on barns and hay stacks in the night,  
And bid the owners quench them with their tears. *Shak.*

We have heats of dungs, and of hays and herbs  
By moist. *Bacon*.—

Or if the earlier season lead  
The tan'd hay cock in the mead. *Milton*.  
Bring them for food sweet boughs and others cut.

For all the Winter long thy hay rick stant. *May's Virgil*.

Some turners turn long and slender sprigs of hay,  
As small as an hay stalk. *Maxon*.—

By some hay cork, or some shady thorn,  
He bids his beads both even song and morn. *Dryden*.

The best manure for meadows is the bottom of  
hay mows and hay stacks. *Mortimer*.—Hay and  
the management of a groom, will make

or, *as it is*. To dance the HAY. To dance in  
the M. Part 1.

a ring: probably from dancing round a hay  
cock.

I will play on the tabor to the worthies,  
And let them dance the hay. *Shak.*

This maids thinks on the hearth they see,  
When fires well nigh consumed be,  
There dancing hays by two and three,  
Just as your fancy casts them. *Drayton*.

The gum and glistening, which with art  
And study'd method, in each part

Hangs down,  
Looks just as it that day

Snails there had crawl'd the hay. *Suckling*.

(3.) HAY. The time of mowing grass for hay must be regulated according to its growth and ripeness; nothing being more prejudicial to the crop than mowing it too soon; because the sap is not then fully come out of the root, and when made into hay, the grass shrinks away to nothing. It must not, however, be let stand too long till it have shed its seeds. When the tops of the grass look brown, and begin to bend down, and the red honeyfuckle flowers begin to wither, it is ripe for mowing. See GRASS, and SAINFOIN.

(4.) HAY, in geography, a town of S. Wales in Brecknockshire, seated near the confluence of the rivers Wye and Dulas. It was a town of note in the time of the Romans; being fortified with a castle and wall, which were ruined in the rebellion of Owen Glendower. It is at present a considerable town; and has a large market for corn and cattle. Lon. 3. 4. W. Lat. 5. 59. N.

(5.) HAY, or L'HAY, a town of France, in the dep. of Paris, 4½ miles S. of Paris.

(6.) \* HAY, *n. f.* [from *haie*, French, a hedge.] A net which incloses the haunt of an animal.—Coyes are destroyed by hays, curs, spaniels, or tumblers bred up for that purpose. *Mortimer*.

(7.) A HAY for taking rabbits, hares, &c. is made from 15 to 20 fathoms in length, and in depth a fathom. As rabbits often straggle abroad about mid day for fresh grass, when they are gone forth to any remote brakes or thickets, pitch a or three of these hays about their burrows, and lie close there; but if there are not hays enough to inclose all their burrows, some may be stopped up with stones, &c. Then set out with the dog to hunt up and down at a good distance, and draw on by degrees to the man who lies close by the hay, who may take them as they bolt into it.

(8.) HAY, BURGUNDIAN. See MEDICAGO.

(9.) HAY, SAINFOIN. See HEDYSARUM, HUSBANDRY, and SAINFOIN.

HAYANGE, a town of France, in the dep. of Moselle, 2 m. NE. of Briey, and 6 SW. of Thionville.

HAYD, a town of Bohemia, 24 miles W. of Pilsen.

HAYDENHEIM, a town of Germany, in Wurtemberg, on the Brentz, famous for pottery; 18 miles NNW. of Ulm, and 42 E. of Stuttgart.

HAYDON, 5 English villages; viz. three in Dorsetshire, and one each in Kent and Northumberland.

(1.) HAYE, a town of France, in the dept. of Indre and Loire, on the Creuse; 12 miles NW. of Preuilly, 25 S. of Tours, and 135 SW. of Paris. Lon. 0. 46. E. Lat. 46. 35. N.

(2.) HAYE, a town of England in Cornwall.

(3.) HAYE DU PUIT, a town of France, in the dep. of the Channel; 12 miles W. of Carentan, and 15 N. of Coutances.

(4.) HAYE PAYNEL, a town of France, in the dep. of the Channel; 2½ miles ESE. of Granville, and 6 N. of Avranches.

(1.) HAYES, Charles, Esq. a very singular person, whose great erudition was so concealed by his modesty, that his name is known to very few, though his publications are many. He was born in 1678, and became distinguished in 1704, by *A Treatise of Fluxions*, in folio; the only work to which he ever set his name. In 1710, came out a 4to pamphlet of 19 pages, entitled, *A new and easy Method to find out the Longitude, from observing the Altitudes of the Celestial Bodies*: and, in 1723, *The Moon, a Philosophical Dialogue*; tending to show, that the moon is not an opaque body, but has original light of her own. During a long course of years, the management of the late Royal African company lay in a manner wholly upon Mr Hayes, he being annually either sub-governor or deputy governor; notwithstanding which, he continued his pursuit after general knowledge. To a skill in the Greek and Latin, as well as the modern languages, he added the knowledge of the Hebrew: and published several pieces relating to the translation and chronology of the scriptures. The African company being dissolved in 1752, he retired to Down in Kent, where he gave himself up to study. In May 1753, he began to compile in Latin his *Chronographia Asiatica & Egyptiaca*, which he lived to finish and which was published after his death. He died at London, December 28, 1760, in his 82d year. The title of his posthumous works runs thus: *Chronographia Asiatica & Egyptiaca Specimen*; in quo, 1. *Origo Chronologiae LXX Interpretum investigatur*. 2. *Conspectus totius operis exhibitur*, 8vo.

(3—5.) HAYES, 4 English villages in Devonshire, Gloucester, Kent, and Middlesex.

(6, 7.) HAYES, a river & island in New S. Wales.

HAYGER, a town of Germany, in Nassau Dillenburg; 3 miles NE. of Dillenburg.

HAYLSHAM. See HAILSHAM.

\* HAY-MAKER. *n. s.* [*hay* and *make*.] One employed in drying grass for hay.—As to the return of his health and vigour, were you here, you might enquire of his *haymakers*. *Pope to Swift*.

1. HAY MAKING. See HUSBANDRY.

(1.) HAYN, a town of Saxony, 6 miles E. of Stolberg.

(2.) HAYN AUX TROIS CHENES, [*i. e.* *Hayn of the three Oaks*.] a town of Germany, in Hsenburg, 5 miles S. of Frankfort on the Maine, and 7 NNE. of Darmstadt.

(3.) HAYN, GROSSEN, a town of Upper Saxony, 8 miles N. of Meissen; famous for the discovery of the art of dyeing Saxon green and blue.

HAYNAU, a town of Silesia in Leignitz.

HAYNAULT. See HAINAULT.

HAYNDORF, a town of Bohemia.

HAYNICHEN, a town of Upper Saxony, 8 miles WNW. of Freyberg, and 25 W. of Dresden.

HAYNSBERG, a town of Upper Saxony, in the bishopric of Naumburg, 3 miles SW. of Naumburg.

(1.) HAYWARD, *n. s.* one who keeps the common herd or cattle of a town. He is appointed by the lord's court; his office is to see that the cattle neither break nor crop the hedges of inclosed grounds.

(2.) HAYWARD, Sir John, an eminent English historian and biographer of the 17th century, educated in the university of Cambridge, where he took the degree of LL. D. In 1610, he was appointed historiographer of a college then at Chelsea; and, in 1619, was knighted. He wrote, 1. *The lives of the three Norman kings of England, William I. and II. and Henry I.* 2. *The first part of the life and reign of king Henry IV.* 3. *The life and reign of king Edward VI.*; and several theological works. He died in 1637.

HAZAEI, [חַזַּאִי, Heb. *i. e.* seeing God.] an officer belonging to Benhadad king of Syria, who caused that prince to be put to death, and reigned in his stead. He defeated Joram, Jehu, and Jehoahaz, kings of Israel; and after his death, was succeeded by Benhadad his son, A. A. C. 834.

(1.) \* HAZARD. *n. s.* [*hazard*, French; *azar*, Spanish; *hazár*, Runick, danger.] 1. Chance; accident; fortuitous hap—

I have set my life upon a cast,

And I will stand the *hazard* of the die. *Shak.*

I will upon all *hazards* well believe

Thou art my friend, that know'st my tongue so well. *Shak.*

—Where the mind does not perceive connection, there men's opinions are not the product of judgment, but the effects of chance and *hazard*, of a mind floating at all adventures, without choice and without direction. *Locke*. 2. Danger; chance of danger.—We are bound to yield unto our Creator, the Father of all mercy, eternal thanks, that he hath delivered his law unto the world; a law wherein so many things are laid open, in light which otherwise would have been buried in darkness, not without the *hazard*, or rather *with* the *hazard*, but with the certain loss of thousands of souls, most undoubtedly now saved. *Hooker*.—The *hazard* I have run to see you here should inform you that I love not at a common rate. *Dryden*.—Men are led on from one stage of life to another in a condition of the utmost *hazard* and yet without the least apprehension of the danger. *Rogers*. 3. A game at dice.—The duke playing at *hazard*, held in a great many hands together, and drew a huge heap of gold. *Swift*.

(2.) HAZARD, in gaming. See GAMING, § 1.

(3.) HAZARD, (§ 1, *def.* 5.) is properly so called; as it speedily enriches a man or ruins him. It is played only with two dice without table, and as many may play as can stand round the best round table. Two things are chiefly to be observed, viz. main and chance; the latter belonging to the castor, and the former, or main, to the other gamers. There can be no main thrown above 9, or under 3; so that 3, 6, 7, and 9, are the only mains. Chances and nicks are from 4 to 10; thus 4 is a chance to 9, 5 to 8, 6 to 7, 7 to 6, 8 to 5; and 9 and 10 a chance to 6, 7, and 8: in short, 4, 5, 6, 7, 8, 9, and 10, are chances to any main, if any of these nick it. Now nicks are either when the chance is the same with the main, as 5 and 5, or the like:

4 and 12, 7 and 12, 8 and 12. Here observe, that 12 is out to 9, 7, and 5; 11 is out to 9, 8, 6, and 5, and aces-ace and deuce-ace, are out to all *whatsoever*.

(1.) \* To HAZARD. *v. a.* [*hazarder*, Fr.] To expose to chance; to put into danger.—They *hazard*, by persisting in the extremity of that opinion, *hazard* greatly their own estates, and so weaken that part which their places now give. *Shak.*—It was not in his power to adventure upon his own fortune, or bearing a publick charge to *hazard* himself against a man of private condition. *Hayward.*—By dealing indifferently mercies with you may *hazard* your own share. *Sherlock.*

(2.) \* To HAZARD. *v. n.* 1. To try the chance. I pray you tarry; pause a day or two, before you *hazard*; for in chusing wrong, I lose your company. *Shak.*

2. To adventure; to run the danger.—

She from her fellow-provinces would go, Rather than *hazard* to have you her foe. *Waller.*

\* HAZARDABLE. *adj.* [from *hazard*.] Venturous; liable to chance.—An *hazardable* determination it is, unto fluctuating and indifferent effects, to affix a positive type or period. *Brown.*

\* HAZARDER. *n. s.* [from *hazard*.] He who hazards.

\* HAZARDOUS. *adj.* [*hazardous*, French; from *hazard*.] Dangerous; exposed to chance.—

Grant that our *hazardous* attempt prove vain, We feel the worst, secur'd from greater pain. *Dryden.*

\* HAZARDOUSLY. *adv.* [from *hazardous*.] With danger or chance.

\* HAZARDRY. *n. s.* [from *hazard*.] Temerity; presumption; rash adventurousness. Obsolete.—

Buffy wrath, and heedless *hazardry*, Demand repentance late, and lasting infamy. *Spenser.*

\* HAZE. *n. s.* [The etymology unknown.] Fog; mist.

(1.) \* To HAZE. *v. a.* To fright one. *Ainsl.*

(2.) \* To HAZE. *v. n.* To be foggy or misty.

HAZEBROUC, a town of France, in the dep. of the North; 19½ miles W. of Lille, and 19½ S. of Dunkirk. Lon. 20. 12. E. of Ferro. Lat. 50. 4. N.

(1.) \* HAZEL. *adj.* [from the noun.] Light brown; of the colour of hazel.—Chuse a warm dry soil, that has a good depth of light *hazel* mould. *Mortimer.*

(2.) \* HAZEL. *n. s.* [*hesel*, Sax. *corylus*, Lat.] The nut.—The nuts grow in clusters, and are joined together at the bottom, each being covered with an outward husk or cup, which opens at the top, and when the fruit is ripe it falls out. The species are hazelnut, cobnut, and filbert. The red and white filberts are mostly esteemed for their fruit. *Miller.*—

Kate, like the *hazel* twig, Is bright and slender; and as brown in hue As *hazel* nuts, and sweeter than the kernels. *Shak.*

Her chariot is an empty *hazel* nut. *Shak.*

Why sit we not beneath the grateful shade, Which *hazels* intermix'd with elms have made? *Dryden.*

—There are some from the size of a *hazel* nut to that of a man's fist. *Hoodward.*

(3.) HAZEL, or HAZLE, in botany. See CORYLUS. The kernels of the fruit have a mild, farinaceous, only taste, agreeable to most palates. Squirrels and mice are fond of them, as well as some birds, such as jays, nutcrackers, &c. A kind of chocolate has been prepared from them, and there are instances of their having been formed into bread. The oil expressed from them is little inferior to the oil of almonds; and is used by painters and by chemists for receiving and retaining odours. The charcoal made of the wood is used by painters in drawing. Evelyn tells us, that no plant is more proper for thickening of copes than the hazel, for which he directs the following expeditious method. Take a pole of hazel (ash or poplar may also be used) of 20 or 30 feet in length, the head a little lopped into the ground, giving it a chop near the ground to make it succumb; this fastened to the earth with a hook or two, and covered with some fresh mould at a competent depth, will produce a great number of suckers, and thicken and furnish a copse speedily.

(4.) HAZLE EARTH, or HAZLEY EARTH, a kind of red loam, which is said to be an excellent mixture with other sorts of earth; uniting what is too loose, cooling what is too hot, and gently retaining the moisture.

HAZEL, WITCH. See HAMAMELUS, and ULMUS.

\* HAZELLY. *adj.* Of the colour of hazel; a light brown.—Uplands consist either of sand, gravel, chalk, rock or stone, *hazelly* loam, clay, or black mould. *Mortimer.*

\* HAZY. *adj.* [from *haze*.] Dark; foggy; misty.—Our clearest day here is misty and *hazy*, we see not far, and what we do see is in a bad light. *Burnet's Theory.*—

Oft engender'd by the *hazy* North, Myriadson myriads, insect armies wait. *Thomson.*

\* HE. *pronoun.* gen. *him*; plur. *they*; gen. *them*. [*hy*, Dutch; *he*, Saxon. It seems to have borrowed the plural from *this*, Saxon, plural *das*, dative *difum*.] 1. The man that was named before.—

All the conspirators, save only *he*, Did that they did in envy of great Cæsar. *Shak.*

If much you note *him*, You shall offend *him*, and increase his passion; Feed and regard *him* not. *Shak.*

—I am weary of this moon; would *he* would change. *Shak.*—

Adam spoke; So cheer'd *he* his fair spouse, and she was cheer'd. *Milton.*

When Adam wak'd, *he* on his side Leaning half rais'd hung over her. *Milton.*

Thus talking, hand in hand along *they* pass'd On to their blissful bow'rs. *Milton.*

Extol Him first, *him* last, *him* midst. *Milton.*

2. The man; the person. It sometimes stands without reference to any foregoing word.—

He is never poor That little hath, but *he* that much desires. *Daniel.*

3. Man or male being.—

Such mortal drugs I have ; but Mantua's law  
Is death to any *be* that utters them. *Shak.*  
—I stand to answer thee, or any *be* the proudest  
of the sort. *Shak.*—

Troas and his race the sculptor shall employ,  
And *be* the god who built the walls of Troy.

*Dryden.*

4. Male : as, a *be* bear, a *be* goat. It is used where  
the male and female have not different denomina-  
tions.—The *be's* in birds have the fairest feathers.  
*Bacon.* 5. In the two last senses *be* is rather a noun  
than pronoun.

HEA, a province of Morocco, on the Atlantic.  
Mogador is the capital.

(1) \* HEAD. *n. f.* [*heafed*, *brafd*, Saxon ;  
*hoofd*, Dutch ; *haued*, old English, whence by  
contraction *beud*.] 1. The part of the animal that  
contains the brain or the organ of sensation or  
thought.—

Vein bea'ing verven, and bead purging dill.

*Spenser.*

Over bead up grew

Insuperable height of loftiest shade. *Milton.*

The dewy paths of meadows we will tread,

For crowns and chaplets to adorn thy bead. *Dryd.*

—I could still have offers, that some, who held  
their *heads* higher, would be glad to accept.  
*Swift.* 2. Person as exposed to any danger or  
penalty.—What he gets more of her than sharp  
words, let it lie on my *bead*. *Shak.*—

Who of al. ages to succeed, but feeling

The evil on him brought by me, will curl

My *bead* & ill fare our ancestor impure. *Milton.*

3. HEAD and *Bar*. The whole person.—

In jingling rhimes well fortified and strong,

He fights intrench'd o'er *bead* and *ears* in song.

*Granville.*

4. Denomination of any animals.—When Inno-  
cent desired the marquis of Carpio to furnish  
30,000 *bead* of swine, he could not spare them ;  
but lawyers he had at his service. *Addison.*—The  
tax upon pasturage was raised according to a cer-  
tain rate *per bead* upon cattle. *Arbutnot.* 5. Chief ;  
principal person ; one to whom the rest are sub-  
ordinate ; leader ; commander.—For their com-  
mons, there is little danger from them, except it  
be where they have great and potent *heads*. *Bacon.*

Your *bead* I him appoint ;

And by myself have sworn, to him shall bow

All knees in heav'n, and shall confess him lord.

*Milton.*

—The *heads* of the chief sects of philosophy, as  
Thales, Anaxagoras, and Pythagoras, did con-  
sent to this tradition. *Tillotson.* 6. Place of ho-  
nour ; the first place.—Notwithstanding all the  
justices had taken their places upon the Bench,  
they made room for the old knight at the *bead* of  
them. *Addison.* 7. Place of command.—An ar-  
my of four hundred thousand troops, with the duke  
of Marlborough at the *bead* of them, could do  
nothing. *Addison on the War.* 8. Countenance ;  
presence.—

Richard not far from hence hath hid his *bead*.

*Shak. Richard II.*

With Cain go wander through the shade of  
night,

And never shew thy *bead* by day or light. *Shak.*

Ere to-morrow's sun shall shew his *Lead*.

*Dryd.*

9. Understanding ; faculties of the mind : com-  
monly in a ludicrous sense.—The wenches lay  
their *heads* together. *L'Estrange.*—A fox and  
goat went down a well to drink : the goat fell ;  
hunting which way to get back ; Oh, says Re-  
nard, never trouble your *bead*, but leave that to  
me. *L'Estrange.*—Work with all the ease and  
speed you can, without breaking your *bead*, as  
being so very industrious in starting scraps.  
*Dryden.*—The lazy and inconsiderate took up the  
notions by chance, without much beating the  
*heads* about them. *Locke.*—If a man shews that  
has no religion, why should we think that  
beats his *bead*, and troubles himself to examine the  
grounds of this or that doctrine? *Locke.*—When  
in ordinary discourse we say a man has a fine  
*we* express ourselves metaphorically, and speak  
relation to his understanding ; and when we  
of a woman she has a fine *bead*, we speak only  
relation to her comode. *Addison.*—We laid  
*heads* together, to consider what grievances the  
nation had suffered under king George. *Add.*  
10. Face ; front ; fore part.—

The gathering crowd pursues ;

The ravishers turn *bead*, the fight renews.

*Dryd.*

11. Resistance ; hostile opposition.—

Then made he *bead*, against his enemies,

And Hymmer flew.

*Fairy Queen.*

—Sometimes both Henry Bolingbroke made  
against my power. *Shak.*—Two valiant gentlemen  
making *bead* against them, seconded by hun-  
dreds more, made forty run away. *Raleigh.*—  
having depraved his judgment, and got posses-  
sion of his will, there is no other principle left  
naturally, by which he can make *bead* against  
*South.* 12. Spontaneous resolution.—The Eng-  
lish wars in this kingdom were made altogether  
voluntaries, upon their own *bead*, without  
pay or commission from the state. *Dorset.*  
State of a deer's horns, by which his age is known.  
—It was a buck of the first *bead*. *Shak.*—There is  
called the fifth year a buck of the fifth *bead*.  
*Shak.* 14. Individual. It is used in numerical  
computation.—If there be six millions of people,  
then there is about four acres for every man.  
*Graunt.* 15. The top of any thing higher than  
the rest.—His spear's *bead* weighed six hundred  
shekels of iron. *1 Sam.*

As high

As his proud *bead* is rais'd towards the sky.

So low tow'rd's hell his roots descend. *Dorset.*

—Trees, which have large and spreading  
would lie with their branches upon the water. *His*  
*guard.*—If the buds are made our food, they are  
ed *heads* or tops ; so *heads* of asparagus or art-  
choaks. *Watts.*—*Head* is an equivocal term ; it  
it signifies the *bead* of a nail, or of a pin, as well  
as of an animal *Watts.* 16. The fore part of any  
thing, as of a ship.—By galleys with brazen  
the might transport over Indus at once three hun-  
dred thousand soldiers. *Raleigh.*—

His galleys moor ;

Their *heads* are turn'd to sea, their sterns  
shore.

*Dryd.*

17. The

27. That which rises on the top.—Let it stand in a tub four or five days before it be put into the cask, stirring it twice a-day, and beating down the head or yeast into it. *Mortimer*. 18. The head of an ass.—A man fetcheth a stroke with the mallet to cut down the tree, and the head slippeth from the helve. *Deut. xix. 5*. 19. Upper part of a bed.—Israel bowed upon the bed's head. *Gen. xli. 31*. 20. The brain.—

As eastern priests in giddy circles run,  
And turn their heads to imitate the fun. *Pope*.  
21. Dress of the head.—Ladies think they gain a point when they have teased their husbands to buy them a laced head, or a fine petticoat. *Swift*.  
22. Principal topick of discourse.—These heads are of a mixed order, and we propose only such as belong to the natural world. *Burnet's Theory*. To our great interest, and duty, to satisfy ourselves on this head upon which our whole conduct depends. *Atterbury*. 23. Source of a stream.—It is the glory of God to give; his very nature delights in it: his mercies in the current, through which they would pass, may be dried up, but at the head they never fail. *Hooker*.—The current by Gaza is but a small stream, rising between it and the Red sea, whose head from Gaza is little more than twenty English miles. *Raleigh's History*.  
Some did the long, and some the choir maintain,

Beneath a laurel shade, where mighty Po  
Mounts up to woods above, and hides his head below. *Dryden*.

24. Clink; pitch.—The indisposition which has long hung upon me, is at last grown to such a head, that it must quickly make an end of me, or of me. *Addison*. 25. Power; influence; force; strength; dominion.—

Within her breast though calm, her breast  
Though pure,

Her many cares and fears got head, and rais'd  
Some troubled thoughts. *Milton*.

26. Army; confux.—People under command come to consult, and after to march in order; but when, contrariwise, run upon an head together in confusion. *Bacon*.—

A mighty and fearful head they are,  
And ever offer'd foul play in a state. *Shak*.

From the marches here we heard you were,  
Seeking another head to fight again. *Shak*.

Let all this wicked crew gather  
Their forces to one head. *Ben Jonson*.

27. Power; armed force.—My lord, my lord, the  
heads have gather'd head. *Shak*.—

At sixteen years,  
When Tarquin made a head for Rome, he sought  
Beyond the mark of others. *Shak*.

28. Liberty in running a horse.—

He gave his able horse the head,  
And bounding forward struck his agile heels  
Against the panting sides of this poor jade  
Up to the rowel head. *Shak*.

29. Licence; freedom from restraint; a metaphor from husbandry.—God will not admit of the  
passionate man's apology, that he has so long given  
to his unruly passions their head, that he cannot  
now govern nor controul them. *Soutb*. 30. It  
is very improperly applied to roots.—

How turneps hide their swelling heads below,

And how the closing coleworts upwards grow.

*Gay*.

31. HEAD and Shoulders. By force; violently.—  
People that hit upon a thought that tickles them,  
will be still bringing it in by head and shoulders,  
over and over, in several companies. *L'Estrange*.  
—They bring in every figure of speech, head and  
shoulders by main force, in spite of nature and  
their subject. *Felton*.

(2.) The HEAD is the uppermost part of the  
body of an animal. See ANATOMY, PART I. Sect.  
II. and III.

(3.) \* HEAD. *adj*. Chief; principal; as, the  
head workman; the head inn.—The horse made  
their escape to Winchester, the head quarters.  
*Clarendon*.

(4.) HEAD, DRAGON'S. See DRAGON'S HEAD,  
§ 3.

(5.) HEAD OF A SHIP, an ornamental figure erect-  
ed on the continuation of a ship's stem, as  
being expressive of her name, and emblematical of  
war, navigation, commerce, &c. HEAD, is also  
used in a more enlarged sense to signify the whole  
front or fore part of the ship, including the bows  
on each side: the head therefore opens the column  
of water through which the ship passes when ad-  
vancing. Hence we say, head sails, head-see,  
head-way, &c. *Fig. 6. Plate CXXXIII.* represents  
one side of the fore-part or head of a 74 gunship,  
together with part of the bow, keel, and gunnel.  
The names of the several pieces, exhibited there-  
in, are as follow: AA Fore part of the keel, with  
a a the two false keels beneath it. AC the stem.  
a a The cat-head. b b The supporter of the cat-  
head. c c The knight-head, or bollard timber,  
of which there is one on each side, to secure the  
inner end of the bowsprit. d d The haule holes:  
e e The naval hoods, i. e. thick pieces of plank  
laid upon the bow to strengthen the edges of the  
haule holes. f The davit-chock, by which the davit  
is firmly wedged while employed to fish the an-  
chor. g The bulk-head, which terminates the  
forecastle on the fore side, being called the *beak-  
head* or *bulk-head* by shipwrights. H The gun-ports  
of the lower deck. h The gun-ports of the up-  
per deck and fore-castle. I, I, The channels, with  
their dead-eyes and chain plates. i The gripe, or  
fore-foot, which unites the keel with the stem,  
forming a part of either. k k These dotted lines  
represent the thickness and descent of the different  
decks from the fore parts of the ship towards the  
middle. The lowest of the three dotted lines l  
expresses the convexity of the beams, or the dif-  
ference between the height of the deck in the  
middle of its breadth and at the ship's side. This  
will be found exhibited more clearly under  
the article MIDSHIP FRAMES. N. B. These  
lines must be always parallel to the lines  
which terminate the gun-ports above and be-  
low. m m The timbers of the head, and part of  
the bowsprit. X The rails of the head which lie  
across the timbers. Q Z Fore part of the main-  
wale. R X Fore part of the channel-wale. U C  
The load water-line. *Fig. 7.* represents a head  
view of a ship, with the projection of her principal  
timbers, and all her planks laid on one side.  
The fore part of a ship is called its head, from the  
affinity of motion and position it bears to a fish,

and in general to the horizontal situation of all animals whilst swimming. By the *HEAD* implies the state of a ship, which is laden deeper at the fore end than the aft end.

(6, 7) *HEAD OF ELK*, a town of Maryland, at the head of Chesapeake Bay, on a river of the same name. The citizens are employed in the carrying trade.

(8.) *HEAD OF MAN*, a cape of S. Wales, in Pembrokehire 6 miles WSW. of Pembroke.

\* *To HEAD*. *v. a.* [from the noun.] 1. To lead; to influence; to direct; to govern.—

Abas, who seem'd our friend, is either fled,  
Or, what we fear, our enemies does *head*.

*Dryden.*

—Nor is what has been said of princes less true of all other governours, from him that *heads* an army to him that is master of a family, or of one single servant. *South*—

This lord had *headed* his appointed hands,  
In firm allegiance to his king's commands.

*Prior.*

2. To behead; to kill by taking away the head.—If you *head* and hang all that offend that way but for ten years together, you'll be glad to give out a commission for more heads. *Shak.*—3. To fit any thing with a head, or principal part.—

*Headed* with Rints and feathers bloody dy'd,  
Arrows the Indians in their quivers hide.

*Fairy Queen.*

Of cornel wood a spear upright,  
*Headed* with piercing steel, and polish'd bright.

*Dryden.*

4. To lop trees.—You must disbranch them, leaving only the summit entire: it may be necessary to *head* them too. *Mortimer.*

(1.) \* *HEADACH*. *n. f.* [*head* and *ach*.] Pain in the head.—

From the cruel *headach*,

Riches do not preserve.

*Sidney.*

—Nothing more exposes to *headachs*, colds, catarrhs, and coughs, than keeping the head warm. *Lacke.*—In the *headach* he orders the opening of the vein of the forehead. *Arbutnot.*—

At some dear idle time,

Not plagu'd with *headach*, or the want of rhyme.

*Pope.*

(2.) The *HEADACH* is a most troublesome sensation in the head produced by various causes, and attended with different symptoms, according to its different degrees and the place where it is seated. See *MEDICINE*, *Index*; and *PERKINISM*.

\* *HEADBAND*. *n. f.* [*head* and *band*.] 1. A fillet for the head; a topknot.—The Lord will take away the bonnets, and the *headbands*. *Isaiah*. 2. The band at each end of a book.—

(1.) \* *HEADBOROUGH*. *n. f.* [*head* and *borough*.] A constable; a subordinate constable.—

Here lies John Dod, a servant of God, to whom he is gone,

Father or mother, sister or brother, he never knew none;

A *headborough* and constable, a man of fame,  
The first of his house, and last of his name.

*Camden.*

This none are able to break thorough,  
Until they're freed by *head* of *borough*. *Hudib.*

(2.) *HEAD-BOROUGH*, or *HEAD BOROW*, is the

chief of the frank-pledge, and had anciently the principal direction of those within his own pledge. This office is now called a *high constable*. The *head-borrow* was the chief of ten pledges: the other 9 were called *HAND-BOROWS*, or *plegi manuales*. See *BOROUGH-HEAD*, and *CONSTABLE*. § 6.

(1.) \* *HEADDRESS*. *n. f.* [*head* and *dress*.] 1. The covering of a woman's head.—There is not so variable a thing in nature as a lady's *headdress*: we have known it rise and fall. *Addison.*—

If ere with airy horns I planted heads,

Or discompos'd the *headdresses* of a prude. *Pope*. 2. Any thing resembling a *headdress*, and prominent on the head.—Among birds the males often appear in a most beautiful *headdress*, whether it be a crest, a comb, a tuft of feathers, or a natural little plume, erected like a kind of papacle on the very top of the head. *Addison.*

(2.) The *HEAD-DRESS*, amongst the ancient Jewish, Grecian, and Roman ladies, as amongst ourselves, was various, according to the times and the fluctuations of fashion. It principally consisted of their hair differently tricked out. It was usually divided before, with a bodkin, into two equal parts; sometimes it was covered with a net, or put into a kind of purse, or tied behind in the form of a knot, or bound back and fastened with ribbands. It was washed with great care, and essence and perfumes were applied to it, and gold dust sometimes made use of as powder. Pearls and jewels made a part of their ornaments; pendants were worn in the ear. To cover the front of hair, perukes were made use of by the gentlemen of Rome. Otho had a covering of his hair. See *HAIR*, § 5, and *JEWELS*. Both Grecian and Roman ladies wore *têtes*. But what they ever built up their heads so high as the English and French did a few years ago, is doubtless.

\* *HEADER*. *n. f.* [from *head*.] 1. One of the heads nails or pins, or the like. 2. The first brail in the angle.—If the *header* of one side of the war is toothed as much as the stretcher on the outside it would be a stronger toothing, and the joint of the *headers* of one side would be in the middle of the *headers* of the course they lie upon, of the other side. *Maxon.*

*HEAD-FAST*, a rope employed to fasten a vessel to a wharf, chain, or buoy, or to some other vessel along-side.

*HEADFORD*, a town of Ireland, in the county of Galway, 11 miles N. of Galway, and 153 W. of Dublin. Lon. 9. 3. W. Lat. 53. 29.

*HEADGARGLE*. *n. f.* [*head* and *gargle*.] A decoction, I suppose, in cattle.—For the *head-gargle* give powder of fenugreek. *Mortimer.*

\* *HEADINESS*. *n. f.* [from *head*.] Hurry; rashness; stubbornness; precipitation; obstinacy.—If any will rashly blame such his choice of oil and unwonted words, him may I more justly blame and condemn, either of witless *headiness* in judging, or of headless hardiness in condemning. *Spenser.*

\* *HEADLAND*. *n. f.* [*head* and *land*.] 1. Promontory; cape.—An heroic play ought to be an imitation of an heroic poem, and consequently love and valour ought to be the subject of it: but these Sir William Davenant began to shadow; but

It was so as discoverers draw their maps, with  
*badlands* and promontories. *Dryden.* 2. Ground  
 under bed, &c.—

Now down with the grass upon *badlands*  
 about,

Tha groweth in shadow so rank and so stout.

*Tupper.*

\* *HEADLESS.* *adj.* [from *head*.] 1. Without  
 a head; beheaded.—

His shining helmet he 'gan soon t' unlace,  
 And left his *headless* body bleeding at the place.

*Spenser.*

Woe I a man, a duke, and next of blood,  
 I would remove these tedious stumbling blocks,  
 And smooth my way upon their *headless* necks.

*Shak.*

On the cold earth lies th' unregarded king,  
 A *headless* carcase, and a nameless thing. *Doubt.*

Prickly stubs, instead of trees, are found;

*Headless* the most, and hideous to behold.

*Dryden.*

1. Without a chief.—They rested not until they  
 had made the empire stand *headless* about seven-  
 teen years. *Raleigh.* 3. Obstinate; inconfide-  
 nt; ignorant; wanting intellects: perhaps for  
*headless*.—Him may I more justly blame and con-  
 demn, either of witless headiness in judging, or  
 of *headless* hardness in condemning. *Spenser.*

*HEADLEY*, Henry, B. A. an ingenious young  
 poet, born at Norwich in 1765, and educated un-  
 der Dr Parr. He studied at Trinity College, Ox-  
 ford, where he took his degree. He published a  
 volume of Poems; several pieces in the *Olla Pod-  
 rica*; and a curious work entitled, *Select Beau-  
 ties of ancient English Poetry*, with remarks: in  
 1786. He died at Norwich in 1788, aged 23.

(1.) \* *HEADLONG.* *adj.* 1. Steep; precipi-  
 tous. 2. Rash; thoughtless. 3. Sudden; precipi-  
 tate.—It suddenly fell from an excess of favour,  
 which, my examples having taught them, ne-  
 ver before was, 'till it came to a *headlong* over-  
 throw.—

(2.) \* *HEADLONG.* *adv.* [*head* and *long*.]  
 1. With the head foremost. It is often doubtful  
 whether this word be adjective or adverb.—

I'll look no more,

Let my brain turn, and the deficient sight

Tumble down *headlong*.

*Shak.*

Woe, while he steering view'd the stars, and  
 bore

His course from Africk to the Latian shore,

He *headlong* down.

*Dryden.*

*Headlong* from thence the glowing fury springs,  
 And o'er the Theban palace spreads her wings.

*Pope.*

1. Rashly; without thought; precipitately.—To  
 the such warning, as might infallibly have  
 prevented his destruction, was esteemed by him  
 good, and to push him on *headlong* into it, because  
 he was fond of it, was accounted good. *South.*—

Some ask for envy'd pow'r, which publick  
 hate

Perfect and hurries *headlong* to their fate;

Down go the titles.

*Dryden.*

2. Hastily without delay or respite.—

Unhappy offspring of my teeming womb!

Dragg'd *headlong* from thy cradle to thy tomb.

*Dryden.*

4. It is very negligently used by *Shakespeare*.—

Hence will I drag thee *headlong* by the heels,

Unto a dunghill, which shall be thy grave. *Shak.*

*HEADMOST*, *adj.* the situation of any ship or  
 ships which are most advanced in a fleet, or line  
 of battle.

(1.) \* *HEADMOULD-SHOT.* *n. f.* [*head*, *mould*,  
 and *shot*.] This is when the sutures of the skull,  
 generally the coronal, ride; that is, have their  
 edges shot over one another; which is frequent  
 in infants, and occasions convulsions and death.  
*Quincy.*

(2.) *The HEAD-MOULDSHOT* is a disease where-  
 in the sutures are so close locked together, as to  
 compress the internal parts, the meninges, or e-  
 ven the brain. It is supposed to admit of no cure  
 from medicine, unless room could be given by  
 manual operation or a divulsion of the sutures.  
 It is the opposite of the horse shoe head.

(3.) *HEADON*, or *HEYDON*, a borough of  
 Yorkshire, in the E. Riding, which sends two mem-  
 bers to parliament. It has a market on Sat. and  
 fairs on Feb. 14. Aug. 2. Sep. 15 and Nov. 17.  
 It is seated on a river, that runs into the Humber,  
 8 miles E. of Hull, and 181. N. of London.

(4, 5.) *HEADON*, two villages; 1. in Northum-  
 berland, S. of the Picts Wall: 2. in Nottingham,  
 SE. of Redford.

*HEAD-PENCE*, an exaction of a certain sum  
 formerly collected by the sheriff of Northumber-  
 land from the inhabitants of that county, without  
 any account to be made to the king. It was abo-  
 lished by Stat. 23 Hen. VI. cap. 7.

\* *HEADPIECE.* *n. f.* [*head* and *piece*.] 1. Ar-  
 mour for the head; helmet; morion.—I pulled  
 off my *headpiece*, and humbly intreated her par-  
 don, or knowledge why she was cruel. *Sidney.*—

The word is giv'n; with eager speed they lace  
 The shining *headpiece*, and the shield embrace.

*Dryden.*

—A reason for this fiction of the one-eyed Cyclops,  
 was their wearing a *headpiece*, or martial vizor,  
 that had but one sight. *Broome.*—This champion  
 will not come into the field, before his great  
 blunderbuss can be got ready, his old rusty breast-  
 plate scoured, and his cracked *headpiece* mended.  
*Swift.* 2. Understanding; force of mind.—

'Tis done by some severals

Of *headpiece* extraordinary, lower messes

Perchance are to this business purblind. *Shak.*

—Eumenes had the best *headpieces* of all Alexan-  
 der's captains. *Prideaux.*

\* *HEADQUARTERS.* *n. f.* [*head* and *quarters*.]  
 The place of general rendezvous, or lodgment for  
 soldiers. This is properly two words.—Those  
 spirits, posted upon the out-guards, immediately  
 scour off to the brain, which is the *headquarters*,  
 or office of intelligence, and there they make their  
 report. *Collier.*

*HEAD-ROPS*, that part of the bolt-rope which  
 terminates any of the principal sails on the upper  
 edge, which is accordingly sewed thereto. See  
*BOLT-ROPS.* § 2.

*HEAD-SAILS*, a general name for all those sails  
 which are extended on the fore-mast and bowsprit,  
 and employed to command the fore part of the  
 ship: such are the fore-sail, fore top sail, fore-top-  
 gallant-sail, jib, fore-stay-sail, and the sprit sail

with

with its top sail. This term is used in opposition to *after-sails*, viz. all those which are extended on the mizen-mast, and on the stays between the mizen and main masts.

\* **HEADSHIP**. *n. f.* [from *head*.] Dignity; authority; chief place.

\* **HEADSMAN**. *n. f.* [*head* and *man*.] Executioner; one that cuts off heads.—

Rods broke on our associates bleeding backs,  
And *headsmen* lab'ring till they blunt their ax?

*Dryden.*

\* **HEADSTALL**. *n. f.* [*head* and *stall*.] Part of the bridle that covers the head.—His horse, with a half-check'd bit, and a *headstall* of sheep's leather, which being restrained to keep him from stumbling hath been often burst, and now repaired with knots. *Shak.*

\* **HEADSTONE**. *n. f.* [*head* and *stone*.] The first or capital stone.—The stone, which the builders refused, is become the *headstone*. *Pf. cxviii. 22.*

\* **HEADSTRONG**. *adj.* [*head* and *strong*.] Unrestrained; violent, ungovernable; resolute to run his own way: as a horse whose head cannot be held in.—An example, for *headstrong* and inconsiderate zeal, no less fearful than Achitophel for proud and irreligious wisdom. *Hooker.*—

How now, my *headstrong*! where have you been gadding?

—Where I have learnt me to repent the sin  
Of disobedient opposition. *Shak.*

But such a *headstrong* potent fault it is,

That it but mocks reproof. *Shak.*

He ill aspires to rule

Cities of men or *headstrong* multitudes,

Subject himself to anarchy within. *Milton.*

—There's no opposing the torrent of a *headstrong* multitude. *L'Estrange.*—

Now let the *headstrong* boy my will controul:  
Virtue's no slave of man; no sex confines the  
soul:

I, for myself, th' imperial seat will gain,  
And he shall wait my leisure for his reign. *Dryd.*

Your father's folly took a *headstrong* course;  
But I'll rule your's, and teach you love by force.

*Dryden.*

Can we forget how the mad *headstrong* rout  
Defy'd their prince to arms, nor made account  
Of faith or duty, or allegiance sworn? *Phillips.*

I'll try if yet I can reduce to reason

This *headstrong* youth, and make him spurn at  
Cato. *Addis.*

—You will be both judge and party: I am sorry  
thou discoverest so much of thy *headstrong* hu-  
mour. *Arbutnot.*

**HEAD TIN**, in metallurgy, is a preparation of tin ore toward the fitting it for working into metal. When the ore has been pounded and twice washed, that part of it which lies uppermost, or makes the surface of the mass in the tub, is called the *head-tin*; this is separated from the rest, and after a little more washing becomes fit for the blowing-house.

**HEAD TO WIND**; the situation of a ship or boat, when her head is turned to windward.

**HEAD-WAY**, the motion of advancing at sea. It is generally used when a ship first begins to advance; or when it is doubtful whether she is in a state of rest or motion. It is in both senses opposed

to retreating, or moving with the stern foremost. See **STERNWAY**.

\* **HEADWORKMAN**. *n. f.* [*head*, *work* and *man*.] The foreman, or chief servant over the rest. Properly two words.—Can Wood be otherwise regarded than as the mechanick, the *headworkman*, to prepare furnace and stamps? *Swift.*

\* **HEADY**. *adj.* [from *head*.] 1. Rash; precipitate; hasty; violent; ungovernable; hurried on with passion.—

Take pity of your town and of your people  
While yet the cool and temperate wind of grace  
O'erblows the filthy contagious clouds  
Of *heady* murder, spoil and villany. *Shak.*

I am advised what I say:

Neither disturb'd with the effect of wine,  
Nor, *heady* rash, provok'd with raging ire;  
Albeit my wrongs might make one wiser mad. *Shak.*

I'll forbear,

And am fall'n out with my more *heady* will,  
To take the indispos'd and sickly fit  
For the sound man. *Shak.*

Wives, the readiest helps

To betray *heady* husbands, rob the easy. *B. Jon.*  
—Those only are regarded who are true to the party; and all the talent required is to be hot. To be *heady*, to be violent on one side or other. *Temple.*—Men, naturally warm and *heady*, transported with the greatest flush of good nature. *Addison.* 2. Apt to affect the head.—was entertained with a sort of wine which was very *heady*, but otherwise seemed to be sack. *Boylan.*

Since hearty beef and mutton will not do,  
Here's julep-dance, ptisan of song and show:  
Give you strong sense, the liquor is too *heady*;  
You're come to farce, that's asses milk, alas! *Dryd.*

Flow, Wellsted! flow, like thine inspiring  
beer;

*Heady*, not strong; and foaming, though not full. *Pope.*

3. Violent; impetuous.—

Never came reformation in a flood  
With such a *heady* current scow'ring faults;  
Nor ever hydra-headed wilfulness  
So soon did lose his seat. *Shak.*

(1.) \* **To HEAL**. *v. a.* [*halgan*, Gothick; *halan*, Saxon; *heelen*, Dutch.] 1. To cure a person; to restore from hurt or sickness.—I will restore health, and *heal* thee of thy wounds. *J. xxx.*—Who would not believe that our Saviour *healed* the sick, and raised the dead, when it was published by those who themselves often did the same miracles? *Addison.*—Physicians, by just observations, grow up to an honourable degree of skill in the art of *healing*. *Watts.* 2. To cure a wound or distemper.—Thou hast no *healing* medicines. *J. xxx. 13.*—A fontanel had been made in the infant's leg, which he was forced to *heal* up, by reason of the pain. *Wifeman.* 3. To perform the act of making a sore to cicatrize, after it is cleansed. After separation of the eschar, I deterged and *healed*. *Wifem.* 4. To reconcile: as, he *healed* all dissensions.

(2.) \* **To HEAL**. *v. n.* To grow well. Used of wounds or sores.—

Those wounds *heal* that men do give themselves. *Shakespeare.*

Abscesses will have a greater or less tendency to *heal*, as they are higher or lower in the body. *Sharp.*

\* **HEALER**. *n. s.* [from *heal*.] One who cures or heals.—I will not be an *healer*. *Isaiah.*

(1.) **HEALFANG**, **HEALSFANG**, or **HALSFANG**; from *heaf*, neck, and *fangen*, to contain, Sax.] in the ancient English customs, signifies *collustrigium*, or the punishment of the pillory: *Pena julecet qualem collum strigatur*. It cannot, however, signify a pillory in the charter of Canute; *De Foresta* cap. xiv. *Et pro culpa solvat regi duos solidos, qui Dasi vocant healfang.*

(2.) **HEALFANG** is also taken for a pecuniary punishment or mulct, to commute for standing in the pillory; and is to be paid either to the king or the chief lord. *Qui falsum testimonium dedit, reddat regi vel terre domino healfang.*

(3.) \* **HEALING**. *participial adj.* [from *heal*.] Mild; mollifying; gentle; assuasive: as he is of a *healing* pacific temper.

(4.) **HEALING**, *part. sub.* in its general sense, includes the whole process of curing a disorder, and restoring health. In this sense medicine is defined the art of healing. In its more restrained use, as used in surgery, &c. healing denotes the uniting or consolidating the lips of a wound or ulcer. The medicines proper for this intention are called *incarnatives*, *agglutinatives*, *vulneraries*, &c.

(5.) **HEALING**, in architecture, denotes the covering the roof of a building; whether with lead, tiles, slate, Horsham stone, shingles, reeds, or straw.

(6.) \* **HEALTH**. *n. s.* [from *heal*, Saxon.] 1. Freedom from bodily pain or sickness.—*Health* is the faculty of performing all actions proper to a human body, in the most perfect manner. *Quincy.*—Our father is in good *health*, he is yet alive. *Gen.*

May be he is not well;  
Idleness doth still neglect all office,  
Wherein our *health* is bound. *Shakespeare.*

2. *Health* of mind; purity; goodness; principle of salvation.—There is no *health* in us. *Common Prayer.*—The best preservative to keep the mind *healthy*, is the faithful admonition of a friend.

3. Salvation spiritual and temporal.—My God, my God, why hast thou forsaken me, and art so far from my *health*, and from the words of thy complaint? *Psalms.* 4. Wish of happiness usually in drinking.—

Come, love and *health* to all;  
Drink to th' general joy of the whole table. *Shak.*  
—Heasted leave to begin two *healths*: the first unto the king's mistress, and the second to his self. *Howell.*

For peace at home, and for the public wealth,  
I mean to crown a bowl to Cæsar's *health*. *Dryd.*

(7.) **HEALTH**, (*§ 1, def. 1.*) is a right disposition of the body, and of all its parts; consisting in a due temperature, a right conformation, just action, and ready and free exercise of all the vital functions. Health admits of latitude, as not being the same in all subjects, who may yet be said to enjoy health. That part of medicine which shows the means of preserving health, is termed *hygiene*. See **MEDICINE**. The Greeks and Romans desired Health. See **HYGIEA**, and **SALUS**.

VOL. XI. PART I.

(3.) **HEALTH OF MARINERS**, METHODS OF PRESERVING THE. See **SEAMEN**.

\* **HEALTHFUL**. *adj.* [from *health* and *full*.] 1. Free from sickness.—Adam knew no disease, so long as temperance from the forbidden fruit secured him: Nature was his physician, and innocence and abstinence would have kept him *healthful* to immortality. *South.* 2. Well disposed.—

Such an exploit have I in hand,  
Had you an *healthful* ear to hear it. *Shak.*

3. Wholesome; salubrious.—Many good and *healthful* airs do appear by habitation and proofs, that differ not in smell from other airs. *Bacon.*—

While they pervert pure nature's *healthful* rules  
To loathsome sickness; worthily since they  
God's image did not reverence in themselves, *Milton.*

Our *healthful* food the stomach labours thus,  
At first embracing what it straight doth crush. *Dryden.*

4. Salutary; productive of salvation.—Pour upon them the *healthful* spirit of thy grace. *Com. Prayer.*

\* **HEALTHFULLY**. *adv.* [from *healthful*.] 1. In health. 2. Wholesomely.

\* **HEALTHFULNESS**. *n. s.* [from *healthful*.] State of being well. 2. Wholesomeness; salubrious qualities.—You have tasted of that cup whereof I have liberally drank, which I look upon as God's physick, having that in *healthfulness* which it wants in pleasure. *King Charles.*—We ventured to make a standard of the *healthfulness* of the air from the proportion of acute and epidemical diseases. *Graunt.*—To the winds the inhabitants of Geneva ascribe the *healthfulness* of their air; for as the Alps surround them on all sides, there would be a constant stagnation of vapours, did not the north wind put them in motion. *Addison on Italy.*

\* **HEALTHILY**. *adv.* [from *healthy*.] Without sickness or pain.

\* **HEALTHINESS**. *n. s.* [from *healthy*.] The state of health.

\* **HEALTHLESS**. *adj.* [from *health*.] 1. Weak; sickly; infirm. 2. Not conducive to health.—He that spends his time in sports, is like him whose garment is all made of fringes, and his meat nothing but sauces; they are *healthless*, chargeable, and useless. *Taylor.*

\* **HEALTHSOME**. *adj.* [from *health*.] Wholesome; salutary. Not used.

Shall I not then be stilled in the vault,  
To whose foul mouth no *healthsome* air breathes in,  
And there be strang'd ere my Romeo comes? *Shakespeare.*

\* **HEALTHY**. *adj.* [from *health*.] 1. Enjoying health; free from sickness; hale; sound.—The husbandman returns from the field, and from mowing his ground, strong and *healthy*, because innocent and laborious. *South.*—Temperance, industry, and a public spirit, running thro' the whole body of the people in Holland, hath preserved an infant commonwealth, of a sickly constitution, through so many dangers, as a much more *healthy* one could never have struggled against without those advantages. *Swift.*—Air and exercise contribute to make the animal *healthy*. *Arbutnot.* 2. Conducive to health; wholesome.—Gardening or husbandry, and working in wood, are fit and *healthy* recreations for a man of study or business. *Locke.*

(1.) \* **HEAM**. *n. f.* In beasts the same as the after-birth in women.

(2.) **HEAM**. Thyme, penny-royal, winter savory, and common hore-hound, boiled in white wine, and given to a mare, are esteemed good to expel the heam. Ditany, applied in a pessary, expels the heam, as well as the dead foal; so also do fennel, hops, favin, angelica, &c.

**HEAN**, a town of Tonquin, on the Domae, 20 miles S. of Cachao, and 80 N. of Tonquin Bay.

\* **HEAP**. *n. f.* [*heap*, Saxon; *heep*, Dutch and Scottish.] 1. Many single things thrown together; a pile; an accumulation.—

The way to lay the city flat,  
And bury all which yet distinctly ranges,  
In *heaps* and piles of ruin. *Shak.*  
—The dead were fallen down by *heaps*, one upon another. *Wisd.* xviii. 23.—

Huge *heaps* of slain around the body rise. *Dryd.*  
—Venice in its first beginnings had only a few *heaps* of earth for its dominions. *Addison on Italy.*

'Tis one thing, only as a *heap* in one. *Blackm.*  
2. A crowd; a throng; a rabble.—A cruel tyranny; a *heap* of vassals and slaves, no freemen, no inheritance, no stirp or ancient families. *Bacon.*—  
3. Cluster; number driven together.—

An universal cry resounds aloud;  
The sailors run in *heaps*, a helpless crowd. *Dryd.*

\* **TO HEAR**. *v. a.* [from the noun.] 1. To throw on *heaps*; to pile; to throw together.—*Heap* on wood, kindle the fire. *Ezek.* xxiv. 10. 2. To accumulate; to lay up.—Though the wicked *heap* up silver as the dust, and raiment as the clay; but the just shall put it on, and the innocent shall divide the silver. *Jab* xxvii. 16.—How great the credit was, wherein that oracle was preserved, may be gathered from the vast riches which were there *heaped* up from the offerings of all the Grecian nations. *Temple*—They who will make profession of painting, must *heap* up treasures out of their reading, and there they will find many wonderful means of raising themselves above others. *Dryden.*

3. To add to something else.—

For those of old,  
And the late dignities *heap'd* up to them,  
We rest your hermits. *Shakesp.*

\* **HEAPER**. *n. f.* [from *heap*.] One that makes piles or *heaps*.

**HEAPHAM**, a village in Lincolnshire, SE. of Gainsborough.

\* **HEAPY**. *adj.* [from *heap*.] Lying in *heaps*.—Where a dim gleam the paly lanthorn throws  
O'er the mid pavement, *heapy* rubbish grows.

Scarce his head  
Rais'd o'er the *heapy* wreath, the branching elk  
Lies slumb'ring fullen in the white abyss. *Thomf.*

(1.) \* **TO HEAR**. *v. n.* [*hyran*, Saxon; *hooren*, Dutch.] 1. To enjoy the sense by which sounds are distinguished.—Sound is nothing but a certain modulation of the external air, which, being gathered by the external ear, beats, as is supposed, upon the membrana tympani, which moves the four little bones in the tympanum: in like manner as it is beat by the external air, these little bones move the internal air which is in the tympanum and vestibulum; which internal air makes an impression upon the auditory nerve in the laby-

rinth and cochlea, according as it is moved by the little bones in the tympanum: so that, according to the various reflexions of the external air, the internal air makes various impressions upon the auditory nerve, the immediate organ of *hearing*, and these different impressions represent different sounds. *Quincy*.—The object of *hearing* is sound whose variety is so great, that it brings in admirable store of intelligence. *Holder*.—Princes can not see far with their own eyes, nor *hear* with their own ears. *Temple*. 2. To listen; to hearken to; as, he *heard* with great attention.—

So spake our mother Eve, and Adam *bears*  
Well-pleas'd, but answer'd not. *Milton*

Great laughter was in heav'n,  
And looking down, to see the hubbub strange,  
And *bear* the din. *Milton*

3. To be told; to have an account: with of—  
have *heard* by many of this man. *Acts*, ix. 13.—  
was bowed down at the *hearing* of it; I was dismayed at the seeing of it. *Hosca*.—

*Hear* of such a crime  
As tragick poets, since the birth of time,  
Ne'er feign'd. *Tate's Juvenal*

—This, of eldest parents, leaves us more in the dark, who, by divine institution, has a right to evil power, than those who never *heard* any thing at all of heir or descent. *Locke*.

(2.) \* **TO HEAR**. *v. a.* 1. To perceive by the ear.—The trumpeters and singers were as of sound to be *heard* in praising the Lord. *1 Chron* v. 13.—

And sure he *heard* me, but he would not *hear* *Dryden*

2. To give an audience, or allowance to speak—  
He sent for Paul, and *heard* him concerning the faith in Christ. *Acts* xxiv. 24.—I must beg the forbearance of censure, 'till I have been *heard* out in the sequel of this discourse. *Locke*. 3. To attend to listen; to obey.—A scorner *heareth* not rebuke. *Proverbs*.—*Hear* the word at my mouth, and give them warning from me. *Ezek.* iii. 17.—Today ye will *hear* his voice, harden not your ears. *Hebrews*. 4. To attend favourably.—They think they shall be *heard* for their much speaking. *Mary*.

Since it is your command, what you so well  
Are pleas'd to *hear*, I cannot grieve to tell. *Dehaim*

The goddess's *heard*. *Pope*

5. To try; to attend judicially.—*Hear* the causes and judge righteously. *Deut.* i. 16. 6. To attend as to one speaking.—

On earth  
Who against faith or conscience can be *heard*  
Infallible? *Milton*

7. To acknowledge a title. A Latin phrase.—  
Or *hear'st* thou rather pure ethereal stream,  
Whose fountain who shall tell? *Milton*  
*Hear'st* thou submissive, but a lowly birth? *Prior*

\* **HEARD** signifies a keeper, and is sometime initial; as *beardbearht*, a glorious keeper: sometime final, as *cynebeard*, a royal keeper. *Guyon's Camden*. It is now written *berd*: as, *cowberd*, cowkeeper; *byrd*, Saxon.

\* **HEARER**. *n. f.* [from *hear*.] 1. One who hears.—And so was she dulled withal, that we could come so near as to hear her speeches, and yet

yet he not perceive the *bearers* of her lamentation.  
*Say.*—St John and St Matthew, which have recorded these sermons, heard them; and being *hovers*, did think themselves as well respected as the *pharisees*. *Hooker.*—Words, be they never so few, are too many, when they benefit not the *hearers*. *Hooker.*—

The *bearers* will shed tears,  
 And say, Alas! it was a piteous deed! *Shak.*  
 Tell thou the lamentable fall of me,  
 And send the *bearers* weeping to their beds.

*Shakespeare.*

1. One who attends doctrine or discourse orally delivered by another; as, the *bearers* of the gospel.  
 2. One of a collected audience.—

Plays in themselves have neither hopes nor fears;

Their fate is only in their *bearer's* ears.

*Ben Jonson.*

Her *bearers* had no share

In all she spoke, except to stare.

*Swift.*

(1.) \* **HEARING**. *n. f.* [from *hear*.] 1. The sense by which sounds are perceived.—Bees are clothed with sound upon brass, and therefore they *hear* *turning*. *Bacon's Nat. Hist.* 2. Audience.—

The French ambassador upon that instant

Could audience; and the hour, I think, is come  
 To give him *hearing*.

*Shakespeare.*

3. Judicial trial.—Agrippa and Bernice entered into the place of *hearing*. *Acts.*—The readers are the jury to decide according to the merits of the case, or to bring it to another *hearing* before some other court. *Dryden.*—Those of different

peoples may be betrayed to give you a fair *hearing*, and to know what you have to say for yourself.

4. Note by the ear; reach of hearing.—If we profess as Peter did, that we love the

Lord, and profess it in the *hearing* of men; charity is to hear all things, and therefore charity

men are likely to think we do so. *Hooker.*—*How hearing* the king charged thee, beware

that thou touch Absalom. 2 Sam. xviii. 12.—

You have been talk'd of since your travels

much,  
 And that in Hamlet's *hearing*, for a quality

Wherein they say you shine.

*Shakespeare.*

—The king had the good luck to be within *hearing*.

5. *L'Esperance.*

(1.) **HEARING** (§ 1. def. 1.) may be scientifically defined, a sensation, whereby, from a due motion

impressed on the fibrillæ of the auditory nerve, and communicated thence to the sensory, the

mind perceives and gets the idea of sounds. See *ANATOMY, INDEX.*

(2.) **HEARING** in different animals. See *ENTOMOLOGY, ICHTHYOLOGY, and ZOOTOMY.*

\* **TO HEARKEN**. *v. n.* [*hearken*, Sax.] 1. To listen; to listen eagerly or curiously.—

The youngest daughter, whom you *hearken* for,  
 Her father keeps from excess of suitors. *Shak.*

He *hearkens* after prophecies and dreams.

*Shak.*

They do me too much injury,  
 That ever said I *hearkend* for your death:

If it were so, I might have let alone

Th' insulting hand of Douglas over you.

*Shakespeare.*

The gaping three-mouth'd dog forgets to snarl;

The furies *hearken*, and their snakes uncurl,

*Dryden.*

Louder, and yet more loud, I hear the alarms  
 Of human cries:

I mount the terraces, thence the town survey,

And *hearken* what the fruitful sounds convey.

*Dryden.*

—He who makes much necessary, will want much; and, wearied with the difficulty of the attainment, will *hearken* after any expedient that offers to shorten his way to it. *Rogers.* 2. To attend; to pay regard.—*Hearken* unto me thou son of Zippor. *Numbers.*—Those who put passion in the place of reason, neither use their own, nor *hearken* to other people's reason, any farther than it suits their humour. *Locke.*—

There's not a blessing individuals find,

But some way leans and *hearkens* to the kind.

*Pope.*

\* **HEARKENER**. *n. f.* [from *hearken*.] Listener; one that hearkens.

**HEARNE**, Thomas, a celebrated antiquarian, eminent for his writings and editions of MSS. His father was parish clerk of Little Waltham in Berkshire, where he was born in 1680. He had a liberal education by the patronage of Mr Cherry of Shottesbrooke, and even when a boy discovered a strong propensity to the study of antiquities. He did great service to the Bodleian library, and died at Oxford in 1735.

(1.) \* **HEARSAY**. *n. f.* [*hear* and *say*.] Report; rumour; what is not known otherwise than by account from others.—

For prey these shepherds two he took,

Whose metal stiff he knew he could not bend

With *hearsay* pictures, or a window look.

*Sidney.*

—He affirms by *hearsay*, that some giants saved themselves upon the mountain Baris in Armenia. *Raleigh.*—All the little scaramblers after fame fall upon him, publish every blot in his life, and depend upon *hearsay* to defame him. *Addison.*

(2.) **HEARSAY**, *adj.* Rumoured; by report. This word is much oftener used as an *adjective*, than as a substantive noun; as *hearsay evidence*, *hearsay testimony*, &c. In the above quotation from *Sidney* (§ 1.) it is evidently an adjective. Dr Johnson ought therefore to have made it a separate article.

(1.) \* **HEARSE**. *n. f.* [of unknown etymology.] 1. A carriage in which the dead are conveyed to the grave. 2. A temporary monument set over a grave.—

To add to your laments,

Wherewith you now bedew King Henry's *hearse*,  
 I must inform you of a dismal sight.

*Shak.*

(2.) **HEARSE**, among hunters, a hind in the ad year of her age. See *HUNTING.*

(1.) \* **HEART**. *n. f.* [*heort*, Sax. *bertz*, German.] 1. The muscle which by its contraction and dilatation propels the blood through the course of circulation, and is therefore considered as the source of vital motion. 2. It is supposed in popular language to be the seat sometimes of courage, sometimes of affection, sometimes of honesty.

ty or baseness.—He with providence and courage so passed over all, that the mother took such pitiful grief at it, that her *heart* brake withal, and she died. *Sidney*.—

Thou would have left thy dearest *heart's* blood there,

Rather than made that savage duke thine heir,  
And disinherited thine only son. *Shak.*

Snakes, in my *heart's* blood warm'd, that sting my *heart*. *Shak.*

Our battle is more full of names than yours,  
Our men more perfect in the use of arms,  
Our armour all is strong, our cause the best;  
Then reason wills our *hearts* should be as good. *Shak.*

I thank you for my venison, master Shallow.

—Master Page, much good do it your good *heart*. *Shak.*

But since the brain doth lodge the pow'rs of sense,

How makes it in the *heart* those passions spring?

The mutual love, the kind intelligence

'Twixt *heart* and brain, this sympathy doth bring. *Davies.*

—We all let our *hearts* at rest, since whatever comes from above is for the best. *L'Estrange*.—

The only true zeal is that which is guided by a good light in the head, and that which consists of good and innocent affections in the *heart*. *Spratt.*

Prest with *heart* corroding grief and years,

To the gay court a rural shade prefers. *Pope.*

3. The chief part; the vital part; the vigorous or efficacious part.—Barley being steeped in water, and turned upon a dry floor, will sprout half an inch; and, if it be let alone, much more, until the *heart* be out. *Bacon.* 4. The inner part of a thing.—Some Englishmen did with great danger pass by water into the *hearts* of the country. *Abbot's description of the World*.—The king's forces are employed in appeasing disorders more near the *heart* of the kingdom. *Hayward*.—Generally the inside or *heart* of trees is harder than the outward parts. *Boyle*.—

Here in the *heart* of all the town I'll stay,

And timely succour, where it wants convey. *Dryden.*

—If the foundation be bad, provide good piles made of *heart* of oak, such as will reach ground. *Maxon.*

5. Person; character. Used with respect to courage or kindness.—

The king's a bawcock, and a *heart* of gold,

A lad of life, an imp of fame. *Shak.*

Hey, my *hearts*; cheerly, my *hearts*. *Shak.*

—What says my *heart* of elder? Ha! is he dead? *Shak.*

6. Courage; spirit.—If it please you to make his fortune known, I will after take *heart* again to go on with this falsehood. *Sidney*.—There did other like unhappy accidents happen out of England, which gave *heart* and good opportunity to them to regain their old possessions. *Spenser on Ireland*.—

Wide was the wound; and a large lukewarm flood,

Red as the rose, thence gushed grievously,

That when the painim spy'd the streaming blood,

Gave him great *heart* and hope of victory.

*Fairy Queen.*

*Eve, recover'ing heart reply'd.* *Mil.*

—Having left that city well provided, and in good *heart*, his majesty removed with his little army to Bewdley. *Clarendon*.—Finding that it did them no hurt, they took *heart* upon't, went up to and viewed it. *L'Estrange*.—The expelled nation take *heart*, and when they fly from one country invade another. *Temple.* 7. Seat of love.—

Ah! what avails it me the flocks to keep,  
Who lost my *heart* while I preserv'd my liberty. *Jon.*

8. Affection; inclination.—Joab perceived that the king's *heart* was towards Absalom. 2 *Samuel* xiv. 1.—

Means how to feel, and learn each other's *heart*,

By th' abbot's skill of Westminster is found. *Dan.*

Nor let thy *heart*,

Thus over fond, on that which is not thine. *Mil.*

—'Tis well to be tender; but to set the *heart* too much upon any thing, is what we cannot justify. *L'Estrange*.—A friend makes me a feast, and is all before me; but I set my *heart* upon one alone, and if that happen to be thrown down, scorn all the rest. *Temple*.—

Then mixing pow'rful herbs with magic  
She chang'd his form who could not change her *heart*. *Dryd.*

What did I not her stubborn *heart* to gain

But all my vows were answer'd with disdain. *Dryd.*

9. Memory: though South seems to distinguish—Whatsoever was attained to, concerning God and his working in nature, the same was deliver'd over by *heart* and tradition from wife to wife to a posterity equally zealous. *Raleigh*.—We call the committing of a thing to memory setting it by *heart*; for it is the memory that we transmit it to the *heart*; and it is in vain to expect that the *heart* should keep its hold of any truth when the memory has let it go. *South*.—

Shall I in London act this idle part?

Composing songs for fools to get by *heart*. *Pope*

10. Good-will; ardour of zeal. To take to *heart* any thing, is to be zealous, or solicitous, or ardent about it.—If he take not their causes to *heart*, how should there be but in them frozen collections when his affections seem benumbed, from whom theirs should take fire? *Hooker*.—If he would take the business to *heart*, and deal in it effectually, would succeed well. *Bacon*.—The lady marriage of Hertford engaged her husband to take the business to *heart*. *Clarendon*.—Amongst those, who took it most to *heart*, Sir John Stawel was the chief. *Clarendon*.—Every prudent and honest man would join himself to that side, which had the good of their country most at *heart*. *Addison*.—Learned men have been now a long time mourning after the happy country from which our forefathers were exiled: if they can find it, with my *heart*. *Woodward*.—I would not be sorry find the Presbyterians mistaken in this point, when they have most at *heart*. *Swift*.—What I have most at *heart* is, that some method should be thought on for ascertaining and fixing our language. *Swift*. 11. Passions; anxiety; concern.

Set your heart at rest ;

The fairy land buys not the child of m<sup>r</sup>. *Shak.*  
 11. Secret thoughts ; recesses of the mind.—Mir-  
 cel saw king David leaping and dancing before  
 Belshazzar, and she despised him in her heart. 2  
*Sam.* vi. 16.—The next generation will in  
 tongue and heart, and every way else, become  
 lecher ; so as there will be no difference or dis-  
 tinction, but the Irish sea betwixt us. *Devises.*—  
 Two sweet the difference between my heart and  
 hand. *King Charles.*—Would you have him open  
 his heart to you, and ask your advice, you must  
 begin to do so with him first. *Locke.*—

Men, some to pleasure, some to business take ;  
 But every woman is, at heart, a rake. *Pope.*  
 12. Disposition of mind.—Doing all things with  
 simplicity a grace, that it seem'd ignorance could  
 not make him do amiss, because he had a heart to  
 do well. *Sidney.* 13. The heart is considered as  
 the seat of tenderness : a hard heart therefore is  
 cruel.—

I've seen thee stern, and thou hast oft beheld  
 Hardening spectacles. *Shak.*

Such iron hearts we are, and such  
 The late barbarity of human kind. *Rome.*

14. *Fixed in the HEART.* To be not wholly a-  
 void.—For my breaking the laws of friendship  
 with you, I could find in my heart to ask your par-  
 don for it, but your now handling of me gives  
 me reason to confirm my former dealing. *Sidney.*  
 15. Secret meaning ; hidden intention.—

I will on with my speech in your praise,  
 And then shew you the heart of my message. *Shak.*

16. Conscience ; sense of good or ill.—Every  
 man's heart and conscience doth in good or evil,  
 constantly committed, and known to none but  
 his, either like or disallow itself. *Hooker.* 17.  
 Strength ; power ; vigour ; efficacy.—Try whe-  
 ther men of trees, swept together, with some  
 mud and dung mixed, to give them more heart,  
 could not make a good compost. *Bacon.*—

That the spent earth may gather heart again,  
 And, better'd by cessation, bear the grain. *Dryden.*

18. It must be taken not to plow ground out of  
 it, because if 'tis in heart, it may be improved  
 by it again. *Mortimer.* 19. Utmost degree.—

This gay charm,  
 Like a right gipsy, hath, at fast and loose,  
 Suppl'd me to the very heart of loss. *Shak.*  
 20. Life. For my heart trembles sometimes to signi-  
 fy life was at stake ; and sometimes for tender-  
 ness.—

I bid the rascal knock upon your gate,  
 And could not get him for my heart to do it. *Shak.*

I gave it to a youth,  
 A prating boy, that begg'd it as a fee ;  
 I could not for my heart deny it him. *Shak.*

Profoundly skill'd in the black art,  
 As English Merlin for his heart. *Hadibras.*

(2.) HEART, § 1. *def.* 1. See ANATOMY, *Ind.*

(3.) HEART, EXPERIMENTS TO ASCERTAIN  
 THE FORCE OF THE BLOOD IN THE. Physiolo-  
 gists and Anatomists have from time to time at-  
 tempted to make estimates of the force of the  
 blood in the heart and arteries ; but have differed  
 as widely from each other, as they have from the  
 truth, for want of sufficient data. This set the  
 ingenious Dr Hales upon making proper experi-  
 ments, to ascertain the force of the blood in the  
 veins and arteries of several animals. If, accord-  
 ing to Dr Keil's estimate, the left ventricle of a  
 man's heart throws out in each systole an ounce  
 or 1.638 cubic inches of blood, and the area of  
 the orifice of the aorta be = 0.4187, then dividing  
 the former by this, the quotient 3.9 is the length  
 of the cylinder of blood which is formed in pass-  
 ing through the aorta in each systole of the ven-  
 tricle ; and in the 75 pulses of a minute, a cylin-  
 der of 292.5 inches in length will pass : this is at  
 the rate of 1462 feet in an hour. But the systole  
 of the heart being performed in one third of this  
 time, the velocity of the blood in that instant will  
 be thrice as much, viz. at the rate of 4386 feet in  
 an hour, or 73 feet in a minute. And if the ven-  
 tricle throws out one ounce in a pulse, then in  
 the 75 pulses of a minute, the quantity of blood  
 will be equal to 4.4lb. 11 oz. and, in 34 minutes,  
 a quantity equal to a middle-sized man, viz. 158 lb.  
 will pass through the heart. But if, with Dr Har-  
 vey and Dr Lower, we suppose 3 oz. of blood,  
 that is, 3.276 cubic inches, to be thrown out at  
 each systole of the ventricle, then the velocity of  
 the blood in entering the orifice of the aorta will  
 be double the former, viz. at the rate of 146 feet  
 in a minute, and a quantity of blood equal to the  
 weight of a man's body will pass in half the time,  
 viz. 17 minutes. If we suppose, what is proba-  
 ble, that the blood will rise 7 + 1/4 feet high in a  
 tube fixed to the carotid artery of a man, and  
 that the inward area of the left ventricle of his  
 heart is equal to 15 square inches, these, multipli-  
 ed into 7 + 1/4 feet, give 1350 cubic inches of blood,  
 which presses on that ventricle, when it first be-  
 gins to contract a weight equal to 135 pounds.  
 What Dr Hales thus calculated from supposition,  
 with regard to mankind, he actually experiment-  
 ed upon horses, dogs, fallow-dees, &c. by fixing  
 tubes in orifices opened in their veins and arteries ;  
 by observing the several heights to which the blood  
 rose in these tubes as they lay on the ground ; and  
 by measuring the capacities of the ventricles of  
 the heart and orifices of the arteries. And, that  
 the reader may the more readily compare the said  
 estimates together, he has given a table of them,  
 ranged in the following order.

(4.) HEART,

(4.) HEART, TABLE OF THE VELOCITY, &amp;c. OF THE BLOOD IN THE, OF DIFFERENT ANIMALS.

The several animals.	Weight of each.	Height of the blood in the tube from the jugular vein.	Height of the blood in tubes fixed to arteries.	Capacity of the left ventricle of the heart.	Area of the orifice of the aorta.	Velocity of the blood in the aorta.	Quantities of blood equal to the weight of the animal, in what time.	How much in a minute.	Weight of the blood contained in the left ventricle contracting.	N <sup>o</sup> of pulses in a minute.	Area of transverse section of descending aorta.	Area of the transverse section of ascending aorta.
	Pounds.	Inches.	Pect. Inches.	Cubic inches.	Square inches.	Feet and inches in a minute.	Minutes.	Pounds.	Pounds.		Square inches.	Square inches.

\* **HEART-ACH.** *n. f.* [*heart and ach.*] Sorrow; pang; anguish of mind.—

To die—to sleep—

No more; and, by a sleep, to say we end

The *heartach*, and the thousand natural shocks  
That flesh is heir to. *Shak.*

\* **HEART-BREAK.** *n. f.* [*heart and break.*] Overpowering sorrow.—Better a little chiding than a great deal of *heartbreak*. *Shak.*

\* **HEART-BREAKER.** *n. f.* A cant name for a woman's curls, supposed to break the heart of all her lovers.—

Like Samson's *heartbreakers*, it grew

In time to make a nation rue. *Hudibras.*

(1.) \* **HEART-BREAKING.** *adj.* Overpowering with sorrow.—

Those piteous plaints and sorrowful sad time,  
Which late you poured forth, as ye did fit

Beside the silver springs of Helicone,

Making your musick of *heartbreaking* mone. *Spenser.*

(2.) \* **HEART-BREAKING.** *n. f.* Overpowering grief.—What greater *heartbreaking* and confusion can there be to one, than to have all his secret faults laid open, and the sentence of condemnation passed upon him? *Hakewill.*

**HEART-BURN,** *n. f.* a disease usually called **CARDIALGIA** by physicians. In surfeits, or upon swallowing without due mastication; when meats are eat tough and fat, or with farinaceous substances unfermented; or when by any accident the saliva is vitiated, too scanty, or not intimately mixed with the food, the fermentation becomes

tumultuous, the stomach swells with air, and extraordinary commotion being attended with unusual heat, brings on the uneasiness called *heart-burn*; which is remedied by whatever promotes a greater secretion of saliva, or helps to mix it with our aliment. The testaceous powders, as oyster-shells, crabs eyes, chalk, &c. are the usual remedies for the *heart-burn*.

\* **HEART-BURNED.** *adj.* [*heart and burn.*] Having the heart inflamed.—How tartly that gentleman looks! I never can see him but I am *heart-burn'd* an hour after. *Shak.*

\* **HEART-BURNING.** *n. f.* [*heart and burn.*] Pain at the stomach, commonly from an acrid humour.—Fine clean chalk is one of the most noble absorbents, and powerfully corrects and subdues the acrid humours in the stomach: this property renders it very serviceable in the *cardialgia*, or *heart-burning*. *Woodew.* 2. Discontent; secret enmity.—In great changes, when right of inheritance is broke, there will remain much *heart-burning* and discontent among the meaner people. *See to Pope.*

\* **HEART-DEAR.** *adj.* Sincerely beloved.—

The time was, father, that you broke your word,

When you were more endear'd to it than now  
When your own Percy, when my *heart-dear* Harry,

Threw many a northward look to see his father  
Bring up his pow'rs; but he did long in vain! *Shak.*

\* **HEART-EASE.** *n. f.* Quiet; tranquillity.—*Wha*

What infinite *heart ease* must kings neglect,  
That private men enjoy? *Shak.*

\* **HEART-EASING.** *adj.* Giving quiet.—

But come, thou goddess fair and free,

In heav'n yclep'd Euphrosyne,

And by men *heart-easing* mirth. *Milton.*

\* **HEARTED.** *adj.* It is only used in composition: as, hard *hearted*.—

He ne'er like bullies coward-*hearted*,

Attacks in public to be parted. *Gay.*

\* **To HEARTEN.** *v. a.* [from *heart*.] 1. To encourage; to animate; to stir up.—Palladius naming those that were slow, *heartening* them that were forward, but especially with his own example leading them, made an impression into the squadron. *Sidney.*—

My royal father, cheer these noble lords,  
And *hearten* those that fight in your defence:

Do heath your sword, good father; cry, St  
George. *Shak.*

This rare man, Tydides, would prepare;

That he might conquer, *hearten'd* him. *Chapm.*

Thus *hearten'd* well, and flesh'd upon his prey,

The youth may prove a man another day. *Dryd.*

2. To meliorate or renovate with manure.—

The ground one year at rest; forget not then

With richest dung to *hearten* it again. *May's Virg.*

\* **HEART-FELT.** *adj.* Felt in the conscience.—

What nothing earthly gives, or can destroy,

The soul's calm sun-shine, and the *heart-felt* joy,

Is virtue's prize. *Pope.*

\* **HEARTH.** *n. f.* The pavement of a room on which a fire is made; the ground under the chimney.—

Hoop'd out of Rome: now this extremity

Has brought me to this *hearth*. *Shak.*

Cicket, to Windsor chimney shalt thou leap,

When thou find'st fires unrak'd, and *hearths*

unswept,

Thou pinch the maids as blue as bilberry. *Shak.*

Good luck befriend thee, son; for at thy birth

The fairy ladies danc'd upon the *hearth*. *Milt.*

The vanquish'd fires withdraw from every

place;

On fall with feeding, sink into a sleep:

Each household genius shews again its face,

And from the *hearths* the little Larcs creep.

*Dryden.*

**HEARTH MONEY, or CHIMNEY MONEY,** a duty

on the crown on houses. By stat. 14. Char. II.

every fire hearth, and stove of every dwelling

or other house, within England and Wales

at such as pay not to church and poor), was

levied with 2s. per annum, payable at Michaelmas

and Lady-day to the king and his heirs

successors, &c. This tax, being much complained

of as burdensome to the people, has been

taken off, and others imposed in its stead;

among which that on windows has by some been

regarded almost equally grievous.

\* **HEARTILY.** *adv.* [from *heart*.] 1. From

heart; fully.—

I bear no malice for my death;

But those that fought it, I could with more

Christians;

Be what they will, I *heartily* forgive them. *Shak.*

If to be sad is to be wise,

I do most *heartily* despise

;

Whatever Socrates has said,

Or Tully writ, or Wanley read. *Prior.*

2. Sincerely; actively; diligently; vigorously.—

Where his judgment led him to oppose men on a

publick account, he would do it vigorously and

*heartily*; yet the opposition ended there. *Atterb.*

3. Eagerly; with desire.—As for my eating *heartily*

of the food, know that anxiety has hindered

my eating till this moment. *Addison.*

\* **HEARTINESS.** *n. f.* [from *heart*.] 1. Sincerity;

freedom from hypocrisy.—This entertainment may a free face put on; derive a liberty from

*heartiness*, and well become the agent. *Shak.* 2.

Vigour; eagerness.—The anger of an enemy represents

our faults, or admonishes us of our duty,

with more *heartiness* than the kindness of a friend.

*Taylor.*

\* **HEARTLESS.** *adj.* [from *heart*.] Without

courage; spiritless.—

I joyed oft to chase the trembling pricket,

Or hunt the *heartless* hare till she were tame.

*Spenser.*

Then hopeless, *heartless* 'gan the cunning thief,

Persuade us die, to flint all further strife.

*Fairy Queen.*

What, art thou drawn among these *heartless*

hinds?

Turn thee, Benvolio; look upon thy death.

*Shak.*

Thousands besides stood mute and *heartless*

there,

Men valiant all; nor was I us'd to fear. *Cowley.*

—The peasants were accustomed to payments,

and grew *heartless* as they grew poor. *Temple.*—

*Heartless* they fought, and quitted soon their

ground,

While our's with easy victory were crown'd.

*Dryden.*

\* **HEARTLESSLY.** *adv.* [from *heartless*.]

Without courage; faintly; timidly.

\* **HEARTLESSNESS.** *n. f.* [from *heartless*.]

Want of courage or spirit; dejection of mind.

(1.) \* **HEART-PEAS.** *n. f.* A plant with round

seeds in form of peas, of a black colour, having

the figure of an heart of a white colour upon each.

*Miller.*

(2.) **HEART-PEAS.** See **CARDIOSPERMUM.**

\* **HEART-QUELLING.** *adj.* Conquering the af-

fection.—

And let fair Venus, that is queen of love,

With her *heart-quelling* son, upon you smile.

*Spenser.*

\* **HEART-RENDING.** *adj.* Killing with anguish.

*Heart-rending* news, and dreadful to those few

Who her resemble, and her steps pursue;

That death should licence have to rage among

The fair, the wise, the virtuous, and the young!

*Waller.*

\* **HEART-ROBBING.** *adj.* Ecstatick; depriving

of thought. Obsolete.—

Sweet is thy virtue, as thyself sweet art;

For when on me thou shinedst, late in sadness,

A melting pleasure run through every part,

And me revived with *heart-robbing* gladness.

*Spenser.*

(1.) \* **HEARTS-EASE.** *n. f.* A plant.—*Hearts-*

*ease* is a sort of violet that blows all Summer, and

often in Winter: it sows itself. *Mortimer.*

(2.) **HEART**

(1.) **HEART**

(2.) **HEART'S EASE.** See *VIOLA*, N° 3.

**HEART-SEED.** See *CARDIOSPERMUM*.

\* **HEART-SICK.** *adj.* 1. Pained in mind.—If we be *heart-sick*, or afflicted with an uncertain soul, then we are true desirers of relief and mercy.

*Taylor.* 2. Mortally ill; hurt in the heart.—

Good Romeo, bide thyself.

—Not I, unless the breach of *heart-sick* grows  
Mist-like, in fold me from the search of eyes.

*Shak.*

\* **HEART-SORE.** *n. f.* That which pains the mind.—

Wherever he that godly knight may find,  
His only *heart-fore* and his only foe. *Fairy Q.*

\* **HEART-STRING.** *n. f.* [*string* and *heart*.] The tendons or nerves supposed to brace and sustain the heart.—

He was by Jove deprived  
Of life himself, and *heart strings* of an eagle rived

*Spenser.*

—How, out of tune on the strings?—Not so;  
but yet so false, that he grieves my very *heart-strings*. *Shak.*

That grates my *heart-strings*: what should  
discontent him!

Except he thinks I live too long. *Denham.*

—If thou thinkest thou shalt perish, I cannot blame  
thee to be sad 'till thy *heart strings* crack. *Taylor.*

There's the fatal wound  
That tears my *heart-strings*; but he shall be  
found,

My arms shall hold him. *Granville.*

\* **HEART-STRUCK.** *adj.* 1. Driven to the heart;  
infixed for ever in the mind.—

Who is with him?

—None but the fool who labours to out-jeat  
His *heart-struck* injuries. *Shak.*

2. Shocked with fear or dismay.—

He added not; for Adam, at the news

*Heart-struck*, with chilling gripe of sorrow stood,

That all his senses bound! *Milton.*

\* **HEART-SWELLING.** *adj.* Rankling in the mind.—

Drawn into arms, and proof of mortal fight,  
Through proud ambition and *heart-swelling* hate.

*Spenser.*

\* **HEART-WHOLE.** *adj.* 1. With the affection  
yet unfixed.—You have not seen me yet, and  
therefore I am confident you are *heart-whole*. *Dryd.*

—Cupid hath clapt him o' th' shoulder; but I'll  
warrant him *heart-whole*. *Shak.* 3. With the vi-  
tals yet unimpaired.

\* **HEART-WOUNDED.** *adj.* Filled with passion  
of love or grief.—

Mean time the queen, without reflection due,  
*Heart-wounded*, to the bed of state withdrew.

*Pope.*

\* **HEART-WOUNDING.** *adj.* Filling with grief.

With a shrill *heart-wounding* loud the cry'd,  
While down her cheeks the gushing torrents ran,  
Fast falling on her hands. *Rowe.*

\* **HEARTY.** *adj.* [from *heart*.] 1. Sincere;  
undissembled; warm; zealous.—They did not  
bring that *heartly* inclination to peace, which they  
hoped they would have done. *Clarendon.*

But the kind hosts their entertainment grace  
With *heartly* welcome and an open face;

In all they did, you might discern with ease

A willing mind, and a desire to please. *Dryd.*

—Every man may pretend to any employments  
provided he has been loud and frequent in dec-  
ring himself *heartly* for the government. *Swift.*

In full health. 3. Vigorous; strong.—

Whose laughs are *heartly*, though his jests  
coarse,

And loves you best of all things but his horse.

*P.*

4. Strong; hard; durable.—Oak, and the  
true *heartly* timber, being strong in all positions  
may be better trusted in cross and transverse work.  
*Wotton's Architecture.*

\* **HEARTY-HALE.** *adj.* [*heartly* and *hale*.] Go  
for the heart.—

Vein-healing verben, and head-purging dill  
Sound savory, and basil *heartly-hale*. *Spa.*

(1.) \* **HEAT.** *n. f.* [*beat*, *bet*, Saxon; *hætt*,  
Danish.] 1. The sensation caused by the appli-  
cation or touch of fire.—Heat is a very brisk agitation  
of the insensible parts of the object, which produces  
in us that sensation from whence we denominate  
the object hot; so what in our sensation is heat  
in the object is nothing but motion. *Locke.*—

The word *heat* is used to signify the sensation we have  
when we are near the fire, as well as the cause  
of that sensation, which is in the fire itself.

thence we conclude, that there is a sort of fire  
the fire resembling our own sensation: where  
the fire there is nothing but little particles of mat-  
ter, of such particular shapes as are fitted to  
press such motions on our flesh as excite the  
sensation of heat. *Watts.* 2. The cause of the sensation  
of burning.—The sword which is made fiery  
not only cut by reason of the sharpness which it  
hath, but also burns by means of the heat which  
it hath from fire. *Hooker.* 3. Hot weather.

—After they came down into the valley, and  
the intolerable heats there, and knew no more  
lighter apparel, they were forced to go naked.

*Bacon.*—

Mark well the flow'ring almonds in the wood,  
The globe will answer to the sylvan rood.

Great heats will follow, and large crops will grow.

*It.*

—The pope would not comply with the proposal  
as fearing the heats might advance too far that  
they had finished their work, and produce a bal-  
ance among the people. *Addison.* 4. State of  
any body under the action of the fire.—The  
smiths take of their iron are a blood-red heat,  
white flame heat, and a sparkling or welding heat.  
*Moxon.* 5. Fermentation; effervescence. 6. A  
violent action unintermitted.—The continual  
agitations of the spirits must needs be a weakness  
of any constitution, especially in age; and  
causes are required for refreshment between the  
heats. *Dreder.* 7. The state of being once to  
a huge effort.—

I'll strike my fortune with him at a heat,  
And give him not the leisure to forget.

They the turn'd lines on golden anvils beat,  
Which look as if they struck them at a heat.

*It.*

8. A course at a race, between each of which  
courses there is an intermission.—

*It.*

Feigned zeal, you saw, set out the speedier  
pace;

But the last best, plain dealing won the race.

*Dryden.*

9. Pimples in the face; *Booth*.—It has ruffled animosities in their hearts, and *beats* in their faces, and broke out in their ribbons. *Addison*. 10. Accession of sudden or violent passion; vehemence of action.—They seeing what forces were in the city with them, issued against the tyrant while they were in this *beat*, before practices might be used to differ them. *Sidney*.—

The friend hath lost his friend;

And the best quarrels, in the *beat*, are curst

By those that feel their sharpness.

*Shak.*

—It might have pleased in the *beat* and hurry of his rage, but must have displeased in cool sedate reflection. *Smith*.—We have spilt no blood but in the *beat* of the battle, or the chase. *Atterb.*—One playing at hazard, drew a huge heap of gold; but in the *beat* of the play, never observed a sharper who swept it into his hat. *Swift*. 11. Faction; contest; party rage.—They are in a most warlike preparation, and hope to come upon them in the *beat* of their division. *Shak*.—I was sorry to hear with what partiality and popular *beat* elections were carried. *King Charles*.—

What can more gratify the Phrygian foe

Than those distemper'd *beats*?

*Dryden.*

12. Ardour of thought or elocution.—

Plead it to her

With all the strength and *beat* of eloquence,

Paternal love and friendship can inspire.

*Addison's Cato.*

(2.) HEAT, DIFFICULTY OF INVESTIGATING THE NATURE OF. Heat, in physiology, has a double meaning: being put either for that peculiar sensation which is felt on the approach of burning bodies, or for the cause of that sensation: in which last it is synonymous with FIRE. This mode of speaking, however, is inaccurate, and, by confounding the effect with the cause, sometimes produces obscurity: it were to be wished therefore that the word *beat* was used only to denote the effect; and *fire*, or some other term, to denote the cause of that effect. The disputes formerly so much agitated in the learned world concerning the nature of heat, viz. whether it consisted merely in the motion of the terrestrial particles of bodies, or in that of a subtle fluid, are now mostly ceased, and it is almost universally believed to be the effect of a fluid. From the promiscuous use, however, of the words *fire* and *beat*, an opinion seems to have gained ground, that there is in nature a fluid essentially *beat*; and that wherever the opposite sensation prevails, the former fluid is in part absent. Hence have arisen numberless speculations concerning the attraction, absorption, and capacities of bodies for heat; all of which being built on a false principle, have served no other purpose but to involve this part of natural philosophy in obscurity and confusion. Under CHEMISTRY, COMBUSTION, ELECTRICITY, &c. it is fully shown that *beat* properly so called is not a fluid, that it is superfluous to say any more on this part of the subject. This being admitted, it will evidently follow, that *beat* can neither be absorbed nor attracted; neither can any body have

a greater capacity for it than another, except in proportion to its bulk, which allows a larger quantity of the fluid to enter and to assume the particular motion which constitutes heat. From some of Dr Black's experiments indeed it would appear at first view, that heat was absorbed, or attracted in the strictest sense of the word; but this must be attributed merely to the transferring of the modification of the fluid from one substance to another, without regarding whether it is the identical quantity of fluid which acts as heat in one substance that is transferred to the other, or whether only by some unknown means a similar motion is produced in another portion of the same. At any rate, some word must be made use of to express this operation; and *absorption* or *attraction* will answer the purpose as well as any other; but still we ought to remember, that these are inaccurate; and when we begin to argue from them as if they fully and exactly determined the mode in which the fluid acts, or rather is acted upon (for both these words suppose heat to be passive, and not active), we must certainly err. As to the phrases *capacity for containing heat*, *absolute heat*, &c. they are still more inaccurate than the words *absorption* and *attraction*, and cannot convey any distinct idea; whence the systems founded upon the explanations of these terms, assumed without proof, are liable to endless and insuperable objections. It is not indeed easy, nay we may say it is impossible, for human genius to investigate all the phenomena of this subtle and invisible element. All that can be done is, to discover a few general rules according to which the fluid acts in certain cases. From these we can only reason analogically to cases where its action is less obvious. But we are not to expect that by reasoning in this manner we can solve every phenomenon; nor can it be any recommendation to an hypothesis, merely that it solves some phenomena, unless we are able by its means to solve them all; but this no wise man will pretend to do, say, not even to know them all. It is exceedingly fallacious therefore to invent solutions of certain phenomena, and then to argue for the truth of the hypothesis from the facility with which the phenomena are explained by it. The proper method of proceeding is to lay down certain principles established from the obvious phenomena of nature, and to reason from them fairly as far as we can; but where this ends, our knowledge must stop, and we cannot proceed farther with any certainty.

(3.) HEAT, ESTABLISHED PRINCIPLES RESPECTING. The general principles established from obvious phenomena upon this subject are the following: 1. Heat and cold are found to expel each other: Hence we conclude, that heat and cold are both *positives*; for a negative can neither be expelled nor accumulated. 2. Heat is visibly occasioned by the rays of the sun concentrated, and likewise by the fluid of electricity concentrated. If FIRE, therefore, properly so called, be the cause of heat, than which nothing can be more evident to our senses, we may certainly conclude, that both the light of the sun and the electric fluid are *elementary fire*. Hence also we conclude their identity; for two different substances cannot by any means produce constantly the same effect

when put in the same circumstances, which both light and electricity do in this case, merely by *concentration*, or discharging a great quantity of the fluid upon a small portion of any terrestrial body. 3. Heat expands bodies in every direction; hence we conclude, that the fluid, when producing heat, acts from a centre towards a circumference; and by analogy, that when it produces cold it acts from a circumference towards a centre. 4. It appears from undeniable experiments, that heat, somehow or other, is the cause of fluidity. As the action of the fluid, when it produces heat, is from a centre to a circumference, it follows, that when the expansive action of the fluid is confined within the surface of any body, this may be called its *latent heat*; because it extends not beyond the surface, and therefore cannot affect the thermometer, or be known to us as heat by the sense of feeling. But when this expansive action is transferred from the internal parts of the substance to the surface, it then affects the thermometer, and the body is said to become *hotter*, at the same time that it congeals or is said to be *frozen*. This is what some philosophers call the conversion of the *latent* into *sensible* heat; others, the alteration of the *capacity*: but whatever term we give to the effect, the cause must remain the same, viz. the opposite actions of the same fluid; the expansive power in some cases counteracting or overcoming the condensing one, and *vice versa*. 5. Though sometimes the expansive action is sufficiently strong to produce fluidity *naturally*, and in most cases may be made so strong *artificially* as to make bodies fluid, yet in all cases it is not so. A certain degree of expansive power exists in all bodies whatever, and this by philosophers is called the *specific heat* of the body. 6. Whatever is called the *cooling* of any body is only the diminution of the expansive action upon its surface, or, that of its particles. This is accomplished by an opposite power or modification of the fluid taking place on the outside; but when this becomes sufficiently strong to penetrate the whole substance, it then expels part of the fluid acting in the opposite direction, and then some change takes place in the texture of the body. It is, however, impossible to speak very perspicuously upon this subject, as the subtilty and invisibility of the fluid render all reasonings upon it very indecisive. 7. It is altogether impossible to calculate the quantity of absolute heat contained in any substance, because this depends on the proportion betwixt the quantity of fluid acting expansively and that acting in the opposite direction in the same. These two must some way or other counterbalance each other throughout the whole system of nature; and we may say with certainty, that any substance in which the one exists without the other, is none of those subject to the investigation of our senses, and all speculations concerning it must be vain. 8. When the fluid contained in any substance is vehemently agitated, this naturally produces an expansion in it; and therefore bodies become hot by violent friction, percussion, &c. In these cases, however, we have no right to say that the fluid is *expelled*, but only that its mode of action is altered; for this is constantly sufficient to produce heat, and in this indeed the very essence of heat consists. 9. When the ex-

pansive action of elementary fire within any substance becomes greater than is consistent with the cohesion of that substance, it is dissipated or resolved into vapour. This, however, may be done in such a manner, that the heat still acts upon the separated parts of the body without spending any of its force upon external substances. Hence vapour continues to exist in a temperature much below that in which it was originally produced; nay, will sometimes be excessively cold to the touch, when it really contains as much heat, though in a *latent* state, as before. 10. When this latent heat is transferred to external bodies, the vapour then ceases to be vapour, or is *condensed*, and in some cases returns to its original state; in others, it is productive of light and vehement sensible heat: whence all the phenomena of COMBUSTION, DISTILLATION, EVAPORATION, FIRE, FLAME, IGNITION, &c. These are the principal facts which can be looked upon as *established* with regard to heat considered in a philosophical view.

(4.) HEAT, EXPANSION OF METALS BY. See PYROMETER.

(5.) HEAT, EXPERIMENTS RESPECTING THE ACCUMULATION OF Heat, in common discourse, is always spoken of as a substance distinct from all others, and may properly enough be reckoned so with regard to all the purposes of life. In this sense, heat is accumulated by certain bodies in a much greater proportion than others. Dr Franklin made the experiments with pieces of cloth of various colours, laid upon snow and exposed to the sunshine, and in all cases found that the piece dyed with the darkest colours sunk deepest in the snow. Mr Cavallo examined the matter more accurately; first by observing the height to which a thermometer with a blackened bulb rose in comparison with one of clear glass, and then by comparing the heights of different thermometers whose bulbs were painted of various colours. Having therefore constructed two thermometers whose scales exactly corresponded with each other, he fixed them both upon the same frame, about an inch asunder, having the balls quite detached from the frame; and in this manner exposed them to the light of the sun or of a lamp. When they were exposed to the sun or kept in the shade with the glass of both bulbs clear, they showed precisely the same degree; and the difference between the degree shown by the thermometer when exposed to the sun and when kept in the shade, at about the same time of the day, was very trifling. The ball of one of the thermometers being painted black, and that of the other left clean, they showed different degrees of temperature on being exposed to the sun; the difference sometimes amounting to 20°: but was never constant; varying according to the clearness of the sun's light as well as of the air, and likewise according to the different degrees of temperature in the atmosphere. On keeping the thermometer with the painted ball on the inside of a window Mr Cavallo observed that strong day-light had a effect in raising the mercury as well as the sun's light. To ascertain this, he cleaned the bulb of the painted thermometer, and blackened that of the other; but the effect was constant, on the quicksilver in the tube of the thermometer

whole ball was painted black, was constantly higher than the other whenever they were exposed to the strong day light. The difference was commonly about one 3d of a degree, but sometimes amounted to three 4ths, or even to a whole degree; and the experiment answered even when the sun was hid by clouds, which seems to indicate that every degree of light is accompanied with a corresponding one of heat. By this confirmation Mr Cavallo was induced to try whether, by directing the concentrated light of the moon upon the blackened bulb of a thermometer, it would be raised higher than a clean one standing at the same. The experiment was several times tried with a large lens, and afterwards with a burning mirror of 18 inches diameter; yet sometimes for want of proper means of observing the height of the mercury in the tubes of the thermometers, sometimes for want of a continued clear light of the moon, or in short from some unfavorable circumstance or other, he was never able to make a fair and decisive trial of this experiment. In trying the heat of a lamp, he found that it had a considerable effect. The ball of one being blackened, and both set at two inches distance from the flame of a lamp, they both rose from 51 to 65½ deg. and the thermometer which was blackened to 67½. Another time the uncoloured thermometer rose to 67½, and the coloured one to 64½. From a number of trials it at last appeared, that the difference at this distance from the lamp amounted generally to about a degree. When the thermometers were removed farther than two inches from the lamp, the difference decreased; and at the distance of about 14 or 15 inches vanished entirely. On this occasion Mr Cavallo had an opportunity of making a curious observation concerning the decrease of heat at different distances from the centre. "It is mathematically true, that emanations which proceed from a centre, and expand in a sphere, must become more and more rare in proportion to the square of the distances from the centre. Thus it is evident, that the intensity of light proceeding from a luminous body, at the double, treble, quadruple, &c. distance from that body, must be respectively 4, 9, 16, times, &c. less dense. The same may be said of heat; but with respect to the flame, it appeared, that its intensity did not decrease exactly in the duplicate proportion of the distance from the flame of the lamp, but showed a very odd irregularity. It seemed to decrease faster than the duplicate proportion of the distance for the space of 2½ or 3 inches, after which it decreased much slower; but whether this proceeded from some different state of the air's purity at different distances from the flame of the lamp, or from the vapours coming from the flame, I cannot take upon me to determine." Mr Cavallo also made some experiments upon thermometers, the bulbs of which were painted of various colours. His view was to examine with precision the degrees of heat imbibed by differently coloured substances, to determine whether they kept any proportion to the spaces occupied by the prismatic colours in the prismatic spectrum, or if they followed any other law. But in these experiments he met with considerable difficulties, chiefly arising

from the different nature of the colours with which the bulbs were painted; and the result was not decisive.

(6.) HEAT, EXPERIMENTS RESPECTING THE DEGREES OF, WHICH ANIMALS CAN BEAR. The ancients were of opinion, that all countries lying within the tropics were uninhabitable by reason of their heat: but time has discovered their mistakes; and it is now found, that no part of the world is too hot for mankind to live in. The learned Dr Boerhaave, in his chemistry, relates certain experiments made with great accuracy by the celebrated Fahrenheit, and others at his fire, on this subject, in a sugar-baker's office; where the heat, at the time of making the experiments, was up to 145 degrees of Fahrenheit's thermometer. A sparrow, subjected to air thus heated, died, after breathing very laboriously, in less than 7 minutes. A cat resisted this great heat somewhat above a quarter of an hour; and a dog about 18 minutes, discharging before his death a considerable quantity of a ruddy-coloured foam, and exhaling a stench so peculiarly offensive, as to throw one of the assistants into a fainting fit. This dissolution of the humours, or great change from a natural state, the professor attributes not to the heat of the stove alone, which would not have produced any such effect on the flesh of a dead animal; but also to the vital motion, by which a still greater degree of heat, he supposes, was produced in the fluids circulating through the lungs, in consequence of which the oils, salts, and spirits of the animal became so highly exalted. Messieurs Du Hamel and Tillet having been sent into the province of Augois, in 1760 and 1761, with a view to destroy an insect which consumed the grain of that province, effected the same in the manner related in the Memoirs for 1761, by exposing the affected corn, with the insects included in it, in an oven, where the heat was sufficient to kill them without injuring the grain. This operation was performed at Rochefoucault, in a large public oven, where, for economical views, their first step was to assure themselves of the heat remaining in it on the day after bread had been baked in it. This they did, by conveying in a thermometer on the end of a shovel, which, on its being withdrawn, indicated a degree of heat considerably above that of boiling water: but M. Tillet, convinced that the thermometer had fallen several degrees in drawing to the mouth of the oven, and appearing under some embarrassment on that head, a girl, one of the attendants on the oven, offered to enter, and mark with a pencil the height at which the thermometer stood within the oven. M. Tillet appearing to hesitate at this strange proposition, the girl smiled, and entering the oven, marked the thermometer with a pencil, after staying two or three minutes, standing at 100° of Reaumur's scale, or, at near 160° of Fahrenheit's. M. Tillet began to express an anxiety for the welfare of his female assistant, and to press her return. This female salamander, however, assuring him that she felt no inconvenience from her situation, remained there 10 minutes longer; that is, near the time when Boerhaave's cat parted with her nine lives, under a much less degree of heat; when, the thermometer standing at 188°, or 76° above that of boiling

water, she came out of the oven, her complexion indeed considerably heightened, but her respiration by no means quick or laborious. After M. Tillet's return to Paris, these experiments were repeated by M<sup>ons</sup> Marantin, commissary of war at Rochefoucault, an intelligent and accurate observer, on a 21 girl belonging to the oven, who remained in it, without much inconvenience, under the same degree of heat, as long as her predecessor; and even breathed in air heated to about 325° for five minutes. M. Tillet endeavoured to clear up the apparent contrariety between these experiments and those made under the direction of Boerhaave, by subjecting various animals, under different circumstances, to great degrees of heat. From his experiments, in some of which the animals were swaddled with clothes, and were thereby enabled to resist for a much longer time the effects of the extraordinary heat, he inferred, that the heat of the air received into the lungs was not, as was supposed by Boerhaave, the only or principal cause of the anxiety, laborious breathing, and death, of the animals on whom his experiments were made; but that the hot air, which had free and immediate access to every part of the surface of their bodies, penetrated the substance on all sides, and brought on a fever, from whence proceeded all the symptoms: on the contrary, the girls at Rochefoucault, having their bodies in great measure protected from this action by their clothes, were enabled to breathe the air, thus violently heated, for a long time without great inconvenience. The bulk of their bodies appears also to have contributed not a little to their security. In common respiration, the blood, in its passage through the lungs, is cooled by being brought into contact with the external air inspired: In these experiments, on the contrary, the vessels and vessels of the lungs receiving at each inspiration an air heated to 300° must have been continually cooled and refreshed, as well as the subcutaneous vessels, by the successive arrival of the whole mass of blood contained in the interior parts of the body, whose heat might be supposed at the beginning of the experiment not to exceed 100°. Not to mention, that M. Tillet's two girls may not possibly have been subjected to so great a degree of heat as that indicated by the thermometer; which appears to have always remained on the stove, in contact with the earth. These experiments soon excited other philosophers to make similar ones, of which some very remarkable ones are those of Dr Dobson at Liverpool, related in the *Philos. Transf.* vol. 12v. "I. The sweating room of our public hospital at Liverpool, which is nearly a cube of nine feet, lighted from the top, was heated till the quicksilver stood at 224° on Fahrenheit's scale, nor would the tube of the thermometer indeed admit the heat to be raised higher. The thermometer was suspended by a string fixed to the wooden frame of the sky-light, and hung down about the centre of the room. Myself and several others were at this time inclosed in the stove, without experiencing any oppressive or painful sensation of heat proportioned to the degree pointed out by the thermometer. Every metallic article about us soon became very hot. II. My friend Mr Park, an insatiable surgeon of this place, whilst in the stove

heated to 203°. After ten minutes, I found the pulse quickened to 120. And to determine the increase of the animal heat, another thermometer was handed to him, in which the quicksilver already stood at 98°; but it rose only to 99½, whether the bulb of the thermometer was inclosed in the palms of the hands or received in the mouth. The natural state of this gentleman's pulse is about 65. III. Another gentleman went through the same experiment in the same circumstances, and with the same effects. IV. One of the patients to the hospital, a healthy young man, his pulse 75, was inclosed in the stove when the quicksilver stood at 219, and he remained there, with little inconvenience, for 20 minutes. The pulse, now 164, and the animal heat, determined by another thermometer as in the former experiments, was 201½. V. A young gentleman of a delicate and irritable habit, whose natural pulse is about 60, remained in the stove ten minutes when heated to 224°. The pulse rose to 145, and the animal heat to 203°. This gentleman, who had been frequently in the stove during the course of the dysentery, found himself feeble, and disposed to break out into sweats for 24 hours after the experiment. Even these experiments do not show the utmost degrees of heat which the human body is capable of enduring. Some others, still more remarkable (as in them the body was exposed to the heat without clothes), by Drs Forryce and Blagden, are also recorded in the *Philos. Transf.* They were made in rooms heated by fires in the floor, and by pouring upon it boiling water. There was no chimney in them, nor any vent for the air, excepting through crevices at the door. In the first room were placed 3 thermometers, one in the hottest part of it, another in the coolest part, and one on a table, to be used occasionally in the course of the experiment. Of these experiments, the following may be taken as a specimen. "About 10 hours after break'ast, Dr Forryce having taken off all his clothes, except his shirt, and being furnished with wooden shoes tied on with lark, went to one of the rooms, where he stood 5 minutes in a heat of 90, and began to sweat gently. He then entered another room, and stood in a part of it heated to 110°. In about half a minute he became so wet that he was obliged to throw it aside, and then the water poured down in streams over his whole body. Having remained in this heat for ten minutes, he removed to a part of the room heated to 120°; and after staying there 20 minutes found that the thermometer placed under his tongue, and held in his hand, stood just at 100, and that his urine was of the same temperature. His pulse had gradually risen to 145 pulsations in a minute. The external circulation was greatly increased, the veins had become very large, and an universal redness had diffused itself all over the body, attended with a strong feeling of heat; his respiration, however, was little affected. He concluded this experiment by plunging in water heated to 100°; and after being wiped dry, was carried home in a chair; but the circulation did not subside for two hours. Dr Blagden took off his coat, waistcoat, and shirt, and went into one of the rooms, as soon as the thermometer had indicated a degree of heat above that of boiling water.

The first impression of this hot air upon his body was exceedingly disagreeable, but in a few minutes all his uneasiness was removed by the breaking out of a sweat. At the end of 12 minutes he left the room very much fatigued, but no otherwise disordered. His pulse beat 136 in a minute, and the thermometer had risen to 110°. In other experiments it was found, that a heat even of 160° of Fahrenheit could be submitted to with tolerable ease. It was also observed, that in these great heats every kind of metal they carried about with them became tolerably hot. Small quantities of water placed in metallic vessels quickly boiled; but in a common earthen vessel it required an hour and an half to raise it to a temperature of 140°, nor could it be brought near the boiling point. Neither did the people, who with impunity breathed the air of the very hot room at 164°, bear to put their hands into the boiling water, which indicated only a heat of 112°. So far from this, they could not bear the touch of quicksilver heated only to 100°, nor could but just bear spirit of wine at 130°.

(2.) **HEAT, INTERNAL, OF THE EARTH.** That there is a very considerable degree of heat always existing to great depths in the earth, is asserted upon by all naturalists: but the quantity of heat hath seldom been measured in any part: what is known, whether in digging to an equal depth in different parts of the earth, the heat is always the same. In digging mines, wells, &c. they find that at a little depth below the surface it is cold. A little lower it is colder still, as being beyond any immediate influence of the sun's rays; so much that water will freeze almost at any time of the year: but when we go to the depth of 20 or 30 feet, it begins to grow warm, so that we can bear it; and then the deeper we go, still the greater the heat, until at last respiration grows difficult, and the candles go out. The heat of the earth has been variously explained. Some suppose an immense body of fire lodged in the centre of the earth, which they consider as a central fire, and the great principle of the motion, vegetation, nutrition, &c. of fossil and igneous bodies. But Mr Boyle, who had been at the bottom of some mines himself, suspected that the degree of heat, at least in some of them, may arise from the peculiar nature of the minerals generated therein. In proof of this, he found a mineral of a vitriolic kind, dug up in great quantities in many parts of England, which by the mere effusion of common water will grow so hot, that it will almost take fire.—These hypotheses are liable to the following objections: 1. If there is within the earth a body of actual fire, it is difficult to show why that fire should not consume the outer shell of earth, till either the earth was totally destroyed, or the fire extinguished. 2. If the internal heat of the earth is owing to the action of water upon mineral substances, the action through time must have ceased, and the heat have totally vanished; but we have no reason to think that the heat of the earth is any thing less now than it was 1000 years ago.

The phenomenon is easily explained by the propositions above laid down. (§ 1, 3) If heat is nothing else than a certain mode of action in the ethereal fluid, or the matter of light, by which it flows out from a body in all directions, as radii drawn from the centre to the circumference of a circle; it will then follow, that if an opaque body absorbs any considerable quantity of light, it must necessarily grow hot. The reason is plain. The body can hold no more than a certain quantity of ethereal matter, if more is continually forcing itself in, that which has already entered must go out. But it cannot easily get out, because it is hindered by the particles of the body among which it is detained. It makes an effort therefore in all directions to separate these particles from each other; and hence the body expands, and the effort of the fluid to escape is felt when we put our hands on the body, which we then say is hot. Now, as the earth is perpetually absorbing the ethereal matter, which comes from the sun in an immense stream, and which we call his *rays*, it is plain, that every pore of it must have been filled with this matter long ago. The quantity that is lodged in the earth, therefore, must be continually endeavouring to separate its particles from each other, and consequently must make it hot. The atmosphere, which is perpetually receiving that portion of the ethereal matter which issues from the earth, counteracts the force of the internal heat, and cools the external surface of the earth, and for a considerable way down; and hence the earth for 20 or 30 feet down, shows none of that heat which is felt at greater depths.

(9.) **HEAT, METHODS OF MEASURING.** See THERMOMETER.

(10.) **HEAT, NOXIOUS EFFECTS OF IMMEDIATE.** Great heats are rather the remote, than the immediate cause of epidemical diseases, by relaxing the fibres, and disposing the juices to putrefaction; especially among soldiers and persons exposed the whole day to the sun; for the greatest heats are seldom found to produce epidemic diseases, till the perspiration is stopped by wet clothes, fogs, dews, damps, &c. and then some bilious or putrid distemper is the certain consequence, as fluxes and ardent intermitting fevers. Sometimes however, heats have been so great as to prove the more immediate cause of particular disorders; as when sentinels have been placed without cover or frequent reliefs in scorching heats; or when troops march or are exercised in the heat of the day; or when people imprudently lie down and sleep in the sun. All these circumstances are apt to bring on distempers, varying according to the season of the year, in the beginning of summer, they produce inflammatory fevers; and in autumn, remitting fevers or dysenteries. To prevent, therefore, the effects of immoderate heats, commanders have found it expedient so to order the marches, that the men come to their ground before the heat of the day; and to give strict orders, that none of them sleep out of their tents, which, in fixed encampments, may be covered with boughs to shade them from the sun. It is likewise a rule of great importance to have the soldiers exercised before the cool of the morning is over; as thus not only the sultry heats are

are avoided, but the blood being cooled, and the fibres braced, the body will be better prepared to bear the heat of the day. Lastly, in very hot weather, it has often been found proper to shorten the centinel's duty, when obliged to stand in the sun.

(11.) **HEAT OF ANIMALS.** Of the natural heat of animals, there are various degrees; some preserving a heat of 100° or more in all the different temperatures of the atmosphere; others keeping only a few degrees warmer than the medium which surrounds them; and in some of the more imperfect animals, the heat is scarcely one degree above that of the air or water in which they live. The phenomenon of animal heat has, from the earliest ages, been the subject of philosophical discussion; and like most other subjects of this nature, its cause is not yet ascertained. "The ancients (says Dr Duguid Leslie,) possessed not the requisites for minutely investigating the science of nature; and, prone to superstition, attributed every phenomenon which eluded their investigation, to the influence of a supernatural power. Hippocrates, the father and founder of medicine, accounted animal heat a mystery, and bestowed on it many attributes of the Deity. In treating of the subject, he says in express terms, "what we call heat appears to me to be something immortal, which understands, sees, hears, and knows every thing present and to come." Aristotle seems to have considered it particularly, but nothing is to be met with in his works that can be said to throw light upon it. Galen tells us that the dispute between the philosophers and physicians of his time was, "whether animal heat depended on the motion of the heart and arteries; or whether, at the motion of the heart and arteries was innate, the heat was not also innate." Both these opinions, however, he rejects; and attempts a solution of the question on his favourite system, namely, the peripatetic philosophy; but his leading principles being erroneous, his deductions are of course inadmissible." The heat of the human body in its natural state, according to Dr Boerhaave, is such as to raise the mercury in the thermometer to 98° or at most to 94°; and Dr Pitcairn makes the heat of the human skin the same. Indeed it is evident that different parts of the human body, and its different states, as well as the different seasons, will make it shew of different temperatures. Thus, by various experiments at different times, the heat of the human body is variously estimated by the following authors: Boerhaave and Pitcairn, 93°. Amontons, 91, 93, or 93. Sir Isaac Newton, 95½, Fahrenheit and Mulchenbroek, the blood, 96; Dr Martine, the skin, 97 or 98; the urine, 99; Dr Hales, the skin 97; the urine, 101; Mr John Hunter, his tongue, 97; in his rectum, 98½; his urethra at 1 inch, 91; at 2 inches, 93; at 4 inches, 94; the ball of the thermometer at the bulb of the urethra, 97.

(12.) **HEAT OF ANIMALS, HYPOTHESES RESPECTING THE CAUSE OF THE.** There is hardly any subject of philosophical investigation that has afforded a greater variety of hypotheses, conjectures, and experiments, than the cause of animal heat. The first opinion, which

has very generally obtained, is, that the heat of animal bodies is owing to the attrition between the arteries and the blood. All the observations and reasoning brought in favour of this opinion, however, only shew, that the heat and the motion of the arteries are generally proportional to each other; without shewing which is the cause, and which the effect; or indeed that either is the cause or effect of the other, since both may be the effects of some other cause. Dr Douglas, in his *say on the Generation of Heat in Animals*, shews it solely to the friction of the globules of blood in their circulation through the capillary vessels. Another opinion is, that the lungs are the source of heat in the human body; and this opinion is supported by much the same sort of arguments as the former, and seemingly to little better purpose. A 3d opinion is, that the cause of animal heat is owing to the action of the solid parts upon each other. And as the heart and arteries move, it has been thought natural to expect that the heat should be owing to this motion. But even this does not seem very plausible, from the following considerations: 1st. The moving parts, however we term them solid, are neither hard nor smooth, which two conditions are absolutely requisite to make them fit to generate heat by attrition. None of their motions are swift enough to produce heat in this way. 3d. They have but a small change of surface in their attritions. 4thly. The moveable fibres have fat, mucous, and liquors every way surrounding them, to prevent their being destroyed, or heated by attrition. 5th cause assigned for the heat of our bodies, is that process by which our aliment and fluids are perpetually undergoing some alteration. An opinion is chiefly supported by Dr Stern, in the *Edinburgh Medical Essays*, vol. 3, art. 77. The late ingenious Dr Franklin inclines to this opinion when he says, that the fluid fire, as well as fluid air, is attracted by plants in their growth, and becomes consolidated with the other materials of which they are formed, and makes a part of their substance; that when they come to be digested, and to undergo a kind of fermentation in the vessels, part of the fire, as well as of the air, recovers its fluid active state again, and suffuses itself on the body, digesting and separating &c. *Exper. and Obs. on Electr.* p. 346. Dr Linnæus thinks the heat of animals explicable by the phosphorus and air they contain. Phosphorus exists, at least in a dormant state, in all fluids, and it is also known that they all contain air: it is therefore only necessary to bring the phosphoreal and aerial particles into contact, and heat must be generated; and were it not for the quantity of aqueous humours in animals, fatal accensions would frequently happen. See *Phil. Trans* N° 476. Dr Black supposes, that animal heat is generated altogether in the lungs, the action of the air on the principle of inflammability, and is thence diffused over the rest of the body by means of the circulation. But Dr Linnæus urges several arguments against this hypothesis, tending to show that it is repugnant to the known laws of the animal machine; and he advances another hypothesis, viz. that the phlogiston, which enters into the composition of natural bodies,

consequence of the action of the vascular system actually evolved through every part of the animal machine, and that during this evolution heat is generated. This opinion, he candidly acknowledges, was first delivered by Dr Duncan of Edinburgh; and that something similar to it is to be found in Dr Franklin's works, and in a paper of Dr Humer's in the *Philos. Transl.* The last hypothesis we shall mention, is that of Dr Crawford, in his *Experiments and Observations on Animals*. This ingenious gentleman has inferred, from a variety of experiments, that heat and phlogiston, so far from being connected, as most philosophers have imagined, are in some measure opposite to each other. By the action of heat, the force of their attraction of phlogiston is diminished, and by the action of phlogiston, part of their absolute heat is expelled. He has demonstrated, that atmospherical air contains more quantity of absolute heat than the air which is expired from the lungs of animals: he shows the proportion of the absolute heat of atmospherical air, to that of fixed air, as 67 to 1; and the heat of dephlogisticated air to that of unphlogisticated air as 46 to 1; and observing that Dr Priestley has proved, that the power of this phlogisticated air in supporting animal life is 5 times as great as that of atmospherical air, he concludes that the quantity of absolute heat, contained in any kind of air fit for respiration, is very nearly in proportion to its purity or to its power in supporting animal life; and since the air expired in respiration is found to contain only the 1/5 part of the heat which was contained in the atmospherical air, previous to inspiration, it is manifestly inferred, that the latter must necessarily contain a very great proportion of its absolute heat in phlogiston. Dr Crawford has also shown, that the blood which passes from the lungs to the pulmonary vein, contains more absolute heat than that which passes from the heart to the lungs by the pulmonary artery; the absolute heat of solid arterial blood being to that of venous blood as 11 1/4 to 10: therefore, since the blood which is returned by the pulmonary vein to the heart has the quantity of its absolute heat increased, it must have acquired this heat in its passage through the lungs; so that in the process of respiration a quantity of absolute heat is separated from the air, and absorbed by the blood. Dr Crawford has also proved, that, in respiration, phlogiston is separated from the blood, and combined with air. This theory however has been objected and disputed, particularly by M. Thevenaz Berlinghieri; and Dr Crawford's experiments have been repeated, with contrary results though no regular and systematical theory was formed in its stead. Indeed these theories of Dr Lavoisier and all others founded upon the doctrine of phlogiston, must prove fallacious; the existence of that principle, being now satisfactorily proved by the latest discoveries in Chemistry. See CHEMISTRY, *Index*; and PHLOGISTON.

(11.) HEAT OF BURNING BODIES. See COMBUSTION, § I—VII.

(12.) HEAT OF CHEMICAL MIXTURES. This is a phenomenon necessarily resulting from the

change of form produced in the different substances which are mixed together; and the manner in which it happens may be easily understood from the example of oil of vitriol and water. If equal quantities of concentrated vitriolic acid and water are mixed together, a very great degree of heat immediately takes place; inasmuch, that if the vessel which contains the mixture is made of glass it will probably break; and after it is cold, the mixture will be found to have shrunk in its dimensions, or will occupy less space than the bulk of the water and acid taken separately. The reason is, that the water in its fluid state, has as much latent heat as it can contain; i. e. the elementary fire within it expands or separates its parts from each other, as much as is consistent with the constitution of the body. If any more is added, it cannot be absorbed, or direct its force upon the particles of the water, without raising them in vapour, and the rest will be discharged upon the neighbouring bodies, i. e. will be converted into sensible heat. The vitriolic acid in its concentrated state, contains a quantity of latent heat, which is necessary to preserve its fluidity. But when it is mixed with the fluid water, the latent heat contained in the latter is abundantly sufficient for both: of consequence, the great expansive power in the oil of vitriol itself becomes now totally useless, and therefore exerts its force upon the neighbouring bodies; and when the mixture returns to the original temperature of the oil of vitriol and water, it shows a loss of substance by its diminution in bulk. This will explain all cases in chemistry where heat or cold is produced: and it will generally be found, that where bodies by being mixed together, produce heat, they shrink in their dimensions; but when they produce cold, they are enlarged. See CHEMISTRY, *Index*.

(13.) HEAT OF SPRINGS. The mean heat of springs, near Edinburgh is estimated at 47° and of those near London, at 51°. *Philos. Transl.* vol. 65. art. 44. See SPRING.

(14.) HEAT OF THE ATMOSPHERE. The mercury seldom falls under 16° in Fahrenheit's thermometer; but we are apt to reckon it very cold at 24°, and it continues cold to 40° and a little above. However, such colds have been often known as bring it down to 0°, the beginning of the scale, or nearly the cold produced by a mixture of snow and salt, often near it, and in some places below it. Thus, the degree of the thermometer has been observed at various times and places as follows:

Places.	Lat.	Year.	Therm.
Pennsylvania	40° 0'	1732	5°
Paris	48 30	1709 & 1710	8
Leyden	52 20	1719	5
Utrecht	52 8	—	4
London	51 32	1709 & 1710	0
Copenhagen	55 43	1709	0
Upsal	59 36	1732	—1
Petersburg	59 56	—	—28
Torneo	65 52	1736-7	—33
Hudson's Bay	52 24	1775	—37

The middle temperature of our atmosphere is about 48°, being nearly a medium of all the seasons. The French make it somewhat higher, reckoning it equal to the cave of their national observatory, or

1693; by John Philips, nephew to Milton, 1696, folio. 2. *Plagellum; or, The Life and Death, Birth and Burial, of Oliver Cromwell*, 1663. The 3d edition came out with additions in 1665, 8vo. 3. *A New Book of Loyal English Martyrs and Confessors, who have endured the Pains and Terrors of Death, Arraignment, &c. for the Maintenance of the just and legal Government of these Kingdoms both in Church and State*, 1663; 2amo. Heath, who perhaps had nothing but pamphlets and newspapers to compile from, frequently relates facts that throw light upon the history of those times, which Clarendon, though he drew every thing from the most authentic records, has omitted.

(3.) *HEATH*, Thomas, brother of Benjamin, (N<sup>o</sup> 1.) an alderman of Exeter, and father of John Heath, Esq. one of the judges of the Common pleas, was author of *An Essay towards a new English Version of the Book of Job*, from the original Hebrew; with some account of his Life, 1755, 8vo.

(4.) \* *HEATH*. *n. f.* [*ericæ*, Lat.] 1. A shrub of low stature: the leaves are small, and abide green all the year. *Müller*.—In Kent they cut up the *beath* in May, burn it, and spread the ashes. *Mortimer*.—

On with bolder wing they soaring dare  
The purple *beath*. *Thomson*.

2. A place overgrown with heath.—

Say, from whence

—You owe this strange intelligence! or why,  
Upon this blasted *beath*, you stop our way  
With such prophetick greeting. *Shak.*

—Heath and long life have been found rather on  
the peak of Derbyshire, and the *beaths* of Staf-  
fordshire, than on fertile soils. *Temple*. 3. A place  
of shrubs of whatever kind.—Some woods of oran-  
ges, and *beaths* of rosemary, will smell a great  
way into the sea. *Bacon*.

(5.) *HEATH*, in botany, § 4. *def.* 1. See *ERICA*.

(6.) *HEATH*, BERRY-BEARING. See *EMPE-  
TRUM*.

(7.) *HEATH*, LOW PINE. See *CORIS*, N<sup>o</sup> 1.

(8.) *HEATH*, MOUNTAIN. See *SAXIFRAGA*.

(9.) *HEATH*, in geography, a township of Mas-  
sachusetts, in Hampshire county, 18 miles NNW.  
of Northampton. and 225 NW. of B. ton.

(10—18.) *HEATH*, 9 English villages; in Bed-  
ford, Derby, Gloucester, Hampshire, Middlesex,  
Oxford, Salop, Warwick, and York shires.

\* *HEATH-COCK*. *n. f.* [*beath* and *cock*.] A large  
fowl that frequents heaths.—Cornwall hath quail,  
rail, partridge, pheasant, *beath cock*, and *powte*.  
*Carew*.

*HEATHCOTE*, Ralph, D. D. a learned Eng-  
lish divine of considerable abilities, born in 1724.  
He was educated and graduated at Cambridge.  
He wrote, 1. *A Treatise against the Hutchinsoni-  
ans*; 2. *A Sketch of Lord Bolingbroke's Philoso-  
phy*; 3. *Sylva, or the Wood*; and several other  
pieces.

(1.) \* *HEATHEN*, *adj.* Gentile; pagan.—  
It was impossible for a *heathen* author to relate  
these things, because, if he had believed them,  
he would no longer have been a heathen. *Addison*.

(2.) \* *HEATHEN*. *n. f.* [*heiden*, German] The  
gentiles; the pagans; the nations unacquainted  
with the covenant of grace.—Deliver us from the

*heathen*, that we may give thanks to thy hol-  
y name. 1 *Cor.* xvi. 35.—If the opinions of others  
whom we think well of, be a ground of assen-  
sion, men have reason to be *heathens* in Japan, maho-  
metans in Turkey, papists in Spain, and protes-  
tants in England. *Locke*.—In a paper of morality  
I consider how I may recommend the particu-  
lar virtues I treat of, by the precepts or example  
of the ancient *heathens*. *Addison*.

(3.) *HEATHENS*. See *PAGANS*.

\* *HEATHENISH*. *adj.* [from *heathen*.] 1. Bel-  
onging to the Gentiles.—When the apostles  
our Lord and Saviour were ordained to alter the  
laws of *heathenish* religion, chosen they were, &  
Paul excepted; the rest unschooled, unlettered  
and unlettered men. *Hooker*. 2. Wild; savage;  
rapacious; cruel.—The Moors did tread under  
their *heathenish* feet whatever little they found  
there standing. *Spenser*.—That execrable Cromwell  
made a *heathenish* or rather inhuman edict, against  
the episcopal clergy, that they should neither  
preach, pray in publick, baptize, marry, bury,  
nor teach school. *South*.

\* *HEATHENISHLY*. *adv.* [from *heathen*.] In  
After the manner of heathens.

\* *HEATHENISM*. *n. f.* [from *heathen*.] Gen-  
tilism; paganism.—It signifies the acknowledgement  
of the true God, in opposition to *heathenism*.  
*Hammond*.

*HEATHFIELD*, Lord. See *ELIOT*.

(1.) \* *HEATH-FRAS*. *n. f.* A species of bitu-  
minous earth, which see.

(2.) *HEATH FRAS*. See *ORONUS*.

*HEATH-POINT*, a cape on the island of Ant-  
icosti, in the Gulf of St Lawrence. Lon. 61. 4.  
W. Lat. 49. 6. N.

\* *HEATH-POUT*. *n. f.* [*beath* and *pout*.] A bird  
Not *beath-pout*, or the rarer bird  
Which Phælia or Ionia yields,

More pleasing morsels would afford  
Than the fat olives of my fields. *Dryden*

\* *HEATH-ROSE*. *n. f.* [*beath* and *rose*.] A plant  
in *Windsor*.

\* *HEATHY*. *adj.* [from *beath*.] Full of heath.  
—This sort of land they order the same way with  
the *beathy* land. *Mortimer*.

*HEATON*, 6 English villages, viz. two each  
in Lancashire and Northumberland, and one each  
in Stafford and York shires.

(1.) \* *HEAVE*. *n. f.* [from the verb.] 1. Lift-  
ing or exertion or effort upwards.—None could give  
whether the next *heave* of the earthquake would  
tettle them on the first foundation, or swallow  
them! *Dryden*. 2. Rising of the breast.—

There's matter in these sighs; these profound  
*heaves*

You must translate; 'tis fit we understand them  
*Shak*

3. Effort to vomit. 4. Struggle to rise.—  
But after many strains and *heaves*,  
He got up to his saddle eaves. *Hudibras*

(2.) \* *HEAVE OFFERING*. *n. f.* An offering  
among the Jews.—Ye shall offer a cake of the first  
of your dough for an *heave offering*, as ye do the  
*heave offering* of the threshing floor. *Numb*.

(3.) \* *TO HEAVE*. *v. a.* pret. *heaved*, *hoisted*,  
*hoisted*; part. *heaved*, or *hoisted*. 1. To lift; to  
raise from the ground.—

So stretch'd out huge in length the arch  
 bend lay,  
 Chain'd on the burning like; nor ever hence  
 Had ris'n, or *beav'd* his head, but that the will  
 And high permission of all-ruling heaven  
 Left him at large. *Milton.*  
 & To carry.—

Now we bear the king  
 Tow'rd Calais: grant him there; and there  
 being seen,  
 Have him away upon your winged thoughts  
 Althwart the sea. *Shak.*

& To raise; to lift.—  
 So daunted, when the giant saw the knight,  
 His heavy hand he *beav'd* up on high,  
 And him to dust thought to have batter'd quite.  
*Spenser.*

I cannot *beave*  
 My heart into my mouth. *Shak.*  
 He dy'd in fight;  
 Fought next my person, as in comfort fought,  
 When he *beav'd* his shield in my defence,  
 And on his naked side receiv'd my wound.  
*Dryden.*

& To cause to swell.—  
 The groans of ghosts, that cleave the earth  
 with pain,  
 And *beave* it up: they pant and stick half way.  
*Dryden.*

The glittering finny swarms,  
 That *beave* our sinthe and croud upon our  
 shores. *Thomson.*

& To force up from the breast.—  
 Made she no verbal quest?  
 —Yes, once or twice she *beav'd* the name of  
 father  
 Piningly forth, as if it prest her heart. *Shak.*  
 The wretched animal *beav'd* forth such  
 groans,  
 As their discharge did stretch his leathern coat  
 Almost to bursting. *Shak. As you like it.*

& To exalt; to elevate.—  
 Poor shadow, painted queen;  
 Out *beav'd* on high, to be hurl'd down below.  
*Shak.*

& To puff; to elate.—The Scots, *beav'd* up in  
 high hope of victory, took the English for fool-  
 birds fallen into their net, forsook their hill,  
 and marched into the plain. *Hayward.*

(2.) \* To HEAVE. v. n. 1. To pant; to breathe  
 with pain.—

'Tis such as you,  
 That creep like shadows by him, and do sigh  
 At each his needless *beavings*; such as you  
 Nourish the cause of his awaking. *Shak.*  
 He *beaves* for breath, which, from his lungs  
 supply'd,  
 And fetch'd from far, distends his lab'ring side.  
*Dryden.*

& To labour.—The church of England had strug-  
 gled and *beav'd* at a reformation ever since Wick-  
 lif's days. *Atterbury.* 3. To rise with pain; to  
 swell and fall.—

Thou hast made my curdled blood run back,  
 My heart *beav'd* up, my hair to rise in bristles.  
*Dryden.*

The wind'ring breath was on the wing to  
 part;

Weak was the pulse, and hardly *beav'd* the  
 heart. *Dryden.*

—No object affects my imagination so much as  
 the sea or ocean: I cannot see the *beaving* of this  
 prodigious bulk of waters, even in a calm, with-  
 out a very pleasing astonishment. *Addison.*

Frequent for breath his panting bosom *beaves*.  
*Prior.*

The *beaving* tide  
 In widen'd circles beats on either side. *Gay.*

4. To heave; to feel a tendency to vomit.  
 (3.) To HEAVE THE LOG. See LOG.  
 (1.) \* HEAVEN. n. s. [*heafon*, which seems  
 to be derived from *beaf*, the places over the  
 head, Saxon.] 1. The regions above; the ex-  
 pansive of the sky.—

A station like the herald Mercury,  
 New lighted on a *beaven* kissing hill. *Shak.*

Thy race in time to come  
 Shall spread the conquests of imperial Rome;  
 Rome, whose ascending tow'rs shall *beav'n* in-  
 vade,

Involving earth and ocean in her shade. *Dryd.*  
 —The words are taken more properly for the  
 air and ether than for the *beavens*. *Raleigh.*

This act, with shouts *beav'n* high, the friendly  
 band  
 Applaud. *Dryden.*

—Some fires may fall from *beavens*. *Temple.* 2.  
 The habitation of God, good angels, and pure  
 souls departed.—

It is a knell  
 That summons thee to *beavens*, or to hell. *Shak.*  
 These, the late  
*Heav'n*'s banish'd host, left desert utmost hell.  
*Milton.*

All yet left of that revolted rout,  
*Heav'n*'s fall'n, in station stood, or just array,  
 Sublime with expectation. *Milton.*

3. The supreme power; the sovereign of heaven.  
 Now *beavens* help him! *Shak.*

The will  
 And high permission of all ruling *beav'n*'s  
 Left him at large. *Milton.*

—The prophets were taught to know the will of  
 God, and thereby instruct the people, and enabled  
 to prophesy, as a testimony of their being sent  
 by *beaven*. *Temple.* 4. The pagan gods; the  
 celestials.—

Take physick, pomp;  
 Expose thyself to feel what wretches feel,  
 That thou may'st shake the superflux to them,  
 And show the *beavens* more just. *Shak.*

They can judge as fitly of his worth,  
 As I can of those mysteries which *beavens*  
 Will not have earth to know. *Shak.*

*Heav'n*! what a spring was in his arm, to  
 throw!

How high he held his shield, and rose at ev'ry  
 blow. *Dryden.*

5. Elevation; sublimity.—  
 O, for a muse of fire, that would ascend  
 The brightest *beaven* of invention. *Shak.*

6. It is often used in composition.  
 (2.) HEAVEN, (§ 1. def. 2.) among Christian  
 divines and philosophers, is considered as a place  
 in some remote part of infinite space, in which  
 the

The omnipresent Deity affords a nearer and more immediate view of himself and a more sensible manifestation of his glory, than in the other parts of the universe. This is often called the *empyrean* heaven, from that splendor with which it is supposed to be invested; and of this place the inspired writers give us the most noble and magnificent descriptions.

(3.) HEAVEN, among Pagans, was considered as the residence only of the celestial gods, into which no mortals were admitted after death, unless they were deified. As for the souls of good men, they were consigned to the *elysian fields*. See ELYSIUM, § 1, 2.

(4.) HEAVEN, in astronomy (§ 1, *def.* 1.) called also the *æthereal* and *starry* heaven, is that immense region wherein the stars, planets, and comets, are disposed. See ASTRONOMY. This is what Moses calls the *firmament*, speaking of it as the work of the second day's creation; at least it is thus the word *רָקִיעַ* is usually rendered by his interpreters; though somewhat abusively, to countenance their own notion of the heavens being *firm* or *solid*. But the word properly signifies no more than *expanse* or *extension*; a term very well adapted by the prophet to the impression which the heavens make on our senses; whence, in other parts of scripture, the heaven is compared to a curtain, or a tent stretched out to dwell in. The LXX first added to this idea of expansion that of *firm* or *solid*; rendering it by *στέρεα*, according to the philosophy of those times; in which they have been very injudiciously followed by the modern translators. Des Cartes, Kircher, &c. demonstrated this heaven not to be solid, but fluid; but they still supposed it full, or perfectly dense, without any vacuity, and partitioned out into many vortices. But others have overturned not only the solidity, but the supposed plenitude, of the heavens. Sir Isaac Newton has abundantly shown the heavens void of almost all resistance, and, consequently, of almost all matter: this he proves from the phenomena of the celestial bodies; from the planets persisting in their motions without any sensible diminution of their velocity; and the comets freely passing in all directions towards all parts of the heavens. Heaven, taken in a general sense, for the whole expanse between our earth and the remotest regions of the fixed stars, may be divided into two very unequal parts, according to the matter found therein; viz. the atmosphere, or aerial heaven, possessed by air; and the *æthereal* heaven, possessed by a thin, unresisting medium, called *Æther*.

(5.) HEAVEN is also used, in astronomy, for an orb, or circular region, of the *æthereal* heaven. The ancient astronomers supposed as many different heavens as they observed motions therein. These they supposed all to be solid, as thinking they could not otherwise sustain the bodies fixed in them; and sphericall, that being the most proper form for motion. Thus they had 7 heavens for the 7 planets; viz. the heavens of the Moon, Mercury, Venus, the Sun, Mars, Jupiter, and Saturn. The 8th was for the fixed stars, which they called the *firmament*. Ptolemy adds a 9th heaven, which he called the *primum mobile*. Two

crystalline heavens were added by king Alphonsus X. &c. to account for some irregularities in the motions of the other heavens; and lastly, an *empyrean* heaven was drawn over the whole, for the residence of the Deity; which made the number twelve. But others admitted many more heavens according as their different views and hypotheses required. Eudoxus supposed 33, Calippus 34, Regiomontanus 33, Aristotle 47, and Fracastor a less than 70. The astronomers, however, did not much concern themselves whether the heavens they thus allowed of were real or not; provided they served a purpose in accounting for any of the celestial motions, and agreed with the phenomena.

\* HEAVEN-BEGOT. Begot by a celestial power.  
If I am *heav'n's* begot, assert your son  
By some sure sign. *Dryden*

\* HEAVEN-BORN. Descended from the celestial regions; native of heaven.—

If once a fever fires his sulph'rous blood,  
In every fit he feels the hand of God,  
And *heav'n's* born flame. *Dryden*

Oh *heav'n's* born sisters! source of art!  
Who charm the sense, or mend the heart;  
Who lead fair virtue's train along,  
Moral truth, and mystick song! *Pope*

\* HEAVEN-BRED. Produced or cultivated in heaven.—

Much is the force of *heav'n's* bred poetry. *Shakspeare*

\* HEAVEN-BUILT. Built by the agency of gods.—

His arms had wrought the destin'd fall  
Of sacred Troy, and raz'd her *heav'n's* built wall. *Pope*

\* HEAVEN-DIRECTED. 1. Raised towards the sky.—

Who taught the *heav'n's* directed spire to rise! *Pope*

2. Taught by the powers of heaven.—

O sacred weapon; left for truth's defence;  
To all but *heaven-directed* hands deny'd!  
The muse may give it, but the gods must guide. *Pope*

(1.) \* HEAVENLY. *adj.* [from *heaven*] 1. Resembling heaven; supremely excellent.—As the love of heaven makes one *heavenly*, the love of virtue, virtuous, so doth the love of the world make one become worldly. *Sidney*—

Not Maro's muse, who sung the mighty man;  
Nor Pindar's *heav'nly* lyre, nor Horace when I swan. *Dryden*

2. Celestial; inhabiting heaven.—

Adoring first the genius of the place,  
Then earth, the mother of the *heav'nly* race. *Dryden*

(2.) \* HEAVENLY. *adv.* 1. In a manner resembling that of heaven.—

In these deep solitudes and awful cells,  
Where *heav'nly* pensive contemplation dwells,  
And ever musing melancholy reigns,  
What means this tumult in a vestal's veins? *Pope*

2. By the agency or influence of heaven.—

Truth and peace and love shall ever shine  
About the supreme throne  
Of him, t' whose happy-making sight alone,  
Our *heav'nly* guided soul shall climb. *Milton*

\* HEAVEN-

\* **HEAVENWARD.** *adv.* [*heaven and onward, Sax.*]

Towards heaven.—

I prostrate lay,  
Various doubts impell'd, or to obey,  
Or object; at length, my mournful look  
Heavenward cast, determin'd, thus I spoke.

*Prior.*

**HAVER,** *n. s.* a wooden staff used by seamen  
to set up the top-mast shrouds,  
the standing rigging, &c.

\* **HEAVILY.** *adv.* [*from heavy.*] 1. With  
ponderousness. 2. Grievously; afflictively.  
It must be impracticable to the curious: they  
under a double misfortune; common calamities  
and common blessings fall heavily upon them.  
*Mr. 3.* Sorrowfully; with grief.—

I came hither to transport the tydings,  
Which I have heavily borne. *Shak.*

The O'Neil took very heavily, because his con-  
dition in the army was less pleasant to him. *Clon-  
don.* 4. With an air of dejection.—

Why looks your grace so heavily to-day?  
—O, I have past a miserable night. *Shak.*

\* **HEAVINESS.** *n. s.* [*from heavy.*] 1. Pon-  
derousness; the quality of being heavy; weight.  
The subject is concerning the heaviness of sev-  
eral, or the proportion that is required be-  
tween weight and the power which may move  
it. *Wilks.* 2. Dejection of mind; depression of  
spirits.—We are, at the hearing of some, more in-  
clined to sorrow and heaviness; of some more  
cheerful, and softened in mind. *Hooker.*—

Against ill chances men are ever merry;  
But heaviness foreruns the good event. *Shak.*

Let us not burthen our remembrance with  
heaviness; that's gone. *Shak.*

Heaviness is the heart of man maketh it stoop;  
A sad word maketh it glad. *Prov. xii. 25.*—

They joy; though now for a season ye  
are heaviness, through manifold temptations.

*Ps. lxxiii. 12.* 3. Inaptitude to motion or thought;  
torpidness; dulness of spirit; lan-  
guor.—

Our strength is all gone into heaviness,  
That makes the weight. *Shak.*

What means this heaviness that hangs upon  
us?

This lethargy that creeps through all my senses?

*Addison.*

He would not violate that sweet recess,  
And loosed besides a welcome heaviness,

Which seal'd his eyes. *Dryden.*

Indication of drowsiness, oppression, heaviness,  
stupidity, are signs of a too plentiful meal.

*Mr. 4.* Oppression; crush; affliction: as,  
heaviness of taxes. 5. Deepness or richness of  
soil.—

—As Alexandria exported many commodities,  
received some, which, by reason of the fat-  
ness and heaviness of the ground, Egypt did not  
bear; such as metals, wood and pitch. *Arbuth.*

(1.) \* **HEAVY.** *adj.* [*heaf, Sax.*] 1. Weighty;  
burdenous; tending strongly to the centre; con-  
trary to light.—

Mercurius tells us, that a little  
weight, with an engine of an hundred double pul-  
leys, might move this earth, though it were much  
heavier than it is. *Wilkins.* 2. Sorrowful; deject-  
ed; depressed.—

Let me not be light;

For slight wife doth make a heavy husband. *Shak.*  
3. Grievous; oppressive; afflictive.—Menelot bore  
an heavy hand over the citizens, having a malle-  
ous mind. *Mac. v. 23.*—

Let not your ears despise my tongue for ever,  
Which shall possess them with the heaviest sound  
That ever yet they heard. *Shak. Macbeth.*

—If the cause be not good, the king himself hath  
a heavy reckoning to make. *Shak. Henry V.*—

Pray for this good man, and for his issue,  
Whose heavy hand hath bow'd you to the grave,  
And beggar'd yours for ever. *Shak. Macbeth.*

Chartres, at the levee,

Tells with a sadder the tydings heavy. *Swift.*  
4. Wanting alacrity; wanting briskness of appear-  
ance.—

My heavy eyes, you say, confess  
A heart to love and grief inclin'd. *Prior.*

5. Wanting spirit or rapidity of sentiment; una-  
nimated.—A work was to be done, a heavy writer  
to be encouraged, and accordingly many thou-  
sand copies were bespoke. *Swift.* 6. Wanting ac-  
tivity; indolent; lazy.—

Fair, tall, his limbs with due proportion join'd;  
But of a heavy, dull, degenerate wind. *Dryden.*

7. Drowsy; dull; torpid.—Peter and they that  
were with him were heavy with sleep. *Luke, ix.  
33.* 8. Slow; sluggish.—

But let thy spiders that suck up thy venom,  
And heavy gaited toads lie in their way. *Shak.*

9. Stupid; foolish.—

This heavy headed revel, East and West  
Makes us traduc'd, and tax'd of other nations.

*Shaksp.*

—I would not be accounted so base minded, or  
heavy headed, that I will confess that any of them  
is for valour, power, or fortune better than my-  
self. *Kneles.* 10. Burdensome; troublesome; ta-  
dious.—I put into thy hands what has been the  
diversion of some of my idle and heavy hours.

*Lect's Epistle to the Reader.*—When alone, your  
time will not lie heavy upon your hands for want  
of some trifling amusement. *Swift.* 11. Loaded;  
encumbered; burthened.—

Hearing that there were  
forces coming against him, and not willing that  
they should find his men heavy and laden with  
booty, he returned unto Scotland. *Bacon's Henry  
VII.* 12. Not easily digested; not light to the  
stomach.—Such preparations as retain the oil or  
fat, are most heavy to the stomach, which makes  
baked meat hard of digestion. *Arbuthnot.* 13.  
Rich in soil, fertile, as heavy lands. 14. Deep;  
cumbersome, as heavy roads.

(2.) \* **HEAVY.** *adv.* As an adverb it is only u-  
sed in composition; heavily.—Your carriages were  
heavy laden; they are a burden to the weary beast.

*Isa. xlv. 1.*—Come unto me all ye that labour and  
are heavy laden, and I will give you rest. *Matth.  
xi. 28.*

**HEBDEN,** a river in Yorkshire, which runs in-  
to the Calder, near Midley.

\* **HEBDOMAD.** *n. s.* [*hebdomas, Latin.*] A  
week; a space of seven days.—Computing by the  
medical month, the first hebdomad or septenary  
consists of six days, seventeen hours and a half.

*Arbuthnot.*

(s.) \* **HEBDOMADAL.** } *adj.* [from *hebdomada*, Lat.] *Week-*  
 (s.) \* **HEBDOMADARY.** } *ness, Lat.] Week-*  
*ly*: consisting of seven days.—As for *hebdomadal*  
*periods*, or weeks, in regard of their sabbaths,  
 they were observed by the Hebrews. *Brown.*

(s.) **HEBDOMADARY,** (*HEBDOMADARIUS*, or  
*HEBDOMADUS*, from *ἑβdomas*, Gr. seven,) a mem-  
 ber of a chapter or convent, whose week it is to  
 officiate in the choir, to rehearse the anthems and  
 prayers, and to perform the usual functions which  
 the superiors perform at solemn feasts, and other  
 extraordinary occasions. He generally collates to  
 the benefices which become vacant during his  
 week. In cathedrals, the hebdomadary was a  
 canon or prebendary, who had the peculiar care  
 of the choir, and the inspection of the officers for  
 his week. In monasteries, he waits at table for a  
 week, or other stated period; directs and assists  
 the monk, &c.

**HEBDOMAGENES**, (from *ἑβdomas*, seven, and  
*γεννη*, birth,) a title of Apollo, so named from  
 his being born on the 7th day of the month;  
 whence the 7th days were held sacred to him. See  
**HEBDOMAS**.

**HEBDOMARIUS,** } the same with **HEBDOMA-**  
**HEBDOMARY,** } **DARY.**

**HEBDOME**, (*ἑβdomas*, Gr. the seventh day,) a  
 solemnity of the ancient Greeks, in honour of A-  
 pollo, in which the Athenians sang hymns to his  
 praise, and carried in their hands branches of lau-  
 rel. It was observed on the seventh day of every  
 lunar month.

**HEBE**, in ancient mythology, a goddess, the  
 idea of whom, among the Romans, seems to have  
 been that of eternal youth, or immortality of bliss.  
 She is fabled to have been a daughter of Jupiter  
 and Juno. According to some she was the daugh-  
 ter of Juno only, who conceived her after eating  
 lettuce. She was fair and always in the bloom  
 of youth, being the goddess of youth, and made  
 by her mother cup-bearer to the gods. She was  
 dismissed from her office by Jupiter, because she fell  
 down in an indecent posture as she was pouring ne-  
 ctar to the gods at a grand festival; and Ganymedes,  
 his favourite, appointed cup-bearer in her place.  
 She was employed by her mother to prepare her cha-  
 riot, and to harness her peacocks. When Hercu-  
 les was raised to the rank of a demigod, he was  
 reconciled to Juno by marrying Hebe, by whom  
 he had two sons, Alexiares and Anticetus. As  
 Hebe had the power of restoring gods and men to  
 the vigour of youth, she, at the request of her  
 husband, performed that kind office to his friend  
 Iolauus. She was worshipped at Sicyon, under  
 the name of *Die*, and at Rome under that of *Ju-*  
*VENIAS*.

**HEBENSTREIT**, John Ernest, M. D. a learn-  
 ed physician, born at Leipzig in 1704. He wrote  
*De usu partium*, and several other works;  
 and died in 1756, aged 54. His brother, John  
 Christian Hebenstreit, was an eminent Hebraist.

**HEBENSTRETIA**, in botany, a genus of the  
 angiospermia order, belonging to the didynamia  
 class of plants; and in the natural method ranking  
 under the 48th order, *aggregata*. The calyx is  
 emarginated, and divided below; the corolla uni-  
 labiate; the lip rising upwards, and quadrifid;

the capsule dispermous; the stigma inserted in  
 the margin of the limb of the corolla.

**HEBER**, the son of Salah, great-grandson  
 Shem, and father of Peleg, from whom the  
 Hebrews derived their name, according to Joseph  
 Eusebius, Jerome, Bede, and most of the in-  
 terpreters of the sacred writings: but Huet has  
 attempted to prove, that the Hebrews took the  
 name from the word *Heber*, which signifies *to*  
 because they came from beyond the Euphrates.  
 Heber lived 464 years, and is supposed to be  
 born born A. A. C. 2281.

\* **HEBETATE.** *n. s.* [*hebetus*, Latin; *hebeté*,  
*ter*, French.] To dull; to blunt; to stupor.  
 The eye, especially if *hebetated*, might cause  
 same perception. *Harvey on Consumption.*—It  
 may confer a robustness on the limbs of an old  
 but will *hebetate* and clog his intellectual  
*business and Pope.*

\* **HEBETATION.** *n. s.* [from *hebetate*.]  
 The act of dulling. 2. The state of being dull.

\* **HEBETUDE.** *n. s.* [*hebetudo*, Latin.] Dull-  
 ness; obtuseness; bluntness.—The pestilent in-  
 naries, according to their grossness or subtilty,  
 tivity or *hebetudo*, cause more or less true  
 plagues. *Harvey on the Plague.*

\* **HEBRAISM.** *n. s.* [*hebraismus*, French;  
*hebraismus*, Latin.] A Hebrew idiom.—Milton  
 infused a great many Latinisms, as well as Ge-  
 cisms, and sometimes *Hebraisms*, into his po-  
*etaster.*

\* **HEBRAIST.** *n. s.* [*hebraicus*, Latin.] A  
 skilled in Hebrew.

**HEBREW**, *adj.* (from **HEBER**,) something  
 relating to the Hebrew: as,

(I.) **HEBREW BIBLE.** See **BIBLE**, § III; VI  
 N° 30.

(II.) **HEBREW CHARACTER.** There are  
 kinds of Hebrew characters: the ancient, or  
 and the modern, or rabbinical characters.

I. **HEBREW CHARACTER, ANCIENT,** or  
**SQUARE HEBREW**, takes this last denomination  
 from the figure of its characters, which are  
 more square, and have their angles more ex-  
 than the other. This character is used in the  
 of holy scripture, and their principal and most  
 portant writings. When both this and the  
 binical character are used in the same work,  
 former is for the text, or the fundamental part,  
 and the latter for the accessory part, as the  
 notes, commentaries, &c. The best and  
 beautiful characters of this kind, are those  
 from the characters in the Spanish MSS.; or  
 those from the Italian MSS.; then those from  
 French; and lastly, those of the Germans, who  
 characters are much the same, with respect to  
 other genuine square Hebrew characters, than  
 Gothic or Dutch characters are with respect  
 the Roman. Several authors contend, that  
 square character is not the real ancient Hebr-  
 character, written from the beginning of the  
 guage to the time of the Babylonish captivity; but  
 that it is the Assyrian, or Chaldean character, which  
 the Jews assumed, and accustomed themselves to  
 during the captivity, and retained afterwards.  
 They say, that the Jews, during their captivity,  
 had quite disused their ancient character; so that

has found it necessary to have the sacred books transcribed into the Chaldean square character. Some authors add, that what we call the Samaritan character, is the genuine ancient Hebrew. Of these are Scaliger, Bochart, Casaubon, Vossius, Ortelius, Walton, Capellus, &c. and among the monks, Jerome and Eusebius. On this side it is urged, that the present characters are called Samaritan by the ancient Jewish writers of the Talmud, and therefore must have been brought from Syria; but to this argument it is replied, that there were two sorts of characters anciently in use, the sacred or present square character, and the profane or civil, which we call Samaritan; that the sacred is called *Affyrian*, because it began in Assyria to come into common use. It is further alleged, that the Chaldean letters, which the Jews now use, were unknown to the Jews before the captivity, from Dan. i. 4. It is also inferred from 2 Kings, xvii. 34. where it is said, that a Jewish priest was sent to teach the Samaritans the worship of Jehovah; on which occasion he must have taught them the law; and yet it is known to be made of his teaching them the language, a character, that the law was then written in the character which the Samaritans used. But a third argument is taken from some ancient medals, which, with a legend on one side, *The shield of Israel*, and on the other *Jerusalem the holy*, have a Samaritan character. These shekels, it is said, must have been coined before the division of the two kingdoms of Judah and Israel, or at least before the Assyrian captivity, because the Samaritans ever afterwards reckoned Jerusalem holy. On the other side, or for the primitive antiquity of the square character, are the two Buxtorf's, Lessius, Calovius, Hottinger, Spanheim, &c. They urge, from Matthew, v. 18. that it is really the least of the consonants in the present Hebrew, whereas it is one of the largest in the Samaritan alphabet: but Walton says, that if our Saviour here speaks of the least of the alphabet, we can only infer, that the square character was used in our Saviour's time, which is not denied by those who maintain the present to be the original. They also allege, that the Jews were too obstinate and superstitious to allow their sacred character to be altered: but if it was done under the direction and authority of Ezra, the argument will be much invalidated. For, they say that Ezra could not alter the ancient character, because it was impossible to make alterations in all their copies. This argument, however, is contradicted by fact; since the old square black letter is actually changed for the present. They say, likewise, that Ezra was not allowed to profane the sacred writings with a heathen character: but this supposes that Ezra was as scrupulous as to imagine, that there was some sanctity in the shape of the letters. Moreover, the advocates for this opinion appeal to ancient coins found in Judea, with a legend in the square or Assyrian character. But the genuineness of these coins is suspected. The learned Jean Socrat maintains, with great address, that the ancient Hebrew character is that found on the medals of Sion, and others, commonly called Samaritan medals; but which, he asserts, were

really Hebrew medals, struck by the Jews, and not the Samaritans. Buxtorf endeavours to reconcile these two opinions, by producing a variety of passages from the rabbies to prove, that both these characters were anciently used; the present square character being that in which the tables of the law, and the copy deposited in the ark, were written; and the other character being used in the copies of the law which were written for private and common use, and in civil affairs in general; and that after the captivity, Ezra enjoined the former to be used by the Jews on all occasions, leaving the latter to the Samaritans and apostates. But it can hardly be allowed by any who consider the difference between the Chaldean and Samaritan characters, with respect to convenience and beauty, that they were ever used at the same time. After all, it is of no great moment which of these, or whether either of them, were the original characters; since it appears, that no change of the words has arisen from the manner of writing them, because the Samaritan and Jewish Buxtorf almost always agree, after so many ages. It is most probable that the form of these characters has varied in different periods; this appears from the testimony of Monfaucon, in his *Memoria Originalis*, vol. i. p. 22. &c. and is implied in Dr Kennicott's making the characters in which MSS. are written, one test of their age.

**II. HEBREW CHARACTER, MODERN, or the RABBINICAL HEBREW,** is a good neat character, formed of the square Hebrew, by rounding it, and retrenching most of the angles or corners of the letters, to make it the more easy and flowing. The letters used by the Germans are very different from the rabbinical characters used every where else, though all formed alike from the square character, but the German is a more slovenly manner than the rest.—The rabbies frequently make use either of their own, or the square Hebrew character, to write the modern languages in. There are even books in the vulgar tongues printed in Hebrew characters; instances whereof are seen in the late French king's library.

**(III.) HEBREW LANGUAGE,** that spoken by the Hebrews.

**I. HEBREW LANGUAGE, ANCIENT,** is the language spoken by the ancient Hebrews, and wherein the Old Testament is written. This appears to be the most ancient of all the languages in the world, at least we know of none older; and some learned men are of opinion, that this is the language in which God spoke to Adam in Paradise. Dr Sharpe adopts the opinion, that the Hebrew was the original language; not indeed that the Hebrew is the unvaried language of our first parents, but that it was the general language of men at the dispersion; and however it might have been improved and altered from the first speech of our first parents, it was the original of all the languages, or almost all the languages, and dialects, that have since arisen in the world. See **PHILOLOGY, Part I.** The books of the Old Testament are the only pieces to be found, in all antiquity, written in pure Hebrew; and the language of many of these is extremely sublime: it appears perfectly regular, and particularly so in its conjugations. Indeed, properly speaking, it has but one conjugation,

position; but this is varied in each 7 or 8 different ways, which has the effect of so many different conjugations, and affords a great variety of expressions, to represent by a single word, the different modifications of a verb, and many ideas, which in the modern, and in many of the ancient and learned languages, cannot be expressed without a periphrasis. The primitive words, which are called *roots*, have seldom more than three letters or two syllables. In this language there are 22 letters, 5 of which are vowels, viz *Alph, He, Yod, Ain* or *Om*, and *Waw*, answering to our *a, e, i, o, and u*; but then each vowel is divided into two, a long and a short, the sound of the former being somewhat grave and long, and that of the latter short and acute. And the two last vowels have sounds that differ in other respects, besides quantity and a greater or less elevation. To those 20 or 22 vowels may be added others, called *semi-vowels*, which connect the consonants, and make the easier transitions from one to another. The number of accents in this language is indeed prodigious: of these there are near 40, the use of some of which, notwithstanding all the inquiries of the learned, are not yet perfectly known. We know, in general, that they serve to distinguish the sentences, like the points called *commas, semicolons, &c.* in our language; to determine the quantity of the syllables; and to mark the tone with which they are to be spoken or sung. It is no wonder, then, that there are more accents in the Hebrew than in other languages, since they perform the office of three different things, which in other languages are called by different names. As we have no Hebrew but what is contained in the Scripture, that language to us wants many words; not only because, in those primitive times, the languages were not so copious as at present; but also on this account, that the inspired writers had no occasion to mention many of the terms that might be in the language. The Chaldee, Syriac, Ethiopic, &c. languages, are by some held to be only dialects of the Hebrew; as the French, Italian, Spanish, &c. are dialects of the Latin. It has been supposed by many very learned men, that the Hebrew letters were often used hieroglyphically, and that each had its several distinct sense understood as a hieroglyphic. Neuman, who seems to have taken vast pains to find out this secret meaning of these letters, gives the following explication: *aleph*, he says, is a character denoting motion, readiness, and activity; *beth* signifies, 1. Matter, body, substance, thing; 2. Place, space, or capacity; and, 3. In, within, or contained; *gimel* stands for flexion, bending or obliquity of any kind; *daleth* signifies any protrusion made from without, or any promotion of any kind; *reish* stands for presence, or demonstrative essence of any thing; *waw* stands for copulation or growing together of things; *zain* expresses vehement protrusion and violent compression, such as is occasioned by at once violently discharging and constringing a thing together; it also signifies sometimes the straitening of any figure into a narrow point at the end; *cheth* expresses association, society, or any kind of composition or combination of things together; *tet* stands for the withdrawing, drawing back, or recede of any thing;

*jod* signifies extension and length, whether longer or in time; *kaph* expresses a turning, a vedness, or concavity; *lamed* stands for addition, access, impulse, or advection, (sometimes for pressure; *mem* expresses any trade, or the amplifying any thing in whatever is in regard to contiguous qualities, it signifies the ding length, breadth, and circumference; and disjunct qualities it signifies multitude; *nun* signifies the propagation of one thing from another or of the same thing from one person to another; *samech* expresses cincture and constraint; *ayin* stands for observation, objection, or objection; *pe* stands for a crookedness or an angle any figure; *sade* expresses contiguity and succession; *qaph* expresses a circuit or any exterior part of a thing, and the extremity or end of any thing; *resh* signifies the number ten or the third degree, or the utmost perfection any thing; *sin* expresses a sequel, continual succession of any thing. According to this explication, as the several particular letters of the Hebrew alphabet separately signify the ideas of motion, matter, space, and several modifications of matter, space, and motion, it follows, that in this language, the words of which are composed of these expressive characters, must necessarily be of languages the most perfect and expressive, as words formed of such letters, according to their determinate separate signification, must contain the idea of all the matters contained in the letters of the several characters, and be at once a name and a definition, or succinct description of the object, and all things material as well as spiritual, objects in the natural and moral world, must be known as soon as their names are known, and their separate letters considered. Upon this account the words are thus easily explained, and are perhaps the most apposite and expressive words that were ever formed. See that article.

2. HEBREW LANGUAGE, RABBINICAL, or MODERN HEBREW, is the language used by the rabbins in their writings. The basis or bottom of it is the Hebrew and Chaldee, with great additions in the words of these two languages, and meanings whereof they have considerably raised and extended. Abundance of things they have borrowed from the Arabic: the rest is chiefly composed of words and expressions from the Greek, some from the Latin; and others from the most modern tongues; particularly that spoken in the place where each rabbin lived or wrote. The rabbinical Hebrew must be allowed to be a very copious language. M. Simon, in his *Hist. Crit. de l'Etat de l'Esprit*, liv. iii. ch. 27. observes, that there is scarce any art or science but the rabbins have treated thereof in it. They have translated all of the ancient philosophers, mathematicians, astronomers, and physicians; and have written the histories on most subjects: they do not want commentators and poets. This language, notwithstanding it is so crowded with foreign words, has many beauties in the works of those who have written well in it.

(1.) HEBREWS, *n. s.* the descendants of Israel, commonly called *Yews*. See *HEBREW* and *Jews*.

(1.) **HEBREWS**, or **EPISTLE TO THE HEBREWS**, a canonical book of the New Testament. Though St Paul did not affix his name to this epistle, the concurrent testimony of the best authors ancient and modern afford such evidence of his being the author of it, that the objections to the contrary are of little or no weight. The Hebrews, to whom the epistle was wrote, were the believing Jews of Palestine; and its design was to convince them, and by their means all the Jewish converts wherever dispersed, of the insufficiency and abolition of the ceremonial and ritual law.

\* **HEBRICIAN**. *n. f.* [from *Hebrew*.] One skilled in the Hebrew.—The words are more properly taken for the air or ether than the heavens, as the best *Hebricans* understand them. *Raleigh*—The measure of the Hebrew verse, as the meanest *Hebricans* knoweth, consists of uneven feet. *Poacham*.

(1.) **HEBRIDES**, **ÆBUDÆ**, or **WESTERN ISLANDS**, the general name of some islands, lying in the NW. of Scotland, of which kingdom they constitute a part. They are situated between 55° and 57° lat. N. are supposed to be about 300 in number, and to contain 48,000 inhabitants. The principal are **SKYE**, **MULL**, **ILAY**, **ARRAN**, **St Kilda**, **N. and S. Uist**, **Canary**, **Staffa**, **Jura**, **Lewis**, and others. See these articles, and **WESTERN ISLANDS**.

(2.) **HEBRIDES**, **NEW**, a cluster of islands in the Pacific Ocean, so named by Captain Cook. See *Cook*, N° III, § 9. The northern islands of this archipelago were first discovered by that great navigator, *Quirós*, in 1606, who supposed them to be a part of the southern continent, which, till lately, was thought to exist. They were first visited by *M. de Bougainville* in 1768, who, landing on the island of *Lepers*, discovered that the land was not connected, but composed of islands, which he called the *Great Cyclades*. Capt. *Cook* explored the whole cluster, and, besides ascertaining the extent and situation of these islands, obtained the knowledge of several others. They extend 75 miles, from NNW. to SSE. The natives are tall and hospitable; of a slender make, and dark complexion, and have mostly frizzled hair. The produce consists of coconuts, bread-fruit, plantains, sugar-cane, &c. The most northern part of this archipelago was called by *M. de Bougainville* the *Isle of the Stars*. The whole cluster consists of several islands; some of which have received names from the different European navigators, others retain the names which they bear among the natives: viz. *Tierra del Espíritu Santo*, *Malakka*, *St Bartholomew*, *Isle of Lepers*, *Aurora*, *Good Hope*, *Ambrym*, *Immer*, *Apee*, *Three Kings*, *Madwich*, *Montagu*, *Hutchinson*, *Shepherd*, *Erromanga*, *Erronan*, *Anatton*, and *Tanaka*. They are situated between 166° 40' and 170° 10' lon. E.; and between 14° 35' and 20° 4' lat. S. **HEBROMANUM**, an ancient town of Gallia Narbonensis, 4 miles from Bourdeaux, now called *Embrau*, or *Embrau*.

(3.) **HEBRON**, in ancient geography, a city situated in the hilly country of the tribe of Judah in the south. Its more ancient name was *KIRJATH-ARBA*, or *City of Four*. In antiquity it vied with the more ancient cities of Egypt, being 7

years prior to *Zoan*, translated *Tanis* by the *LXX*. *Josephus* makes it not only older than *Tanis*, but even than *Memphis*. It stood to the W. of the lake *Asphaltites*, and was for some time the royal residence of *David*. After the captivity it fell into the hands of the *Edomites*, as did all the country of *Judea*. It is now called *Hebron*. The *Arabs* call it *El-Ahli*, i. e. the well beloved; the epithet they usually apply to *Abraham*, whose sepulchral grotto they still show. It is seated at the foot of an eminence, on which are some wretched ruins of an ancient castle. The adjacent country is a sort of oblong hollow, 5 or 6 leagues in length, varied by rocky hillocks, groves of fir trees, stunted oaks, and a few plantations of vines and olive trees. These vineyards are not cultivated with a view to make wine, the inhabitants being so zealous mahometans as not to permit any Christians to live among them: they are only of use to procure dried raisins, which are badly prepared, though the grapes are excellent. The peasants cultivate cotton, which is spun by their wives, and sold at *Jerusalem* and *Gaza*. They have also some soap manufactories, the salt for which is sold by the *Bedouins*; and a very ancient glass-house, the only one in *Syria*, wherein they make a great quantity of coloured rings, bracelets for the wrists, legs, and arms, with various other trinkets, which are sent to *Constantinople*. In consequence of these manufactures, *M. Volney* says, *Hebron* is the most powerful village in all this quarter; and is able to arm 200 or 300 men, who adhere to the faction *Kaifi*, and are the enemies of the people of *Bethlehem*. This discord, which has prevailed throughout the country from the earliest times of the *Arabs*, causes a perpetual civil war. The peasants are incessantly making incursions on each other's lands, destroying their corn, dourra, sesamum, and olive trees, and carrying off their sheep, goats, and camels. The *Turks* being negligent in repressing these disorders, the *Bedouins*, who occupy the level country, are continually at hostilities with them; of which the peasants avail themselves to resist their authority, or do mischief to each other, according to their caprice. Hence arises an anarchy which is more dreadful than the despotism which prevails elsewhere, while the mutual devastations of the contending parties render the appearance of this part of *Syria* more wretched than that of any other. *Hebron* is 22 miles S. of *Bethlehem*, and 24 SW. of *Jerusalem*.

(4.) **HEBRON**, a township of Connecticut, in Tolland county, 16 miles S. of Tolland, and 18 SE. of Hartford.

(5.) **HEBRON**, a town of the district of Maine, in Cumberland county, on the *Little Androscoggin*, 135 miles N. by W. of Portland.

(6.) **HEBRON**, a township of New York, in Washington county, containing 1703 citizens in 1795, of whom 414 are electors.

(7.) **HEBRON**, a Moravian settlement in Pennsylvania, 16 miles from Litz, and between 76 and 86 from Philadelphia.

(8.) **HEBRUS**, in ancient geography, the largest river of Thrace, rising from mount *Scombrus*, running in two channels to *Philippopolis*, where they unite. It runs by two mouths into the *Ægean*

Sea, N. of Samothrace. It was supposed to roll its waters upon golden sands. The head of Orpheus was thrown into it after, it had been cut off by the Ciconian women.

(1.) **HABRUS**, a city of Thrace, on the above river.

**HESTICH**, or **HEITICH**, a town of Germany, in the ci-devant county of Sponheim, annexed to the French republic by the treaty of Luneville in 1801, and included in the dep. of the Rhine and Moselle: 2 miles SE. of Traarbach.

**HEBUDÆ**, } or **ÆBUDÆ**, in ancient geogra-  
**HEBUDÆ**, } phy, islands on the W. of Scot-  
land. The ancients differed greatly as to their situation, number, and names; said in general to lie on the N. of Ireland and W. of Scotland. They are now called the **WESTERN ISLES**, and **HEBRIDES**; which last is a modern name, supposed to be a corruption of *Hebudes*. By Beda they are called **MEVANIA**, an appellation equally obscure. See **WESTERN ISLANDS**.

**HECALE**, an ancient town of Attica, so named from a poor old woman, who vowed that she would sacrifice herself to Jupiter, if Theseus returned safe from battle, but died before his return; whereupon Theseus built this town in honour of her, and dedicated it to Jupiter.

**HECALESIA**, or **ECALLESIA**, a festival held by the Athenians, in honour of Jupiter. See **HECALA**.

**HECALESTUS**, a surname of Jupiter.

**HECATÆA**, [*ἑκαταῖα*,] in antiquity, statues erected to the goddess **HECATE**, who, the Athenians believed, was the overseer of their families, and the protectress of their children.

**HECATÆUS**, an ancient Milesian historian, the scholar of Protagoras, who is said to have been the first Grecian who wrote history in prose.

(1.) **HECATE**, in the mythology, a name of **DIANA**. She was called **Luna** in heaven, **Diana** on earth, and **Hecate** or **Proserpine** in hell; whence her name of *Divæ triformis, tergemina, triiceps*. She was supposed to preside over enchantments. She was generally represented like a woman, with the head of a horse, a dog, or a boar; and sometimes she appeared with 3 different bodies, and 3 faces, with one neck. Dogs, lambs, and honey were generally offered to her, especially in ways and cross roads, whence she obtained the name of *Triplex*. Her power was extended over heaven, earth, sea, and hell; and to her kings and nations supposed themselves indebted for their prosperity.

(2.) **HECATE**, in fabulous history, a queen of Tauris in Chersonesus, daughter of Perles and Afferia, who poisoned her father; by some confounded with Hecate, (N° 1.) the sister of Apollo.

**HECATESIA**, [*ἑκατηστία*,] in antiquity, an annual solemnity observed by the Stratonicensians, in honour of Hecate. The Athenians likewise had a public entertainment or supper every new moon, in honour of this goddess. The supper was provided at the charge of the richer sort; and was no sooner brought to the accustomed place but the poor people carried all off, giving out that Hecate had devoured it. For the rest of the ceremonies observed on this occasion, see *Poll. Arab. Græc.* lib. ii. cap. 20.

(1.) **HECATOMB**. *n. f.* [*hecatombe*, French; *hecatombē*,] A sacrifice of 100 hundred cattle.—

In rich mens homes

I bid kill some heast-, but no *hecatombs*;  
None starve, none surfeit so. *Dante.*

One of these three is a whole *hecatomb*,  
And therefore only one of them shall die. *Dryd.*

Her triumphant sons in war succeed,  
And slaughter'd *hecatombs* around 'em bleed.

*Addis.*

(2.) **A HECATOMB**, in antiquity, was a sacrifice of 100 beasts of the same kind, at 100 altars, and by 100 priests or sacrificers. The Greek word, *ἑκατόμβη*, properly signifies a magnificent sacrifice. Others derive it from the Greek *ἑκατόν*, a hundred, and *βου*, a bullock; Others from *ἑκατόν* and *μοῖ*, a song; on which principle they hold, that the hecatomb might consist of only 25 four-footed beasts; and that it did not matter what kind of beasts were chosen for victims, provided there were but 100 feet. Pythagoras is said to have sacrificed a hecatomb to the Muses of 100 oxen, in gratitude for discovering the demonstration of the 47th proposition of Euclid. Strabo relates, that there were 100 cities in Laconia, and that each city used to sacrifice a bullock every year for the common utility of the country; whence the institution of hecatombs. Others refer the origin of hecatombs to a plague, wherewith the 100 cities of Peloponnesus were afflicted; for the removal whereof, they jointly contributed to do so splendid a sacrifice. *Junius Capitolinus* relates, that for a hecatomb they erected 100 altars of turf, and on these sacrificed 100 sheep and 100 hogs. He adds, that when the emperor offered sacrifices of this kind, they sacrificed 100 lions, 100 eagles, and 100 other wild animals.

**HECATOMBEON**, [*ἑκατομβεὼν*,] in chronology, the first month of the Athenian year. It consisted of 30 days, and began on the first new moon after the summer solstice; answering to the latter part of June and beginning of July. The *Boeotians* called it **HIPPONOMOS**, and the *Macedonians* **LOUS**. See **MONTH**. The word is derived from the Greek *ἑκατόμβη*, a *hecatomb*, because of the great number of hecatombs sacrificed in it.

**HECATOMPEDON**, a temple of **MINERVA** at Athens, lying open on every side 100 feet.

**HECATOMPOLIS**, a surname of **CYRUS**, from its 100 cities. The territory of Laconia also had anciently this name for the same reason; and the custom of these 100 cities was to sacrifice a hecatomb annually.

**HECATOMPYLOS**, in ancient geography, the metropolis of Parthia, and royal residence of Artaxerxes, situated at the springs of the Araxes. Thebes in Egypt had also the same name from its 100 gates.

**HECATUS**, a name of Apollo, from Hecate.

**HECHINGEN**, a town of Suabia, 30 miles S. of Suabia, and 51 ESE. of Strasburg.

**HECHLINGEN**, a town of Upper Saxony, in Anhalt Bernburg, 10 miles NE. of Bernburg.

**HECKT**, Christian, a learned divine, born at Essen, in E. Prussia, in 1696. He wrote, 1. *Commentatio Philologica: critica exegesis*, &c. 2. *Antique Hebræorum inter Judæos in Polonia*. He died in 1748, aged 51.

**HECK**, *n. f.* a grate or engine to take fish.

**HECKDYKE**, a river in Nottinghamshire.

**HECKLE**, among hemp-dressers. See **HEAL**.

DESIGN, p. 1; and HATCHES; and Plate 151.

HECLA, a volcano of Iceland, and one of the most furious in the world. See ICELAND. It was visited in 1773 by Dr Van Troil, a Swedish physician, along with Mr (now Sir Joseph) Banks, Dr Solander, and Dr James Lind of Edinburgh. On their first landing they found a tract of land some 70 miles in extent entirely ruined by lava, which appeared to have been in the highest state of liquefaction. Having undertaken a journey to the top of the mountain, they travelled from 300 to 360 English miles over an uninterrupted tract of lava; and had at length the pleasure of being the first who had arrived at the summit of the mountain. Hecla, according to their accounts, is situated in the S. part of the island, about 4 miles from the sea coast; and is divided into three parts at the top, the middle point being the highest. From an exact observation with Ramsden's barometer, it is 5000 feet above the level of the sea. They were obliged to quit their horses at the first opening from which the lava burst. They describe this as a place with glazed walls and high glazed cliffs, unlike anything which they had ever seen before. A little higher up they found a large quantity of grit and stones; and still farther on another opening, which, though not deep, descended lower than that of the highest point. Here they imagined they plainly discerned the effects of boiling water; and not far from thence the mountain was covered with snow, excepting some spots. The reason of this difference they perceived to be the hot vapour issuing from the mountain. As they ascended higher they found the spots become larger; and about 100 yards below the summit, a hole about 8 feet and an half in diameter was observed, from which issued so hot a steam, that they could not measure the degree of heat with the thermometer. The wind now began to be very intense; Fahrenheit's thermometer, which, at the foot of the mountain was at 54, now fell to 34; the wind also became so violent, that they were sometimes obliged to lie down for fear of being blown down the most dreadful precipices. On the very summit they experienced at the same time a high degree of heat and of cold; for, in the air, Fahrenheit's thermometer stood constantly at 24, but when set in the ground, rose to 153; the barometer stood at 21.27. Though they wished very much to remain here for some time, it could not be done with safety; they therefore descended very quickly. The mountain seems to be made up, not of lava, but of sand, grit, and ashes; which are thrown up with the stones partly discoloured, and partly melted by the fire. Several sorts of pumice stones were found on it, among which was one with some sulphur. Sometimes the pumice was so much burnt, that it was as light as tow. Its form and colour were sometimes very fine, but at the same time so soft, that it was difficult to remove it from one place to another. The common lava was found in both large and small pieces; as well as a quantity of black jasper burned at the extremities, and resembling trees and branches. Some state of a strong red colour was observed a-

mong the stones thrown out by the volcano. In one place the lava had taken the form of chimney stacks half broken down.—As they descended the mountain, they observed three openings. In one, every thing looked as red as brick; from another, the lava had flowed in a stream about 50 yards broad, and after proceeding some length, had divided into three large branches. Further on they perceived an opening, at the bottom of which was a mount in form of a sugar loaf, in throwing up of which the fire appeared to have exhausted itself. The reason that no one before them had ever ascended to the top of this mountain, was partly owing to superstition, and partly to the steepness and difficulty of the ascent, which was greatly facilitated by an eruption in 1746. Most kinds of lava found in other volcanic countries are to be met with about Hecla, or other Iceland volcanoes, as the grey, dark perforated kind, similar to the Derbyshire loadstone; the Iceland agates, *pumex vitreus, niger* and *viridis*. Some have conjectured this to be the lapis obsidianus of the ancients, which they formed into statues. The lava is seldom found near the openings whence the eruptions proceed, but rather loose grit and ashes; and indeed the greater part of the Iceland mountains consist of this matter; which, when it is grown cold, generally takes an arched form. The upper crust frequently grows hard and solid, whilst the melted matter beneath it continues liquid. This forms great cavities, whose walls, bed, and roof, are of lava, and where great quantities of basaltic lava are found. There is a vast number of these caves in the island, some of which are very large, and are made use of by the inhabitants for sheltering their cattle. The largest in the island is 3034 feet long, from 50 to 54 broad, and between 34 and 36 high.—There are some prodigious clefts left by the eruptions, the largest of which is called *Almarggas*, near the water of Tingalla, in the south west part of the island. It is 105 feet broad and very long. The direction of the chasm itself is from N. to S. Its western wall, from which the other has been perpendicularly divided, is 107 feet six inches in height, and consists of many strata, of about ten inches each in height, of lava grown cold at different times. The eastern wall is only 45 feet 4 inches in height, and that part of it which is directly opposite to the highest part of the other side is only 36 feet 8 inches.

HECQUET, Philip, a French physician, of considerable eminence, and author of several works on medicine. But, being a great advocate for the use of warm water and copious bleeding, in many diseases, his practice was justly ridiculed by M. Le Sage, in his ingenious satirical novel of *Gil Blas*; wherein he is caricatured under the character of Dr Saugrado. He died in 1737.

\* HECTICAL. } *adj.* [*hectique*, Fr. from *hect.*]  
(1.) \* HECTICK. } *s.* Habitual; constitutional.  
—This word is joined only to that kind of fever which is slow and continual, and, ending in a consumption, is the contrary to those fevers which arise from a plethora, or too great fulness from obstruction. It is attended with too lax a state of the excretory passages, and generally those of the

Ein; whereby so much runs off as leaves not resistance enough in the contractile vessels to keep them sufficiently distended, so that they vibrate oftener, agitate the fluids the more, and keep them thin and hot. *Quincy.*—

A *hectic* fever hath got hold

Of the whole substance, not to be controul'd.

*Donne.*

8. Troubled with a morbid heat.—

No *hectic* student fears the gentle maid.

*Taylor.*

(2.) \* *HECTICK*. *n. f.* An *hectic* fever.—

Like the *hectic* in my blood he rages,  
And thou must cure me. *Shak. Hamlet.*

(3.) *HECTICK* *FEVER*. See *MEDICINE, Index.*

(1.) *HECTOR*, the son of Priam and Hecuba, and the father of Astyanax, celebrated for the valour with which he defended the city of Troy against the Greeks. He was killed by Achilles, who dragged his body, fastened to his chariot, thrice round the walls of Troy, and afterwards restored it to Priam for a large ransom. See *TROY*.

(2.) \* *HECTOR*. *n. f.* [from the name of *Hector*, the great *Homeric* warrior.] A bully; a blustering, turbulent, perrivacious, noisy fellow.—Those usurping *hectors*, who pretend to honour without religion, think the charge of a lye a blot not to be washed out but by blood. *South.*—

We'll take one cooling cup of nectar,

And drink to this celestial *hector*. *Prior.*

(3.) *HECTOR*, in geography, a military township of New York, on the E. side of lake Seneca; S. of Ovid, and N. of Newton.

(1.) \* *To HECTOR*. *v. a.* [from the noun] To threaten; to treat with insolent authoritative terms.—They reckon they must part with honour together with their opinion; if they suffer themselves to be *hectored* out of it. *Gov. of the Tongue.*—

The weak low spirit Fortune makes her slave;  
But she's a drudge, when *hector'd* by the brave.

*Dryden.*

1.—An honest man, when he came home at night, found another fellow domineering in his family, *hectoring* his servants, and calling for supper. *Archbishop's Hist of John Bull.*

(2.) \* *To HECTOR*. *v. n.* To play the bully; to bluster.—They have attacked me, some with piteous moans and outcries, others grinning and only shewing their teeth, others ranting and *hectoring*, others scolding and reviling. *Stillington.*—One would think the *hectoring*, the storming, the sulken, and all the different species of the angry, should be cured. *Speck.*—

Don Carlos made her chief director,

That she might o'er the servants *hector*. *Swift.*

*HECUBA*, in fabulous history, the wife of Priam, the last king of Troy, and the mother of 19 of his 33 children. She was the daughter of Dymas, according to Homer, or of Cisseus, according to Virgil. When with child of Paris she dreamed that she brought forth a firebrand. (See *PARIS, N° 1.*) After the destruction of Troy, she was carried captive by Ulysses, and in a fit of insanity for her misfortunes, threw herself into the Hellespont; whereupon she was fabled to have been turned into a bitch.

1 *HED*, a town of Sweden, in Westmania, 18 miles NW. of Stroomholm.

*HEDAMORA*, a town of Sweden, in Westmania, on the Dahl, 55 miles NW. of Upsal. Lon. 17. 7. E. Lat. 60. 14. N.

*HEDDING*, a town of Denmark, in Zealand.

*HEDE*, a town of Sweden, in W. Gothland.

*HEDZE*, a town of France, in the dep. of Lie and Vilaine. Lon. 15. 32. E. of Ferro. Lat. 48. 18. N.

*HEDELIN*, Francis, abbé of Aubignac, was born at Paris in 1604. Being of a haughty temper, he engaged in disputes with Corneille and other authors, greatly his superiors. He wrote *Zenobia*, a tragedy in prose, and several romances of little esteem. He died in 1676.

*HEDEMORA*, a town of Sweden in Dalecarlia, near a lake, famous for a large manufacture of gun-powder: 35 miles NW. of Upsal.

*HERERA*, *ivy*, in botany, a genus of the monogynia order, belonging to the pentandria class of plants; and in the natural method giving name to the 46th order, *Hederaceae*. There are 5 oblong petals; the berry is pentaspermous, girt by the calyx.

1. *HERERA DIONYSIAS*, or *Port's ivy*, a species that grows in many of the islands of the Archipelago; so named by Caspar Bauhine and Tournefort, because the ancients made crowns of it for adorning the brows of their poets. It is called *dionysias*, because they also made use of it in their public feasts, in honour of Bacchus. The berries are of a fine gold colour, whence it has been termed by others *chrysocarpus*.

2. *HERERA HELIX*, or common *ivy*, grows naturally in many parts of Britain; and, where it meets with any support, will rise to a great height, sending out roots on every side, which strike into the joints of walls or the bark of trees. If there is no support, they trail on the ground, and take root all their length, so that they closely cover the surface, and are difficult to eradicate. When these stalks are fixed to any support, or trail upon the ground, they are slender and flexible; but when they have reached to the top of their support, they shorten and become woody, forming themselves into large bushy heads; and their leaves are larger, more of an oval shape, and not divided into lobes like the lower leaves, so that it hath a quite different appearance. There are two varieties of this species, one with silver striped leaves, the other with yellowish leaves on the tops of the branches: and these are sometimes admitted into gardens. They are easily propagated and thrive in any soil. The roots are used by leather-cutters to whet their knives upon. Apricots and peaches covered with *ivy* in February, bear fruit plentifully. The leaves have a nauseous taste; Haller says, they are given to children in Germany, as a specific for the atrophy. The people of England apply them to issues; and an ointment made from them is in great esteem among our Scots Highlanders as a ready cure for burns. The berries have a little acidity. When fully ripe, a dose of them has been recommended in the plague. In warm climates, a resinous juice exudes from the stalks, which is said to be a powerful resolvent and discutient, and an excellent ingredient in plasters and ointments adapted to the

the purposes. Horses and sheep eat the plant; geese and cows refuse it.

*HEDERA QUINQUEFOLIA*, the Virginian ivy, is a native of all the northern parts of America. It was first brought to Europe from Mexico; and has been long cultivated in the British islands, chiefly to plant against walls or buildings to cover them: which these plants will do in but time; for they will shoot almost 20 feet in a year, and will mount up to the top of the tallest building: but as the leaves fall off in autumn, the plants make but an indifferent appearance in winter, and therefore are proper only for situations as will not admit of better plants; they will thrive in the midst of cities, and is not hurt by smoke or the closeness of the air. It is propagated by cuttings; which, if planted in autumn in a shady border, will take root, and the following autumn will be fit to plant in the places where they are to remain.

**HEDERACEÆ**, [from *hedera*, ivy.] The 46th class in Linnæus's fragments of a natural method. *See* *Index*.

\* **HEDERACEOUS**. *adj.* [*hederaceus*, Latin.] *See* *Index*.

**HEDERICH**, or } Benjamin, a learned lexicographer, born at Hain, 1661, 1663. He published a valuable Greek Lexicon, and an edition of *Empedocles*. He died in 1748.

**HEDSUNDA**, a town of Sweden, in the province of Gefle, 18 miles S. of Gefle.

\* **HEDGE**. *n. s.* [*hegge*, Sax.] A fence made of grounds with prickly bushes, or woven together. It is a good wood for fire, if kept dry; and very useful for stakes in hedges. *Mortimer*. The gardens unfold variety of colours to the eye every morning, and the hedges breath is beautiful perfume. *Pope*.—

Through the verdant maze  
Of hedges I pursue my walk. *Thomson*.  
A *hedge*, prefixed to any word, notes a mean, vile, of the lowest class: perhaps as *hedge born man*, a man without place of birth.—There are five in the *hedge*: the pedant, the braggart, the *hedge*-school, and the boy. *Shakespeare*—The clergy are better than a little *hedge*, contemptible, and not can be presumed to do. *Swift*.—A man, who, by his style and literature, seems to be the corrector of a *hedge-press* in Little Britain, proceeded gradually to an author. *Swift*.  
In hedges, in agriculture, are either planted in round inclosures, or to divide parts of a garden. When they are desired outward fences, they are planted either with hawthorn, crabs, or black-thorn: but those which are planted in gardens, either to bound wilderness quarters, or to screen the parts of a garden from sight, are planted according to the fancy of the owner. Some like ever-greens, in which case the holly is best; the yew, then the laurel, laurustinus, phyllyria, &c. Others prefer the beech, the hornbeam, and the elm.

\* **HEDGES**, DIRECTIONS FOR PLANTING. Before planting, it is proper to consider the nature of the land, what sort of plants

will thrive best in it; and what is the soil from whence they are to be taken. The sets ought to be about the thickness of one's little finger, and cut within about 4 or 5 inches of the ground; they ought to be fresh taken up, straight, smooth, and well-rooted. Those plants that are raised in the nursery are to be preferred. In planting outside hedges, the turf is to be laid, with the grassy side downwards, on that side of the ditch on which the bank is designed to be made; and some of the best mould should be laid upon it to bed the quick, which is set upon it at a foot asunder. When the first row of hawthorn, or quick is set, it must be covered with mould; and when the bank is a foot high, another row of sets may be laid against the spaces of the former, and covered like the others. The bank is then to be topped with the bottom of the ditch, and a dry or dead hedge laid, to shade and defend the under plantation. Stakes should then be driven into the loose earth, so low as to reach the firm ground: these are to be placed at about 2½ feet distant: To render the hedge yet stronger, edder it, that is, bind the top of the stakes with small long poles, and when the eddering is finished, drive the stakes anew. The quick must be kept constantly weeded, and secured from being cropped by cattle; and in Feb. it will be proper to cut it within an inch of the ground, which will cause it strike root afresh, and help it much in the growth. The crab is frequently planted for hedges. Plants raised from the kernels of the small wild crabs, are to be preferred to those raised from the kernels of all sorts of apples without distinction; because the plants of the true small crab never shoot so strong as those of the apples, and may therefore be better kept within the proper compass of an hedge. The black thorn, or sloe, is often planted for hedges. The best method is, to raise the plants from the stones of the fruit, which should be sown about the middle of January, if the weather permit, in the place where the hedge is intended. When they are kept longer out of the ground, it will be proper to mix them with sand, and keep them in a cool place. The same fence will do for it when sown, as when planted. The holly is sometimes planted for hedges; but where it is exposed, it is very difficult to prevent its being destroyed: otherwise, it is by far the most beautiful plant; and, being an ever-green, affords much better shelter for cattle in winter than any other sort of hedge. The best method of raising these hedges, is to sow the stones in the place where the hedge is intended. Where this can be done, the plants will make a much better progress than those that are transplanted; but these berries should be buried in the ground several months before they are sown. The method is, to gather the berries about Christmas, when they are ripe, and put them into large flower-pots, mixing some sand with them; then dig holes in the ground, into which the pots must be sunk, covering them over with earth, about ten inches thick. In this place they must remain till the following October, when they should be taken up, and sown in the place where the hedge is intended to be made. The ground should be well trenched, and cleared from the roots of all weeds, bushes, trees, &c.

These two drills should be made, about 2 foot distant, from each other, and about two inches deep, into which the seeds should be scattered pretty close, lest some should fail. When the plants grow up, they must be carefully weeded; and if they are designed to be kept very neat, they should be cut in May and in August; but if they are designed for fences, they need only be sheered in July. The fences for these hedges, while young, should admit as much free air as possible: the best sort are those made with posts and rails, or with ropes drawn through holes made in the posts; and if the ropes are painted over with a composition of melted pitch, brown Spanish colour and oil, well mixed, they will last several years.

(5.) **HEDGES, DIRECTIONS FOR PLANTING IN GARDENS.** Hedges for ornament in gardens are sometimes planted with ever-greens, in which case the holly is preferable to any other: next to this, most people prefer the yew; but the dead colour of its leaves renders those hedges less agreeable. The laurel is one of the most beautiful ever-greens; but the shoots are so luxuriant that it is difficult to keep it in any tolerable shape; and as the leaves are large, to prevent the disagreeable appearance given them by their being cut through with the shears, it will be best to prune them with a knife, cutting the shoots just down to a leaf. The laurustinus is a very fine plant for this purpose; but the same objection may be made to this as to the laurel: this, therefore, ought only to be pruned with a knife in April, when the flowers are going off; but the new shoots of the same spring must by no means be shortened. The small-leaved and rough-leaved laurustinus are the best plants for this purpose. The true phillyrea is the next best plant for hedges, which may be led up to the height of 10 or 12 feet; and if they are kept narrow at the top, that there may be not too much width for the snow to lodge upon them, they will be close and thick, and make a fine appearance. The ilex, or ever-green oak, is also planted for hedges, and is a fit plant for those designed to grow very tall.—The deciduous plants usually planted to form hedges, in gardens are, The hornbeam, which may be kept neat with less trouble than most other plants. The beech, which has the same good qualities as the hornbeam; but the gradual falling of its leaves in winter causes a continual litter. The small-leaved English elm is a proper tree for tall hedges, but these should not be planted closer than 8 or 10 feet. The lime tree has also been recommended for the same purpose; but after they have stood some years, they grow very thin at bottom, and their leaves frequently turn of a black disagreeable colour. Many of the flowering shrubs have also been planted in hedges, such as roses, honeysuckles, sweet briar, &c. but these are difficult to train; and if they are cut to bring them within compass, their flowers, which are their greatest beauty, will be entirely destroyed. A correspondent of the society for improving agriculture in Scotland, however, tried with success the glan-zine, sweet-brier, or dog-rose, when all the methods of making hedges practised in Essex and Hampshire had been tried in vain. His method was to gather the hips of this plant, and to lay

them in a tub till March: the seeds were easily rubbed out; after which they were sown in a piece of ground prepared for garden use. Next year they came up; and the year after were planted in the following manner. A marking out the ditch, the plants were laid at 18 inches asunder upon the side grass, and the roots covered with the first turfs that were taken off from the surface of the intended ditch. The earth side of these turfs was placed next to the roots, and other earth laid upon the turfs which had been taken out of the ditch. In 4 or 5 years these plants made a fence which neither horse or cattle of any kind could pass. Even in 3 years some of the larger cattle will attempt it of this kind. Sheep indeed will sometimes break but they are always entangled to such a degree that they would remain there till they died unless relieved. Old briars dug up and planted make an excellent fence; and, where this, it may be easily thickened by laying down branches which in one year will make shoots of 6 or 7 feet. They bear clipping very well.

(6.) **HEDGES, DR. ANDERSON'S DIRECTIONS FOR PLANTING.** Dr Anderson, who has treated the subject very particularly, is of opinion, some other plants besides those above-mentioned might be usefully employed in the construction of hedges. Among these he reckons the common willow. Thus, he says, by no means requires wetness of soil which is commonly supposed. It is generally imagined (says he), that the willow can be made to thrive no where except in a boggy ground; but this is one of those vulgar errors, founded upon inaccurate observation, often to be met with in subjects relating to agriculture; for experience has sufficiently convinced me, that this plant will not only grow, but flourish in any rich well cultivated soil (unless in particular circumstances that need not here be enumerated), even although it be of a very dry nature. It could not, however, in general be made so useful if planted in the same manner as those above-mentioned. Would it, in any respect, be proper to use the willow for a fence in the same way as that plant? The willow, as a fence, could seldom be successfully employed, but for dividing into separate rows any extensive field of rich ground; and, as it is always necessary to put the soil into as good a state as possible, before a hedge of this kind is planted in it, the easiest method of putting it into the necessary high tilth, will be to mark off the boundaries of your several fields in the winter, or in the spring, with a design to give a complete low to a narrow ridge, 6 or 8 feet broad, in the middle of which the hedge is intended to be planted the ensuing winter. This ridge ought to be frequently plowed during the summer, and in autumn to be well manured with dung or lime, or both (for it cannot be made too good) and be neatly formed into a ridge before the winter. Having prepared the ground in this manner, it will be in readiness to receive the hedge, which ought to be planted as early in winter as it can be got conveniently done; as the willow is much hurt by being planted late in the spring. Before you begin to make a fence of this kind, it is necessary to provide a sufficient number of

which will be best done by previously sowing them in a nursery of your own, as near the field to be inclosed as you can conveniently get; for as they are very bulky, the carriage would be troublesome if they were brought from any considerable distance. The best kinds of willow for this use, are such as make the longest and straightest shoots, and are not of a brittle nature. The large kinds of hoop willows may be employed for this use; but there is another kind with larger and more taper shoots, covered with a green bark when young, which, upon the old shoots, becomes of an ash gray, of a firm texture, and a little rough to the touch. The shoots are not so long, and a great deal broader than those of the common hoop willow, pretty much of a dark green colour. What name it bears is usually known by, I cannot tell; but it becomes very quickly of a large size at the top, and is strong and firm, it ought to be made use of for this purpose, in preference to all others that I have seen. The shoots ought to be of two or three years growth before they can be properly used, and should never be less than six or seven feet in length. These ought to be cut off close by the ground immediately before using, and carried to the field at their whole length. The planter having stretched a line, along the middle of the ridge which was prepared for the reception, begins at one end thereof, thrusts one of these plants firmly into the ground, on the side of the line, at the distance of 18 inches from one another; making them all parallel to one side in a direction parallel to the line. This being finished, let him begin at the opposite end of the line, and plant another row, making these incline as much as the others, in a direction exactly contrary; and by following these basket-ways, work them into one another, fastening the tops by plaiting the twigs with one another, which with very little trouble may be made to bind together firmly. The whole, when finished, assumes a beautiful net like appearance, and is even at a small expence, so quickly become a defence, and continues so long in good order. But it will be greatly improved by putting a plant of eglandine between each two plants of willow, which will quickly climb up and be supported by them; and by its numerous prickles would effectually prevent the defenceless willow from being browsed upon by cattle. As it will be necessary to clear the narrow ridge, upon which the hedge is raised, in culture for one year at least, that the plants of eglandine may not be choaked by weeds, and that the roots of the willow may be allowed to grow with the greater ease in the tender mold, and by this means, it will be proper to stir

the earth once or twice by a gentle horse-hoe in the beginning of summer; and, in the month of June, it may be sowed with turneps, or planted with coleworts, which will abundantly repay the expence of the fallow." Dr Anderson also gives the following useful directions for planting hedges in situations very much exposed to the weather, and recovering them when on the point of decaying. "Those who live in an open uncultivated country, have many difficulties to encounter, which others who inhabit more warm and sheltered regions never experience; and, among these difficulties, may be reckoned that of hardly getting hedges to grow with facility. For, where a young hedge is much exposed to violent and continued gusts of wind, no art will ever make it rise with so much freedom, or grow with such luxuriance, as it would do in a more sheltered situation and favourable exposure. But although it is impossible to rear hedges in this situation to so much perfection as in the others, yet they may be reared even there, with a little attention and pains, so as to become very fine fences. It is advisable in all such cases, to plant the hedges on the face of a bank; but it becomes absolutely necessary in such an exposed situation as that I have now described: for the bank, by breaking the force of the wind, screens the young hedge from the violence of the blast, and allows it to advance, for some time at first, with much greater luxuriance than it otherwise could have done. But as it may be expected soon to grow as high as the bank, it behoves the provident husbandman to prepare for that event, and guard, with a wise forecast, against the inconvenience that may be expected to arise from that circumstance. With this view, it will be proper for him, instead of making a single ditch, and planting one hedge, to raise a pretty high bank, with a ditch on each side of it, and a hedge on each face of the bank; in which situation, the bank will equally shelter each of the two hedges while they are lower than it; and, when they at length become as high as the bank, the one hedge will in a manner afford shelter to the other, so as to enable them to advance with much greater luxuriance than either of them would have done singly. To effectuate this still more perfectly, let a row of service trees be planted along the top of the bank, at the distance of 18 inches from each other, with a plant of eglandine between each two services. This plant will advance, in some degree, even in this exposed situation; and by its numerous shoots, covered with large leaves, will effectually screen the hedge on each side of it, which, in its turn, will receive some support and shelter from them; so that they will be enabled to advance all together, and form, in time, a close, strong, and beautiful fence. The service is a tree but little known in Scotland; although it is one of those that ought perhaps to be often cultivated there, in preference to any other tree whatever, as it is more hardy, and, in an exposed situation, affords more shelter to other plants, than almost any other tree I know: for it sends out a great many strong branches from the under part of the stem, which, in time, assume an upright direction, and continue to advance with vigour, and carry many leaves to the very bottom, almost as long as the tree

free exists; so that if it is not pruned, it rises a large close bush, till it attains the height of a forest tree. It is of the same genus with the sawn-tree—and has a great resemblance to it both in flower and fruit; its branches are more waving and pliant—its leaves undivided, broad and round, somewhat resembling the elm, but white and mealy on the under side. It deserves to be better known than it is at present. But if, from the poorness of the soil in which your hedge is planted, or from any other cause, it should so happen, that, after a few years, the hedge becomes sickly, and the plants turn poor and stunted in appearance, the easiest and only effectual remedy for that disease, is to cut the stems of the plants clean over, at the height of an inch or two above the ground; after which they will send forth much stronger shoots than they ever would have done without this operation. And if the hedge be kept free of weeds, and trained afterwards in the manner above described, it will, in almost every case, be recovered, and rendered fresh and vigorous. This amputation ought to be performed in autumn, or the beginning of winter; and in the spring, when the young buds begin to show themselves, the stumps ought to be examined with care, and all the buds be rubbed off, excepting one or two of the strongest and best placed, which should be left for a stem. For if the numerous buds that spring forth round the stem are allowed to spring up undisturbed, they will become in a few years as weak and stunted as before; and the hedge will never afterwards be able to attain any considerable height, strength, or healthfulness.—I have seen many hedges, that have been repeatedly cut over, totally ruined by this circumstance not having been attended to in proper time. If the ground for 16 or 20 feet on each side of the hedge be fallowed at the time that this operation is performed, and get a thorough dressing with rich manure, and be kept in high order for some years afterwards by good culture and meliorating crops, the hedge will prosper much better than if this had been omitted, especially if it has been planted on the level ground, or on the bank of a shallow ditch."

(7.) **HEDGES, DR ANDERSON'S METHOD OF REPAIRING.** "It sometimes happens (says Dr Anderson) that a hedge may have been long neglected, and be in general in a healthy state, but full of gaps and openings, or so thin and straggling, as to form but a very imperfect sort of fence. On these occasions, it is in vain to hope to fill up the gaps by planting young quicks; for these would always be outgrown, choked, and starved, by the old plants: nor could it be recovered by cutting clear over by the roots, as the gaps would still continue where they formerly were. The only methods that I know of rendering this a fence are, either to mend up the gaps with dead wood, or to *plash* the hedge; which last operation is always the most eligible where the gaps are not too large to admit of being cured by this means. The operation I here call *plashing*, may be defined, a *watling made of living wood*. To form this, some stems are first selected, to be left as stakes at proper distances, the tops of which are all cut over at the height of four feet from the root. The straggling side-branches of the other part of the

hedge are also lopped away. Several of the remaining plants are then cut over, close by the ground, at convenient distances; and the remaining plants are cut perhaps half through, so as to permit them to be bent to one side. They are then bent down almost to a horizontal position and interwoven with the upright stakes, so as to retain them in that position. Care ought to be taken, that these be laid very low at those places where there were formerly gaps; which ought to be farther strengthened by some dead stakes or truncheons of willows, which will frequently take root in this case, and continue to live. And sometimes a plant of egantine will be able to overcome the difficulties it meets with, strike root, and grow up so as to strengthen the hedge in a most effectual manner. The operator begins at one end of the field, and proceeds regularly forward, bending all the stems in one direction, so that the poles rise above the roots of the others, till the whole watling is completed to the same height as the uprights. An expert operator will perform this work with much greater expedition, than one who has not seen it done could easily imagine. As all the diagonal wattlings continue to live, they send out shoots from many parts of their length; and as the upright shoots that rise from the tops of those plants that have been cut over, quickly rush up through the whole hedge, these knots unite the whole into one entire mass, that forms a strong, durable, and beautiful fence. This is the best method of recovering an old neglected hedge that hath as yet come to my knowledge. In some cases it happens, that the young shoots of a hedge are killed every winter; in which case it soon becomes dead and unsightly, and can never rise to any considerable height. A remedy for this disease may therefore be wished for. Young hedges are observed to be chiefly affected with this disorder; and it is almost always occasioned by an injudicious management of the hedge, means of which it has been forced to send out a great number of shoots in summer, that render it thus rendered so weakly as to be unable to resist the severe weather in winter. It often happens that the owner of a young hedge, with a view to render it very thick and close, cuts it over at the shears a few inches above the ground the first winter after planting; in consequence of which many small shoots spring out from each of the stems that has been cut over:—Each of these, being afterwards cut over in the same manner, sends forth a still greater number of shoots, which are smaller and smaller in proportion to their number. If the soil in which the hedge has been planted is poor, in consequence of this management the branches, after a few years, become so numerous, that the hedge is unable to send out shoots at all, and the utmost exertion of the vegetative powers enables it only to put forth leaves. These leaves are renewed in a sickly state for many years, and at last cease to grow at all—the branches become covered with fog, and the hedge withers entirely. But if the soil be very rich, notwithstanding this great multiplication of the leaves the roots will still have sufficient vigour to send out a great many small shoots, which advance a great length, but never attain a proportionable thickness.

And as the vigour of the hedge makes them continue to vegetate very late in the autumn, the haws come on before the tops of these dangling shoots have attained any degree of woodyness, so that they are killed almost entirely by frost; the whole hedge becomes covered with these dead shoots, which are always disagreeable to look at, and usually indicate the approaching disorder of the hedge. The causes of the disorder being explained, it will readily occur, that the radical cure is amputation; which, by giving an opportunity to begin with training the hedge anew, has also an opportunity of avoiding the errors which occasioned it. In this case, care ought to be taken to cut the plants as close to the ground as possible, as there the stems will be less numerous than at any greater height. And particular attention ought to be had to allow very few shoots to spring from the stems that have been cut over, and to guard carefully against shortening them. But the roots, in the case here supposed, will be vegetating, the shoots that are allowed to spring from them will be very vigorous, and there will be no danger of their continuing to grow later in the season than they ought in safety to do; in fact, some part of the top of the shoot may perhaps be killed the first winter, which ought if possible to be prevented. This can only be effectually done by giving a check to the vegetation in autumn, so as to allow the young shoots to harden the points before the winter approaches. If the leaves or branches of a tree are cut away while it is in the state of vegetation, the whole suffers the loss, and it suffers a temporary check in its growth in proportion to the loss that it sustains. To check, therefore, the vegetation at the end of autumn, it will be proper to choose the beginning of September for the time of lopping off all the supernumerary shoots from the young hedge, and for clipping the like branches that have sprung out from the old hedge; which will, in general, be sufficient to give it a check in its growth at that season, as will prevent any of the shoots from advancing afterwards. If the hedge is extremely vigorous, a few may be allowed to grow upon the large stems in the spring, with a view to be cut off at the end of the season, which will tend to stop the vegetation of the hedge still more effectually. By this mode of management, the hedge may be preserved entire through the first winter. And as the shoots will be less vigorous every successive season, there will be less difficulty in preserving them at any period. It will always be proper, however, to trim the sides of a very vigorous hedge for some time while it is young, about the same season of year, which will tend powerfully to prevent its growing too high. But when the hedge has advanced to considerable height, it will be equally proper to clip it during any of the winter months, as the Candlemas.

**Hedges, Lord Kames's method of raising and mending.** Lord Kames, in his *Essays on Agriculture*, gives several directions for the raising and mending hedges, considerably different from those above related. For a deer-park, he recommends a wall of stone coped with turf, and laburnums planted close to it. The heads

of the plants are to be lopped off, to make the branches extend laterally, and interweave in the form of a hedge. The wall will prevent the deer from breaking through; and if the hedge be trained eight feet high, they will not attempt to leap over. He prefers the laburnum plant, because no beast will feed upon it except a hare, and that only when young and tender. Therefore, no extraordinary care is necessary except to preserve them from the hare for 4 or 5 years. A row of alders may be planted in front of the laburnums, which no hare nor any other beast will touch. The wall he recommends to be built in the following manner, as being both cheaper and more durable than one constructed entirely of stone. Raise it of stone to the height of two feet and a half from the ground, after which it is to be coped with sod as follows. First, lay on the wall, with the grassy side under, sod cut with the spade four or five inches deep, and of a length equal to the thickness of the wall. Next, cover this sod with loose earth rounded like a ridge. Third, prepare thin sod, cast with the paring spade, so long as to extend, beyond the thickness of the wall, two inches on each side. With these cover the loose earth, keeping the grassy side above; place them so much on the edge, that each sod shall cover part of another, leaving only about two inches without cover: when 20 or 30 yards are thus finished, let the sod be beat with mallets by two men, one on each side of the wall, striking both at the same time. By this operation the sod becomes a compact body that keeps in the moisture, and encourages the grass to grow. Lastly, cut off the ragged ends of the sod on each side of the wall, to make the covering neat and regular. The month of October is the proper season for this operation, because the sun and wind, during summer, dry the sod, and hinder the grass from vegetating. Moist soil affords the best sod. Wet soil is commonly too fat for binding; and, at any rate, the watery plants it produces will not thrive in a dry situation. Dry soil, on the other hand, being commonly ill bound with roots, shakes to pieces in handling. The ordinary way of coping with sod, which is to lay them flat and single, looks as if intended to dry the sod and kill the grass; not to mention that the sod is liable to be blown off the wall by every high wind. Where the wall itself is to be used as a fence without any hedge, a ditch is to be made on each side, beginning a foot from the root of the wall, and sloping outward to the depth of three feet, or at least two and an half. The ditch should be equally sloped on the other side, so as to be four feet wide. A rood of this fence, including every article, may be done for three shillings or thereabouts; and a field of 20 acres thus inclosed, for about 50*l*. It will also stand many years without any need of reparation; while stone walls require no less than 2*½* per cent. of the original cost expended annually to keep them up. The advantages of a thorn hedge, according to our author, are, that it is a very quick grower, when planted in a proper soil; shooting up six or seven feet in a season. Though tender, and apt to be hurt by weeds when young, it turns strong, and may be cut into any shape.

Even when old it is more disposed than other trees to lateral shoots; and lastly, its prickles make it the most proper of all for a fence. None of these thorns ought to be planted in a hedge till five years of age, as it is of the utmost importance that they be properly trained in the nursery. The best soil for a nursery, his Lordship observes, is between rich and poor. In the latter the plants are dwarfish: in the former, being luxuriant and tender, they are apt to be hurt during the severity of the weather; and these imperfections are incapable of any remedy. An essential requisite in a nursery is free ventilation. "How common (says his Lordship) is it to find nurseries in hollow sheltered places, surrounded with walls and high plantations, more fit for pine-apples than barren trees! The plants thrust out long shoots, but feeble and tender: when exposed in a cold situation, they decay, and sometimes die. But there is a reason for every thing: the nurseryman's view is to make profit by saving ground, and by imposing on the purchaser tall plants, for which he pretends to demand double price. It is so difficult to purchase wholesome and well nursed plants, that every gentleman farmer ought to raise plants for himself. As thorns will grow pleasantly from roots, I have long practised a frugal and expeditious method of raising them from the wounded roots that must be cut off when thorns are to be set in a hedge. These roots, cut into small parts and put in a bed of fresh earth, will produce plants the next spring no less vigorous than what are produced from seed; and thus a perpetual succession of plants may be obtained without any more seed. It ought to be a rule, never to admit into a hedge plants under five years old: they deserve all the additional sum that can be demanded for them. Young and feeble plants in a hedge are of slow growth; and, besides the loss of time, the paling necessary to secure them from cattle must be renewed more than once before they become a fence. A thorn hedge may be planted in every month of winter and spring unless it be frost. But I have always observed, that thorns planted in October are more healthy, push more vigorously, and fewer decay, than at any other time. In preparing the thorns for planting, the roots ought to be left as entire as possible, and nothing cut away but the ragged parts. As a thorn hedge suffers greatly by weeds, the ground where they are planted ought to be made perfectly clean. The common method of planting is to leave 8 or 9 inches along a side of the intended ditch, termed a *scarfment*; and behind the scarfment to lay the surface soil of the intended ditch, cut into square sods two or three inches deep, its grassy surface under. Upon that sod, whether clean or dirty, the thorns are laid, and the earth of the ditch above them. The grass in the scarfment, with what weeds are in the moved earth, soon grow up, and require double diligence to prevent the young thorns from being choked. The following method deserves all the additional trouble it requires. Leaving a scarfment as above of 10 inches, and also a border for the thorns, broad or narrow according to their size; lay behind the border all the surface of the intended ditch, champagne, with the spade, and upon it lay the

mouldery earth that fell from the spade in cutting the said surface. Cover the scarfment and border with the under earth, three inches thick at least, laying a little more on the border to raise it higher than the scarfment, in order to give room for weeding. After the thorns are prepared by smoothing their ragged roots with a knife, and lopping off their heads to make them grow better, they are laid fronting the ditch, with their roots on the border, the head a little higher than the root. Care must be taken to spread the roots among the surface earth taken out of the ditch, and to cover them with the mouldery earth to lay immediately below. This article is of importance, because the mouldery earth is the best of all. Cover the stems of the thorns with the next stratum of the ditch, leaving a way made at the top free. It is no matter how poor the stratum be, as the plants draw no nourishment from it. Go on to finish the ditch, pressing down carefully every row of earth thrown up behind the hedge, which makes a good solid mound impervious to rain. It is a safeguard to the young thorns to raise this mound as perpendicular as possible, and for that reason, it may be proper, to bind it with a row of the rough sod, which will support the earth above till it become solid by lying. In poor soil more care is necessary. Behind the line of the ditch the ground intended for the scarfment and border should be summer fallow, manured, and clear of all grass roots; and culture will make up for the inferiority of the soil. In very poor soil, it is vain to think of planting a thorn hedge. In such ground there is a seed for a stone fence. The only reason that is given for laying thorns as above described, is to give the roots space to push in all directions upward into the mound of earth. There are some advantages in this; but, in my apprehension, the disadvantage is much greater of beating much earth upon the roots as to exclude them by the sun, but the rain which runs down the sloping bank, and has no access to the roots, instead of laying the thorns fronting the ditch, would it not do better to lay them parallel to it; covering the roots with three or four inches of the earth, which would make a hollow between the plants and the sloping bank? This hollow will intercept every drop of rain that falls on the roots, to sink gradually among the roots. Why, then, should a thorn be put into the ground lying? This is not the practice with regard to any other tree; and I have heard of no one trying to persuade me that a thorn thrives better lying than erect. There occurs, indeed, one objection against planting thorns erect, that the roots have no room to extend themselves on that side of the ditch. But does it not hold, that when their progress, roots meet with a ditch, they do not push onward; but, changing their direction, push downward at the side of the ditch? If these downward roots will support the ditch, prevent it from being mouldered down by frost. One thing is evident without experiment, thorns planted erect may sooner be made a complete fence than when laid sloping as usual. In the latter case, the operator is confined to the

but do not exceed a foot or 15 inches; but some six or six feet high may be planted erect and a hedge of such thorns, well cultivated in security, will in three years arrive to greater growth than a hedge managed in the ordinary way will do in twice that time." After the hedge is finished, it is absolutely necessary to secure it for some time from the depredations of cattle; and this is by no means an easy matter. "The ordinary method of a paling (says his lordship) is no sufficient defence against cattle; and gentlemen make it a rubbing post, and the cows vainly break it down with their horns. The only effectual remedy is expensive; viz. two palings and two hedges, with a mound of earth between them. If this remedy, however, be not possible, the paling ought at least to be of the best kind. I recommend the following as the plan I am acquainted with: Drive into the ground a stake three feet and an half long, with iron hoops eight to twelve inches, according to the size of the cattle that are to be inclosed; and of the same height. Prepare plates of timber cut out of logs, every plate 3 inches broad and 12 inch thick. Fix them on the head of the stake with a nail driven down into each. The plates will be united so firmly, that one cannot be pulled out without the whole; and will be proof against the rubbing of cattle. But, after all, it is no fence against vicious cattle. The only place for it is the side of a high road, or near a plantation of trees. It will indeed be a good fence against sheep, and endure till the trees become a fence. A fence thus composed, including thorns, ditching, wood, nails, will not much exceed two shillings every six feet." His lordship discommends the ordinary method of training hedges by cutting off the top and turning the lateral branches in order to make it thick and bushy. This, as well as the method of cutting off the stems two or three inches above the ground, indeed produces a great growth of shoots, and makes a very thick fence, but becomes so weak when bare of leaves, that it breaks through it in every part. To describe the best method of proceeding in this case, his lordship made an experiment on three hedges, one twelve years old at the time he wrote. The first was annually pruned at the top and sides; the second was pruned, but not the third was allowed to grow without pruning. The first, at the time of writing, was 4 feet broad, and thick from top to bottom, but weak in the stems, and unable to resist a horned beast; the second was strong in its stems and close from top to bottom; the third was strong in its stems, but bare of branches for 3 feet from the ground; the lower ones have been deprived of air and rain by the thick growth of those above them. Hence he directs that the lower should be allowed to grow till the stems be 6 inches in circumference, which will be in 15 years; at which time the hedge will be 15 feet in height. The lateral branches next to the ground must be pruned within two feet of the ground; those above must be made shorter and shorter according to their distance from the ground; and the top must be cut close to the stems,

leaving all above full freedom of growth. By this dressing the hedge takes on the appearance of a very steep roof; and it ought to be kept in that form by pruning. This form gives free access to rain, sun, and air: every twig has its share, and the whole is preserved in vigour. When the stems have arrived at their proper bulk, cut them over at 5 feet from the ground where the lateral branches end. This answers two excellent purposes: the first is to strengthen the hedge, the sap that formerly ascended to the top, being now distributed to the branches; the next is, that a tall hedge stagnates the air, and poisons both corn and grass near it. A hedge trained in this manner is impenetrable even by a bull. With regard to the practice of *plashing* an old hedge recommended by Dr Anderson, (See § 7) his lordship observes that "it makes a good interim fence, but at the long run is destructive to the plants; and accordingly there is scarcely to be met with a complete good hedge where plashing has been long practised. A thorn is a tree of long life. If, instead of being massacred by plashing, it were raised and dressed in the way here described, it would continue a firm hedge perhaps 500 years. A hedge ought never to be planted on the top of the mound of earth thrown up from the ditch. It has indeed the advantage of an awful situation; but being planted in bad soil, and destitute of moisture, it cannot thrive: it is at best dwarfish, and frequently decays and dies. To plant trees in the line of the hedge, or within a few feet of it, ought to be absolutely prohibited as a pernicious practice. It is amazing that people should fall into this error, when they ought to know that there never was a good thorn hedge with trees in it. And how should it be otherwise? An oak, a beech, an elm, grows faster than a thorn. When suffered to grow in the midst of a thorn hedge, it spreads its roots every where, and robs the thorns of their nourishment. Nor is this all: the tree, overshadowing the thorns, keeps the sun and air from them. At the same time, no tree takes worse with being overshadowed than a thorn. It is scarce necessary to mention gaps in a hedge, because they will seldom happen where a hedge is trained as above recommended. But in the ordinary method of training gaps, are frequent, partly by the failure of plants, and partly by the trespassing of cattle. The ordinary method of filling up gaps is to plant sweet briar where the gap is small, and a crab where it is large. This method I cannot approve for an obvious reason: a hedge ought never to be composed of plants which grow unequally. Those that grow fast, overtop and hurt the slow growers; and with respect, in particular, to a crab and sweet briar, neither of them thrive under the shade. It is a better method to remove all the withered earth in the gap, and to substitute fresh lappy mould mixed with some lime or dung. Plant upon it a vigorous thorn of equal height with the hedge, which in its growth will equal the thorns it is mixed with. In that view there should be a nursery of thorns of all sizes, even to 5 feet high, ready to fill up gaps. The best season for this operation is in October. A gap filled with sweet briar, or a crab lower than the hedge, invites the cattle to break through and tramp,

trample the young plants under foot; to prevent which, a paling raised on both sides is not sufficient, unless it be raised as high as the hedge. Where a field is too poor to admit of a thorn hedge, if there be no quantity of stones easily procurable, whins are the only resource. These are commonly placed on the top of a dry earth dyke, in which situation they seldom thrive well. The following seems preferable. Two parallel ditches 3 feet wide and two deep, border a space of 12 feet. Within this space raise a bank at the fifth of each ditch with the earth that comes out of it, leaving an interval between the two banks. Sow the banks with whin seed, and plant a row of trees in the interval. When the whins are pretty well grown, the hedge on one of the banks may be cut down, then the other as soon as it becomes a fence, and so on alternately. While the whins are young, they will not be disturbed by cattle, if passages be left to go out and in. These passages may be closed up when the hedge is sufficiently strong to be a fence. A whin hedge, thus managed, will last many years, even in strong frost, unless very severe. There are many whin-hedges in the shire of Mincardine not so skilfully managed, and yet the possessors appear not to be afraid of frost. Such fences ought to be extremely welcome in the sandy grounds of the shire of Moray, where there is scarce a stone to be found. The few earth fences that are there raised, composed mostly of sand, very soon crumble down."

(9.) HEDGES, MR BAKEWELL'S METHOD OF PLANTING. Mr Young in his *Annals of agriculture*, vol. vi. says, that "Mr Bakewell plants his quicks in a different manner, from what is common in various parts of the kingdom. He plants one row at a foot from set to set, and making his ditch, lays the earth which comes out of it to form a bank on the side opposite to the quick. In the common method the bank is made on the quick side above it. Reasons are not wanting to induce a preference of this method. The plants grow only in the surface earth, uncovered from the atmosphere, which must necessarily be a great advantage; whereas, in the usual way of planting, that earth, which is always the best, is loaded by a thick covering obliquely of the earth out of the ditch. If the roots shoot in the best soil, they will be out of the reach of the influences of the air; the consequence of which is, that they cannot have so large a space of that earth as if set on the flat. The way to have a tree or a quick thrive in the best manner possible, is to set it on the surface, without any ditch or trench, that cuts off half its pasture. But if a ditch is necessary, the next best way must of course be still to keep it on the flat surface; and the worst way to cover up that surface, by loading it with the dead earth out of a trench. To say that there are good hedges in the common method is not a conclusive argument, unless both were tried on the same soil and exposure." Mr Young however observes that this method occasions a great waste of land.

(10.) HEDGES, MR MILLER'S DIRECTIONS FOR PLANTING. Mr Miller recommends the black alder as superior to any other that can be employed in moist soils. It may either be propagated by layers or transplants, about three feet

long. The best time for planting these last is in February or March. They ought to be sharpened at their largest end, and the ground well loosened before they are thrust into it, lest the bark should be torn off, which might occasion their miscarriage. They should be set at least two feet deep, to prevent their being blown out of the ground by violent winds after they have made strong shoots; and they should be kept clear of tall weeds until they have got good heads, after which they will require no farther care. When raised by laying down the branches, it ought to be done in October; and by that time twelve months they will have roots sufficient for transplantation, which must be done by digging a hole and loosening the earth in the place where the plant is to stand. The young sets must be planted at least a foot and an half deep; and their top should be cut off to within about nine inches of the ground; by which means they will shoot out many branches. This tree may be trained into very thick and close hedges, to the height of 20 feet and upwards. It will thrive exceedingly on the sides of brooks; for it grows best when part of its roots are in water; and may, if planted thus as is usual for willows, be cut for poles every 4 or 5 years. Its wood makes excellent posts and staves; for it will last a long time under ground or in water; and it is likewise in great esteem among plough-wrights, turners, &c. as well for making several of the utensils necessary for agriculture. Its bark also dyes a good black. The birch is also recommended by Mr Miller as proper for hedges; and in places where the young plants can be easily procured, he says that a plantation of an acre will not cost 40 shillings; after expence will not exceed 20 shillings; so that the whole will not come above three pounds. Ash-trees ought never to be permitted in hedges, both because they injure the corn and grass by their wide extended roots, and likewise on account of the property their leaves have of giving a taste to butter made from the milk of such cattle as feed upon the leaves. No ash trees are permitted to grow in the good dairy counties.

(11.) HEDGES OF EGLANTINE, BLACK, See FENCE, § 3.

(12.) HEDGES OF FUZZY, METHODS OF PLANTING. Under the article FENCE, (§ 3.) we quote Dr Anderson's opinion, that "whins (or furze) commonly employed are neither a strong nor lasting fence." "The first of these defects, however, (says the Dr) may in some sort be removed, by making the bank upon which they are sowed (for they never should be transplanted) of a considerable breadth; that the largest of the aggregate body, considered as one mass, in some measure make up for the want of strength in each individual plant. With this view, a hedge may be raised 5 or 6 feet in breadth at the top with a large ditch on each side of it; raising the bank as high as the earth taken from the ditch will permit; the surface of which should be kept pretty thick with whin-seeds. These will grow up very quickly; and in 2 or 3 years will form a barrier that few animals will attempt to pass through, and will continue in that state of perfection for some years. But the greatest ob-

to this plant as a fence is, that, as it advances in age, the old prickles always die away; there being never more of these alive at any time upon the plant, than those that have been the produce of the year immediately preceding: and these, thus gradually falling away, leave the stems naked below as they advance in height; so that it very soon becomes an exceeding poor and unsightly fence; the stems being entirely bare, and so tender withal as not to be able to make a sufficient resistance to almost any animal whatever. To remedy this great defect, either of the two following methods may be adopted. The first is, to take care to keep the bank always stored with young plants; never allowing them to grow to such a height as to become bare below: and it was principally to admit of this, without losing at any time the use of the fence, that I have advised the bank to be made of such an unusual breadth. For if one side of the hedge be cut quite close to the bank, when it is only 2 or 3 years old, the other half will remain as a fence till that side become strong again; and then the opposite side may be cut down in its turn; and so on alternately, as you may incline: by which means the bank will always have a strong hedge upon it without ever becoming naked at the root. And as this plant, when bruised, is one of the most valuable kinds of winter food yet known for all kinds of domestic animals, the young tops may be carried home and employed for that purpose by the farmer; which will abundantly compensate for the trouble of cutting, and the waste of ground that is occasioned by the breadth of the bank. The other method of preserving a hedge of whins thus turning open below, can only be practised when sheep are kept; but may be there employed with great propriety. In this case it will be proper to sow the seeds upon a conical bank of earth, shovelled up from the surface of the ground on each side without any ditches. If this is preserved from the sheep for two or three years at least, they may then be allowed free access to it; as they can get up close to the foot of the bank upon each side, if they have been accustomed to this kind of food, they will eat up all the young shoots that are within their reach, which will occasion them to send out a great many lateral shoots; and these, being continually browsed upon, soon become as close as could be desired, and are then in no sort of danger of becoming naked at the root, although the middle part should advance to a considerable height."

(1.) \* To HEDGE. v. a. [from the noun.] 1. To enclose with a hedge, or fence of wood dry or growing.—Hedge thy possession about with thorns. *L. l. xviii. 14.*—Those alleys must be hedged at both ends, to keep out the wind. *Bacon.* 2. To encircle.—I will hedge up thy way with thorns. *Is. li. 6.* 3. To encircle for defence.—

England, hedg'd in with the main,  
That water-walled bulwark, still secure  
And confident from foreign purposes. *Shaksp.*  
There's such divinity doth hedge a king,  
That treason can but peep to what it would.

*Shak. Hamlet.*  
4. To shut up within an inclosure.—It must not be paid and exported in ready money; so says our

law; but that is a law to hedge in the country, and serves for no purpose: for if we export not goods, for which our merchants have money due to them, how can it be paid by bills of exchange? *Locke.* 5. To force into a place already full. This seems to be mistaken for edge. To edge in, is to put in by the way that requires least room; but hedge may signify to thrust in with difficulty, as into a hedge.—

You forget yourself

To hedge me in. *Shak. Julius Caesar.*

When I was hasty, thou delay'st me longer &

I prythee, let me hedge one moment more

Into thy promise; for thy life preserv'd. *Dryden.*

—When you are sent on an errand, be sure to hedge in some business of your own. *Swift.*

(2.) \* To HEDGE. v. n. To shift; to hide the head.—I myself sometimes, hiding mine honour in my necessity, am fain to shuffle, to hedge, and to lurch. *Shak.*

\* HEDGE-BORN. adj. [hedge and born] Of no known birth; meanly born.—

He then, that is not furnish'd in this sort,

Doth but usurp the sacred name of knight,

And should, if I were worthy to be judge,

Be quite degraded, like a hedge-born swain,

That doth presume to boast of gentle blood. *Shak.*

HEDGE-BREAKERS, or HEDGE-STEALERS, n. s.

Thieves who break through hedges, to rob gardens or orchards. By 4, 3 Eliz. cap. 7. hedge-break-

ers are bound to pay such damages as a justice of

the peace shall think fit; and if not able to pay,

they shall be committed to the constable to be

whipped. And hedge-stealers may be apprehen-

ded, and the justice shall adjudge a penalty, not

exceeding 10s. to the poor; or, in want of pay-

ment, they shall be sent to the house of correction

for a month. 15 Car. II. cap. 2. And persons

convicted of buying stolen wood, shall forfeit tre-

ble the value.

\* HEDGE-CREEPER. n. s. [hedge and creep.]

One that skulks under hedges for bad purposes.

(1.) \* HEDGE-FUMITORY. n. s. A plant; *fumaria sepium.* *Ainsworth.*

(2.) HEDGE-FUMITORY. See FUMARIA.

(1.) \* HEDGE-HOG. n. s. [hedge and hog; *crin-*

*ceus.*] 1. An animal set with prickles, like thorns,

in an hedge.—

Like hedge-hogs, which

Lie tumbling in my bare-foot way, and mount

Their prickles at my foot-fall. *Shak.*

—Few have belief to swallow, or hope enough to

experience, the collyrium of Albertus; that is to

make one see in the dark: yet thus much, accord-

ing unto his receipt, will the right eye of an hedge-

hog, boiled in oil, and preserved in a brazen vessel,

effect. *Brocon's Vulgar Errors.*—The hedge-hog

bath his backside and flanks thick set with strong

and sharp prickles; and besides, by the help of a

muscle, can contract himself into a globular figure,

and so withdraw his whole under part, head, bel-

ly and legs, within his thicket of prickles. *Ray on*

*the Creation.* 2. A term of reproach.—

Did'st thou not kill this king?

—I grant ye.

—Do'st grant me, hedge-hog?

*Shak.*

3. A plant; trefoil; *medica echinata.* *Ainsworth.*

4. The globe-fish; *orbis echinatus.* *Ainsworth.*

(2.) HEDGES

(4.) **HEDGE-HOG.** See **ERINACEUS.**

(1.) **HEDGE-HOG THISTLE.** See **CACTUS.**

(4.) **HEDGE-HOG THORN.** See **ANTHYLLIS.**

(1.) \* **HEDGE-HYSSOP.** *n. f.* *hedge* and *byssop.* A species of willow-wort; *gratiola.*—*Hedge-byssop* is a purging medicine, and a very rough one; externally it is said to be a vulnerary. *Hill.*

(2.) **HEDGE-HYSSOP.** See **GRATIOLA.**

(1.) \* **HEDGE-MUSTARD.** *n. f.* A plant.

(2.) **HEDGE-MUSTARD.** See **FRYSIMUM.**

(1.) \* **HEDGE-NETTLE.** *n. f.* A plant; *galathea*. *Misfuorth.*

(2.) **HEDGE-NETTLE.** See **GALATHEA.**

(3.) **HEDGE-NETTLE, SHRUBBY.** See **BRASSICA.**

**HEDGES-NOTE.** *n. f.* [*hedge* and *note.*] A word of contempt for low writing.—When they began to be somewhat better bred, they left these *hedge-notes* for another sort of poem, which was also full of pleasant railery. *Dryden.*

\* **HEDGE-PIG.** *n. f.* [*hedge* and *pig.*] A young hedge-hog.—

Thrice the brinded cat hath mew'd,

Thrice and once the *hedge-pig* whin'd. *Shakspeare.*

**HEDGE-PRESS.** } See **HEDGE,** § 1.

**HEDGE PRIEST.** }

\* **HEDGER.** *n. f.* [from *hedge.*] One who makes hedges.—

The labour'd ox

In his loose traces from the furrow came,

And the swink'd *hedger* at his supper sat. *Milton.*

—He would be laugh'd at, that should go about to make a fine dancer out of a country *hedger* at past fifty. *Locke.*

\* **HEDGE-ROW.** *n. f.* [*hedge* and *row.*] The series of trees or bushes planted for inclosures.—

Sometimes walking not unseen

By *hedge-rows* clime, on hillocks green. *Milton.*

—The fields in the northern side are divided by *hedge-rows* of myrtle. *Berkley to Pope.*

(1.) \* **HEDGE SPARROW.** *n. f.* [*hedge* and *sparrow;* *curruca.*] A sparrow that lives in bushes, distinguished from a sparrow that builds in thatch.

The *hedge-sparrow* fed the cuckoo so long,

That it had its head bit off by its young. *Shakspeare.*

(2.) **HEDGE SPARROW.** See **MOTACILLA.**

\* **HEDGING BILL.** *n. f.* [*hedge* and *bill.*] A cutting-hook used in making hedges.—Comes master Dametas with a *hedging-bill* in his hand, chafing and swearing. *Sidney.*

**HEDJAS,** or **HEDSJAS,** a province of Arabia, bounded on the E. by Nejed; on the S. by Yemen; on the W. by the Arabic Gulph, and on the N. by the desert of Sinai. The plain from the Red Sea to the Mountains is entirely sandy and barren; but the high lands produce variety of fruits. The two chief cities are **MECCA** and **MEDINA.** "The authority of the Grand Signor" says M Neibuhr, "is here nothing but a mere shadow, which the Arabs would long since have annihilated, if they had not found their interest in preserving it. It consists only in a few slender prerogatives, and the revenues are proportionate."

(1.) **HEDIC,** an island of France, 15 miles from the coast of the dep. of Morbihan, chiefly inhabited by fishermen.

(2.) **HEDIC,** a town in the above island, with a fort named Pengarde, 7½ miles E. of Bellefleur. Lon. 14. 40. E. of Ferro. Lat. 47. 23. N.

**HEDINGHAM,** a town of Essex, with a castle, and a market on Tuesday; 48 m. NNW. of London.

**HEDYCARIA,** in botany: A genus of the polyandria order, belonging to the diœcia class of plants. The calyx of the male is cleft in 8 or 10 parts; there is no corolla, nor are there any stamens; the anthers are in the bottom of the calyx, four-furrowed, and bearded at top. The calyx and corolla of the female are as in the male; the germs pedicellated; the nuts pedicellated and monospermous.

**HEDYOTIS,** in botany: A genus of the monogynia order, belonging to the tetrandria class of plants; and in the natural method ranking under 47th order, *Stellata.* The corolla is monopetalous and funnel-shaped; the capsule is bilocular, polyspermous, inferior.

**HEDYSARUM,** **FRENCH HONEY-SUCKLE,** in botany; a genus of the decandria order, belonging to the diadelphica class of plants; and in the natural method ranking under the 32d order, *Papilionaceæ.* The carina of the corolla is transversely obtuse; the seed-vessel a legumen with monospermous joints. There are 59 species of this plant, of which the most remarkable are

1. **HEDYSARUM CORONARIUM,** the common biennial *French honeysuckle,* with large deeply-furrowing biennial roots; upright, hollow, smooth, very branchy stalks, 3 or 4 feet high, garnished with pinnated leaves; and from between the leaves proceed long spikes of beautiful red flowers, succeeded by jointed seed-pods. It is easily raised from seed in any of the common borders, and is very ornamental.

2. **HEDYSARUM GYRANS,** or sensitive *hedyasrum,* a native of the East Indies, where it is called *kurru chundalli.* It arrives at the height of 2½ feet, and in autumn produces bunches of yellow flowers. The root is annual or biennial. It is a trifolious plant, and the lateral leaves are smaller than those at the end, and all day long they are in constant motion without any external impulse. They move up and down and circularly. The last motion is performed by the twisting of the footstalks; and while the one leaf is rising, its associate is generally descending. The motion downwards is quicker and more irregular than the motion upwards, which is steady and uniform. These motions are observable for 24 hours in the leaves of a branch which is lopped off from the plant if kept in water. If from any obstacle the motion is retarded, upon the removal of that obstacle it is resumed with a greater degree of velocity. This species requires the common culture of tender exotics.

\* **HEED.** *n. f.* [from the verb.] 1. Care; attention.—

With wanton *heed* and giddy cunning,

The melting voice through mazes running. *Mil.*  
—Take *heed* that, in their tender years, ideas, that have no natural cohesion, come not to be united in their heads. *Locke.*—

Thou must take *heed*, my Portius;

The world has all its eyes on Cato's son. *Add.*  
2. Caution; fearful attention; suspicious watch.—Enter wise bearing or ignorant carriage is caught as men catch diseases, one of another; therefore, let men take *heed* of their company. *Shakspeare.*

Take *heed*; have open eye; for thieves do foot by night;

Take

Take heed ere Summer comes, or cuckoo birds  
affright. *Shak.*

; Care to avoid.—We should take heed of the neglect or contempt of his worship. *Tillotson.* 4. Notice; observation.—Speech must come by hearing and learning; and birds give more heed, and mark words more than beasts. *Bacon.* 5. Seriousness; heed. *etc.*

He did unseal them; and the first he view'd,  
He did it with a serious mind; a heed

Was in his countenance. *Shak.*

6. Regard; respectful notice.—It is a way of calling a man a fool, when no heed is given to what he says. *L'Estrange.*

\* To HEED, v. a. [*bedan*, Saxon.] To mind; to regard; to take notice of; to attend.—

With pleasure Argus the musician heeds;

But wonders much at those new vocal reeds.

*Dryden.*

—He will no more have clear ideas of all the operations of his mind, than he will have all the particular ideas of any landscape or clock, who will not turn his eyes to it, and with attention heed all the parts of it. *Locke.*

\* HEEDFUL, adj. [from *heed*.] 1. Watchful; suspicious; vigilant.—

Give him heedful note;

For mine eyes will rivet to his face;

And, after, we will both our judgments join,  
In censure of his seeming. *Shak.*

2. Attentive; careful; observing: with *of*.—

I am commanded

To tell the passion of my sovereign's heart;

Where fame, late entering at his heedful ears,

Has plac'd thy beauty's image and thy virtue. *Shak.*

To him one of the other twins was bound,

While I had been like heedful of the other. *Shak.*

Then, heedful of advice, secure proceed;

My praise the precept is, be thine the deed.

*Pope.*

\* HEEDFULLY, adv. [from *heedful*.] Attentively; carefully; cautiously.—Let the learner obtain an honourable opinion of his instructor, and heedfully listen to his instructions, as one will be led. *Watts.*

\* HEEDFULNESS, n. f. [from *heedful*.] Caution; vigilance; attention.—

\* HEEDILY, adv. Cautiously; vigilantly. *Dist.*

\* HEEDINESS, n. f. Caution; vigilance. *Dist.*

\* HEEDLESS, adj. [from *heed*.] Negligent; inattentive; careless; thoughtless; regardless; observing: with *of*.—

The heedless lover does not know

Those eyes they are that wound him so. *Wall.*

Heedless of verse, and hopeless of the crown,  
Scarce half a wit, and more than half a clown.

*Dryden.*

Some ideas, which have more than once offered themselves to the senses, have yet been little in notice of; the mind being either heedless, as children, or otherwise employed, as in men. —Surprises are often fatal to heedless unguarded innocence. *Sherlock.*

\* HEEDLESSLY, adv. [from *heedless*.] Carelessly; negligently; inattentively.—Whilst ye discharge the duties of matrimony, ye heedlessly slide  
to sin. *Arbutnot and Pope.*

\* HEEDLESSNESS, n. f. [from *heedless*.] Carelessness; thoughtlessness; negligence; inattention.—In the little harms they suffer from knocks and falls, they should not be pitied, but bid do so again; which is a better way to cure their heedlessness. *Locke.*

(1.) \* HEEL, n. f. [*bele*, Saxon.] 1. The part of the foot that protuberates behind.—If the luxated bone be distorted backward, it lieth over the heel bone. *Wifeman's Surgery.* 2. The whole foot of animals.—

The stag recalls his strength, his speed,  
His winged heels, and then his armed head;  
With these t' avoid, with that his fate to meet;  
But fear prevails, and bids him trust his feet.

*Denham.*

—Pegasus appeared hanging off the side of a rock, with a fountain running from his heel. *Addison.* 3. The feet, as employed in flight.—Nothing is commoner, in times of danger, than for men to leave their masters to bears and tigers, and shew them a fair pair of heels for't. *L'Estrange.* 2. To be at the HEELS. To pursue closely; to follow hard.

Sir, when comes your book forth?

—Upon the heels of my presentment. *Shak.*

But is there no sequel at the heels of this  
Mother's admiration? *Shak.*

5. To attend closely.—

Could we break our way

By force, and at our heels all hell should rise

With blackest insurrection to confound

Heav'n's purest light.

*Milton.*

6. To pursue as an enemy.—The Spaniards fled on towards the North to seek their fortunes, being still chased by the English navy at their heels, until they were fain to give them over for want of powder. *Bacon.*

Want! hungry want! that hungry meagre  
fiend,

Is at my heels, and chases me in view. *Orway.*

7. To follow close as a dependant.—

Through proud London he came fighting on,  
After the admired heels of Bolingbroke. *Shak.*

8. To lay by the HEELS. To fetter; to shackle; to put in gyves.—

If the king blame me for't, I'll lay ye all

By th' heels, and suddenly; and on your heads  
Clap round fines for neglect. *Shak.*

One half of man, his mind,

Is sui juris, unconfin'd,

And cannot be laid by the heels.

*Hudibras.*

—I began to smoke that they were a parcel of mummers; and wondered that none of the Middlesex justices took care to lay some of them by the heels. *Addison.* 9. Any thing shaped like a heel.—At the other side is a kind of heel or knob, to break clots with. *Mortimer's Husbandry.* 10. The back part of a stocking: whence the phrase to be out at heels, to be worn out.—

A good man's fortune may grow out at heels.  
*Shak.*

(2.) HEEL. See ANATOMY, § 160, 217, 218.

(3.) HEEL, in the sea language. If a ship leaves on one side, whether she be aground or afloat, then it is said she heels a-starboard or a-port; or that she heels offwards, or to the shore; that is, inclines more to one side than to another.

(4.) HEEL OF A HORSE, the lower hinder part

of the foot comprehended between the quarters and opposite to the toe. The heel of a horse should be high and large, and one side of it should not rise higher than the other upon the pastern. See FARRIERY, Part V.

(5.) **HEEL OF A HORSEMAN.** This being the part that is armed with the spur, the word is used for the spur itself; "This horse understands the heel well." To ride a horse from one heel to another, is to make him go sideways, sometimes to one heel and sometimes to another.

(1.) \* **To HEEL.** v. a. [from the noun.] To arm a cock.

(2.) \* **To HEEL.** v. a. 1. To dance.—

I cannot sing,

Nor heel the high lavolt, nor sweeten talk. *Shak.*

2. To lean on one side; as, the ship heels.

\* **HEELER.** n. s. [from heel.] A cock that strikes well with his heels.

\* **HEEL-PIECE.** n. s. [heel and piece.] A piece fixed on the hinder part of the shoe, to supply what is worn away.

\* **To HEEL-PIECE.** v. a. [heel and piece.] To put a piece of leather on a shoe heel.—Some blamed Mrs Bull for new heel-piecing her shoes. *Arb.*

**HEEM, John David DE,** an able painter, born at Utrecht in 1604. He excelled in painting flowers, fruit, vases, and instruments of music, which he performed in such a perfect manner, that a person was apt to attempt taking them in his hand. His colouring is agreeable, and the insects in his pictures appear alive. He died at Antwerp in 1674. Cornelius, his son, was also a good painter, though inferior to his father.

**HEEMSKIRK.** See HEMSKIRK.

**HEEMSTEDDE,** a town of the Batavian republic, in the dept. of Amstel, and late prov. of N. Holland, 3 miles S. of Haarlem.

**HEEREMBERG,** a town of the Batavian republic, in the dept. of the Rhine, and late prov. of Guelderland; 13 miles SE. of Arnheim.

**HEERINGEN,** a town of Upper Saxony, 6 miles SE. of Nordhausen, and 32 N. of Erfurt.

\* **HEFT.** n. s. [from heave.] 1. Heaving; effort.—

May be in the cup

A spider steep'd, and one may drink; depart,  
And yet partake no venom; for his knowledge  
Is not infected: but if one present

Th' abhorrent ingredient to his eye, make known  
How he hath drunk, he cracks his gorge, his sides  
With violent hefts. *Shak.*

2. [For heft.] Handle.—

His only side devours both blade and heft.

*Waller.*

**HEGAU,** a district of Suabia, on the lake of Constance.

**HEGENSDORF,** a town of Germany, in Westphalia, and bishopric of Paderborn, 2 miles SSE. of Buren.

(1.) **HEGESIPPUS,** a learned Jew of the 1d century, who embraced Christianity at Rome, A. D. 137. He was the first author of an ecclesiastical history after the death of St Luke. His work extended from the birth of our Saviour to his own time. Some extracts from it are preserved by Eusebius.]

(2.) **HEGESIPPUS,** author of an Account of the Destruction of Jerusalem still extant, flourished in the 3d century, posterior to the reign of Constantine the Great. His work was printed at Cologne, in 8vo, in 1559.

(1.) \* **HEGIRA.** n. s. [Arabick.] A term in chronology, signifying the epocha, or account of time, used by the Arabians and Turks, who begin their computation from the day that Mahomet was forced to make his escape from the city of Mecca, which happened on Friday, July 16, A. D. 610, under the reign of the emperor Heraclius. Harris.

(2.) **HEGIRA** is formed of *h*egirah, *h*egirah, *h*egirah, of *h*egirah to fly. See ARABIA, § 9. To render this epocha more creditable, the Mahometans affect to use the word *begira* in a peculiar sense for an act of religion, whereby a man forsakes his country, and gives way to the violence of persecutors and enemies of the faith: they add, that the Qurathites, being then the strongest party in the city, obliged their prophet to fly, as not being able to endure his abolishing of idolatry. This flight was not the first of Mahomet's, but it was the most famous. It happened in the 12th year from his assuming the character of prophet and apostle, and promulgating his new religion. The orientals do not agree with us as to the time of the hegira. Among the Mahometans, Amasi fixes it to A. M. 630, and from the death of Moses 2347; and Casseri to A. M. 5804: according to the Greek computation among the Christians, Said Ebn Hattik refers the hegira to A. D. 614, and A. M. 6113. Khondemir relates, that it was Omar, the second caliph, that first established the hegira as an epocha, and appointed the years to be numbered from it: at the time he made this decree there were already seven years elapsed. This establishment was made in imitation of the Christians, who, in those times, reckoned their years from the persecution of Dioclesian. But there is another hegira, and that earlier too, though of less eminence. Mahomet, in the 12th year of his mission, was obliged to relinquish Medina: the Qurathites had all along opposed him very vigorously, as an innovator and disturber of the peace; and many of his disciples, not enduring to be reputed followers of an impostor, desired of him to abandon the city, for fear of being obliged to renounce their religion. This retreat was the first hegira. These two hegiras the Mahometans, in their language, call *begiratan*. The years of the hegira consist only of 354 days. To reduce these years to the Julian calendar, i. e. to what Julian year a given year of the hegira answers to, reduce the year of the hegira given into 354, by multiplying by 354, divide the product by 355, and from the quotient subtract the intercalary days, i. e. as many days as there are four years in a century; and lastly, to the remainder add 4609. See YEAR.

**HEGOW.** See HEGAU.

**HEIBACH,** a town of Franconia, on the Rhine, 12 miles W. of Wertheim.

**HEICETÆ, HICETÆ, or EICETÆ,** he of the 7th century, who made profession of monastic life.—From that passage in Exodus, where Moses and the children of Israel are said to

long a song in praise of the Lord, after they had passed the Red Sea, wherein their enemies had perished; the Heicetæ concluded, that they must sing and dance to praise God aright; and as Mary the prophetess, sister of Moses and Aaron, took a drum in her hand, on the same occasion, and all the women did the like, to testify their joy, by playing, beating, and dancing, they, the better to imitate their conduct herein, endeavoured to draw women to them to make profession of the Jewish life, and assist in their mirth.

HEIDECRUG, a town of Prussian Lithuania, under NE. of Rusa.

(1.) HEIDEGGER, John Henry, professor of divinity at Zurich, was born in 1633. He published, 1. *Exercitationes Selectæ de Historia sacra* Jovianiburnæ, 2 vols 4to. 2. *De ratione studiorum opuscula aurea*, 12mo. 3. *Tumulus Tridentis Caroli*, 4to. 4. *Historia Papatus*, 4to.

(2.) HEIDEGGER, John James, a native of Zurich in Switzerland, who long figured in England, as *Archer Elegantiarum*, or manager of the public amusements. He was the son of a clergyman, and was married, but left his country in consequence of an intrigue. Having had an opportunity of visiting the principal cities of Europe, he acquired a taste for elegant and refined pleasures, as they are called, which, united to a strong inclination for voluptuousness, by degrees qualified him for the management of public amusements. In 1751, when he was near 30 years old, he came to England on a negociation from the Swiss at Zurich; but, falling in his embassy, he entered as a private soldier in the guards for protection. By his lively conversation and insinuating address, he soon worked himself into the good graces of the king of fashion; who called him *the Swiss Count*. He procured a subscription, with which, in 1709, he was enabled to furnish out the opera of *Thomy*, which was written in English, and performed at the queen's theatre in the Haymarket. The opera, however, was Italian; that is to say, airs and dances from sundry of the foreign operas by Buononcini, Scarlatti, Steffani, Gasparini, and Albini. Heidegger by this performance gained 500 guineas. The judicious remarks he made on several defects in the conduct of our operas in general, and the hints he threw out for improving the ornaments of the royal theatre, soon established his character as a good critic. Appeals were made to his judgment; and some very magnificent and elegant decorations introduced upon the stage in consequence of his advice, gave such satisfaction to George II. who was fond of operas, that, being informed to whose genius he was indebted for these improvements, he countenanced him, and Heidegger soon obtained the chief management of the opera-house in the Haymarket. He then set about improving another species of diversion, not less agreeable to the king, viz. the masquerades, and over these he always presided at the king's theatre. He was likewise appointed director of the revels. The nobility now cared less for much, and had such an opinion of his taste, that all splendid and elegant entertainments given on particular occasions, and all private assemblies by subscription, were submitted to his direction. From the emoluments of these employments,

he gained a considerable income, amounting, in some years, to 5000 l. which he spent with much liberality, particularly in the maintenance of a luxurious table; so that it may be said he raised an income, but never a fortune. At the same time his charities ought not to pass unnoticed, which were frequent and ample. After a successful masquerade, he has given away several hundred pounds at a time. "You know poor objects of distress better than I do," he would frequently say to a particular acquaintance; "be so kind as to give away this money for me." This well known liberality, perhaps, contributed much to his carrying on that diversion with so little opposition as he met with. He died in 1749, at the advanced age of 90 years.

(1.) HEIDELBERG, a populous town of Germany, capital of the Lower Palatinate, with a celebrated university. It is noted for its great tun, which holds 800 hogheads, generally kept full of good Rhenish wine. It stands in a pleasant rich country, and was a famous seat of learning: but has undergone many calamities. It was entirely burnt down in 1278, and 1288. In 1622, it was plundered by the Bavarians; and the rich library was transported partly to Vienna, and partly to the Vatican at Rome. After this it enjoyed peace, till 1689, when the Protestant electoral house became extinct, and a bloody war ensued, in which not only the castle was ruined, and the town burnt, but the tombs and bodies of the electors were shamefully violated and pillaged. This happened in 1693; and the people of the Palatinate were obliged to leave their dwellings, and take refuge in foreign countries. The great tun was broke to pieces in 1693 by the French, but repaired at great expence in 1729. The town stands on the Neckar, 44 miles SSE. of Mentz, and 43 S. of Francfort on the Maine. Lon. 8. 48. E. Lat. 49. 20. N.

(2.) HEIDELBERG, a town of Pennsylvania, in Dauphiné county, 74 miles NW. by W. of Philadelphia.

HEIDELSHHEIM, a town of Germany, in the Palatinate of the Rhine, 14 miles SE. of Spire.

HEIDENFELD, a town of Franconia.

(1.) HEIDENHEIM, a town of Germany, in Swabia, and in the territory of Brentzhall, with a handsome palace or castle, belonging to the house of Wirtemberg. Lon. 10. 19. E. Lat. 48. 37. N.

(2.) HEIDENHEIM, a town of Franconia, in Anspach, 15 miles SE. of Anspach.

HEIDINA, a town of Germany, in Soria.

\* HEIFER. *n. f.* [*heifer*, Sax.] A young cow.

Who finds the *heifer* dead and bleeding slain,  
And sees fast by a butcher with an axe,

But will suspect 'twas he that made the slaughter?  
*Shakspeare.*

—A *heifer* will put up her nose, and snuff in the air, against rain. *Bacon.*—

For her the *flax* refuse their verdant bow,  
Nor thirsty *heifers* seek the gliding flood. *Pope.*

\* HEIGH HO, *interj.* 1. An expression of light languor and uneasiness — *Heigh ho! an't he not four by the day, I'll be hang'd.* *Shakspeare.* 2. It is used by *Drayden*, contrarily to custom, as a voice of exultation.—

We'll toss off our ale 'till we cannot stand,

And *beigh-bo* for the honour of old England.

*Dryden.*

(1.) \* HEIGHT. *n. f.* [from *high*.] 1. Elevation above the ground: indefinite.—

Into what pit thou seest,

From what *height* fall'n!

*Milton.*

An amphitheatre's amazing *height*

Here fills the eye with terror and delight. *Addis.*

2. Altitude; definite space measured upwards.—

Abroad I'll study thee,

As he removes far off, that great *heights* takes.

*Donne.*

—There is in Ticinum a church that is in length one hundred feet, in breadth twenty, and in *height* near fifty. *Bacon.*—

An amphitheatre appear'd,

Rais'd in degrees, to sixty paces rear'd;

That when a man was plac'd in one degree,

*Height* was allow'd for him above to see. *Dryd.*

3. Degree of latitude. Latitudes are higher as they approach the pole.—Guinea lieth to the North sea, in the same *height* as Peru to the South. *Abbot's Desc. of the World.* 4. Summit; ascent; towering eminence; high place.—

From Alpine *heights* the father first descends;  
His daughter's husband in the plain attends.

*Dryden's Sen.*

5. Elevation of rank; station of dignity; great degree of excellence.—

By him that rais'd me to this careful *height*,  
From that contented hap which I enjoy'd. *Spak.*  
Ten kings had from the Norman conqueror reign'd,

When England to her greatest *height* attain'd,  
Of pow'r, dominion, glory, wealth and state.

*Daniel.*

—Every man of learning need not enter into their difficulties, nor climb the *heights* to which some others have arrived. *Watts.* 6. The utmost degree; full completion.—Putrefaction doth not rise to its *height* at once. *Bacon.*—

Did not she

Of Timon first betray me, and reveal

The secret wrested from me in the *height*

Of nuptial love profess'd?

*Milton.*

Hide me from the face

Of God, whom to behold was then my *height*  
Of happiness!

*Milton.*

Despair is the *height* of madness.

*Sherlock.*

7. Utmost exertion.—Come on, sir; I shall now put you to the *height* of your breeding. *Shakesp.*

8. State of excellence; advance towards perfection.—Social duties are carried to greater *heights*, and enforced with stronger motives, by the principles of our religion. *Addison.*

(2.) HEIGHTS, METHODS OF MEASURING. See BAROMETER, § 23, GEOMETRY, TRIGONOMETRY, MOUNTAIN, &c.

\* To HEIGHTEN. *v. a.* [from *height*.] 1. To raise higher. 2. To improve; to meliorate. 3. To aggravate.—Foreign states used their endeavours to *heighten* our confusions, and plunge us into all the evils of a civil war. *Addison.* 4. To improve by decorations.—As in a room, contrived for state, the height of the roof should bear a proportion to the area; so in the *heightenings* of poetry, the strength and vehemence of figures should be suited to the occasion. *Dryden.*

HEILA, a town of royal Prussia, in Casselia, seated at the mouth of the Vistula, on the Baltic, 12 miles N. of Dantzic. Lon. 19. 35. E. Lat. 53 N.

HEILBRONN, an imperial town of Germany, in Suabia, on the Neckar, containing 3 churches, a library and public baths, 20 miles N. of Stuttgart, and 26 E. of Heidelberg. Lon. 26. 51. E. Lat. 49. 40. N.

HEILEGEN HARE, a sea-port town of Germany, in Lower Saxony, on the Baltic, over 20 miles from Termeren. Lon. 11. 15. E. Lat. 57. 30. N.

HEILGELAND, an island in the North Sea belonging to Denmark, 9 miles in circumference, with a light-house; 23 miles NW. of the mouth of the Elbe. Lon. 7. 57. E. Lat. 54. 21 N.

HEINECCIUS, John Gotlieb, one of the best civilians of the 18th century, born at Eisenach in Altenburg, in 1681. After having studied Gossir and Leipsick, he became professor of philosophy at Hall in 1710; and in 1721, he was professor of civil law, with the title of *counsellor to the court*. His great reputation made the free Frieland invite him to Francker in 1724; but in 1727, the king of Prussia prevailed on him to accept of a professorship of law at Frankfurt on the Oder, where he distinguished himself till 1741. Becoming again professor at Hall, he remained there till his death, in 1741, though invited to Marburg, Denmark, and Holland. He wrote many works, all of them much esteemed. The principal are, 1. *Antiquitatum Romanarum jurisprudentiam illustrantium syntagma*. This exact abridgement gave rise to his reputation in foreign countries. 2. *Elementa juris civilis*. 3. *Fundamenta juris cultioris*; a most useful work for forming a Latin style. 4. *Elementa philosophiæ rationalis et moralis*. 5. *Historia juris civilis Romanæ a G. municipi*. 6. *Elementa juris naturæ & gentium*.

HEINECKEN, or } Christian, an extraordinary

HEINETKEN, } 7y child, the prodigy of the North, born at Lubeck in 1711. He spoke his maternal tongue fluently at 10 months. At one year old, he knew the principal events of pentateuch; in two months more, he was master of the entire history of the Old and New Testaments; at two years and an half, he answered the principal questions in geography, and ancient and modern history; and he spoke Latin and French with great facility before his 4th year. His constitution was so delicate, that he was not weaned till a few months before his death. M. Marck of Lubeck published a pamphlet in 1730, in which he endeavoured to give natural reasons for the extraordinary capacity of this child, who died in the 5th year.

\* HEINOUS. *adj.* [*haineux*, French, from *hate*; or from the Teutonic *loos*, shame, &c.] Heinous; wicked in a high degree.—To abrogate, innovate the gospel of Christ, if men or angels should attempt it, were most *heinous* and sacrilegious. *Hucker.*—

This is the man should do the bloody deed  
The image of a wicked *heinous* fault

Lives in his eye.

*Shaksp.*

—As it is a most *heinous*, so it is a most execrable impiety, to despise him that can destroy the world.

• **HEINOUSLY.** *adv.* [from *heinous*.] Atrociously; wickedly.

• **HEINOUSNESS.** *n. s.* [from *heinous*.] Atrociousness; wickedness.—He who can treat offences, provoking God, as jests and trifles, must have little taste of the *heinousness* of them. *Rogers*.

**HEINSBERG**, a town of Germany, in the electoral duchy of Juliers; annexed to the French republic, by the treaty of Lunéville, and included in the dep. of the Roer: 10 miles SE. of Ruremond. Lon. 27. 56. E. Ferro. Lat. 51. 3. N.

(1.) **HEINSIUS**, Daniel, professor of politics and history at Leyden, and librarian to the university there, was born at Ghent, in 1580. He became a scholar to Joseph Scaliger at Leyden, and was indebted to him for the perfection to which he attained in literature. He distinguished himself as a critic by his labours on many classical authors; and was highly honoured at home and abroad. Gustavus Adolphus gave him a place among his counsellors of state; the republic of Venice made him a knight of the order of St Mark; and pope Urban VIII. made him great offers, if he would come, as he expressed it, "to rescue Rome from barbarism." He died in 1666, leaving several works both in poetry and prose.

(2.) **HEINSIUS**, Nicholas, the son of Daniel (1.) was born at Leyden; and became as great a Latin Poet, and a greater critic, than his father. His poems have been several times printed, but the best edition is that of Amsterdam in 1666. He made editions of several of the classics, with notes; a Claudian is dedicated in a Latin poem to Christina of Sweden, and his Ovid to Thulius. He was as much distinguished by his great employments in the state, as by his talents, learning, and good qualities. He died in 1681.

**HEINZENBERG**, a mountainous but fertile part of the Helvetic Republic, in the country of the Grisons: S. of Coire.

(3.) • **HEIR.** *n. s.* [*heire*, old Fr. *heires*, Lat.] One that is inheritor of any thing after the last possessor.—An *heir* signifies the eldest, who by the laws of England, to have all his father's land. *Locke*.—

What lady is that?

—The *heir* of Alanson, Rosaline her name.

*Shak.*

That I'll give my voice on Richard's side,  
To bar my master's *heirs* in true descent,  
God knows, I will not do it. *Shak.*

Bring *heirs* together of the grace of life. *1 Pet.*

Sunk is the hero, and his glory lost,  
And I his *heir* in misery alone. *Pope.*

The *heirs* to titles and large estates have weakened their eyes, and a tenderness in their conceptions. *Swift*. 2. One newly inheriting an estate.—The young extravagant *heir* had got a new sword, and was resolved to look into his estate. *Swift*.

(4.) **HEIR**, in law, signifies the person who succeeds another by descent to lands, tenements, and hereditaments, being an estate of inheritance, or an estate in fee; because nothing passes by right of inheritance but in fee. See CONSANGUINITY, AGNATE, INHERITANCE, SUCCESSION, and LAW. If land be given to a man for ever, or to

him and his assigns for ever, this vests in him but an estate for life. This very great nicety about the insertion of the word *heirs* in all feoffments and grants, in order to vest a fee, is plainly a relic of the feudal strictness, by which it was required, that the form of the donation should be punctually pursued; or that, as Craig expresses it, in the words of Baldus, *donationes sint stricti juris, ne quis plus donasse presumatur quam in donatione expresserit*. And therefore, as the personal abilities of the donee were originally supposed to be the only inducements to the gift, the donee's estate in the land extended only to his own person, and subsisted no longer than his life; unless the donor, by an express provision in the grant, gave it a longer continuance, and extended it also to his heirs. But this rule is now softened by many exceptions. For, 1. It does not tend to devise by will; in which, as they were introduced at the time when the feudal rigour was apace wearing out, a more liberal construction is allowed: and therefore by a devise to a man for ever, or to one and his assigns for ever, or to one in fee-simple, the devisee hath an estate of inheritance; for the intention of the deviser is sufficiently plain from the words of perpetuity annexed, though he hath omitted the legal words of inheritance. But if the devise be to a man and his assigns, without annexing words of perpetuity, there the devisee shall take only an estate for life; for it does not appear that the deviser intended any more. 2. Neither does this rule extend to fines or recoveries, considered as a species of conveyance; for thereby an estate in fee passes by act and operation of law without the word *heirs*: as it does also, for particular reasons, by certain other methods of conveyance, which have relation to a former grant or estate, wherein the word *heirs* was expressed. 3. In creations of nobility by writ, the peer so created hath an inheritance in his title, without expressing the word *heirs*; for they are implied in the creation, unless it be otherwise specially provided: but in creations by patent, which are *stricti juris*, the word *heirs* must be inserted, or otherwise there is no inheritance. 4. In grants of lands to sole corporations and their successors, the word *successors* supplies the place of *heirs*; for as heirs take from the ancestor, so doth the successor from the predecessor. Nay, in a grant to a bishop, or other sole spiritual corporation, in *frank alms*, the word *frank alms* supplies the place of *successors* (as the word *successors* supplies the place of *heirs*) *ex vi termini*; and in all these cases a fee simple vests in such sole corporation. But, in a grant of lands to a corporation aggregate, the word *successors* is not necessary, though usually inserted; for, albeit such simple grant be strictly only an estate for life, yet as that corporation never dies, such estate for life is perpetual, or equivalent to a fee simple, and therefore the law allows it to be one. Lastly, in the case of the king, a fee simple will vest in him, without the word *heirs* or *successors* in the grant; partly from prerogative royal, and partly from a reason similar to the last, because the king, in judgment of the law, never dies. But the general rule is, that the word *heirs* is necessary to create an estate of inheritance.

(3.) **HEIR APPARENT** is a person so called in the lifetime of his ancestor, at whose death he is heir at law.

(4.) **HEIR PRESUMPTIVE** is one who, if the ancestor should die immediately, would, in the present circumstances of things, be his heir; but whose right of inheritance may be defeated by the contingency of some nearer heir being born.

\* **To HEIR. v. a.** [from the noun.] To inherit.

His son in blooming youth was snatch'd by fate;

One only daughter *heir'd* the royal state. *Dryd.*

(1.) \* **HEIRESS. n. f.** [from *heir*.] An inheritrix; a woman that inherits.—

An *heiress* she, while yet alive;

All that was her's to him did give. *Waller.*

—*Æneas*, though he married the *heiress* of the crown, yet claimed no title to it during the life of his father in law. *Dryden.*

(2.) **HEIRESS, STEALING AW.** See **FORCIBLE MARRIAGE**, § 4.

\* **HEIRLESS. adj.** [from *heir*.] Without an heir; wanting one to inherit after him.—

I still think of

The wrong I did myself; which was so much,  
That *heirless* it hath made my kingdom. *Shak.*

(1.) \* **HEIR-LOOM n. f.** [*heir* and *geloma*, goods, Sax.] Any furniture or moveable decreed to descend by inheritance, and therefore inseparable from the freehold.—

Achilles' sceptre was of wood,

Transmitted to the hero's line;

Thence through a long descent of kings

Came an *heirloom*, as Homer sings. *Swift.*

(2.) **HEIR-LOOM**, comprehends divers implements: as tables, presses, cupboards, bedsteads, furnaces, wainscot, and such like; which in some countries have belonged to a house for certain descents, and are never inventoried after the decease of the owner, as chattels are, but accrue by custom, not by common law, to the heir, with the house itself. The ancient jewels of the crown are held to be heir-looms, and are not devisable by will, but descend to the next successor.

(1.) \* **HEIRSHIP. n. f.** [from *heir*.] The state, character, or privileges of an heir.—A layman appoints an heir or an executor in his will, to build an hospital within a year, under pain of being deprived of his *heirship*. *Ayliffe's Parergon.*

(2.) **HEIRSHIP MOVEABLES**, in Scots law, the best of certain kinds of moveables, which the heir of line is intitled to take, besides the heritable estate. See **LAW**.

**HEISKER**, an island of Scotland, 2 miles long, which produces grain and abounds with sea ware for kelp; 6 miles N. of N. Uist.

**HEIST**, a town of Germany in Westphalia, and Nassau Siegen, 4 miles NNW. of Siegen.

**HEISTERIA**, in botany: A genus of the monogynia order, belonging to the decandria class of plants; and in the natural method ranking under the 12th order *Floraceæ*. The calyx is quinquefid, the petals five; the fruit is a plum on a very large coloured calyx.

**HEITERSHEIM**, a principality of Germany, in the Upper Rhine, 20 m. E. of Brisach.

**HEI**, a river of Cornwall, near Falmouth.

**HELAN**, a town of Bohemia.

**HELRIGSDORF**, a town of Upper Saxony.

\* **HELD**. The preterite and part. pass. of *hold*.—A rich man beginning to fall, is *held* up of friends. *Ecclef.*—If Minerva had not appeared and *held* his hand, he had executed his design. *Dryden.*

**HELDURG**, a town of Saxony, 8 miles W. of Coburg.

**HEIDER**, or } a town and fort of the Bat-

**HELDER POINT**, } viaa republic, in the dep. of the Texel, seated on a cape on the coast of the Zuyder Zee, about 14 miles from Alkmaar. It was taken by the British, under the D. of York, August 30th 1799, after a battle wherein about 3000 of the Dutch and 540 of the British were killed, wounded or missing.

**HELE**, Thomas, a dramatic author of the 17th century, born in Gloucestershire, in 1740. He acquired so complete a knowledge of the French language, that he wrote in it with all the ease and elegance of a native. After serving in the army during the German war, till the peace of 1763, he went to Italy, and thence to Paris; where he settled, and wrote comedies for the Theatre, which have been much admired. He died in 1780.

**HELEN**, or } is fabulous history, the daughter

(1.) **HELENA**, } ter of Tyndarus, or according to the poets, of Jupiter and Leda, was married to Menelaus king of Sparta, but was stolen from him by Theseus, A. A. C. 1235. She was recovered soon after, but carried off again by Paris, which occasioned the famous Trojan war. **PARIS**, N° 1, and **TRAY**.

(2.) **HALANA; ST.** the wife of the emperor CONSTANTINUS CHLORUS, and mother of CONSTANTINE the Great, was a native of South Britain; but authors differ as to the rank she held when the emperor married her. Dr Watkins, in his *Biog. Dict.* makes her "of obscure birth" but Dr Anderson, in his *Royal Genealogist*, she was the daughter of King CORIUS II. agree that she was eminent for virtue and piety. In her 80th year she went to the Holy Land, the Catholics say, she discovered the holy sepulchre. She died soon after about A. D. 328.

(3.) **HELENA, ST.** an island in the Atlantic Ocean, belonging to the English East India company. Its greatest length is about 8 miles, its circumference about 20. It has some high mountains, particularly one called *Diana's* peak, which is covered with woods to the very top. Some of the hills bear evident marks of a volcanic origin; and some have huge rocks of lava, and kind of half-vitrified slags. The country, according to Mr Forster, has a fine appearance; though in many places a rich mould, from 6 to 10 inches deep, and various plants thrive in it luxuriantly. He found many plants here which he had not observed in other parts of the world. Among these were some called by the natives *cabbage trees*, *gum-trees*, and *red wood*. The former thrive in moist places; the latter on the ridges of hills, where the soil is dry. The cabbage tree has large leaves; but Mr Forster could not find that it was used for any other purpose than that of fuel, and no reason could be assigned why it had obtained that name. It differs from the cabbage-tree of America, India, and the South Sea, which is a species of palm. The island is laid out

only in gardens and pasturage. Peaches are the only European fruits that thrive here. Cabbages and other greens are devoured by caterpillars; and corn is destroyed by rats. Furze has been of singular advantage to the inhabitants of St Helena. Before the introduction of that plant, the ground was parched by the intense heat, and all kinds of grass and herbage were shrivelled up. But the furze bushes, which thrive as it were in spite of the sun, preserved a degree of moisture in the ground, which made the grass spring up vigorously, and the country became covered with such and beautiful sod. The furze is now used for fuel. The number of inhabitants does not exceed 1000, including 500 soldiers and 600 slaves. By the India ships, which they supply with refreshments, they are provided with all sorts of necessaries; and the Company annually order one or two of their ships to touch there in their way to India, to supply them with European goods and provisions. Many of their slaves are employed in catching fish, which are very plentiful; and, by the help of these, together with their poultry, cattle, roots, and salt provisions, they subsist very happily through the year. St Helena was first discovered by the Portuguese in 1502, on St Helen's day; whence its name. They stocked it with several kinds of useful animals, but whether they ever settled a colony, is uncertain. The Portuguese having either abandoned or never taken possession of it, the Dutch became its masters; and kept possession of it till 1600, when they were driven out by the English. In 1673, the Dutch lost it by surprise; but a short time after it was recovered by the brave captain Munden, who also took Dutch East India men then lying in the harbour. The Dutch had fortified the only landing place on the island, and erected batteries of guns to prevent a descent: but the English sent a small creek, where only two men could creep up, climbed to the top of the hill in the night; and appearing the next morning behind the batteries, the Dutch were so terrified, that they surrendered at discretion. This fort has been since strongly fortified, and a battery of large cannon placed at its entrance. St Helena lies 1300 miles W. of Africa, and 1800 N. of America. Lon. 5. 49. W. Lat. 15. 55. S.

(4) HELENA, ST. an island of S. Carolina.

**HELENIUM**, BASTARD SUN-FLOWER: A genus of the polygamia superflua order, belonging to the fruges class of plants; and in the natural method ranking under the 49th order, Compositae. The receptacle is naked in the middle; the radius paleaceous; the pappus consists of short awns; the calyx is simple and multi-toothed; the florets of the radius semitrid. The rays are

1. **HELENIUM AUTUMNALE**, with spear-shaped narrow leaves: and

2. **HELENIUM LATIFOLIUM**, with pointed, lance-shaped, sawed leaves. Both are natives of North America, where they grow wild in great plenty. They rise to the height of 7 or 8 feet in good ground. The roots, when large, send up several number of stalks, which branch toward the top; the upper part of the stalk sustains one flower, shaped like the sun-flower, but

much smaller, having long rays, which are jagged pretty deep into 4 or 5 segments. These plants may be propagated by seeds, or by parting their roots; the latter is generally practised in this country. The best season to transplant and part the old roots is in October, when their leaves are past, or in the beginning of March, just before they begin to shoot. They delight in a soil rather moist than dry, provided it is not too strong; or does not hold the wet in winter.

(1.) **HELEN'S, ST.**, a town of the Isle of Wight, in E. Medina. It is seated on a bay which runs a considerable way within land, and in a war with France is often the place of rendezvous for the royal navy. At the mouth of the bay is that cluster of rocks called the **MIZEN**. It had an old church situated at the extremity of the coast, which was in danger of being washed away, with a great part of the church-yard, which occasioned a new church to be built in 1719. The priory to which the old church belonged is now converted into a gentleman's seat; is in a remarkably pleasant situation, and commands a fine prospect of Portsmouth and the Road at Spithead.

(2.) **HELEN'S, ST.**, a village near Derby.

(3.) **HELEN'S, ST.**, a town near Warrington.

(4.) **HELEN'S, ST. BAY.** See N° 1.

(5.) **HELEN'S, ST. HEAD.** See ANTRIM, N° 2.

**HELENUS**, in fabulous history, a celebrated footsayer, son of Priam and Hecuba. He was greatly respected by all the Trojans. When Deiphobus was given in marriage to Helen in preference to himself, he retired to mount Ida, where Ulysses took him prisoner by the advice of Calchas. The Greeks by threats and promises, induced him to reveal the secrets of the Trojans; and either the fear of death, or gratification of resentment, led him to disclose to the enemies of his country, that Troy could not be taken whilst it was in possession of the Palladium, nor before Polydectes came from his retreat at Lemnos and assisted in the siege. After the ruin of his country, he fell to the share of Pyrrhus the son of Achilles, and saved his life by warning him to avoid a dangerous tempest, which proved fatal to all those who set sail. This endeared him to Pyrrhus; from whom he received Andromache, the widow of his brother Hector, by whom he had a son called *Cestrimus*. He was the only one of Priam's sons who survived the ruin of his country. After the death of Pyrrhus he reigned over part of Epirus, which he called *Chironia*, in memory of his brother Chiron, whom he had inadvertently killed. Helenus received Aeneas as he voyaged towards Italy, and foretold him some of the calamities which attended his fleet.

**HELEPOLIS**, in the ancient art of war, a machine for battering down the walls of a place, the invention of which is ascribed to Demetrius Poliorcetes. Diodorus Siculus says, that each side of the Helepolis was 40 cubits in breadth, and 90 in height; that it had 9 stages, and was carried on 4 strong solid wheels 3 cubits in diameter; that it was armed with large battering rams, and had two roofs capable of supporting them; that in the lower stages there were different sorts of engines for casting stones; and in the middle they had large catapultas for discharging arrows, and smaller

smaller ones in those above, with a number of expert men for working all these machines.

**HELFENBERG**, a town of Austria.

**HELFORD**, a town of Cornwall, on the Hel.

**HELGA**, a town of Sweden, in Smaland.

**HELGEA**, a river of Sweden, which runs into the Baltic, 20 miles S. of Christianstadt.

(1.) \* **HELIACAL**, *adj.* *belique*, French, from *ἥλιος*.] Emerging from the lustre of the sun, or falling into it.—Had they ascribed the heat of the season to this star, they would not have computed from its *helical* ascent. *Brown*.

(2.) **HELIACAL**, in astronomy, is applied to the rising and setting of the stars. A star is said to rise heliacally, when, after having been in conjunction with the sun, and on that account invisible, it comes to be at such a distance from him as to be seen in the morning before sun rising; the sun, by his apparent motion, receding from the star towards the east. The heliacal setting is when the sun approaches so near a star as to hide it with his beams, which prevent the fainter light of the star from being perceived; so that the terms *apparition* and *occultation* would be more proper than *rising* and *setting*.

\* **HELIACALLY**, *adv* [from *helical*.]—From the rising of this star, not colimically, that is, with the sun, but *beliacally*, that is, its emersion from the rays of the sun, the ancients computed their canicular days. *Brown*.—He is tempestuous in the Summer, when he rises *beliacally*; and rainy in the Winter, when he rises *achronically*. *Dryden*.

**HELIADES**, in mythology, the daughters of Apollo and Clymene, who were so afflicted with the death of their brother Phaethon, that the gods, in compassion, transformed them into poplars on the banks of the Eridanus. Their names were Phaethusa, Lampetia and Phoebe. See **PHAETHON**.

**HELIJA**, in Grecian antiquity, the greatest and most frequented court in Athens for the trial of civil affairs. See **HELIASTÆ**.

**HELIANTHUS**, the GREAT SUNFLOWER; a genus of the polygamia frustanea order, belonging to the syngenesia class of plants; and in the natural method ranking under the 49th order, *Compositæ*. The receptacle is paleaceous and plane; the pappus diphylous; the calyx imbricated; the scales standing a little out at the tops. There are 22 species, most of which are now common in our gardens, though all of them are natives of America. They are all very hardy, and prosper in almost any soil or situation. They may be propagated either by seeds or by parting their roots.

**HELIASTÆ**, or } in antiquity, the judges of  
**HELIASTES**, } the court **HELIJA**. They were so called, according to Ulpian, from *ἑλίσσιν*, to assemble in a great number; or according to others, from *ἥλιος*, the sun, because they held their assemblies in an open place, and from sunrise to sun-set. They composed the most numerous and important of the Athenian tribunals. Their province was to explain obscure laws, and to give authority to those which had been violated. The *Thesmothetæ* convoked the assembly of the Heliastræ, which sometimes amounted to 2000, sometimes to 3500, judges. Mr Blanchard is of

opinion, that, to make this number, the *Thesmothetæ* sometimes summoned those of each tribe who had last quitted the public offices which they had exercised in another court. The assemblies of the Heliastræ were not frequent, as they would have interrupted the jurisdiction of the stated tribunals and the common course of affairs. The *Thesmothetæ* paid to each member of this assembly, for his attendance, 3 oboli. Hence Aristophanes terms them *the brothers of the tribune*. They were fined if they came too late, and if the orators had begun to speak, they were not admitted. They were paid out of the public treasury, and their pay was called *μισθοὶ βουλευτῶν*. The assembly met, at first, according to Aristophanes, at the rising of the sun. If the judges were obliged to meet under cover on account of frost and snow, they had a fire; but no ancient author informs us of the place where these assemblies were held. We only learn, that there was a double enclosure around the assembly, that it might not be disturbed. The first was a kind of arbor work, separated by doors, over which were painted in red the 10 or 12 first letters of the Greek alphabet, which directed the entrance of the officers who composed the tribunal, each of them entering under the letter which distinguished his tribe. The *beadles*, to whom they showed the wands which had been sent them by the *Thesmothetæ*, examined the mark, to see if it was authentic, and then introduced them. The second enclosure, which was 20 feet from the former, was a rope or cord; that the people who surrounded the first enclosure, and were desirous to see what passed within the 2d, might not be prevented from gratifying their curiosity at a proper distance. Thus the attention of the judges was interrupted by the concourse of the multitude, many of whom were heated by views of interest or of party. To each member was given 10 pieces of copper; one of which was perforated. Sea shells were at first in use. The king was present at the assembly, at whose command all been summoned. The *Thesmothetæ* read the names of those who were to compose it, and each man took his place as he was called. The *Thesmothetæ* were then sent for, whose function was to observe prodigies and to superintend the sacrifices; and if they gave their sanction, the deliberations were begun. The *EXARCTÆ* were often corrupted by those who were interested in the debates of the assembly, and even excited tumult. Of all the monuments extant relating to the Heliastræ, the most curious is the oath which the judges took before the *Thesmothetæ*: Demosthenes preserved it in his oration against Timarchus, who, having been bribed by those who had been intrusted with the effects taken on board a vessel of Naucratis, and refused to give an account of them, got a law passed, by which enlargement was granted to prisoners for public debts on giving bail. Demosthenes, in making his oration against that law, ordered the oath of the Heliastræ to be read aloud, as a perpetual auxiliary to his arguments. This oath we quote, to show how respectable a tribunal that of the Heliastræ was, and the importance of their decisions.

"I will judge according to the laws and decrees of the people of Athens, and of the senate of the people. I will never give my vote for the establishment of a tyrant, nor of an oligarchy. Nor will I ever give my approbation to any opinion prejudicial to the liberty or to the union of the people of Athens. I will not second those persons who may propose a reduction of private debts, or a distribution of the lands or houses of the Athenians. I will not recall exiles, nor endeavour to procure a pardon for those who shall be condemned to die. Nor will I force those to retire whom the laws and the suffrages of the people shall permit to remain in their country. I will not give my vote to any candidate for a public function, who gives not an account of his conduct in the office which he has previously filled; nor will I presume to solicit any trust from the commons without subjecting myself to this condition, which I mean as obligatory to the nine archons, to the chief of religious matters, to those who are balloted on the same day with the nine archons, to the herald, the ambassador, and the other officers of their court. I will not suffer the same man to hold the same office twice, or to hold two offices in the same year. I will not accept any present, either myself or by another, either directly or indirectly, as a member of the public assembly. I solemnly declare that I am 70 years old. I will be equally attentive and impartial to the accuser and the accused; I will pronounce sentence rigorously according to evidence. Thus I swear, by Jupiter, by Neptune, and by Demeter, to act. And if I violate any of my engagements, I imprecate from these deities ruin on myself and my family; and I request them to deprive me every kind of prosperity, if I am faithful to my oath." Here we have one of the motives of the meeting of this assembly. Aristotle informs us of another; which was by the public authority delegated to them, to elect a magistrate in the room of one dead. It is surprising, that Pausanias, who enters so often into details, gives us no particular account of this assembly. All that he says of it is, that the most numerous of the Athenian assemblies was called *HELICE*. Dionysius Laertius, in his life of Solon, says, that it was before one of these Helianth assemblies, that Solon presented himself, covered with wounds and contusions, to excite the indignation of the people against his pretended enemies. See *ARTICLE*, § 2. As to the manner in which the judges gave their suffrages, there was a sort of vessel covered with an osier mat, in which were placed two urns, the one of copper, the other of wood. In the lid of these urns was an oblong hole, large at the top, and narrower downwards. The suffrages which condemned the accused person were thrown into the wooden urn, called *kyrtos*. That of copper, named *akytos*, received those which absolved him. Aristotle observes, that Solon, whose aim was to make his people happy, and who found an aristocracy established by the election of the nine archons (annual officers, whose power was almost absolute), tempered their sovereignty, by instituting the privilege of appealing from them to the people, who were to be assembled by lot to give the suffrages; after having taken the oath of the

Helianth, in a place near the Panathenæum; where Miltiades had, in former days, calmed a sedition of the people, and bound them to unanimity by an oath. It has likewise been remarked, that Apollo was not invoked in the oath of the Helianth, as in the oaths of the other judges. As all who took the oath of the Helianth, engaged not to be corrupted by solicitation or money, those who violated this part of their oath were condemned to pay a severe fine.

*HELICAL*, *adv.* [*helice*, French; from *helix*.] Spiral; with many circumvolutions.—The screw is a kind of wedge, multiplied or continued by a helical revolution about a cylinder, receiving its motion not from any stroke, but from a vector at one end of it. *Wattson*.

*HELICE*. See *HELIASTES*.

*HELICON*, in ancient geography, a mountain in the neighbourhood of Parnassus and Cytheron, sacred to Apollo and the Muses. It is situated in Livadia, and now called *ZAGURA* or *Zagura*. It was one of the most fertile and woody mountains in Greece. On it the fruit of the *ADRACHNUS*, a species of the *ARBUTUS*, or strawberry tree, was uncommonly sweet; and the inhabitants affirmed, that the plants and roots were all friendly to man, and that even the serpents had their poison weakened by the innoxious qualities of their food. Its N. side was near Parnassus, where it touched on Phocis; and resembled that mountain in loftiness, extent, and magnitude. Here was the shady grove of the Muses and their images; with statues of Apollo and Bacchus, of Linus and Orpheus, and other illustrious poets. Among the tripods, in the 3d century, was that consecrated by Hesiod. On the left hand towards the grove was the fountain Aganippe; and about 20 stadia, or 2½ miles higher up, the violet coloured *HIPPOCRENE*. Round the grove were houses. A festival was celebrated there by the Thespianians with games called *Musæa*. The valleys of Helicon are described by Wheeler as green and flowery in the spring; and enlivened by pleasing cascades and streams, and by fountains and wells of clear water. The Boeotian cities in general, two or three excepted, were reduced to inconsiderable villages in the time of Strabo. The grove of the Muses was plundered under Constantine the Great. The Heliconian goddesses were afterwards consumed in a fire at Constantinople, to which city they had been removed. Their ancient seats on the mountain, Aganippe and Hippocrene, are not ascertained.

*HELICONIA*, in botany; a genus of the monogynia order, belonging to the pentandria class of plants. The spathe is universal and partial, there is no calyx; the corolla has 3 petals, and the nectarium two leaves; the capsule is three-grained.

*HELICONIAN*, *adj.* } epithets of the Muses,  
*HELICONIDES*, *n. f.* } from Mount Helicon.

*HELICTERES*, the *SCREW-TREE*: A genus of the decandria order, belonging to the gymandria class of plants; and in the natural method ranking under the 37th order, *Columnifera*. The calyx is monophyllous and oblique; there are five petals, and the nectarium consists of five petal-like leaflets; the capsules are intorted or twisted inwards. There are 4 species, all natives of warm climates. They are shrubby plants, rising from 4 to 24 feet

is bright, adorned with flowers of a yellow colour. They are propagated by seeds; but are tender, and in this country must be kept in a stove during the winter.

(1.) HELIER, ST, or ST ELERIUS. See N° 3.

(2.) HELIER, ST, the capital of the island of Jersey, in the bay of St Aubin, where it has a harbour, and a stone pier, having the sea on the SW. and hills on the N. Another large hill projects over the town, and has a pleasant walk, and an extensive prospect. The streets are wide and well paved. The inhabitants are about 2000. In the church, prayers are read alternately in English and French. In the market place is the statue of George II. in bronze, gilt. In the church is a monument, erected to the memory of Major Pierson, who fell in the moment of victory, in the attack of the French troops, who had made a descent on this island; in which action, the French general also was mortally wounded. See JERSEY. Lon. 2. 10. W. Lat. 49. 11. N.

(3.) HELIER, ST, a little island near the above town, (N° 1) on the S. side of Jersey; so named from St HELIER, a hermit, who lived in this island many centuries ago, and was slain by the Pagan Normans, at their coming here. He is mentioned in the *Martyrology of Cantuaries*. His little cell, with the stone bed, is still shown among the rocks; and, in memory of him, a noble abbey was founded here. On the site of this abbey now stands Elizabeth Castle, a very large and strong fortification. It is the residence of the governor and garrison, and occupies the whole island, which is near a mile in circuit, and surrounded by the sea at every flood. At low water, there is a passage to the town of St Helier, called *the Bridge*, half a mile long, and formed of sand and stones.

HELIOCARPUS, in botany: A genus of the digynia order, belonging to the dodecandria class of plants; and in the natural method ranking under the 17th order, *Columniferae*. The calyx is tetraphyllous; the petals four; the styles simple; the capsule bilocular, compressed, and radiated lengthwise on each side.

(1.) \* HELIOCENTRICK. *adj.* [*heliocentrique*, French; *helioc.* and *helioc.*] The *heliocentrick* place of a planet is said to be such as it would appear to us from the sun, if our eye were fixed in its centre. *Harris*.

(2.) HELIOCENTRIC LATITUDE OF A PLANET, the inclination of a line drawn between the centre of the sun and the centre of a planet to the plane of the ecliptic.

(3.) HELIOCENTRIC PLACE. See § 1.

HELIOCOMETES, a phenomenon sometimes observed about sun-setting; being a large luminous tail or column of light proceeding from the body of the sun, and dragging after it, like the tail of a comet; whence the name.

HELIODORUS, Bp. of Tricca in Thessaly, and the father of *Romance-writing*, was born at Emessa, in Phœnicia, in the end of the 4th century. In his youth he wrote a romance in 10 books, the first work of its kind, entitled *Æthiopica*, relating the amours of Theagenes and Chariclea. He was deposed by a synod because he would not consent to suppress it. The fable has a moral tendency,

and particularly inculcates chastity. It has been repeatedly printed in Greek and Latin, particularly at Basil, in 1553. Prof. Robinson gives the following high character of this work, in his *Proofs of a Conspiracy*, p. 266.—“I think (says he) that the first piece, in which woman is pictured as a respectable character, is the oldest novel that I am acquainted with, written by a Christian bishop, Heliodorus—I mean the adventures of Theagenes and Chariclea. I think that the heroine is a greater character than you will meet with in all the novels of antiquity. And it is worth while to observe what was the effect of this painting. The patriarch had been deposed and even excommunicated, for doctrinal errors, and for drawing such a picture of a heathen. The magistrates of Antioch, the most voluptuous and corrupted city of the East, wrote to the emperor, that this book had reformed the ladies of their city, where Julian the emperor, and his sophists, had formerly preached in vain; and they therefore prayed, that the patriarch might not be deprived of his mitre.” Heliodorus was also a good Latin poet. He flourished under Theodosius I. and Arcadius.

HELIOGABALUS, M. Aurelius Antoninus, one of the many monsters who reigned in Rome. See ROME. He was murdered, after a short and detestable reign of 4 years, A. D. 218. He took the name of *Helio-gabalus* from having been a priest of Apollo, in Phœnicia.

\* HELIOID PARABOLA, in mathematics, the parabolick spiral, is a curve which arises from the supposition of the axis of the common Apollonian parabola's being bent round into the periphery of a circle, and is a line then passing through the extremities of the ordinates, which do converge towards the centre of the said circle. *Harris*.

HELIOMETER, [from *ἥλιος*, *the sun*, and *μετρον*, *to measure*,] an instrument called also *heliometer*, invented by M. Bouguer in 1747, for measuring with particular exactness the diameters of the stars, and especially those of the sun and moon. This instrument is a kind of telescope, consisting of two object glasses of equal focal distance, placed the one by the side of the other, so that the eye-glass serves for both. The tube is of a conical form, larger at the upper end, which receives the two object glasses, than at the lower, which is furnished with an eye glass and micrometer. By the construction of this instrument two distinct images of an object are formed in the focus of the eye-glass, whose distance, depending on that of the two object glasses from one another, may be measured with great accuracy: nor is it necessary that the whole disc of the sun or moon come within the field of view; since, if the images of only a small part of the disc be formed by each object glass, the whole diameter may be easily computed by their position with respect to one another; for if the object be large, the images will approach, or perhaps lie even over one another; the object-glasses being moveable, the two images may always be brought to touch one another, and the diameter may be computed from the known distance of the centres of the two glasses. Besides this instrument has a common micrometer

the form of the eye glass, when the two images of the sun or moon are made in part to cover one another, that part which is common to both the images may be measured with great exactness, as being viewed upon a ground that is only one half less luminous than itself; whereas, in general, heavenly bodies are viewed upon a dark ground, and on that account are imagined to be larger than they really are. By a small addition to this instrument, provided it be of a moderate length, M. Bouguer thought it very possible to measure angles of 1 or 2 degrees, which is of particular consequence in taking the distance of stars from the moon. With this instrument M. Bouguer, by repeated observation, found, that the sun's vertical diameter, though somewhat diminished by the astronomical refraction, is longer than the horizontal diameter; and, in ascertaining this phenomenon, he also found, that the upper and lower edges of the sun's disc are not so equally defined as the other parts; on this account his image appears somewhat extended in the vertical direction. This is owing to the decomposition of light, which is known to consist of rays differently refrangible in passing through our atmosphere. Thus the red and violet rays, which proceed from the upper part of the disc at the same time with those of other colours, are somewhat more refracted than the others, and therefore seem to us to have proceeded from a higher point; whereas, on the contrary, the red rays proceeding from the lower edge of the disc, being less refracted than the others, seem to proceed from a lower point; so that the vertical diameter is extended, or appears longer, than the horizontal diameter. Mr Servington Savary discovered a similar method of improving the micrometer, which was communicated to the Royal Society in 1743. See MICROMETER.

**HELIOPHILA**, in botany: A genus of the fifth order, belonging to the tetradynamia class; and in the natural method ranking under the 30th order, *Sisymbrium*. There are two near allied towards the vesicular base of the

**HELIOPHOBIA**, [from *heli*, the sun, and *phobos*, fear.] a name given to the white negroes or Ethiopians, from their aversion to the light of the sun.

**HELIOPOLIS**, an ancient city of Egypt, mentioned by Herodotus and Diodorus Siculus; by Strabo, and by Jeremiah *Beth/bene/b*. It lay SE. of the Delta, and E. of Memphis; and was long famous for its temple of the sun. Near this city the British General K'eer completely defeated the army of the Grand Vizier, and killed 8000 men on the 18th March 1800, after the breach of the treaty of El-Arisch.

**HELIOPOLIS**, a city of Coelosyria, near the mouth of the Orontes; so called from the worship of the sun; now named *Haleb*. See *BAL-*

**HELIOSCOPE**. *n. f.* [*helioscope*, French; and *scopus*.] A sort of telescope fitted so as to look on the body of the sun, without offence to the eyes. *Harris*.

**HELIOSCOPE**. See TELESCOPE. As the sun may be viewed through coloured glasses without hurt to the eyes, if the object and eye-glasses be

of a telescope be made of coloured glass, as red or green, such a telescope will become an helioscope. Mr Huygens only used a plain glass, blacked at the flame of a candle on one side, and placed between the eye-glass and the eye; which answers the design very well.

**HELIOSTATA**, in optics, an instrument invented by the late learned Dr S. Gravesande; who gave it this name from its fixing, as it were, the rays of the sun in an horizontal direction across the dark chamber all the while it is in use. See OPTICS, *Index*.

(1.) \* **HELIOTROPE**. *n. f.* [*heliotrope*, French; *heliotropium*, Latin.] A plant that turns towards the sun; but more particularly the turnsole, or sun-flower.—'Tis an observation of flatterers, that they are like the *heliotrope*; they open only towards the sun, but shut and contract themselves at night, and in cloudy weather. *Goverment of the Tongue*.

(2.) **HELIOTROPE**. See **HELIOTROPISM**.

(3.) **HELIOTROPE**, among the ancients, an instrument or machine for showing when the sun arrived at the tropics and the equinoctial line. This name was also used for a sun dial.

(4.) **HELIOTROPE**, in lithology, a precious stone, of a green colour, streaked with red veins. Pliny says it is thus called, because, when cast into a vessel of water, the sun's rays falling thereon seem to be of a blood colour; and that, when out of the water, it gives a faint reflection of the figure of the sun; and is proper to observe eclipses of the sun as a helioscope. The heliotrope is also called the *oriental jasper*, on account of its ruddy spots. It is found in the East Indies, as also in Ethiopia, Germany, Bohemia, &c. Some have ascribed to it the property of rendering people invisible, like Gyges's ring.

**HELIOTROPISM**, TURNSOLE: A genus of the polygynia order, belonging to the pentandria class of plants; and in the natural method ranking under the 41st order, *Asperifolia*. The corolla is salver-shaped and quinquefid, with lesser dents interjected alternately; the throat closed up by small arches formed in the corolla itself. There are many species, all natives of warm countries. Only one, viz.

**HELIOTROPISM TRICOCCUM**, grows in Europe; and is a native of France, Spain, and Italy. It is only remarkable for the property of its berries. See COLOUR-MAKING, *Index*.

\* **HELISPHERICAL**. *adj.* [*helix* and *sphere*.] The *helispherical* line is the rhomb line in navigation, and so called because on the globe it winds round the pole spirally, and still comes nearer and nearer to it, but cannot terminate in it. *Harris*.

(I.) \* **HELIX**. *n. f.* [*helix*, Fr. *helix*.] Part of a spiral line; a circumvolution.—Find the true inclination of the screw, together with one quantity of water which every *helix* does contain. *Wilkins*.

(II.) **HELIX**, [*helix*.] literally signifies a wreath or winding; of *αἶμα*, to environ.

(III.) **HELIX**, in anatomy, is the whole circuit or extent of the auricle or border of the ear outwards; whence the inner protuberance surrounded thereby, and answering thereto, is called **ANTHELIX**. See ANATOMY, § 195. and 149.

(IV.) **HELIX**, in architecture. Some authors

make a difference between the helix and the spiral. A stair case, according to Daviler, is in a helix, or is helical, when the stairs or steps wind round a cylindrical rewel; whereas the spiral winds round a cone, and is continually approaching nearer and nearer its axis. The word is also applied to the caulicules or little volutes under the flowers of the Corinthian capital; called also *URULE*.

(V.) *HELIX*, in zoology, the *SNAIL*, a genus in the class of vermes and order of testacea. The shell consists of one spiral, brittle, and almost diaphanous valve; and the aperture is narrow. There are 60 species, principally distinguished by the figure of their shells. They are of various sizes, from that of a small apple to less than half a pea. Some of them live on land, frequenting woods and gardens, or inhabiting clefts of rocks and dry sand banks. Others are aquatic, inhabiting ponds, deep rivers, and the ocean. The principal species are,

1. *HELIX HORTENSIS*, the *garden snail*, is in form like the *Pomatia*, N. 3. but less, and not umbilicated, clouded, or mottled with brown. It abounds with a viscid slimy juice, which it readily gives out by boiling in milk or water, so as to render them thick and glutinous. The decoctions in milk are apparently very nutritious and demulcent, and have been recommended in a thin acrimonious state of the humours, in consumptive cases and emaciations. The eyes of snails are lodged in their horns, one at the end of each horn, which they can retract at pleasure. The manner of examining these eyes which are four in number, is this: when the horns are out, cut off nimbly the extremity of one of them; and placing it before the microscope you may discover the black spot at the end to be really a semiglobular eye.—The dissection of this animal is very curious; for the microscope not only discovers the heart beating just against the round hole near the neck, which seems the place of respiration, but also the liver, spleen, stomach, and intestines, with the veins, arteries, mouth, and teeth, are plainly observable. The guts of this creature are green, from its eating herbs, and are branched all over with line capillary white veins: the mouth is like a hare's or rabbit's with 4 or 6 need'e-teeth, resembling those of lerehas, and of a substance like horn. Snails are all hermaphrodites, having both sexes united in each individual. They lay their eggs with great care in the earth, and the young ones are hatched with shells completely formed. Cutting off a snail's head, a little stone appears, which is supposed to be a great diuretic, and good in all nephritic disorders. Immediately under this stone the heart is seen beating; and the auncies are evidently distinguishable, are membranous, and of a white colour; as are also the vessels which proceed from them. Snails discharge their excrements at a hole in their neck; they also breathe by this hole, and their parts of generation are situated very near it. The penis is very long, and in shape resembles that of a whale. In the process of generation, it has been observed, that with the male and female part there issues, at the aperture of the neck, a kind of spout, shaped like the head of a lance, and terminating in a very acute point:

and when the two snails turn the clefts in their necks towards each other, the spear issuing from one pricks the other, and then either drops to the ground or is carried off by the snail it has pricked. This snail instantly withdraws, but soon after rejoins the other, which it pricks in return; and after such mutual puncture, the copulation never fails of being consummated. Snails are said to couple three times at the distance of about 23 days, a new spear being created for each time of copulation, which lasts 10 or 11 hours. At the end of about 18 days they bring forth their eggs by the aperture of their neck. The snail is a small animal, it is not free from the plague of supporting other smaller animals on its body; and as in other animals we find their secondary ones either living only on their fur, as lice, &c. or only in the intestines, as worms, it is very remarkable that this creature must be a snail in both these manners; being found sometimes on the surface of its body, and sometimes within its intestines. There is a part of the common garden snail, and of other of the like kind, commonly called the *collar*. This surrounds the neck of the snail, and is considerably thick. It is the only part that is visible when the snail is retired quietly into its shell. In this part of the animal there infects which infect it are numerous in considerable numbers marching about very early on this part: besides, the snail, every one has occasion to open its anus, gives them a passage by which to enter into its intestines, and they then seize the opportunity. Snails are great destroyers of fruit in gardens, especially the best sorts of wall fruit. Lime and ashes sprinkled on the ground where they most resort will drive them away, and destroy the young brood of them. It is a common practice to pull off the fruit they have bitten; but this should never be done, for they will eat no other till they have wholly eaten this if it be left for them.

2. *HELIX JANTHINA*, with a violet-coloured shell. This is remarkable for the extremeness of texture, which breaks with the least pressure, and seems therefore entirely calculated to keep open sea, or at least to shun rocky shores. It inhabits the seas of Europe, especially the Mediterranean; those of Asia and Africa; and also the ocean. The living animal, when touched, exudes a juice which stains the hands of a violet colour. Dr Hawkesworth, in his account of Cook's voyage, mistakes this shell for that which yielded the *purpure* of the ancients. But whoever looks at Pliny, cannot entertain the idea, that the shell aforementioned could be the same with this. They had several shells which yielded the purple dye; but these were all rock shells, (see *ROCK MUREX*, and *MUREX*.) very different both in hardness and from the little *helix janthina*; which is not calculated for the neighbourhood of rocks. See Plin. lib. v. cap. 1. and lib. ix. cap. 66. Also Don Ant. Ulloa's Voyage to South America book iv. ch. 8.

3. *HELIX POMATIA*, the *exotic snail*, with spires, most remarkably ventricose, and coloured with a lighter and a deeper brown, is a native of France, where it inhabits the woods; but has been naturalized in England, where it inhabits the

the northern counties. It was introduced, as we learn by Sir Kewelm Digby; whether for medicinal purposes, or as food, is uncertain: tradition is to cure him beloved wife of a decay was it. They are quite confined to our four counties. An attempt was made to bring them to Northamptonshire, but they would not grow.—These are used as food in several parts of the county during Lent; and are preserved in an earthen jar, or a large place boarded in, with a small hole at the bottom, in which they are kept and tatten. They were also a favourite with the Romans, who had their *carbunculus* similar to the above. Fulvius Hirpinus the first inventor of this luxury, a little before the civil wars between Cæsar and Pompey, was fed with bran and sudden wine. He had credit Varro (*lib. iii. cap. 24.*) they were so large, that the shells of some would hold a whole dinner. People need not admire the temperance of the younger Pliny (*Epist. xv.*) who was contented with only a lettuce a piece, three barley-cakes, a barley-cake, sweet wine and a small fish. Its name is derived not from its relating to an orchard, but from *hell*, an Italian having a very strong one. This species is described by Pliny, (*lib. viii. c. 12.*) which he says was scarce; that it covered its opercle, and lodged under ground; and they were at first found only about the Alps, and more lately near Velitæ. See *lib. 8.* where the fig. is half the natural size.

\* *HELL*. *n. f.* [*hell*, Saxon.] 1. The place of evil and wicked souls.—

For it is a knell

It summons thee to heaven, or to hell. *Shak.*  
A man were a porter of hell gates, he should have turning the key. *Shak. Macbeth.*—

Let none admire

That riches grow in hell; that soil may best  
Sow the precious bane. *Milton.*

His black tyrant trembled to behold  
The glorious light he forfeited of old. *Cowley.*

The place of separate souls, whether good or evil will go down to my son mourning to hell.

\* *HELL*. *n. f.*—He descended into hell. *Apostles Creed.*

Temporal death.—The pains of hell came apace; the snares of death overtook me. *Psalms.*

3. The place at a running play to which who are caught are carried.—

Then couples three be straight allotted there;  
They of both ends the middle two do fly;

The two that in mid-place, hell called were,  
Must strive with waiting foot and watching eye,

To catch of them, and them to hell to bear,  
For they, as well as they, hell may supply. *Sidney.*

The place into which the taylor throws his scissars.—

This trusty squire, he had as well  
As the bold Trojan knight (seen hell);

Not with a counterfeit pass  
Of golden bough, but true gold-lace. *Hudibras.*

In Covent-garden did a taylor dwell,  
Who might deserve a place in his own hell.

King's Cookery.

The infernal powers.—

Much danger first, much toil did he sustain,  
While Saul and hell cross his strong fate in vain.

*Cowley*

7. It is used in composition by the old writers more than by the modern.

(2.) *HELL*, *§ 1. def. 1.* As all religions have supposed a future state of existence after this life, so all have their hell or place of torment, in which the wicked are supposed to be punished.

(3.) *HELL*, *ANCIENT OPINIONS RESPECTING.* The hell of the ancient heathens was divided into two mansions; the one called *ELYSIUM*, on the right hand, pleasant and delightful, appointed for the souls of good men; the other called *TARTARUS*, on the left, a region of misery and torment, appointed for the wicked. The latter only was hell, in the present restrained sense of the word. (See these articles.) The philosophers were of opinion, that the infernal regions were at an equal distance from all the parts of the earth; nevertheless it was the opinion of some, that there were certain passages which led thither, as the river *Lethe* near the *Syrtes*, and the *Acherusian* cave in *Epirus*. At *Hermione* it was thought, that there was a very short way to hell; for which reason the people of that country never put the fare into the mouths of the dead to pay their passage. The Jews placed hell in the centre of the earth, and believed it to be situated under waters and mountains. According to them, there are 3 passages leading to it: the first is in the wilderness, and by that, *Korah*, *Dathan*, and *Abiram*, descended into hell; the 2d. in the sea, because *Jonah*, who was thrown into the sea, cried to God out of the belly of hell; the 3d. is in *Jerusalem*, because it is said the fire of the Lord is in *Zion*, and his furnace is in *Jerusalem*. They likewise acknowledged 7 degrees of pain in hell, because they find this place called by 7 different names in scripture. Though they believed that infidels, and persons eminently wicked, will continue for ever in hell; yet they maintained, that every Jew who is not infected with some heresy, and has not acted contrary to the points mentioned by the rabbins, will not be punished therein for any other crimes above a year at most.

(4.) *HELL*, *MODERN OPINIONS RESPECTING.* The Mahometans believe the eternity of rewards and punishments in another life. In the *Koran* it is said, that hell has 7 gates, the first for the *Muslimans*, the 2d. for the *Christians*, the 3d. for the *Jews*, the 4th. for the *Sabians*, the 5th. for the *Magians*, the 6th. for the *Pagans*, and the 7th. for hypocrites of all religions. Among *Christians*, there are two controverted questions in regard to hell; the one concerning the locality, the other the duration of its torments. 1. The locality of hell, and the reality of its fire, began first to be controverted by *Origen*. That father, interpreting the scripture account metaphorically, makes hell to consist, not in external punishments, but in a consciousness or sense of guilt, and a remembrance of past pleasures. Among the moderns, *Mr Whiston* advanced a new hypothesis. The comets, he thinks, are so many hells appointed in their orbits alternately to carry the damned into the confines of the sun, there to be scorched by its violent heat, and then to return with them.

beyond the orb of Saturn, there to starve them in those cold and dismal regions. Another modern author supposes the sun to be the local hell. 3. As to the duration of the torments, Origen is again at the head of those who deny that they are eternal; it being that father's opinion, that not only men, but devils, after a due course of punishment suitable to their respective crimes, shall be pardoned and restored to heaven. The chief principle upon which Origen built his opinion, was the nature of punishment, which he took to be emendatory, applied only as physic for the recovery of the patient's health. The chief objection to the eternity of hell torments, among modern writers, is the disproportion between temporary crimes and eternal punishments. Those who maintain the affirmative, ground their opinions on scripture accounts, which represent the pains of hell under the figure of a worm which never dies, and a fire which is not quenched; as also upon the words, "These shall go away into everlasting punishment, but the righteous into life eternal." But say their opponents, the character given by the Almighty of himself should decide the point: "His mercy is over all his works." Eternal punishment excludes every idea of mercy; and even of justice, for finite crimes can never merit infinite punishment.—Dr Morse says there is a sect in the United States of America, whose sole term of communion is founded on this last opinion—Against this, many hold that, Everlasting punishment is as certain as everlasting bliss; and that, Divine justice and mercy will be equally displayed in both cases.

(5.) HELL, VALLEY OF, a valley of Suabia, in the Black Forest, through which, for many leagues, there is scarcely room for 30 men to march in front, the mountains rise so high on each side. Through this formidable defile, though defended by numerous bodies of Austrian troops, general Moreau, in 1798, forced a passage with his army, through a hostile country of 300 miles in extent: and daily gave battle to the Austrians, while flushed with victory; and even took several thousands of them prisoners, with many of their colours and cannons, during his desperate but masterly retreat, which, many think, has not been equalled since the days of Xenophon.

HELLA. See HALLA.

HELLANICUS of Mitylene, a celebrated Greek historian, born before Herodotus, flourished about A. A. C. 480. He wrote a history of the ancient kings and founders of cities, but it has not come down to us.

(1.) HELLAS, in ancient geography, an appellation comprising, according to the ancient Greeks and Romans, Achaia and Peloponnesus, but afterwards restrained to Achaia. It was bounded on the W. by the Achelous, on the N. by mounts Othrys and Ossa, on the E. by the Ægean sea, and on the S. by the Saronic and Corinthian bays, and by the isthmus which joins it to Peloponnesus. It was called *Hellas*, from the district, (Nº 2.) or from Hellen the son of Deucalion; and is now called *IVADIA*.

(2.) HELLAS, a district of Thessaly.

\* HELL-BLACK. *adj.* Black as hell.—

The sea, with such a storm as his bare head

In bell black night endur'd, would have boil'd up  
And quench'd the stelled fires. *Shak. King Lear*  
\* HELL-BRED. *adj.* [*bell* and *bred*.] Produced in hell.—

Heart cannot think what courage and what  
cries,

With foul enfoldred smook and flashing fire  
The bell bred beast threw forth into the flames.

\* HELL-BROTH. *n. f.* [*bell* and *broth*.] A composition boiled up for infernal purposes.—

Adder's fork, and blind worm's ring,  
Lizard's leg, and owlet's wing;  
For a charm of powerful trouble,  
Like a bell broth boil and bubble. *Shak. Macbeth*

\* HELL-DOOMED. *adj.* [*hell* and *doom*.] Consigned to hell.—

And reckon'st thou thyself with spirits  
heav'n,

Hell-doom'd! and breath'st defiance here  
scorn,

Where I reign king?

HELLE, in fabulous history, a daughter of thamas king of Thebes by Nephele. She fled from her father's house with her brother Phryxos to avoid the cruelty of her step mother, Ino: coming to some she was carried through the air on a ram with a golden fleece, which her mother had received from Neptune, and in her passion became giddy, and fell into that part of the sea which from her received the name of HELL-POINT. Others say that she was carried on a ship, or rather upon a ship, from which she fell into the sea and was drowned. See PHRYXUS.

HELLEBERG, a town of Sweden, in Smolands.

(1.) \* HELLEBORE. *n. f.* [*helleborus*, Lat.] Christmas flower.

(2.) HELLEBORR, BASTARD. See SERAPIAS.

(3.) HELLEBORE, BLACK. See HELLEBORR.

(4.) \* HELLEBORE, WHITE. *n. f.* [*veratrum*, Lat.] A plant.—There are great doubts whether any of its species be the true *hellebore* of the ancients. *Miller*.

(5.) HELLEBORR, WHITE. See VERATRUM.

HELLEBORINE. See SERAPIAS.

HELLEBORUS, HELLEBORE: A genus of plants, belonging to the pentandria order, and in the natural method ranking under the 26th order, *Multifloræ*. There is usually five or more petals; the nectaries are labiated and tubular; the capsules polymeric and a little erect. The most remarkable species is the

1. HELLEBORUS NIGER, BLACK HELLEBORE or CHRISTMAS ROSE. It has roots composed of many thick fleshy spreading fibres, crowned by a large cluster of lobed leaves, consisting each of 3 or 8 obtuse fleshy lobes, united to one foot-stalk and between the leaves several thick fleshy flower stalks 3 or 4 inches high, surmounted by large beautiful white flowers of 5 roundish petals, and numerous filaments, appearing in winter, about or soon after Christmas. It may be propagated either by seeds or parting the roots. It prospers in open borders, or may be planted in pots to move when in bloom, in order to adorn any particular place; but it always flowers fairest as

most abundantly in the front of a warty funny border. The plants may be removed, and the roots divided for propagation, in Sept. Oct. or Nov.; but the sooner in autumn it is done, the stronger will the plants flower at their proper season. The root was anciently used as a cathartic. The taste is acid and bitter. Its acrimony, says Dr Grew, is first felt on the tip of the tongue, and then spreads itself immediately to the middle, without being much perceived in the intermediate part. On chewing the root for a few minutes, the tongue feels numb, and affected with a kind of paralytic stupor, as when burnt by eating any thing too hot. The fibres are more acrimonious than the head of the root from whence they issue. Black hellebore root, taken from 15 to 30 grains, proves a strong cathartic; and, as such, has been celebrated for the cure of maniacal and other disorders proceeding from what the ancients called the *atra bilis*; in which cases, medicines of this kind are doubtless occasionally of use, though they are by no means possessed of any specific power. It does not however appear, that our black hellebore acts with so much violence as that of the ancients; whence many have supposed it to be a different species of plant: and indeed the descriptions which the ancients have left us of their hellebore, do not agree with those of any of the sorts lately taken notice of by modern botanists. Our hellebore is at present looked upon principally as a purgative; and in this light is frequently employed in small doses, for attenuating viscid humors, promoting the uterine and urinary discharges, and opening inveterate obstructions of the renal glands. It often proves a powerful emmenagogue in plethoric habits, where steel is radical or improper. In some parts of Germany, a species of black hellebore has been made use of, which frequently produced violent, and sometimes deleterious, effects. It appears to be a kind of *Lamium*, called in English *settlemore*, *sternmore*, or *bastard hellebore*. The roots may be distinguished from those of the true hellebore, by their being less black.

**HELLEBORUS NIGER ORIENTALIS** is a species discovered in the eastern countries, which Linnaeus distinguishes thus; *amplissimum folio, praeterita, flore purpureo*, and supposes to be the true ancient hellebore, from its growing in the mountainous parts of the Caucasus, and in the island of Cyprus, celebrated of old for the production of a maniacal drug: he relates, that a scruple of this root, given for a dose, occasioned convulsions.

**HELLELAND**, a town of Norway.

**HELLEN**, the son of Deucalion, who is said to have given the name of **HELLENES** to the Greeks.

**HELLEN**. See **GREEK**, N° 1. § 2.

**HELLENES**. See **GREEK**, § 2. & **HELLENISTS**.

**HELLENISM**. *n. s.* (*ἡλληνισμός*.) A Greek idiom. *Asiatick*.

(*h.*) **HELLENISM**: only used when speaking of the authors who, writing in a different language, express themselves in a phraseology peculiar to the Greek.

**HELLENISTIC LANGUAGE**, that used by the Grecian Jews who lived in Egypt and other parts where the Greek tongue prevailed. In this lan-

guage it is said the Septuagint was written, and also the books of the New Testament; and that it was thus denominated to show that it was Greek filled with Hebraisms and Syriacisms.

**HELLENISTS**, (*ἡellenιστᾶς*.) a term occurring in the Greek text of the New Testament, and which in the English version is rendered *Grecians*. The critics are divided as to the signification of the word. *Origen*, in his *Scholia* on Acts vi. 2. observes, that it is not to be understood as signifying those of the religion of the Greeks, but those who spoke Greek, *ἡellenιστᾶς ὡς ἡellenιστᾶς*. The authors of the Vulgate version, indeed, render it like ours, *Greci*; but *Messieurs Du Port-Royal* more accurately, *Juifs Grecs*, Greek or Grecian Jews; the Jews who spoke Greek being here treated of, and hereby distinguished from the Jews called *Hebrews*, that is, who spoke the Hebrew tongue of that time. These Hellenists, or Grecian Jews, were those who lived in Egypt and other parts where the Greek tongue prevailed. It is to them we owe the Greek version of the Old Testament, commonly called the *Septuagint*, or that of the LXX. *Salmastius* and *Vossius*, however, are of a different opinion, with regard to the Hellenists. The latter will only have them to be those who adhered to the Grecian interests. *Scaliger* is represented, in the *Scaligeriana*, as asserting the Hellenists to be the Jews who lived in Greece and other places, and who read the Greek Bible in their synagogues, and used the Greek language in *sacris*; and thus they were opposed to the Hebrew Jews, who performed their public worship in the Hebrew tongue. In this sense St Paul speaks of himself as a Hebrew of the Hebrews, (*Phil. iii. 5.*) i. e. a Hebrew both by nation and language. The Hellenists are thus properly distinguished from the *HELLENES* or Greeks, mentioned John xii. 20. who were Greeks by birth and nation, and yet proselytes to the Jewish religion.

**HELLENODICÆ**, (*ἡellenοδικᾶς*.) in antiquity, the directors of the Olympian games. At first there was only one, afterwards the number increased to 2 and 3, and at length to 9. They assembled in a place called *ἡellenοδικῆς*, in the Eleian forum, where they were obliged to reside ten months before the celebration of the games, to take care that such as offered themselves to contend, performed their *προπαιδεύσεις*, or preparatory exercises, and to be instructed in all the laws of the games by certain men called *ἡellenοδικοὶ*, i. e. *keepers of the laws*. To prevent all unjust practices, they were obliged to take an oath, that they would act impartially, would take no bribes, nor discover the reason for which they disliked or approved of any of the contenders. At the solemnity they sat naked, having before them the victor's crown till the exercises were finished, and then it was presented to whomsoever they adjudged it. Nevertheless, there lay an appeal from the *hellenodice* to the Olympian Senate.

**HELLEN'S**, ST. See **HELEN'S**, ST. N° 1.

**HELLERBACH**, a river of Silesia.

**HELLESPONT**, a narrow strait between Asia and Europe, near the Propontis, so named from **HELL**. It is celebrated for the love and death of *Leander*, and for the bridge of boats which *Xerxes* built over it when he invaded Greece. It is now called

called the **DARDANELLES**. It is about 33 miles long, and in the broadest parts the Asiatic coast is about one mile and a half distant from the European, and only half a mile in the narrowest, according to modern investigation, and the cocks are heard crowing from the opposite shores.

**HELL-GATE**, a famous strait. 8 miles E. of New York, near the W. end of Long Island Sound, opposite Haerlem, in York Island, remarkable for its whirlpools, which make a most tremendous noise at certain times of the tide.

\* **HELL-GOVERNED**, *adj.* Directed by hell.—

Earth gape open wide and eat him quick,  
As thou dost swallow up this good king's blood,  
Which his *hell-govern'd* arm hath butcher'd.

*Shakespeare.*

\* **HELL-HATED**, *adj.* Abhorred like hell.—

Back do I toss these treasons to thy head,  
With the *hell-hated* lie o'erwhelm thy heart. *Shak.*

\* **HELL-HAUNTED**, *adj.* [*hell* and *haunt*.] Haunted by the devil.—

Fierce Osmond clos'd me in the bleeding bark,  
And bid me stand exposed to the bleak winds,  
Bound to the fate of this *hell-haunted* grove.

*Dryden.*

\* **HELL-HOUND**, *n. f.* [*helle hund*, Sax.] 1. Dog of hell.—

From forth the kennel of thy womb hath crept  
A *hell-hound* that doth hunt us all to death. *Shak.*

Now the *hell-hounds* with superior speed  
Had reach'd the dame, and, fast'ning on her side,  
The ground with issuing streams of purple dy'd.

*Dryden.*

2. Agent of hell.—

I call'd

My *hell-hounds* to lick up the draff, and filth,  
Which man's polluting sin with taint had shed  
On what was pure. *Milton.*

**HELLIMER**, a town of France, in the dep. of the Moselle, 8 miles W. of Sar Albe, and 9 SSE. of St Avold.

**HELLIN**, a town of Spain, in Murcia.

\* **HELLISH**, *adj.* [*from hell*.] 1. Sent from hell.

—O thou celestial or infernal spirit of love, or  
what other heavenly or *hellish* title thou list to have,  
for effects of both I find in myself, have compassion of me. *Sidney.*—

Victory and triumph to the Son of God,  
Now entering his great duel, not of arms,  
But to vanquish by wisdom *hellish* wiles. *Milt.*

2. Having the qualities of hell; infernal; wicked; detestable.—No benefits shall ever allay that diabolical rancor that ferments in some *hellish* breasts, but that it will foam out at its foul mouth in slander. *South.*

\* **HELLISHLY**, *adv.* [*from hellish*.] Infernally; wickedly; detestably.

\* **HELLISHNESS**, *n. f.* [*from hellish*.] Wickedness; abhorred qualities.

\* **HELL-KITE**, *n. f.* [*hell* and *kite*.] Kite of infernal breed. The term *hell* prefixed to any word notes detestation.—

Did you say all? What all? Oh, *hell-kite*! all?  
What, all my pretty chickens, and their dam,  
At one fell swoop? *Shak. Macbeth.*

**HELL'S CLEUGH**, a hill of Scotland in East Lothian, 2100 feet above the sea level. On its summit is a cairn, called the *Pyked Stone*, which af-

fords an extensive prospect of Fifeshire, as far as Dumbarton S. of the Forth, to N. Berwick on the E. and to the Eildon and Cheviot hills on the S.

**HELL'S SKERRIES**, a cluster of small islands near the W. coast of Scotland, 10 miles W. of Rum Island. Lon. 3. 40. W. Lat. 57. 0. N.

\* **HELLWARD**, *adv.* [*from hell*.] Towards hell.

Be next thy care the sable sheep to place  
Full o'er the pit, and *hellward* turn their faces.

*Pope.*

**HELL-WEED**. See *CUSCUTA*.

(I) \* **HELM** denotes defence: as *Badhelm*, happy defence; *Sighelm*, victorious defence; *Bethelm*, eminent defence; like *Amyntas* and *Boris* among the Greeks. *Gibson's Camden.*

(II. 1.) \* **HELM**, *n. f.* [*helm*, Saxon, from *hel* to cover, to protect.] 1. A covering for the head in war; a helmet; a morrion; an headpiece.—

France spreads his banners in our noiseless field  
With plumed *helm* the slayer begins his threat.

*Shak.*

*Mneestheus* lays hard load upon his *helm*. *Dryden.*

2. The part of a coat of arms that bears the crest.—More might be added of *helms*, crests, mantling and supporters. *Camden's Remains.*

3. The upper part of the retort.—The vulgar chymists themselves pretend to be able, by repeated combinations, and other fit operations, to make the distilled parts of a concrete bring its own *caput mortuum* over the *helm*. *Boyle.* 4. [*helma*, Sax.] The steering; the rudder.—

They did not leave the *helm* in storm

And such they are make happy states. *B. Jon.*

More in prosperity is reason tost  
Than ships in storms, their *helms* and anchors.

*Devin.*

Fair occasion shews the springing gale,  
And int'rest guides the *helm*, and honour for the sail.

5. The station of government.—I may be wrong in the means; but that is no objection against the design: let those at the *helm* contrive it better. *Swift.* 6. In the following line it is difficult to determine whether *steersman* or *defender* is intended: I think *steersman*.—

You slander

The *helms* o' th' state, who care for you fathers,

When you curse them as enemies.

(2.) The **HELM** (§ 1, def. 4.) is a long and narrow piece of timber, or an assemblage of several pieces, suspended along the hind part of a ship's stern, where it turns upon hinges to the right or left, serving to direct the course of the vessel, as the tail of a fish guides the body. The *helm* is usually composed of 3 parts, viz. the rudder, the tiller, and the wheel, except in small vessels, where the wheel is unnecessary. As to the form of the rudder, it becomes gradually broader in proportion to its distance from the top, or to its depth under the water. The back, or inner part of it, which joins to the stern-post, is diminished into the form of a wedge throughout its whole length, so that the rudder may be more easily turned from one side to the other, where it makes an obtuse angle with the keel. It is supported upon hinges, which those that are bolted round the stern post at the after extremity of the ship, are called *grogg*

and are furnished with a large hole in the after-part of the stern-post. The other parts of the luger, which are bolted to the back of the rudder, are called *pasles*, being strong cylindrical pins, which enter into the goonges, and rest upon them. The length and thickness of the rudder is nearly equal to that of the stern-post. The rudder is turned upon its hinges by means of a long bar of timber, called the *tiller*, which is fixed horizontally in its upper end within the vessel. The movements of the tiller to the right and left, accordingly, direct the efforts of the rudder to the permanent of the ship's course as she advances; which, in the sea language, is called *steering*. The operations of the tiller are guided and assisted by a set of tackle, communicating with the ship's side, called the *tiller-rope*, which is usually composed of untarred rope-yarns for the purpose of sliding more readily through the blocks or pulleys.

(1) HELM, MANAGEMENT OF THE. To facilitate the management of the helm, the tiller-rope, in all large vessels, is wound about a wheel, which steers it with the powers of a crane or windlass. The rope employed in this service being moved from the fore end of the tiller *k*, to a pulley block *l*, on each side of the ship, (See *DECK*, and *PL. 93, fig. 7.*) is farther communicated to a wheel, by two blocks suspended near the mainmast, and two holes immediately above, leading up to the wheel, which is fixed upon an axis in the quarter-deck, almost perpendicularly over the fore end of the tiller. Five turns of the tiller-rope are usually wound about the barrel of the wheel; and when the helm is amidship, the middle rope is nailed to the top of the barrel, with a mark which the helmsman readily discovers the situation of the helm, as the wheel turns it from the starboard to the larboard side. The spokes of the wheel generally reach about eight inches beyond the circumference, serving as handles to the helmsman who steers the vessel. As the effect of a rope increases in proportion to the length of its lever, it is evident that the power of the helmsman in the wheel will be increased according to the length of the spokes beyond the circumference of the barrel. When the helm, instead of lying in a right line with the keel, is turned to one side or the other, as in *BD*, *Plate CLXXIII, fig. 9.* it receives an immediate shock from the water, which is along the ship's bottom in running ast from *B*; and this fluid pushes it towards the opposite side, whilst it is retained in this position: so that the stern, to which the rudder is confined, receives the same impression, and accordingly turns from *B* to *b* about some point *c*, whilst the head of the ship passes from *A* to *a*. It must be observed, that the current of water falls upon the rudder obliquely, and only strikes it with that part of its motion which acts according to the line of incidence, pushing it in the direction *NP*, with a force which not only depends on the velocity of the ship's course, by which this current of water is produced, but also upon the extent of the line of incidence. This force is by consequence composed of the square of the velocity with which the vessel moves, and the square of the sine of incidence, which will necessarily be greater or smaller

according to circumstances; so that if the vessel runs 3 or 4 times more swiftly, the absolute shock of the water upon the rudder will be 9 or 16 times stronger under the same incidence: and, if the incidence is increased, it will yet be augmented in a greater proportion, because the square of the sine of incidence is more enlarged. This impression, or power of the helm, is always very feeble, when compared with the weight of the vessel; but as it operates with the force of a long lever, its efforts to turn the ship are extremely advantageous. For the helm being applied to a great distance from the centre of gravity *G*, or from the point about which the vessel turns horizontally, if the direction *PN* of the impression of the water upon the rudder be prolonged, it is evident that it will pass perpendicularly to *R*, widely distant from the centre of gravity *G*: thus the absolute effort of the water is very powerful. It is not therefore surprising, that this machine impresses the ship with a considerable circular movement, by pushing the stern from *B* to *b*, and the head from *A* to *a*: and even much farther whilst she sails with rapidity, because the effect of the helm always keeps pace with the velocity with which the vessel advances. Amongst the several angles that the rudder makes with the keel, there is always one position more favourable than any of the others, as it more readily produces the desired effect of turning the ship, in order to change her course. To ascertain this, it must be considered, that if the obliquity of the rudder with the keel is greater than the obtuse angle *ABD*, so as to diminish that angle, the action of the water upon the rudder will increase, and at the same time oppose the course of the ship in a greater degree; because the angle of incidence will be more open, so as to present a greater surface to the shock of the water, by opposing its passage more perpendicularly. But at that time the direction *NP*, of the effort of the helm upon the ship, will pass with a smaller distance from the centre of gravity *G* towards *R*, and less approach the perpendicular *NL*, according to which it is absolutely necessary that the power applied should act with a greater effect to turn the vessel. Thus it is evident, that if the obtuse angle *ABD* is too much inclosed, the greatest impulse of the water will not counterbalance the loss sustained by the distance of the direction *NP* from *NL*, or by the great obliquity which is given to the same direction *NP* of the absolute effort of the helm with the keel *AR*. If, on the contrary, the angle *ABD* is too much opened, the direction *NP* of the force of the action of the helm will become more advantageous to turn the vessel, because it will approach nearer the perpendicular *NL*; so that the line prolonged from *NP* will increase the line *GR*, by removing *R* to a greater distance from the centre of gravity *G*: but then the helm will receive the impression of the water too obliquely, for the angle of incidence will be more acute: so that it will only present a small portion of its breadth to the shock of the water, and by consequence will only receive a feeble effort. By this principle it is easy to conceive, that the greatest distance *GR* from the centre of gravity *G*, is not sufficient to repair the diminution of force occasioned by the too great obliquity of the shock of the water. Hence we may conclude

conclude, that when the water either strikes the helm too directly, or too obliquely, it loses a great deal of the effect it ought to produce. Between the two extremes there is therefore a mean position, which is the most favourable to its operations. The diagonal NP of the rectangle IL represents the absolute direction of the effort of the water upon the helm. NI expresses the portion of this effort which is opposed to the ship's head-way, or which pushes her astern, in a direction parallel to the keel. It is easily perceived, that this part NI of the whole power of the helm contributes but little to turn the vessel; for, if IN is prolonged, it appears that its direction approaches to a very small distance GV from the centre of gravity G; and that the arm of the lever BN=GV, to which the force is applied, is not in the whole more than equal to half the breadth of the rudder: but the relative force NL, which acts perpendicular to the keel, is extremely different. If the first NI is almost useless, and even pernicious, by retarding the velocity; the second NL is capable of a very great effect, because it operates at a considerable distance from the centre of gravity G of the ship, and acts upon the arm of a lever GE, which is very long. Thus it appears, that between the effects NL and NI, which result from the absolute effort NP, there is one which always opposes the ship's course, and contributes little to her motion of turning; whilst the other produces only this movement of rotation, without operating to retard her velocity. Geometricians have determined the most advantageous angle made by the helm with the line prolonged from the keel, and fixed it at  $54^{\circ} 44'$ , presuming that the ship is as narrow at her floating-line, or at the line described by the surface of the water round her bottom, as at the keel. But as this supposition is absolutely false, inasmuch as all vessels augment their breadth from the keel upward to the extreme breadth, where the floating-line or the highest water-line is terminated; it follows, that this angle is too large by a certain number of degrees. For the rudder is impressed by the water, at the height of the floating line, more directly than at the keel, because the fluid exactly follows the horizontal outlines of the bottom; so that a particular position of the helm might be supposed necessary for each different incidence which it encounters from the keel upwards. But as a middle position may between all these points, it will be sufficient to consider the angle formed by the sides of the ship, and her axis, or the middle line of her length, at the surface of the water, in order to determine afterwards the mean point, and the mean angle of incidence. It is evident that the angle  $54^{\circ} 44'$  is too open, and very unfavourable to the ship's head-way, because the water acts upon the rudder there with too great a sine of incidence, as being equal to that of the angle which it makes with the line prolonged from the keel below. but above, the shock of the water is almost perpendicular to the rudder, because of the breadth of the bottom, as we have already remarked. If then the rudder is only opposed to the fluid, by making an angle of  $45^{\circ}$  with the line prolonged from the keel, the impression, by becoming weaker, will be less opposed to the ship's head-way, and the direction

NP of the absolute effort of the water upon the helm drawing nearer to the lateral perpendicular will be placed more advantageously, for the reasons above mentioned. On the other hand, experience daily testifies, that a ship steers well when the rudder makes the angle DBE equal to  $35^{\circ}$  only. It has been already remarked, that the effect of moving the wheel to govern the helm increases in proportion to the length of the spokes; and so great is the power of the wheel, that if the helmsman employs a force upon its spokes equivalent to 30 lb. it will produce an effect of 90 or 120 lb. upon the tiller. On the contrary, the action of the water is collected into the middle of the breadth of the rudder, which is very small in comparison with the length of the tiller; for the effort of the water is very little removed from the fulcrum B upon which it turns, whereas the tiller forms the arm of a lever 10 or 15 times longer, which also increases the power of the helmsman in the same proportion that the tiller bears to the lever upon which the impulse of the water is exerted. This force then is by consequence 10 or 15 times stronger; and the effort of 30 pounds, which at first gave the helmsman a power equal to 90 or 120 lb. becomes accumulated to one of 900 or 1800 lb. upon the rudder. This disadvantage arises from the shortness of the lever upon which the action of the water is impressed, and the comparative length of the tiller, or lever, by which the rudder is governed; together with the additional power of the wheel that directs the movements of the tiller, and still farther accumulates the power of the helmsman over it. Such a demonstration ought to remove the surprise which the prodigious effect of the helm is sometimes considered, from an insurrection to the channel: for we need only to observe the position of the water, which acts at a great distance from the centre of gravity G, about which the ship is supposed to turn, and we shall easily perceive the difference there is between the effort of the water against the helmsman, and the effect of the impulse against the vessel. With regard to the person who steers, the water acts only with the arm of a very short lever NB, of which B is the fulcrum: on the contrary, with regard to the vessel, the force of the water is impressed in the direction NP, which passes to a great distance from G, and acts upon a very long lever EG, which renders the action of the rudder extremely powerful in turning the vessel; so that, in a large ship, the rudder receives a shock from the water of 3700 or 3800 lb. which is frequently the case when the ship fails at the rate of 3 or 4 leagues by the hour; this force being applied in E, perhaps 120 or 150 feet distant from the centre of gravity G, will operate upon the ship to turn her about, with 370,000 or 308,000 lb.; whilst, in the latter case, the helmsman acts with an effort which exceeds not 30 lb. upon the spokes of the wheel. From what has been said, it is plain that the more a ship increases her velocity with regard to the sea, the more powerful will be the effect of the rudder, because it acts against the water with a force, which increases as the square of the swiftness of the ship, whether the ship advances or retreats; or, in other words, whether she has head-way or stern-way.

with this distinction, that in these two circumstances the effects will be contrary. For if the vessel retreats, or moves astern, the helm will be impressed from I to N; and instead of being pushed, according to NP, it will receive the effort of the water from N towards R; so that the stern will be transported to the same movement, and the head turned in a contrary direction. When the helm operates by itself, the centre of rotation of the ship, and her movement, are determined by estimating the force of this machine; that is to say, by multiplying the surface of the rudder by the square of the ship's velocity.

(4.) HELM, TERMS USED RESPECTING THE. In the sea language, *Bear up the helm*, signifies, let the ship go more at large before the wind: *Keep a mid-ship, or right the helm*, is, Keep it even with the middle of the ship: *Port the helm*, put it over the left side of the ship; and *Starboard the helm*, Put it on the right side of the ship.

\* To HELM. *v. a.* [from the noun.] To guide; to conduct. *Hammer.*—The very stream of his life, and the business he hath *helmed*, must give him a later proclamation. *Shak.*

HELMANAED, a town of Austria.

HELMBRECHT, a town of Franconia.

\* HELMED. *adj.* [from *helm*.] Furnished with headpiece.—

The *helmed* cherubim

Are seen in glittering ranks with wings display'd.

*Milton.*

HELMERSHAUSEN, a town of Hesse-Cassel.

(1.) \* HELMET. *n. f.* (Probably a diminutive of *helm*.) A helm; a headpiece; armour for the head.—

I saw him down; thrice up again, and fighting;

From helmet to the spur all bleeding o'er. *Shak.*

See'n darts are thrown at once, and some rebound

From his bright shield, some on his helmet found.

*Dryden.*

(2.) The HELMET, was anciently worn by horsemen both in war and in tournaments. It covered the head and face, only leaving an aperture at the front secured by bars, which was called the visor.

In achievements, it is placed above the effigy for the principal ornament, and is the mark of chivalry and nobility. Helmets vary according to the different degrees of those who wear them. They are also used as a bearing in coats of arms. See HERALDRY, Chap. IV. Sect. IV.

\* HELMINTHICK. *adj.* [from *helminth*.] Relating to worms. *DiB.*

HELMINTHOLITHUS, in natural history, a name given by Linnæus to petrified bodies resembling worms. Of these he reckons 4 genera: 1. Petrified lithophyta, found in the mountains of Iceland. 2. Petrified shells. 3. Petrified zoophytes. 4. Petrified reptiles.

(1.) HELMONT, John Baptist VAN, a celebrated Flemish gentleman, born at Brussels in 1577. He acquired such skill in natural philosophy, physics, and chemistry, that he was accounted a magician, and thrown into the inquisition: but having with difficulty justified himself, as soon as he was released he retired to Holland; where he died

Vol. XI. PART I.

in 1644. He published, 1. *De magnetica corporum curatone*. 2. *Februm doctrina inaudita*. 3. *Ortus medicince*. 4. *Paradoxa de aquis Spadani*; and other works, printed together in one vol. folio.

(2.) HELMONT, a small town of the Batavian republic, in the dep. of Dommel and Scheldt, and adjacent province of Dutch Brabant, with a good castle, seated on the Aa. Lon. 5. 37. E. Lat. 51. 31. N.

(1.) HELMSDALE, a river of Scotland, in Sutherland, called in the Celtic, *Abbie Iligb*, or *Avonaxillie*, which rises from several lakes in the parish of Kildonan, runs through it for 11 miles from NW. to SE. and falls into the German Ocean, 2 miles SW. of the Ord of Caithness, after a course of other 7 miles through the parish of Loth. It abounds with salmon, which are sent to London, by a company, who pay L. 133 sterling a year for the privilege of fishing in it.

(2.) HELMSDALE, a village on the above river, (Nº 1.) in the parish of Loth, where a boiling house is erected by the fishing company above-mentioned.

HELMSLEY, a town of Yorkshire, on the Rye, which has a good trade in cottons and linens: 22 miles N. of York, and 212 N. by W. of London. Lon. 1. 0. W. Lat. 54. 19. N.

HELMSMAN, *n. f.* a pilot, or steerfman.

(1.) HELMSTADT, a town of Germany, in the duchy of Brunswick, built by Charlemagne. Lon. 11. 10. E. Lat. 52. 20. N.

(2.) HELMSTADT, a town in the palatinate of the Rhine, 14 miles SE. of Heidelberg.

(3.) HELMSTADT, or HALMSTADT, a strong maritime town of Sweden, and capital of the province of Halland, seated at the mouth of the Nida, on the Baltic. Lon. 12. 48. E. Lat. 56. 38. N.

HELOISE, or ELOISA, the mistress, and afterwards the wife of Abelard, famous for her unfortunate affection for, and her Latin letters to him, after they had retired from the world. She died abbess of Paraclet in 1163, 20 years after him. See ABELARD.

HELONG-KIANG. See AMUR.

HELONIAS, in botany: A genus of the trigynia order, belonging to the hexandria class of plants; and in the natural method ranking under the 10th order, *Coronaria*. The corolla is hexapetalous; there is no calyx; and the capsule is trilocular.

HELOS, in ancient geography, a maritime town of Laconia, between Trinasus and Acrize, in the district of Helotea. In Pausanias's time it was in ruins. The people being subdued by the Lacedæmonians, were all reduced to a state of the most horrid slavery; and neither could recover their liberty, nor be sold out of the territory of Sparta. Hence the term *ulavrov*, in Hæpocrætion, for being in a state of slavery; and hence also the Lacedæmonians called the slaves of all nations whatever *helotes*. *Heloticus* is the epithet.

HELOTÆA, a district of Laconia.

HELOTÆ, } called also *Helci* and *Helentæ* by  
HELOTES, } Stephanus, and *LOTÆ* by Livy,  
HELOTS, } the inhabitants of Helos, and the slaves of the Spartans. See HELOS. The Spartans were forbidden the exercise of any mean or mechanical

nial employment, and therefore the whole care of supplying the city with necessaries devolved upon the Helots.

\* **HELP.** *n. s.* [from the verb; *helpe*, Dutch.]  
1. Assistance; aid; support; succour.—Mullest, despairing to recover the city, hardly escaped his enemies hands by the good *help* of his uncle. *Kneller*.—He may be beholden to experience and acquired notions, where he thinks he has not the least *help* from them. *Locke*.—So great is the stupidity of some of those, that they may have no sense of the help administered to them. *Smalridge*.

2. That which gives help.—Though these contrivances increase the power, yet they proportionably protract the time; that which by such *helps* one man may do in a hundred days, may be done by the immediate strength of a hundred men in one day. *Wilkins*.—Virtue is a friend and an *help* to nature; but it is vice and luxury that destroys it, and the diseases of intemperance are the natural product of the sins of intemperance. *Saath*.—Another *help* St Paul himself affords us towards the attaining the true meaning contained in his epistles. *Locke*. 3. That which forwards or promotes.—Coral is in use as an *help* to the teeth of children. *Bacon*. 4. Remedy.—There is no *help* for it, but he must be taught accordingly to comply with the faulty way of writing. *Holder on Speech*.

(1.) \* **To HELP.** *v. a.* preter. *helped*, or *help*; part. *helped*, or *helpen*. [*helpan*, Gothick; *helpan*, Saxon.] 1. To assist; to support; to aid.—

Let us work as valiant men behoves;

For boldest hearts good fortune *helpeth* out.

*Fairfax*.

—O Lord, make haste to *help* me. *Psalms*.—God *helped* him against the Philistines. 2 *Corin.* xxvi. 7. —They *helped* them in all things with silver and gold. 1 *Esar*.—A man reads his prayers out of a book, as a means to *help* his understanding and direct his expressions. *Stillingfleet*. 2. It has, in familiar language, the participle *out*, which seems to have meant originally, *out of a difficulty*.—

This he conceives not hard to bring about,

If all of you should join to *help* him *out*. *Dryden*.

—What I offer is so far from doing any diskindness to the cause these gentlemen are engaged in, that it does them a real service, and *helps* them *out* with the main thing whereat they stuck. *Woodward's Natural History*.—

The god of learning and of light,

Would want a god himself to *help* him *out*. *Swift*.

3. To raise by help: with *up*.—Woe to him that is alone when he falleth; for he hath not another to *help* him *up*. *Ecc.* iv. 10. 4. To enable to surmount: with *over*.—Wherever they are at a stand, *help* them presently *over* the difficulty without any rebuke. *Locke*. 5. To remove by help: with *off*.—Having never learned any laudable manual art, they have recourse to those foolish or ill ways in use, to *help off* their time. *Locke*. 6. To free from pain or vexation.—*Help* and ease them, but by no means bemoan them. *Locke*. 7. To cure; to heal: with *of*. Obsolete.—

Love doth to her eyes repair,

To *help* him of his blindness.

*Shakspeare*.

R. It is used commonly before the disease.—The true calamus *helps* coughs. *Gerrard*. 9. To remedy; to change for the better.—

Cease to lament for that thou can'st not *help*;  
And study help for that which thou lament'st.

*Shakspeare*.

10. To prevent; to hinder.—Those few who reside among us, only because they cannot *help* us. *Swift*.—If they take offence when we give none, it is a thing we cannot *help*, and therefore the whole blame must lie upon them. *Saundersen*.—It is a high point of ill nature to make sport with any man's imperfections that he cannot *help*. *L'Estrange*.

Those closing skies may still continue bright;  
But who can *help* it, if you'll make it night.

*Dryden*.

She, betwixt her modesty and pride,

Her wishes, which she could not *help*, would  
hide.

*Dryden*.

—It is reckoned ill manners for men to quarrel upon difference in opinion, because that is a thing which no man can *help* in himself. *Seneca*. 11. To forbear; to avoid.—He cannot *help* believing, that such things he saw and heard. *Atterbury*.—I cannot *help* remarking the resemblance betwixt him and our author in qualities, fame, and fortune. *Pope*. 12. To promote; to forward.—And then *helped* forward the afflictive. *Zerb*.—If you make the earth narrower at the bottom than at the top, in fashion of a sugar-loaf reversed, it will *help* the experiment. *Bacon*. 13. **To HELP to.** To supply with; to furnish with.—Whom they would *help to* a kingdom, those reign: and whom against they would, they displace. 1 *Mac.* viii. 13.—The man that is now with Tiresias can *help* him to his end again. *L'Estrange*. 14. To present at table.—

In plenty starving, tantaliz'd in state,

And complaisantly *help'd* to all I hate;

Treated, carous'd, and tir'd, I take my leave.

*Pope*.

(2.) \* **To HELP.** *v. a.* 1. To contribute and  
succour.—

Sir, how come it you

Have *help* to make this rescue?

*Shakspeare*.

—Discreet followers and servants *help* much to reputation. *Bacon*.—

Bennet's grave look was a pretence,

And Danby's matchless impudence

*Help'd* to support the knave.

*Dryden*.

—A generous present *helps* to persuade as well as an agreeable person. *Garrick*. 2. To bring a supply.—Some, wanting the talent to write, make it their care that the actors should *help out* when the muses failed. *Rymer*.

\* **HELPER.** *n. s.* [from *help*.] 1. An assistant; an auxiliary; an aider; one that helps or assists.—There was not any left, nor any *helper* for Israel. 2 *Kings*.—We ought to receive such, that we might be fellow *helpers* to the truth. 3 *Jo.* vi. —It is impossible for that man to despair who remembers that his *helper* is omnipotent. *Taylor's Rule of living holy*. 2. One that administers remedy.—Compassion, the mother of tears, is not always a mere idle spectator, but an *helper* sometimes of evils. *Merr*. 3. One that supplies with any thing wanted: with *to*.—

Heaven

Hath brought me up to be your daughter's  
dower,

As it hath fated her to be my motive

And *helper* to a husband.

*Shakspeare*

4. b

3. A supernumerary servant—I live in the corner of a vast unfurnished house: my family consists of a steward, a groom, a *helper* in the stable, a footman, and an old maid. *Swift to Pope.*

\* **HELPPFUL**. *adj.* [*help* and *full*.] 1. Useful; that which gives assistance.—

Let's fight with gentle words,

'Till time lend friends, and friends their *helpful* swords. *Shakesp.*

He orders all the succours which they bring;  
The *helpful* and the good about him run,

And form an army. *Dryden.*

2. Wholesome; salutary.—A skilful chymist can as well, by separation of visible elements, draw *helpful* medicines out of poison, as poison out of the most healthful herbs. *Raleigh's History.*

\* **HELPLESS**. *adj.* [from *help*.] 1. Wanting power to succour one's self.—

One dire shot

Cloze by the board the prince's main-mast bore;  
All three now *helpless* by each other lie. *Dryd.*

—Let our enemies rage and persecute the poor and the *helpless*; but let it be our glory to be pure and peaceable. *Rogers.* 2. Wanting support or assistance.—

How shall I then your *helpless* fame defend?

'Till then be infamy to seem your friend. *Pope.*

Irremediable; admitting no help.—

Such *helpless* harms it's better hidden keep,  
Than rip up grief, where it may not avail. *Spenser.*

Unsupplied; void: with *of*. This is unusual, perhaps improper.—

Naked he lies, and ready to expire,  
*Helpless* of all that human wants require. *Dryd.*

\* **HELPLESSLY**. *adv.* [from *helpless*.] Without help; without succour.

\* **HELPLESSNESS**. *s. f.* [from *helpless*.] Want of help; want of succour.

**HELSIMBURG**, } or **ELSINBURG**. See **EL-**  
**HELSINGBORG**, } **SIMBURG**.

**HELSINGFORS**, a sea port of Sweden, in the prov. of Nyland, on the N. coast of the Gulf of Bothnia, built by Gustavus Vasa. The harbour is deep, and is defended by several forts. It lies 24 miles ESE. of Abo. Lon. 24. 43. E. Lat. 60. 2 N.

**HELSINGIA**, or **HELSINGLAND**, a province of Sweden, bounded on the N. by Jemtnerland and Lapland; on the E. by the Bothnic gulf; on the S. by Gestrícia, and SW. and W. by Dalecarlia. It is full of mountains and forests. The principal towns are Hudwicksväld, Alta, and Dillsbo. The rivers and lakes abound with fish. Its chief trade is in wood, flax, linen, iron, butter, tar, &c. It is 120 miles long and 90 broad.

**HELSINGIC CHARACTER**, a peculiar character found on stones in Helzingia, resembling the hawk.

**HELSINGOER**. See **ELRINGUR**.

**HELSTON**, a populous borough of Cornwall, seated on the Cober, near its influx into the sea.

It was one of those appointed for the coinage of tin, and the place of assembly for the W. division of the shire. By a grant of Edward III. it has a market on Monday, and 8 fairs. It had formerly a priory and a castle, and sent members to parliament in the reign of Edward I. but was not incorporated till the 27th of Q. Elizabeth, who ap-

pointed a mayor, 4 aldermen, and 24 assistants. It was re-incorporated August 16, 1774, and still sends two members to parliament. It has a large market-house, a guild hall, and 4 streets in the form of a cross, with a channel of water running through each. The steeple of the church, with its spire, is 90 feet high, and a sea-mark. King John exempted Helston from paying toll any where but in London; and the citizens from being impleaded any where but in their own borough. It is 12 miles E. of Penzance, and 174 WSW. of London. Lon. 5. 17. W. Lat. 50. 7. N.

**HELTER**, a river of Northumberland.

\* **HELTER-SKELTER**. *adv.* [As *Skinner* fancies, from *beolster* *scada*, Sax. the darkness of hell; hell, says he, being a place of confusion.] In a hurry; without order; tumultuously.—

Sir John, I am thy Pistol, and thy friend;

And *better-skelter* have I rode to England,

And tidings do I bring. *Shakesp.*

—He had no sooner turned his back but they were at it *better-skelter*, throwing books at one another's heads. *L'Esrange.*

\* **HELVE**. *s. f.* [*helfe*, Saxon.] The handle of an axe.—The slipping of an axe from the *helve*, whereby another is slain, was the work of God himself. *Ralegh's History.*

\* **To HELVE**. *v. a.* [from the noun.] To fit with a helve or handle.

**HELVELIA**, in botany; a genus of the natural order of fungi, belonging to the cryptogamia class of plants. The fungus is of the shape of a top.

**HELVETIA**, or **CIVITAS HELVETIÆ**, in ancient geography, the country of the **HELVETII**, was divided into 4 pagi or Cantons, situated to the S. and W. of the Rhine, by which they were divided from the Germans; and extending towards Gaul, from which they were separated by mount Jura on the W. and by the Rhodanus and Lacus Lemanus on the S. and therefore called a Gallic nation. It was formerly a part of Celtic Gaul, but by Augustus assigned to Gallia Belgica; lately called **SWITZERLAND**, and now the **HELVETIC REPUBLIC**.

(1.) **HELVETIC**, *adj.* having a relation to the Switzers, or inhabitants of the Swiss cantons, who were anciently called **HELVETII**.

(2.) **The HELVETIC BODY**, before the war, comprehended the republic of Switzerland, consisting of 13 cantons, which made so many distinct commonwealths, united under one general confederacy, in the 14th century. See **SWITZERLAND**. These States have undergone various revolutions, and the country has been subjected to much distress, from having been repeatedly the scene of various bloody battles during the present war. See **REVOLUTION** and **WAR**. They are now (Sept. 1801.) united under the title of the **HELVETIC REPUBLIC**.

(3.) **The HELVETIC REPUBLIC**, one of the modern democratic States of Europe, formed by the French out of the ci-devant cantons of Switzerland, and new-modelled after the form of the **FRENCH REPUBLIC**, under a Directory, two Councils, &c. on the 22d March, 1798. (See **COUNCIL**, § 8, 9; and **DIRECTORY**, § 2, 3.) On the 10th April, 1799, the whole country of the **GRISONS**, (except the *Valteline*, *Chiavenna*, and

Bornia, which in Nov. 1797, were annexed to the Cisalpine republic,) was united to the Helvetic republic, after the expulsion of the Austrians by the French under gen. Massena; who in 3 days took 10,000 prisoners, 40 cannon, and 20 standards, with proportional ammunition and stores, &c. Since that period, these countries have been repeatedly over-run by the troops of the Belligerent powers; and various changes have been made in their constitution. See REVOLUTION, and WAR.

HELVETII, a people of Gallia Belgica, near the country of the Allobroges and the Provincia Romana; famed for bravery and a turn for war; and not destitute of learning. See DAVIDI, § 4.

(1.) HELVETIUS, Adrian, an eminent physician, born in Holland, in 1656. After having studied physic at Leyden, he went to Paris, where he acquired great reputation in his profession, by discovering a cure for the dysentery, then prevalent. Lewis XIV. gave him 1000 louis d'ors for publishing his method; made him inspector general of the hospitals in Flanders, physician to the D. of Orleans, &c. He died at Paris, in 1711, aged 63. He wrote a treatise on the most common diseases, and their remedies; (the best edition is that of 1724, in 3 vols. 8vo.) and other works.

(2.) HELVATIUS, John Claude, son of the doctor, (N° 1.) was born in 1683. He was first physician to the queen; inspector general of the military hospitals; a member of the Academy of Sciences at Paris, of the Royal Society in London, and of the Academies of Prussia, Florence, and Bologna. He was author of 1. *Idee Générale de l'Economie animale*, 1722, 8vo. 2. *Principia Physico-Medica, in tyronum Medicinæ gratiam conscripta*, 2 vols. 8vo. He died in 1755, aged 70.

(3.) HELVATIUS, Claude Adrian, son of the preceding, (N° 2.) was born at Paris, in 1715, and in 1738, published a celebrated book *De l'Esprit*. Voltaire calls him "a true philosopher;" but his book was stigmatized by the authors of the *Journal de Trévoux*, and suppressed by the government, on account of its atheistical principles. Upon this he came over to England, in 1764, and went afterwards to Berlin, where he was well received by Frederick II. He wrote also, 1. *Le Bonheur* a poem in 6 cantos: 2. *Of Man*, a philosophical work; and, 3. *The Child of Nature improved by Chance*; an indecent romance. He died at Paris in 1771.

HELVETUM, in ancient geography, a town of Germany, in Alsatia, now called *Schibstadt*.

HELUI. See HALUI.

HELVICUS, Christopher, D. D. professor of divinity, Greek, and the Oriental tongues, in the university of Gessen, was born near Francfort, in 1581, educated at Marburg, and died in 1617. He published several Lat'n poems, lexicons, and grammars of different languages. The Hebrew language was so familiar to him, that he spoke it as fluently as his mother tongue. His *Chronological Tables* have been greatly esteemed.

HELVIDIANS, the disciples of HELVIDIUS; the same with the ANTIDICOMARIANITES.

HELVIDIUS, a disciple of Auxentius the Arian, whose distinguishing principle was, that Mary, the mother of Jesus, did not continue a virgin, but had children by Joseph. He flourished in the end of the 4th century.

HELVII, an ancient people of Gallia Narbonensis, who possessed the country since called the VIVARAIS. Cæsar calls them *Helvi*; Pliny *Helvi*. Their chief city was ALBA, now ALBI, or so there think VIVERRS.

HELVOETSLUYS, a sea port town of the Batavian republic, in the department of Delft, island of Voorn, and late province of S. Holland. It has a handsome quay, is well fortified, and esteemed the safest harbour in the country. The largest men of war may come up to the middle of the town, and the English packet boats frequent it. In Jan. 1795, it surrendered to the French, called Pichegru. It is 12 miles W. of Dort, and 15 SW. of Rotterdam. Lon. 4. 20. E. Lat. 51. 48. N.

HELWICK HEAD, a cape of Ireland, in Waterford, on the S. point of the entry into Douglas Bay. Lon. 7. 33. W. Lat. 52. 2. N.

HELYOT, Peter, a Franciscan of the order of Picpis, of English extraction, who wrote a *History of Monastic Orders*, in 2 vols. 4to. He was born in 1660, and died in 1716, aged 56.

HELZSTADT, a town of Upper Saxony, Mansfeld, 9 miles N. of Eisleben, and 16 S. of Quedlinburg. Lon. 29. 6. E. of Ferro. Lat. 51. 35. N.

(1.) \* HEM. *n. f.* [*hem*, Sax.] 1. The edge of garment doubled and sewed to keep the threads from spreading.—Rowers must be made of even cloth white and gentle, without *hem*, seam, or thread hanging by. *Wife-man*. 2. [*Hemmen*, Dutch.] The noise uttered by a sudden and violent expulsion of the breath.—I would try if I could cry *hem* and have him. *Shak.*—He loves to clear his pipe in good air, and is not a little pleased with one who takes notice of the strength which he exerts in his morning *hems*. *Addison*. 3. *Lat. Hem!* [Lat.]

(2.) HEM, a town of Holstein, 3 m. S. of Lauenburg.

(1.) \* To HEM. *v. a.* 1. To close the edge of cloth by a hem or double border sewed together. 2. To border; to edge.—

All the skirt about

Was *hem'd* with golden fringe. *Fairy Queen*

Along the shore of silver streaming Thames  
Whose rushy bank, the which his river brook

3. To enclose; to environ; to confine; to surround. —So of either side, stretching itself in a narrow length, was it *hemmed in* by woody hills, as indeed nature had meant therein to make a place for beholders. *Sidney*.—

What lets us then the great Jerusalem  
With valiant squadrons round about to *hem*?

Why, Neptune, hast thou made us stand alone  
Divided from the world for this, say they;

*Hem'd in* to be a spoil to tyranny,  
Leaving affliction hence no way to fly? *Dani.*

I hurry me in haste away,  
And find his honour in a pound

*Hem'd* by a triple circle round,  
Chequer'd with ribbons, blue and green. *As You Like It*

(2.) \* To HEM. *v. n.* [*hemmen*, Dutch.] To utter a noise by violent expulsion of the breath.

HEMAN, an inspired psalmist of Israel, author of the 84th Psalm. Three persons of this name are mentioned.

mentioned in Scripture, viz. 1. Heman, the son of Zerah and grandson of Judah : (1 Chron. ii. 6.) 2. Heman, the son of Mahol, who with Ethan the Gershonite and others, is celebrated for wisdom : (1 Kings iv. 31.) and, 3. Heman the son of Joel and grandson of Shemuel, or Samuel, a Kohathite, and one of the chief singers, whom David set over his service. (1 Chron. vi. 31, 33.) Commentators are uncertain which of these three was the same; but we think the last is the most probable, not only from the time he lived in, and the office he held, but also from the genealogies of the other two psalmists, ASAPH and EISHA, being recorded in the same chapter, immediately after the generation of his ancestors.

**HAMATH, or HAMATH.** See **HAMATH.**

**HAMATH-ZOBA,** the 'E. pa.' of **HAMATH.**

**HAMATITES.** See **HAMATITES.**

**HAMELAR, John,** an eminent antiquarian, and son of Antwerp, in the 17th century, born at Haggae. He wrote a work, entitled, *Expeditio innotatum imperatorum Romanorum a Julio Cæsare ad Heraclium*; which is very scarce, though it had several editions. He died in 1640.

**HAMELSTEDE,** a town of Holstein.

**HEMEROBAPTISTS,** a sect among the ancients, thus called from their washing and baptizing daily in all seasons; and performing this duty with the greatest solemnity, as a religious rite necessary to salvation. Epiphanius says, they derived the resurrection in common with the Sadducees and entertained some other opinions of theirs. **LIBRARIUS N° 2.**

**HEMEROBIVUS,** in zoology, a genus of insects in the Neuroptera order; the characters of which are: The mouth is furnished with two teeth; there are 4. the wings are deflected, but not united; and the antennæ are bristly, and longer than the breast. There are 15 species, principally distinguished by their colours.—They are named from the shortness of their lives, which, however, continue several days. In the state of pupæ they are great devourers of plant lice, for which has had the name of the *lion of the plant*. They are also cannibals, and devour each other after their transformation. The eggs are born in gummy pedicles, spun by the insects from their abdomen. These eggs are deposited upon a sand set in the form of bunches. They have been taken for parasitic plants. In 15 or 16 days the pupa attains to its full growth. With its spinous wheel at its tail, it makes itself a small, round, silky cocoon, of a close texture. In summer, at the end of 3 weeks, the hemerobivus issues forth with its wings; but when the cocoon has not been spun, the chrysalis remains in it the whole year, and does not undergo its final metamorphosis till the next spring. The flight of this insect is very: some species have an excrementitious secretion. One is named the *water hemerobivus*, because it is mostly at the water side.

**HEMEROCALLIS, DAY LILY,** or *lily asphodel*: one of the monogynia order, belonging to the Liliacea class of plants; and in the natural ranking under the 10th order, *Coronarieæ*. The corolla is campanulate, with the tube cylindrical; the stamina declining downwards.

**HEMEROCALLIS FLAVA,** the *yellow day lily*,

with strong fibrous roots, sending up large hollow keel shaped leaves, two feet long, upright, leafless, firm stalks, two feet high; dividing at top into several foot stalks, each terminated by one large liliaceous yellow flower of an agreeable odour. Of this there is a variety called the

**HEMEROCALLIS MINOR,** or small yellow day-lily.

2. **HEMEROCALLIS FULVA,** the *reddish* or *copper-coloured day lily*, hath roots composed of strong fleshy fibres and large oblong tubes; radical, keel-shaped, hollow, pointed leaves, a yard long, reflected at top; with leafless stalks three or four feet high, and large copper-coloured liliaceous flowers. These have large stamina, charged with a kind of brown-coloured farina; which, on being touched or smelled to, is discharged in great plenty all over the hands and face.—Both these species are hardy, and may be easily propagated by parting their roots.

(1.) **HEMERODROMI,** [from *hēmera*, day, and *dromos*, course, &c.] among the ancients, were guards, appointed for the security of cities and other places. They went out of the city every morning, as soon as the gates were opened, and kept all day patrolling round the place; sometimes also making excursions farther into the country, to see that there were no enemies lying in wait to surprise them.

(2.) **HEMERODROMI** were also a sort of couriers, who only travelled one day, and delivered their dispatches to a fresh man, who run his day, and so on to the end of the journey. The Greeks had also these sort of couriers, which they derived from the Persians, who first used them, as appears from Herodotus.

**HEMEROTROPHIS,** [from *hēmera*, Gr. a day, and *trophis*, food,] in antiquity, a measure of capacity, the same with the *choenix*; so called from its holding one day's food.

**HEMI,** [from *hēmi*, Gr. half,] a word used in the composition of various terms, signifying the same with *femi* or *demi*, half.

(1.) **HEMICRANIA,** } a species of head-ach,

(1.) **HEMICRANY,** } supposed to be occasioned by a congestion of blood in the vessels of one side of the head. See § 2.

(2.) \* **HEMICRANY.** n. f. [*hēmi*, half, and *cranium*, the skull, or head.] A pain that affects only one part of the head at a time. *Quincy.*

(1.) \* **HEMICYCLE.** n. f. [*hēmi*, half, and *kyklos*, circle.] A half round.

(2.) **HEMICYCLE,** [of *hēmi*, half, and *kyklos*, circle,] a semicircle, is particularly applied, in architecture, to vaults in the cradle form; and arches or sweeps of vaults, constituting a perfect semicircle. To construct an arch of hewn stone, they divide the hemisphere into so many voussoirs; taking care to make them an uneven number, that there be no joint in the middle, where the key-stone should be. See **BUILDING**, § 3; and **KEY.**

(3.) **HEMICYCLE,** or **HEMICYCLUM,** was also a part of the orchestra in the ancient theatre.

(4.) **HEMICYCLE,** } was also used for a sort of **HEMICYCLUM,** } sun-dial, the cusp whereof looked to the North.

**HEMISPERMS,** in botany; a genus of the angiospermia order, belonging to the didynamia class of plants. The capsule is bilocular, with one of the

the cells more gibbous than the other: the corolla is wheel-shaped; with one division greater, and inverse heart-shaped; the interstice of the divisions nectar-bearing.

(1.) \* **HUMINA**. *n. f.* An ancient measure: now used in medicine to signify about ten ounces in measure. *Quincy*.

(2.) The **HUMINA**, in Roman antiquity, was a liquid measure, which, according to Arbuthnot, was equal to half a wine-pint English measure; its contents being 2.818 solid inches.

**HEMIOBOLON**, a weight often mentioned by the ancient writers in medicine, signifying the half of the obolos, or the 12th part of a dram, *i. e.* 5 grains.

**HEMIONITIS**, [from *hemionus*, a mule.] in botany, **MULE'S TERN**; a genus of the natural order of filices, belonging to the cryptogamia class of plants. The fructifications are in lines decussating or crossing each other.

**HEMIONUS**. See **EQUUS**, N° IV.

(1.) \* **HEMIPLEGY**. *n. f.* [*hemis*, half, and *plegma*, to strike or seize.] A palsy, or any nervous affection relating thereunto, that seizes one side at a time; some partial disorder of the nervous system.

(2.) **HEMIPLEGY**, } **HEMIPLEGIA**. See **MA-**  
**HEMIPLEXIA**, or } **DICINE**, *Index*.

**HEMIPTERA**, [from *hemis*, half, and *pteron*, wing,] in the Linnæan system, the 2d order of insects, comprehending 12 genera, viz. the *blatta*, *mantis*, *gryllus*, *fulgora*, *cixida*, *notonecta*, *nepa*, *cimex*, *aphis*, *chermes*, *coccus*, and *strepus*; and a great number of species. See **ENTOMOLOGY**, **INSECTS**, and **ZOOLOGY**.

(2.) \* **HEMISPHERE**. *n. f.* [*hemisphaerion*; *hemisphere*, French.]—The half of a globe when it is supposed to be cut through its centre in the plane of its greatest circles.—

That place is earth, the seat of man; that light

His day, which else, as th' other *hemisphere*,  
Night would invade. *Milton*.

A hill

Of Paradise, the highest from whose top  
The *hemisphere* of earth, in clearest ken  
Stretch'd out to th' amplest reach of prospect lay. *Milton*.

—The sun is more powerful in the northern *hemisphere*, and in the apogæum; for therein his motion is slower. *Brown*.—

In open prospect nothing bounds our eye,  
Until the earth seems join'd unto the sky;  
So in this *hemisphere* our utmost view  
Is only bounded by our king and you. *Dryden*.

(2.) **HEMISPHERE**, in astronomy, is particularly used for one half of the mundane sphere. The equator divides the sphere into two equal parts, called the *northern* and *southern hemispheres*. The horizon also divides the sphere into 2 parts, called the *upper* and the *lower hemispheres*.

(3.) **HEMISPHERE** is also used for a map, or projection, of half the terrestrial globe, or half the celestial sphere, on a plane. Hemispheres are frequently called *planispheres*.

(4.) **HEMISPHERE**. See **GEOMETRY**.

(5.) **HEMISPHERES**, **MAGDEBURG**. See **CO-**  
**MESION**, § 5.

\* **HEMISPHERICAL**. } *adj.* [from *hemisphaerion*]

\* **HEMISPHERICK**. } Half round; containing half a globe.—The thin film of water swells above the surface of the water it swims on, and commonly constitutes *hemispherical* bodies with *Boyle*.—A pyrites, placed in the cavity of one of an *hemispherick* figure, in much the same manner as an acorn in its cup. *Woodward on Fossils*.

(1.) \* **HEMISTICK**. *n. f.* [*hemis*, half, and *stichos*, a verse, Fr.] Half a verse.—He broke off in the *hemistich*. *Dryden's Dufresnoy*.

(2.) **HEMISTICK** denotes also a verse not completed. Of this there are frequent examples in Virgil's *Æneid*; but whether they were left unfinished by design or not, is disputed among learned: such are,—

*Ferro accincta vocat. Æn. II. v. 614.*

And, *Italiam non sponte sequor. Æn. IV.*  
In reading common English verses, a short is required at the end of each *hemistich* or verse.

**HEMITONE**, in the ancient music, was what we now call a half note or *semitone*.

**HEMITERTIUS**, [from *hemis*, half, and *tertianus*,] in medicine, a kind of fever, denoting the same as *semi-tertian*, returning twice every 24 hours.

(1.) \* **HEMLOCK**. *n. f.* [*hemilos*, Sax.] herb.—The leaves are cut into many minute parts: the petals of the flower are bifid, shaped, and unequal: the flower is succeeded by two short channeled seeds. One sort is sometimes used in medicine, though it is noxious: the *hemlock* of the ancients, which was such a violent poison, is generally supposed different.

He was met even now,

Crown'd with rank fumiter and furrow-weed,  
With hardocks, *hemlock*.

—We cannot with certainty affirm, that men can be nourished by wood or stone, or that men will be poisoned by *hemlock*. *Locke*.

(2.) **HEMLOCK**. See **CICUTA** and **CONIUM**.

(3.) **HEMLOCK DROP-WORT**. See **OSNABURGH**.

(4.) **HEMLOCK, LESSER**. See **ÆTHUSA**.

(5.) **HEMLOCK, WATER**. See **CICUTA**.

**HEMMAU**, a town of Bavaria, in Neuchâtel.

**HEMMENDORF**, a town of Lower Saxony.

**HEMMINGFORD**, Walter de, an English

historian of the 14th century. He was an abbot in Gilsborough Abbey, in Yorksh. and wrote an English Chronicle, which comprehends the period between 1066 and 1308. He died in 1341.

**HEMODES**, in ancient geography, 7 islands in Denmark, now called Zeeland, Fuyaca, Lalandt, Muen, Palster, Lalandt, and Femern.

**HEMOIPTOTON**. See **ORATORY**.

(1.) \* **HEMORRHAGE**. } *n. f.* [*hemorrhagia*, Fr.]

(1.) \* **HEMORRHAGY**. } *morrhagia*, Fr.] violent flux of blood.—Great *hemorrhagy* is the separation. *Ray*.—Twenty days fasting not diminish its quantity so much as one *hemorrhage*. *Arbuthnot*.

(2.) **HEMORRHAGY**. See **HEMORRHAGIA**.

(1.) \* **HEMORRHOIDAL**. *adj.* [*hemorrhoides*, Fr. from *hemorrhoids*.] Belonging to the veins of the fundament.—Besides there are hemorrhages of the nose, and *hemorrhoidal* veins, and flux of rheum. *Ray*.

Enlist upon the field a battle flood

Of leeches, spouting hemorrhoidal blood. *Garth.*

1.) HEMORRHOIDAL. See HÆMORRHOIDAL.

2.) \* HEMORRHOIDS. *n. s.* [*aignijides*; *hemoroids*, French.] The piles; the emroids.—*I the hemorrhoids. Swift.*

3.) HÆMORRHOIDS. See MEDICINE, *Index.*

4.) \* HEMP. *n. s.* [*hempe*, Sax. *hemp*, Dutch; *hemu*.] A fibrous plant of which coarse linen ropes are made.—It hath digitated leaves opposite to one another: the flowers have no visible stamens; it is male and female in different plants. *It is useful for cordage and cloth. Miller.*—

Let gallows go for dog; let man go free,  
And let not hemp his wind-pipe suffocate. *Shak.*  
Hemp and flax are commodities that deserve encouragement both for their usefulness and profit. *Marr.*

5.) HEMP. See CANNABIS.—It does not appear that the ancients were acquainted with the hemp, in respect of the thread it affords. *P.* who speaks of the plant in his natural history, lib. xi. cap. 23. says not a word of this; but he mentions the virtues of its stem, leaves, and root. *Id.* what some writers on the Roman antiquities assert, viz. that the hemp necessary for the fleet was all stored up in two cities of the empire, viz. at Ravenna and Vienne, under the direction of two procurators, called *procuratores hempi*, must be understood of LINUM.

6.) HEMP, ANNUAL IMPORTS OF. The use of hemp is so extensive and important, that vast quantities of it are annually imported into this kingdom from those countries where it is in greatest plenty, of which Russia is one. *P.* the quantity imported into England amounted to 12,000 tons. Sir John Sinclair observes, that in 1785, the quantity exported from St. Petersburg in British ships was as follows:

Russian hemp	2,038,791 poods.
Polish	37,383
American	28,374
Indo-Banile	19,252
	<hr/>
	2,123,798

At 43 poods to a ton, the above quantity amounts to 17,695 tons; and supposing it to take to produce a ton of hemp, the whole of ground requisite for this purpose would be to 22,475 acres. The annual import of hemp into Britain and Ireland in 1799 was estimated at 10,000 tons, which, at an average, of L. 40 per ton, amounts to L. 400,000. This circumstance will enable the reader to form some idea of the value of hemp, into which so many labouring men were thrown in 1800, by the edicts of prohibiting the exportation of Russian hemp from any part of this kingdom.

7.) HEMP, BOUNTIES AND DUTIES ON. The great uses of hemp, (§ 10.) and the superiority of that produced in Britain to other kinds, rendered the culture of it an object of attention to government. Accordingly in 1787, a bounty of 10s. per stone was allowed on all the hemp imported into England; and probably with a view to promote the growth of English hemp; duties

have been laid on that which comes from abroad. Dressed hemp in a British ship pays 1s. 4s. per cwt. import duty; in a foreign one 1s. 6s. 9d.; and in both cases a drawback of 1s. 19s. is allowed. Undressed hemp in a British ship pays 3s. 6d.; and in a foreign one 3s. 11d. In both cases the drawback is 3s. 4d. The export of British hemp is free.

(5.) HEMP, CHINESE, a newly discovered species of Cannabis, of which an account is given in the *Philos. Transf.* Vol. 72. p. 46. In that paper Mr Fitz-Gerald, vice-president of the society for encouraging arts, mentions his having received the seeds from the late Mr Elliot; which being sown, according to his directions, produced plants 24 feet high, and nearly 7 inches in circumference. These being pulled in November, and steeped for a fortnight in water, were placed against a southern wall to dry. After this the hemp was found to separate easily from the woody part; and so great was the produce, that 32 plants yielded 3½ lb. In consequence of this success, Mr Fitzgerald applied to the directors of the India company to procure some of the seeds from China; which being obtained, the society were furnished, in 1785, with some of the seeds, which were distributed to several of the members. Two of the species, tried by the D. of Northumberland, rose to the height of 24 feet 7 inches, and would even have risen higher had they not been hurt by a high wind. The result of Dr Hinton's experiments is related under the article CANNABIS.

(6.) HEMP, CULTIVATION OF. See CANNABIS SATIVA. In Italy hemp is generally cultivated, though the Bolognese only can pretend to any superiority in the management of it. It is there sown upon the best lands, which are rich strong loams; and on which they are at all possible pains to procure a fine friable surface. For manure they use dung, pieces of rotten cloth, feathers, and horns brought from Dalmatia. The plant, however, may be cultivated upon ground of every kind; the poorer land producing that which is finer in quality though in smaller quantity; whereas strong and rich land produces a great quantity but coarser. It does not exhaust the land on which it grows like flax. A Sussex manufacturer, who writes on this subject in the *Annals of Agriculture*, informs us, that it may be raised for many years successively on the same ground, provided it be well manured. An acre requires from 9 to 12 pecks, according to the nature of the soil: the latter being the most usual, though a variation in the quality of the soil makes an alteration both in the quantity and quality of the hemp. An acre produces on an average 36 or 38 stone. The season for sowing it extends from the 25th March to the 25th of June. The seed ought always to be sown thin, not exceeding two bushels to an acre, and with a drill plough still less will answer. The male and female being distinct plants, of which the latter only produces seed, regard must be had to this circumstance. In Sussex the male and female are pulled together about 13 weeks after the sowing, but in the fens are often separated. This last method is recommended by the abbe Brulle, who directs that little paths should be made lengthwise through the field, about 7 feet distant, to allow

low a passage for the person who pulls up the male hemp, from among the females, which require to stand more than a month after, to ripen the seeds. The male hemp (or, as it is commonly but improperly called, the *female* hemp) is known to be ripe by the fading of the flowers, the falling of the farina secundana, and some of the stalks turning yellow. After the whole of this kind is pulled, it must be manufactured, and ought to be worked if possible while green; the hemp thus produced being much finer than that which is previously dried. The male hemp, however, is always in smaller quantity than the female; and therefore where the crop is large, it will be impossible to work the whole as fast as it is pulled or cut. It is known to be ripe by the stems becoming pale; but it must be remembered that hemp of any kind will be much less injured by pulling the plants before they are ripe than by letting them stand too long. The female hemp being stripped of its leaves, &c. (See § 7.) will soon be dry for storing by the heat of the atmosphere, though sometimes it may be necessary to use artificial means; but where these are used, the utmost care must be taken, hemp when dry being exceedingly inflammable. The stored or dried hemp must be steeped and treated in every other respect as if it had been green; whence it is evident that this operation ought never to be used but in cases of necessity. It is likewise impossible to make hemp which has been dried previous to its being steeped so white as that which has been worked green. With regard to the perfecting of hemp-seed for a subsequent season, it would seem proper to set apart a piece of ground for this purpose; for M. Aimen, from 40 plants raised in the common way, had only  $1\frac{1}{2}$  lb. of seed, though the plants from which it was taken might be deemed fine; whereas, from a single plant which grew by itself, he had  $7\frac{1}{2}$  lb. Some are of opinion, that by putting the clusters which contain the hemp-seed to heat and sweat, the quality is improved; as many of those seeds which would otherwise wither and die, may thus arrive at perfection. But this seems problematical, as there are no experiments which show that seeds, when separated from the vegetable producing them, have any power of meliorating themselves.

(7.) **HEMP, DRESSING OF.** After the hemp is pulled, it must be taken in large handfuls, cutting off the roots, (though this is not absolutely necessary,) the leaves, seeds, and lateral branches, being dressed off with a wooden sword or ripple. It is then to be made up into bundles of 12 handfuls each, in order to be steeped, like flax, in water. This, or something similar, is absolutely necessary, in order to separate the bark; which is properly the hemp, from the reed or woody part. In Suffolk, this operation is called *water-retting*; but sometimes it is merely exposed to the air turning the hemp frequently during the time it is exposed. This is called *dew-retting*; but the former method is universally deemed preferable. Such hemp as is designed for seed is seldom water-retted, though in the opinion of the manufacturer already quoted, it would be better if it were so. Dew retted hemp is generally stacked and covered during the winter; in January and Februa-

ry it is spread upon meadow land, and whitened with the frost and snow; though it is always much inferior to the other, and proper for coarser yarn only. The length of time required for steeping hemp is various, and a complete knowledge of it can only be attained by practice. In Suffolk it is usual to continue the immersion 4, 5, or 6 days; standing water is preferred, and the same water will steep hemp three times during the season, but the first has always the best colour. The abbé Brulle prefers clear and running water, especially if overhanging with trees. The bundles are to be laid cross-wise upon each other, taking particular notice of the manner in which they lie when put in, that they may be taken out without difficulty. His time of steeping is from 6 to 12 days, and it is much better to let it remain too long in the water than too short a time. The Scotch hemp requires the most soaking. The operation is known to be finished by the reed separating easily from the bark. The next operation is to separate the bark from the reed or woody part; this may be done two ways, viz. either pull out the reed from every stalk with the hand, drying and breaking it like flax. The abbé is very particular in his directions for this operation, which he calls *RÉPANDRE*, and it may be performed either in a trough under water or upon a table. The whole, however, may be reduced to the following, viz. pressing down the bundles either in the trough or on a table by heavy weights, to keep the hemp steady on the dle and top end. Then beginning at the bottom part of the bundle, pull out the reeds one by one. The reed which remains will press closely to the remaining unreeded hemp, and keep it steady; so that 3, 4, or even 6 stalks, may be taken at a time. The weight is then to be removed from the top, and all the pieces of reed which remain there, having been broke off in the operation, are to be taken out. Lastly, the dle weight is to be taken off, and any small pieces which remain taken out. If the reed is performed on a table, the bundle must be pressed frequently, though slightly; a continual dipping of water would perhaps be the best method. The hemp must next be freed from the mucous matter with which it abounds. This is done by pouring water through it, squeezing out the liquid after every affusion, but taking care not to let the threads twist or entangle each other, as they will be very apt to do. The abbé is of opinion, that soft soap should be dissolved in the water, in the proportion of 1 oz. to 3 lb. of hemp, which contributes much to soften and render the hemp easy to dress. Hemp is broken by machinery, after being steeped, in a manner similar to flax; but the instruments used for this purpose in Suffolk are all worked by the hand. The operation which breaks in the operation is called *shorting*, and is about half the value of the long hemp. The best water-retted hemp sells for about 8s. 6d. stone; the other kind from one to two shillings lower. Beating is the next operation, which formerly was performed entirely by hand, (See *MANUFACTURE*, § 8.) but now in most places by a mill, which raises 3 heavy beaters that fall alternately; the hemp being turned al-

the while by a boy to receive the strokes equally. The finer it is required to make the tow, the more beating is necessary. It is then dressed or combed by drawing it through heckles formed like the combs of wool manufacturers, only fixed. Sometimes it is divided into 2 or 3 sorts of tow, and sometimes the whole is worked together into one sort; the prices varying from 6d. to 1s. 6d. per pound.

(8.) **HEMP, HEIGHT OF.** The usual height of the plant when growing is from 5 to 6 feet. In Catalonia, they generally rise to 7; but in Alsace, they are sometimes 12 feet high, and 3 inches in circumference.

(9.) **HEMP, KARLS and SIMSLE.** See CANABIS.

(10.) **HEMP, USES OF.** Only the coarser kinds of hemp are employed in making cordage, the better sorts being used for linen, which, though it can never be made so fine as that from flax, is yet incomparably stronger, and equally susceptible of bleaching both in the old and new way. Cloths made of hemp have also this property, that their colour improves by wearing, while that of linen decays. The English hemp is much superior in strength to that which grows in any other country. Next to it is the Russian, from which sackings are usually made, as it is sometimes also from the offal of the English kind, but none of the Suffolk hemp is ever made into cordage, on account of its strength. A considerable quantity of Russian sheeting is imported into England merely on account of its strength, and is much coarser at the price than any other foreign linen. Hemp is also said to possess a property as a plant which renders it almost invaluable; viz. that of driving away almost all insects that feed upon other vegetables. Hence in some places of the continent they secure their crops from these mischievous vermin, by drawing a belt of hemp round their gardens, or any particular spot which they wish to preserve.

(11.) **HEMP YARN, PRICES OF.** Hemp, when completely dressed, (see § 7.) is sold to spinners, who reel their yarn as follows:

3 Yards make	-	1 thread.
40 Threads	-	1 lea.
10 Leas	-	1 skain.
3 Skains	-	1 clue of 4800 yards.

It is next delivered to the bleachers, who return it bleached on receiving 10 or 12 clues for every 100 unbleached. The prices of hemp yarn are as follow:

1 Clue from a pound	-	7d. or 6½d.
1½ from ditto	-	8½d. or 8d.
1 from ditto	-	9½d. or 9d.
1½ from ditto	-	10½d. or 10d.
1 from ditto	-	11d.

(12.) **\* HEMP AGRIMONY.** n. f. A plant.—The common *hemp agrimony* is found wild by ditches and sides of rivers. *Miller.*

(1.) **HEMP AGRIMONY.** See EUPATORIUM.

(2.) **HEMP AGRIMONY, BASTARD.** See AGRIMONY.

(3.) **HEMP AGRIMONY, NAKED HEADED.** See VIBURNUM.

(4.) **HEMP AGRIMONY, WATER.** See BIDENS.

**HEMP, BASTARD.** See DATISCA.

\* **HEMPEN.** adj. [from *hemp*.] Made of hemp.

Vol. XI. PART I.

In foul reproach of \*nighthood's fair degree,  
About his neck a *hempen* rope he wears. *Fairy Q.*  
Behold

Upon the *hempen* tackle ship boys climbing. *Shak.*  
—Ye shall have a *hempen* caudle then, and the help of a hatchet. *Shaksp.*

I twitch'd his dangling garter from his knee;  
He wist not when the *hempen* string I drew. *Gay.*

(1.) **HEMPSTED**, a town of Hertfordshire, among hills, upon the Gade, 7 miles W. of St Alban's. The church has a handsome tower with a tall spire, and good bells. It was, in the time of the Saxons, called *Hemsted*, or *Hean-Hemsted*, i. e. High Hemstead, and in that of William I. *Hemmlafede*. Henry VIII. incorporated it, and empowered the inhabitants to have a common seal, and a pye-powder court during its markets. It has one of the greatest markets for wheat in this county, 20,000 l. a week being often drawn in it for meal alone. Eleven mills stand within 4 miles of it. It lies 18 miles SW. of Hertford, and 23 NW. of London. Lon. o. 15. W. Lat. 51. 47. N.

(2-4.) **HEMPSTED**, 3 towns in Essex and Norfolk.

(1.) **HEB. KERCK**, Egbert, THE OLD, a celebrated Flemish painter of drolls and conversations, of whom, though his works are much esteemed, we have no information as to the time in which he flourished, or the school in which he was taught.

(2.) **HEMSKERCK**, Egbert, THE YOUNG, was the disciple of Peter Grebber, but imitated the manner of Brouwer and of the elder Hemskerck. He was born at Haerlem in 1645, but settled at London, where for a long time his works were exceedingly esteemed, though now much sunk in their value. He died in 1704.

(3.) **HEMSKERCK**, or } Martin, an eminent

(3.) **HEMSKIRK**, } Dutch painter, born at Hemskirk, (N° 4.) in 1498, and educated at Rome. He settled at Haerlem, where he died in 1574, aged 76. His invention was fruitful.

(4.) **HEMSKIRK**, a village of the Batavian republic, in the department of Amstel.

**HEMSTERHUIS**, or } Tiberius, a learned Cri-  
**HEMSTERHUSIUS**, } tic, born at Groningen, in 1685. In 1704, he was appointed professor of mathematics and philosophy at Amsterdam; in 1717, professor of Greek and history at Francker; and in 1740, he filled the same offices at Leyden. He published, 1. The 3 last books of Julius Pollux's *Onomasticon*, in 1706: 2. *Colloquia*, &c. of Lucian: 3. *Aristophanes's Plutus*; and other learned works.

(1.) \* **HEN.** n. f. [*henas*, Saxon and Dutch; *han*, German, a cock.] 1. The female of a house-cock. 2. The female of any land fowl.—The peacock, pheasant, and goldfinch cocks have glorious colours; the *henas* have not. *Bacon.*—Whilst the *hen* bird is covering her eggs, the male generally takes his stand upon a neighbouring bough within her hearing, and by that means diverts her with his songs during the whole time of her sitting. *Addis.*

O'er the trackless waste

The beath *hen* flutters.

*Thomson.*

(2.) **HEN.** See PHASIANUS, N° 3.

(3.) **HEN, GUINEA.** See NUMIDA, N° 2.

**HENANBIEN**, a town of France, in the dep. of the North Coast; 7½ miles NE. of Lamballe, and 13½ NW. of Dinan.

B b

(1.) **HENAULT**,

(1.) HENAUT, Charles John Francis, son of John René Henaut lord of Mouffy, was born at Paris in 1683. He early discovered a sprightly genius, as well as a benevolent disposition. Claude de Lisle, father of the celebrated geographer, taught him geography and history. On quitting college, Henaut entered the Oratory, which he left two years after, and his father bought for him the *Armstrong des chasses*, and the government of Corbeil. At M. Villeroy's he formed connections with many of the nobility, and passed the early part of his life in agreeable amusements, and in the liveliest company, without having his religious sentiments tainted. He associated with the wits till the dispute between Rousseau and De la Motte gave him a disgust. In 1707, he gained the prize of eloquence at the French Academy; and another next year at the Academy des Jeux Floraux. In 1713 he brought a tragedy on the stage, under the disguised name of *Pygmalion*. As he was known to the public only by some slighter pieces, *Cornélie the Follal* met with no great success. In his old age Mr Horace Walpole being at Paris in 1768, and having formed a friendship with him as one of the most amiable men of his nation, obtained the M. S. of this piece, and had it printed. In 1715, M. Henaut, under a borrowed name, brought out a second tragedy, intitled, *Marius*, which was well received and printed. In 1714, he married a daughter of M. Le Bas de Montargis, keeper of the royal treasure, who died in 1718, without issue. He had been admitted counsellor in parliament in 1706, and in 1720 president of the first chamber of inquests. These important places, which he determined to fill in a becoming manner, engaged him in the most solid studies. He made himself master of the Roman law, and the French ordinances, customs, &c. M. de Morville, procureur general of the great council, being appointed ambassador to the Hague in 1718, engaged M. Henaut to accompany him. His merit soon introduced him to the most eminent personages there. The grand pensionary, Heinsius, who, under the exterior of Lacedæmonian simplicity, kept up all the haughtiness of that people, laid aside with him all that hauteur, which the French court had experienced from him in the negotiations of the treaty of Utrecht. The agitation which all France felt by Law's system, and the consequent exile of the parliament, was a trial to the wise policy of the president Henaut. His friendship for the first president, De Mesmes, led him to second all the views of that great magistrate; he took part in all the negotiations, and exerted himself zealously for the public good. On the death of Card. du Bou, in 1713, he succeeded him at the French Academy. Cardinal Fleury recommended him to succeed himself as director, and he pronounced the eulogy of M. de Malézieux. History was M. Henaut's favourite study. To obtain a knowledge of the laws and manners of nations, he drew instruction from private conversations, a method he strongly recommends in his preface. After having discussed the most important points of public law, he collected and published the result of his inquiries; and he is deservedly accounted the first framer of chronological abridgements, in which, without stopping at de-

tached facts, he attends only to those which form a chain of events that perfect or alter the government and character of a nation, and traces those springs which exalt or humble a nation, extending or contracting the space it occupies in the world. The 1st edition of this work appeared in 1744, under the modest title of *An Essay*. Its success exceeded his expectations. He improved it, and it not only passed through 9 editions, but was translated into English, Italian, German, and even Chinese. He next determined to reduce into the form of a regular drama, one of the periods of French history, viz. the reign of Francis II. It accordingly went through five editions; the harmony of dates and facts is exactly observed in it, and the passions interested without offence to historic truth. In 1719, he was chosen an honorary member of the academy of Belles Lettres, being previously a member of the academies of Nanci, Berlin, and Stockholm. The queen appointed him superintendant of her house. He composed 3 comedies: *Le Petit Maître*, *La Jalouse de son mari*, and *Le Rival d'Amour*. The subject of the last was the Cretan philosopher, who is pretended to have slept 70 years. Epimenides is introduced, supposing that he had slept but one night, and astonished at the change in the age of all around him; he mistakes his mistress for her mother; but discovering his mistake, offers to marry her, which she refuses though he still continues to love her. The queen was particularly pleased with this piece. She ordered the president to restore the philosopher's mistress to her former youth: he introduced Hebe, and this episode produced an agreeable entertainment. He was now in such favour with the queen, that on the place of superintendant becoming vacant by the death of M. Le Tellier de Conbert, she bestowed it on Henaut, and presented that he should divide the profits with his predecessor's widow. On the queen's death he held the same place under the dauphiness. A delicate constitution made him liable to frequent illnesses, but did not interrupt the serenity of his mind. He made several journeys to the waters of Plombières: in one of these he visited the duc de Stanislaus at Lunéville; and in another accompanied his friend the marquis de Paulmy, ambassador to Switzerland. In 1763, one morning after a quiet night, he felt an oppression, which the faculty pronounced a suffocating cough. His confessor being sent to him, he received him without alarm. He called to mind the saying of Madame de Sevigne, "I leave here only dying creatures." He received the sacraments. It was believed the next night would be his last; but by noon next day he was out of danger. "Now," (said he) "I know what death is. It will not be new to me any more." The last 7 years of his life, like all the rest, were gentle and calm. For of gratitude to the author of his being, and obedience to his decrees, he died Dec. 24, 1772, in the 86th year.

(2.) HENAUT, or } John D', a French poet of the 17th century, the son of a baker in Paris. Being patronized by the superintendant Fouquet, he was appointed receiver of the taxes at Forez. He wrote a satirical poem on Colbert and several pieces of merit; printed at Paris.

Paris, under the title of *Oeuvres Diverses*, in 1700. 1670; but his conduct was irregular, and his principles libertine. He professed Atheism, and gloried in it with uncommon affectation. He travelled into England, and went to Holland on purpose to visit Spinoza, who, however, did not much esteem him; considering him as "one of those fashionable gentry, which every country abounds with, who adopt new opinions in religion, not from rational conviction, but from a profligate spirit of vain glory." He translated 3 books of Lucretius, but falling sick, burnt them, the fear of death having put his atheistical principles to flight; and having now become a convert, he was for carrying matters to the opposite extreme, and proposed to his confessor, as a proof of his penitence, to take the sacrament with a halter about his neck. He died in 1682.

(1.) \* **HENBANE**. *n. f.* [*hyoscyamus*, Lat.] A plant. —It is very often found growing upon the sides of banks and old dunghills. This is a very poisonous plant. *Miller*.—

That to which old Socrates was cur'd,  
Or *henbane* juice, to swell 'em 'till they burst.  
*Dryden*.

(2.) **HENBANE**. See **HYOSCIAMUS**.

\* **HENBIT**. *n. f.* [*Alfne foliis hederaceis*.] A plant. —In a scarcity in Silesia a rumour was spread of burning millet seed; but it was found to be on the seeds of the ivy-leaved speedwell, or small *henbit*. *Derham's Phys. Theology*.

**HENBURY**, a town and parish in Gloucestershire, near Bristol, 2 miles from St Vincent's Rock. There is an ancient British or Roman camp in the parish, with 3 ramparts and trenches. In 1707, many Roman coins were found, in digging up the

\* **HENCE**. *adv. or interj.* [*hencan*, Sax. *hennes*, English.] 1. From this place to another.—

Discharge my follow'rs; let them *hence* away,  
From Richard's night to Bolingbroke's fair day.  
*Shakeff.*

Th' Almighty hath not built  
Here for his envy; will not drive us *hence*. *Milt.*  
A fallen prudence drew thee *hence*  
From noise, fraud and impertinence. *Rescomm.*  
Away; to a distance. A word of command.—  
Be not found here; *hence* with your little ones.  
*Shakeff.*

*Hence* with denial vain, and coy excuse. *Milt.*  
At a distance; in other places. Not in use.—  
Why should I then be false, since it is true  
That I must die here, and live *hence* by truth?  
*Shakeff.*

All members of our cause, both here and *hence*,  
That are infixed to this action. *Shakeff.*  
From this time; in the future.—He who can  
do well to-day about one sort of matters can-  
not at all reason to day about others, though per-  
haps a year *hence* he may. *Locke*.—Let not poster-  
ity a thousand years *hence* look for truth in the  
luminous annals of pedants. *Arbutnot*. 5. For  
reason; in consequence of this.—*Hence* per-  
haps it is, that Solomon calls the fear of the Lord  
the beginning of wisdom. *Tillotson*. 6. From this  
place; from this ground.—By too strong a pro-  
pulsive motion the aliment tends to putrefaction;  
hence may be deduced the force of exercise in help-

ing digestion. *Arbutnot on Alim.* 7. From this  
source; from this original; from this store.—

My Flora was my sun; for as  
One sun, so but one Flora was;  
All other faces borrowed *hence*  
Their light and grace, as stars do thence. *Swift*.  
8. *From hence* is a vicious expression, which crept  
into use even among good authors, as the original  
force of the word *hence* was gradually forgotten.  
*Hence* signifies *from this*.—

An ancient author prophesy'd *from hence*,  
Behold on Latian shores a foreign prince! *Dryd.*  
\* **To HENCE**. *v. a.* [from the adverb.] To send  
off; to dispatch to a distance. Obsolete.—

Oo, bawling cur! thy hungry maw go fill  
On yon foul flock, belonging not to me;  
With that his dog he *henc'd*, his flock he curst.  
*Sidney*.

\* **HENCEFORTH**. *adv.* [*hencforth*, Saxon.]  
From this time forward.—

Thanes and kinsmen,  
*Henceforth* be earls. *Shak. Macbeth*.  
Never *henceforth* shall I joy again;  
Never, oh never, shall I see more joy. *Shakeff.*  
Happier thou may'st be, worthier can'st not be;  
Taste this, and be *henceforth* among the gods,  
Thyself a goddess. *Milton*.

I never from thy side *henceforth* will stray,  
'Till day droop. *Milton*.  
If we treat gallant foldiers in this sort;  
Who then *henceforth* to our defence will come?  
*Dryden*.

\* **HENCEFORWARD**. *adv.* [*hence* and *for-  
ward*.] From this time to all futurity.—

*Henceforward* will I bear  
Upon my target three fair shining suns. *Shakeff.*  
Pardon, I beseech you;  
*Henceforward* I am ever rul'd by you. *Shakeff.*  
—The royal academy will admit *henceforward*  
only such who are endued with good qualities.  
*Dryden*.

\* **HENCHMAN**. *n. f.* [*hync*, a servant, and *man*,  
*shinner*; *hengst*, a horse, and *man*, *Spelman*.] A  
page; an attendant. Obsolete.—

Why should Titania cross her Oberon?  
I do but beg a little changeling boy,  
To be my *henchman*. *Shakeff.*

Three *henchmen* were for ev'ry knight assign'd,  
All in rich livery clad, and of a kind. *Dryden*.

\* **To HEND**. *v. a.* [*hendan*, Saxon, from *hendo*,  
low Latin, which seems borrowed from *band* or  
*band*, Teutonic.] 1. To seize; to lay hold on.—

With that the sergeants *hent* the young man  
flout,  
And bound him likewise in a worthless chain.  
*Fairfax*.

2. To crowd; to surround. Perhaps the follow-  
ing passage is corrupt, and should be read *hemmed*;  
or it may mean *to take possession*.—

The generous and gravest citizens  
Have *hent* the gates, and very near upon  
The duke is entering. *Shakespeare*.

\* **HENDECAGON**. *n. f.* [*hendeca* and *gon*.] A  
figure of eleven sides or angles.

**HENDECASYLLABON**, *n. f.* in grammar, a  
word consisting of 11 syllables.

**HENDER**, an island of Scotland, on the W.  
coast of Sutherland.

**HENDERSON**, John, a late eminent English actor, born at London, March 8, 1746-7, but descended of a respectable Scots family, at Fordell, and in a direct line from the rev. Alexander Henderson, D. D. famous for his conference with E. Charles I. in theisle of Wight. His mother having put into his hands a volume of Shakspeare, when very young, he became enamoured with the stage; and in 1768, applied to Mr Garrick, but met with no encouragement, neither from him nor Mr Coleman, till 1770, that Garrick gave him a letter to Palmer, manager of the theatre at Bath, where he first exhibited, with uncommon applause, in the character of Hamlet, Oct. 6, 1772. In the course of that and the four subsequent seasons, he represented Richard III, Benedict, Macbeth, Bayes, Earl of Essex, Hotspur, Friar, Falstaff, King Lear, Hasting, Pierre, Othello, Sir J. Brute, and other capital characters, with increasing reputation. All this time, however, Garrick and Foote refused to admit him on the London theatre. But in 1777, Coleman, having purchased Foote's patent, engaged him, and he was well repaid by the public; for in the first 34 nights, no less than 4,500*l.* were drawn. The Haymarket was crowded every night even during the heat of summer, and Coleman, as an acknowledgment, gave Henderson a free benefit, which produced a large sum. In winter he was engaged by Mr Sheridan at *l.* 10. a-week for two years at Drury-lane. In 1778 and 1779, he went to Ireland, and was introduced to most of the literati there. On the 15th Jan. 1779, he married. He was now as much courted by the managers, as he had formerly been slighted; but his drama drew fast to a close. His last performance was in the character of *Horatius*, in the *Roman Father*, Nov. 3d, 1783. He was soon after seized with a fever, which carried him off on the 25th of that month. He was interred in Westminster Abbey. He left a few poems, which are esteemed.

**HENDIADIS**, [*ἑνδιαδης*, Gr.] a figure in rhetoric, when two substantive nouns are used for a substantive and adjective.

\* **HEN-DRIVER**. *n. s.* [*hen* and *driver*.] A kind of hawk.—

The *hen-driver* I forbear to name. *Warton*.

**HENED PENNY**, in old writers, a customary payment of money instead of hens at Christmas. It is mentioned in a charter of king Edward III. Mon. Angl. tom. ii. p. 327. Du-Cange is of opinion it may be *hen-penny*, *gallinagium*, or a composition for eggs; but Cowel thinks it is misprinted *bread-penny* for *breed penny*, or *bread penny*.

**HENETI**, an ancient people of Illyria, mentioned by Herodotus, whose marriage laws were similar to those of the ancient Babylonians. See **BABYLONIANS**, § 8. Livy says, (*lib.* 3.) that they came originally from Paphlagonia, mixed with a number of Trojans, under ANTIHON, and having settled on the coast of the Adriatic Gulf, were afterwards called *VANETI*.

**HENO**, a river of China, in Hou-quang.

**HENGERSPERG**, a town of Bavaria.

**HENGIST**. See **ENGLAND**, § 13.

**HENG-TCHE**, and } two cities of China, on

**HENG-TCHEOU**, } the Heng, in the prov. of Hou-quang, about 780 miles S. of Peking, but 10 miles distant from each other. The latter has si-

ver mines, which are not permitted to be wrought. Lon. 139. 44. E. Ferro. Lat. 26. 56. N.

(1.) **HEN-NARM**. } *n. s.* A kind of hen.

(2.) **HEN-NARRER**. } *Ansforth*. So called, probably from destroying chickens. *Pyrgum*.

(3.) **HEN-NARRER**. See **FALCO**, N° 24.

\* **HEN-HEARTED**. *adj.* [*hen* and *heart*.] Dastardly; cowardly; like a hen. A low word.

**HENING**, a town of Hungary.

(1.) **HENLEY**; Anthony, Esq. of Grange, in Hants, the son of Sir Robert Henley, was born about the middle of the 17th century, and educated at Oxford, where he distinguished himself by his proficiency in the classics, and his poetical talents. Being a zealous Whig, he was chosen M. P. for Andover, in 1698, and in several successive parliaments for other boroughs. Inheriting a fortune of *l.* 3000. a-year, which was increased by the addition of *l.* 30,000 obtained with his wife, Mary Bertie, sister to the countess of Pawlett, he was very generous to all his brethren authors, many of whom dedicated their works to him. He wrote many anonymous pieces, besides the opera of *Alexander*, and several papers in the *Tatler* and *Meley*. He died in 1711, leaving several children, of whom Robert, his second son, was created **Baron HENLEY**, in 1760, lord chancellor in 1761, and Earl of Northampton in 1764.

(2.) **HENLEY**, John, M. A. commonly called *the* *father Henley*, a very singular character, was born at Melton Mowbray, Le. R. in 1691. His father, the rev. Simon Henley, and his maternal grandfather, John Dowel, M. A. were both rectors of that parish. Having passed his exercises at Cambridge, and obtained the degree of B. A. he returned to his native place, where he was desired by the trustees to take the direction of the school, which he soon raised to a flourishing condition. Here he began his *Universal Grammar*; written in ten languages, with dissertations prefixed, and wrote his poem on *Essex*, which was well received. He was ordained a deacon by Dr Wall, then Bp. of Lincoln; and having taken his degree of M. A. was admitted to priest's orders by Gibson. After preaching many occasional sermons, he went to London, recommended by above 30 letters from the most considerable men in the country, both of the clergy and laity. There he published translations of Pliny's *Epistles*, several works of Abbé Vertot, of Montfaucon's *Italian Travels* in folio; and many original lectures. His most generous patron was the Duke of Marcellfield, who gave him a benefice in the country, the value of which to a resident would have been above 80*l.* a-year; he had likewise a lecture in the city; and preached more than 100 sermons about town, was more numerously followed, and raised more for the poor children, than any other preacher, except the celebrated George Whitefield. But when he pressed his promotion from a great man of being fixed in town, it was negatived. He then gave up his benefice and lecture, believing the public would be a more profitable protector of learning and science, than some of the higher ranks in his own order. He preached on Sundays upon theological matters, and on Wednesdays upon all other sciences. He declaimed several years against the greatest persons, on occasional

occasionally, says Warburton, did Pope that honour. The poet retaliated as follows:

"Imbrown'd with native bronze, lo Henley stands,  
Tuning his voice, and balancing his hands.  
How sweet nonsense trickles from his tongue!  
How sweet the periods, neither said nor sung!  
Still break the benches, Henley! with thy strain,  
While Kennet, Hare, and Gibson preach in vain.  
O great restorer of the good old stage,  
Preacher at once and zany of thy age!" &c.

Instead of tickets, this extraordinary person struck medals, which he dispersed among his subscribers; the first rising to the meridian, with this motto, *Ad summum*; and below, *Invensum viam, aut faciam*. Each auditor paid 1s. He was author of a weekly paper, called *The Hypothesitor*, for which he had not a year. In his advertisements and lectures, he often introduced satirical and humorous remarks on the public transactions of the times. He never collected an audience of a great number of hearers, by announcing that he could teach them a speedy mode of operation in their business, which proved only to be, the making of shoes by cutting off the tops of ready-made boots. He died on the 14th October, 1756.

(3.) HENLEY, a town of Oxfordshire, seated on the river Thames, over which there is a handsome bridge. It sends malt, corn, and other things, to London in barges. Lon.  $\alpha$ . 46. W. Lat. 51. 34. N.

(4.) HENLEY, a town of Warwickshire, seated on the river Aine. Lon. 1. 45. W. Lat. 52. 23. N.

(5-10.) HENLEY, 6 English villages in Dorsetshire, Hants, Salop, Staffordshire, Suffolk, and Warwickshire.

HEN-MOULD SOIL, in agriculture, a term used by the husbandmen in Northamptonshire, and other counties, to express a black, hollow, spongy, mouldering earth, usually found at the bottom of hills. It is an earth much fitter for grass than for corn, because it will never settle close to the grain to keep it sufficiently steady when it is growing up; without which, the farmers observe, it either does not grow well, or, if it does thrive, as it will in some years, the growth is weak, and yields much straw, but little ear. It is too moist, and to that is principally to be attributed this rankness of the crop in some years; on the occasion of its retaining so much moisture that it usually has a bed of stiff clay, which does not let the water run off into the under strata. In some places they also give this name to a black, heavy, and dense earth, with streaks of a whitish sand in many parts. This sort of hen-mould is usually very rich and fertile.

HENNA, or ALHESNA. See LAWSONIA.

HENNEAMIMERIS, in poetry, a verse of 9 feet.

(1.) HENNEBERG, a mountainous county of Franconia, in the circle of Franconia. It is bounded on the N. by Thuringia, on the W. by Hesse, on the S. by the bishoprick of Wurtzburg, and on the E. by that of Bamberg. It abounds in woods, and has 13 towns; it is populous, and pretty fertile. Meiningen is the capital.

(2.) HENNEBERG, a town in the above county, with a castle which was burnt in 1535: 4 miles S. of Meiningen, and 34 NW. of Bamberg. Lon. 11. E. Lat. 50. 40. N.

HENNEDON, a town of France in the dep. of Morbihan and late prov. of Bretagne: seated on the Blavet; 32 miles NW. of Vannes, and 160 W. by S. of Paris. Lon. 3. 4 W. Lat. 47. 48. N.

HENNERSBACH, a river of Upper Saxony.

HENNERSDORF, a towns of Germany: 1. in Upper Saxony: 2. in Silesia.

HENNEVEUX, a town of France in the dep. of the Straits of Calais, 9 miles E. of Boulogne.

HENNIN-LIETARD, a town of France in the dep. of Straits of Calais, 10½ miles NNE. of Arras, and 1 NW. of Douay.

HENNUYER, John, a celebrated French bishop, who, though a Roman Catholic, saved the lives of all the the Protestants in his diocese of Lisieux, during the Massacre of St Bartholomew's day, in spite of the inhuman order of the bloody tyrant Charles IX. He died in 1577, universally beloved and regretted.

HENOTICUM, [*Henoticon*, q. d. reconciliative; of *Henos*, I unite,] in church history, a famous edict of the emperor Zeno, published A. D. 481, and intended to reunite the Eutychians with the Catholics. It was opposed by the catholics, and condemned in form by pope Felix II. It confirms all the acts of former councils against the Arians, Nestorians, &c.

\* HEN-PECKED. *adj.* [*hen* and *pecked*.] Governed by the wife.—

A stepdame too I have, a cursed she,  
Who rules my *hen-peck'd* fire, and orders me,  
*Dryden.*

—The neighbours reported that he was *hen-pecked*, which was impossible, by such a mild-spirited woman as his wife. *Arbutb.*

HENRICHEMONT, a town of France, in the dept. of Cher, and late prov. of Berry, on the Sambre; built by the D. of Sully, and named after Henry IV, who gave him the district. It lies 11 miles S. of Aubigny, and 11½ NNE. of Bourges. Lon. 20. 11. E. of Ferro. Lat. 47. 18. N.

HENRICHS, a town of Franconia, in Henneberg, 6 miles E. of Meiningen.

HENRICIANS, in ecclesiastical history, a sect so called from Henry its founder, who, though a monk and a hermit, undertook to reform the vices of the clergy. For this purpose he left Lausanne in Switzerland, and after visiting different places, at length settled at Thoulouse in 1147, where he exercised his ministerial function; till being opposed by Bernard abbot of Clairval, and condemned by pope Eugenius III. at a council assembled at Rheims, he was committed to a close prison in 1148, where he died. He rejected the baptism of infants; severely censured the corrupt manners of the clergy, and treated the festivals and ceremonies of the church with deserved contempt.

HENRICKSWALD, a town of Lithuania.

HENRICO, a county of Virginia, bounded on the N. and NE. by Hanover county; S. by the James; SE. by Charles City, and NW. by Goochland. It is 30 miles long and 7 broad. It contained 6181 citizens, and 3819 slaves in 1793; and abounds with coals.

HENRICUS DE SEGUSIO. See HENAY, N. 35.

\* HEN-ROOST. *n. s.* [*hen* and *roost*.] The place where the poultry rest.—Many a poor devil stands to a whipping-post for the pilfering of a silver spoon, or

or the robbing of a *bro-royal*. *L'Estr.*—Her house is frequented by a company of rogues, whom she encourageth to rob his *bro-royals*. *Swift*.—If a man prosecutes gipsies with severity, his *bro-royal* is sure to pay for it. *Addison*.

They oft have sallied out to pillage

The *bro-royals* of some peaceful village. *Tickell*.

(1—27.) HENRY, the name of 8 emperors of Germany, and one of Constantinople; of 8 kings of England, 4 of France, 4 of Spain, one of Portugal, and one of Scotland. See CONSTANTINOPLE, ENGLAND, FRANCE, GERMANY, PORTUGAL, SCOTLAND, and SPAIN. Of these monarchs we shall only give a brief biographical sketch of three; the first remarkable for his misfortunes, the 2d for his virtues, and the 3d for his crimes.

(i.) HENRY IV. emperor of Germany, styled the Great, was born in 1050, and succeeded his father Henry III. in 1056, under the tutelage of his mother Agnes. In 1063, he assumed the reins of government; but soon after quarrelled with pope Gregory II. whom at one time he deposed, for having presumed to judge his sovereign; but at another, dreading the effects of the papal anathemas, he had the weakness to submit to the most humiliating personal solicitations and penances to obtain absolution; which impolitic measure increased the power of the Pope, and alienated the affections of his own subjects. Thus circumstanced, he reassumed the hero, but too late; marched with an army to Rome, expelled Gregory, deposed him, and set up another pope. Gregory died soon after; but Urban II. and Pascal II. successively excited his ambitious sons, Conrad and Henry, to rebel against him, and the latter, being crowned emperor in 1106, had the monstrous inhumanity to arrest his father, and to deprive him, not only of all his dignities but even of the necessities of life. The unfortunate Henry IV. was reduced to such extremities (after having fought 63 battles in defence of the German empire), that he solicited the bishop of Spire to grant him an underchanter's place in his cathedral, but was refused! He died the same year at Liege, aged 55, a martyr to the ignorance and superstition of the age, and to his own blind confidence in favourites and mistresses.

(ii.) HENRY IV. king of France and Navarre, justly styled THE GREAT, the son of Anthony de Bourbon, chief of the House of Bourbon, by Joan Q. of Navarre, was born at Pau, the capital of Bern, in 1553. His mother was the daughter of Henry d'Albret, king of Navarre; a woman of extraordinary spirit and genius; intrepid, simple, and rustic in her manners, but deeply versed in politics, and a zealous Protestant. Foreseeing that her party would want such a protector (for her husband was a weak indolent prince), she undertook the education of the young hero: his diet was coarse; his clothes neat, but plain; he always went bare-headed; she sent him to school with the other children of the same age, and accustomed him to climb the rocks and neighbouring mountains, according to the custom of the country. In 1569, when only 16, he was declared the Defender and Chief of the Protestants at Rochelle. The peace of St Germain, concluded in 1570, recalled the lords in the Protestant interest to court; and

in 1572 Henry was married to Margaret de Valois, sister to Charles IX. It was in the midst of the rejoicings for these nuptials that the horrid massacre of Paris took place. (See FRANCE, § 41, 42.) Henry was detained a prisoner of state 3 years. In 1587 he made his escape; put himself at the head of the Huguenot party, exposing himself to all the risks and fatigues of a religious war, often in want of the necessities of life, and enduring all the hardships of the common soldier: but he gained victory this year at Courtras, which established his reputation in arms, and endeared him to the Protestants. On the death of Henry III. religion was urged as a pretext for one half of the officers of the French army to reject him, and for the other half not to acknowledge him. Cardinal Richelieu was set up against him, but his most formidable rival was the duke of Mayenne: however, Henry, with few friends, fewer important possessions, and a very small army, supplied the want by his activity and valour, and the success of his troops. He gained several victories over the duke; particularly that of Ivry in 1590, remarkable for his heroic admonition to his soldiers: "you love your ensigns, rally by my white plume; you will always find it in the road to honour and glory." Paris held out against him, notwithstanding his successes; he took all the suburbs in one week, and might have reduced the city by famine, but he had not humanely suffered his own army to be the besieged; yet the bigotted friars and priests of Paris all turned soldiers, except four of the mendicant order; and made daily military reviews, processions, the sword in one hand and the cross in the other, on which they made the soldiers swear rather to die with famine than to desert Henry. The scarcity of provisions in Paris had degenerated to an universal famine; bread had been sold, whilst any remained, for a crown a pound, and at last it was made from the bones of the charnel house of St Innocents; human flesh became the food of the obstinate Parisians, mothers ate the dead bodies of their children. At last, the D. of Mayenne, seeing that neither the league would ever grant him the crown, nor the league would ever grant him the crown, determined to assist in giving it to the law. He engaged the states to hold a conference with the chiefs of both parties; which ended in the abjuration of the Protestant religion at St Denis in 1593; a measure which the rev. Mr. Robertson in his *Letters to M. Volney*, justly condemns the cause not only of all the subsequent persecutions which the protestants suffered from bigotry and superstition, (see DRAGONNAGE,) but of all the consequences, as productive of all the horrors which have accompanied the revolution, arising from the opposite principles of infidelity and superstition. The following year Paris opened its gates to Henry in 1594, the D. of Mayenne was pardoned; in 1598, peace was concluded with Spain. Henry now showed himself doubly worthy of the throne, by his encouragement of commerce, fine arts, and manufactures, and by his patronage of men of ingenuity and sound learning of his country; but though the fermentations of bigotry were calmed, the heaven was not appeased; scarce a year passed without some calamity being made on this real father of his people; and

of the monster Baynollet stabbed him to the heart at his coach, in the streets of Paris, on the 24th of May 1610, in the 37th year of his age and end of his reign.

(m.) HENRY VIII. king of England, the 2d son of Henry VII. by Elizabeth the eldest daughter of Edward IV. was born at Greenwich, on the 28th of Jan. 1491. On the death of his brother Arthur, in 1502, he was created prince of Wales; and the following year betrothed to Catharine of Aragon, prince Arthur's widow, the Pope having issued a dispensation for that purpose. He ascended the throne, on the death of his father, the 21st of April 1509, and his marriage with Catharine was solemnized about two months after. In the beginning of his reign he left the government of his kingdom entirely to his ministers; and spent his time chiefly in tournaments, balls, sports, and other expensive amusements. He was so extravagant in his pleasures, that, in a short time, he entirely dissipated 1,800,000 l. which his father had hoarded. This will seem less wonderful, when the reader is informed, that gaming was one of his favourite diversions. Nevertheless he was not so totally absorbed in pleasure, but he was careful for business, and even for writing on crucial divinity: so that he may be ranked among the royal authors, though it cannot be said that he reflects great honour on the list. The principal transactions of his reign, as well as the titles of his works, with the murder of one, the death of another, and the divorce of two of his queens; his abolition of the monasteries, his persecutions of both papists and protestants, and his other tyrannies and inconsistencies, are related under the article ENGLAND, §

That the last scene of his life might resemble the first, he determined to end the tragedy with the murder of two of his best friends and most faithful subjects, the duke of Norfolk and his son the earl of Surrey. The earl was beheaded on the 23d of January; and the duke was ordered for execution on the 29th, but fortunately escaped by the king's death, on the 28th. They were killed without the shadow of a crime; but the political reason for putting them to death was the apprehension that, if they survived him, they would counteract some of his regulations in law, and might be troublesome to his son. Henry died on the 28th Jan. 1547, in the 56th year of his age, and was buried at Windsor. As to his character, Lord Herbert palliates his crimes, excuses what he calls his *weaknesses*. Dr. Burnet, "he was rather to be reckoned among the bad than the good princes." He afterwards acknowledges, that "he is to be numbered among the bad princes;" but adds, "I cannot rank him the worst." Sir Walter Raleigh, with more acuteness, says, "If all the pictures and patterns of perfect princes were lost to the world, they might again be painted to the life out of the history of this king." He was indeed a merciless tyrant, a covetous politician, a foolish bigot, and a cruel murderer.

b) HENRY, Prince of Wales, eldest son of James VI. of Scotland by his queen, Anne, daughter of the king of Denmark, one of the most accomplished princes of the age in which he lived,

was born on the 19th Feb. 1594. His birth was announced by embassies to many foreign powers, with invitations to be present at the ceremony of his baptism, which was thus delayed for a considerable time. All these ambassadors were cordially received, and others appointed in return, except by the courts of France and England. Henry IV. then king of France, neither made any present, nor appointed an ambassador. Queen Elizabeth had designed to act in the same manner till she heard of the behaviour of Henry; after which she sent an ambassador of very high rank, Robert earl of Sussex. James not only delayed the ceremony till the English ambassador arrived, but distinguished him from the rest by having a canopy carried over his head at the procession, supported by the lords of Cessford, Buccleugh, Duthope, and Traquair. The ceremony was performed with great magnificence; after which the ambassadors presented their gifts. That from the United Provinces was the most valuable. It consisted of two gold cups worth 12,400 crowns, with a box of the same metal, weighing in all about 400 ounces, containing the grant of a pension of 3000 florins annually to the prince for life. The English ambassador gave a cupboard of plate curiously wrought, and valued at 3000 l. sterling; and the Danish ambassador two gold chains, one for the queen and another for the prince. The baptism was celebrated on the 6th of Sept. 1594, and the child named Henry Frederick. He was committed to the care of the earl of Mar, who was assisted in this important charge by Annabella countess dowager of Mar, daughter of William Murray of Tullibardine, paternal ancestor of the D. of Athol. This lady was remarkable for the severity of her temper, so that the prince met with little indulgence while under her tuition; notwithstanding which, he showed great affection for her. In his sixth year he was committed to the care of Mr Adam Newton, a Scotsman, eminently skilled in most branches of literature, but particularly in Latin. Under his tutorage the prince soon made great progress in that language, as well as in other branches of knowledge; insomuch that, before he had completed his 6th year, his father wrote for his use the treatise intitled *Balliolum Davon*, thought to be the best of all his works. In his 7th year, prince Henry began his correspondence with foreign powers. His first letter was to the States of Holland; in which he expressed his gratitude for the good opinion they had conceived of him, concluding with a request, that they would make use of his interest with his father in whatever he could serve them, and promising his service in every other respect in which he could be useful. At this early period the prince began to add to his literary accomplishments some of the martial kind, such as riding, the exercise of the bow and pike; the use of fire-arms, &c. as well as singing, dancing, &c. On his 9th birth-day he sent a letter in Latin to the king, informing him that he had read over Terence's *Hecyra*, the 3d book of Phædrus's *Fables*, and two books of Cicero's *Epistles*; and that now he thought himself capable of performing something in the commendatory kind of epistles. His accomplishments were soon spoken of in foreign countries; and these, along

with the general suspicion that James favoured the Catholic party, probably induced pope Clement VIII. to make an attempt to get him into his hands. With this view he proposed, that if James would entrust him with the education of the young prince, he would advance such sums of money as would effectually establish him on the throne of England. This happened a little before the death of Elizabeth; but James, notwithstanding his ambition to possess the crown of England, of which he was not yet altogether certain, withstood the temptation. On the death of Q. Elizabeth, James left Scotland in such haste, that he had no time to take a personal leave of his son, and therefore did so by letter, which was answered by the prince in Latin. In July 1603, prince Henry was invested with the order of the garter. Being obliged to leave London on account of the plague, he retired to Oatlands, a royal palace near Weybridge in Surrey, where a separate household was appointed for him and his sister Elizabeth. In his 10th year, he applied himself to naval and military affairs. In matters of literature he appears to have been a very good judge. He patronized divines, and his attachment to the protestant religion was so great, that it never was in the power of the queen, who favoured the catholic party, to make the least impression upon him. Her machinations for this purpose were discovered by the French ambassador; who, in a letter dated June 7th 1604, informed his master of them, and that the Spaniards were in hopes of being able by her means to alter the religion in England, as well as to prejudice the prince against France, which the queen said she hoped that her son would one day be able to conquer, like another Henry V. In another letter, dated 22d Oct. 1604, after taking notice of the queen's immoderate ambition, he adds, that she used all her efforts to corrupt the mind of the prince, by flattering his passions, diverting him from his studies, and representing to him, that learning was inconsistent with the character of a great general and conqueror; proposing at the same time a marriage with the infant of Spain. Notwithstanding these insinuations, the prince continued to patronise the learned as before. He presented John Johnston, one of the king's professors at St Andrew's, with a diamond, for having dedicated to him an Historical Description of the kings of Scotland from the foundation of the monarchy. In 1606 Mr John Bond dedicated his edition of Horace to the prince, whom he highly compliments on his progress in learning. In 1609 a book was sent over to him from France by Sir George Carew, the British ambassador there, tending to disprove the doctrine of the Catholics concerning the church of Rome being the first of the Christian churches. The same year the learned Thomas Lydyat published his *Emendatio Temporum*, under the patronage of the prince; who took the author into his family, and made him his chronographer and cosmographer. Paul Buys also sent him a letter with a dedication of the 1d part of his *Pandects*. In 1611 Dr Tooker, in his dedication of an Answer to Becanus a Jesuit, who had written against a piece done by K. James himself, styles prince Henry "the Marcellus of all the learned." Many other authors dedicated their

performances to him; nor was his correspondence less extensive than his erudition. He was courted by the elector palatine, afterwards married to the princess Elizabeth, on the discovery of a gunpowder-plot. On the same occasion also La Spencer wrote him a letter, accompanying it with the present of a sword and target; "in which" (says he) "fit to be about you in these troublous times; from the which, I trust, God will protect your most royal father, &c." Prior to this he had corresponded in Latin with the doge of Venice, the landgrave of Hesse, the K. of Denmark, the D. of Brunswick, and Vladislaus K. of Poland; and in French with the D. of Joy; besides a number of other eminent persons. In 1606 Henry IV. of France ordered his ambassador to pay him special regard on all occasions. He desired him likewise to salute the prince in the name of the dauphin, afterwards Lewis XIII. to inform him of the regard the latter had for him. To all these messages the prince made very ample replies. This year also the prince waited on his Frederic III. K. of Denmark, who had come to England on a visit to K. James; and who was much pleased with his company, that he presented him at parting with his vice admiral and fighting ship, valued at no less than 2500 L. with a rapier and hanger, valued at 2000 L. The states of Holland were equally ready to shew their attachment. On the 15th of August 1607 they sent a letter to the prince in French, accompanied with a present of a set of table furniture produce of their country. The prince's partiality towards France was so evident, that the French ambassador, in a letter dated 31st Oct. mentions, that "as far as he could discover the highness's inclination was entirely towards France, and that it would be wrong to neglect a prince who promised such great things. None of his pleasures (continued he) favour the least of his country. He is a particular lover of horses, but is more of hunting; and when he goes to it, it is for the pleasure of galloping, than that which dogs give him. He studies two hours a day, employs the rest of his time in tossing the ball, or leaping, or shooting with the bow, or in juggling the bar, or vaulting, or some other such thing, and he is never idle. He shows himself very good natured to his dependents, respects their interests, and pushes whatever he undertakes for them or others with such zeal as gives success to it." He adds, that the queen had less affection for Prince Henry than for his brother the duke of York, afterwards Charles I; the king also seemed to be jealous of his son's accomplishments, and to be displeased with the progress he made. In 1607, the prince received the arms and armour which Henry IV. had sent as a present; and these being accompanied by a letter, the prince returned an answer by Sir Douglas, who was introduced to the prince by the ambassador Sir George Carew. Henry contrary to custom, opened the letter immediately; and was so much struck with the beauty of the character, that he could not be satisfied that it was the prince's hand, and compared the signature with the rest of the prince's. In July 1607, the Dutch ambassadors came

recommended to Prince Henry by the States. All his attention paid him by foreign powers, and all the temptations which a youth in his exalted station must have been exposed to, seem never to have shaken the mind of this magnanimous prince, or to have made him deviate from the strict line of propriety. His attachment to the Protestant religion appears not to have been grounded upon prejudice, inculcated upon his infant mind by those who had the care of him, but from a thorough conviction of the truth of its principles. On the discovery of the gunpowder plot, he was so impressed with gratitude towards the Supreme Being, that he never afterwards omitted being present at the sermon preached on that occasion. In his 14th year he showed himself capable of distinguishing the merit of religious discourses, and paid particular regard to such divines as were remarkable for learning and abilities. Among these he honoured with his attention the learned Mr Joseph Hall, then rector of Halstead in Suffolk, afterwards successively Bp. of Exeter and Norwich. In his family he took the utmost care to preserve decency and regularity. He ordered men to be kept at his houses of St James's, Richmond, and Nonsuch, for the money required of those who were heard to swear; the fines levied on such offenders being given to the poor. He had, indeed, a particular aversion to the vice of profane swearing. Being once asked why he did not swear at play as well as others? he answered, that he knew no game worthy of an oath. The same answer he is said to have given at a hunting match. The stag, almost quite spent, crossed a road where a butcher was passing with his dog. The stag was instantly killed by the dog; the huntsmen were greatly offended against the butcher; but the prince answered coolly, "What if the butcher's dog killed the stag, what would the butcher help it?" They replied, that if his father had been so served, he would have been so that no man could have endured. "Away," cried the prince, "all the pleasure in the world is not worth an oath." The regard which Prince Henry had for religion was manifest from his attachment to those who behaved themselves in a religious and virtuous manner. Among these was Sir John Harrington, whose good qualities so endeared him to the prince, that he entered into as strict a friendship with him as the proportion between their stations would allow. SIR JOHN HARRINGTON, N<sup>o</sup> 3. In his friendships Prince Henry appears to have been very sincere, and invariably attached to those whom he once trusted. He had a great regard for his grand aunt Lady Arabella Stewart, sister of Henry Lord Stanley; and there is still extant a letter from her, acknowledging some kindness he had bestowed on a kinsman at her recommendation. He expressed much compassion for her misfortunes; and having excited the king's jealousy on account of her marriage with Mr William Seymour, afterwards earl and marquis of Hertford, and duke of Somerset. The courage, intrepidity and martial virtues of this prince, were manifest from his infancy. He was hardly ten years of age, when he mounted a very high-spirited horse, in spite of the remonstrances of his attendants; spurred the

animal to a full gallop, and having thoroughly wearied him, brought him back at a gentle pace, asking his servants at his return, "How long shall I continue in your opinion to be a child?" In August 1607, he visited the royal navy at Woolwich, where he was received by Mr Pett, and conducted aboard the Royal Anne, where he had 31 large pieces of ordnance ready to be fired. This was done unexpectedly as it was as the prince reached the poop; at which he expressed great satisfaction. After this he paid the utmost attention to naval affairs, and repeatedly visited the dock yards at Woolwich, Chatham, &c. Among his papers, a list of the royal navy was found after his death, with an account of all the expences of fitting out, manning, &c. which must now be accounted a valuable addition to the naval history of those times. His passion for naval affairs naturally led him to a desire of making geographical discoveries; of which, two instances are recorded. One was in 1607, when he received from Mr Tindal his gunner, who had been employed by the Virginia company, a draught of James's river in that country, with a letter dated 22d June the same year. The other was in 1612, when he employed Mr Thomas Button, an eminent mariner, to go in quest of a north-west passage, but who did not return till after prince Henry's death. His martial disposition was eminently displayed on occasion of his being invested in the principality of Wales and duchy of Cornwall, June 4th 1610; when, at the tournaments given, according to the romantic taste of the times, he gave and received 31 pushes of the pike, and about 360 strokes of swords, performing his part to the admiration of all who saw him, he being then not 16 years of age. To his other virtues Prince Henry added those of frugality without avarice, and generosity without extravagance. Though he never interfered much in public business, yet in any little transactions he had of this kind, he always displayed great firmness and resolution. It is not to be supposed but that the marriage of a prince so much admired would engage the attention of the public. The queen, who favoured the interest of Spain, proposed a match with the Infanta, and the king of Spain seemed inclined to the match. In 1611 a proposal was made for a double marriage between the prince of Wales and the eldest princess of Savoy, and between the prince of Savoy and Lady Elizabeth; but these overtures were very coolly received, being generally disagreeable to the nation. Another match was proposed with the 2d princess of France. But in all of these proposals prince Henry showed the most stoical indifference; and continued to apply himself with the utmost assiduity to his employments and exercises, the continual fatigue of which at last impaired his health. In his 19th year his constitution underwent a remarkable change; he began to appear pale and thin, and to be more retired and serious than usual. He complained now and then of a giddiness and heavy pain in his forehead; he frequently bled at the nose, which gave great relief, though the discharge stopped some time before his death. These forebodings of a dangerous malady were totally neglected both by himself and his attend-

ants, even after he began to be seized at intervals with fainting fits. Notwithstanding these alarming symptoms he continued his usual employments. In the beginning of June 1612, he went to Richmond, and notwithstanding his complaints, took the opportunity of the neighbourhood of the Thames to learn to swim. This practice in an evening, and after supper, was discommended by several of his attendants. He could not, however, be prevailed upon to discontinue it, but took pleasure in walking by the river side in moonlight to hear the sound and echo of the trumpets, by which he was exposed to the evening dew. Through impatience to meet the king his father, he rode 60 miles in one day, and the next day 36 to Belvoir Castle. During the heat of the season also he made several other fatiguing journeys, which undoubtedly contributed to impair his health. His countenance became more pale; his body more emaciated; and he complained now and then of drowsiness. The malady increased in October, though he endeavoured to conceal it; and now, instead of rising early in the morning as before, he commonly kept his bed till 9. On the 16th his disease had gained so much ground, that his temper underwent a considerable alteration, and he became peevish; yet so great was his activity even at this time, that he played a match at tennis on the 24th. At this time he exposed himself in his shirt, seemingly without inconvenience; but at night he complained of a greater degree of lassitude than usual, and of a pain in his head. Next day, being Sunday, he attended divine service, and heard two sermons; after which he dined with his father, seemingly with a good appetite, but the paleness and ghastly appearance of his countenance were much remarked. About 3 P. M. he was obliged to yield to the violence of his distemper; being seized with a great faintness, shivering, and head ach, with other symptoms of fever, which from that time never left him. Several physicians were called; but they differed much in their opinions, which, indeed, considering the state of medicine at that time, could have been of no service. On the 1st of Nov. he was bled, the impropriety of which was manifest by the thin and dissolved state of the blood which was taken away, and still more by his becoming much worse next day. As no proper methods of treatment were employed, it is not to be wondered that he sunk under the disease. He expired on the 6th Nov. 1612, at the age of 28 years 2 months and 17 days. On opening his body, the lungs were found black, spotted, and full of corrupted matter; the diaphragm was also blackened in many places; the blood-vessels in the hinder part of the head were distended with blood, and the ventricles full of water; the liver was in some places pale and lead coloured; the gall-bladder destitute of bile, and distended with wind; and the spleen in many places unnaturally black. His funeral was not solemnized till the 7th of December. Many funeral sermons were published in honour of him, and the two universities published collections of verses on this occasion. The most eminent poets of that age also exerted themselves in honour of the deceased prince; particularly Donne, Brown, Chapman,

Drummond of Hawthornden, Dominic Bunsen of Leyden, &c. Prince Henry was of a comely stature, about 5 feet 8 inches; of a strong, straight, well made body, with broad shoulders and a small waist; of an amiable and majestic countenance. His hair of an auburn colour; he was long-faced, and had a broad forehead, a piercing eye, a most gracious smile, with a terrible frown. He was courteous, loving, and affable; naturally modest, and even shame-faced; patient; slow to anger; and merciful to offenders. His sentiments of piety were strong and habitual. He usually retired three times a day for his private devotions, and was scarce once a month absent from the public prayers, where his behaviour was decent and exemplary, and his attention fixed. He had the greatest esteem for all divines whose characters and conduct corresponded with their profession; but could not conceal his indignation against such as acted inconsistently with it. He had a thorough detestation for popery, though he treated those of that religion with great courtesy; showing, that his hatred was not levelled at their persons, but their opinions. And he was so immovable in his attachment to the Protestant religion, that Sir Charles Cornwallis assures us, he made a solemn protestation that he would never join in marriage with one of a different faith. He was exact in the duties of filial piety, and bore a high regard for his father. He adhered strictly to justice on all occasions; and never suffered himself to be terrified rashly, till after a due examination of all parties. This love of justice showed itself very early. When he was but a little above 5 years of age, and a son of the earl of Mar, somewhat younger than himself, falling out with one of his pages, did him some wrong, the prince reproved him saying, "I love you, because you are a lord's son, and my cousin; but if you be a better conditioned, I will love such a one better; naming the child who had complained of him." He was of singular integrity, and hated flattery and dissimulation. His temperance, except in the article of fruit, was as eminent as his abhorrence of ostentation. When he was taught to hold the pike, and his master instructed him to walk in that kind of stately march, though he knew all other things, he would not conform himself to that affected fashion. And though he was a perfect master of dancing, he never practised it except when strongly pressed to it. The modesty appeared in whatever he said or did. His cloaths were usually very plain, except on occasions of public ceremony, or upon receiving foreign ambassadors. In quickness of apprehension and memory few of the same age ever excelled him; and fewer still in a right judgment of what he was taught. Besides his knowledge of several learned languages, he spoke the Italian and French, and had made a considerable progress in philosophy, history, fortification, mathematics, and cosmography. He delighted in shooting and handling great pieces of ordnance; in ordering and marshalling of troops; in building and gardening in music, sculpture, and painting, in which last art he brought over several works of great value from foreign countries. He had a just opinion of the great abilities of Sir Walter Raleigh; and

reported to have said, that "no king but his father would keep such a bird in a cage." Though he loved plenty and magnificence in his house, he restrained them within the rules of moderation. By this economy he avoided the necessity of being rigid to his tenants, either by raising their rents, or taking advantage of forfeitures. Whatever abuses were represented to him he immediately redressed, to the satisfaction of the persons aggrieved. In his removal from one house to another, and in his attendance on the king, &c. he suffered no provisions or carriages to be taken up for him, without full value being paid to the parties. And he was so solicitous to prevent any person from being injured by himself or any of his train, that whenever he went out to hawk before harvest was ended, he took care that none should pass through the corn; and, to set them an example, would himself ride rather a furlong about. His speech was slow, and attended with some impediment, rather from custom than any defect of nature. Yet he often said of himself, that he had the most unserviceable tongue of any man living. Though affable he knew how to keep his distance, allowing no near approach either to his power or his secrets. He had a sincere affection for his mother and sister. With regard to the fair sex, Charles Cornwallis represents his virtue to have been perfectly immaculate. His early death, occurring with the public apprehensions of the monks, and the ill opinion which the nation then had of the court, gave rise to suspicions of its being hastened by poison, which were heightened by the very little concern shown by some persons at great stations. With these notions his mother the queen was peculiarly impressed, according to Wetwood; who, in his *Notes on Arthur Wilson's Life of K. James I.* (in the *Complete History of England*, p. 714.) informs us, that when the prince fell into his last illness, the queen sent to Walter Rawleigh for his cordial, which she herself had taken some time before in a fever with remarkable success. Rawleigh sent it, with a letter to the queen, wherein he expressed a tender concern for the prince; and, boasting of his medicine, said, "that it would certainly cure him or break off a fever, except in case of poison." As the prince took this medicine, and died notwithstanding its virtues, the queen, in the agony of her grief, showed Rawleigh's letter; and laid so much weight on the expression about poison, that as long as she lived she could never be persuaded but that the prince had died by that means. Anthony Weldon and Mr Wilson also countenance the same idea. But it is sufficient to oppose to all such suggestions the unanimous opinion of the physicians who attended the prince, and opened his body after his death; from which, Dr Wetwood observes, there can be no inference drawn that he was poisoned. To this may be added the authority of Sir Charles Cornwallis, who was above all suspicion in this point, and who was fully convinced that his death was natural.

(19.) HENRY, Philip, a pious and learned nonconformist minister, was the son of Mr John Henry, page of the back-stairs to James duke of York, and was born at Whitehall in 1631. He

was admitted into Westminster school at 11 years of age; became the favourite of Dr Busby, and was employed by him, with some others, in collecting materials for the Greek grammar he afterwards published. From thence he removed to Christ church, Oxford; where, having obtained the degree of M. A. he was taken into the family of Judge Puleston, at Emerald in Flintshire, as tutor to his sons, and to preach at Wortfenbury. He soon after married the only daughter of Mr Daniel Matthews of Broad-oak near Whitchurch, by whom he became possessed of a competent estate. On the restoration, he refused to conform, was ejected, and retired with his family to Broad-oak: where he lived about 18 years, relieving the poor, employing the industrious, instructing the ignorant, and exercising every opportunity of doing good.

(20.) HENRY, Matthew, an eminent dissenting minister, the son of the above (N<sup>o</sup> 19.) was born in 1662. He continued under his father's care till he was 18 years of age; in which time he became well skilled in the learned languages, especially in the Hebrew, which his father had rendered familiar to him from his childhood; and from first to last the study of the scriptures was his most delightful employment. He completed his education in Mr Doolittle's academy at Islington, and was afterwards entered in Gray's-Inn for the study of the law. But at length, resolving to devote his life to divinity, in 1686 he retired into the country, and was chosen pastor of a congregation at Chester, where he lived about 23 years, greatly esteemed and beloved by his people. He had several calls to London, which he constantly declined; but was at last prevailed upon to accept an unanimous invitation from a congregation at Hackney. He wrote, 1. *Expositions of the Bible*, in 5 vols folio. 2. *The life of Mr Philip Henry*. 3. *Directions for daily communion with God*. 4. *A method for prayer*. 5. *Four discourses against vice and immorality*. 6. *The communicant's companion*. 7. *Family hymns*. 8. *A scriptural catechism*. And, 9. *A discourse concerning the nature of schism*. He died of an apoplexy at Nantwich, in 1714; and was interred at Trinity church in Chester.

(21.) HENRY, or BLIND HENRY, or HENRY THE MINSTREL, an ancient Scottish author, distinguished by no particular surname, but well known as the composer of an historical poem reciting the achievements of Sir William Wallace. This poem continued for several centuries to be in great repute; but afterwards sunk into neglect, until 1790, that it has been again released from its obscurity by a very neat and correct edition published at Perth, under the inspection and patronage of the earl of Buchan. It is difficult to ascertain the precise time in which this poet lived, or when he wrote his history, as the two authors who mention him speak somewhat differently. Dempster, who wrote in the beginning of the 17th century, says that he lived in 1361: but Major, who was born in 1446, says that he composed his book during the time of his infancy, which we must therefore suppose to have been a few years posterior to 1446; for if it had been composed that very year, the circumstance would

probably have been mentioned. The author of the dissertation on his life, prefixed to the new edition of the poem, says, "It is not indeed impossible that he might be born in or about that year (1301). In the time of Major's infancy he might be about 83 years of age. In that case, it may be supposed, that it was the work of his old age to collect and put in order the detached pieces of his History of Wallace, which he had probably composed in those parts of the country where the incidents were said to have happened." Henry's family is not recorded, but from his writings he appears to have had a liberal education. In them he discovers some knowledge in divinity, classical history, and astronomy, as well as of the languages. In one place he boasts of his celibacy, which seems to indicate that he had engaged in some religious order. From what Major says of him, we may suppose his profession to have been that of a travelling bard; though it does not appear that he was skilled in music, or had no other profession. His being blind from his birth, indeed, makes this not improbable; nor is this circumstance inconsistent with his being a religious mendicant. "The particulars (says Major) which he heard related by the vulgar, he wrote in the vulgar verse, in which he excelled. By reciting his histories before princes or great men, he gained his food and raiment, of which he was worthy." It is thus probable that he would be a frequent visitor at the Scottish court; and would be made welcome by those great families who could boast of any alliance with the hero himself, or took pleasure in hearing his exploits or those of his companions. With regard to the authenticity of his histories, Major informs us only that "he does not believe every thing that he finds in such writings; but from other testimonies it appears, that he consulted the very best authorities which could then be had. Though, according to the most early account of Henry, he appears to have been born at least 36 years after the death of Wallace, yet he is said to have consulted with several of the descendants of those who had been the companions of that hero, while he achieved his most celebrated exploits, and who were still capable of ascertaining the veracity of what he published. The principal of these were Wallace of Craigie and Liddle of that ilk; who, he says, persuaded him to omit in his history a circumstance which he ought to have inserted. Besides these, he consulted with the principal people of the kingdom; and he utterly disclaims the idea of having adhered entirely to any unwritten tradition, or having been promised any reward for what he wrote. His chief authority, according to his own account, was a Latin history of the exploits of Sir William, written partly by Mr John Blair and partly by Mr Thomas Gray, who had been the companions of the hero himself. Henry's account of these two authors is to the following purpose: "They became acquainted with Wallace when the latter was only about 26 years of age, and at that time a student at the school of Dundee; and their acquaintance with him continued till his death, which happened in his 29th year. Mr John Blair went from the schools in Scotland to Paris, where he studied some time, and received

priests orders. He returned to Scotland in 1196, where he joined Wallace, who was bravely asserting the liberties of his country. Mr Thomas Gray, who was parson of Libberton, joined Wallace at the same time. They were men of great wisdom and integrity, zealous for the freedom of Scotland; and were present with Wallace, and assisting to him, in most of his military enterprises. They were also his spiritual counsellors. The history written by these two clergymen was attested by William Sinclair Bp. of Dunelm, who had himself been witness to many of Wallace's actions. The bishop, if he had lived longer, was to have sent their book to Rome, to obtain the sanction of the pope's authority." The book which Henry thus appeals to as his principal authority is now lost, so that we have no opportunity of comparing it with what he has written. The character given by Dempster of Henry, however, is more favourable than that by Major. He tells us, that "he was blind from his birth; a man of singular happy genius; he was indeed another Homer. He did great honour to his native country, and raised it above what was common to it in his age. He wrote, in the vernacular verse, an elaborate and grand work, in 12 books, of the deeds of William Wallace." In this account there is a mistake; for the poem contains 22 or 23 books; but Dempster, who wrote in a foreign country, and had not a perfect copy of Henry's work by him, when he wrote his eulogium, is excusable in a mistake of this kind. With regard to his poetical merit, it must be undoubtedly rank very far below that of Homer; but the poem, on the whole, is valuable, on account of our being able to trace, by its manner, the progress which the English language had made at that time in Scotland; the manners of the Scots at that age; as the favourite dress of green which at that time was the taste of the inhabitants of Scotland, &c. With regard to the authenticity of the relations, it is probable that they are partly true and partly false. The general thread of the story may undoubtedly be looked upon to be genuine, though embellished with poetical fictions and exaggerations; and his constant appeals to the book already mentioned, though it is now lost, may be looked upon as a strong testimony in his favour: for we cannot suppose, that at the time he lived, when the transactions which he related were recent, he would have had the confidence to appeal to a book, which had not been generally known to have an existence; and its being now lost can never be any argument against it, when we consider the difficulty there was of preserving books before the invention of printing; the confusions in which Scotland was frequently involved; and that the exploits of Wallace, who must be supposed to have been a kind of rival to the great Bruce, could not be so agreeable to the court as those of the more successful hero; and therefore the history of them might be suffered to fall into oblivion, though written in elegant Latin, while a ridiculous poem in that language on the battle of Bannockburn has been preserved.

(12) Henry, Robert, D. D. author of the *History of Great Britain*, written on a new plan, and one of the ministers of Edinburgh, was the son of Mr James

James Henry, farmer at Muirtown, in St Ninians parish, and Jean Galloway, daughter of Mr Galloway of Burrow-meadow in Stirlingshire. He was born 18th Feb. 1718; educated at St Ninians and Liding; afterwards completed his education at the University of Edinburgh, and was some time master of the grammar school of Annan. He was ordained 17th March, 1746, and was the first Minister of the Presbytery of Annan after its erection. In Nov. 1748, he was ordained a minister (a dissenting congregation) at Carlisle; and on the 3d Aug. 1760, was called to another at Berwick upon Tweed, where, in 1763, he married Ann Calderston, daughter of Mr Thomas Calderston, surgeon in Berwick, with whom he had no children, but much domestic happiness. He was removed to the New Gray Friars church, Edinburgh (Nov. 1768, by the influence of Provost Laurie, to whom he had married Mrs Henry's sister; and, in Nov. 1774, to the Old Church, where he continued till his death. In 1770, the degree of D. D. was conferred on him by the university of Edin. and in 1774 he was unanimously elected Moderator of a General Assembly, and is the only person on record who obtained that honour the first time he was a member. While he was in Berwick he published a scheme for raising a fund for the widows and orphans of Protestant dissenting ministers in the N. of England. By his activity, he overcame every difficulty, and had the pleasure of seeing the scheme commence in 1768. He conducted it successfully for several years, and its success exceeded most sanguine expectations long before he died. Henry published the first 3 vols. of his History at his own risk. He had many friends, but till his work was attacked in the Newspapers, Magazines, and Reviews, with a degree of malignity, he so candid a critic will allow himself to infer that he was ignorant that he had any enemies. His work possesses uncommon merit, and upon every occasion the Dr experienced the truth of the late Mr's remark, that

"Every will merit, as its shade, pursue;  
"But like the shadow, prove the substance true."  
Perhaps the active part, that Dr Henry had taken, in the church judicatories, in opposition to the Tory party, and in favour of the popular side, might be one cause of exciting those malevolent spirits to depreciate an excellent work; and another probably arose from the influence of city politics, which about that period raged violently, directed the malevolence of party spirit not only against the magistrates personally, but even against those who were related to, or connected with them. The merit of his History of Great Britain is already established in the public opinion. The work will be regarded by posterity, not only as a work which has greatly enlarged the sphere of history, and gratified curiosity on various subjects, but which fall not within the limits prescribed by preceding historians, but as one of the most accurate and authentic repositories of historical information which this country has produced. The plan he adopted, which is indisputably his own, and its several advantages, are sufficiently explained in a general preface. In every period, it arranges, under separate heads, the civil and military history

of Great Britain; the history of religion; the history of our constitution, government, laws, and courts of justice; the history of learning, of learned men, and of the chief seminaries of learning; the history of arts; the history of commerce, of shipping, of money or coin, and of the price of commodities; and the history of manners, virtues, vices, customs, language, dress, diet, and amusements. Under these seven heads, which extend the province of an historian greatly beyond its usual limits, every thing curious or interesting in the history of any country may be comprehended. But it certainly required more than a common share of literary courage to attempt, on so large a scale, a subject so intricate and extensive as the history of Britain from the invasion of Julius Cæsar. That Dr Henry neither over-rated his powers nor his industry, was proved by the success and reputation of his work. The first vol. of his History, in 4to, was published in 1771, the 2d in 1774, the 3d in 1777, the 4th in 1781, and the 5th (which brings down the History to the accession of Henry VII.) in 1785. These volumes comprehend the most intricate and obscure periods of our history; and when we consider the scanty and scattered materials which Dr Henry has digested, and the accurate and minute information which he has given under every chapter of his work, we must have a high opinion both of the learning and industry of the author, and of the vigour and activity of his mind: especially when it is added, that he employed no amanuensis, but completed the MS. with his own hand; and that, excepting the first volume, the whole book was printed from the original copy. Whatever corrections were made on it, were inserted by interlineations, or in revising the proof-sheets. He found it necessary, indeed, to confine himself to a first copy, from an unfortunate tremor in his hand, which made writing extremely inconvenient, and obliged him to write with his paper on a book placed on his knee instead of a table, and which unhappily increased to such a degree, that in the last years of his life he was often unable to take his victuals without assistance. An attempt which he made after the publication of his 5th volume to employ an amanuensis did not succeed. Never having been accustomed to dictate his own compositions, he found it impossible to acquire a new habit; and though he persevered but a few days in the attempt, it had a sensible effect on his health, which he never afterwards recovered. An author has no right to claim indulgence, and is still less entitled to credit from the public, for any thing which can be ascribed to negligence in committing his MSS. to the press; but considering the difficulties which Dr Henry surmounted, and the accurate research and information which distinguish his history, the circumstances above mentioned are interesting, and add considerably to his merit. He did not profess to study the ornaments of language; but his arrangement is uniformly regular and natural, and his style simple and perspicuous. He believed that the time, which might be spent in polishing a sentence, was more usefully employed in ascertaining a fact: And as a book of facts and solid information, supported by authentic documents, his history

tory will stand a comparison with any other of the same period. But Dr Henry had other difficulties to surmount besides those which related to the composition of his work. Not having been able to transact with the booksellers to his satisfaction, the first 5 vols. were originally published at the risk of the author. When the first volume appeared, it was censured with unexampled acrimony. The same spirit appeared in strictures published on the 2d and 3d volumes; but by this time it had in a great measure lost the attention of the public. The malevolence was sufficiently understood, and had long before become fatal to the sale of the *Edinburgh Magazine and Review*, the work from which it originally proceeded. The book, though printed for the author, had sold beyond his most sanguine expectations; and had received both praise and patronage from men of the first literary characters in the kingdom: and though, from the alarm which had been raised, the booksellers did not venture to purchase the property, till after the publication of the 3d volume, the work was established in the opinion of the public, and at last rewarded the author with a high degree of celebrity, which he happily lived to enjoy. His profits upon the whole amounted to about L. 3,300: a striking proof of the merit of the work. In its progress, it also proved the means of introducing Dr Henry to more extensive patronage, and in particular to that of the earl of Mansfield. That venerable nobleman thought the merit of Dr Henry's history so considerable, that, without solicitation, after the publication of the 4th volume, he applied personally to his Majesty, to bestow on the author some mark of his royal favour. In consequence of this, Dr Henry was informed by a letter from lord Stormont, of his Majesty's intention to confer on him an annual pension for life of 100l. "considering his distinguished talents and great literary merit, and the importance of the very useful and laborious work in which he was so successfully engaged, as titles to his royal countenance and favour." The warrant was issued on the 28th May 1781; and his right to the pension commenced from the 5th of April preceding, and continued till his death. From the earl of Mansfield he received many other testimonies of esteem, which he was often heard to mention with the most affectionate gratitude. The 2vo edition of his history, published in 1788, was inscribed to his lordship. The 4to edition had been dedicated to the king. The prosecution of his history had been Dr Henry's favourite object for almost 30 years of his life. He had naturally a sound constitution, and a more equal and larger portion of animal spirits than is commonly possessed by literary men. But from the year 1785 his bodily strength was sensibly impaired. Notwithstanding this, he persisted steadily in preparing his 6th volume, which brings down the history to the accession of Edward VI. and left it in the hands of his executors almost completed. Scarcely any thing remained unfinished but the two short chapters on arts and manners; and even for these he left materials and authorities so distinctly collected, that there was no great difficulty in supplying what was wanting. This volume was published in 1793; and met with the same favourable reception from the public which has

been given to the former volumes, though written under the disadvantage of bad health. The tremulous motion of his hand had increased so as to render writing much more difficult to him than it had ever been; but the vigour of his mind was unimpaired; and the posthumous volume will be a lasting monument of the strength of his faculties, and of the literary industry and perseverance which ended only with his life. Dr Henry's original plan extended from the invasion of Britain by the Romans to the present times. And men of literary curiosity must regret that he did not live to complete his design; but he has certainly finished the most difficult part of his subject. The proof after the accession of Edward VI. afforded materials more ample, better digested, and much more within the reach of common readers. In summer 1790 he was able to pursue his study though not without interruptions. But he had lost his health entirely; and, with a constitution quite worn out, died on the 24th Nov. in the 74 year of his age. He was buried in the church-yard of Polmont.

(33.) HENRY OF HUNTINGDON, an English historian, of the 12th century, canon of Lincoln, afterwards archdeacon of Huntingdon. He wrote 1. A history of England, which ends with the year 1154: 2. A continuation of that of Bede: 3. Chronological tables of the kings of England: 4. A small treatise on the contempt of the world: 5. Several books of epigrams and love-verses: 6. A poem on herbs; all in Latin. His invocation of Apollo and the goddesses of Tempe, is the ordium of his poem on herbs, may afford a specimen of his poetry.

Vatum magne parens, herbarum Phœbe reple  
 Vosque, quibus resonant Tempe iocosa, Deæ!  
 Si mihi ferta prius hedera florente paratis,  
 Ecce meos flores, ferre parata fero.

(34.) HENRY OF LAUSANNE. See HENSTON.

(35.) HENRY OF SUSA, a famous civilian and canonist of the 13th century, who acquired his reputation by his learning, that he was called *le fourre and splendeur of the law*. He was Abp. of Embrun about 1238, and cardinal bishop of Ostia in 1268. He wrote *A summary of the canon or civil law*; and a commentary on the book of the *decretals*, composed by order of Alexander IV.

(36—38.) HENRY, in geography, the name of a county, a cape, and a fort in the United States viz.

I. HENRY, a mountainous county of Virginia bounded on the N. by Franklin, S. and SE. by Patrick, SW. by Grafton, and W. and NW. by Montgomery counties. It is 40 miles long, 20 broad, and contained 6,928 citizens and 1,000 slaves in 1795.

II. HENRY, CAPE, the S. cape of Virginia, at the entrance of Chesapeake Bay. Lon. 76. 10. W. Lat. 37. 0. N.

III. HENRY, FORT, a fort of Pennsylvania, 14 miles N. of Lancaster, and 37 SE. of Sunbury.

\* HEN'S FEET. s. f. *sumaria sepium*. Hedge to mitory.

HENSHIN, or } a town of the French rep.

HENSINGEN, } lie, in the dep. of Forêts et  
 ci-devant duchy of Luxemburg, 18 miles ENE. of  
 Bastogne.

HEUSKEM, a town of Lithuania.

(1.) HENTING, *n. s.* in agriculture, a term used by the farmers for a particular method of sowing before the plough; the corn being cast in a straight line just where the plough is to come, so by this means presently plowed in. By this way of sowing they think they save a great deal of seed and other charges, a dexterous boy being as capable of sowing this way out of his hat as the most skillful seedman.

(2.) HENTING is also a term used by the ploughmen, and others, to signify the two furrows that are turned from one another at the bottom, in the plowing of a ridge. The word seems to be a corruption of *ending*, because those furrows made in end of plowing the ridges. The tops of the ridges they call *verrings*.

HEPARE. See HAFARS, and COOK, § III. 10.

(1.) HEPAR, the LIVER. See ANATOMY, *Ind.*

(2.) HEPAR SULPHURIS, ALKALINE SULPHUR, or LIVER OF SULPHUR, a combination of alkali and sulphur. See CHEMISTRY, *Index*. By the

meaning on the decomposition of hepar sulphuris by an acid, Sir T. Bergman found a method of imitating the hot or sulphureous mineral waters, to as great perfection as the cold ones are imitated by fixed air. The process consists simply in adding the vitriolic acid to hepar sulphuris, and impregnating water with the peculiar species of air that arises from this mixture; in the same manner as when water is impregnated with fixed air arising from the mixture of that or any other acid with chalk. The HEPATIC AIR, which Bergman calls it, is very readily absorbed by water; to which it gives the smell, taste, and all the other sensible qualities of the sulphureous water. A Swedish cantharus of distilled water, containing 12½ Swedish inches, will absorb about 12 cubic inches of this hepatic air; and on dropping into it the nitrous acid, it will appear, that fixed sulphur is contained, in a state of perfect solution, in this water, to the quantity of 8 grains.

It does not appear that any other acid, except what he calls the *dephlogistated marine acid*, will produce this effect. When any particular sulphureous water is to be imitated, we scarce need to observe, that the saline, or other contents peculiar to it, are to be added to the artificial hepatic air. Instead of the liver of sulphur, the operator may use a mixture of three parts of filings of iron, and two parts of sulphur melted together. It may, perhaps, be thought, that water thus prepared, does not differ from that in which a portion of hepar sulphuris has been dissolved: but it appears evidently to differ from it in this material circumstance, that in the solution of hepar sulphuris the sulphur is held in solution by the water, by means of the alkali combined with it: whereas in Bergman's process, it does not appear probable that the hepar sulphuris rises substantially in the form of air; for, in that case, its presence in the hepatic water might be detected by the weakness of the acids (even the mephitic), which would precipitate the sulphur from it. Nor can it be supposed that any portion or constituent part of the alkali itself (except a part of its remaining fixed air) can come over. The water, therefore, must owe its impregnation to the sulphur, raised,

in some peculiar manner, into the state of an elastic vapour; permanent, when the experiment is made in quicksilver; but condensable in water, and rendered soluble in that fluid by means of some unknown principle combined with it, and which the author supposes to be the matter of heat, combined with it through the medium of phlogiston.

HEPATICA, a species of ANEMONE.

HEPATICÆ ARTERIÆ. See ANATOMY, § 199.

\* HEPATICAL. } *adj.* [*hepaticus*, Latin;

(1.) \* HEPATICK. } [*hepatique*, French, from *hep.*] Belonging to the liver.—If the evacuated blood be florid, it is stomach blood; if red and copious, it is *hepatick*. *Harvey on Consumptions*.—The cystick gall is thick, and intensely bitter; the *hepatick* gall is more fluid, and not so bitter. *Arbuthnot on Aliments*.

(2.) HEPATICK, or HEPATIC AIR, a permanently elastic fluid, of a very disagreeable odour somewhat like that of rotten eggs, obtained in plenty from combinations of sulphur with earths, alkalis, metals, &c. and sometimes from combinations of alkalis with substances which do not appear to contain any sulphur. In the new chemical nomenclature, it is called SULPHURETUM HYDROGENOUS GAS. See CHEMISTRY, *Index*; and HEPAR SULPHURIS. Its specific gravity is to that of common air, as 10,000 to 9,018. The nature of this fluid has been particularly examined by Mr Kirwan, of whose experiments an account is given in the 78th vol. of the *Philos. Trans.* From the results, that gentleman concludes, that hepatic air consists merely of sulphur, rarefied by elementary fire, or the matter of heat. Some have supposed that it consists of liver of sulphur itself volatilized; but this Mr Kirwan denies, for the following reasons: 1. It is evidently, though weakly, acid; reddening litmus, and precipitating acetous baro-selenite, though none of the other solutions of earths do. 2. It may be extracted from materials which either contain no alkali at all, or next to none; as iron, sugar, oil, charcoal, &c. 3. It is not decomposed by marine or fixed air; by which nevertheless liver of sulphur may be decomposed. Mr Kirwan says, he was formerly of opinion that sulphur was held in solution in hepatic air, either by means of vitriolic or marine air, but neither of these is essential to the constitution of hepatic air as such, since it is producible from materials that contain neither of these acids; and from whatever substance it is obtained, it always affords the same character, viz. that of the vitriolic acid exceedingly weakened, such an acid as we may suppose sulphur itself to be. This substance indeed, even in its concrete state, manifests the properties of an acid, by uniting with alkalis, calcareous and ponderous earths, as well as with most metals, which a very weak acid might be supposed to do. See CHEMISTRY, *Index*; and HEPAR, § 2.

(3.) HEPATICK ALOES, the inspissated juice of a species of ALOES.

(4.) HEPATIC STONES. See LIVER STONES.

(5.) HEPATIC WATER. See HEPAR SULPHURIS.

HEPATICUS DUCTUS. See ANATOMY, § 300.

HEPATITIS, in medicine, an inflammation of the liver. See MEDICINE, *Index*.

HEPATOSCOPIA, [from *hep.*, liver, and *scop.*, to view,

etc, I consider.) is antiquity, a species of divination, wherein predictions were made by inspecting the livers of animals. The word was also used for divination by entrails.

**HEPBURN**, James Bonaventura, a celebrated Scottish author, of the 16th century, born at Oldhamstocks, in E. Lothian, July 14, 1573. His father, Thomas Hepburn, who was rector of that parish, and was a convert of the celebrated John Knox, bred him up a Protestant; notwithstanding which, he had hardly completed his academical education at St Andrews, when, either from persuasion or views of interest, he turned Roman Catholic, and travelled into France and Italy. After this he set out on a most extensive peregrination through Turkey, Persia, Syria, Palestine, Egypt, Ethiopia, and most other countries of note in the East, during which he acquired the languages of all these nations, to an uncommon degree of perfection. Upon his return to Europe, he entered into a convent of Minims, an order of Franciscans at Avignon, and afterwards removed to the monastery of the Holy Trinity at Rome. Pope Paul V. hearing of his great acquisitions in oriental learning, drew him from this retirement, by appointing him keeper of the Oriental Books and M. SS. in the Vatican; in which office he continued 6 years. He afterwards went to Venice to translate some Hebrew, Syriac, and Chaldaic writings; and died in that city in 1620 or 1621. His works are very numerous. The most important are, 1. A Hebrew and Chaldaic Dictionary, and an Arabic Grammar; printed at Rome, in 1 vol. 4to, 1591. 2. A translation of the Psalms from the Hebrew into Latin with a commentary: 3. An abridged Chronicle of the affairs of the Romans: 4. A Collection of all the synonymous words in the Bible. All the rest of his writings and translations favour strongly of superstitious credulity. The titles of one or two of them may serve as a specimen: 1. A Treatise on mystical numbers; from the Hebrew of Eben Ezra: 2. *Sepher Yetzura*, or the Book of the creation; said to have been written by the Patriarch Abraham: 3. The Book of Benoch: all translated, with many similar works, into Latin. His merit, however, as a learned linguist is unquestionable. Dr M'Kenzie, Mr Dempster, J. Gaffarel, and Vincent Biancua, a noble Venetian, all mention him in terms of high commendation; and Dr Lettice concludes him "to have been one of the first linguists in modern literature."

**HEPHÆSTIA**, in antiquity, an Athenian festival in honour of Vulcan, the chief ceremony of which was a race with torches. The antagonists were 3 young men, one of whom, by lot, took a lighted torch in his hand, and began his course; if the torch was extinguished before he finished the race, he delivered it to the 2d. and he in like manner to the 3d: the victory was his who first carried the torch lighted to the end of the race; and to this successive delivering of the torch we find many allusions in ancient writers.

**HEPHÆSTION**, the friend of Alexander the Great. See **ALEXANDER III.**

**HEPHÆSTUS**, [*Ἥφαίστος*, from *ἥψα*, I have kindled, and *ἥρως*, a fire.] The Greek name of Vulcan.

(1.) **HEPHTHEMIMERIS**, [cf *ἑπτα* seven, *μερ*

or half, and *μερ* part,] in the Greek and Latin poetry, a sort of verse consisting of three feet and a syllable; that is, of seven half feet: called *hepthemimeris catalectic*. Such are most of the verses in Anacreon:

Οὐλοῖτο δὲ λυγρὸν ἄλγεος ἄλγεος  
Οὐλοῖτο δὲ λυγρὸν ἄλγεος ἄλγεος

And that of Aristophanes, in his *Plutus*:

Ἐνὶ τῷ ποταμῷ ποταμῷ

(2.) **HEPHTHEMIMERIS**, or *Hepthemimeris*, also a caesura after the third foot; that is, on the 7th half foot. It is a rule, that this syllable, if it be short in itself, must be made long on account of the caesura, or to make it an *hepthemimeris*. As in that verse of Virgil.

*Et furis agitatae amor, et constans virtus.*

The caesura is not to be on the 5th foot, as it is the verse which Dr Harris gives for an example.

*Ille latus uterum molli fatus Hecynthio.*

This is not a *hepthemimeris caesura*, but a *heptamimeris*.

(1.) **HEPPENHEIM**, a town of Germany, in the circle of the Lower Rhine, and electorate of Mentz, 10 miles E. of Worms, and 16 NNW. Heideberg.

(2.) **HEPPENHEIM**, a town of Germany, annexed to the French republic, by the treaty of Lunéville, and included in the dep. of Mont Tonne; 4 miles SW. of Worms, and 14 NNW. Mannheim.

(1.) \* **HEPS**. *n. f.* Hawthorn-berries common written *heps*. *Asiaworth*.—In hard Winters it is observed great plenty of *heps* and haws, which preserve the small birds from starving. *Asiaworth*.

(2.) **HEPS** or **HEPS**. { See **ROSA**, N° 3.

(1.) **HEP TEE**.

**HEPSEY**, a river of Wales, which runs into the Neath, in Brecknockshire.

\* **HEPTACAPSULAR**. *adj.* [*ἑπτα* and *capsula*] Having seven cavities or cells.

**HEPTACHORD**, *n. f.* in ancient poetry, a versified verse that were sung or played on 7 chords, or on 7 different notes. In this sense it was applied to the lyre when it had but 7 strings. On the intervals is also called an *heptachord*, as containing the same number of degrees between extremes.

(1.) \* **HEPTAGON**. *n. f.* [*heptagon*, from *ἑπτα* and *γωνία*] A figure with seven sides or angles.

(2.) **HEPTAGON**, in fortification, a place which has 7 bastions for its defence.

(1.) \* **HEPTAGONAL**. *adj.* (from *heptagon*) Having seven angles or sides.

(2.) **HEPTAGONAL NUMBERS**, in arithmetic, a sort of polygonal numbers, wherein the difference of the terms of the corresponding arithmetical progression is 5. One of the properties of these numbers is, that if they be multiplied by 40, and 9 be added to the product, the sum will be a square number.

**HEPTAGYNIA**, (from *ἑπτα*, seven, and *γυνή*, a female.) an order of plants, consisting of such as have 7 styles. See **BOTANY**, § 182.

**HEPTANDRIA**, in botany, (from *ἑπτα* and *ἄνδρ*, a man,) the 7th class in Linnaeus's method, consisting of plants with hermaphrodite flowers, which have 7 stamina or male organs. See **BOTANY**, *Index*.

**HEPTANGULA**

HEPTANGULAR, *adj.* In geometry, having 7 angles.

(1.) \* HEPTARCHY. *s. f.* [*heptarchie*, French; *hepta* and *archa*.] A sevenfold government.—In the Saxon *heptarchy* I find little noted of arms, albeit the Germans, of whom they descended, used shields. *Comtes*.—England began not to be a people, when Alfred reduced it into a monarchy; for the materials thereof were extant before, namely, under the *heptarchy*. *Hale's Origin of Mankind*.—

The next returning planetary hour  
Of Mars, who shar'd the *heptarchy* of pow'r,  
His steps bold Arcite to the temple bent. *Dryd.*  
(2.) HEPTARCHY signifies a government composed of 7 persons, or a country governed by 7 persons, or divided into 7 kingdoms.

(3.) HEPTARCHY, THE SAXON, included all England, which was cantoned out into 7 independent kingdoms, peopled and governed by different Saxon and colonies; viz. those of Kent, the South Saxons, West Saxons, East Saxons, Northumbria, the East Angles, and Mercia. The *heptarchy* was formed gradually from A. D. 455, when the kingdom of Kent was erected, and Hengist assumed the title of king of Kent immediately after the battle of Eglesford; and it terminated in 7 or 828, when Egbert reunited them into one, and the *heptarchy* into a monarchy, and assumed the title of *king of England*. It must be observed, however, that though Egbert became monarch of England, he was not absolute. The kingdom which he actually possessed consisted of 7 ancient kingdoms of Wessex, Sussex, Kent, Essex, that had been peopled by Saxons and Angles. Over the other 3 kingdoms, whose inhabitants were Angles, he contented himself with asserting the sovereignty, permitting them to be governed by kings who were his vassals and tributaries. The government of the *heptarchy*, reckoned from the founding of the kingdom of Mercia, last of the 7 Anglo-Saxon kingdoms, lasted 243 years; but if the time spent by the Saxons in their conquests from the arrival of Hengist in 449 be added, the *heptarchy* will be found to have lasted 283 years from its commencement to its dissolution. The causes of the dissolution of the *heptarchy* were the great inequality among the 7 kingdoms, 3 of which greatly surpassed the others in extent and power; the default of male heirs in the royal families of all the kingdoms, that of Wessex excepted; and the concurrence of various circumstances which combined in the time of Egbert.

See ENGLAND, § 13, 14.  
(4.) \* HER. *pronoun*. [*hera*, *her*, in Saxon, stood for *her*, or of *them*, which at length became the possessive.] 1. Belonging to a female; of a woman.—

About his neck  
A green and gilded snake had wreath'd itself,  
That with *her* head, nimble in threats, approach'd  
The opening of his mouth. *Shak.*

Still new favourites she chose,  
Till up in arms my passion rose,  
And cast away *her* yoke. *Cowley.*

One month, three days, and half an hour,  
Which held the sov'reign pow'r;

Wonderous beautiful *her* face;  
But so weak and small *her* wit,

Vol. XI. PART I.

That she to govern were unfit,  
And so Susanna took *her* place. *Cowley.*

2. The oblique case of *she*.—  
England is so idly king'd,  
Her sceptre so fantastically borne,  
That fear attends *her* not. *Shak.*

She cannot seem deform'd to me,  
And I would have *her* seem to others so. *Cowley.*  
The moon arose clad o'er in light,  
With thousand stars attending on *her* train;  
With *her* they rise, with *her* they set again.

Should I be left, and thou be lost, the sea,  
That bury'd *her* I lov'd should bury me. *Dryd.*  
(5.) \* HER. *pron.* This is used when it refers to a substantive going before: as, such are *her* charms, such charms are *hers*.—

This pride of *hers*,  
Upon advice, hath drawn my love from *her*. *Shak.*

Thine own unworthiness  
Will still that thou art mine, not *hers*, confess. *Cowley.*

Some secret charm did all *her* acts attend,  
And what his fortune wanted, *hers* could mend. *Dryden.*

I bred you up to arms, rais'd you to power,  
Indeed to save a crown, not *hers*, but your. *Dryden.*

(1.) HERACLEA, an ancient city of European Turkey in Romania, with a Greek archbishop's see, and a sea port. It was a very famous place in former times, and has still some remains of its ancient splendor. It was built by the emp. Severus. Theodore Lascaris took it from David Comnenus, emperor of Trebisond; when it fell into the hands of the Genoese, but Mahomet II. took it from them; since which it has been in the possession of the Turks. It is seated on the N. coast of the sea of Marmora, 45 miles WSW. of Constantinople. Lon. 27. 58. E. Lat. 40. 39. N.

(2.) HERACLEA. See HERKLA.  
HERACLEONAS. See HERACLIUS, N. 2.  
HERACLEONITES, a sect of heretics, the followers of Heracleon, who refined upon the Gnostic system, and maintained that the world was not the immediate production of the son of God, but that he was only the occasional cause of its being created by the Demiurgus. The Heracleonites denied the authority of the Old Testament, maintaining that they were mere random sounds in the air; and that St John the Baptist was the only true voice that directed to the Messiah.

HERACLEUM, MADNESS: A genus of the digynia order, belonging to the pentandria class of plants; and in the natural method ranking under the 45th order, *Umbellatae*. The fruit is elliptical, emarginated, compressed, and striated, with a thin border. The corolla is disform, inflexed, and emarginated; the involucre dropping off. There are five species, of which the most remarkable is

HERACLEUM SPONDYLUM, the *cow parsnip*. It is common in many parts of Britain, and other northern parts of Europe and Asia. Gmelin, in his *Flora Siberica*, p. 224. tells us, that the inhabitants of Kamtschatka, about the beginning of July, collect the foot-stalks of the radical leaves of this plant, and, after peeling off the rind, dry them

them separately in the sun, and then tying them in bundles, dry them carefully in the shade: in a short time afterwards, these dried stalks are covered over with a yellow saccharine efflorescence, tasting like liquorice: and in this state they are eaten as a great delicacy.—The Russians not only eat the stalks thus prepared, but procure from them a very intoxicating spirit. They first ferment them in water with the greater bilberries (*VACCINIUM ULIGINOSUM*), and then distil the liquor to what degree of strength they please; which Omelet says is more agreeable to the taste than spirits made from corn. This may therefore prove a good succedaneum for whisky, and lessen the consumption of barley. Swine and rabbits are very fond of this plant. In Norfolk it is called *ageword*.

**HERACLIDÆ**, the descendants of **HERCULES**, greatly celebrated in ancient history. Hercules at his death left to his son Hyllus all the rights and demands which he had upon Peloponnesus, and ordered him to marry Iole the daughter of Eurytus, as soon as he came of age. The posterity of Hercules were not more kindly treated by Eurytus than their father had been, and they were obliged to retire for protection to the court of Ceyx, king of Trachinia. Eurytus pursued them thither; and Ceyx, afraid of his resentment, begged the Heracids to depart from his dominions. From Trachinia they came to Athens, where king Theseus, who had accompanied their father in some of his expeditions, received them with great humanity, and assisted them against Eurytus. Eurytus was killed by Hyllus himself; his children perished with him, and all the cities of Peloponnesus became the undisputed property of the Heracids. Their triumph, however, was short; their numbers were lessened by a pestilence; and the oracle informed them, that they had taken possession of Peloponnesus before the gods permitted their return. Upon this they abandoned Peloponnesus, and came to settle in Attica, where Hyllus married Iole. Soon after he consulted the oracle, anxious to recover the Peloponnesus; and the ambiguity of the answer determined him to make a second attempt. He challenged to single combat Atreus, the successor of Eurytus on the throne of Mycenæ; and it was mutually agreed that the undisturbed possession of Peloponnesus should be ceded to the victor. Echemus accepted the challenge for Atreus; Hyllus was killed, and the Heracids departed from Peloponnesus a 3d time, about 30 years before the Trojan war. Cleodæus the son of Hyllus made a third attempt, and was equally unsuccessful; and his son Aristomachus some time after met with the same unfavourable reception, and perished in the field of battle. Aristodemus, Temenus, and Cleopontes, the three sons of Aristomachus, encouraged by the more explicit word of an oracle, and desirous to revenge the death of their progenitors, assembled a numerous force, and with a fleet invaded all Peloponnesus. Their expedition was attended with much success; and after some decisive battles, they became masters of all the peninsula. The recovery of Peloponnesus by the Heracids forms an interesting epoch in ancient history, which is universally believed to have happened 80 years after the Trojan war, or A. A. C. 1190. This con-

quest was totally achieved about 110 yrs after the first attempt of Hyllus, who was killed 30 years before the Trojan war. As it occurred many changes and revolutions in the affairs of Greece, the return of the Heracids is the epoch of the beginning of profane history: all the era that preceded it is reputed fabulous. Accordingly, Ephorus, Cumanus, Callisthenes, and Theopompus, begin their histories from this era.

**HERACLIDES**, a Greek philosopher of Pontus, the disciple of Speusippus, and afterwards Aristotle, flourished about A. A. C. 336. His vanity prompted him to desire one of his friends put a serpent into his bed just as he was dead, in order to raise a belief that he was ascended to the heavens among the gods; but the cheat was covered. All his works are lost.

**HERACLITUS**, a famous Ephesian philosopher, who flourished about the 6th Olympiad in the time of Darius Hystaspes. He is said to have continually bewailed and wept for the wretched lives of men; contrary to Democritus, who made the follies of mankind a subject of laughter. He retired to the temple of Diana, and played dice with the boys there; saying to the Epicureans who gathered round him, "Work of men, do you wonder at? Is it not better to be than to govern you?" Darius invited him to come and live with him, but he refused. Angry out of hatred to mankind, he retired to the mountains, where he contracted a dropsy, by using herbs, which killed him at 60 years of age. His writings gained him great reputation. Lucian mentions a *treatise upon nature*, divided into 12 books, one concerning the universe: the 2d on politics: the 3d on theology. This book he deposited in the temple of Diana; and it is said that he affected to write obscurely, lest it could be read by the vulgar, and become contemptible. The fundamental doctrine of his philosophy is that fire is the principle of all things. The ancient philosophers have collected and preserved fragments of him.

(1.) **HERACLIUS**, an emperor of the east, a renowned warrior, who dethroned and slew Phocas in 610. At this time the empire was at war with Chosroes II. king of Persia. Heracles proposed terms of peace, but the haughty Persian refused it, unless he would renounce Christianity. Heracles thereupon mustered his forces, and after repeated victories obliged him to beg for peace he had refused. He was, however, not successful in his wars with the Saracens. He died in 641, aged 66.

(2.) **HERACLIUS CONSTANTINE**, the 30th Heracles, (N° 1.) succeeded him in command with his brother **HERACLIANUS**; but reigned only a few months, being poisoned by his brother, Martina, in 641.

**HERAKRA**, a town of Sweden, in Småland.

(1.) \* **HERALD**. *s. f.* [*herault*, Fr. *herold*, German.] 1. An officer whose business is to register genealogies, adjust ensigns, armorial, regulate funerals, and anciently to carry messages between princes, and proclaim war and peace.

May none, whose scatter'd names he wears  
In book,

For strict degrees of rank or title look;

'Tis 'gainst the manners of an epigram,  
And I a poet here, no *herald* am. *Ben Jonson*,  
When time shall serve let but the *herald* cry,  
And I'll appear again. *Shak.*

Embassador of peace, if peace you chuse;  
Or *herald* of a war, if you refuse. *Dryden*.

Please thy pride and search the *herald's* roll,  
Where thou shalt find thy famous pedigree. *Dryden*.

A precursor; a forerunner; a harbinger.—  
It is the part of men to fear and tremble,  
When the most mighty gods, by tokens, send  
Such dreadful *heralds* to astonish us. *Shak.*

It was the lark, the *herald* of the morn. *Shak.*

A proclaimer; a publisher.—  
After my death I wish no other *herald*,  
No other speaker of my living actions,  
But such an honest chronicler as Griffith. *Shak.*

(1.) *HERALD*, says Verstegan, is derived from the  
Latin word *Herebault*, and by abbreviation *He-*

*alt*, which in that language signifies the champi-

on of an army; and growing to be a name of of-

fice, it was given to him who, in the army, had

the special charge to denounce war, to challenge

to battle and combat, to proclaim peace, and to

convey martial messages. But the business of he-

*rald*, now, is as follows, viz. To marshal, or-

der, and conduct all royal cavalcades, ceremo-

nies at coronations, royal marriages, installations,

creations of dukes, marquises, earls, viscounts,

barons, baronets, and dubbing of knights; em-

balles, funeral processions, declarations of war,

proclamations of peace, &c.: To record and bla-

ze the arms of the nobility and gentry; and to

regulate any abuses therein through the British

honours, under the authority of the Earl Mar-

shal, to whom they are subservient. The of-

fice of Windsor, Chester, Richmond, Somerset,

York, and Lancaster heralds, is to be assistants

to the king at arms, in the different branches of

his office; and they are superior to each other,

according to creation, in the above order. He-

*ralds* were anciently held in much greater esteem

than they are at present; and were created and

christened by the king, who, pouring a gold cup  
of wine on their head, gave them the herald name:  
but this is now done by the earl marshal. They could  
not arrive at the dignity of herald without being  
7 years pursuivant; nor quit the office of herald,  
but to be made king at arms. Richard III. was  
the first who formed them, in this kingdom, into  
a college; and afterwards great privileges were  
granted them by Edward VI. and Philip and Ma-  
ry. The origin of heralds is very ancient. Sten-  
tor is represented by Homer as herald of the  
Greeks, who had a voice louder than 50 men to-  
gether. The Greeks called them *megastis*, and *meg-*  
*astis*; and the Romans, *feciales*. The Romans  
had a college of heralds, appointed to decide whe-  
ther a war were unjust; and to prevent its com-  
ing to open hostilities, till all means had been at-  
tempted for deciding the difference in a pacific  
way.

(3.) *HERALDS, COLLEGE OF, OR HERALDS OF-*  
*FICE*, a corporation founded by a charter of king  
Richard III. who granted them several privileges, as  
to be free from subsidies, tolls, offices, &c. They  
had a second charter from king Henry VI.; and  
a house built near Doctors Commons, by the E. of  
Derby, in the reign of K. Henry VII. was given  
them by the D. of Norfolk, in the reign of queen  
Mary I. which house is now rebuilt. This col-  
lege is subordinate to the earl marshal of England.  
They are assistants to him in the court of chival-  
ry, usually held in the common-hall of the col-  
lege, where they sit in their rich coats of his ma-  
jesty's arms.

(4.) *HERALDS, COLLEGE OF, IN SCOTLAND*,  
consists of Lyon king at arms, six heralds, and six  
pursuivants, and a number of messengers. See  
LYON.

\* *To HERALD, v. a.* [from the noun.] To in-  
troduce as by an herald. A word not used.—

We are sent from our royal master,  
Only to *herald* thee into his fight,

Not pay thee. *Shak.*

*HERALDIC, adj.* Belonging to heraldry.

## H E R A L D R Y.

*HERALDRY* is thus defined by Dr John-

son:—  
\* *HERALDRY, n. f.* [*herauldrie*, Fr. from *be-*  
*al*.] 1. The art or office of a herald.—I am  
king of *heraldry*. *Peacbam*.—

Grant her, besides of noble blood that ran  
In ancient veins, ere *heraldry* began. *Dryden*.

Registry of genealogies.—

'Twas no false *heraldry* when madness drew  
Her pedigree from those who too much knew.

*Denham*,—

*Blazonry*.—  
Metals may blazon common beauties; she  
Makes pearls and planets humble *heraldry*.

*Cleveland*.

**INTRODUCTION.**  
*HERALDRY* is a science, which teaches how to

blazon, or explain in proper terms, all that be-

longs to arms; and how to marshal, or dispose  
regularly, divers arms on a field. It also teaches  
whatever relates to the marshalling of solemn ca-  
valcades, processions and other public ceremo-  
nies at coronations, installations, creations of peers,  
nuptials, christenings of princes, funerals, &c.

Arms, or coats of arms, are hereditary marks  
of honour, made up of fixed and determined co-  
lours and figures, granted by sovereign princes,  
as a reward for military valour, or some signal  
public service; and serve to denote the descent  
and alliance of the bearer, or to distinguish states,  
cities, societies, &c. civil, ecclesiastical, and mi-  
litary.

Heraldry is therefore a science, of which arms  
are the proper object; yet they differ much both  
in their origin and antiquity. Heraldry, accord-  
ing to Sir Geo. Mackenzie, "as digested into an

D d 2 art,

Digitized by Google

are, and subjected to rules must be ascribed to Charlemagne and Frederick Barbarossa, for it did begin and grow with the feudal law." Sir John Ferne is of opinion, that we borrowed arms from the Egyptians; meaning from their hieroglyphicks. Sir William Dugdale mentions, that arms, as marks of honour were first used by great commanders in war, necessity requiring that their persons should be notified to their friends and followers. The learned Alexander Nisbet, in his excellent *System of Heraldry*, says, that arms owe their rise and beginning to the light of nature, and that signs and marks of honour were made use of in the first ages of the world, and by all nations, however simple and illiterate, to distinguish the noble from the ignoble. We find in Homer, Virgil, and Ovid, that their heroes had divers figures on their shields, whereby their persons were distinctly known. Alexander the Great, desirous to honour those of his captains and soldiers who had done any glorious action, and also to excite an emulation among the rest, granted them certain badges to be born on their armour, pennons, and banners; ordering, at the same time, that no person or potentate, through his empire, should attempt or presume to give or tolerate the bearing of those signs upon the armour of any man, but it should be a power reserved to himself; which prerogative has been claimed ever since by all other kings and sovereign princes within their dominions.

On this subject, all that can be said with any certainty is, that in all ages, men have made use of figures of living creatures, or symbolical signs, to denote the bravery and courage either of their chief or nation, to render themselves more terrible to their enemies, and even to distinguish themselves or families, as names do individuals. The famous C. Agrippa, in his treatise of the vanity of sciences, cap. 81. has collected many instances of these marks of distinction, anciently born by kingdoms and states that were any way civilized, viz. The Egyptians bore an ox; the Athenians an owl; the Goths a bear; the Romans an eagle; the Franks a lion; and the Saxons a horse. As to hereditary arms of families, William Camden, Sir Henry Spelman, and other judicious heralds, agree, that they did not begin till towards the end of the 11th century. According to F. Menestrier, a French writer, whose authority is great in this matter, Henry I<sup>st</sup> Ouseleur (or the Falconer) who was raised to the imperial throne of the West in 920, by regulating tournaments in Germany gave occasion to the establishment of family arms, or hereditary marks of honour, which undeniably are more ancient and better observed among the Germans than in any other nation. This last author also asserts, that with tournaments first came up coats of arms; which were a sort of livery, made up of several lists, fillets, or narrow pieces of stuff of divers colours, from whence came the fess, the bend, the pale, &c. which were the original charges of family arms; for they who never had been at tournaments, had not such marks of distinction. They who enlisted in the Crusades, took up also several new figures formerly known in armorial ensigns; such as allions, bezants, escalop shells, martlets, &c. but more particularly crosses of dif-

ferent colours for distinction's sake. From this it may be concluded, that heraldry, like most human inventions, was gradually introduced and established; and that, after having been rude and unsettled for many ages, it was at last methodized, perfected, and fixed by the Crusades and tournaments.

These marks of honour are called *arms*, from their being principally and first worn by military men at war and tournaments, who had them engraved, embossed, or depicted on shields, banners, or other martial instruments. They are also called *Coats of Arms*, from the custom of the ancients embroidering them on the coats they wore over their arms as heralds do to this day.

Arms are distinguished by different names, to denote the causes of their bearing: such as, arms of Dominion, of Pretension, of Concession, of Community, of Patronage, of Family, of Alliance, or Succession.

**Arms of Dominion**, or sovereignty, are those which emperors, kings, and sovereign states, or states bear; being, as it were, annexed to territories, kingdoms, and provinces, they possess. Thus the three lions are the arms of England, the fleur-de-lis those of the late monarchy of France, &c.

**Arms of Patronage** are those of such kingdoms, provinces, or territories, to which a prince or lord has some claim, and which he adds to his own, although the said kingdoms or territories be possessed by a foreign prince or other lord. Thus the kings of England have quartered the arms of France with their own, ever since Edward I<sup>st</sup> laid claim to the kingdom of France, which he opened in 1330, on account of his being son to Isabella, sister to Charles IV. or the Fair, who died without issue; till the first day of the present century, when HIS MAJESTY'S ARMS were quartered on account of the Union with Ireland, and the French arms were thrown out.

**Arms of Concession**, or augmentation of honour, are either entire arms, or else one or more figures, given by princes as a reward for some great service. We read in history, that Robert I<sup>st</sup> king of Scotland allowed the earl of Winton ancestor to bear, in his coat armour, a crown supported by a sword, to show that he, and the descendants, of which he was the head, supported a tottering crown. The late Q. Anne granted Sir Cloudesly Shovel, rear-admiral of Great Britain, a chevron between two fleur-de-lis in chief and a crescent in base, to denote three great victories he had gained; two over the French, and one over the Turks.

**Arms of Community** are those of bishoprics, cities, universities, academies, societies, companies, and other bodies corporate.

**Arms of Patronage** are such as governors of provinces, lords of manors, patrons of benefices, &c. add to their family arms, as a token of their superiority, rights, and jurisdiction. These arms have introduced into heraldry, castles, gates, wheels, ploughs, saxes, harrows, &c.

**Arms of Family**, or **PATRIMONIAL ARMS**, are those that belong to one particular family, that distinguish it from others, and which so possess

is suffered to assume without committing a crime, which sovereigns have a right to restrain and punish.

Arms of ALLIANCE are those which families or private persons take up and join to their own, to denote the alliances they have contracted by marriage. This sort of arms is either impaled, or born in an *escutcheon of pretence*, by those who have married heiresses.

Arms of SUCCESSION are such as are taken up by those who inherit certain estates, manors, &c. either by will, entail, or donation, and which they either impale or quarter with their own arms; which multiplies the titles of some families out of necessity, and not through ostentation, as many imagine.

These are the eight classes under which the various sorts of arms are generally ranged; but there is a sort which blazoners call *assumptive arms*, being such as are taken up by the caprice or fancy of upstarts, though of ever so mean extraction, who, being advanced to a degree of fortune, assume them without a legal title. This, indeed, is a great abuse of heraldry; and common only in Britain, for on the continent no such practice takes place.

We now proceed to consider the essential and several parts of arms, which are these: 1. The ESCUTCHEON: 2. The CHARGES: 3. The TINCTURES: 4. The ORNAMENTS.

## CHAP. I.

## Of the SHIELD or ESCUTCHEON.

THE *Shield* or *Escutcheon* is the field or ground upon which are represented the figures that make up the arms: for these marks of distinction are put on bucklers or shields before they were used on banners, standards, flags, and coat-armour; and wherever they may be fixed, they are seen on a plane or superficies whose form resembles a shield.

Shields, in heraldry called *escutcheons* or *scutcheons*, have been, and still are, of different forms, according to different times and nations. Amongst ancient shields, some were almost like a horse-shoe, as is represented in the figure of Escutcheon, Plate CLXXIV. others triangular, somewhat rounded at the bottom. The people who inhabited Mesopotamia, now called *Diarbeck*, made use of this sort of shield, which it is thought they had of the Trojans. Sometimes the shield was heptagonal, that is, had 7 sides. The first shape is said to have been used by the famous triumvir M. Antony. That of knights banner was square, like a banner. As to modern escutcheons, those of the Italians, particularly of the Medici, are generally oval. The English, French, Germans, and other nations, have their escutcheons formed different ways, according to the carver's or painter's fancy: see the various examples in the plates. But the escutcheons of kings, widows, and of such as are born ladies, or are married to private gentlemen, is in the shape of a lozenge: See Plate 174. Sir George Martineau mentions one Murice, countess of Devon, who carried her arms in a lozenge, as

no 1384, which shows how long we have been versant in heraldry.

Armourists distinguish several parts or points in escutcheons, in order to determine exactly the position of the bearings they are charged with; they are here denoted by the first 9 letters of the alphabet ranged in the following manner:

- A—the dexter chief.  
B—the precise middle chief.  
C—the sinister chief.  
D—the honour point.  
E—the fess point.  
F—the nombril point.  
G—the dexter base.  
H—the precise middle base.  
I—the sinister base.

The knowledge of these points is of great importance, for they are frequently occupied with several things of different kinds. The dexter side of the escutcheon is opposite to the left hand, and the sinister side to the right of the hand of the person that looks on it.

## CHAP. II.

## Of TINCTURES, FURS, LINES, and DIFFERENCES.

## SECT. I. Of TINCTURES.

By *tinctures* is meant, that variable hue of arms which is common both to shields and their bearings. According to the ci-devant French heralds, there are but 7 tinctures in armory; of which 2 are metals, the other 5 are colours.

The Proper Colours.	By tinctures for Commoners.	By Precious Stones for Peers.	By Planets for Princes, Kings, and Emperors.
Yellow	Or	Topaz	Sol
White	Argent	Pearl	Luna
Red	Gules	Ruby	Mars
Blue	Azure	Sapphire	Jupiter
Purple	Purpure	Amethyst	Mercury
Black	Sable	Diamond	Saturn
Green	Vert	Emerald	Venus

When natural bodies, such as animals, plants, celestial bodies, &c. are introduced into coats of arms, they frequently retain their natural colours, which is expressed in this science by the word *proper*.

Besides the colours above mentioned, the English writers on heraldry admit two others, viz.

Orange, } termed Tenny.  
Blood-colour, } termed Sanguine.

But these two are rarely to be found in British bearings.

These tinctures are represented in engravings and drawings (the invention of the ingenious Silvester Petra Sancta, an Italian author of the last century) by dots and lines, as in Plate 174.

Or is expressed by dots. Argent needs no mark, and is therefore plain. Azure, by horizontal lines. Gules, by perpendicular lines. Vert, by diagonal lines from the dexter chief to the sinister base points. Purpure, by diagonal lines from the sinister

ter chief to the dexter base points. *Sable*, by perpendicular and horizontal lines crossing each other. *Tenay*, by diagonal lines from the sinister chief to the dexter base points, traversed by horizontal lines. *Sanguine*, by lines crossing each other diagonally from dexter sinister, and from sinister to dexter.

The English heralds give different names to the roundlet, according to its colour. Thus, if it is Or, it is called a *Brant*; Argent, a *Plat*; Azure, a *Hurt*; Gules, a *Tortaux*; Vert, a *Penny*; Purpure, a *Golpe*; Sable, a *Pellet*; Tenny, an *Orange*; and Sanguine, *Gum*.

Other nations do not admit such a multiplicity of names to this figure; but call them *Brants*, after an ancient coin struck at Constantinople, once *Byzantium*, if they are Or and Tortaux; if of any other tincture expressing the same.

### SECT. II. Of FURS.

FURS represent the hairy skin of certain beasts, prepared for the doublings or linings of robes and garments of state: and as shields were anciently covered with furred skins, they are therefore used in heraldry, not only for the linings of the mantles, and other ornaments of the shields, but also in the coats of arms themselves. There are 6 different kinds in use, (see Plate CLXXIV.) viz.

1. *Ermine*; which is a field argent, powdered with black spots, their tails terminating in 3 hairs.

2. *Erminette*, or *Counter ermine*, where the field is sable, and the powdering white.

3. *Erminee*; the field Or, the powdering Sable.

4. *Vair*, which is expressed by blue and white skins, cut into the forms of little bells, ranged in rows opposite to each other, the base of the white ones being always next to that of the blue ones. *Vair* is usually of six rows; if there be more or fewer, the number ought to be expressed; and if the colours are different from those above mentioned, they must likewise be expressed.

5. *Penn*; the field is Sable, the powdering Or. The French used no such term: but they called all furs or doublings *des penes*, or *penes*; which term has possibly given rise to this mistake, and many others, in those who do not understand the French language.

6. *Potent*, anciently called *Fairy-cuppy*, as when the field is filled with crutches or potents counter-placed. *Vair* and *Potent* may be any two colours.

The use of the tinctures took its rise from the several colours used by warriors whilst they were in the army, which S. de Petra Sancta proves by many citations. And because it was the custom to embroider gold and silver on silk, or silk on cloth of gold and silver, the heralds appointed, that in imitation of the clothes so embroidered, colour should never be used upon colour, nor metal upon metal.

### SECT. III. Of the LINES used in the PARTING of FIELDS.

ESCUTCHEONS are either of one tincture, or more than one. Those that are of one only, that is, when some metal, colour, or fur, is spread all over the surface or field, such a tincture is said to be predominant: but in such as have of them more than one, as most have, the field is divided

by lines; which, according to their diverse forms, receive various names.

Lines may be either straight or crooked. Straight lines are carried evenly through the escutcheon; and are of 4 different kinds; viz. a perpendicular line |; a horizontal, —; a diagonal dexter, \; a diagonal sinister, /.

Crooked lines are those which are carried unevenly through the escutcheon with rising and falling. French armorists reckon 11 different sorts of them; Guillim admits of 7 only; but there are 11 distinct kinds, the figures and names of which are as in Plate CLXXIV: viz. 1. The engrailed. 2. The involled. 3. The wavy. 4. The embattled or crenelle. 5. The arborescent. 6. The regny. 7. The indented. 8. The dancette. 9. The dove tail. 10. The embattled atende. 11. The battled embattled. 12. The Champaine.

The principal reason why lines are thus used in heraldry, is to difference bearings which would otherwise be the same; for an escutcheon charged with a chief engrailed, differs from one charged with a chief wavy, as much as if the one bore a cross and the other a saltier. As the forementioned lines serve to divide the field, if the division consists of two equal parts made by the perpendicular line, it is called *parted per pale*; by the horizontal line, *parted per fess*; by the diagonal dexter, *parted per bend*; by the diagonal sinister, *parted per bend sinister*; examples of which will be given in the sequel of this treatise.

If a field is divided into four equal parts by any of these lines, it is said to be *quartered*; which may be done two ways, viz.

*Quartered* or *parted per cross*; which is made by a perpendicular and horizontal line, which cross each other at the centre of the field, divide it into four equal parts called *quarters*. See Pl. CLXXV.

*Quartered* or *parted per saltier*; which is made by two diagonal lines, dexter and sinister, which cross one another in the center of the field, likewise divide it into four equal parts. *Ibid.*

The escutcheon is sometimes divided into a greater number of parts, in order to place in the arms of the several families to which one is allied; and in this case it is called a *genealogical achievement*. These divisions may consist of 6, 12, and 16, quarters, (as the royal arms,) and even sometimes of 32, 64, and upwards; being examples of such divisions frequently exhibited at pompous funerals. An extraordinary instance of this kind was lately exhibited at the pompous funeral of the late worthy viscountess of T. head, whose corpse was brought from Dublin in Ireland to Rainham hall in Norfolk, where the principal tenants on horse-back carried before the bier a genealogical banner, containing the quarterings of his lordship's and her lady's family, to the amount of upwards of 160. Sir George Booth, rector of the valuable manor of Ashton under Line, bears six distinct coats of arms in his shield; viz. those for Booth, Earl Venables, Mountfort, Ashton, Egerton; and besides a right to 37 other coats: but Sir Wm Dugdale very justly objects to so many arms being clustered together in one shield or banner, on account of the difficulty of discerning and knowing asunder one coat of arms from another.

**Escutcheons**

**HERALDRY.**

**Plate CLXXIV**

**Colours, or Tinctures**

## SECT. IV. Of the DIFFERENCES of COATS of ARMS.

ARMORISTS have invented many differences or characteristic marks, whereby bearers of the same coat of arms are distinguished each from others, and their nearness to the principal bearer demonstrated. According to J. Guillim, these differences are to be considered either as ancient or modern.

1. Those he calls *ancient differences* consist in *bordures*; which is a bearing that goes all round, and parallel to the boundary of the escutcheon, in form of a hem, and always contains a fifth part of the field in breadth. Bordures were used in ancient times for the distinguishing not only of one nation or tribe from another, but also to note a diversity between particular persons descended of one family and from the same parents. This distinction, however, was not expressly signified by variable marks; nor were bordures always appropriated to denote the different degrees of consanguinity: for, as Sir Henry Spelman observes in his *Apologia*, p. 140, "ancient heralds, being fond of perspicuous differences, often inverted the natural tincture, or sometimes inserted another charge in the escutcheon, such as bends, crozlets, fasons, or the like; which irregularity has, I suppose, induced modern armorists to invent and make use of others."

There are bordures of different forms and tinctures, as in the examples, in *Plate CLXXV*. Bordures are generally used as a difference between halves of the same name, and also as marks of degeneracy.

A bordure is never of metal upon metal, and seldom of colour upon colour, but rather of the nature which the principal bearing or charge is. Thus Sir — Dalziel of Glenae, whose predecessor was a younger brother of the noble family of Carnwath, has, within a Bordure Argent, the paternal coat of the ancient name of Dalziel, viz. "Sable, a hanged man with his arms extended Argent;" formerly they carried him hanging on a gallows. This bearing, though so very singular for a coat of arms, was given as a reward to one of the ancestors of the late Robert Dalziel, of Carnwath, to perpetuate the memory of a brave and hazardous exploit performed in taking down from the gallows the body of a favourite and near relation of king Kenneth II. hung up by the Picts; which story is thus related by Alexander Nisbet: "The king being exceedingly grieved that the body of his minion and kinsman should be so disgracefully treated, he proffered a great reward to any of his subjects who would adventure to rescue his corpse from the disgrace his cruel enemies had unjustly put upon it: but when none would undertake this hazardous enterprise, at last a valiant gentleman came and said to the king, 'I dare;' and he did fully perform that noble exploit to the king's satisfaction and his own immortal honour, and in memory of it got the aforesaid remarkable bearing, and afterwards his posterity took the word *I dare* for their surname, and the interpretation of it, *I dare*, continues to this day to be the motto of that noble family." We can have no better

proof of the truth of this tradition than this, that the heads of this ancient family have for many ages carefully retained this bearing without any alteration or addition.

2. The *modern differences*, which the English have adopted, not only for the distinguishing of sons issued out of one family, but also to denote the difference and subordinate degrees in each house from the original ancestors, are nine, viz. For the heir or first son, the Label. 2d son, the Crescent. 3d son, the Mullet. 4th son, the Martlet. 5th son, the Annulet. 6th son, the Flower-de-lis. 7th son, the Rose. 8th son, the Cross-moline. 9th son, the Double Quarter foil. See *Plate CLXXV*. By these differences, the six sons of Thomas Beauchamp, the 13th earl of Warwick, who died in the 34th year of king Edward III. are distinguished in an old window of the church of St Mary at Warwick; so that although they are called *modern differences*, their usage with the English is ancient. But of all the fore mentioned marks of distinction, none but the label is affixed on the coats of arms belonging to any of the royal family; which the introducers of this peculiarity have, however, thought proper to difference by additional pendants and distinct charges on them: as is shewn in *Plate CLXXV*, where, 1. The Prince of Wales and D. of Cornwall have a label Luna. 2. The D. of York has a label Luna charged with a cross Mars upon the middle Lambreux. 3. The D. of Clarence has a label Luna, charged with a cross Mars, between two anchors Jupiter. 4. The D. of Gloucester has a label of five points Luna, the middle one charged with a fleur-de-lis Jupiter; the other four with a cross Mars. These differences are born upon the arms and supporters.

As to the distinction to be made in the arms of the offspring belonging to each of the above-mentioned brothers, it is expressed by figures on the top and margin of the *TABLE of HOUSES*, given in *Plate CLXXV*. For instance, The heir or first son of the second house, bears a crescent charged with a label during his father's life only. The second son of the second house, a crescent charged with another crescent. The third son of the second house, a crescent charged with a mullet. The fourth son of the second house, a crescent charged with a martlet. The fifth son of the second house, a crescent charged with an annulet. The sixth son of the second house, a crescent charged with a fleur-de-lis; and so on of the other sons, taking care to have them of a different tincture.

In what part of the escutcheon these differences should be born is not certain; for Guillim, Morgan, and others, give us many different examples of their position. The honour point would be the properest place, if the arms would admit of it; but that is not always the case, as that part may be charged with some figure in the paternal coat, which cannot with propriety receive the difference. There are instances where these are born alone as perfect coats of arms.

In the *Examples of Differences*, exhibited in *Plate CLXXV*, 1. Is the mark of filiation for the 4th son of the 6th house. 2. Is the 4th son of the first generation, expressed by the martlet in chief.

Sisters, except of the blood-royal, have no other mark

mark of difference in their coats of arms, but the form of the escutcheon; therefore they are permitted to bear the arms of their father, as the eldest son does after his father's decease. The reason is by Guillim said to be, that when they are married, they lose their surname, and receive that of their husbands.

Next to these diminutions, G. Leigh, J. Guillim, and after them Dr Harris in his *Lexicon Technicum*, set forth at large divers figures, which they pretend were formerly added to the coats of such as were to be punished and branded for cowardice, fornication, slander, adultery, treason, or murder, for which they give them the name of *abatements of honour*; but as they produce but one instance of such whimsical bearings, we have not inserted them. Besides, arms being marks of honour, they cannot admit of any note of infamy; nor would any body now-a-days bear them if they were so branded. It is true, a man may be degraded for divers crimes, particularly high treason; but in such cases the escutcheon is reversed, trod upon, and torn in pieces, to denote a total extinction and suppression of the honour and dignity of the person to whom it belonged.

### CHAP. III.

#### Of the CHARGES.

WHATSOEVER is contained in the field, whether it occupy the whole or only a part thereof, is called a *charge*. All charges are distinguished by the names of *honourable ordinaries*, *sub-ordinaries*, and *common charges*.

1. Honourable ordinaries, the principal charges in heraldry, are made of lines only, which, according to their disposition and form, receive different names.

2. Sub-ordinaries are ancient heraldic figures, frequently used in coats of arms, and which are distinguished by terms appropriated to each of them.

3. Common charges are composed of natural, artificial, and even chimerical things; such as plants, creatures, vegetables, instruments, &c.

#### SECT. I. Of Honourable Ordinaries.

THE most judicious armorists admit only of nine honourable ordinaries, *viz.* The Chief; the Pale; the Bend; the Bend Sinister; the Fess; the Bar; the Chevron; the Cross; and the Saltier.

Of these, only 6 have diminutives, which are called as follows: That of the chief is a *fillet*; the pale has a *pallet* and *endorse*; the bend, a *bendlet*, *cost*, and *ribband*; the bend sinister has the *searp* and *baton*; the bar, the *closet* and *barulet*; the chevron, a *cheveronnel* and *couple-close*.

1. The **CHIEF** is an ordinary determined by an horizontal line, which, if it is of any other form but straight, must be expressed. It is placed in the upper part of the escutcheon, and contains in depth the third part of the field. Its diminutive is a *fillet*, the content of which is not to exceed one fourth of the chief, and stands in the lowest part thereof. This ordinary is subject to be charged with variety of figures; and may be indented, wavy, nebule, &c. as in the examples, in *Plate CLXXV*.

2. The **PALE** is an ordinary, consisting of two perpendicular lines drawn from the top to the base of the escutcheon, and contains the third middle part of the field. Its diminutives are, the *pallet*, which is the half of the pale; and the *endorse*, which is the 4th part of a pale. This ordinary and the *pallet* may receive any charge, but the *endorse* should not be charged. The *endorse*, besides, is never used, according to J. Leigh, but to accompany the pale in pairs, as cotices do the bend; but Sir John Ferne is of a different opinion.

3. The **BEND** is an ordinary formed by two diagonal lines, drawn from the dexter chief to the sinister base; and contains the 5th part of the field in breadth, if uncharged; but if charged, then the third. Its diminutives are, the *bendlet*, which is the half of a bend; the *cost* or *cotice*, when two of them accompany a bend, which is the 4th part of a bend; and the *ribband*, the moiety of a cost, or the 8th part of a field.

The **BEND SINISTER** is of the same breadth as the bend, but drawn the contrary way; thus it is subdivided into a *scrape*, which is the half of the bend; and into a *bâton*, which is the 4th part of the bend, but does not extend itself to the extremities of the field, there being part of it lost at both ends. See *Plate CLXXVII*.

4. The **FESS** is an ordinary produced by two parallel lines drawn horizontally across the centre of the field, and contains in breadth the third part thereof. Some English writers say it has no diminutive for the bar is a distinct ordinary of itself.

5. The **BAR**, according to their definition, is formed of two lines, and contains but the 5th part of the field: which is not the only thing wherein it differs from the fess; for there may be more than one in an escutcheon, placed in different parts thereof, whereas the fess is limited to the centre point; but in this the French armorists differed from them. The bar has two diminutives; the *barulet*, which contains the half of the bar; and the *closet*, which is the half of the barulet. When the shield contains a number of bars of metal and colour alternate, of even number, that is called *barry* of so many pieces, expressing their number. See the examples, in *Pl. CLXXVI*.

6. The **CHEVRON**, which represents two rafters of a house well jointed together, or a pair of compasses half open, takes up the fifth part of the field with the English, but the French gave it the third. Its diminutives are, The *cheveronnel*, which contains the half of a chevron; and the *couple-close*, which is the half of a cheveronnel, that is its breadth is but the fourth part of a chevron. Leigh observes, that this last diminutive is never born but in pairs, or with a chevron between two of them. The French had but one diminution of this ordinary called *Stape*, containing the third part of its breadth. See *Plate CLXXVII*.

7. The **CROSS** is an ordinary formed by the meeting of two perpendicular with two horizontal lines in the fess point, where they make four angles; the lines are not drawn throughout, but discontinued the breadth of the ordinary, which takes up only the fifth part of the field when uncharged; but if charged, then the third. It is born as well engrailed, indented, &c. as plain.

There is a great variety of crosses used in heraldry.

*Cap of the Lord Mayor*

raldry. Guillim has mentioned 39 different sorts; De la Colubiere, 73; Leigh, 46; and Upton declares he dares not ascertain all the various crosses born in arms, for that they are almost innumerable. Examples of those most commonly seen at present in coats of arms, will be found in *Plate CLXXVI.*

2. The **SALTIER**, which is formed by the bend and bend sinister crossing each other in right angles, as the intersecting of the pale and fess forms the cross, contains the 5th part of the field; but if charged, then the 3d. In Scotland, this ordinary is frequently called a *St Andrew's cross*. It may, like the others, be born engrailed, wavy, &c. as also between charges, or charged with any thing. See *Plate CLXXVI.*

### SECT. II. Of SUB-ORDINARIES.

THERE are other heraldic figures, called **SUB-ORDINARIES**, or *Ordinaries* only, which, by reason of their ancient use in arms, are of worthy name, viz. The *Gyron*, *Franc-quarter*, *Canton*, *Fess*, *Fret*, *Pile*, *Orle*, *Escutcheon*, *Tressure*, *Ambr*, *Flanches*, *Flasques*, *Voiders*, *Billet*, *Lozenge*, *Gutts*, *Puff*, *Raistr*, *Maske*, *Pavillone*, and *Diaper*. See *Plates CLXXV. and CLXXVII.*

The **GYRON** is a triangular figure formed by two lines, one drawn diagonally from one of the angles to the centre of the shield, and the other is drawn either horizontal or perpendicular, from one of the sides of the shield, meeting the other line at the centre of the field.

**GYRONNY** is said, when the field is covered with 6, 8, 10, or 12, gyrons in a coat of arms; but a French author would have the true gyronny to consist of 8 pieces only, which represents the arms of Flora Campbell countess of Louisa, &c. whose ancestor was created baron of London in 1604 by James VI. and earl of the same year, May 12, 1633, the 9th of Charles I.

The **FRANC-QUARTER** is a square figure, which occupies the upper dexter quarter of the shield. It is but rarely carried as a charge. Silvester Petrus has given us a few instances of its use.

The **CANTON** is a square part of the escutcheon, somewhat less than the quarter, but without any set proportion. It represents the banners that were given to ancient knights bannerets, and, generally speaking, possesses the dexter-chief point of the field, as in the figure; but should it possess the dexter corner, which is but seldom, it must be surmounted by a canton sinister. J. Coats reckons it to be one of the 9 honourable ordinaries, contrary to all heralds opinions. It is added to coats of arms of military men as an augmentation of honour. See *Plates CLXXV. and CLXXVII.*

The **PAVILLON** is a figure formed by the conjunction of the upper half of the saltier with the under half of the pale.

The **FRAT** is a figure representing two little lions in saltier, with a mascle in the center inter-medial. J. Gibbon terms it the *herald's true lovers* arms, but many dissent from his opinion.

**FRETTY** is said when the field or bearings are covered with a fret of 6, 8, or more pieces, as in *Plate CLXXV.* The word *fretty* may be used without distinction, when it is of 8 pieces; but if there be less than that number, they must be specified.

The **PILE**, which consists of two lines, terminating in a point, is formed like a wedge, and is born engrailed, wavy, &c. as in the figure. It issues in general from the chief, and extends towards the base; yet there are some piles born in bend, and issuing from other parts of the field, as may be seen in *Plate CLXXV.*

The **ORLE** is an ordinary composed of two lines going round the shield, the same as the bordure, but its breadth is but one half of the latter, and at some distance from the brim of the shield, as in *Plate CLXXV.*

The **INRESCUTCHEON** is a little escutcheon born within the shield; which, according to Guillim's opinion, is only to be so called when it is born single in the fess point or centre; see the figure on *Plate CLXXV.* but modern heralds, with more propriety, give the name of *inrescutcheon* to such as are contained in *Plate CLXXVII.* and call that which is fixed on the fess point *escutcheon of pretence*, which is to contain the arms of a wife that is an heiress, as mentioned above.

The **TRESSURE** is an ordinary commonly supposed to be the half of the breadth of an orle, and is generally born flowery and counter-flowery, as it is also very often double, and sometimes treble. See *Plate CLXXVII.* This double tressure makes part of the arms of Scotland, as marshalled in the royal achievement, and was granted to the Scots kings by Charlemagne, emperor and king of France, when he entered into a league with Achilcous king of Scotland, to show that the French lilies should defend and guard the Scottish lion.

The **ANNULAT**, or **RING**, is a well-known figure, and is frequently to be found in arms through every kingdom in Europe. See *Plate CLXXV.*

The **FLANCHES** are formed by two curved lines, or semicircles, being always born double. See *Pl. CLXXV.* G. Leigh observes, that on two such flanches two sundry coats may be born.

The **FLASQUES** resemble the flanches, except that the circular lines do not go so near the centre of the field. See *Pl. 177.* Gibbon would have these two ordinaries to be both one, and written *flank*; alledging, that the two other names are but a corruption of this last: but as G. Leigh and J. Guillim make them two distinct and subordinate ordinaries, we insert them here as such.

The **VOIDERS** are by Guillim considered as a subordinate ordinary, and are not unlike the flasques, (see *Pl. 175*), but they occupy less of the field.

The **BILLET** is an oblong square, twice as long as broad. Some heralds imagine, that they represent bricks for building; others more properly consider them as representing folded paper or letters.

The **LOZANGE** is an ordinary of four equal and parallel sides, but not rectangular; two of its opposite angles being acute, and the other two obtuse. Its shape is the same with those of our window-glasses, before the square came so much in fashion. See *Plate CLXXV.*

**GUTTS**, or **DROPS**, are round at bottom, waved on the sides, and terminate at the top in points. Herald's have given them different names according to their different tinctures: thus, if they are yellow, they are called *Guttés d'Or*; if white, *d'Eau*; if red, *de Sang*; if blue, *de Larmes*; if green, *de Vert*; if black, *de Poix*. See *Plate CLXXV.*

The **PURSE** is longer than the lozenge, having its upper and lower part more acute and sharp than the other two collateral middle parts, which acuteness is occasioned by the short distance of the space between the two collateral angles; which space, if the fustil is rightly made, is always shorter than any of the four equal geometrical lines whereof it is composed. See *Plate CLXXV*.

The **RUSTEN** is a lozenge pierced round in the middle, called by the Germans *ruten*. See *Pl. 173*.

The **MASCL** is pretty much like a lozenge, but voided or perforated through its whole extent, showing a narrow border, as in the figure. Authors are divided about its resemblance; some taking it for the mesh of a net, and others for the spots of certain flints found about Rohan. See *Plate 173*.

**PAPILLON** is an expression used for a field or charge that is covered with figures like the scales of a fish. *Monf. Baron* gives as an example of it the arms of *Monti*, *Gueules Papelone d'Argent*. The proper term for it in English would be *scallop-work*.

**DIAPHAN** is said of a field or charge, shadowed with flourishings or foliage with a colour a little darker than that on which it is wrought. The Germans frequently use it; but it does not enter into the blazoning or description of an arms; it only serves to embellish the coat.

If the fore-mentioned ordinaries have any attributes, that is, if they are engrailed, indented, wavy, &c. they must be distinctly specified, after the same manner as the honourable ordinaries.

### SECT. III. Of COMMON CHARGES born in COATS OF ARMS.

As in all ages men have made use of representations of animals and other symbols to distinguish themselves in war, human ingenuity has been not a little exerted, in multiplying these marks of distinction, by all sorts of figures, some natural, others artificial, and many chimerical; in allusion to the state, quality, or inclination of the bearer.

Hence the sun, moon, stars, comets, meteors, &c. have been introduced to denote glory, grandeur, power, &c. Lions, leopards, tigers, serpents, flags, &c. have been employed to signify courage, strength, prudence, swiftness, &c. War, hunting, music, &c. have furnished lances, swords, pikes, arms, saddles, &c. Architecture, columns, cheverons, &c.; and the other arts various things that relate to them.

Human bodies, or parts of them, as well as clothes, and ornaments, have, for particular intentions, found place in armory. Trees, plants, fruits, and flowers, have also been adopted, to denote the rarities, advantages, and singularities, of different countries.

The relation of some creatures, figures, &c. to particular names, has been likewise a very fruitful source of variety in arms. Thus the family of *Coningsby* bears three *conys*; of *Arundel*, six swallows, from *hirundo*, the Latin for a swallow; of *Urfon*, a bear, from the Latin *ursus*; of *Lucie*, three pikes, in Latin *tres lucas pisces*; of *Starkey*, a *stork*; of *Castleman*, a *castle* triple-towered; of *Southleworth*, three weaver's *shuttles*, &c.

Besides these natural and artificial figures, many

chimerical or imaginary ones are used in heraldry, the result of fancy and caprice; such as centaurs, hydras, phoenixes, griffons, dragons, &c. The great variety of figures prevents us from comprehending all common charges in a work of this nature; therefore such only are treated of as are most frequently born in coats of arms.

I. Among the multitude of **NATURAL FIGURES** which are used in coats of arms, those most usually born are, for the sake of brevity as well as propriety, distributed into the following classes, viz. 1. *Celestial figures*; as, the sun, moon, stars, &c. and their parts. 2. *Effigies of men, women, &c.* and their parts. 3. *Beasts*; as, lions, flags, lions, bears, &c. and their parts. 4. *Birds*; as, eagles, swans, storks, pelicans, &c. and their parts. 5. *Fishes*; as dolphins, whales, sturgeons, trouts, &c. and their parts. 6. *Reptiles and insects*; as, tortoises, serpents, grass-hoppers, &c. and their parts. 7. *Vegetables*; as, trees, plants, flowers, herbs, &c. and their parts. 8. *Stones*; as diamonds, rubies, pebbles, rocks, &c.

These charges have, as well as ordinaries, various attributes or epithets, which express their qualities, positions, and dispositions. Thus the sun is said to be *in his glory*, *eclipsed*, &c. The moon, *in her complement*, *increased*, &c. Animals are said to be *rampant*, *passant*, &c. Birds have all their denominations, such as *close*, *displayed*, &c. Fishes are described to be *hauriant*, *noient*, &c. Lions are termed *lionsels*, if more than two in a field, and eagles *eaglets*. See examples in *Pl. 177 & 178*. A lion is said to be *conchant*, when lying down, and *rampant*, when standing on his hind legs, and rearing up his fore feet, as if climbing. Trees and plants are also said to be *trunked*, *radicated*, *frustrated*, or *ragged*, according as they are represented in arms. See *Plate CLXXVIII*.

II. Of **ARTIFICIAL FIGURES** born in coats of arms, some are taken from *warlike instruments*, as swords, arrows, battering rams, gauntlets, helmets, spears, pole axes, &c. Others from *ornaments* used in royal and religious ceremonies; as crowns, coronets, mitres, wreaths, croziers, &c. Others are borrowed from *architecture*; as towers, castles, arches, columns, plummets, battlements, churches, portcullises, &c. Others from *navigation*; as ships, anchors, rudders, pendants, masts, flags, galleys, lighters, &c.

All these bearings have different epithets, serving either to express their position, disposition, or make: viz. swords are said to be *erect*, *pointed*, *hilted*, &c.; arrows, *armed*, *scattered*, &c. towers, *covered*, *embattled*, &c.; and so on of all others. See *Plate CLXXVIII*. and *CLXXIX*.

III. **CHIMERICAL FIGURES** form the last and the oddest kind of bearings in coats of arms. Under the name of *chimerical figures*, heralds rank all representations of things, that have no real existence, but are mere fabulous and fantastical inventions. These charges, griffons, martlets, and unicorns excepted, are not common in British coats. Those most in use are the following, viz.

Angels, Cherubims, Tritons, Centaurs, Martlets, Griffons, Unicorns, Dragons, Mermaids, Satyrs, Wiverns, Harpies, Cockatrices, Phoenixes, and Sphinxes. These, like the foregoing charges, are

are subject to various positions and dispositions, which, from the principles already laid down, will be plainly understood. See the examples in *Plates CLXXVII. and CLXXVIII.*

To these figures may be added the *montegre*, an imaginary creature, supposed to have the body of a tiger with a satyr's head and horns; also those which have a real existence, but are said to be endowed with extravagant and imaginary qualities, viz. the salamander, beaver, camelion, &c.

#### CHAP. IV.

##### Of the EXTERNAL ORNAMENTS of ESCUTCHEONS.

THE ornaments that accompany or surround escutcheons were introduced to denote the birth, dignity, or office, of the persons to whom the coat of arms appertaineth; which is practised both among the laity and clergy. Those most in use are often surts, viz. Crowns, Coronets, Mitres, Helmets, Mantlings, Chapeaux, Wreaths, Crests, Scrolls, and Supporters.

##### SECT. I. Of CROWNS.

THE first crowns were only diadems, bands, or Bells; afterwards they were composed of branches of trees, and then flowers were added to them. Among the Greeks, the crowns given to those who won the prize at the Isthmian games, were of pine; at the Olympick, of laurel; and at the Nemean, of smilax. The Romans had various crowns to reward martial exploits and extraordinary services done to the republic; for which see the article *Crown*, and *Plate CL.*

Examples of some of these ANCIENT CROWNS are frequently met with in modern achievements, p. 1. The *mural crown*. 2. The *naval or restral crown*. 3. The *castle or vallary crown*. 4. The *river crown*. 5. The *radiated crown*. 6. The *crystal crown*, formed like the radiated, with the addition of a star on each ray; is only used upon tomb-stones, monuments, and the like. See *Plate CLXXIX.* Others of the ancient crowns are also born as crests.

IN MODERN CROWNS are only used as ornaments, which emperors, kings, and independent princes set on their heads, in great solemnities, to denote their sovereign authority. These are the most in use in heraldry, and are as follows:

THE IMPERIAL CROWN is made of a circle of gold, adorned with precious stones and pearls, heightened with fleurs-de-lis, bordered and seeded with pearls, raised in the form of a cap voided at the top, like a crescent. From the middle of this cap rises an arched fillet enriched with pearls, and surmounted of a mound, whereon is a cross of gold.

THE CROWN of the KINGS of GREAT BRITAIN, (see *Plate CLXXIX*) is a circle of gold, bordered with pearls and precious stones, and heightened up with four crosses patee and four large fleurs-de-lis alternately; from these rise four arched diadems adorned with pearls, which close under a mound, surmounted of a cross like those at bottom. Mr Sandford, in his *Genealogical History*, p. 311. remarks, that Edward IV. is the first king of England, who in his seal, or on his coin, is crowned with an arched diadem.

THE crowns of SPAIN and PORTUGAL, are a ducal coronet, heightened up with 8 arched diadems that support a mound, ensigned with a plain cross. Those of DENMARK and SWEDEN consist of 8 arched diadems, rising from a marquis's coronet, which conjoin at the top under a mound ensigned with a cross botone.

THE crowns of most other kings in Europe are circles of gold, adorned with precious stones, and heightened up with large trefoils, and closed by 4, 6, or 8 diadems, supporting a mound, surmounted of a cross.

THE Grand Signior bears over his arms a turban, enriched with pearls and diamonds, under two coronets, the first of which is made of pyramidal points heightened up with large pearls, and the uppermost is surmounted with crescents.

THE Pope appropriates to himself a Tiara, or long cap of golden cloth, from which hang two pendants embroidered and fringed at the ends, *semés* of crosses of gold. This cap is inclosed by three marquis's coronets; and has on its top a mound of gold, whereon is a cross of the same, which cross is sometimes represented by engravers and painters pometted, recrossed, flowery, or plain. It is difficult to ascertain the time when these haughty prelates assumed the three forementioned coronets. A patched up succession of the holy pontiffs, engraved and published a few years ago, by order of Clement XIII. for the education of good catholics in Great Britain and Ireland, represents Marcellus, who was chosen bishop of Rome A. D. 310, and all his successors, adorned with such a cap. But it appears, from very good authority, that Boniface VIII. who was elected in 1295, was the first who encompassed his cap with a coronet; Benedict XII. in 1335, added a second to it; and John XXIII. in 1411, a third; with a view to indicate by them, that the Pope is the sovereign priest, the supreme judge, and the sole legislator amongst Christians.

##### SECT. II. Of CORONETS.

THE Coronet of the PRINCE of WALES, or eldest son of the king of Great Britain was anciently a circle of gold set round with four crosses-patee, and as many fleurs-de-lis alternately; but since the restoration, it has been closed with one arch only, adorned with pearls, and surmounted of a mound and cross, and bordered with ermine like the king's. See *Plate CLXXIX.* But besides the coronet, his royal highness has another distinguishing mark of honour, peculiar to himself, viz. A plume of three ostrichfeathers, with a coronet of the ancient princes of Wales. Under it in a scroll, is this motto *ICH DIN*, which in the German or old Saxon language signifies, *I serve*. This device was at first taken by Edward prince of Wales, commonly called the *Black Prince*, after the famous battle of Cressy, in 1346, where having with his own hand killed John king of Bohemia, he took from his head such a plume, and put it on his own.

THE coronet of all the PRINCES, immediate sons and brothers of the kings of Great Britain, is a circle of gold, bordered with ermine, heightened up with 4 fleurs-de-lis, and as many crosses-patee alternate. The particular and distinguished form of such coronets as are appropriated to princes of the blood-royal,

blood-royal, is described and settled in a grant of the 13th of Charles II.

The coronet of the PRINCESSES of Great Britain is a circle of gold, bordered with ermine, and heightened up with crosses-patee, fleurs-de-lis, and strawberry leaves alternate.

A DUKE's coronet is a circle of gold bordered with ermine, enriched with precious stones and pearls, and set round with eight large strawberry or parsley leaves.

A MARQUIS's coronet is a circle of gold, bordered with ermine, set round with four strawberry leaves, and as many pearls on pyramidal points equal height, alternate.

An EARL's coronet is a circle of gold, bordered with ermine, heightened up with 8 pyramidal points or rays, on the tops of which are as many large pearls, and are placed alternately with as many strawberry leaves, but the pearls much higher than the leaves.

A VISCOUNT's coronet differs from the preceding ones as being only a circle of gold bordered with ermine, with large pearls set close together on the rim, without any limited number, which is his prerogative above the baron, who is limited.

A BARON's coronet, which was granted by king Charles II. is formed with six pearls set at equal distances on a gold circle, bordered with ermine, four of which only are seen on engravings, paintings, &c. to show he is inferior to the viscount.

The eldest sons of peers, above the degree of a baron, bear their father's arms and supporters with a label, and use the coronet appertaining to their father's second title; and all the younger sons bear their arms with proper differences, but use no coronets.

As the crown of the king of Great Britain is not quite like that of other potentates, so most of the coronets of foreign noblemen differ a little from those of the British nobility.

### SECT. III. Of Mitres.

THE archbishops and bishops of England and Ireland place a mitre over their coats of arms. It is a round cap pointed and cleft at the top, from which hang two pendants fringed at both ends; with this difference, that the bishop's mitre is only surrounded with a fillet of gold, set with precious stones; whereas the archbishop's issues out of a ducal coronet. See Plate CLXXIX.

This ornament, with other ecclesiastical garments, is still worn by the archbishops and bishops of the church of Rome, whenever they officiate with solemnity; but it is never used in England, except on coats-of-arms.

### SECT. IV. Of Helmets.

THE helmet was formerly worn as a defensive weapon, to cover the bearer's head and face; and is now placed over a coat of arms as its chief ornament, and the true mark of gentility. There are several sorts, distinguished by the matter they are made of; by their form, and by their position.

1st, As to the matter, they are, or rather were made of: the helmets of sovereigns were of burnished gold damasked; those of princes and lords, of silver figured with gold; those of knights, of steel adorned with silver; and those of private gentlemen, of polished steel.

2dly, As to their form: Those of the king and the royal family, and noblemen of Great Britain, are open-faced and grated, and the number of bars serves to distinguish the bearer's quality; that is, the helmet appropriated to the dukes and marquises is different from the king's, by having a bar crossly in the middle, and two on each side, making but five bars in all, whereas the king's helmet has six bars, viz. three on each side. The other grated helmet with four bars is common to all degrees of peerage under a marquis. The open-faced helmet without bars denotes baronets and knights. The close helmet is for all esquires and gentlemen.

3dly, Their position is also looked upon as a mark of distinction. The grated helmet in front belongs to sovereign princes. The grated helmet in profile is common to all degrees of peerage. The helmet standing direct without bars, and the beaver a little open, denote baronets and knights. Lastly, the side-standing helmet, with beaver closed, the way of wearing it amongst esquires and gentlemen. See Plate CLXXIX.

### SECT. V. Of Mantlings.

MAINTLINGS are pieces of cloth jagged or cut into flowers and leaves, which now-a-days are used as an ornament for escutcheons. They were the ancient coverings of helmets, to preserve them or the bearer, from the injuries of the weather; as also to prevent the ill consequences of the too much dazzling the eye in action. But Gualtieri very judiciously observes, that their shape must have undergone a great alteration since they have been out of use, and therefore might more properly be termed *flourishings* than *mantlings*.

The French heralds assure us, that these mantlings were originally only short coverings which commanders wore over their helmets; and that going into battles with them, they often, on the coming away, brought them back in a ragged condition, occasioned by the many cuts they received on their heads: and therefore the more hacked they were, the more honourable they were accounted; as our colours in time of war are the more esteemed for having been shot through in many places.

Sometimes skins of beasts, as lions, bears, &c. were thus born, to make the bearer look more terrible; and this occasioned the doubling of mantlings with furs.

### SECT. VI. Of CHAPEAUX, WREATHS, and CRESTS.

A CHAPEAU is an ancient hat, or rather cap of dignity worn by dukes, generally scarlet coloured velvet on the outside, lined and turned up with fur; of late frequently to be met with above an helmet, instead of a wreath, under gentlemen and noblemen's crests. Heretofore they were seldom to be found, as of right appertaining to private families; but by the grants of Robert Cooke, Clarencieux, and other succeeding heralds, these, together with ducal coronets, are now frequently to be met with in families, who yet claim not above the degree of gentlemen. See Plate CLXXX.

THE WREATH is a kind of roll, made of two strains of silk of different colours twisted together which

which ancient knights wore as a head-dress when equipped for tournaments. The colours of the list are always taken from the principal metal and colour contained in the bearer's coat of arms. They are still accounted one of the lesser ornaments of escutcheons, and are placed between the helmet and the crest. See *Plate 79*. In the time of Henry I. and long after, no man, who was under the degree of a knight, had his crest set on a wreath; but this, like other prerogatives, has been infringed so far, that every body nowadays wears a wreath.

THE CREST is the highest part of the ornaments of a coat of arms. It is called *crest*, from the Latin word *crispa*, which signifies comb or tuft, such as many birds have upon their heads, as the peacock, pheasant, &c. in allusion to the place on which it is fixed. Crests were formerly great marks of honour, because they were only worn by heroes of great valour, or by such as were advanced to some superior military command, that they might be the better distinguished in an engagement, and thereby rally their men if dispersed, but they are at present considered as a mere ornament. The crest is frequently a part either of the supporters, or of the charge borne in the shield. Thus the crest of the royal achievement of Great Britain is a Lion guardant crown'd. There are several instances of crests that relate to offices, employments, or names; and which on that account have been changed.

#### SECT. VII. Of the SCROLL, and MOTTO.

THE SCROLL is the ornament placed sometimes above the crest, but most usually below the shield and supporters; containing a motto, or short sentence, alluding thereto, or to the bearings; or the bearer's name, as in the two following instances. The motto of the noble earl of Cholmondeley is, *Castis tutissima virtus*; i. e. "Virtue the safest helmet;" on account of the helmet of the coat of arms. The motto of the right hon. ed Fortescue is, *Forte sentum salus ducum*; i. e. "A strong shield is the safety of the commanders;" being to the name of that ancient family. Sometimes it has reference to neither, but expresses something divine or heroic; as that of the earl of Armonagh, which is, *Murus aram conscientie*; i. e. "A good conscience is a wall of brass." Others are enigmatical; as that of the royal achievement, which is *Dei et meo dextis*, i. e. "God and my right;" introduced by Edward I. in 1240, when he assumed the arms and title *King of France*, and began to prosecute his wars, which occasioned long and bloody wars, at, by turns, to both kingdoms. Mottoes, though hereditary in the families that first took them up, have been changed on some particular occasions, and others appropriated in their stead, places of which are sometimes met with in the story of families.

Sometimes there are two mottoes, as in the arms of Scotland; where the one, in Dutch, is placed in a scroll above the Crest; the other, "Nemo me impune lacessit," in a scroll under the shield and supporters. Sometimes a 3d motto is added, as in the Royal arms of Great Britain, where the Garter, with its

motto, "HONI SOIT QUI MAL Y PENSE," surrounds the shield.

#### SECT. VIII. Of SUPPORTERS.

SUPPORTERS are figures standing on the scroll, and placed at the side of the escutcheon; they are so called, because they seem to support or hold up the shield. The rise of supporters is, by F. Menestrier, traced up to ancient tournaments, wherein the knights caused their shields to be carried by servants or pages under the disguise of lions, bears, griffons, blackmoors, &c. who also held and guarded the escutcheons, which the knights were obliged to expose to public view for some time before the lists were opened. Sir George Mackenzie, who dissents from this opinion, says, in his *Treatise on the science of heraldry*, chap. xxi. p. 93. "That the first origin and use of them was from the custom which ever was, and is, of leading such as are invested with any great honour to the prince who confers it: thus, when any man is created a duke, marquis, or knight of the garter, or any other order, he is supported by, and led to the prince betwixt, two of the quality, and so receives from him the symbols of that honour; and in remembrance of that solemnity, his arms are thereafter supported by any two creatures he chooses." Supporters have formerly been taken from such animals or birds as are born in the shields, and sometimes they have been chosen as bearing some allusion to the names of those whose arms they are made to support. The supporters of the arms of Great Britain, since king James the first's accession to the throne, are a *Lion rampant guardant crowned Or, on the dexter side*, and an *Unicorn Argent, crowned, armed, unguled, maned and gorged with an antique Crown, to which a chain is affixed, all Or, on the sinister*. Bearing coats of arms supported, is, according to the heraldic rules of England, the prerogative, 1st, Of those called *nobles majores*, viz. dukes, marquises, earls, viscounts, and barons: 2d, Of all knights of the garter, though they should be under the degree of barons; and 3d, Of knights of the Bath, who both receive on their creation a grant of supporters. And, lastly, of such knights as the king chooses to bestow this honour upon; as in the instance of Sir Andrew Fountain, who was knighted by Philip earl of Pembroke, when lord lieutenant of Ireland, Fountain being then secretary; and on his return to England, king William granted him supporters to his arms, viz. *two Griffons Gules and Or*. In Scotland, all the chiefs of clans or names have the privilege of claiming supporters; also the baronets. But by act of parliament, 10th September 1672, none are allowed to use either arms or supporters, under a penalty and confiscation of all moveables whereon arms are put, without the lord Lyon's authority.

#### CHAP. V.

##### Of the RULES of HERALDRY.

THE rules for blazoning, such as the ancient usage and laws of heraldry have established amongst us, are the following:

1. The first and most general rule is, to express heraldic

heraldic distinctions in proper terms, so as not to omit any thing that ought to be specified, and at the same time to be clear and concise without tautology.

II. Begin with the tincture of the field, and then proceed to the principal charges which possess the most honourable place in the shield, such as Fess, Cheveron, &c. always naming that charge first which lies next and immediately upon the field.

III. After naming the tincture of the field, the honourable ordinaries, or other principal figures, specify their attributes, and afterwards their metal or colour.

IV. When an honourable ordinary, or some one figure, is placed upon another, whether it be a Fess, Cheveron, Cross, &c. it is always to be named after the ordinary or figure over which it is placed, with one of these expressions, *sur tout*, or *over all*.

V. In blazoning such ordinaries as are plain, the bare mention of them is sufficient; but if an ordinary should be made of any of the crooked lines mentioned above, its form must be specified; that is, whether it be Engrailed, Wavy, &c.

VI. When a principal figure possesses the centre of the field, its position is not to be expressed: or (which amounts to the same thing) when a bearing is named, without specifying the point where it is placed, then it is understood to possess the middle of the shield.

VII. The number of the points of mullets or stars must be specified when more than five; and also if a mullet or any other charge be pierced, it must be mentioned as such, to distinguish it from what is plain.

VIII. When a ray of the sun, or other single figure, is born in any other part of the escutcheon than the centre, the point it issues from must be named.

IX. The natural colour of trees, plants, fruits, birds, &c. is no otherwise to be expressed in blazoning but by the word *proper*; but if discoloured, that is, if they differ from their natural colour it must be particularized.

X. When three figures are in a field, and their position is not mentioned in the blazoning, they are always understood to be placed two above, and one below.

XI. When there are many figures of the same species born in a coat of arms, their number must be observed as they stand, and distinctly expressed. See *Plates 178 and 179*.

There are other positions called *irregular*; as for example, when three figures which are naturally placed 1 and 2, are disposed 2 and 1, &c. It must also be observed, that when the field is strewn with the same figures, this is expressed by the word *semée*: but if the figures strewn on the field are whole ones, it must be denoted by the words *sans nombre*; whereas, if part of them is cut off at the extremities of the escutcheon, the word *semée* or *semi* is then to be used.

## CHAP. VI.

### Of MARSHALLING COATS OF ARMS.

By *marshalling* coats of arms, is to be understood the art of disposing divers of them in one es-

cutcheon, and of distributing their constituent ornaments in proper places. Various cases may occasion arms to be thus conjoined, which Guilielmus comprises under two heads, viz. *manifest* and *obscure*. What this learned and judicious author means by *manifest causes*, in the marshalling of coats of arms, are such as betoken marriages, a sovereign's gift, granted either through the special favour of the prince, or for some eminent services. Concerning marriages it is to be observed.

I. When the coats of arms of a married couple, descended of distinct families, are to be put together in one escutcheon, the field of their respective arms is conjoined pale-ways, and blazoned *parted per Pale, Baron and Femme, two cuts; first, &c.* In which case the baron's arms are always to be placed on the dexter side, and the femme's arms on the sinister side. See *Plate 180*.

II. If a widower marry again, his late and present wife's arms are, according to G. Leigh, "to be both placed on the sinister side, in the escutcheon with his own, and parted per Pale. The first wife's coat shall stand on the Chief, and the second on the Base; or he may set them both pale with his own, the first wife's coat next himself, and his second outermost. If he marry a 3d wife, then the two first matches shall stand on the Chief, and the third shall have the whole Base. And if he take a 4th wife, she must participate one half of the Base with the third wife, and so will they seem to be so many cuts quartered." But these forms of impaling are meant of hereditary coats, whereby the husband stands in expectation of having the hereditary possessions of his wife united to his patrimony. If a man marry a widow, he marshalls her *maiden* arms only. See *Plates CLXXX*.

III. In the arms of females joined to the paternal coat of the baron, the proper differences by which they were born by the fathers of such women must be inserted.

IV. If a coat of arms that has a Bordure be impaled with another, as by marriage, then the Bordure must be wholly omitted in the side of the arms next the centre.

V. The person who marries an heiress, instead of impaling his arms with those of his wife, is to bear them in an escutcheon placed in the centre of his shield, and which, on account of its showing forth his pretension to her estate, is called a *escutcheon of pretence*, and is blazoned *sur tout*, or *over all*. But the children are to bear the hereditary coat of arms of their father and mother *quarterly*, which denotes a fixed inheritance, as to transmit them to posterity. The first and fourth quarters generally contain the father's arms and the second and third the mother's; unless the heirs should derive not only their estate, but also their title and dignity, from their mother.

VI. If a maiden or dowager lady of quality marry a commoner, or a nobleman inferior to her rank, their coats of arms may be set beside one another in two separate escutcheons, upon a mantle or drapery, and the lady's arms ornamented according to her title. See *Plate 180*.

VII. Archbishops and bishops impale their arms differently from the fore-mentioned coats, viz.

2000

giving the place of honour, that is, the dexter side, to the arms of their dignity, as it is expressed in *Plate 180*; which represents the coat of arms of an archbishop of Canterbury, and a bishop of an English see. These prelates thus bear their arms parted per Pale, to denote their being joined to their cathedral church in a sort of spiritual marriage.

With respect to such armorial ensigns as the sovereign thinks fit to augment a coat of arms with, they may be marshalled various ways, as may be seen by the arms of his grace the duke of Rutland, and many others. So far the causes for marshalling divers arms in one shield, &c. are manifest. As to such as are called *obscure*, that is, when coats of arms are marshalled in such a manner, that no probable reason can be given why they are so conjoined, they must be left to heralds to explain.

## CHAP. VII.

*Of the ORDERS of KNIGHTHOOD, &c.*

To the augmentations above mentioned may be added,

1. The Baronet's mark of distinction, or the arms of the province of Ulster in Ireland, granted and made hereditary in the male line by king James I. who erected this dignity on the 22d of May 1611, in the 7th year of his reign, in order to propagate a plantation in the fore-mentioned province. This mark is *Argent, a fisted Hand bent at the Wrist, and crested Gules*; which may be borne either in a canton, or in an escutcheon, & will best suit the figures of the arms. See *Plate 180*.

2. The ancient and respectable badge of the noble Order of the Garter, instituted by king Edward III. 1349, in the 37th year of his reign. Its honourable augmentation is a deep blue surmounting the arms of such knights, and inscribed with this motto, "*Honi soit qui mal y pense*." See *Plate 180*.

The arms of those who are knights of the order of the Bath, of the Thistle, or of St Patrick, are marshalled in the same manner, with this difference only, that the colour and motto accord with the order to which it belongs. Thus the motto "*Qui separabit 1783*" on the light blue ribbon of the order, surrounds the escutcheon of a knight of St Patrick. "*Nemo me impune lacesset*," on a green ribband, distinguishes a knight of the Thistle; and "*Tria juncta in uno*," on red, a knight of the Bath. None of these orders of knight-hood are hereditary; but the honours of a Baronet of Ulster, and of a Baronet of Nova Scotia (created by patent in 1602), descend to the male.

With regard to the emblazoning of the wife's arms in the case of the husband being noble, or a knight of the Garter, of the Bath, &c. or where, on the other hand, the wife is noble in her own right, and the husband a commoner, these will be found exemplified in *Plate 180*.

For representations of the BADGES of the several Orders of Knight-hood. See *Plate 180*.

## CHAP. VIII.

*Of FUNERAL ESCUTCHEONS.*

WE shall conclude this treatise by describing the several funeral escutcheons, usually called HATCHMENTS; whereby may be known, after any person's decease, what rank he or she held when living; and is it be a gentleman's hatchment, whether he was a bachelor, married man, or widower, with the like distinctions for gentlewomen.

The hatchment is usually affixed to the fronts of houses, when any of the nobility or gentry die. 1. The arms, if the deceased be a private gentleman, are parted per pale with those of his wife. The ground without the escutcheon being black denotes the man to be dead; and the ground on the sinister side being white signifies that the wife is living; which is represented on *Plate 180*, where all the following varieties of hatchments are also depicted.

When a married gentleman dies first, the hatchment is distinguished by contrary colour from the former; that is, the arms on the sinister side have the ground without the escutcheon black; whereas those on the dexter side, for her surviving husband, are upon a white ground: the hatchment of a gentlewoman is, moreover, distinguished by a cherub over the arms instead of a crest.

When a bachelor dies, his arms may be depicted single or quartered, with a crest over them, but never impaled as the two first are, and all the ground without the escutcheon is also black.

When a maid dies, her arms, which are placed in a lozenge, may be single or quartered, as those of a bachelor; but, instead of a crest, have a cherub over them, and all the ground without the escutcheon is also black.

When a widower dies, his arms are represented impaled with those of his deceased wife, having a crest and sometimes a helmet and mantling over them, and all the ground without the escutcheon black.

When a widow dies, her arms are also represented impaled with those of her deceased husband, but inclosed in a lozenge, and, instead of a crest, a cherub is placed over them; all the ground without the escutcheon is also black.

If a widower or bachelor should happen to be the last of the family, a mort head is generally annexed to each hatchment, to denote, that death has conquered all.

By the forementioned rules, which are sometimes neglected through the ignorance of illiterate people, may be known, upon the sight of any hatchment, what branch of the family is dead; and by the helmet, coronet, &c. what title and degree the deceased person held. The same rules are observed with respect to the escutcheons placed on the hearse and horses used in pompous funerals, except that they are not surmounted with any crest, as in the foregoing examples of hatchments, but are always plain. It is necessary, however, to ensign those of peers with coronets, and that of a maiden lady with a knot of ribbands.

In SCOTLAND, a funeral escutcheon not only shows forth the arms and condition of the defunct, but is also a proof of the gentility of his descent; and such persons for whom this species of escutcheon can be made out, are legally entitled to the character of gentlemen of blood, which is the highest species of gentility. The *English hatchment* above described exhibits no more than a right to a coat of arms, which may be acquired by purchase, and is only the first step towards establishing gentility in a family.

The funeral escutcheon, as exhibited in Scotland, as well as Germany, is in form of a lozenge, above six feet square, of black cloth; in the centre of which is painted, in proper colours, the complete achievement of the defunct, with all its exterior ornaments and additional marks or badges of honour; and round the sides are placed the sixteen arms of the families from which he

derives his descent, as far back as the grandfather's grandfather, as the proofs of his gentility. They exhibit the armorial bearings of his father and mother, his two grandmothers, his four great-grandmothers, and his eight great-great-grandmothers. If all these families have acquired a legal right to bear arms, then the gentility of the person whose proof it is must be accounted complete, but not otherwise. On the four corners are placed mort-heads, and the initials of his name and titles or designation; and the black interstices are semée, or powdered with tears.

On the morning of the interment, one of these is placed on the front of the house where the deceased lies; and another on the church in which he is to be buried, which after the burial is fixed above the grave. The pall, too, is generally adorned with these proofs of gentility, and the horses of the hearse with the defunct's arms.

## H E R

(1.) HERALDUS, Desiderius, or Didier HERAULT, a counsellor of the parliament of Paris, of uncommon learning. His *Adversaria* appeared in 1599; which however, if the *Scaligerana* may be credited, he repented having published. His notes on Tertullian's Apology, on Minutius Felix, and on Arnobius, have been esteemed. He also wrote notes on Martial's Epigrams. Under the name of *David Leidbrefferus*, he wrote a political dissertation on the independence of kings, some time after the death of Henry IV. He had a controversy with Salmasius, *De jure Attico ac Romano*; but did not live to finish what he had written on that subject. What he had done, however, was printed in 1650. He died in June 1649.

(2.) HERALDUS, or HERAULT, son to Desiderius, was a minister in Normandy, when he was called to the service of the Walloon church of London under Charles I. He wrote a work entitled *Pacifique Royal en deuil*, wherein he condemned the execution of K. Charles I. It is quoted by Daillé. He was so zealous a royalist, that he was forced to fly to France, to escape the fury of the republicans. He returned to England after the Restoration, and resumed his ministry in the Walloon church at London: some time after which, he obtained a canonry in the cathedral of Canterbury, which he enjoyed till his death.

(1.) HERAT, a town of Persia, in Chorasan, surrounded with walls and ditches and defended by a castle, seated on the river. (N° 2). Lon. 60. 50 E. Lat. 34. 30. N.

(2.) HERAT, a river of Persia in Chorasan.

(1.) HERAULT, a river of France, which rises among the Sevennes mountains, runs through the department (N° 2) from N. to S. almost centrally, and falls into the Gulf of Lyons, below Agde.

(2.) HERAULT, a department of France, so named from the river (N° 1.), bounded on the N. by those of Tarn and Aveyron; on the NE. by that of Gard; on the SE. by the Mediterranean; on the SW. by the dep. of Aude; and on the W. by that of Tarn. It comprehends part of the ci-

## H E R

devant prov. of LANGUEDOC. Montpellier is capital.

(3, 4.) HERAULT. See HERALDUS. N° 1.

(1.) \* HERB. *n. f.* [*herbe*, French; *herba*, Latin.]—Herbs are those plants whose stalks are soft, and have nothing woody in them; as grass and hemlock. *Locke*.—

In such a night

Medea gather'd the enchanted herbs  
That did renew old Æson.

With sweet-smelling herbs

Espos'd Eve deck'd first her nuptial bed.

Unhappy, from whom still conceal'd does  
Of herbs and roots the harmless luxury grow.  
—If the leaves are of chief use to us, they call them *herbs*; as sage and mint. *Warr's Lex.*  
—Herb-eating animals, which don't ruminate, have strong grinders, and chew much. *Arbuthnot on Aliments*.

(2.) HERB, in botany, is used by Linnaeus to nominate that portion of every vegetable which arises from the root, and is terminated by fructification. It comprehends, 1. The whole stalk, or stem. 2. The leaves. 3. Those external parts called by him the *fulcra* or supports of plants. 4. The buds, or, as he also calls them, the *winter quarters* of the future vegetable.

(3.) HERB BANE. See OROBANCHE.

(4.) HERB BENNET. See GEUM.

(5.) \* HERB CHRISTOPHER, or *Beetroot* *n. f.* A plant.

(6.) HERB CHRISTOPHER. See ACTEA.

(7.) HERB CLEROD. See ÆGOPodium.

(8.) HERB MASTICH. See SATURIA.

(9.) HERB OF GRACE. See RUTA.

(10.) HERB PARIS. See PARIS, N° IV.

(11.) HERB PARIS OF CANADA. See TRILL.

(12.) HERB ROBERT, a species of GERANIUM, a plant in great reputation with farmers on account of its powerful virtue against stinking blood and the bloody flux in cattle.

(13.) HERB TRINITY, a species of VIOLA.

(14.) HERB TRUELOVE. See PARIS, N°

(15.) **BERR, WILLOW.** See **EPILOBUM**.

**HERBA.** See **BOTANY, Glossary.**

(1.) \* **HERBACEOUS.** *adj.* [from *herba*, Lat.]

1. Belonging to *herba*.—Ginger is the root of neither tree nor trunk; but an *herbaceous* plant, resembling the water flower *de-luce*. *Brown.*

2. Feeding on vegetables; perhaps not properly.—Their teeth are fitted to their food; the rapacity to catching, holding, and tearing their prey; the *herbaceous* to gathering and comminution of vegetables. *Darwin.*

(2.) **HERBACEOUS PLANTS** are those which have succulent stems or stalks that lie down to the ground every year. Of herbaceous plants, some are annual which perish stem and root every year; biennial, which subsist by the roots two years; perennial which are perpetuated by their roots for a series of years; a new stem being produced every spring.

(3.) \* **HERBAGE.** *n. f.* [*herbage*, French.] 1. Herbs collectively; grass; pasture.—

Rocks lie cover'd with eternal snow;

This *herbage* in the plains, and fruitless fields.

*Dryden.*

At the time the deluge came, the earth was covered with *herbage*, and thronged with animals.

*Isaiah.* 2. The tythe and the right of pasture. *Isaiah.*

(4.) **HERBAGE**, in law, signifies the pasture granted by nature for the food of cattle; also liberty to feed cattle in the forest, or in another person's ground.

(5.) \* **HERBAL.** *n. f.* [from *herb*.] A book containing the names and description of plants.—It leaves the description of plants to *herbals*, and is like books of natural history. *Bacon.*—Such a book will not be found in the *herbal* of nature.—As for the medicinal uses of plants, the *herbals* are ample testimonies thereof. *Morley's* *Against Atheism*—Our *herbals* are sufficient proof with plants. *Baker.*

(6.) **AN HERBAL** treats of the classes, genera, species, and virtues of plants. The word is sometimes also used for what is more generally called *herbarium*. See **HORTUS**.

**HERBALIST.** *n. f.* [from *herbal*.] A man skilled in herbs.—*Herbalists* have distinguished themselves, meaning that the male whose leaves are green, and fruit rounder. *Brown.*

**HERBANUM**, an ancient town of Etruria, called **ORVETO**.

**HERBARI.** *n. f.* [A word, I believe, only to be found in *Spenser*.] Herb; plant.—

The roof hereof was arched over head,  
And deck'd with flowers and *herbars* daintily.

*Fairy Queen.*

\* **HERBARIST.** *n. f.* [*herbarius*, from *herba*, Lat.] One skilled in herbs.—*Herbarists* have showed a commendable curiosity in subdividing plants of the same denomination. *Boyle.*—He was much swayed by the opinions then current among *herbarists*, that different colours, or multiplicity of leaves in the flower, were sufficient to constitute a specific difference. *Ray on the Creation.*—As to the fuci, their seed hath been discovered and shewed me first by an ingenious *herbarist*. *Darwin.*

VOL. XI. PART. I.

**HERBAULT**, a town of France in the dep. of Loir and Cher, and late province of Blaisois.

**HERBE**, a town of the Cisalpine republic, in the ci-devant prov. of the Veronese, 15 miles S. of Verona. By the first division of the CISALPINE REPUBLIC in 1797, into 20 departments, it was included in the dep. of Benaco; but by the new division which took place on the 13th May 1802, into 22 departments, it is included in that of the Mincio.

**HERBES**, a town of Germany, in Westphalia, 2 miles ENE. of Blankenstein.

\* **HERBELET.** *n. f.* Diminutive of *herb*, or of *herbule*, Latin.] A small herb.—

These *herbelets*, which we upon you throw.

*Shakspeare.*

**HERBELOT**, Bartholomew D<sup>r</sup>, a French writer, eminent for his oriental learning, born at Paris in 1625. He travelled several times into Italy, where he obtained the esteem of some of the most learned men of the age. Ferdinand II. grand duke of Tuscany, gave him many marks of his favour: a library being exposed to sale at Florence, the duke desired him to examine the MSS. in the oriental languages, to select the best of them, and to mark the price; which being done, that generous prince purchased them, and made him a present of them. M. Colbert being at length informed of Herbelot's merit, recalled him to Paris, and obtained a pension for him of 1200 livres: he afterwards became secretary and interpreter of the oriental languages, and royal professor of the Syriac tongue. He died at Paris in 1695. His principal work is intitled *Bibliothèque Orientale*, which he first wrote in Arabic, and afterwards translated into French. It is greatly esteemed. M. Herbelot's modesty was equal to his erudition; and his uncommon abilities were accompanied with the utmost probity, piety, and charity, which he practised through the whole course of his life.

**HERBEMONT**, a town of the French republic, in the dep. of Forêts, and late Austrian prov. of Luxemburg; with a castle seated on a mountain near the Semois, 3 miles from Chinoy, and 20 W. of Arlon.

**HERBERSTEIN**, a town of Stiria.

(1.) **HERBERT**, Edward, lord Herbert of Chesham in Shropshire, an eminent English writer, born in 1581, and educated at Oxford. He travelled, and at his return was made knight of the Bath. James I. sent him ambassador to Lewis XIII. in behalf of the Protestants, who were besieged in several cities of France. He continued several years in this station. In 1615 he was created a baron of the kingdom of Ireland, by the title of lord Herbert of Castle Island; and in 1632, by that of lord Herbert of Chesham in Shropshire. On the breaking out of the civil wars, he adhered to the parliament; and in 1644 obtained a pension, on account of his having been plundered by the king's forces. He wrote *A History of the Life and Reign of Henry VIII.* which was greatly admired; a treatise *De veritate*; and several other works. He died at London in 1633. "Lord Herbert, says Mr Granger, stands in the first rank of the public ministers, historians, and philosophers of the 16th century."

P f of

of his age. It is hard to say whether his person, his understanding, or his courage, was the most extraordinary; as the fair, the learned, and the brave, held him in equal admiration. But the same man was wise and capricious; restless, wrong, and quarrelled for punctilio; hated bigotry in religion, and was himself a bigot to philosophy."

(2.) **HERBERT**, George, an English poet and divine, brother to Edward, (N. 1.) was born in 1593, and educated at Cambridge. In 1619 he was chosen public orator of that university, and afterwards obtained a sinecure from the king. In 1626 he was appointed prebendary of Layton Ecclesia, in the diocese of Lincoln, and in 1630, rector of Bamerton, near Sarum. The great lord Bacon had such an opinion of his judgment, that he would not suffer his works to be printed before they had passed his examination. He wrote a volume of devout poems, called *The Temple*, and another intitled *The Priests of the Temple*. He died about 1633.

(3.) **HERBERT**, Mary, countess of Pembroke, was sister of the famous Sir Philip Sidney, and wife of Henry earl of Pembroke. She was not only a lover of the Muses, but a great encourager of polite literature. Her brother dedicated his incomparable romance *Arcadia* to her. She translated a dramatic piece from the French, entitled *Antony*, a tragedy. She also turned the psalms of David into English metre; but it is doubtful whether these works were ever printed. She died in 1633. An exalted character of her is given in Francis Osborne's memoirs of king James I.

(4.) **HERBERT**, Sir Thomas, an eminent gentleman of the Pembroke family, born at York, where his father was a nalderman. William earl of Pembroke (see N. 3.) sent him to travel at his expence in 1624, and he spent 4 years in visiting Asia and Africa. His expectations of preferment ending with the death of the earl, he went abroad again, and travelled over several parts of Europe. In 1634, he published, in folio, "A Relation of some Years Travels into Africa and the Greater Asia, especially the Territories of the Persian monarchy, and some parts of the Oriental Indies and isles adjacent." On the breaking out of the civil war, he adhered to the parliament; and at Oldenby, on the removal of the king's servants, he and James Harrington were retained as grooms of his bed-chamber, and attended him even to the block. At the restoration he was created a baronet by Charles II. for his faithful services to his father during his two last years. In 1678 he wrote *Threnodia Carolina*, containing an account of the two last years of the life of Charles I. and he assisted Sir William Dugdale in compiling the 3d volume of his *Monasticon Anglicanum*. He died at York in 1681, leaving several MSS. to the public libraries at Oxford and York.

(5.) **HERBERT**, William, earl of Pembroke, was born at Wilton in Wiltshire, 1580: and admitted of New-college in Oxford in 1593, where he continued about two years. In 1601, he succeeded to his father's honours and estate; was made K. G. in 1604; and governor of Portsmouth in 1610. In 1616, he was elected chancellor of the university of Oxford; and appointed lord steward

of the king's household. He died suddenly in his house called *Baynard's castle*, in London, April 10, 1633; according to the calculation of his nativity, says Wood, made several years before by Mr Thomas Allen of Gloucesterhall. Clarendon relates concerning this calculation, that some considerable persons connected with lord Pembroke being met at Mardenhead, one of them drank a health to the lord steward: upon which another said, that he believed his lordship was that time very merry; for he had now outlived the day, which it had been prognosticated by his nativity he would not outlive; but he outlived it now, for that was his birth-day, which had completed his age to 50 years. The next morning, however, they received the news of his death. Lord Pembroke was not only a great favourer of learned and ingenious men, but was himself learned, and endued with a considerable share of poetic genius. All that are extant of his productions were published with this title: "Poems written by William Earl of Pembroke, &c. many of which are answered by way of repartee by Sir Henry Wotton, with other Poems written by them occasionally and apart, 1660, 8vo.

\* **HERBESCENT**, *adj.* [*herbescens*, Latin.] Growing into herbs.

**HERBESOS**, or } an ancient city of Syria.  
**HERBESSUS**, } mentioned by Livy.

\* **HERBID**, *adj.* [*herbidus*, Latin.] Covered with herbs.

**HERBIERS**, a town of France, in the department of the Vendée, 7 miles SSW. of Montagne, and SE. of Montaigu.

**HERBIGNAC**, a town of France, in the department of the Lower Loire, 9 miles NE. of Guen.

**HERBINUS**, John, a native of Kirchen-Silber, born in 1632. He wrote a work called *De Statu Ecclesiarum Augustanae confessionis in Germania*; 4to 1670; and several curious treatises on Cataracts and Waterfalls, also in Latin. He died in 1676, aged 44.

**HERBIPOLIS**, an ancient city of France, now called **WURTZBURG**.

**HERBITA**, an ancient city of Sicily now called *Nigola*.

**HERBIVOROUS**, *adj.* feeding on herbs.

\* **HERBORIST**, *n. s.* [*herb*, from *herb*.] One who deals in herbs. This seems a mistake for *herb*—A curious *herborist* has a plant, which he preserves in about an hour. *Rep.*

**HERBORN**, a town of Germany, in Westphalia, and Nassau-Dillenburg, with a castle, on the Dille; a celebrated university, founded in 1127, and manufactures of woollen and iron. It was taken by the French under Jourdan in June 1794. It lies 3 miles SSE. of Dillenburg. Lon. 8. E. Lat. 50. 34. N.

\* **HERBOROUGH**, *n. s.* [*herberg*, German.] Place of temporary residence. Now written *four*.—The German lord, when he went out of Newgate into the cart, took order to have his arms set up in his last *herborough*. *See* *Travels*.

\* **HERBOUS**, *adj.* [*herbosus*, Latin.] Abounding with herbs.

**HERBRAM**, a town of Westphalia, in Prussia, 4 miles SW. of Dringenberg.

**HERBSTEDT**, a town of Germany, in the bishopric of Fulda, 13 miles W. of Fulda, and 26 M. of Marburg.

\* **HERBULENT**. *adj.* [from *herbula*.] Comprising herbs. *Dall.*

\* **HERBWOMAN**. *n. f.* [*herb* and *woman*.] A woman that sells herbs.—I was like to be pulled to pieces by brewer, butcher, and baker; even my herbwoman damned me as I went along. *Shakspeare.*

\* **HERBY** *adj.* [from *herb*.] Having the nature of herbs.—No substance but earth, and the properties of earth, as tile and stone, yieldeth any herb or herby substance. *Bacon.*

**HERCULANEUM**, an ancient city of Campania Italy, which was destroyed by an eruption of Vesuvius in the first year of the emperor Titus, the 79th of the Christian era, and lately rendered famous on account of the curious monuments recently discovered in its ruins; an account of which has been published by order of the king of Naples, in a work of 12 volumes folio.—The origin of the foundation of Herculanæum is unknown. Dionysius Halicarnassensis conjectures it may be referred to 60 years before the war Troy, or about A. A. C. 1343; and therefore it lasted about 1400 years. The thickness of the lava, by which the city was overwhelmed, has been much increased by fiery streams vomited since that catastrophe; and now forms a 14 feet deep of dark grey stone, which is called *lapillo*. By its non-adhesion to substances, marbles and bronzes are preserved in a case made to fit them, and exact moulds of the head and limbs of statues are frequently taken in this substance. The precise situation of this ancient city was not known till 1713, when it was accidentally discovered by some labourers, who, in digging a well struck upon a fragment of the benches of the theatre. Many others were afterwards dug out and sent to France by the king of Elbeuf. But little progress was made in excavations, till Charles third of Spain ascended the Neapolitan throne, by whose unwearied efforts and liberality a very considerable part of Herculanæum has been explored, and such treasures of antiquity drawn out as form the most curious museum in the world. In being too arduous to attempt removing the covering, the king ordered himself with cutting galleries to the top of the buildings, and causing the extent of one of them to be cleared. Of these the theatre is the most considerable. On a balustrade which divided the orchestra from the stage was a row of statues; and, on each side of the stage, the equestrian figure of a person of the royal family. They are now placed under porticos of the palace; and from the great rarity of statues in marble would be very valuable. The workmanship even less exact than it is; one of them in particular is a fine piece of sculpture. Since the king of Naples ascended, the digging has been continued, with less spirit and expenditure: indeed the efforts of connoisseurs brought out of Herculanæum and Pompeii is already so considerable, that a want of zeal and activity becomes excusable. (See *Journal*.) They are now arranged in a

wing of the palace; and consist not only of statues, busts, altars, inscriptions, and other ornamental appendages of opulence and luxury; but also comprehend an entire assortment of the domestic, musical, and chirographical instruments used by the ancients; tripods of elegant form and exquisite execution, lamps in endless variety, vases and basins of noble dimensions, chandeliers of the most beautiful shapes, pateras and other appurtenances of sacrifice, looking glasses of polished metal, coloured glass, so hard, clear, and well stained, as to appear emeralds, sapphires, and other precious stones; a kitchen completely fitted up with copper pans lined with silver, kettles, cisterns for heating water, and every utensil necessary for culinary purposes; specimens of various sorts of combustibles, retaining their form though burnt to a cinder; corn, bread, fish, oil, wine, and flour: a lady's toilet, fully furnished with combs, thimbles, rings, paint, ear-rings, &c. Among the statues, which are numerous, a Mercury and a sleeping Jove are most admired by connoisseurs. The busts fill several rooms; but very few of the originals whom they were meant to imitate are known. The floors are paved with ancient mosaic. Few rare medals have been found in these ruins; the most curious is a gold medalion of Augustus struck in Sicily in the 15th year of his reign. The fresco paintings, which, for the sake of preservation, have been torn off the walls and framed and glazed, are to be seen in another part of the palace. "The elegance of the attitudes, and the infinite variety of the subjects (Mr Swinburne observes), stamp them as performances worthy of the attention of artists and antiquarians; but no pictures yet found are masterly enough to prove that the Greeks carried the art of painting to as great a height of perfection as they did that of statuary. Yet can we suppose those authors incapable of appreciating the merits of an Apelles or a Zeuxis, who with so much critical discernment have pointed out the beauties of the works of a Phidias or a Praxiteles, beauties that we have still an opportunity of contemplating? would they have bestowed equal praises on both kinds of performances if either of them had been much inferior to the other? I think it is not probable; and we must presume, that the capital productions of the ancient painters, being of more perishable materials than busts and statues, have been destroyed in the fatal disasters that have so often afflicted both Greece and Italy. Herculanæum and Pompeii were but towns of the second order, and not likely to possess the masterpieces of the great artists, which were usually destined to adorn the more celebrated temples, or the palaces of kings and emperors." A more valuable acquisition was thought to be made, when a large parcel of MSS. was found among the ruins. Hopes were entertained, that many works of the ancients were now going to be restored to light, and that a new mine of science was on the point of being opened. But the difficulty of unrolling the burnt parchment, of pasting the fragments on a flat surface, and of decyphering the obscure letters, have proved such obstacles, that very little progress has been made in the work. A priest invented a method of proceeding; but it would require the joint labours of

many learned men to carry on so nice and tedious an operation with success. The plan is dropped; and the MSS. now lie in dusty heaps, as useless to the learned world as they had been for the preceding centuries.

**HERCULEAN**, *adj.* [from *Hercules*] Belonging to, or resembling Hercules; as, a *Herculean* labour, a work requiring the strength of Hercules.

(1) **HERCULES**, in fabulous history, a most renowned Grecian hero, who after death was ranked among the gods, and received divine honours. According to the ancients, there were many persons of this name. Diodorus mentions 3, Cicero 6, and some authors no less than 41. Of all these, one generally called the *Theban Hercules*, is the most celebrated; and to him the actions of the others have been attributed. He is reported to have been the son of Jupiter by Alcmena (wife to Amphitryon king of Argos), whom Jupiter enjoyed in the shape of her husband while he was absent; and in order to add the greater strength to the child, made that amorous night as long as three. Amphitryon having soon after accidentally killed his uncle and father-in-law Electryon, was obliged to fly to Thebes, where Hercules was born. The jealousy of Juno prompting her to destroy the infant, she sent two serpents to kill him in the cradle, but young Hercules strangled them both. He was early instructed in the liberal arts: Castor the son of Tyndarus taught him to fight; Furytus to shoot; Autolicus to drive a chariot; Linus to play on the lyre; and Eumolpus to sing; while the instructions of Chiron, the centaur, rendered him the most valiant and accomplished hero of the age. In his 18th year he delivered the neighbourhood of mount Cithæron from a huge lion which preyed on the flocks of Amphitryon, and laid waste the adjacent country. He went to the court of Thespius king of Thespie, who shared in the general calamity, by whom he was hospitably entertained for 30 days: but he made a bad return, for the king's 30 daughters became mothers by him during his stay at Thespie, and some lay in one night. He next delivered his country from the tribute of 100 oxen, annually paid to Erginus. Such public services became universally known; and Creon king of Thebes, rewarded his patriotic deeds by giving him his daughter in marriage, and entrusting him with the government. Eurytheus, the son of Amphitryon, having succeeded his father, became jealous of Hercules; and lest he should deprive him of his crown, left no means untried to get rid of him. On this Hercules consulted the oracle; but being answered that it was the pleasure of the gods that he should serve Eurytheus 12 years, he fell into a deep melancholy which at last ended in a furious madness; during which, among other desperate actions, he put away his wife Megara, and murdered all the children he had by her. As an expiation of this crime, the king imposed upon him 12 labours surpassing the power of all other mortals to accomplish, which nevertheless our hero performed with ease, the favours of the gods having indeed completely armed him. He had received a coat of armour and helmet from Minerva, a sword from Mercury, a horse from Neptune, a shield from Jupiter, a bow and arrows from Apollo, and from

Vulcan a golden cuirass and brazen boots, with a celebrated club of brass. His first labour was the killing of a lion in Nemea, a wood of Achæia whose hide was proof against any weapon, so that he was forced to seize him by the throat and smother him. He carried the dead beast on his shoulders to Mycenæ, and ever after clothed himself with the skin. Eurytheus was so astonished at the sight of the beast, and at the courage of Hercules, that he ordered him never to enter the gates of the city when he returned from his expeditions, but to wait for his orders without the walls. He even got a brazen vessel made, into which he retired whenever Hercules returned. The 2d labour was to destroy the Lernean hydra, which had 7 heads according to Apollodorus, 50 according to Simonides, and 100 according to Diodorus. This monster he first attacked with his arrows, but soon after by means of his heavy club he destroyed the heads of his enemy. This labour was productive of no advantage; for as soon as one head was beaten to pieces by the club, 2 sprang up; and the labour of Hercules would have remained unfinished, had not he commanded his friend Iolaus to burn with a hot iron the roots of the head which he had crushed to pieces. This succeeded; and Hercules became victorious, and cut the belly of the monster, and dipped himself in the gall to render the wounds they should incurable. He was ordered in his 3d labour to bring alive and unhurt into the presence of Eurytheus a stag, famous for its incredible strength, its golden horns, and brazen feet. This celebrated animal frequented the neighbourhood of Cnœ; and Hercules was employed for a year in pursuing it: at last he caught it when tired. The 4th labour was to bring to Eurytheus a wild boar which ravaged the neighbourhood of Erymanthus. In this expedition he destroyed the centaurs, and caught the boar closely pursuing him through the deep snow. Eurytheus was so frightened at the sight of the boar that, according to Diodorus, he hid himself in his brazen vessel for some days. In his 5th labour Hercules was ordered to clear the stables of Augeas, where 3000 oxen had been confined for 30 years. For his 6th labour he was ordered to kill the carnivorous birds which ravaged the country near the lake Stymphalia in Arcadia. In his 7th labour he brought alive into Peloponnesus a prodigious wild bull which laid waste the country of Cræte. In his 8th labour he was employed in obtaining the mares of Diomedes, king of Thrace, which fed upon human flesh. He killed Diomedes, and gave him to be eaten by his mares, which he brought to Eurytheus; who sent them to mount Olympus, where they were devoted to wild beasts; though some say they were consecrated to Jupiter, and that a breed of them still existed in the age of Alexander the Great. For his 9th labour, he was commanded to obtain the girdle of the queen of the Amazons. In his 10th labour he killed the monster Geryon king of the island of Erythra, and brought to Argos his numerous herds which fed upon human flesh. This was in the west of Spain; in the furthest parts of which he erected his two pillars as the utmost limits of the known world. These ten labours he achieved

about 1 year. In this last expedition he likewise killed Antaeus, a monstrous giant, who, when weary with wrestling or labour, was immediately refreshed by touching his mother the Earth. Hercules overcame him in wrestling, and slew him; and slew him the tyrant Busiris, king of Egypt, who used to sacrifice all strangers upon his altars; but was slain by Hercules, with all his attendants. His 11th labour was the carrying away the Hesperian golden apples kept by a dragon: (See Hesperides.) The 12th and last, and most dangerous of his labours, was to bring up to the earth the three headed dog Cerberus. Descending into hell by a cave on mount Tænarus, he was permitted by Pluto to carry away his friends Theseus and Pirithous, who were condemned to punishment in hell, and Cerberus also was granted to his prayers, provided he made use of no arms to drag him away. Hercules carried him back to hell as he had brought him before Eurytheus. Many other exploits were performed by Hercules. He accompanied the Argonauts to Colchis before he delivered himself up to Eurytheus. He assisted the gods in their wars against the giants, and it was through him that Jupiter obtained the victory. He conquered Laomedon, and pillaged Troy. When Iole, the daughter of Eurytus king of Oechalia, of whom he was deeply enamoured, was refused to his entreaties, he fell into a fit of insanity, and murdered Iphitus, the only one of the sons of Eurytus who favoured his addresses to Iole. He was afterwards purified of the murder, and his insanity ceased; but he was visited by a madness which obliged him to apply to the oracle of Delphi for relief. The coldness with which the Pythia received him irritated him, and he resolved to plunder Apollo's temple and carry away the sacred tripod. Apollo opposed him, and a severe contest was begun, which nothing but the interference of Jupiter with his thunderbolts could have ended. He was upon this told by the oracle that he must be sold as a slave, and remain 3 years in the most abject servitude to recover from his disorder. He complied, and Mercury by order of Jupiter, conducted him to Omphale, queen of Lydia, to whom he was sold as a slave. Here he subdued all the country from robbers; and Omphale, astonished at the greatness of his exploits, married him. Hercules had Agelaus and Lamon by Omphale, from whom Cræsus king of Lydia was descended. He became also enamoured of one of Omphale's female servants, by whom he had Alcma. After he had completed the years of his slavery, he returned to Peloponnesus, where he returned to the throne of Sparta Tyndarus, who had been expelled by Hippocoon. He became one of Dejanira's suitors, and, after overcoming all her rivals, married her. He was obliged to leave Calydon his father-in-law's kingdom, because he had inadvertently killed a man with a blow of his club; and on this account he was not present at the hunting of the Calydonian boar. From Calydon he retired to the court of Ceyx king of Trachinia, who received him and his wife with great marks of friendship, and purified him of the murder which he had committed at Calydon. He next made war against Eurytus, who had refused him his daughter Iole, and killed him with three of his sons.

Iole fell into his hands, and accompanied him to mount Oeta, where he intended to offer a solemn sacrifice to Jupiter. As he had not then the shirt and tunic in which he sacrificed, he sent Lichas to Trachin to Dejanira, to provide him a proper dress. Dejanira had some time before been attempted by the Centaur Nessus, as he was ferrying her over the river Evenus; and Hercules beholding it from the shore, had mortally wounded him with one of his poisoned arrows. Nessus, finding himself dying, advised her to mix some oil with the blood which flowed from his wound, and to anoint her husband's shirt with it, pretending that it would infallibly secure him from loving any other woman; and she, apprized of his inconsistency, had actually prepared the poisoned ointment accordingly. Lichas coming to her for the garments, acquainted her with his having brought away Iole: upon which she anointed his shirt with the fatal mixture. This had no sooner touched his body, than he felt the poison diffused through his veins; the violent pain of which made him disband his army, and return to Trachin. His torment increasing, he sent to consult the oracle for a cure; and was answered, that he should cause himself to be conveyed to mount Oeta, and there rear up a pile of wood, and leave the rest to Jupiter. Having obeyed the oracle, and his pains becoming intolerable, he dressed himself in his martial habit, flung himself upon the pile, and desired the bystanders to set fire to it; or as others say, his son Philoctetes, who having performed his father's command, had his bow and arrows given him as a reward. At the same time Jupiter sent a flash of lightning, which consumed both the pile and the hero; Iolaus, coming to take up his bones, found nothing but ashes; from which it was concluded, that he was gone to heaven, and admitted among the gods. His friends raised an altar where the burning pile had stood; and Menœceus the son of Actor sacrificed a bull, a wild boar, and a goat; and enjoined the people of Oropus to observe these ceremonies annually. His worship soon became as universal as his fame; and Juno, forgetting her resentment, gave him her daughter Hebe in marriage. Hercules has many surnames, from the places where his worship was established, and from the labours he had achieved. His temples were numerous and magnificent, and his divinity revered. No dogs or flies entered his temple at Rome: and that of Oades, according to Strabo, was always forbidden to women and pigs. The Phœnicians offered quails on his altars; and as he was supposed to preside over dreams, the sick and infirm were sent to sleep in his temples, that they might receive in their dreams the agreeable presages of their approaching recovery. The white poplar was particularly dedicated to his service. None even of the twelve great gods of antiquity have so many ancient monuments as Hercules. The famous statue of Hercules, in the Farnese palace at Rome, is well known to the connoisseurs. It represents him resting after the last of his twelve labours above recited, leaning on his club, and holding the apples of the Hesperides in his hand. In this statue, as in all the other figures of him, he is formed, by the breadth of his shoulders, the splendour of his chest, the largeness

largeness of his frame, and the firmness of his muscles, to express strength and a capacity of enduring great fatigue, which constituted the chief idea of virtue among the ancient heathens. His other attributes are his lion's skin, his club, and his bow. Hercules is represented by the ancients as an exemplar of virtue: however, the *Hercules bibax*, or drunken Hercules, is no uncommon figure; and his amours are described both by the poets and artists. Thus the Cupids are made to take away his club, and he is exhibited in the posture of bending under a little boy; by which is meant, that he who conquered all difficulties was a slave to love. His children were as numerous as the labours and difficulties which he underwent; and indeed they became so powerful soon after his death, that they alone had the courage to invade all Peloponnesus. See *HERACLIUM*. The apotheosis of Hercules, or the establishment of his altar in the principal cities of Greece, is fixed by Thrasylus 29 years before the taking of Troy. Hercules has been honoured by the Greeks by the name of *MUSAGETES*, the conductor of the Muses; and at Rome by that of *Hercules Musarum*. He is represented on medals with a lyre in his hand; and the reverse is marked with the figure of the nine Muses, with their proper symbols.

(1.) *HERCULES*, in astronomy, a constellation of the northern hemisphere. See *ASTRONOMY*, § 348.

(3.) *HERCULES'S PILLARS*, in ancient geography, two lofty mountains, situated on one of the most southern extremity of Spain, and the other on the opposite part of Africa. They were called *ABILA* and *CALPE*; (see these articles;) were reckoned the boundaries of the labours of Hercules; and were fabled to have been joined together till they were severed by that hero, and a communication opened between the Mediterranean and Atlantic.

*HERCULIS CLAVA*. See *ZANTHOXYLUM*, § 1.

*HERCYNIA SILVA*, the } in ancient geogra-

*HERCYNIAN FOREST*, } phy, the largest of forests. Its breadth was a journey of 9 days. From the limits of the Helvetii, Nemetes, and Rauraci, it extended along the Danube to the borders of the Daci and Anartes, a length of 60 days journey, according to Cæsar, who appears to have been well acquainted with its true breadth, as it occupied all Lower Germany. It may therefore be considered as covering the whole of Germany; and most of the other forests may be considered as parts of it, though distinguished by particular names; consequently the *HARTZ*, in the duchy of Brunswick, which gave name to the whole, was one of its parts. By the Greeks it was called *Or-cynius*, a name common to all the forests in Germany; and *Hercynius* by the Romans; both from the German *HARTZ*.

(1.) \* *HERD*. *n. s.* [*herd*, Saxon.] 1. A number of beasts together. It is peculiarly applied to black cattle. *Flocks and herds are sheep and swine or hies.*—

Note a wild and wanton *herd*,  
Or race of youthful and unhandled colts,  
Fetching mad bounds. *Shakespeare.*

There find a *herd* of helvers, wand'ring o'er  
The neighbouring hill, and drive them to the  
shore. *Addison.*

2. A company of men, in contempt or detestation.—  
Survey the world, and where one Cato lives,  
Count a degenerate *herd* of Catilines. *Dryden.*  
—I do not remember where ever God delivered his oracles by the multitude, or sature truth by the *herd*. *Locke.* 3. It anciently signified a keeper of cattle, and in Scotland it is still used. [*Sprk Saxon.*] A sense still retained in composition: as *great herd*.

(2.) *HERD*, among hunters, an assemblage of black or fallow beasts, in contradistinction to *stok*. See *FLOCK*. In hunting, various terms are used for companies of the different kinds of game; as a *herd* of harts or bucks, a *drove* of roe, a *run* of wolves, a *richest* of martens, &c.

(1.) \* *To HERD*. *v. a.* [from the same.] To throw or put into an herd.—

The self,

However great we are, honest and valiant,  
Are *herded* with the vulgar. *Ben Jonson's Cat.*

(2.) \* *To HERD*. *v. n.* 1. To run in herds or companies.—

Weak women should, in danger, *herd* like  
deer. *Dryden.*

—It is the nature of indigency, like common danger, to endear men to one another, and make them *herd* together, like fellow-sailors in a storm. *Norris.* 2. To associate; to become one of any number or party.—

I'll *herd* among his friends, and seem

One of the number. *Addison's Cat.*

Run to towns, to *herd* with knaves and fools,  
And undistinguish'd pass among the crowd. *Wells.*

\* *HERDROOM*. *n. s.* [*herd* and *groom*.] A house of herds. Not in use.—

But who shall judge the wager won or lost?  
That shall yonder *herdgroom*, and none other. *Spenser.*

*HERDICKER*. See *MARISH-HERDICKER*.

*HERDIN*, a town of Bohemia.

\* *HERDMAN*. } *n. s.* [*herd* and *man*.] One

\* *HERDSMAN*. } employed in tending herds  
formerly, an owner of herds.—

A *herdsman* rich, of much account was he,  
In whom no evil did reign, or good appear. *Shakspeare.*

And you, enchantment,  
Worthy enough a *herdsman*, if e'er thou  
These rural latches to his entrance open,  
I will devise a cruel death for thee. *Shakspeare.*

Scarce themselves know how to hold  
A sheephook, or have learn'd ought else the less  
That to the faithful *herdsman's* art belongs. *Mil.*

There oft the Indian *herdsman*, shunning hot  
Shelters in cool, and tends his pasturing herd  
At loop-holes cut through thickest shade. *Mil.*  
So stands a Thracian *herdsman* with his spee  
Full in the gap, and hopes the hunted bear. *Dryden.*

The *herdsman*, round  
The cheerful fire, provoke his beath in goble  
crown'd. *Dryden's Virgil's Georgics.*

—When their *herdsman* could not agree, they paid by consent. *Locke.*

\* *HERE*. *adv.* [*her*, Sax. *hier*, Dutch.] 1. this place.—

Before they *here* approach,

Old Sward, with ten thousand warlike men,  
All ready at appoint, was setting forth. *Shak.*

I, upon my frontiers *here*,  
Keep residence. *Milton.*

*Here* Nature first begins  
Her farthest verge. *Milton.*

How wretched does Prometheus' state appear,  
While he his second mis'ry suffers *here*! *Cowley.*

To-day is ours, we have it *here*. *Cowley.*

1. In the present state.—Thus shall you be happy  
*here*, and more happy hereafter. *Bacon's Advice  
to Filliers.* 2. It is used in making an offer or at-  
tempt.—

Then *here's* for earnest:

'Tis smith'd. *Dryden.*

4. In drinking a health.—

*Here's* to thee, Dick. *Cowley.*

However, friend, *here's* to the king, one cries;  
To him who was the king, the friend replies.

*Prior.*

5. It is often opposed to *there*; in one place, dis-  
tinguished from another.—

Good-night, mine eyes do itch;

Doth that bode weeping?

—'Tis neither *here* nor *there*. *Shak. Othello.*

—We are come to see thee fight, to see thee foigne,  
to see thee traverse, to see thee *here*, to see thee  
*there*. *Shakespeare.*

Then this, then that man's aid, they crave,  
implore;

Put *here* for help, seek *there* their followers.

*Daniel.*

—I would have in the heath some thickets made  
only of sweet-briar and honey-suckle, and some  
wild rose amongst; and the ground set with vio-  
lets; for these are sweet, and prosper in the shade;  
and these to be in the heath *here* and *there*, not in  
order. *Bacon.*—The devil might perhaps, by in-  
sidious suggestions, have drawn in *here* and *there* a  
large proselyte. *Gov. of the Tongue.*—Your city,  
after the dreadful fire, was rebuilt, not presently,  
by raising continued streets; but at first *here* a  
house, and *there* a house, to which others by de-  
grees were joined. *Spratt's Sermon.*—He that rides  
fast through a country may be able to give some  
adequate description of *here* a mountain and *there* a  
plain, *here* a morass and *there* a river, woodland  
on one part, and savannas in an other. *Locke.*

6. *Here* forms, in the following passage, to mean *this*

*here*.—

Bid them farewell, Cordelia, though unkind;

Thou lovest *here*, a better where to find. *Shak.*

\* HEREABOUTS. *adv.* [*here* and *about*.] A-  
bout this place.—I saw *hereabouts* nothing remark-  
able, except Augustus's bridge. *Addison on Italy.*

(1.) \* HEREAFTER. *adv.* [*here* and *after*.] 1. In  
the to come; in futurity.—How worthy he is, I  
shall have to appear *hereafter*, rather than story  
him in his own hearing. *Shakespeare.*

The grand-child, with twelve sons increas'd,  
departs

From Canaan, to a land *hereafter* call'd

Egypt. *Milton.*

*Hereafter* he from war shall come,

And bring his Trojans peace. *Dryden.*

2. In a future state.—You shall be happy *here*,  
and more happy *hereafter*. *Bacon.*

(2.) \* HEREAFTER. *n. f.* A future state.

This is a figurative noun, not to be used but in poe-  
try.—

'Tis the divinity that stirs within us;

'Tis Heaven itself that points out an *hereafter*,  
And intimates eternity to man. *Addison's Cato.*

I still shall wait

Some new *hereafter*, and a future state. *Friar.*

\* HEREAT. *adv.* [*here* and *at*.] At this.—One  
man coming to the tribune, to receive his dona-  
tive, with a garland in his hand, the tribune, of-  
fended *hereat*, demanded what this singularity  
could mean? *Hooker.*

\* HEREBY. [*here* and *by*.] By this.—In what  
estate the fathers rested, which were dead before,  
it is *hereby* either one way or other determined.

*Hooker.*—*Hereby* the Moors are not excluded by  
beauty, there being in this description no conside-  
ration of colour. *Brown.*—The acquisition of  
truth is of infinite concernment: *hereby* we become  
acquainted with the nature of things. *Watts.*

\* HEREDITABLE. *adj.* [*heres*, Lat.] Whate-  
ver may be occupied as inheritance.—Adam being  
neither a monarch, nor his imaginary monarchy  
*hereditary*, the power which is now in the world  
is not that which was Adam's. *Locke.*

(1.) \* HEREDITAMENT. *n. f.* [*heredium*, La-  
tin.] A law term denoting inheritance, or heredi-  
tary estate.

(2.) HEREDITAMENTS are moveables which a  
man may have to himself and his heirs by way of  
inheritance; and which, if not otherwise bequea-  
thed, descend to him who is next heir, and not to  
the executor, as chattels do.

\* HEREDITARILY. *adv.* [from *hereditary*.]  
By inheritance.—Here is another, who thinks one  
of the greatest glories of his father was to have dis-  
tinguished and loved you, and who loves you *he-  
reditarily*. *Pope to Swift.*

(1.) \* HEREDITARY. *adj.* [*hereditaire*, French;  
*hereditarius*, Lat.] Possessed or claimed by right  
of inheritance; descending by inheritance.—

To thee and thine, *hereditary* ever,  
Remain this ample third of our fair kingdom.

*Shakespeare.*

These old fellows  
Have their ingratitude in them *hereditary*. *Shak.*

He shall ascend  
The throne *hereditary*, and bound his reign  
With earth's wide bounds, his glory with the  
heavens. *Milton.*

Thus while the mute creation downward bend  
Their sight, and to their earthly mother tend,  
Man looks aloft, and with erected eyes  
Beholds his own *hereditary* skies. *Dryden's Ovid.*

When heroick verse his youth shall raise,  
And form it to *hereditary* praise. *Dryden's Virgil.*

(2.) HEREDITARY is also figuratively applied  
to good or ill qualities, either of body or mind,  
supposed to be transmitted from father to son.  
thus we say virtue and piety are hereditary quali-  
ties in such a family; that in Italy the hatred of  
families is hereditary; and that the gout, king's  
evil, madness, &c. are hereditary diseases.

(3.) HEREDITARY DISEASES. The opinion,  
that certain diseases, such as those above mention-  
ed, (§ 2.) are hereditary, has been held by phy-  
sicians ever since the days of Hippocrates, and in-  
deed seems to be confirmed by the experience of  
mankind

man kind in all ages and countries. In the new system of medicine, however, this doctrine is denied in the strongest terms. (See BRUNONIAN SYSTEM, § 6.) Dr Brown in his *Elem. Med.* § DCUL, affirms, that, "A taint, transmitted from parents to their offspring, and celebrated under the appellation of *hereditary*, is a mere tale, or there is nothing in the fundamental part of this" (the Brunonian) "doctrine. The sons of the rich, who succeed to their father's estate, succeed also to his gout: Those who are excluded from the estate, escape the disease also, unless they bring it on by their own conduct.—Though Peter's father may have been affected with the gout, it does not follow, that Peter must be affected; because, by a proper way of life, that is, by adapting his excitement to his stamina, he may have learned to evade his father's disease. If the same person, who, from his own fault and improper management, has fallen into the disease, afterwards by a contrary management, and by taking good care of himself, prevents and removes the disease, as it has been lately discovered, what then is become of the hereditary taint?"—Such is Dr Brown's reasoning against the existence of hereditary diseases; for a more full account of which, see his *Elem. Med.* Edit. 2. Vol. II. p. 243—247. But the cautious reader will probably agree with Dr Beddoe, that this is one of those "opinions, which in a complete revival of the Brunonian System would require particular examination." *Ibid.* Vol. I. p. civ.

(4.) HEREDITARY HONOURS have been long esteemed useful in a well governed state, as tending to excite a laudable ardour and generous emulation in acts of virtue and heroism. (See LORD.) In the present age of political revolution and innovation, however, they have been depreciated as producing the very opposite effects. Without entering into this question here, we shall only quote a judicious sentiment delivered by Dr Watson, Bp. of Llandaff, in the house of Lords, upon a question respecting the Scots Peerage, in Feb. 1787:—"Whatever may be said of ancestry no man *despises* it, but he who has none to value himself upon; and no man will make it his *pride*, but he who has *nothing better*."

(5.) HEREDITARY RIGHT, in the British constitution. The grand fundamental maxim upon which the *jus regium*, or right of succession to the throne of Britain depends, Sir William Blackstone takes to be this: That the crown is, by common law and constitutional custom, hereditary; and this in a manner peculiar to itself: but that the right of inheritance may from time to time be changed or limited by act of parliament; under which limitations the crown still continues hereditary. 1. The crown is in general hereditary, or descendible to the next heir, on the death of the last king. All regal governments must be either hereditary or elective: and as there is no instance wherein the crown of England has ever been asserted to be elective, except by the regicides on occasion of the trial of king Charles I. it must of consequence be hereditary. Yet in thus asserting an hereditary right, a *jus divinum* title to the throne is by no means intended. Such a title may be allowed to have subsisted under the theocratic establishment

of the children of Israel in Palestine: but it never yet subsisted in any other country; save only so far as kingdoms, like other human societies, are subjected to the general and ordinary dispensation of Providence. Nor indeed have a *jus divinum* and an hereditary right any necessary connection with each other; as some have very weakly imagined. The titles of David and Jehu were equally *jus divinum* as those of either Solomon or Ahab; and yet David slew the sons of his predecessor, and Jehu his predecessor himself. And what our kings have the same warrant as they had, whether it be to sit upon the throne of their fathers, or to destroy the house of the preceding sovereign, they will then, and not before, possess the crown of England by a right like theirs, immediately derived from heaven. The hereditary right, which the laws of Britain acknowledge, owes its origin to the founders of our constitution and to them only. It has no relation to, nor depends upon, the civil laws of the Jews, the Greeks, the Romans, or any other nation upon earth; the municipal laws of one society having no connection with, or influence upon, the fundamental polity of another. The founders of the English monarchy might have made it elective, but they rather chose, and upon good reason, to establish originally succession by inheritance. This has been acquiesced in by general consent, and ripened by degrees into common law: the very same title that every private man has to his own estate. Lands are as naturally descendible, more than thrones: but the law has, for the benefit and peace of the public, established hereditary succession in the one as well as the other. It must be owned, an elective monarchy seems to be the most obvious, and best suited of any to the national principles of government, and the freedom of human nature: and accordingly we find from history, that, in the infancy and first rudiments of almost every state, the king, chief magistrate, or prince, has usually been elective. And, if the individuals who composed that state could always continue true to first principles, uninfluenced by passion or prejudice, and assailed by corruption, and unswayed by violence, elective succession were as much to be desired in a kingdom as in other inferior communities. The best, the wisest, and the bravest man, would then be sure of receiving that crown which his merits merited; and the sense of an unbiased majority would be dutifully acquiesced in by the few who were of different opinions. But history and observation inform us, that elections of every kind are too often brought about by influence, partiality, and artifice: and, even where the election is otherwise, these practices will be often suspected, and as constantly charged upon the success by a disappointed minority. This is an evil to which all societies are liable; as well those of private and domestic kind, as the great community of the public, which regulates and includes the rest. But in the former there is this advantage. That such suspicions, if false, proceed no farther than jealousies and murmurs, which time will effectually suppress; and, if true, the injustice may be remedied by legal means, by an appeal to the tribunals to which every member of society is (by becoming such) virtually engaged to submit.

Where, in the great and independent society, which every nation composes, there is no superior to refer to but the law of nature; no method to resist the infringements of that law, but the exertion of force. As therefore between nations complaining of mutual injuries, the relief can only be decided by the law of arms; and the same nation, when the fundamental principles of their common union are supposed to be invaded, and more especially when the appointment of their chief magistrate is alleged to be unduly made, the only tribunal to which the nation can appeal is that of the God of battles: the only process by which the appeal can be decided is that of a civil and intestine war. Hereditary succession to the crown is therefore established, in this and most other countries, to prevent that periodical bloodshed and misery, which the history of ancient imperial Rome, and modern experience of Poland and Germany, have shown are the consequence of elective kingdoms. Thirdly, as to the particular mode of inheritance, it in general corresponds with the feudal descent, chalked out by the common law for succession to landed estates; yet with one or two material exceptions. Like them, the crown will descend lineally to the issue of the reigning monarch; as it did from king John to Edward II. through a regular pedigree of six generations: as in them the preference of males to females, and the right of primogeniture to the males, are strictly adhered to. Thus Edward V. succeeded to the crown, in preference to his younger brother, and Elizabeth his sister. Like them, on failure of the male line, it descends to the issue female; according to our British custom remarked by Tacitus, *semper mulierum ductu bellare, et sexum in imperio spectare*. Thus Mary I. succeeded to Edward VI.; and the line of Margaret queen of France, the daughter of Henry VII. succeeded, on the death of the line of Henry VIII. his son. But as to the females, the crown descends by right of primogeniture to the eldest daughter only and her heirs, and not, as in common inheritances, to all daughters at once; the evident necessity of a succession to the throne having occasioned the line of descents to depart from the common in this respect: and therefore queen Mary I. on the death of her brother, succeeded to the crown, and not in partnership with her sister Elizabeth. Again, the doctrine of representation prevails in the descent of the crown, as it does in other inheritances; whereby the lineal descendants of any person deceased stand in the same place as their ancestor, if living, would have done. Thus Edward III. succeeded his grandfather Edward I. in right of his father the Black Prince; and his son Richard II. succeeded his grandfather Edward III. in right of his father the Black Prince; and his son Richard I. and James I. to Elizabeth I. derived from the Conqueror, who was the only regal stock. But herein there is no objection (as in the case of common descents) to the succession of a brother, an uncle, or other collateral relation, of the half blood; that is, where the relationship proceeds not from the same couple of ancestors (which constitutes a kinsman of the whole blood), but from a single ancestor only; as when two persons are derived from the same father, and not from the same mother, or *vice versa*: provided only, that the one ancestor, from whom both are descended, be that from whose veins the blood royal is communicated to each. Thus Mary I. inherited to Edward VI. and Elizabeth inherited to Mary; all born of the same father, king Henry VIII. but all by different mothers. (See CONSANGUINITY, § II, 1; DESCENT, § IV; INHERITANCE; and SUCCESSION.) 3. The doctrine of hereditary right does by no means imply an indefeasible right to the throne. No man will assert this, who has considered our laws, constitution and history, without prejudice, and with any degree of attention. It is unquestionably in the power of the supreme legislative authority of this kingdom, the king and both houses of parliament to defeat this hereditary right; and, by particular entails, limitations, and provisions, to exclude the immediate heir, and vest the inheritance in any one else. This is strictly consonant to our laws and constitution; as may be gathered from the expression so frequently used in our statutes, of "the king's majesty, his heirs, successors:" In which we may observe, that as the word heirs necessarily implies an inheritance or hereditary right generally subsisting in the royal person; so the word *successors*, distinctly taken must imply that this inheritance may sometimes be broken through; or, that there may be a successor without being the heir of the king. And this is so extremely reasonable, that without such a power, lodged somewhere, our polity would be very defective. For, let us barely suppose so melancholy a case, as that the heir apparent should be a lunatic, an idiot, or otherwise incapable of reigning; how miserable would the condition of the nation be, if he were also incapable of being set aside! It is therefore necessary that this power should be lodged somewhere; and yet the inheritance and regal dignity would be very precarious indeed, if this power were expressly and avowedly lodged in the hands of the subject only, to be exerted whenever prejudice, caprice, or discontent, should happen to take the lead. Consequently it can no where be so properly lodged as in the two houses of parliament, by and with the consent of the reigning king; who, it is not to be supposed, will agree to any thing prejudicial to the rights of his own descendants. And therefore, in the king, lords, and commons, in parliament assembled, our laws have expressly lodged it. 4. But, fourthly, However the crown may be limited or transferred, it still retains its descendible quality, and becomes hereditary in the wearer of it. And hence in our law the king is said never to die in his political capacity; though, in common with other men, he is subject to mortality in his natural: because immediately upon the natural death of Henry, William, or George, the king survives in his successor. For the right of the crown vests, *eo instanti*, upon his death.

objection (as in the case of common descents) to the succession of a brother, an uncle, or other collateral relation, of the half blood; that is, where the relationship proceeds not from the same couple of ancestors (which constitutes a kinsman of the whole blood), but from a single ancestor only; as when two persons are derived from the same father, and not from the same mother, or *vice versa*: provided only, that the one ancestor, from whom both are descended, be that from whose veins the blood royal is communicated to each. Thus Mary I. inherited to Edward VI. and Elizabeth inherited to Mary; all born of the same father, king Henry VIII. but all by different mothers. (See CONSANGUINITY, § II, 1; DESCENT, § IV; INHERITANCE; and SUCCESSION.) 3. The doctrine of hereditary right does by no means imply an indefeasible right to the throne. No man will assert this, who has considered our laws, constitution and history, without prejudice, and with any degree of attention. It is unquestionably in the power of the supreme legislative authority of this kingdom, the king and both houses of parliament to defeat this hereditary right; and, by particular entails, limitations, and provisions, to exclude the immediate heir, and vest the inheritance in any one else. This is strictly consonant to our laws and constitution; as may be gathered from the expression so frequently used in our statutes, of "the king's majesty, his heirs, successors:" In which we may observe, that as the word heirs necessarily implies an inheritance or hereditary right generally subsisting in the royal person; so the word *successors*, distinctly taken must imply that this inheritance may sometimes be broken through; or, that there may be a successor without being the heir of the king. And this is so extremely reasonable, that without such a power, lodged somewhere, our polity would be very defective. For, let us barely suppose so melancholy a case, as that the heir apparent should be a lunatic, an idiot, or otherwise incapable of reigning; how miserable would the condition of the nation be, if he were also incapable of being set aside! It is therefore necessary that this power should be lodged somewhere; and yet the inheritance and regal dignity would be very precarious indeed, if this power were expressly and avowedly lodged in the hands of the subject only, to be exerted whenever prejudice, caprice, or discontent, should happen to take the lead. Consequently it can no where be so properly lodged as in the two houses of parliament, by and with the consent of the reigning king; who, it is not to be supposed, will agree to any thing prejudicial to the rights of his own descendants. And therefore, in the king, lords, and commons, in parliament assembled, our laws have expressly lodged it. 4. But, fourthly, However the crown may be limited or transferred, it still retains its descendible quality, and becomes hereditary in the wearer of it. And hence in our law the king is said never to die in his political capacity; though, in common with other men, he is subject to mortality in his natural: because immediately upon the natural death of Henry, William, or George, the king survives in his successor. For the right of the crown vests, *eo instanti*, upon his death.

heir; either the *herem natus*, if the course of descent remains unimpeached, or the *heres factus*, if the inheritance be under any particular settlement. So that there can be no interregnum; but, as Sir Matthew Hale observes, the right of sovereignty is fully invested in the successor by the very descent of the crown. And therefore, however acquired, it becomes in him absolutely hereditary, unless by the rules of the limitation it is otherwise ordered and determined: In the same manner as landed estates are by the law hereditary or descendible to the heirs of the owner; but still there exists a power, by which the property of those lands may be transferred to another person. If this transfer be made simply and absolutely, the lands will be hereditary in the new owner, and descend to his heir at law: but if the transfer be clogged with any limitations, conditions, or entails, the lands must descend in that channel, so limited and prescribed, and no other. See SUCCESSION.

**HEREDITAS JACENS**, in Scots law. An estate is said to be in *hereditate jacente*, after the death of the proprietor till the entry of the heir.

(1.) **HEREFORD**, [Sax. *i. e.* the army's ford.] the capital of Herefordshire, with markets on Wed. Frid. and Sat. It is almost encompassed by the Wye and two other rivers, over which are two bridges. It is an ancient decayed place, and had six parish churches, but two of them were demolished in the civil wars. It was erected into a bishop's see, in 680; and the cathedral is an ancient and venerable structure. In 1055, the town was sacked and the cathedral destroyed by Griffin Pr. of S. Wales. Harold II. repaired and fortified it, and the Normans walled it round. The present stately cathedral was founded in the reign of Henry I. by Bp. Reinelm, and enlarged by his successors. The west tower was a beautiful and magnificent piece of architecture; it was 135 feet high, and was built in the 12th century, by Giles de Bruce, Bp. of Hereford; but, in April 1786, the whole tower, with a part of the church, fell down. The tower has been since rebuilt. The chief manufacture is gloves. It is governed by a mayor, and six aldermen; and is 30 miles NW. of Gloucester, and 130 WNW. of London. Lon. 2. 35. W. Lat. 52. 4. N.

(2.) **HEREFORD, LITTLE**, a village of Herefordshire, on the Teme, W. of Tenbury.

**HEREFORDSHIRE**, a county of England, bounded on the E. by Gloucester, and Worcester-shires, on the W. by Radnor and Brecknock-shires, on the N. by Shropshire, and on the S. by Monmouthshire. It extends 35 miles from N. to S. and 47 from E. to W. It is divided into 11 hundreds; contains one city, 8 market towns, 176 parishes; 391 villages, 15,000 houses, and about 90,000 inhabitants. It sends 8 members to parliament, viz. 2 for the county and 2 each for Hereford, Leominster, and Weobly. The air is healthy, and the inhabitants generally live to a great age. The soil is exceedingly rich, producing excellent corn, wool, and fruit, as is evident from the Leominster bread, Weobly ale, and Hereford-sh. cider; the last of which is sent to all parts of England. Apples grow in greater abundance here than in a-

ny other county, being plentiful even in the wet-  
gers. Of these are various kinds; the most cele-  
brated is the *redstreak*, which is pecul- to the  
county. The Styer cider is remarkable for a su-  
perior strength and body, and for keeping well.  
The sheep are small, affording a very fine silky  
wool. The principal rivers are the Wye, My-  
now, and Lug; all well stored with fish. The  
salmons of this county are very remarkable; be-  
ing never out of season, but always found, fat, and  
fit for the table.

**HEREGOVINZA**, a territory of European  
Turkey, in Bosnia, near Dalmatia.

\* **HERESIN**. *adv.* [*here* and *in*.] In this.—How  
highly soever it may please them with words of  
truth to extol sermons, they shall not *heresin* of  
send us. *Hooker*.—

My best endeavours shall be done *heresin*.

—Since truths, absolutely necessary to salvation,  
are so clearly revealed that we cannot err in them,  
unless we be notoriously wanting to ourselves,  
*heresin* the fault of the judgment is resolved into a  
precedent default in the will. *Saunders*.

\* **HEREINTO**. *adv.* [*here* and *into*.] Into this.—  
Because the point about which we strive is the  
quality of our laws, our first entrance *heresin* can-  
not better be made than with consideration of the  
nature of the law in general. *Hooker*.

\* **HEREMITICAL**. *adj.* [It should be written  
*eremitical*, from *eremite*, of *ερεμιτα*, a desert; *her-  
mitique*, French.] Solitary; suitable to a hermit.  
You describe so well your *heremitical* state of life,  
that none of the ancient anchorites could go be-  
fore you for a cave in a rock. *Pope*.

**HERENCIA**, a town of Spain, in New Castile,  
40 miles SE. of Toledo.

**HERENDITZ**, a town of Croatia.

**HERENHAUSEN**, a palace near Hanover, with  
a garden of vast extent, in which are fine water  
works, a labyrinth, and many other curiosities.

**HERENTHALS**, a town of the French repub-  
lic, in the dep. of Deux Nattes, and late prov.  
Austrian Brabant, seated on the Nethe, 20 m.  
NE. of London. Lon. 4. 54. E. Lat. 51. 15. N.

\* **HERESOP**. *adv.* [*here* and *of*.] From this;—  
*Heresop* comes it that prince Henry is valiant.  
*Shak.*

\* **HERSON**. *adv.* [*here* and *on*.] Upon this.—  
If we should strictly insist *hereson*, the position  
might fall into question. *Brown*.

\* **HERSOUT**. *adv.* [*here* and *out*.] 1. Out of  
this place—

A bird all white, well feather'd on each wing  
*Heresout* up to the throne of God did fly. *Spenser*.  
2. All the words compounded of *here* and *out* in  
opposition, except *heresafter*, are obsolete or ob-  
lescent; never used in poetry and seldom in prose,  
by elegant writers, though perhaps not unworthy  
to be retained.

\* **HERESIARCH**. *n. s.* [*heresiarque*, French  
*αρχι-αερετις*] A leader in heresy; the head of  
herd of hereticks.—The pope declared him not  
only an heretick, but an *heresiarch*. *Stillingfleet*.

(1.) \* **HERESY**. *n. s.* [*heresie*, Fr. *heresia*, La-  
tin; *αερεσις*.] An opinion of private men different  
from that of the catholick and orthodox church.

—*Heretick*

—*Heresy* prevaileth only by a counterfeit shew of reason, whereby notwithstanding it becometh invincible, unless it be convicted of fraud by manifest remembrance clearly true, and unable to be withstood. Hook.—As for speculative heresies, they work mightily upon men's wits; yet do not produce great alterations in states. Bacon.—Let the truth of that religion I profess be represented to her judgment, not in the odious disguises of levity, kith, kin, novelty, cruelty, and disloyalty. King Charles.

(2.) *HERESY*, in law, consists in a denial of some of the essential doctrines of Christianity, publicly and obstinately avowed; being defined, "*sententia contra firmanum humanum sensum excogeta, palam dicta et pertinaciter defensa.*" And here it must be acknowledged, that particular moles of belief or unbelief, not tending to overturn Christianity, or to sap the foundations of morality, are by no means the object of coercion by the civil magistrate. What doctrines shall therefore be adjudged heresy, was left by our old constitution to the determination of the ecclesiastical judge; who had taken a most arbitrary latitude allowed him. For the general definition of an heretic given by Lyndesdale, extends to the smallest deviations from the doctrines of the holy church: "*hereticus est qui abstat de fide catholica, et qui negligit servare ea, que Romana ecclesia statuit, seu servare decreverat.*" Or, as the statute 2 Hen. IV. c. 15. expresses it in English, "teachers of erroneous opinions, contrary to the faith and blessed determinations of the holy church." Very contrary this to the usage of the first general councils, which defined all heretical doctrines with the utmost precision and exactness. And what ought to have alleviated the punishment, the uncertainty of the crime, seems to have enhanced it in those days of blind zeal and cruelty. The sanctioning hypocrisy of monks, indeed, went at first no farther than imposing penance, excommunication, and ecclesiastical deprivation, for heresy; but afterwards they proceeded boldly to imprisonment by the ordinary, and confiscation of goods *in pias usus*. But at the same time they had prevailed upon the chiefs of bigoted princes to make the civil law subservient to their purposes, by making heresy not only a temporal, but even a capital offence: the Romish ecclesiastics determining, without appeal, whatever they pleased to be heresy, and turning off to the secular arm the odium and rigour of executions; with which they pretended to be too tender and delicate to intermeddle. They affected to intercede, on behalf of the convicted heretic, *ut citra mortis periculum sententia non moderetur*: well knowing that at the same time they were delivering the unhappy victim to certain death (See ACT OF FAITH.) Hence the capital punishments inflicted on the ancient Gnostics and Manichæans by the emperors Theodosius and Justinian; hence also the constitution of the emperor Frederic, mentioned by Lyndesdale, adjudging all persons without distinction to be burnt with fire, who were convicted of heresy by the ecclesiastical judge. The same emperor, in another constitution, ordained, that if any temporal lord, when admonished by the church, should neglect to clear his territories of heretics

within a year, it should be lawful for good catholics to seize and occupy the lands, and utterly to exterminate the heretical possessors. And upon this foundation was built that arbitrary power, so long claimed and so fatally exerted by the Pope, of disposing even of the kingdoms of refractory princes to more dutiful sons of the church. The immediate event of this constitution serves to illustrate at once the *gratitude* of the holy see, and the just punishment of the royal bigot; for, upon the authority of this very constitution, the pope afterwards expelled this very emperor Frederic from his kingdom of Sicily, and gave it to Charles of Anjou. Christianity being thus deformed by the demon of persecution upon the continent, our own island could not escape its scourge. Accordingly we find a writ *de HERETICO COMBURENDO*, i. e. of burning the heretic (See that article.) But the king might pardon the convict by issuing no process against him; the writ *de heretico comburendo* being not a writ of course, but issuing only by the special direction of the king in council. In the reign of Henry IV. when the eyes of the Christian world began to open, and the seeds of the Protestant religion (under the opprobrious name of LOLLARDY) took root in this kingdom; the clergy, taking advantage from the king's dubious title to demand an increase of their own power, obtained an act of parliament, which sharpened the edge of persecution to its utmost keenness. (See HERETICO COMBURENDO.) By stat. 2. Hen. V. c. 7. lollardy was also made a temporal offence, and indictable in the king's courts; which did not thereby gain an exclusive, but only a concurrent, jurisdiction with the bishop's consistory. Afterwards, when the reformation began to advance, the power of the ecclesiastics was somewhat moderated; for though what heresy *is*, was not then precisely defined, yet we are told in some points what it *is not*: the statute 25 Henry VIII. c. 14. declaring that offences against the see of Rome are not heresy; and the ordinary being thereby restrained from proceeding in any case upon mere suspicion; i. e. unless the party be accused by two credible witnesses, or an indictment of heresy be first previously found in the king's courts of common law. And yet the spirit of persecution was not abated, but only diverted into a lay channel. For in six years afterwards, by stat. 31. Hen. VIII. c. 14. the bloody law of the six articles was made; (see ENGLAND, § 38.) which were "determined and resolved by the most godly study, pain, and travail of his majesty; for which his most humble and obedient subjects, the lords spiritual and temporal, and the commons, in parliament assembled, did render and give unto his highness their most high and hearty thanks!" The same statute established a mixed jurisdiction of clergy and laity for the trial and conviction of heretics; Henry being equally intent on destroying the supremacy of the bishops of Rome, and establishing all their other corruptions of the Christian religion. Without recapitulating the various repeals and revivals of these sanguinary laws in the two succeeding reigns, we proceed to the reign of Q. Elizabeth; when the reformation was finally established with temper and decency, unallied with party rancour, or personal resentment. By

Stat. 1 Edw. c. 1. all former statutes relating to heresy are repealed, which leaves the jurisdiction of heresy as it stood at common law; viz. as to the infliction of common censures, in the ecclesiastical courts; and in case of burning the heretic, in the provincial synod only. Sir Matthew Hale is indeed of a different opinion, and holds that such power resided in the diocesan also; though he agrees, that in either case the writ *de heretico comburendo* was not demandable of common right, but grantable or otherwise merely at the king's discretion. But the principal point now gained was, that by this statute a boundary is for the first time set to what shall be accounted heresy; nothing for the future being to be so determined, but only such tenets, which have been heretofore so declared, 1. by the words of the canonical scriptures; 2. by the first four general councils, or such others as have only used the words of the holy scriptures; or, 3. which shall hereafter be so declared by the parliament, with the assent of the clergy in convocation. Thus was heresy reduced to a greater certainty than before; though it might not have been the worse to have defined it in terms still more precise and particular: as a man continued still liable to be burnt, for what perhaps he did not understand to be heresy, till the ecclesiastical judge so interpreted the words of the canonical scriptures. For the writ *de heretico comburendo* remained still in force, till it was totally abolished, and heresy again subjected only to ecclesiastical correction, *pro salute anime*, by Stat. 29 Car. II. c. 9: when, in one and the same reign, our lands were delivered from the slavery of military tenures; our bodies from arbitrary imprisonment by the *habeas corpus* act; and our minds from the tyranny of superstitious bigotry, by demolishing this last badge of persecution in the English law. Every thing is now less exceptionable, with respect to the spiritual cognizance, and spiritual punishment of heresy: unless perhaps that the crime ought to be more strictly defined, and no prosecution permitted, even in the ecclesiastical courts, till the tenets in question are by proper authority previously declared to be heretical. Under these restrictions, some think it necessary for the support of the national religion, that the officers of the church should have power to censure heretics; yet not to harass them with temporal penalties, much less to exterminate or destroy them. The legislature has indeed thought it proper, that the civil magistrate should interpose, with regard to one species of heresy, very prevalent in modern times; for by Stat. 9 and 10 W. III. c. 32. if any person educated in the Christian religion, or professing the same, shall, by writing, printing, teaching, or advised speaking, deny any one of the persons in the holy Trinity to be God, or maintain that there are more gods than one, he shall undergo the same penalties and incapacities which were inflicted on apostacy by the same statute.

• HERETICAL, *adj.* [from *heretic*.] Containing heresy.—How exclude they us from being any part of the church of Christ under the colour of heresy, when they cannot but grant it possible even for him to be, as touching his own personal persuasion, *heretical*, who, in their opinion, not only is of the church, but holdeth the chiefest

place of authority over the same? *Hosier*.—Constantinople was in an uproar, upon an ignorant jealousy that those words had some *heretical* meaning. *Decay of Piety*.

• HERETICALLY, *adv.* [from *heretical*.] With heresy.

(1.) • HERETICK, *n. s.* [*heretique*, Fr. *heretique*.] 1. One who propagates his private opinions in opposition to the catholic church.—These things would be prevented, if no known *heretic* or schismatick be suffered to go into those countries. *Born*.

No *heretics* desire to spread

Their wild opinions like these Epicures. *Davenant*.—Bellarmine owns, that he has quoted a *heretic* instead of a father. *Baker on Learning*.—When a Papist uses the word *heretic*, he generally means Protestants; when a Protestant uses the word, he means any persons wilfully and contentiously obstinate in fundamental errors. *Watt's Logic*.—It is or has been used ludicrously for any one whose opinion is erroneous.—

I rather will suspect the sun with cold

Than thee with wantonness; thy honour stands  
In him that was of late an *heretic*.

As firm as faith.

*Shakespeare*.

(2.) HERETICK is a general name for all such persons under any religion, but especially the Christian, as profess or teach religious opinions contrary to the established faith, or to what is made the standard of orthodoxy. See *HERESY*, § 1, 2.

• HERETO, *adv.* [from *here* and *to*.] To this; add to this.

HERETOCH, *n. s.* among the Anglo-Saxons signified the same with *Dux* or duke, denoting the commander of an army. It appears, from Edward the Confessor's laws, that the military force of this kingdom was in the hands of the heretochs, who were constituted through every province and county in the kingdom, being selected out of the principal nobility, and such as were most remarkable for being *sapientes, fideles, & animosi*. Their duty was to lead and regulate the English army with a very unlimited power; on which account they were elected by the people in their full or full assembly, in the same manner as *heretochs*.

• HERETOFORE, *adv.* [from *heret* and *fore*.] Formerly; anciently.—I have long desired to know you *heretofore*, with honouring your virtue, though I love not your person. *Sidney*.—So near is the connection between the civil state and religion, that *heretofore* you will find the government and the priesthood united in the same person. *South*.

We now can form no more

Long schemes of life, as *heretofore*. *Scot*.

• HERETOON, *adv.* [from *here* and *to*.] To this.—They which rightly consider after what sort the heart of man *heretofore* is framed, must of necessity acknowledge, that whose assenteth to the words of eternal life, doth it in regard of his authority whose words they are. *Hosier*.—Agreeable *heretofore* might not be amiss to make children often to tell a story of any thing they know. *Locke*.

• HERETOWITH, *adv.* [from *here* and *with*.] With this.

You, fair sir, be not *heretowith* dismay'd,  
But constant keep the way in which ye stand.

*Gray*.

—*Herewith* the castle of Hume was suddenly surprised by the Scots. *Hayward*.

HER-

HERFORDEN. See HERVORDEN.

HERGUNDT, a town of Upper Hungary, famous for its rich mines of vitriol. The miners have built a subterraneous town, which is very extensive. It is 6½ miles N. of Buda. Lon. 16. 17 E. Lat. 48. 30. N.

HERI, a pleasant island in the Indian Ocean, 5000 fathoms high, and only two miles in circumference. The cultivated parts, contrasted with the brown tops of the trees, and the interspersed situation of the houses, give it a very picturesque appearance. It appears to be in a perfect state of cultivation, and well inhabited; as well as TRAVATA, which it lies 3 miles NNW.

HERICOUR, a town of France, in the department of Upper Saône, 13 miles SE. of Lure. Lon. 4. 40 E. of Ferro. Lat. 47. 34. N.

HERICY, a town of France, in the dep. of Seine et Marne, 3 miles NE. of Fontainebleau.

HERIOT. *n. s.* [*herigild*, Saxon.] A fine estate the lord at the death of a landholder, commonly the best thing in the landholder's possession. The lord retains from the ivy; for he should be the possessory lord thereof, but the olive divides with his conscience to pass it over with a present and an *heriot* every year. *Howell's Feud.*

Trough thou consume but to renew,  
For love, as lord, doth claim a *heriot* due.

*Clarendon.*

It has up, as your *heriot*, with intention to make the best of him, and then have brought the produce of him in a purse to you. *Dryd.*

HERIOT, in law, is a customary tribute of land and chattels, payable to the lord of the fee in decrease of the owner of the land. See TENANT. It is of two sorts, viz.

HERIOT CUSTOM, where *heriots* have been taken out of mind by custom, after the death of a tenant for life. In some places, there is a composition in money, as 10 or 20 shillings of a *heriot*, by which the lord and tenant both bound, if it be an indisputably ancient custom: but a new composition of this sort is had the representatives of either party.

HERIOT SERVICE, when a tenant holds by knight's service to pay *heriot* at the time of his death; the service is expressed in the deed of feoffment. The lord shall distrain; and for the tenant shall seize, and not distrain. If the lord takes a part of the tenancy, *heriot* service is exacted; but it is not so of *heriot* custom.

HERIOT, in geography, a parish of Scotland in Mid Lothian, 10 miles long from E. to W. and 6 broad. The surface is hilly. The climate is salubrious; the soil thin and gravelly, but yielding good crops of oats, bear, peas, and grass, and turnips. The sheep farms are of various extent, from 50 to 1000 acres, and the sheep are of good size, hardy and thriving. The roads are good, and one of them leads to Edinburgh. The population in 1794, stated by the Rev. Mr. Hunter, in his report to Sir J. Sinclair, was 10,000, and had increased 91, since 1755. Mr. Sinclair complains of the practice of farmers subletting farms. "There are lands" (says he) "in the parish of Sir J. Dalrymple *sub-sub-sublet*; so that the original tackman is a kind

of second *laird*, and the last is oppressed with anxiety and toil to make up his rent."

(4.) HERIOT, a river which rises in the W. end of the above parish, and running E. divides it in two, and falls into the Gala. It abounds with trout.

(5.) HERIOT, or HERIOT-TOWN, a village in the above parish, 16 miles from Edinburgh.

(6.) HERIOT, George, Jeweller to K. James VI. and Charles I., the founder of the elegant Hospital at Edinburgh, which bears his name, (§ 7.) was born in the parish of Gladsmuir, in E. Lothian. "His ancestors, (says the rev. George Hamilton, minister of that parish) were proprietors of the small village of Trabrowne, and their names appear on the roll of the Scotch parliament. (Sir J. Sinclair's *Stat. Acc.* Vol. VII. p. 321.) Mr Creech says, "He furnished jewels to Prince Charles, afterwards K. Charles I. when he went to the Court of Spain, in 1623. These jewels were never paid for by James, but when Charles I. came to the throne, the debt to Heriot was allowed to his trustees, in part of their purchase of the barony of Broughton, then crown-lands in the neighbourhood of Edinburgh. These lands are now a part of the foundation of the hospital." (*Ibid.* Vol. VI. p. 397.) Mr Heriot died in 1627. Tradition reports, that he acquired his fortune, by purchasing for a trifle a large quantity of yellow sand, with which a ship-master, who traded to Africa, had loaded his vessel by way of ballast, from the coast of Guinea, without knowing its value; but in which Heriot soon discerned a considerable proportion of gold dust, which he afterwards extracted.

(7.) HERIOT'S HOSPITAL. See EDINBURGH, § 12.

(8.) HERIOT-TOWN. See N° 5.

HERISAIL, or HERISHAW, an ancient town of the Helvetian republic, in the canton of Appenzel, seated on the Bulbach; 7 miles SW. of St Gall, and 10 NW. of Appenzel.

(1.) HERISSON, *n. s.* in fortification, a beam armed with a great number of iron spikes with their points outwards, and supported by a pivot on which it turns. These serve as a barrier to block up any passage, and are frequently placed before the gates, and more especially the wicket doors, of a town or fortress, to secure those passages which must be often opened and shut.

(2.) HERISSON, a town of France, in the dept. of Allier, 15 miles NW. of Montmarault.

(1.) HERITABLE. *adj.* [*heres*, Lat.] A person that may inherit whatever may be inherited.—By the canon law this son shall be legitimate and *hereditary*, according to the laws of England. *Hale.*

(2.) HERITABLE RIGHTS, in Scots law, signify all rights affecting lands, houses, &c. or any immovable subject.

(1.) HERITAGE. *n. s.* [*heritage*, Fr.] 1. Inheritance; estate devolved by succession; estate in general.—

Let us our father's *heritage* divide. *Habb. Tale.*  
—He considers that his proper home and *heritage* is in another world, and therefore regards the events of this with the indifference of a guest that tarrys but a day. *Rogers.* 2. [In divinity.] The people of God.—O Lord, save thy people, and bless thine *heritage*. *Common Prayer.*

(2.) HERI-

(3.) **HERITAGE**, in Scots law, implies lands, houses, and all immoveable subjects, in contradistinction to moveables or moveable subjects. It also signifies such immoveable property, as a person succeeds to as heir to another, in contradistinction to that which he himself purchases, or acquires otherwise, called *conquest*.

(1.) **HERITIER**, Nicholas L', a French poet of the 17th century, who was historiographer of France, and treasurer to the guards. He wrote two tragedies, entitled, *Hertule Parisien*, and *Cleolis*. He died in 1680.

(2.) **HERITIER**, Mary Jane L', de Villandon, a French poetess, daughter of the above, (N° 1.) was born in 1664. She was a member of the academies of the Jeux Floraux, and the Ricovrati at Padua. She wrote, 1. Translation of Ovid's *Epistles*: 2. *La Tour Tenebreuse*, an English tale: 3. *Les Caprices du Destin*, a novel: and, 4. *L'Amour puni*, a tale in poetry.

(1.) **HERK**, a river of Germany, in the late bishopric of Liege, which runs into the Demer; now included in the French republic.

(2.) **HERK**, a town of the French republic, in the dept. of Ourte, and late bishopric of Liege, seated on the river, (N° 1.) near its confluence with the Demer, 20 miles NW. of Maastricht. Lon. 5. 10. E. Lat. 50. 55. N.

(1.) **HERKEMER**, a county of New York, bounded on the E. by Clinton and Washington counties; S. by Otsego; NW. by the St Lawrence and lake Ontario; and N. by Canada. It was divided into 20 townships in 1796, when it contained, by the census, 23,573 citizens, of whom 4,161 were electors.

(2.) **HERKEMER**, a town in the above county, (N° 1.) on the N. side of the Mohawk; 80 miles NW. by W. of Albany; containing 2,073 citizens in 1796, of whom 338 were electors.

**HERKENRODE**, a town of the French republic, in the dep. of Ourte, and ci-devant bishopric of Liege, 2 miles W. of Hasselt.

**HERKLA**, or **HERACLSA**, a town of Africa in Tunis, on the E. coast, 50 miles S. of Tunis.

**HERLE**, a town of the French republic, in the dep. of the Lower Meuse, and late duchy of Limburg; 6 miles ENE. of Fauquemoot.

**HERLING**. See **HARLING**, N° 1.

**HERM**, a town of France, in the dep. of the Upper Garonne, 6 miles SW. of Muret.

**HERMA**. See **HERMES**, N° 1.

**HERMÆA**, in antiquity, ancient Greek festivals in honour of Mercury. One of these was celebrated by the Phœnicians in Arcadia; a 2d by the Cylleians in Elis; and a 3d by the Tanagrians, where Mercury was represented with a ram upon his shoulder, because he was said to have walked through the city in that posture in time of a plague, and to have cured the sick; in memory of which, it was customary at this festival for one of the most beautiful youths in the city to walk round the walls with a ram upon his shoulder. A 4th festival was observed in Crete, when it was usual for the servants to sit down at the table while their masters waited; a custom which was also observed at the Roman Saturnalia.

**HERMAL**, a town of the French republic, in

the dept. of Ourte, and late bishopric of Liege, near the Meuse: 3 miles SSW. of Viêt.

**HERMAN**, Paul, a famous botanist in the 17th century, born at Hall in Saxony. He practised physic in the isle of Ceylon, and was afterwards professor of botany at Leyden, where he died 1695. He wrote, 1. A catalogue of the plants in the public garden at Leyden: 2. *Cynosura Medica*: 3. *Flora Lugduno-Batavae*: 4. *Radices Batavae*: and, 5. *Museum Zeylanicum*.

(1.) **HERMANCE**, a town of France, in the department of Mont Blanc, and ci-devant province of Charolais, in the late duchy of Savoy, on the coast of the lake of Geneva, 7 m. NNE. of Geneva.

(2.) **HERMANCE**, a river of France, in the dept. of Mont Blanc, which runs into the lake of Geneva.

**HERMAN-MIESTIZ**, a town of Bohemia, 10 m. W. of Chrudim; famed for its fine marble.

**HERMANN**, James, a learned mathematician of the academy at Berlin, and a member of the academy of sciences at Paris, was born at Halle 1678. He was a great traveller, and for six years was professor of mathematics at Padua. He afterwards went to Muscovy, being invited thither by Peter the Great, in 1724. On his return to Berlin he was made professor of morality and natural law; and died there in 1733. He wrote several mathematical works.

**HERMANNIA**, in botany; a genus of the Labiata order, belonging to the Monadelphous class of plants; and in the natural method ranking under the 37th order, *Columnifera*. The corolla quinquelocular; the petals at the base are tubulated and oblique. There are 19 species.

1. **HERMANNIA ALNIFOLIA** has a shrubby stem and branches growing irregularly 4 or 5 feet high, with pale yellow flowers in short spikes from the sides and ends of the branches, appearing in April or May.

2. **HERMANNIA ALTHÆIFOLIA** has a firm upright stalk, and soft woolly branches, growing 2 or 3 feet high, with numerous yellow flowers in loose clusters growing at the end of the branches, and making their appearance in July.

3. **HERMANNIA GROSSULARIFOLIA** has a firm by stalk and spreading branches, growing 3 or 4 feet high, with bright yellow flowers coming in great numbers at the ends of all the slender branches in April or May.

4. **HERMANNIA HYSOPIFOLIA** has a firm upright stalk, branching out laterally 6 or 7 feet high, with pale yellow flowers in clusters from the sides of the branches, appearing in May and June.

5. **HERMANNIA LAVENDULIFOLIA** has a firm by stalk and slender branches, very bushy, 2 or 3 feet and an half high, small, spear-shaped, stiff and hairy leaves, with clusters of small white flowers along the sides of the branches, continuing from June to Autumn. All these plants are natives of Africa, and therefore must be kept in a green-house during the winter in this country. They are propagated by cuttings of their young shoots, which may be planted in pots of rich soil from April to July.

**HERMANNBURG**, a town of Lunenburg in Germany.

**HERMANST**, a town of European Turkey, in Romania, 34 miles WNW. of Adrianople.

**HERMANSTADT**, a handsome, large, populous, and strong town of Hungary, capital of Transylvania, with a bishop's see: seated on the river, 15 miles E. of Weissenburg, and 105 SE. from Lon. 14. 40. E. Lat. 46. 25. N.

**HERMANT**, Godfrey, a learned doctor of the sciences, born at Beauvais in 1617. He wrote many excellent works; the principal of which are, *The lives of St Athanasius, St Basil, St Gregory Nazianzen, St Chrysostom, and St Ambrose.* 2. *Four pieces in defence of the rights of the university of Paris against the Jesuits.* 3. *A French edition of St Chrysostom's treatise of Providence, and Basil's Ascetica.* 4. *Extracts from the same; published after his death, under the title *Opus doctrinale ecclesiastica.** He died suddenly Paris, in 1690.

(1.)<sup>o</sup> **HERMAPHRODITE**. *n. f.* [*hermaphroditus* French, from *herm* and *aphrodite*.] An animal having two sexes.—

Man and wife make but one right

*Classical hermaphrodite.*

*Cleveland.*

Hermaproditism could not incapacitate from marriage, whence *hermaphrodites*. *Arbutus and Pope.*

(2.) **HERMAPHRODITE** is generally understood to signify a human creature possessed of both sexes, or who has the parts of generation both of male and female. The term, however, is applied also to other animals, and even to plants. The word is a compound of *herm*, *Mercury*, and *aphro*, *Venus*; *q. d.* a mixture of Mercury and Venus, i. e. of male and female. See **HERMAPHRODITUS**. The Greeks also call *hermaphrodites*, *androgyni*, *q. d.* men-women. See **ANDROGYNUS**. In a paper by Mr Hunter, in the 10th volume of the Philosophical Transactions, hermaphrodites are divided into *natural* and *unnatural* or monstrous. The first belongs to the simplest orders of animals, of which there is not a greater number than of the more perfect. Natural takes place in every tribe of animals by distinct sexes, but is more common in some than in others. The human species, he imagines, has the fewest, never having seen them in species, nor in dogs; but in the horse, sheep, black cattle, they are very frequent. From Hunter's account, however, it does not appear that such a creature as a perfect hermaphrodite has ever existed. All the hermaphrodites which he had the opportunity of seeing had the parts of females, and were generally thought to be the horse they are very frequent; and the most perfect of this kind he ever saw, the udder had come down out of the abdomen into the place where the udder should have been, and appeared like an udder, not so pendulous as in the male of such animals. There were also two nipples, of which horses have no idea; being blended in them with the udder, of which there was none here. The male and female parts were exactly similar to those of a perfect female; but instead of a common clitoris, there was one about 3 or 6 inches long; which, when erect, stood almost directly forwards. A foal also very similar to the above was killed, and the following appearances were observed on dissection. The testicles were not enlarged as in the former, possibly because

the creature was too young. It had also two nipples; but there was no penis passing round the pubes to the belly, as in the perfect male ass. The external female parts were similar to those of the true ass. Within the entrance of the vagina was placed the clitoris; but much longer than that of a true female, being about 5 inches long. The vagina was open a little farther than the opening of the urethra into it, and then became obliterated; from thence, up to the fundus of the uterus, there was no canal. At the fundus of the common uterus it was hollow, or had a cavity in it, and then divided into two, viz. a right and a left, called the *horns* of the uterus, which were also pervious. Beyond the termination of the two horns were placed the ovaria, as in the true female; but the Fallopian tubes could not be found. From the broad ligaments, to the edges of which the horns of the uterus and ovaria were attached, there passed towards each groin a part similar to the round ligaments in the female, which were continued into the rings of the abdominal muscles; but with this difference, that there were continued with them a process or theca of the peritonæum, similar to the tunica vaginalis communis in the male ass; and in these thecae were found the testicles, but no vasa deferentia could be observed passing from them. In most species of animals, the production of hermaphrodites appears to be the effect of chance; but in the black cattle it seems to be an established principle of their propagation. It is a well-known fact, and, as far as has yet been discovered, appears to be universal, that when a cow brings forth two calves, one of them a bull, and the other a cow to appearance, the cow is unfit for propagation, but the bull calf becomes a very proper bull. The cows are known not to breed; they do not even show the least inclination for the bull, nor does the bull ever take the least notice of them. Among the country people in England, this kind of calf is called a **FREE-MARTIN**; and this singularity is just as well known among the farmers, as either cow or bull. When they are preserved, it is for the purposes of an ox or spayed heifer; viz. to yoke with the oxen, or fatten for the table. They are much larger than either the bull or the cow, and the horns grow longer and bigger, being very similar to those of an ox. The bellow of a free martin is similar to that of an ox, and the meat is similar to that of the ox or spayed heifer, viz. much finer in the fibre than either the bull or cow; and they are more susceptible of growing fat with good food. By some they are supposed to exceed the ox and heifer in delicacy of taste, and bear a higher price at market; this, however, does not always hold, and Mr Hunter gives an instance of the contrary. The Romans, who called the bull *taurus*, spoke also of *tauræ*, in the feminine gender, different from *vaccæ* or cows. Stephens observes, that it was thought they meant by this word *barren cows*, who obtained this name because they did not conceive any more than bulls. He quotes a passage from Columella, *lib. vi. cap. 22.* "And, like the *tauræ*, which occupy the place of fertile cows, should be rejected or sent away." He likewise quotes Varro, *De re rustica, lib. ii. cap. 3.* "The cow which is barren is called

ed name." From which we may reasonably conjecture, that the Romans had not the idea of the circumstances of their production. Of these creatures Mr Hunter dissected three, and the following appearances were observed in the most perfect of them. The external parts were rather smaller than in the cow. The vagina passed on as in the cow to the opening of the urethra, and then it began to contract into a small canal, which passed on to the division of the uterus into the two horns; each horn passing along the edge of the broad ligament laterally towards the ovaria. At the termination of these horns were placed both the ovaria and testicles, both of which were nearly about the size of a small nutmeg. No Fallopian tubes could be found. To the testicles were vasa deferentia, but imperfect. The left one did not come near the testicle; the right only came close to it, but did not terminate in the body called *epididymis*. They were both pervious, and opened into the vagina near the opening of the urethra. On the posterior surface of the bladder, or between the uterus and bladder, were the two bags called the *vesiculae seminales* in the male, but smaller than what they are in the bull: the ducts opened along with the vasa deferentia. Concerning hermaphrodites of the human species, much has been written, and many laws enacted about them in different nations; but the existence of them is justly disputed. Dr Parsons has given us a treatise on the subject, in which he endeavours to explode the notion as a vulgar error. According to him, all the hermaphrodites that have appeared, were only women whose clitoris from some cause or other was overgrown, and, in particular, that this was the case with an Angola woman shown at London as an hermaphrodite some time ago. Dr Tissot, however, in his *Onania*, mentions one who passed for a woman, but who was so very perfect in both sexes, that she not only was married, and had a child to her husband, but, during her in-laying, she got with child the servant girl who slept with her. But this anecdote appears so incredible, that we are apt to suspect, that the servant girl had had an amour with some young man, and to conceal it, had taken advantage of her mistress's singular case, and thus imposed upon both her and the Doctor. Among the reptile tribe, such as worms, snails, leeches, &c. hermaphrodites are very frequent. In the Memoirs of the French academy, we have an account of this very extraordinary kind of hermaphrodites, which not only have both sexes, but do the office of both at the same time. Such are earth-worms, round-tailed worms found in the intestines of men and horses, land snails, and those of fresh waters, and all the sorts of leeches. And, as all these are reptiles, and without bones, M. Poupert concludes it probable, that all other insects which have these two characters are also hermaphrodites. The method of coupling practised in this class of hermaphrodites, may be illustrated in the instance of earth-worms. These creep, two by two, out of holes proper to receive them, where they dispose their bodies in such a manner as that the head of the one is turned to the tail of the other. Being thus stretched lengthwise, a

little conical button or papilla is thrust forth by each, and received into an aperture of the other. These animals, being male in one part of the body, and female in another, and the body itself withal, M. Homberg does not think it impossible but that an earth worm may couple with itself, and be both father and mother of its young; observation which appears rather extraordinary. Among the insects of the soft or bouché kind there are great numbers, which are so far from being hermaphrodites, that they are of no sex at all. Of this kind are all the caterpillars, maggots, and worms, produced of the eggs of flies of all kinds: but the reason of this is plain; these are not animals in a perfect state, but disguises in which animals lurk. They have no business in the propagating of their species, but are transformed into winged animals, by getting rid of their coverings; and then only they are in a perfect state, and therefore then only show differences of sex, which are always in distinct animals, each being only male or female. They copulate, and their eggs produce these creatures, which show no sex till they arrive at that perfect state again. Hermaphrodites have also been served among fishes. A lady in Perth, whose veracity we cannot doubt, assures us, that, in taking a large full grown haddock, in 1794, she was surprised to find that it contained both a male and a roe, in full perfection. If she had not opened the fish herself, and observed the parts before she took them out, she would have suspected either a mistake or some imposition.

(3.) HERMAPHRODITE FLOWERS, in botany are so called by the sexualists on account of containing both the anthera and stigma, the organs of generation, within the same calyx and petals. Of this kind are the flowers of many classes in Linnæus's sexual method, except the classes *monœcia* and *diœcia*; in the former of which male and female flowers are produced on the same root; in the latter, on distinct plants but of the same feed. In the class *polygamia*, there are always hermaphrodite flowers mixed with male, female, or both, either on the same or distinct roots. In the plantain tree the flowers are all hermaphrodite; in some, however, the anther is the male organ, in others the stigma or female organ proves abortive. The flowers in the former are styled *female hermaphrodites*; in the latter *male hermaphrodites*. Hermaphrodites are as frequent in the vegetable kingdom as they are rare in the animal one. See BOTANY, p. 111—114.

\* HERMAPHRODITICAL, *adj.* [from *hermaphrodite*.] Partaking of both sexes—may be equivocal seeds and *hermaphroditical* couples, that contain the radicality of different sexes.

HERMAPHRODITUS, in the pagan mythology, the son of HEHÆUS, or Mercury, and PHRODITE, or Venus. Being educated on Mount Ida by the Naiades, Salmacis, one of the nymphs, fell desperately in love with him; he refusing to gratify her passion, she sought him one day, while he was bathing in a fountain in Caria, and leaping into it, seized him, and

of himself about him, and by her prayers, obtained of the gods to have his body and hers united in one. Whereupon Hermaphroditus, finding himself thus metamorphosed, prayed his celestial parent, that in future every man who should drink from that fountain should possess both sexes, which according to Ovid, was also granted. (See *Met. lib. iv. l. 251.*) Some explain the fable, that Hermaphroditus was represented as the son of Mercury and Venus, to exhibit the union between war and peace, or commerce, whereof Mercury was the deity, with pleasure, whereof Venus was the deity.

2.) HERMAS, an ecclesiastical author of the 2d century; and, according to Origen, Eusebius, and Jerome, the same whom St Paul salutes as the friend of his epistle to the Romans. He wrote in Greek some time before Domitian's persecution, A. D. 95, entitled *The Pastor*, from his writing an angel speaking to him in it under the form of a shepherd. The Greek text is lost, but a very ancient Latin version of it is extant. Some of the fathers have considered this book as apocryphal. The best edition of it is that of 1698, in which it is to be found among the other apostolical writings, illustrated with the notes and corrections of Cotelerius and Le Ciere. With these it was translated into English by Abp. Wake, the edition of which is that of 1710.

3.) HERMAS, in botany, a genus of the monandria order, belonging to the polygamia class of plants. The umbel in the hermaphrodite is terminal; there is an universal involucre, and perianth. The rays of the small umbels are lobed; each ray bears one flower; there are 5 petals, 5 barren stamens; the seeds are two fold and circular. In the male the lateral umbels have only partial involucre; the small umbels are flowered; there are five petals, and five stamens.

HERMATA, a kingdom and town in Borneo.

HERMBACH, a town of Germany, in the circle of Juliers, now annexed to the republic, by the treaty of Lunéville. By the division of the countries on the left bank of the Rhine, in December 1797, into 6 departments, Hermbach was included in the dept. of the Rhenus; by the last division in June 1801, into 4 departments, it appears to be in that of the Roer. It is 12 miles S. of Juliers.

HERMESDORF, a town of Silesia, in Neisse.

HERMENAULT, a town of France, in the dept. of the Vendée, 3 miles NW. of Fontenay.

HERMENSTADT. See HERMANSTADT.

HERMENT, a town of France, in the dept. of de Drome, 8 miles WSW. of Riom.

4.) HERMES, [*Ἑρμης*, Gr. from *ἑρμης*, an interpreter,] the Greek name of the god Mercury.

HERMES, surnamed TRISMISTOS, *i. e.* the great, an Egyptian or Phœnician priest philosopher, and according to some a king; in triple office, they say, was the reason of his name; tho' Suidas alleges, it was given to him because he taught the doctrine of the Trinity. It is more probable, however, that he was so called on account of his great learning; for he is said to have wrote 36 books on divinity and philosophy, and 6 on physic. Clemens Alexandrinus

has given a catalogue of his works; but none of them are extant, except a piece entitled *Parmenides*, which is reckoned spurious. He taught the Egyptians chemistry, the art of land measuring, the cultivation of the olive, the division of time into hours, and the use of hieroglyphics. He is supposed to have flourished under Ninus or Oiris, about A. M. 2076. See THOTH.

(3.) HERMES, or HERMA, among antiquaries, a sort of square or cubical figure of the god Mercury usually made of marble, though sometimes of brass or other materials, without arms or legs, and planted by the Greeks and Romans in their cross ways. Servius gives us the origin thereof, in his comment on the 8th book of the *Æneid*. Some shepherds, says he, having one day caught Mercury asleep on a mountain, cut off his hands; from which he, as well as the mountain where the action was done, became denominated Cyllenius, from *κύλληναι* *mains* *ed*; and thence certain statues without arms are denominated *Hermes* or *Herma*. But this etymology of the epithet of Cyllenius contradicts most of the other ancient authors; who derive it from Mercury's birth place Cyllene, a city of Elis, or the mountain Cyllene, which had been so named before him. Suidas gives a moral explication of this custom of making statues of Mercury without arms. The *Hermes*, says he, were statues of stone placed at the vestibules or porches of the doors and temples at Athens; for this reason, that as Mercury was held the god of speech and of truth, square and cubical statues were peculiarly proper; having this in common with truth, that on what side soever they are viewed, they always appear the same. Athens abounded more than any other place in *Hermes*: there were abundance of very signal ones in various parts of the city, and they were indeed among the principal ornaments of the place. They were also placed in the high roads and cross ways, because Mercury, who was the courier of the gods, presided over the highways; whence he had his surnames of TRIVIVS and VIACVS.

(1.) \* HERMETICAL. HERMETICK. *adj.* [from *Hermes*, or *Mercury*, the imagined inventor of chymistry; *hermetique*, French.] Chymical.—An hermetical seal, or to seal any thing hermetically, is to heat the neck of a glass 'till it is just ready to melt, and then with a pair of hot pincers to twist it close together. *Quarry*.—The tube was closed at one end with diachylon, instead of an hermetical seal. *Boyle*.

(2.) HERMETICAL ART, a name given to chemistry, on a supposition that Hermes Trismegistus was the inventor of the art, or that he excelled therein. See HERMES, N° 1.

(3.) HERMETICAL PHILOSOPHY is that which undertakes to solve and explain all the phenomena of nature, from the three chemical principles, salt, sulphur, and mercury.

(4.) HERMETICAL PHYSIC, or MEDICINE, is that system or hypothesis in the art of healing, which explains the causes of diseases, and the operations of medicine, on the principles of the hermetical philosophy, and particularly on the system of alkali and acid. It has been long exploded.

(5.) HERMETICAL SEAL, a manner of closing glass vessels, for chemical operations, so very accurately

curately, that nothing can exhale, not even the most subtle spirits. It is performed by heating the neck of the vessel in the flame of a lamp till it be ready to melt, and then with a pair of pincers twisting it close together. This chemists call putting on *Hermes's seal*. Vessels are also sealed hermetically; by stopping them with a stopple of glass, well luted into the neck of the vessel; or, by turning another ovum philosophicum upon that wherein the matter is contained.

\* **HERMETICALLY.** *adv.* [from *hermetical*.] According to the hermetical or chemick art.—He suffered those things to putrefy in *hermetically* sealed glasses, and vessels close covered with paper; and not only so, but in vessels covered with fine lown, so as to admit the air, and keep out the insects; no living thing was ever produced there. *Dentley*.

**HERMETICK.** See **HERMETICAL**, § 1.

**HERMETRA**, one of the Western Islands of Scotland, lies a little N. of N. Uist.

**HERMEVILLE**, a town of France, in the dept. of the Menſe,  $7\frac{1}{2}$  miles from Verdun.

**HERMHARPOCRATES**, or **HERMARPOCRATES**, in antiquity, a deity, or figure of a deity, composed of Mercury and Harpocrates the god of Silence. M. Spon gives a *hermharpocrates* in his *Rech. Cur. de l'Antiquité*, p. 98. fig. 15. having wings on his feet like Mercury, and laying his finger on his mouth like Harpocrates. They might mean by this combination, that *Silence* is sometimes *eloquent*.

**HERMIANI**, or **HERMIATITE**, a sect of heretics in the second century, thus called from their leader **HERMIAS**, and also denominated **SELEUCIANI**. One of their distinguishing tenets was, that God is corporeal. Another, that Jesus Christ did not ascend into heaven with his body, but left it in the sun. See next article.

**HERMIAS**, a heretic of the 2d century, the founder of the above sect, born in Galatia. He maintained that the Deity is material, the world eternal, and that the human soul is composed of fire and spirit.

**HERMILLY**, Vaquette D', a French historian, born at Amiens in 1707. He wrote the History of Majorca and Minorca, and translated Fejoo's Critical Theatre, and Ferrara's History of Spain.

(1.) **HERMIONE**, in fabulous history, the daughter of Menelaus and Helen, who was betrothed to her cousin Orestes, but afterwards married to Pyrrhus, whom Orestes therefore killed in the temple of Apollo, and recovered Hermione.

(2.) **HERMIONE**. See **HARMONIA**.

(3.) **HERMIONE**, in ancient geography, a considerable city of Argolis. It was in ruins, except a few temples, in the time of Pausanias; who says that the new city was at the distance of 4 stadia from the promontory on which the temple of Neptune stood. It gave name to the

**HERMIONICUS SINUS**, a part of the Sinus Arcticus.

(1.) \* **HERMIT.** *n. f.* [*hermite*, French; contracted from *eremite*, *eremita*.] 1. A solitary; an anchorite; one who retires from society to contemplation and devotion—

A wither'd *hermit*, fivescore winters worn,  
M<sup>d</sup> shake off fifty looking in her eye. *Shak.*

—You lay this command upon me, to give you my poor advice for your carriage in so eminent place: I humbly return you mine opinion, for as an *hermit* rather than a courtier can read *Bacon's Advice to Villiers*.—He had been duke of Savoy, and, after a very glorious reign, took him the habit of a *hermit*, and retired into a solitary spot. *Addison on Italy*. 2. A beheading one bound to pray for another. Improper.—

For those of old,

And the late dignities heap'd up to them,  
We rest your *hermit*.

(2.) **HERMIT**, is derived from the Greek *eremita*, a desert, and, therefore should rather be written **EREMITE**. Paul, surnamed the *Hermit*, is also reckoned the first hermit; though St Jerome the beginning of the Life of that saint, says, it is known who was the first. Some think John Baptist, others Elias; others make St Anthony the founder of the eremetical life; but others that he only rekindled and heightened the first thereof, and that his disciples owned St Paul Thebes for the first that practised it. The persecutions of Decius and Valerian are supposed to have been the occasion. Several of the *hermits*, though they lived in deserts, had numbers of religious accompanying them. There are also various orders and congregations of religious distinguished by the title of *hermits*; as, that of St Augustine, of St John Baptist, of St Paul, &c.

(3.) **HERMIT**, **PETER** the. See **CROISSADE**.

(1.) \* **HERMITAGE.** *n. f.* [*hermitage*, French.] The cell or habitation of a hermit.—

By that painful way they pass  
Forth to an hill, that was both steep and bare  
On top whereof a sacred chapel was,  
And eke a little *hermitage* thereby. *Pope*

Go with speed  
To some forlorn and naked *hermitage*,  
Remote from all the pleasures of the world.

And may at last my weary age  
Find out the peaceful *hermitage*,  
The hairy gown and mossy cell,  
Where I may sit and rightly spell  
Of every star that heav'n doth shew,  
And ev'ry herb that sips the dew.

—About two leagues from Fribourg we will see a *hermitage*: it lies in the prettiest landscape imaginable, among woods and rocks. *Adrian*

(2.) **HERMITAGE** is also applied to any religious cell, built and endowed in a reclusive place, annexed to some large abbey, of which the superior was called a Hermit.

(3.) **HERMITAGE**, in geography, a bill of France on the side of the Rhone, opposite Tournon, famous for its vineyards.

(4.) **HERMITAGE**, a river of Scotland in Northburghshire, which runs into the Liddel, and bounds with trouts.

(5.) **HERMITAGE CASTLE**, an ancient castle the parish of Castletown, on the banks of the above river, (N<sup>o</sup> 4.) supposed to have been built by Alexander II, about 1240. The rev. Mr. A. says, "it has been a very strong building, a 100 feet square, defended by a strong rampart and ditch. The walls are almost entire. The upper part is a heap of ruins." Bp. Elphinstone says:

to William Douglas, E. of Liddisdale, beat the English out of all Teviotdale, and took the castle of Hermitage in 1340. In this castle Sir Alexander Lindsay of Dalhousie was starved to death by the Earl of W. Douglas, in 1342, from jealousy, because Sir Alexander was made Sheriff of Teviotdale. His bones were found a few years ago in a chamber of the castle. Queen Mary visited Bothwell in this castle, in 1561.

\* **HERMITESS.** *n. f.* [from *hermit.*] A woman retired to devotion.

\* **HERMETICAL.** *adj.* [from *hermit.*] Suitable to a hermit.

**HERMIT'S ISLANDS,** a cluster of small isles, on the coast of Terra del Fuego.

\*) \* **HERMODACTYL.** *n. f.* [from *hermo* and *dactyl.*] *Hermodactyl* is a root of a determinate and exact figure, and represents the common figure of a heart cut in two, from half an inch to an inch in length. This drug was first brought into medical use by the Arabians, and comes from Egypt and Syria, where the people use them, while alive, as a vomit or purge; and have a way of eating them for food, which they eat in order to make themselves fat. The dried roots are a gentle purge, now little used. *Hill's Materia Med.*

\*) **HERMODACTYLS** are brought from Turkey and are of a white colour, compact, yet easy to cut or powdered, of a viscous sweetish taste, and a slight degree of acrimony. They were of great repute among the ancients as a cathartic; those now sold in the shops have very little purgative virtue. Neumann declares he never found them to have any effect. The *hermodactyl* is the root of the *COLCHICUM VARIEGATUM*, according to some; others suppose it to be that of the *LESS TUBEROSA*.

**HERMODORUS,** a philosopher of Ephesus, coming to Rome, advised the making of laws called the *Twelve Tables*; on which account a statue was erected to his memory. *Pliny.*

\*) **HERMOGENES,** the first and most celebrated architect of antiquity, was according to Vitruvius, born at Alabanda, a city in Caria. He had a temple of Diana at Magnesia; another of Apollo at Troas; and was the inventor of several parts of Architecture. He wrote a book on the art, which is lost.

\*) **HERMOGENES,** of Tarsus, an ancient orator who was in every respect a prodigy. At 17 years of age he published his system of rhetoric, and at 20 his philosophic ideas; but at 25 he lost his memory. His body being opened after his death, his heart was found of an extraordinary size, and all over hairy. He died about A. C. 168. His works were published by Aldus in 1509.

\*) **HERMOGENES,** a heretic of the 3d century, born in Africa. He held matter to be the first principle; and regarding it as the fountain of all life, he maintained that the world, and every thing contained in it, as well as the souls of men and other spirits, were formed by the Deity from created and eternal mass of corrupt matter.

**HERMOGENIANS,** a sect of ancient heretics, named from their leader **HERMOGENES**. Their opinions were warmly opposed by Tertullian. They were divided into several branches

under their respective chieftains, viz. **Hermian**, **Seleucians**, **Materians**, &c. See last article.

**HERMON,** or **ARAMON,** in ancient geography, a mountain of the Amorites, called **SANION** by the Phœnicians, and **Sansir** or **Sansir** by the Amorites, on the E. of Jordan. It is also called **Sion** by Moses; but must not be confounded with the **Sion** of Jerusalem. By the Sidonians it was called **Serian**; in the Vulgate, it is called **Serion**. Joshua informs us, that it was the dominion of Og king of Bashan; which must be understood of its S. side. It is never particularly mentioned by profane writers; being comprised under **Libanus**, or **Antilibanus**, with which it is joined on the E. It is also called

**HERMONIM**, plurally, Psalm xlii. 6. because it was extensive, and contained several mountains.

**HERMONTHIS,** an ancient city of Egypt, famous for the worship of Jupiter, Apollo, and Isis.

**HERMONVILLE,** a town of France, in the dept. of Marne, 7 miles from Rheims.

**HERMOPOLIS,** an ancient city of Egypt, famous for flax, and for the worship of Pan; 120 miles S. of Cairo.

**HERMOSELLO,** a town of Spain, in Leon.

**HERMUS,** in ancient geography, a river of Ionia; which, rising near Doryzium, a town of Phrygia, in a mountain sacred to Cybele, touched Myfia, and ran through the Regio Combusta, then through the plains of Smyrna down to the sea, carrying along with it the waters of the Pactolus, Hyllus, and other rivers. It was said to roll down gold, by Virgil and other poets.

\* **HERN.** *n. f.* [Contracted from **HERON**, which see.] Birds that are most easy to be drawn are the mallard, swan, *heron*, and bittern. *Præben.*

**HERNANDRIA,** **JACK-IN-A-BOX TREE**; a genus of the triandria order, belonging to the monœcia class of plants; and in the natural method ranking under the 38th order, *Triæta*. The male calyx is tripartite; the corolla tripetalous; the female calyx is truncated, quite entire; the corolla hexapetalous; the plum hollow, and open at the mouth or upper part, with a loose kernel. The species are two:

1. **HERNANDRIA OVIGERA** grows many feet high, garnished with large oval leaves, not petiolated; and monœcious flowers, succeeded by swollen fruit, open at the end, and a nut within.

2. **HERNANDRIA SONORA**, or common **jack-in-a-box**, is a native of both the Indies. It grows 20 or 30 feet high; and is garnished with broad petiolated leaves, and monœcious flowers, succeeded by a large swollen hollow fruit, formed of the calyx; having a hole or opening at the end, and a hard nut within. The wind blowing into the cavity of this fruit makes a very whistling and rattling noise, whence the name. It is said, the sonora in Java affords a sure antidote against poison, if you either put its small roots on the wounds or eat them; as was discovered to Rumphius by a captive woman, in the war between the people of Macassar and the Dutch, in 1667. The soldiers of the former always carry this root about them, as a remedy against wounds with poisoned arrows.—Both these species being tender exotics, must be planted in pots of rich earth, and always kept in a hot house; in which, notwithstanding all the care that can be

taken, they seldom flower, and never grow beyond the height of common shrubs, though in the places where they are natives, they arrive at the height of trees. They are propagated by seeds procured from the West Indies.

HERNE, a town of Kent, 6 miles from Canterbury, 12 from Margate, and 14 from Faversham. It has a fair on Easter Tuesday. The church is a large ancient structure, 111 feet long, with a tower of flint. The great Dr Ridley, the English martyr, was vicar of Herne. It has a commodious bay, frequented by colliers, &c.

HERNGRUND. See HERGAUND.

\* HERNHILL. *n. f.* [*hern* and *hill*.] An herb. *Ainsworth*.

(1.) \* HERNIA. *n. f.* [Lat.] Any kind of rupture, diversified by the name of the part affected. — A *hernia* would certainly succeed. *Wistman*.

(2.) HERNIA is a descent of a portion of the intestines or omentum out of their natural place; or rather, the tumour formed by that descent, popularly called a rupture. The word originally signifies the same with *tumor scroti*, called also *hemex*. Priscian says, that the ancient Marli gave the appellation *hernia* to rocks; whence some think hernias thus called on account of their hardness. Scaliger derives it from the Greek *ἑρνα*, a branch. See SURGERY, *Index*.

HERNIARIA, RUPTURE-WORT; a genus of the digynia order, belong to the pentandria class of plants; and in the natural method ranking under the 11th order, *Sarmentacea*. The calyx is quinquepartite; there is no corolla; there are 3 barren lamina, and a monospermous capsule. There are 4 species, of which the most remarkable is the

HERNIARIA GLABRA, or *smooth rupture wort*, a native of many parts of England. It is a low trailing plant, with leaves like the smaller chickweed; the flowers come out in clusters from the side of the stalks at the joints, and are of a yellowish green colour. This plant is a little saltish and astringent. Cows, sheep, and horses, eat it; goats and swine refuse it. The juice is useful to take away specks in the eyes.

HERNOSAND, or } a seaport of Sweden on  
HERNOSUND, } an island in the gulph of Bothnia. In 1710, 1714, and 1718, it was burnt by the Russians. It has a great trade in linen. Lon. 18. 38. E. Lat. 62. 38. N.

(1, 1.) \* HERO. *n. f.* [*heros*, Latin; *ἥρως*.] 1. A man eminent for bravery.—

I sing of *heros* and of kings,  
In mighty numbers mighty things. *Cowley*.  
*Heroes* in animated marble frown. *Pope*.  
—In this view he ceases to be an *hero*, and his reputation is no longer a virtue. *Pope's Odyssey*.—

These are thy honours, not that here thy bust  
Is mix'd with *heroes*, or with kings thy dust. *Pope*.

2. A man of the highest class in any respect; as, a *hero* in learning.

(3.) A HERO (*§ 1, def. 1.*) is thus distinguished, by F. Bouhours, from a great man, that the former is more daring, fierce, and enterprising, and the latter more prudent, thoughtful, and reserved. In this sense we say, Alexander was a hero, Julius Cæsar a great man.

(3.) A HERO, in Pagan mythology, was a great and illustrious person, of a mortal nature, but supposed to partake of immortality, and after his death to be placed among the number of the gods. The Greeks erected columns and other monuments over the tombs of their heroes, and established a kind of worship in honour of the names both of the heroes and heroines. The Romans also raised statues in honour of their heroes; but there were of a superior order, who were supposed to be admitted into the community of the 12 great gods, viz. Hercules, Bacchus, Æsculapins, Romulus, Castor, and Pollux. Authors distinguish between the worship which the ancients paid to their heroes, and that offered to their gods. The first consisted of sacrifices and libations; the last was only a kind of funeral honour, in which they celebrated their exploits, concluding the rites with feasts.

(4.) THE HERO OF A POEM, or ROMANCE, is the principal personage, or he who acts the chief part in it. Thus the hero of the *Iliad* is Achilles; of the *Odyssey*, Ulysses; of the *Æneid*, Æneas; of Tasso's *Jerusalem*, Godfrey of Bulloigne; Milton's *Paradise Lost*, Adam; though Mr. den will have the Devil to be Milton's hero, because he gets the better of Adam, and drives him out of Paradise.

(II.) HERO, in fabulous history, a famous mistress of Venus, who lived at Abydos, in a tower on the banks of the Hellespont. Leander, her lover, who lived at Sestos on the other side of the strait, every night swam over to visit her, being directed by a light fixed on the tower. But the light being put out in a stormy night, the youth mistook his way, and was drowned; on which Hero threw herself into the sea, and perished.

(III.) HERO, THE OLD, and } two celebrated

(IV.) HERO, THE YOUNG, } Greek mathematicians. The latter was a disciple of Euclid. Their works were translated into Latin by Barocius: *Spiralium liber*, by Hero senior, *Treatat. artis et machin. militar.* by Hero junior. They flourished about A. A. C. 130 and 100.

(1.) HEROD, improperly styled the Great, a detestable tyrant of Judæa, was born at Ascalon about A. A. C. 68. His father, Antipater Idumæan, (or *Idemite*,) appointed him governor of Galilee: Mark Antony made him tetrarch of Judæa; (See ETHERNARCH:) and he afterwards obtained the kingdom of Judæa, which was confirmed to him by Augustus, a short time before the birth of our Saviour; and thus the prophecy was fulfilled, of "the sceptre departing from Judah," he being an alien by birth. At the birth of our Lord, in the vain hope of cutting off the Messiah, he caused all the infants of Bethlehem under two years of age to be massacred. His death was as fatal to his own family as to his subjects, for he murdered his beautiful wife Mariamne, his mother Alexandra, her brother Aristobolus, grandfather Hyrcanus II, and his own sons Alexander and Aristobulus; which led the emperor Augustus to say, that it was better to be Herod's swine than his son. He died miserably within a few years after the birth of Christ, aged 70.

(2, 3.) HEROD AGRIPPA I. & II. See AGRIPPA.

(4.) HEROD ANTIPAS, the son of Herod the Great.

Great, by his wife Cleopatra, a native of Jerusalem. Herod, in his will, named his son Archelaus his successor, giving Antipas the title of Tetrarch of Galilee and Peraea. Antipas adorned and fortified the principal places of his dominions. He married the daughter of Aretas king of Arabia; when he divorced about A. D. 33, to marry his first-law Herodias, wife to his brother Philip, who was still living. St John the Baptist, exclaiming against this incest and adultery, was imprisoned in the castle of Machærus; and afterwards beheaded by Herod's order, as recorded in Mat. xiv. Mark vi. and Luke iii. Aretas to revenge the affront which Herod had offered to his daughter, declared war against him, and overcame him in a very obstinate engagement. Herod being afterwards detected as a party in Sejanus's conspiracy, was banished by the emperor Caligula into Lyons in Gaul; whither Herodias accompanied him. This Antipas is the Herod who, being at Jerusalem at the time of our Saviour's passion, (Luke xii. 11.) ridiculed him, by dressing him in a white robe, and sending him back to Pilate, as a mock king, whose ambition gave him no umbrage. The year when he died is not known, but it is certain he died in exile, as well as Herodias. Josephus says, he died in Spain.

HERODIAN, an eminent Greek historian, who flourished at Rome in the 3d century, in the reigns of Severus, Caracalla, Heliogabalus, Alexander, and Maximin. His history begins from the death of Marcus Aurelius the philosopher; and ends with those of Balbinus and Maximin, and the beginning of the reign of Gordian. It is written in elegant Greek; and there is an excellent translation of it into Latin, by Angelus Politianus. It was published by Henry Stephens in 4to, in 1611; by Boetler, at Strasburg in 1663, in 8vo; and by Hudson, at Oxford, in 1699, 8vo.

HERODIANS, a sect among the Jews, mentioned in Matth. xxiii. 16. and Mark iii. 6. Commentators are much divided with regard to them. Jerom, in his dialogue against the Luciferians, says the name to have been given to such as owned Herod for the Messiah; and Tertullian and Eusebius are of the same opinion. But the same opinion is ridiculous; and maintains, that the Pharisees gave this appellation by way of ridicule to Herod's soldiers, who paid tribute to the Romans; agreeable to this the Syrian interpreters render the word by *the domestics of Herod*, i. e. *Herod's courtiers*. M. Simon, in his notes on the 23d chapter of Matthew, advances a more probable opinion. The name he supposes to have been given to such as adhered to Herod's party and interests; and were for preserving the government in the hands of the Romans, about which there were great divisions among the Jews. P. Hardouin will have the Herodians and Sadducees to have been the same. Dr. Lightfoot is of opinion, that they were distinguished from the other Jews by their concurrence with Herod's scheme, of subjecting himself and his dominions to the Romans, and by complying with many of their heathen usages and customs. This subsiding with idolatry upon views of interest and worldly policy, was probably that leaven of hypocrisy, against which our Saviour cautioned his

disciples. It is farther probable, that they were chiefly of the sect of the Sadducees; because the leaven of Herod is also called the leaven of the Sadducees.

(1.) HERODIAS. See HEROD, N° 4. She was grand-daughter of Herod the Great, so that even her marriage with her uncle Philip was incestuous, as well as her adultery with her brother.

(2.) HERODIAS, in zoology. See ANTRIA, § 6. HERODOTUS, an ancient Greek historian, the son of Lyxus and Dryo, born at Halicarnassus in Caria, in the first year of the 74th Olympiad, about A. A. C. 484. Halicarnassus being at that time under the tyranny of Lygdamis, grandson of Artemisia queen of Caria, Herodotus refused to stay; from whence he travelled over Egypt, Greece, Italy, &c. and acquired the knowledge of the history and origin of many nations. He then began to digest the materials he had collected, and composed that history which has preserved his name ever since. He wrote it in the isle of Samos. Lucian informs us, that when Herodotus left Caria to go into Greece, he began to consider with himself,

What he should do to be for ever known,

And make the ages all to come his own.

His history, he presumed, would easily procure him fame, and raise his name among the Grecians, in whose favour it was written; but then he saw that it would be tedious to go through all the cities of Greece, and recite it to the inhabitants of each city. He thought it best therefore to take the opportunity of their assembling all together; and accordingly recited his work at the Olympic games, which rendered him more famous than even those who had obtained the prizes. None were ignorant of his name, nor was there a single person in Greece who had not either seen him at the Olympic games, or heard those speak of him who had seen him there. His work is divided into 9 books; which, according to the computation of Dionysius Halicarnassensis, contain the most remarkable occurrences within a period of 340 years; from the reign of Cyrus to that of Xerxes, when the historian was living. These 9 books are named after the nine Muses, each book being distinguished by the name of a Muse; and this has given birth to two disquisitions; viz. 1. Whether they were so called by Herodotus himself; and, 2. For what reason they were so called. As to the first, it is generally agreed that Herodotus did not impose these names himself; but it is not agreed why they were imposed by others. Lucian tells us, that these names were given them by the Grecians at the Olympic games, when they were first recited, as the best compliment that could be paid the man who had taken pains to do them so much honour. Others have thought, that the names of the *Muses* have been fixed upon them by way of reproach, to intimate, that Herodotus, instead of true history, had written a great deal of fable. Aldus Manutius, Joachim Camerarius, and Henry Stephens, have written apologies for him; and have very justly observed, that he seldom relates any thing of doubtful credit without producing the authority on which his narration is founded; and, if he has no certain authority to fix it upon, uses always the terms, *ut ferunt*, *ut ego audivi*, &c.

There

There is ascribed also to Herodotus, but falsely, a Life of Homer, which is usually printed at the end of his work. He wrote in the Ionic dialect, and his style and manner have been admired by all people of taste. There have been several editions of his works; two by Henry Stephens, in 1570, and 1592; one by Gale at London in 1679; and one by Gronovius at Leyden in 1715, which is the best, though not the best printed.

\* **HEROESS.** *n. f.* [from *hero*; *herois*, Latin.] A heroine; a female hero. Not in use.—

In which were held, by sad disease,  
Heroes and *heroesses*. *Chapman.*

\* **HEROICAL.** *adj.* [from *hero*.] Beftitting an hero; noble; illustrious; heroick.—Mufidorus was famous over all Asia for his *heroical* enterprises. *Sidney.*—Though you have courage in an *heroical* degree, I ascribe it to you as your second attribute. *Dryden.*

\* **HEROICALLY.** *adv.* [from *heroical*.] After the way of a hero; suitably to an hero.—Not *heroically* in killing his tyrannical cousin. *Sidney.*—

Free from all meaning, whether good or bad;  
And, in one word, *heroically* mad. *Dryden.*

(1.) \* **HEROICK.** *adj.* [from *hero*; *heroique*, Fr.] 1. Productive of heroes.—

Bolingbroke

From John of Gaunt doth bring his pedigree,  
Being but the fourth of that *heroick* line. *Shak.*

2. Noble; suitable to an hero; brave; magnanimous; intrepid; enterprising; illustrious.—

Not that which justly gives *heroick* name  
To person, or to poem. *Milton.*

Verse makes *heroick* virtue live,  
But you can life to verses give. *Waller.*

3. Reciting the acts of heroes. Used of poetry.—

Methinks *heroick* poetry, 'till now,

Like some fantastick fairy land did show. *Cowley.*

—I have chosen the most *heroick* subject which any poet could desire: I have taken upon me to describe the motives, the beginning, progress and successes of a most just and necessary war. *Dryden.*

—An *heroick* poem is the greatest work which the soul of man is capable to perform: the design of it is to form the mind to *heroick* virtue by example. *Dryden.*

(2.) **HEROICK AGE** is that age or period of the world wherein the *heroes*, or those called by the poets the *children of the gods*, are supposed to have lived. It coincides with the fabulous age.

(3.) **HEROIC POEM** is that which undertakes to describe some extraordinary action, or enterprise. Homer, Virgil, Statius, Lucan, Tasso, Camoens, Milton, and Voltaire, have composed *heroic poems*. In this sense, *heroic poem* coincides with *epic poem*.

(4.) **HEROIC VERSE** is that wherein heroic poems are usually composed; or, it is that proper for such poems. In the Greek and Latin, hexameter verses are peculiarly denominated *heroic verses*, as being alone used by Homer, Virgil, &c. Alexandrine verses, of 12 syllables, were formerly called *heroic verses*, as being supposed the only verse proper for heroic poetry; but later writers use verses of ten syllables.

\* **HEROICKLY.** *adv.* [from *heroick*.] Suitably to an hero. *Heroically* is more frequent, and more analogical.—

Samson had quit himself

Like Samson, and *heroically* hath slain'd  
A life heroick. *Milton.*

\* **HEROINE.** *n. f.* [from *hero*; *heroine*, Fr.] A female hero. Anciently, according to English analogy, *heroes*.—

But inborn worth, that fortune can control,  
New-brung, and stiffer bent her softer soul;  
The *heroine* assum'd the woman's place,  
Confirm'd her mind and fortified her face.

*Dryden.*

Then shall the British stage  
More noble character expose to view,  
And draw her finish'd *heraines* from you. *Add.*

\* **HEROISM.** *n. f.* [*heroyisme*, Fr.] The qualities or character of an hero.—If the *Odyssey* be less noble than the *Iliad*, it is more instructive: the *Iliad* abounds with more *heroism*, this with more morality. *Broomer.*

**HEROLDSBERG**, a town of Franconia, in Nuremberg, 7 miles NNE. of Nuremberg.

(1.) \* **HERON.** *n. f.* [*heron*, Fr.] 1. A bird that feeds upon fish.—

So lords, with sport of flag and *heron* fall,  
Sometimes we see small birds from nests do fall.

*Sidney.*

—The *heron*, when she soareth high, sweeps  
winds. *Bacon.* 2. It is now commonly pronounced *hern*.—

The tow'ring hawk let future poets sag,  
Who terror bears upon his soaring wing;  
Let them on high the frighted *hern* survey,  
And lofty numbers paint their airy fray. *Gay.*

(2.) **HERON**, in ornithology. See **ARDEA**, N° 8. This bird is a very great devourer of fish and will do more mischief to a pond than even an otter. Some say that a heron will destroy more fish in a week than an otter will do in three months; but that seems carrying the matter too far. People who have kept herons and have had the curiosity to number out the fish they fed them with in a tub of water, and count them again afterwards have found that a heron will eat 50 moderate dace and roaches in a day. It has been found that in carp ponds visited by this bird, one heron will eat up 1000 store carp in a year, and hunt them so close that very few can escape. The readiest method of destroying this mischievous bird is by fishing for him in the manner of *perch* with a baited hook; the bait consisting of a roach or dace, and the hook fastened to one end of a strong line, made of silk and wire twisted together. The wire should be entered under the gills of the roach, and run just under the skin to the tail; in which condition the fish will live several days: for if it be dead, the heron will not touch it. To the other end of the line is fastened a stone of a pound weight; and several of the baited lines being sunk by means of the stone in different parts of the pond, in a night or two the heron will certainly be taken.

\* **HERONRY.** *n. f.* [from *heron*, *con*]

\* **HERONSHAW.** *n. f.* [monly pronounced *heronry*.] A place where herons breed.—They carry their load to a *heronry* above three miles. *Darham's Physico-Theology.*

**HEROPHILA**, or } the name of the Cumaean  
**HEROPHILE**, } or Erythrean Sibyl. *See*

**HERON.**

**HERON.**

**HEROPHILUS**, an ancient physician, born in Chalcodon, about A. A. C. 500. He was an accurate anatomist, (see *ANATOMY*, *Index*;) and is said to have discovered the lacteal vessels, as well as to have made some discoveries in botany.

(1.) **HERPES**. *n. f.* [*græc.*] A cutaneous inflammation of two kinds: *miliaris*, or *pustularis*, which is like millet-seed upon the skin; and *exedens*, which is more corrosive and penetrating, so as to form little ulcers. *Quincy*.—A farther progress towards acrimony maketh a *herpes*; and, if the acrimony be very great, it maketh an *herpes excrucians*. *Wise-man's Surgery*.

(2.) **HERPES** is a kind of sore or pustule, which, breaking out upon the skin, spreads in various directions; or sometimes heals on one side or in the middle, while it eats the sound parts. As these appearances vary, the herpes accordingly receives different denominations.

(1.) **HERQUI**, or **ERQUI**, a village of France, in the dept of the North Coast, with a harbour on the British Channel; 18 miles W. of St Malo, and 4 ENE. of St Brieux.

(2.) **HERQUI BAY**, and } a bay and cape on the

(3.) **HERQUI POINT**, } coast of the above vil-  
lage. Sir Sidney Smith sailed into this bay on the 17th March, 1796, and destroyed several French ships.

**HERRENBERG**, a town of Germany, in Wurtemberg, 14 miles SSE. of Stuttgart.

**HERRENBRITUNGEN**, a town of Franconia, in Thuringia, on the Werra.

(1.) **HERRERA**, a town of Spain, in Old Castile, 32 miles NNW. of Burgos.

(2.) **HERRERA**, Ferdinand de, an eminent Spanish poet, of the 16th century, was born at Seville, and principally succeeded in the lyric poetry. Before his poems, he wrote notes on Garcilasso de Vega, and an account of the war of Cyprus, and the battle of Lepanto, &c.

(3.) **HERRERA TORDESILLAS**, Anthony, a Spanish historian, secretary to Vespasian Gonzaga viceroy of Naples, and afterwards historiographer of the Indies, under Philip II. who allowed him a considerable pension. He wrote a general history of the Indies, in Spanish, from 1492 to 1554; and the world (not so much esteemed), from 1554 to 1598. He died in 1615, aged about 66.

**HERRIEDEN**, a town of Franconia, on the Rhine, 5 miles SW. of Anspach.

(1.) **HERRING**, Thomas, Abp. of Canterbury, the son of the rev. Mr John Herring, rector of Walsoken in Norfolk, where he was born in 1681.

He was educated at Jesus College, Cambridge; was afterwards chosen fellow of Corpus Christi College, and continued a tutor there upwards of 7 years. Having entered into orders in 1701, he was successively minister of Great St. Andrew, Stow cum Qui, and Trinity in Cambridge; then to Dr Fleetwood, bishop of Ely; rector of Hattingdon in Essex, and of Barby in Hertfordshire; preacher to the Society of Lincoln's Inn, chaplain in ordinary to King George II. rector of St. Nicholas in Surrey, and dean of Rochester. In 1717 he was consecrated Bishop of Bangor, and in 1721 Abp. of York. When the rebellion broke out in 1745, and the king's troops were defeated at Culloden, he convened the nobility, gentry,

and clergy of his diocese, and addressed them in an animated speech; which had such an effect, that a subscription ensued, to the amount of £40,000; and the example was followed by the nation in general. On the death of Dr Potter in 1747, he was translated to the see of Canterbury; but in 1753 was seized with a violent fever, which brought him to the brink of the grave; and after languishing about 4 years, he died on the 13th of March, 1757. He expended upwards of £6000. in repairing and adorning the palaces of Croydon and Lambeth. This worthy prelate, in a most eminent degree, possessed the virtues of public life; his mind was filled with unaffected piety and benevolence; he was an excellent preacher, and a true friend to religious and civil liberty. After his death was published a volume of his sermons on public occasions.

(II. 1.) **HERRING**. *n. f.* [*bering*, Fr. *bering*, Saxon] A small sea-fish.—The coast is plentifully stored with round fish, pilchard, *bering*, mackerel, and cod. *Carver*.—Buy my herring fresh. *Swift*.

(ii.) **HERRING**. See *CLUPEA*, N° 4.

(iii.) **HERRING FISHERY**. Our great stations for this fishery are off the Shetland and Western Isles. There are two seasons for it; the first from June to the end of August; and the 2d in Autumn, when the fogs become very favourable for this kind of fishing. The Dutch begin their herring fishing on the 24th of June, and employ a vast number of vessels therein; called *buffes*, being between 45 and 60 tons burden each, and carrying 3 or 4 small cannon. They never stir out of port without a convoy, unless there be enough together to make about 18 or 20 cannon among them, in which case they are allowed to go in company. Before they go out, they make a verbal agreement, which has the same force as if it were in writing. The regulations of the admiralty of Holland are partly followed by other nations, and partly improved and augmented with new ones; as, that no fisher shall cast his net within 100 fathoms of another boat: that while the nets are cast, a light shall be kept on the hind part of the vessel: that when a boat is by any accident obliged to leave off fishing, the light shall be cast into the sea: that when the greater part of a fleet leaves off fishing, and casts anchor, the rest shall do the same, &c. Mr Anderson, in his *History of Commerce*, allows to the Scots a knowledge of great antiquity in the herring fishery. He says that the Netherlanders resorted to these coasts as early as A. D. 836, to purchase salted fish of the natives; but, imposing on strangers, they learned the art, and took up the trade, which has since proved of such immense emolument to the Dutch. Sir Walter Raleigh's observations on that head, extracted from the same author, are extremely worthy the attention of the curious, and excite reflections on the vast strength resulting from the wisdom of well applied industry. In 1603, (he remarks) the Dutch sold to different nations, as many herrings as amounted to £1,759,000 Sterling. In 1615, they at once sent out 2000 buffes, and employed in them 37,000 fishermen. In 1618, they sent out 3000 ships, with 50,000 men to take the herrings, and 9000 more ships to transport and sell the fish; which by sea and land employed 150,000 men, besides

besides those first mentioned. All this wealth was gotten on our coasts; while our attention was taken up in a distant whale-fishery. The Scottish monarchs for a long time seemed to direct all their attention to the preservation of the salmon fishery; probably because their subjects were novices in sea affairs. At length James III. endeavoured to stimulate his great men to these patriotic undertakings; for by an act of his 3d parliament, he compelled "certain lords spiritual and temporal, and burrows, to make ships, busses, and boats, with nets and other pertments, for fishing. That the same should be made in each burgh; in number according to the substance of each burgh, and the least of them to be of twenty tons: and that all idle men be compelled by the sheriffs in the country to go on board the same." Numerous indeed have been the attempts made at different periods to secure this treasure to ourselves, but with little success. In the late reign, a very strong effort was made, and bounties allowed for the encouragement of British adventurers: the first was of 30 s. per ton to every buss of 70 tons and upwards. This bounty was afterwards raised to 50 s. per ton, to be paid to such adventurers as were entitled to it by claiming it at the places of rendezvous. The busses are from 20 to 90 tons burden, but the best size is 80. A vessel of 80 tons ought to take ten lasts, or 120 barrels of herrings, to clear expences, the price of the fish to be admitted to be a guinea a barrel. A ship of this size ought to have 18 men, and three boats: one of 20 tons should have six men; and every 3 tons above require an additional hand. To every ton are 180 yards of nets; so a vessel of 80 tons carries 10,000 square yards: each net is 12 yards long, and 10 deep; and every boat takes out from 20 to 30 nets, and puts them together, so as to form a long train; they are sunk at each end of the train by a stone, which weighs it down to the full extent: the top is supported by buoys, made of sheep's skin, with a hollow stick at the mouth, fastened tight; through this the skin is blown up, and then stopped with a peg, to prevent the escape of the air. Sometimes these buoys are placed at the top of the nets; at other times the nets are suffered to sink deeper, by lengthening the cords fastened to them, every cord being for that purpose 10 or 12 fathoms long. But the best fisheries are generally in more shallow water. Of the Scots fishery in the Western Isles, the following account is given by Mr Pennant, in his *Voyage to the Hebrides*. "The fishing is always performed in the night, unless by accident. The busses remain at anchor, and send out their boats a little before sun-set; which continue out, in winter and summer, till day light; often taking up and emptying their nets, which they do 20 or 22 times in a night, in case of good success. During winter it is a most dangerous and fatiguing employ, by reason of the greatness and frequency of the gales in these seas, and in such gales are the most successful captures: but, by the Providence of heaven, the fishers are seldom lost, and, what is wonderful, few are visited with illness. They go out well prepared, with a warm great coat, boots, and skin aprons, and a good provision of beef and spirits. The same good fortune attends the busses, which in

the tempestuous season, and in the darkest nights, are continually shifting, in these narrow seas, from harbour to harbour. Sometimes 20 busses of herrings are taken in a night by the boats of a single vessel. It once happened, in Loch-Sheppan, in Skye, that a buss of 80 tons might have taken 200 barrels in one night, with 10,000 square yards of net; but the master was obliged to desist, for want of a sufficient number of hands to preserve the capture. The herrings are preserved by salting, after the entrails are taken out. This last is an operation performed by the country people, who get three halfpence per barrel for their trouble; and sometimes, even in the winter, can gain 1 s. d. a-day. This employs both women and children; but the salting is only entrusted to the crew of the busses. The fish are laid on their backs in the barrels, and layers of salt between them. The entrails are boiled into an oil; 8000 fish will yield ten gallons, valued at 1 s. the gallon. A vessel of 80 tons takes out 144 barrels of salt; a drawback of 1 s. 8 d. is allowed for each barrel used by the foreign exportation of the fish; but there is a duty of 1 s. per barrel for the home consumption, and the same for those sent to Ireland. The busses are made of oak staves, chiefly from Virginia; the hoops from several parts of our own island, and are either of oak, birch, hazel, or willow: the latter from Holland, liable to a duty. The busses are about 3 s. each, they hold from 500 to 800 fish according to their sizes; and are made to contain 32 gallons. The barrels are inspected by proper officers: a cooper examines if they are good; if faulty, he destroys them, and obliges the maker to stand to the loss. Loch-Broom has been celebrated for 3 or 4 centuries as the resort of herrings. They generally appear here in July: the boats that turn into this bay are part of the brigade which detaches itself from the western column of the great army which annually descends the vast depth of the arctic circle, and come, heaven-directed, to the seats of population, offered as a cheap food to millions, whom wretched luxury or iron-hearted avarice hath deprived, by enhancing the price of the wretched supports of the poor. The migration of these fish from their northern retreat is regular: their visits to the Western isles and coasts, are certain; but their attachment to one particular bay is extremely precarious. All have their turns: the bay which swarmed with fish one year, is totally deserted the following; yet the next lock to it may be crowded with the shoals. These changes of place give often full employ to the busses, who are continually shifting their harbour in quest of news respecting these important wanderers. The busses commonly appear here in July; the latter end of August they go into deep water, and continue there for some time, without any apparent cause. In November, they return to the shallows, and a new fishery commences, which continues till January; at that time the herrings become salt-roe, and are useless as articles of commerce. No doubt, whether those herrings that appear in November are not part of a new migration; for they are as fat, and make the same appearance, as those that composed the first. The signs of the approach of the herrings are flocks of gulls, who catch the fish while they skim on the surface; and

gists, who plunge and bring them up from considerable depths. Both these birds are closely attended to by the fishers. Cod fish, haddocks, and dog fish, follow the herrings in vast multitudes; these voracious fish keep on the outside of the columns, and may concur in driving the shials into bays and creeks. In summer, they come into the bay generally with the warmest weather, and with easterlies. During winter, the hard eales from NW. are supposed to assist in forcing them into shelter. East winds are very unfavourable to the fishery."

(iv.) **HERRINGS, METHOD OF SALTING.** The fish being haled on board, the fishes are taken out, and put into the warbacks, which stand on the side of the vessels. When all the nets are thus unloaded, one fills the gippers baskets. The gippers cut their throats, take out their guts, and lay out the full herrings into one basket, and the empties into another. One man takes the full basket when they are gipped, and carries them to the other back, wherein there is salt. One boy rows at him about in the salt, and another follows them, thus rowed, and carries them in baskets to the packers. Four men pack the herrings into one barrel, and lay them, one by one, straight and even; and another man, when the barrel is full, takes it from the packers. It is left to stand open or more open to settle, that the salt may run and dissolve to pickle; after which it is filled up, and the cooper completes the work, by heading the casks very tight, and flowing them in the pickle. The pickle is to be strong enough to sustain the fish; otherwise the fish decay in it. See § iii.

(v.) **HERRINGS, MIGRATION OF.** See *CLUPEA*.

(vi.) **HERRINGS, PRESERVED.** Different names are given to preserved herrings, according to the different manners wherein they are ordered: as, 1. **HERRINGS, CORVED,** serve to make red herrings, being such as are taken in the Yarmouth from the end of August to the middle of October; provided they can be carried ashore within a week after they are taken. These are not gipped, but rowed in salt, for the better preserving them, till they can be brought on shore; which as are kept to make *red herrings* (see N° 1) are washed in great vats in fresh water, before they are hung up in the *herring-bangs* or *red-berry* houses.

2. **HERRINGS, CRUX,** are such as are caught after the 14th of Sept. These are cured with that kind of salt called *salt upon salt*, and are carefully sorted, all full herrings, and used in the repacking.

3. **HERRINGS, ASD,** must lie 24 hours in the salt, as they are to take all their salt there. (See N° 1.)

When taken out, they are spitted, that being by the head on little wooden spiks, and are hung in a chimney made for that purpose. In which, a fire of brush wood, which yields a deal of smoke but no flame, being made under them, they remain there till sufficiently smoked and dried, and are then barrelled up for keeping.

4. **HERRINGS, RE PACKED,** those that are re-packed on shore: 17 barrels of sea sticks commonly make from 12 to 14 of repacked herrings. The manner of repacking them is, to take out the herrings, wash them out in their own pickle, and lay them orderly in a fresh barrel: these have no salt in them, but are close packed, and headed

up by a sworn cooper, with pickle, when the barrel is half full.

5. **HERRINGS, SEA-STICK,** are such as are caught all the fishing season, and are but once packed. A barrel holds 6 or 800 of these; 8 barrels go to the ton by law; a hundred of herrings is to be 120; a last is 20,000, and they commonly reckon 24 barrels to the last.

6. **HERRINGS, SHOTTEN and SICK,** are put by themselves; the barrels are to be marked distinctly.

7. **HERRINGS, SUMMER,** are such as the Dutch chafers or divers catch from June to the 15th July. These are sold away in sea sticks, to be used presently, on account of their fatness, as they will not endure repacking. They go one with another, full and shotten; but the repacked herrings are sorted, the full herrings by themselves.

(vii.) **HERRINGS, STATUTES RESPECTING.** It is unlawful to buy or sell herrings at sea before the fishermen come into the haven, and the cable of the ship be drawn to the land. 31 Edw. III. Stat. 2. No herring shall be sold in any vessel, hut where the barrel contains 32 gallons, and half barrel and firkin accordingly; and they must be well packed, of one time's packing and salting, and be as good at the middle as the ends, on the pain of forfeiting 3s. 4d. a barrel, &c. by Stat. 22 Edw. IV. cap. 2. The vessels for herrings are to be marked with the quantity and place where packed; and packers are to be appointed and sworn in all fishing ports, &c. under the penalty of 100 l. by Stat. 15 Car. II. cap. 16.

**HERRISON.** See *HERRISSON*.

**HERRN-CHIEMSSEE.** See *HERRNWERTH*.

(1.) **HERRNHUT,** or } the first and most considerable settlement of  
(1) **HERRNHUTH,** } of the UNITED BRETHREN, or MORAVIANS, situated upon an estate belonging to the family of Count Zinzendorf, about 30 miles E. of Dresden. See *UNITED BRETHREN*. The building of this place was begun in 1727, by some emigrants from Moravia, who forsook their possessions on account of the persecution they suffered as Protestants from the Roman Catholics. It is situated upon the rise of an hill called *HUTBERG*, or *Watch-hill*, from which they took occasion to call the new settlement *Herrnhut*, or the Watch of the Lord. The building, increase, and admirable regulations of this settlement occasioned no small surprise in the adjacent country; and caused, in 1733, 1736, and 1737, commissioners to be appointed to examine into the doctrines and proceedings of the brethren at Herrnhut. The commissioners made a favourable report; and ever since both Herrnhut and other settlements of the United Brethren in Saxony have been protected, and even several immunities offered them by the court, but not accepted. Herrnhut was visited in 1766, by the emp. Joseph II. by Frederick William II. king of Prussia, and by several other royal personages, who expressed their satisfaction on examining its peculiar regulations.

(2.) **HERRNHUT, NEW,** the first mission settlement of the United Brethren, in the island of St Thomas in the West Indies, then under the Danish government, but which was taken by the British in 1801. This settlement was begun in 1739; the missionaries having endeavoured to propagate Christianity among the negro slaves ever since

1731, and suffered many hardships and persecutions, from which their converts were not exempted. Many of the planters finding in process of time that the Christian slaves were more tractable, moral, and industrious than the heathen, not only countenanced but encouraged their endeavours. These were also greatly facilitated by the protection of Christian VI, king of Denmark. The settlement consists of a spacious negro church, a dwelling-house for the missionaries, negro huts, out-houses, and gardens. From this place the islands of St Croix and St John were supplied at first with missionaries; and the Brethren have now two settlements in each. The negro converts belonging to their church, amount in those three islands, to near 8000 souls.

(3.) HERRHUT, now, is also the name of the oldest settlement of the United Brethren in Greenland. It is situated on Ball's River, a few miles from the sea, near Davis's Straights, on the W. coast of Greenland, near the Danish colony of Godthaab. The two first missionaries were sent from Herrnhut in 1733, and their laudable intentions favoured by Christian VI, king of Denmark. They had to struggle in this uncultivated, frozen, and savage country, with inconceivable hardships, and found at first great difficulty in acquiring the language of the natives. However, after six years labour and perseverance, they had the satisfaction to baptize four persons, all of one family; and from that time the mission began to prosper; so that in the succeeding years two other settlements were begun, called LICHTENFELS and LICHTENAU; and they all continue in prosperity. About 1300 of the natives have been Christianized since the beginning of this mission. See *Grant's History of Greenland*, Lond. 1777.

HERRNHUTTERS, a sect of Christians, so named from their first and principal settlement at Herrnhut, (see HERRNHUT, N° 1.) but better known by the names of MORAVIANS and UNITED BRETHREN. See these articles, and ZINZENDORF. They have settlements in Saxony, Silesia, and other parts of Germany; in Holland, Denmark, England, Ireland, and America. In England, their principal settlements are at Fulneck near Leeds, and Fairfield near Manchester. In Greenland, North and South America, the West Indies, and Russia, they have missions for the propagation of Christianity among the Heathens; and in many parts have had considerable success. See *Bushing's Account of the Rise and Progress of the Church of the Brethren*, printed at Halle in 1781; and *Grant's History of the Brethren*, Lond. 1780.

HERRNSTADT, a town of Silesia.

HERRNWERTH, or HERN-CHIRMERS, a town of Bavaria, 12 miles W. of Salzburg.

HERRSBRUCK, a town of Franconia, on the Pegnitz, 15 miles E. of Nuremberg.

HERRSTEIN, a town of Germany, in the circle of the Upper Rhine, and ci devant county of Sponheim; annexed to the French republic by the treaty of Lunéville, in 1801, and included in one of the 4 departments into which the territories on the left bank of the Rhine are now divided; probably that of Mount Tonnerre. It lies 12 miles W. of Creutznach.

\* HERS. pron. The female possessive used

when it refers to a substantive going before; as, this is *her* house, this house is *hers*. See *HIS*.

How came her eyes so bright? not with *her* tears;

If so, my eyes are oftener wash'd than *hers*.

Whom ill fate would ruin, it profits,

For all the miserable are *hers*.

I see her rowling eyes;

And, panting, lo! the god, the god, she cries,

With words not *hers*, and more than human sound,

She makes th' obedient ghosts peep trembling thro' the ground.

HERSCHEDE, a town of Germany, in Westphalia, and county of Mark, 6 m. S. of Lantchede.

HERSCHEL, the name given by most foreigners to the new planet, called *Georgium Sidus* by Mr Herschel, who discovered it. See *ASTRONOMY*, *Index*; and *GEORGIUM SIDUS*. The Indians call it OURANUS, or URANIA. Dr Herschel lately discovered other 4 satellites revolving round this planet, besides the two he formerly observed. They revolve as follows, the periodical times being estimated from their greatest elongations: I. The interior one in 3 d. 21 h. 25 min. at the distance of 35° 5'. II. One between the two first discovered ones, in 10 d. 23 h. 4 m. at the distance 38° 57'. III. The nearest exterior one at about twice the distance of the farthest old one; in 1 d. 1 h. 49 m. IV. The most distant satellite times as far from the Herschel, as the old one whence he calculates its period of revolution to be 107 d. 16 h. 40 m. The planes of the orbits of the two first discovered satellites form large angles with that of the planet, and of course of the ecliptic, as to be almost perpendicular; it; and they also move in a retrograde direction which are two remarkable circumstances in which they depart from the analogy of the old planets. Whether the motions of these 4 last discovered direct or retrograde seems not yet determined. The disk of the Georgian planet is flattened. Herschel, with an excellent seven feet telescope thought he observed, on different days, two rings surrounding the planet, and crossing each other at right angles; but Mr Nicholson suspects, that they were optical deceptions, as they kept the same position with respect to the tube, after the relative position of the parallel had been much changed by the earth's rotation, and because they did not appear with larger telescopes in 10 years.

HERSCHELD, a town of Lusatia.

(1) \* HERSE. *n. f.* [*berse*, low Latin; supposed to come from *bersean*, to praise.] Thus likewise written *berse*; see *HERSES*. 1. A temporary monument raised over a grave. 2. A carriage in which corpses are drawn to the grave.

When mourning nymphs attend their Daughters' *berse*,

Who does not weep that reads the moving story.

On all the line a sudden vengeance waits,  
And frequent *herfes* shall besiege your gates.

(2.) *HERSE*, [*berce*, Fr. *i. e.* a harrow.] in fortification, a lattice, or portcullis, in form of a harrow.

harrow, beset with iron spikes. It is usually hung by a rope fastened to a maulmet; to be cut, in case of surprise, or when the first gate is broken with a petard, that the hedge may fall, and stop up the passage of the gate or other entrance of a fortress. It is otherwise called a *sarrazin*, or *catapult*; and when it consists of straight stakes, without any cross-pieces, it is called *ORCERS*.

(3.) *HERSE* is also a harrow, which the besieged for want of chevaux de frise, lay in the way, or in breaches, with the points up, to incommode the march of the enemy's horse or infantry.

(4.) *HERSE*. See *ARRHEPHORIA*.

\* *To HERSE*. *v. a.* [from the noun.] To put into an herse.—I would my daughter were dead at my foot, and the jewels in her ear. O, would she were *herse'd* at my foot, and the ducats in her coffin. *Shak.*

The Grecians spitefully drew from the darts the corse,

And *herse'd* it, bearing it to fleet. *Chapman.*

The house is *herse'd* about with a black-wood,  
Which nods with many a heavy-headed tree.

*Craheaw.*

\* *HERSELF*. *pronoun*. 1. A female individual, distinguished from others.—

The jealous o'er-worn widow, and *herself*,  
Since that our brother dubb'd them gentlewomen,

Are mighty gossips in this monarchy. *Shak.*

Being in her own power; mistress of her own  
Mights.—

The more she looks, the more her fears increase,

At nearer sight; and she's *herself* the less. *Dryd.*

The oblique case of the reciprocal pronoun;  
she hurt *herself*.—The daughter of Pharaoh

came down to wash *herself*. *Exodus.*—She returned  
himself to *herself*. *Judges.*

\* *HERSE-LIKE*. *adj.* [*herse* and *like*.] Funereal;  
suitable to funerals.—Even in the Old Testa-

ment, if you listen to David's harp, you shall hear  
many *herse-like* airs, as carols. *Bacon.*

*HERSENT*, Charles, a French divine, of the  
17th century, who wrote a work entitled, *Opus*

*de cavendo Schismate*. As in this work he  
argued Card. Richelieu with views inimical to the

Catholic church, he was obliged to quit France,  
and retire to Rome; where he incurred censure

from the Inquisition, by publishing some peculiar  
doctrines on the doctrine of grace, and was excom-

municated. He then returned to France; wrote  
a paraphrase on Solomon's Song, with other tracts:

he died in 1660.

(1.) *HERSFELD*, a territory of Germany, in  
the circle of the Upper Rhine, belonging to the

duke of Hesse-Cassel.

(2.) *HERSFELD*, or *HIRSCHFELD*, the capital  
of the above territory (N<sup>o</sup> 1.) is surrounded with

walls, flanked with towers, and contains about  
10,000 houses, an hospital, and an academy. It is

3 m. SSE. of Cassel, and 50 W. of Erfurt. Lon.

51. 30. E. Ferro. Lat. 50. 39. N.

*HERSILIA*, the wife of ROMULUS, the first  
king of Rome. After her death, she was deified,

and worshipped under the names of *HORTA* and  
*HERSILLON*, in the military art, a sort of

plank or beam, 10 or 12 feet long, whose two  
sides are driven full of spikes or nails, to incommode  
the march of the infantry or cavalry. The  
word is a diminutive of *herse*. See *HERSE*, § 3.

*HERSIN*, a town of France, in the dep. of the  
Straits of Calais, 6 miles S. of Bethune.

*HERSIPHORIA*. See *ARRHEPHORIA*.

*HERSTAL*, or *HERISTAL*, a town of the  
French republic, in the dep. of Ourte, and late  
bishopric of Liege; with a castle which anciently  
belonged to Pepin, the father of Charles Martel.  
It is seated on the Meuse, 4 miles N. of Liege.

*HERSTELLE*, a town of Germany, in West-

phalia, in Paderborn, 11 m. ENE. of Warburg.

(1.) *HERTFORD*, the county of Hertfordshire.

In the beginning of the heptarchy it was considered  
as one of the principal cities of the E. Saxons.

It is seated on the Lea, which is now navigable  
for barges, but, at that period, was equally navi-

gable for ships to this town. In 879, the Danes  
erected a forts here, for the security of their ships;

but Alfred turned the course of the river, so that  
their vessels were left on dry ground. Edward,

the eldest son of Alfred, built a castle here, which  
has been often a royal residence, and is still entire.

The town sends two members to parliament, and  
is governed by a high steward, mayor, 9 alder-

men, a recorder, &c. It has 4 fairs, and a mar-

ket on Saturday. It had formerly 5 churches, but  
has now only 2. Hertford is 2 miles W. by S.

of Ware, and 12 N. of London. Lon. 0. 1. E.

Lat. 51. 30. N.

(2.) *HERTFORD*, a county of N. Carolina, in  
Edenton district, bounded on the N. by Virginia,

E. by Chowan, S. by Bertie, and W. by Nor-

thampton counties; containing 3,386 citizens,  
and 4,242 slaves in 1796. Winton is the capital.

(3.) *HERTFORD*, a post town of N. Carolina,  
the capital of Gates county, on the W. side of the

Peregrinians, 18 miles NNE. of Edenton, and  
438 SSW. of Philadelphia. Lon. 1. 45. W. of

that city. Lat. 36. 11. N.

*HERTFORDSHIRE*, or *HERTS*, a county of Eng-

land, bounded on the N. by Cambridgeshire, on  
the E. by Essex, on the NW. by Bedfordshire, on

the W. by Bucks, and on the S. by Middlesex.

It is 36 miles long from N. to S. and 18 broad  
from E. to W. It is divided into eight hundreds,

which contain 19 market towns, 174 parishes, 956  
villages, 16,500 houses, and 90,000 souls; and

sends six members to parliament. The northern  
skirts of this country are hilly, forming a part of

the chalky ridge which extends across the king-

dom in this direction. A number of streams rise  
from this side, which, by their clearness, show the

soil to be inclined to hardness, and not abundantly  
rich. Flint stones are scattered in great profu-

sion over it, and beds of chalk are frequently met  
with. It is, however, with proper culture, ex-

remely favourable to wheat and barley, which  
come to as great perfection here as in any part of  
the kingdom. The soil of the western part is to-

lerably rich, and under excellent cultivation. The  
chief traffic is in corn and malt. The air is whole-

some; and the principal rivers are the Lea, Stort,  
and Coln.

*HERTGOVINZA*, a territory of Turkey in  
Europe, in Dalmatia. Castel-Nuovo the capital,  
11 s

belonged to the Venetians before the present war, and the rest, with a town of the same name to the Turks. The emperor being, by the treaty of Lunéville, in possession of the city of Venice, we suppose he will now claim the capital, as belonging to Maritime Austria.

**HERTHA**, or *Hertha* in mythology, a goddess worshipped by the ancient Germans. She is mentioned by Tacitus, in his book *De Moribus Germanorum*, cap. 40. Vossius supposes, that this goddess was Cybele; but she was more properly Terra or the Earth; for the Germans still use *hertha* for the earth, whence also the English word *earth*.

**HERTS**. See **HERTFORDSHIRE**.

**HERTWIGSWALD**, a town of Silesia.

**HERTZBERG**, a considerable town of Saxony, 24 miles SE. of Wittenberg, and 35 NW. of Dresden. Lon. 13. 17. E. Lat. 51. 41. N.

**HERTZFELD**, a town of Germany, in the bishopric of Munster, 5 m. SSW. of Strumberg.

**HERTZHORN**, a town of Holstein.

**HERTZOGAURACH**, a town of Franconia.

**HERZOGENBOSCH**. See **BOIS LE DUC**. This town was taken by the French, under gen. Pichegru, on the 11th of Oct. 1794, though the adjacent country for several miles round was laid under water; a garrison of 3,000 men were made prisoners, and a vast quantity of ordnance and military stores were taken. It is now the capital of the department of Dommel and Scheldt, in the Batavian republic.

**HERZOGENBURG**, a town of Austria.

**HERZOGSGRAHEN**, a river of Silesia.

**HERZOGSTORF**, a town of Austria.

**HERVE**, a town of the French republic, in the dep. of Ourte; 8 miles NW. of Limburg, and 21 SE. of Liège.

(1.) **HERVEY**, James, a clergyman of exemplary piety, was born in 1714, and succeeded his father in the livings of Weston Favell and Collingtree in Northamptonshire. These, being within 5 miles of each other, he attended alternately with his curate; till being confined by ill health, he resided constantly at Weston; where he diligently pursued the labours of the ministry and his study. He was remarkably charitable; and desired to die just even with the world, and to be, as he termed it, *his own executor*. This excellent divine died on Christmas day 1758, leaving the little he possessed to buy warm clothing for the poor in that severe season. No work is more generally or deservedly known, than his *Meditations and Contemplations*; containing, *Meditations among the Tombs*, *Reflections on a Flower garden*, a *Discant on Creation*, *Contemplations on the Night*, and *Starry Heavens*, and a *Winter-piece*. The sublime sentiments in these pieces have the peculiar advantage of being conveyed in a flowing elegant language, and they have accordingly gone through many editions. He published besides, *Remarks on Lord Bolingbroke's Letters on History*; *Theron and Asopha*, or a *Series of Dialogues and Letters on the most important Subjects*; *some sermons*, and other tracts.

(2—4.) **HERVEY**. See **HARVEY**, and **HARVIE**.

**HERVEY'S ISLAND**. See **HARVEY'S ISLAND**.

**HERVORDEN**, or **HAERWAARDEN**, a free impe-

rial town of Germany, in the circle of Westphalia, capital of the county of Ravensburgh, and a famous nunnery, belonging to the protestants of the confession of Augsburg, whose abbess is a princess of the empire, and has a voice and place in the diet. It is seated on the river Aa, 17 m. SW. of Minden. Lon. 8. 47. E. Lat. 52. 9. N.

**HERY**, a town of France, in the dep. of Yonne 8 miles N. of Auxerre.

\* *To HARRY*. v. a. [*herian*, Sax. to praise, to celebrate.] To hallow; to regard as holy. Now no longer in use.—

Thenot, now 'tis the time of merrymake,  
Nor Pan to *berry*, nor with love to play;

Like mirth in May is meetest for to make.

Or Summer shade under the cocked hay. *Arg.*

But were thy years green as now be mine,

Then wouldst thou learn to carol of love,

And *berry* with hymns thy lass's glove. *Sp.*

**HERZBERG**. See **HAARTZBERG**.

**HERZOGENBUSCH**. See **HAARTZOGENBUSCH**.

**HESBON**, **ESBON**, or **HESHBON**, in sacred geography, the royal city of the Amorites, in the tribe of Reuben, according to Moses: though Josh. xxi. 39. where it is reckoned among the Levitical cities, it is put in the tribe of Gad; who argues its situation to be on the confines of both.

(1.) **HESDIN**, a strong town of France, in the department of the Straits of Calais, and in the county of Artois, seated on the Canche, 25 m. SSW. of St Omer, and 165 N. of Paris. Lon. 1. 6. E. Lat. 50. 14. N.

(2.) **HESDIN**, **OLD**, a town 3 m. from Hesdin.

**HESLIUSIUS**, Tilleman, a German Lutheran divine born at Wessel in 1536. He wrote, 1. *Commentaries on the Psalms*; 2. *On Isaiah*; 3. *On Paul's Epistles*; and 4. *on Justification and the Lord's Supper*. He died in 1588.

**HELIOD**, a very ancient Greek poet; but whether cotemporary with Homer, or a little older or younger, is not agreed among the learned. His father, as he tells us in his *Opera et Dies*, was an inhabitant of Cumæ, one of the Eolian isles, now called *Tara Nova*; and removed from thence to Aspera, a little village of Boeotia, at the foot of mount Helicon, where Hesiod was probably born, and called, as he often is, *Ascreus*, from it. Of what quality his father was, is so where said; but that he was driven by misfortunes from Cumæ to Aspera, Hesiod himself informs us. His father seems to have prospered better at Aspera, than he did in his own country; yet Hesiod could arrive at no higher fortune than keeping sheep on the top of mount Helicon. Here the Muses met him, and entered him into their service, as he boasts in his *Generatio Deorum*:

Erewhile as they the shepherd swain behold,

Feeding beneath the sacred mount his fold,

With love of charming song, his breast they fill'd.

There ere the heav'nly muses first inspir'd;

There, when the maids of Jove the silence broke,

To Hesiod thus the shepherd swain they spoke, &c.

On the death of the father, an estate was left

which ought to have been equally divided between

Hesiod and his brother Perseus; but Perseus defrauded

him in the division, by corrupting the judges.

Hesiod was so far from resenting this injustice, that

expresses a concern for those mistaken mortals who place their happiness in riches only, even at the expense of their virtue. \* He lets us know, that he was not only above want, but capable of aiding his brother in time of need; which he offers as though he had been so ill used by him. The last circumstance he mentions relating to himself is his conquest in a poetical contention. Archilochus, king of Euboea, had instituted funeral games in honour of his own memory, which his son afterwards took care to have performed. Hesiod was a competitor for the prize in poetry; and won a tripod, which he consecrated to the Muses. When he was grown old (for it is said by all that he lived to a very great age), he moved to Locris, a town about the same distance from mount Parnassus as Asclepias was from the same. His death was tragical. The man with whom he lived at Locris, a Milesian born, ravished a maid in the same house; and though Hesiod was entirely ignorant of the fact, yet being maliciously accused to her brothers as an accomplice, was unjustly slain with the ravisher, and thrown into the sea. The *Theogony*, and *Works and Days* are the only undoubted pieces of this poet now extant; but it is supposed that even these have not come down to us complete. A good edition of Hesiod's works was published by Mr Le Clerc, at Amsterdam in 1705.

**HECUBA**, in fabulous history, the daughter of Lamedon king of Troy, and sister of K. Priam. She was exposed to be devoured by a sea monster, but was killed it, and delivered her; but Laomedon refusing her the promised reward, he sacked the city, and gave Hecuba to Telamon.

**HECUBA**, *n. f.* [from *hesite*.] Dubiousness; uncertainty; suspense.—The reason of my hesitating about the air is, that I forgot to try whether that liquor, which shot into crystals, exposed to the air, would not have done the like in a vacuum accurately stopped. *Boyle*.—Some of them lived without doubt or *hesitation*, and lived and died in such a manner as to shew that they believed their own reasonings. *Atterbury*.

**HECUBA**, *v. a.* [from *hesite*. Latin; *hesiter*, *hesit*.] To be doubtful; to delay; to pause; to be difficult.—A spirit of revenge makes him like the Grecians in the seventh book, when he hesitates to accept Hector's challenge. *Pope*.—Willing to wound, and yet afraid to strike, he hesitates a fault, and *hesitates* dislike; he reserves to blame or to commend, he is timorous foe, and a suspicious friend. *Pope*.

**HECUBA**, *n. f.* [from *hesite*.] 1. Uncertainty; difficulty made.—I cannot see the difficulties and *hesitations* of every one; all will be more or fewer, according to the capacity of each person. *Woodward*. 2. Intermittent speech; want of volubility.—Many clergy write in so diminutive a manner, with such poor blots and interlineations, that they are obliged to go on without perpetual *hesitations*.

**HEGIVON**, a town of Egypt, 13 miles SSW. of Luxor.

**HEIN**, a town of Turkey, in Diarbeck.

**HEMALMAI**, an island and town of Egypt, in the lake of Tenis, 13 miles NW. of Tineh.

**HESNE**, a river of France, which runs into the Scheldt, near Conde, in the dep. of the North.

**HESPER**, **HESPERUS**, [Gr. *Ἑσπερος*.] in astronomy, the evening star; an appellation given to Venus when she follows or sets after the sun. See **HESPERUS**.

(1.) **HESPERIA**, or **HESPERIA MAGNA**, an ancient name of Italy; so called by the Greeks from its western situation.

(2.) **HESPERIA**. See **HESPERIDES**.

(3.) **HESPERIA ULTIMA**, an appellation of ancient Spain.

**HESPERI CORNU** is called the *Great Bay* by the author of Hanno's Periplus; but most interpreters, following Mela, understand a promontory; some Cape Verd, others Palmas Cape: Vossius takes it to be the former, since Hanno did not proceed so far as the latter cape.

**HESPERIDEAE**, in botany, from the *Hesperides*; golden or precious fruit: the 39th order in Linnaeus's Natural Method. See **BOTANY**, *Index*.

(1.) **HESPERIDES**, in ancient mythology, the granddaughters of **HESPERUS**, the brother of Atlas. According to Diodorus, these brothers possessed great riches in the western parts of Africa. **Hesperus** had a daughter called **HESPERIA**, who married her uncle Atlas, and from this marriage proceeded seven daughters, called *Hesperides* from the name of their mother, and **ATLANTIDES** from that of their father. According to the poets, the *Hesperides* were 3 in number, *Ægle*, *Arethusa*, and *Hesperethusa*. Hesiod, in his *Theogony*, makes them the daughters of *Nox*. Night, and seats them in the same place with the Gorgons; viz. at the extremities of the west, near mount Atlas; because the sun sets there. They were fabled to have had the keeping of certain golden apples, on the other side of the ocean. A dragon watched the garden, but Hercules slew him, and carried off the apples. Ptolemy and Solinus suppose the dragon to mean an arm of the sea, wherewith the garden was encompassed, and which defended the entrance; and Varro supposes, that the golden apples were sheep. Others, with more probability, say they were oranges.

(2.) **HESPERIDES**, **GARDENS OF THE**, in ancient geography, are placed by some authors at Larach, a city of Fes; by others, at Bernich, a city of Barca, which accords better with the fable. Others take the province of Susa in Morocco for the island wherein the garden was seated. And, lastly, Rudbeck places the Fortunate Islands, and these gardens in his own country, Sweden.

**HESPERIDUM INSULÆ**, in ancient geography, islands near the *Hesperic Cornu*; but the accounts of them are so much involved in fable, that nothing certain can be affirmed of them.

**HESPERIS**, **ROCKET**, *Dame's Violet*, or *queen's gilliflower*; a genus of the *filiquosa* order, belonging to the *tetradynamia* class of plants; and in the natural method ranking under the 39th order, *Siliquosæ*. The petals are turned obliquely; there is a glandule within the shorter stamina; the siliqua almost upright; the stigma forked at the base, connivent, or closing at the top; the calyx close. The species are,

1. **HESPERIS INODORA**, the scentless rocket, has a fibrous root; upright, round, firm stalks,

Two feet high, garnished with spear-shaped, acute pointed, sharply indented, close-fitting, leaves; and all the branches terminated by large spikes of scentless flowers, with obtuse petals, of different colours and properties in the varieties. This species makes a fine appearance, but has no scent.

2. *HESPERIS NATURALIS*, the common sweet-scented garden rocket, having fibrous roots, crowned with a tuft of long, spear-shaped, rough leaves; upright, single, hairy stalks, two feet high; garnished with oval lanceolate, slightly indented, close-fitting leaves; and the stalk and branches terminated by large and long spikes of sweet-scented flowers of different colours and properties in the varieties, of which there are a great number. All the varieties of this species are so remarkable for imparting a fragrant odour, that the ladies were fond of having them in their apartments. Hence they derived the name of *dame's violet*; and, bearing some resemblance to a stock-gilliflower, were sometimes also called *queen's gilliflower*; but are now most commonly called *rocket*.

3. *HESPERIS TRISTIS*, the dull-flowered night-smelling rocket, hath fibrous roots, upright, branching, spreading, bristly stalks, two feet high; spear-shaped pointed leaves; and spikes of pale purple flowers, of great fragrance in the evening. All the species are hardy, especially the 1st and 2d, which prosper in any of the open borders, and any common garden soil; but the 3d should have a dry warm situation, and a few may be placed in pots to be sheltered in case of inclement weather. They may be propagated either by seeds, by offsets, or by cuttings off the stalks.

(1.) *HESPERUS*, in the mythology, the brother of Atlas, and grandfather of the Hesperides. Diodorus, lib. iii. relates, that Hesperus, having ascended to the top of mount Atlas, thence better to observe the stars, never returned; and hence he was fabled to have been changed into the evening star.

(2.) *HESPERUS*, the son of Cephalus by Aurora, as fair as Venus, was changed into a star, called *Lucifer* in the morning, and *Hesperus* in the evening.

*HESPRES*, a river of France, which runs into the Sambre, 3 miles below Landrecy.

*HESPYN*, a river of Wales, which falls into the Clwyd, 2 miles S. of Ruthyn.

(1.) *HESSE*, a country in the circle of the Upper Rhine, in Germany, bounded on the N. by the bishopric of Paderborn and duchy of Brunswick; on the E. by Thuringia; on the S. by the territory of Fulde and Weteravia; and on the W. by the counties of Nassau, Witgenstein, Hartzfeldt, and Waldeck. The house of Hesse is divided into four branches, namely, Hesse Cassel, Homberg, Darmstadt, and Rhinefeldt, (See these articles,) each of which has the title of landgrave, and takes its name from one of the four principal towns. This country is about 100 miles in length, and 50 in breadth, and surrounded by woods and mountains, in which are mines of iron and copper. In the middle are fine plains, fertile in corn and pastures; and there is plenty of all sorts of fruit and honey. They likewise cultivate a large quantity of hops, which serve to make excellent beer.

Birch trees are very common, and they make a great deal of wine of the sap. The landgrave of Hesse-Cassel is an absolute prince, and derives a considerable part of his revenue from his troops, which he lets out to such of the powers of Europe as can give him an advantageous subsidy.

(2.) *HESSE*, William prince of. See WILLIAM IV.

(3.) *HESSE-DARMSTADT*. The landgrave of Hesse-Darmstadt in July 1831, by a memorial to the diet at Ratisbon states his loss, by the cession of the German territory on the left Bank of the Rhine to amount to 22 bailiwicks, 7 towns, 4 burghs, 143 villages, 104 mills and meadows, 74,000 subjects, and 666,050 florins of annual revenue comprehended in the county of Manau Lichtenberg now added to Alsace.

*HESSEL*, a town of the Batavian republic, in the dep. of the Rhine, and late prov. of Dutch Guelderland, 3 miles E. of Bommel.

*HESSIAN FLY*, a very mischievous insect, which a few years ago appeared in North America; and whose depredations threatened to destroy the crops of wheat in that country entirely. It is, in its perfect state a small winged insect; but the mischief it does is while in the form of a caterpillar; and the difficulty of destroying it is increased by its being as yet unknown when it deposits its eggs, to be hatched before the appearance of the caterpillars. These mischievous insects begin their depredations in autumn, soon as the wheat begins to shoot up through the ground. They devour the tender leaf and shoot with great voracity, and continue to do so till stopped by the frost; but no sooner is this obstacle removed by the warmth of the spring, when the fly appears again, laying its eggs now, as has been supposed, upon the stems of the wheat beginning to spire. The caterpillars, hatched from these eggs, perforate the stems of the growing plants at the joints, and lodge themselves in the hollow within the corn, which shows signs of disease till the ears begin to turn black. The stems then break; and being no longer able to perform their office in supporting and supplying the ears with nourishment, the corn perishes about the time that it goes into a milky state. These insects attack also rye, barley, and timothy grass, though they seem to prefer wheat. The destruction occasioned by them is described in *Amer. Museum*, (published at Philadelphia) for 1787, in the following words: "It is well known that all the crops of wheat in all the land to which it has extended, have fallen before it, and that the farmers beyond it dread its approach. The prospect is, that unless means are discovered to prevent its progress, the whole continent will be over-run;—a calamity more to be dreaded than the ravages of war." This terrible insect appeared first in Long Island during the American war, and was supposed to have been brought to Germany by the Hessians; whence it proceeded thence it proceeded inland at the rate of about 15 or 20 miles annually; and in 1789 it reached 100 miles from the place where it was first observed. At that time it continued to proceed with unabating increase; being apparently

stopped neither by rivers nor mountains. In the fly state it is likewise exceedingly troublesome; by getting into houses in swarms, falling into meals and drink; filling the windows, and flying perpetually into the candles. It still continued to infect Long Island as much as ever; and in many places the culture of wheat was entirely abandoned. Mr Morgan, in a communication to the Philadelphia Society for promoting agriculture, informs us, that he had made himself acquainted with the fly, by breeding a number of them from the chrysalis into the perfect state. The fly is at first of a white body with long black legs and whiskers, so small and motionless as not to be easily perceived by the naked eye, though very discernible with a microscope; but they soon become black and very nimble, both on the wing and feet, being about the size of a small ant. During the height of the brood in June, where four or five of the nits have been deposited on one stalk of wheat, he has sometimes discovered, even to the naked eye, some of them twist and move when disturbed: thus is while they are white; but they do not then travel from one stalk to another, nor to different parts of the same stalk. The usual time of their spring hatching from the chrysalis is in May. "Those (says he) who are doubtful whether the fly is in their neighbourhood, cannot find their eggs or nits in the wheat, by looking themselves by opening their windows at night and burning a candle in the room. The more flies enter in proportion to their number and kind. The first night after the commencement of the harvest, this season, they filled my dining-room in such numbers as to be exceedingly troublesome in the eating and drinking vessels. About exaggeration I may say, that a glass tumbler from which beer had been just drank at night, had 300 flies in it in a few minutes. The rooms are filled with them when they desire to escape their escape. They are very distinguishable from every other fly by their horns or whiskers." The American States are likewise infested with another mischievous insect, named the VIRGINIA WHEAT-FLY. This, however, has not yet crossed the river Delaware; though there is danger of its being gradually insured to colder climates, and to extend its depredations to the northern States. But it is by no means the same as the Hessian fly. The wheat fly is the same that whose ravages in the Angoumois in France are recorded by M. Du Hamel: it eats the grain, and is a moth in its perfect state. On the other hand, the Hessian fly has hitherto been unknown in America; it eats only the leaf and stalk; and, in its perfect state, is probably a TENTHREDINID, or the black negro fly of the turnip. As great quantities of wheat were at this time imported from America into Britain, it became an object of the attention of government, to consider how far it was proper to allow of such importation, lest this destructive insect might be brought along with the grain. The matter, therefore, was fully canvassed before the privy council, and the following is the substance of the information relative to it; in consequence of which, the importation of American wheat was at that time prohibited by proclamation. From a very ex-

tensive correspondence on this subject, between Mr Bond the British consul at Philadelphia, and many others, with Sir Joseph Banks, the latter drew up a report for the privy council, dated March 2, 1789, in which he states the following particulars: 1. The appearance of the fly in Long Island was first observed in 1779. We must suppose this to be meant, that its destructive effects became then first perceptible; for it seems undoubtedly to have been known in 1776. 2. The opinion of colonel Morgan, that it was imported by the Hessians, seems to be erroneous, as no such insect can be found to exist in Germany or any other part of Europe. 3. Since its first appearance in Long Island, it has advanced at the rate of 15 or 20 miles a-year, and neither waters nor mountains have impeded its progress. It was seen crossing the Delaware like a cloud, from the Falls Township to Makefield; had reached Saratoga, 200 miles from its first appearance, infesting the counties of Middlesex, Somerset, Huntington, Morris, Sussex, the neighbourhood of Philadelphia, all the wheat counties of Connecticut, &c. committing the most dreadful ravages; attacking wheat, rye, barley, and timothy grass. 4. The Americans, who have suffered by this insect, speak of it in terms of the greatest horror. In colonel Morgan's letter to Sir John Temple, he uses the following expressions. "Were it to reach Great Britain, it would be the greatest scourge that island ever experienced; as it multiplies from heat and moisture, and the most intense frosts have no effect on the egg or aurelia. Were a single straw, containing the insect, egg, or aurelia, to be carried and safely deposited in the centre of Norfolk in England, it would multiply in a few years, so as to destroy all the wheat and barley crops of the whole kingdom. There cannot exist such an atrocious villain as to commit such an act intentionally." 5. No satisfactory account of the mode in which this insect is propagated has hitherto been obtained. Those who say that the eggs are deposited on the stalk from 6 or 8 to 30, and by their growth compress and hinder the stalk from growing, are evidently deceived, and the authors of the assertion plainly mistake the animal itself for its eggs. It is sufficient to remember, that eggs do not grow or increase in bulk, to prove that what they observed were not eggs. 6. The landlord's opinion, that the eggs are deposited on the ripe grains of wheat, though contradicted by colonel Morgan, is not disproved, as the colonel advances no argument against it. 7. A letter dated New York, September 2, 1786, says, that the eggs are deposited on the young blade, resembling what we call a *fly-blow* in meat; very small, and but one in a place: but this, though the only natural mode of accounting for the appearance of the insect, had it been true, must undoubtedly have been confirmed by numbers of observations. 8. Even though this should be found hereafter to be the case, there will still remain a danger of the aureliae being beaten off by the flail from the straw in threshing the wheat, and imported into Britain along with it; the presence of these flies in barns having been fully proved by the observations of Messrs Potts and Bond. 9. None of the remedies proposed against this de-

fruitful insect have been in any degree effectual, excepting that of sowing the yellow bearded wheat; the straw of which is sufficiently strong to resist the impression of the insect, and, even if its eggs are deposited upon it, receives little injury in point of produce in grain: this provides, however no remedy for the loss of the barley crop, nor for that which must be incurred by sowing the yellow-bearded wheat on lands better suited by nature for the produce of other kinds: it appears also that this very kind is liable to degenerate, and probably from a different cause than that assigned by colonel Morgan, viz. the mixture with common wheat. 9. Though the Agricultural Society at Philadelphia, as well as colonel Morgan, have declared their opinions decisively that no danger can arise from wheat imported into Britain, as the insect has no immediate connection with the grain; yet with nearly if not exactly the same materials before him which these gentlemen were furnished with, Sir Joseph Banks could not avoid drawing an inference directly contrary; and he concludes his report with the words of Mr Bond in a letter to the marquis of Caermarthen. "Satisfactory as it would be to my feelings to be able to say with precision, that I apprehend no danger of extending the mischief by seed, my duty urges me to declare, that I have not heard or seen any conclusive fact by which I could decide on a matter of such importance; and till that test occurs, the wisdom of guarding against so grievous a calamity is obvious." On the 27th of April 1786, another paper, by way of appendix to the foregoing, was given in by Sir Joseph Banks. In this he again observes, that none of the descriptions of any European insect hitherto published answer exactly to the Hessian fly. In a letter from Mr Bond to the marquis of Caermarthen, he mentions another kind of insect in the state of Maryland, called by way of eminence *the fly*; and which in some things resembles the Hessian fly, though it cannot be accounted the same. It makes its way into the mow, and bites the ends of the grain perceptibly, and no doubt deposits its eggs in the grain itself; since it has been observed, that wheat recently threshed, and laid in a dry warm place, will soon be covered with an extreme clammy crust, which binds the wheat on the surface together in such a way as to admit its being lifted in lumps; but the wheat beneath will not be hurt to any considerable depth. Such is the quality of this fly, that if the hand be inserted into the heap infested by it, watery blisters are immediately raised; and the farmers and slaves, riding upon bags of this infested wheat, never fail to be severely blistered thereby. "This insect (says he) is called in Maryland the *Revolution fly*, by the friends of the British government; but from all I can learn it is not the same insect which originated on Long Island, and is called the *Hessian fly* (by way of opprobrium) by those who favoured the revolution. All the papers I have read on the Hessian fly are very inaccurate, not to say contradictory; and I am convinced, it is by no means a settled point at this moment, in what manner and place the eggs of these insects are deposited." In another letter to the same nobleman, Mr Bond expresses himself

to the following purpose: "I have not been able to collect any decided information which furnishes the essential point, how far the insect may be communicated by seed. It is a matter at this time quite undecided here: nor have I heard or observed any very conclusive reason to suppose that the fly makes its way generally into barns and ricks. A very intelligent farmer in the county of Bucks informed me, that it was the prevailing opinion there, and so I found it, that the fly did not, either in the field or in the mow, affect the grain of the wheat: a neighbour of his, in threshing the little wheat he had saved last harvest, observed the fly rise from the straw in great numbers wherever it was struck by the flail; but then it was at first presumed that the fly had reëntered itself into the mow for the purpose of depositing its eggs in the grain or in the straw, no trace of the egg could be discovered from the appearance of any mucus or dust, either in the grain or in the straw; hence it was inferred that all the mischief was done in the field."

\* HEST. *n. f.* [*hest*, Sax.] Command; imperative inflection. Obsolete, or written *hest*.—

Thou dost afflict the not deserver,

As him that doth thy lovely *hest* despise.

Thou wast a spirit too delicate

To set her earthy and abhor'd commands,  
Refusing her grand *hest*.

HESTER, a town of Sweden, in E. Gothl.

HESTRA, a town of Sweden, in Smoland.

IESUS. See DAVID, § 11.

HESYCHIUS, the most celebrated of all ancient Greek grammarians, whose works are tant. He was a Christian; and, according to some, the same with Hesychius patriarch of sairm, who died in 609. He wrote a Greek con; which, in the opinion of Casaubon, is most learned and useful work of that kind produced by the ancients. Schrevelius published an edition of it in 1668, in 4to, with notes; the best are those of John Alberti, printed at den in 1746, and Ruhnkenius, in 1766; both vols. folio.

HETERIARCH, } [*heterarcha*, Gr. from

HETERIARCHA, } an ally, and *archa*, *mand.*] in antiquity, an officer in the Greek empire, whereof there were two species; the called simply *heteriarch*, and the other *protiarch*, who had the direction of the land. Their principal function was to command troops of the allies; besides which, they had other duties in the emperor's court, described Codin: *De offiis*, cap. 5. n. 30, 35, 36, 37.

(1.) \* HETEROCLITE. [*heterochlita*, Fr. *roclitum*, Lat. *hetero* and *clita*.] 1. Such nouns vary from the common forms of declension, by redundancy, defect, or otherwise. *Cast.* The *heterochlita* nouns of the Latin should not be touched in the first learning of the rudiments of the tongue. *Watts.* 2. Any thing or person deviating from the common rule.—

(2.) HETEROCLITE, HETEROCLITON, (§ 1. 1.) [from *hetero*, another, and *clita*, to decline in grammar, an anomalous word, which either in declension, conjugation, or regimen, deviates from the ordinary rules of grammar. It is particularly applied to nouns which vary or are irregular in declension.]

declensions; having fewer cases, numbers, &c. than ordinary; or that of one declension in one number, and another: as, *Hoc vas, vasis; hoc lignum, lignorum.*

\* **HETEROCLITICAL.** *adj.* [from *heteroclitus*.] Deviating from the common rule.—In the mention of his *heteroclitical*, and such as want either name or precedent, there is oft times a sin, even in their histories. *Brown's Vulgar Errors.*

\* (1.) \* **HETERODOX.** *adj.* [*heterodoxus*, Fr. *hétérodoxe* and *lâche*.] Deviating from the established opinion; not orthodox.—Partiality may be observed in some to vulgar, in others to *heterodox* tenets. *Locke.*

(2.) \* **HETERODOX.** *n. f.* An opinion peculiar.—Not only a simple *heterodox*, but a very hard paradox it will seem, and of great absurdity, if we attraction is unjustly appropriated unto the doctrine. *Brown's Vulgar Errors.*

**HETERODROMUS VECTIS**, a lever in which the fulcrum, or point of suspension is between the weight and the power. It is the same with what is called a *lever of the first kind*.

\* **HETEROGENEAL.** *adj.* [*heterogeneus*, Fr. *hétérogène* and *mixte*.] Not of the same nature; not kindred.—Let the body adjacent and ambient be not material, but merely *heterogeneous* towards the body that is to be preserved; such are quicksilver and white amber to herbs and flies. *Bacon's Natural History.*—The light whose rays are all alike refrangible, I call simple, homogeneous, and similar; but that whose rays are some more refrangible than others, I call compound, *heterogeneous*, and dissimilar. *Newton.*

(1.) \* **HETEROGENEITY.** *n. f.* [*heterogenéité*, Fr. *hétérogénéité*; from *heterogeneous*.] 1. Opposition of nature; contrariety or dissimilitude of qualities. Opposite or dissimilar parts.—Guaiacum, burnt as an open fire in a chimney, is sequestered in ashes and soot; whereas the same wood, distilled into a retort, does yield far other *heterogenities*. It is resolved into oil, spirit, vinegar, water and stool. *Boyle.*

(2.) **HETEROGENEITY**, in physics, is also used of the heterogeneous parts themselves; in which case, the heterogeneities of a body are the same as with its impurities.

(3.) \* **HETEROGENEOUS.** *adj.* [*hétérogène* and *mixte*.] Not kindred; opposite or dissimilar in nature. I have observed such *heterogeneous* bodies, which are included in the mass of this sandstone. *Woodward.*

(4.) **HETEROGENEOUS**, or **HETEROGENEAL**, literally imports consisting of parts of different kinds; opposition to **HOMOGENEOUS**.

(5.) **HETEROGENEOUS BODIES** are such as have parts of unequal density.

(6.) **HETEROGENEOUS LIGHT**, is by Sir Isaac Newton defined that which consists of rays of different degrees of refrangibility, reflexibility, and colour. Thus the common light of the sun or moon is heterogeneous, being a mixture of all sorts of rays.

(7.) **HETEROGENEOUS NOUNS**, one of the 3 varieties in irregular nouns; or such as are of one gender in the singular number, and of another in the plural. Heterogeneous, under which are

comprehended mixed nouns, are six-fold. 1. Those which are of the masculine gender in the singular number, and neuter in the plural; as, *hic tartarus, hic tartara.* 2. Those which are masculine in the singular number, but masculine and neuter in the plural; as, *hic locus, bi loci, & hic loca.* 3. Such as are feminine in the singular number, but neuter in the plural; as, *hec carbafus, & hec carbasa.* 4. Such as are neuter in the singular number, but masculine in the plural; as, *hoc caelum, bi caeli.* 5. Such as are neuter in the singular, but neuter and masculine in the plural; as, *hoc rastrum, bi rastri, & hec rastra.* And, 6. Such as are neuter in the singular, but feminine in the plural; as, *hec opulum, hec opula.*

(6.) **HETEROGENEOUS NUMBERS**, are mixed numbers, consisting of integers and fractions.

(7.) **HETEROGENEOUS PARTICLES** are such as are of different kinds of natures, and qualities. Most bodies consist of such particles.

(8.) **HETEROGENEOUS QUANTITIES**, are those which are of such different kinds and consideration, as that one of them, taken any number of times, never equals or exceeds the other.

(9.) **HETEROGENEOUS SURDS**, are such as have different radical signs; as,  $\sqrt{aa}$ , and  $\sqrt[3]{bb}$ ;  $\sqrt[4]{99}$  and  $\sqrt[7]{19}$ .

(1.) \* **HETEROSCIANS.** *n. f.* [*hétérosque* and *mixte*.] Those whose shadows fall only one way, as the shadows of us who live north of the Tropic fall at noon always to the North.

(2.) **HETEROSCIANS.** } All the inhabitants of the  
**HETEROSCHII.** } globe between the tropics and polar circle, or without the torrid zone, are Heteroschi; i. e. in N. latitude their shadows at noon are always to the northward, and in the S. latitude to the southward. The inhabitants in these two situations are Heteroschi to each other, having their shadows projected contrary ways at all times of the year.

**HETH**, [חֶת, Heb. i. e. Pear.] the 2d son of Canaan, grandson of Ham, and progenitor of the Hittites. (Gen. x. 15.) He dwelt southward of the promised land, at Hebron or its neighbourhood. Ephron an inhabitant of Hebron, was a descendant of Heth, and the city in Abraham's time was peopled by his posterity. See **HITTITES**.

(1.) **HETRURIA**, or **ETRURIA**, in ancient geography, a celebrated country of Italy, W. of the Tiber. It originally contained 12 different nations, which had each their respective monarch. Their names were Veientes, Clusini, Perusini, Cortonenfes, Arretini, Vetuloni, Volaterrani, Rusellani, Volsceini, Tarquini, Falisci, and Caeretani. The inhabitants were famous for their confidence in omens, dreams, auguries, &c. They all proved powerful and resolute enemies to the rising empire of the Romans, and were conquered only after much effusion of blood.

(2.) **HETRURIA**, or **ETRURIA**, in modern geography, is now the youngest kingdom in Europe, as two years ago it formed the youngest republic; (See **ETRUSCAN REPUBLIC**;) having been erected into a monarchy in May 1801, by the first consul of France, in favour of the prince of Parma's eldest son, by way of compensation for the cession of part of the Parmesan to the Cisalpine republic.

(See REVOLUTION.) This small kingdom comprehends the ci-devant duchy of Tuscany. The young monarch took possession of it in August, 1801. See TUSCANY.

HETSIN, a town in the kingdom of Corea.

HETTANGS, a town of France, in the dept. of the Meuse, 4 miles NW. of Thionville, and 6 SW. of Rodemach.

HEVÆI, in ancient geography, the Hivvta, one of the 7 nations who occupied Canaan; a numerous people, and the same with the Kadmonæi, who dwelt at the foot of Hermon and partly of Libanus, or between Libanus and Hermon (Judges iii. 3.) To this Bochart refers the fables concerning Cadmus and Harmonia, changed to serpents; the name *Hevi* denoting a wild beast, such as is a serpent. Cadmus, who is said to have carried the use of letters to Greece, seems to have been a Kadmonæan; of whom the Greeks say that he came to their country from Phœnicia.

HEUBACH, a town of Suabia, in Wurtemberg, 21 miles N. of Ulm, and 34 E. of Stuttgart.

HEUCHERA, in botany; a genus of the digynia order, belonging to the pentandria class of plants. There are five petals; the capsule is bispirated and bilocular.

HEUCHIN, a town of France, in the dept. of the Straits of Calais, 7 miles NNW. of St Pol.

HEUDICOURT, 2 towns of France: 1. in the dept. of the Meuse, 6 miles NE. of St Mihiel, and 13½ W. of Pont à Mousson: 2. in that of the Somme, 9 miles NNE. of Peronne.

HEVE, or HAVER, a port and cape on the S. coast of Nova Scotia.

HEVELIUS, or } John, an eminent astronomer,  
HEVELKE, } born at Dantzic in the year

1611. He studied in Germany, England, and France, and every where obtained the esteem of the learned. He was the first who discovered a libration in the moon, and made several important observations on the other planets. He also discovered several fixed stars, which he named the *firmament of Sobieski*, in honour of John III. king of Poland. His wife was also well skilled in astronomy, and made a part of the observations published by her husband. In 1673 he published a description of the instruments with which he made his observations, under the title of *Machina Cælestis*; and in 1679 he published the 2d part of this work. But in Sept. 1679, while he was in the country, his house at Dantzic was burnt down, by which he lost several thousand pounds; having not only his observatory and all his valuable instruments destroyed, but also a great number of copies of his *Machina Cælestis*; which made his 2d part very scarce. He died in 1687, aged 76. In 1690 were published his *Firmamentum Sobiesianum*, and *Prodromus astronomiæ & nova tabula solaris, cum catalogo stellarum fixarum*, in which he gives the necessary preliminaries for taking an exact catalogue of the stars. He was greatly esteemed by his countrymen, not only on account of his skill in astronomy, but as a very worthy magistrate. He was made a burgo master of Dantzic; which office he is said to have executed with the utmost integrity and applause. He was also highly esteemed by foreign literati as well as by foreign

princes and potentates: as appears from a collection of their letters, printed at Dantzic in 1613.

HEVER, a town of the French republic, in the dep. of the Dyle, and late Austrian Brabant, 1 mile S. of Louvain. Lon. 5. 49. E. Lat. 50. 51. N.

HEUGH HEAD, a cape of Scotland, on the coast of Fife.

HEUILLY, a town of France, in the dept. of Upper Marne, 6 miles SSE. of Langres.

HEUKELUM, a town of the Batavian republic in the dep. of Delft, and late province of Holland, seated on the Ligne, 5 miles from Gorcum. Lon. 4. 55. E. Lat. 51. 55. N.

(1.) HEURNIUS, or VAN HEURN, John, M.D. a learned Dutch physician, born at Utrecht 1543. He studied at Louvain, Paris, Padua, & Pavia. On his return, he was elected a magistrate of Amsterdam; after which he became professor of anatomy, and rector of the university of Leyden, where he died in 1601. He wrote commentaries on Hippocrates, and various treatises on different diseases.

(2.) HEURNIUS, Otho, son of the doctor, was also professor of Physic at Leyden, and author of several works.

HEUSDEN, a strong town of the Batavian republic, in the dept. of Dommel and Scheldt, in late province of Holland, seated on the Maas with a handsome castle; 8 miles NW. of Bois duac. It was surrendered to the French on the 17 Jan. 1795. Lon. 5. 3. E. Lat. 51. 44. N.

(1.) HEUSINGER, John Michael, a celebrated divine, born at Sunderhausen, in Thuringa, 1690. In 1730, he was made professor at Göttingen, and in 1738, removed to Eisenach, where he died in 1758. He wrote several learned treatises, & published editions of the Greek and Latin Classics.

(2.) HAUSINGER, James Frederick, nephew of the above, was born in 1719, and educated by his uncle. He became head master of the school at Wolfenbuttel, and published several treatises on ancient authors. He died in 1774.

HEUSZDORF, a town of Saxony, in Weimar.

\* To HEW. v. s. part. *brun* or *brunt* [even, Saxon; *beurnen*, Dutch.] 1. To cut blows with an edged instrument; to hack.—

Upon the joint the lucky steel did light,  
And made such way that *brw'd* it quite in two.

I had purpose

Once more to *brw* thy target from thy brow  
Or lose my arm for't

—He was *brun* in pieces by Hamilton's iron *Hayward*—One Vane was so grievously hurt that many thousands have died of less than his hurts, whereof he was cured. *Hayward*. To chop; to cut.—

He from deep wells with engines water drew  
And us'd his noble hands the wood to *brw*. Dry

3. To cut, as with an axe: with the participle *down*, when it signifies to fell; *up*, to extract from below; *off*, to separate.—

He that depends

Upon your favours, swims with fins of lead,  
And *brws down* oaks with rushes.

Brave followers, yonder stands the thorny wood  
Which, by the heav'n's assistance and your strength,

Must by the roots be *drawn* up yet ere night.

*Shak. Henry VI.*

Scarcely can I speak my choler is so great :

Oh : I could *draw* up rocks, and fight with flint.

*Shak.*

Yet shall the axe of justice *draw* him down,

And level with the root his lofty crown. *Sandys.*

He from the mountain *drawing* timber tall,

Began to build a vessel of huge bulk. *Milton.*

We'll force the gate where Marcus keeps his guard,

And *draw* down all that would oppose our passage.

*Addison.*

To form 'or shape with an axe : with *axe*.—

Thou hast *drawn* thee out a sepulchre here, as he

has *drawn* him out a sepulchre on high. *Isa. xlii.*

4—Nor is it so proper to *draw* out religious re-

formations by the sword, as to polish them by fair

and equal disputations. *King Charles.*—This river

lies in the very heart of the Alps, and has a long

key that seems *drawn* out on purpose to give its

waters a passage amidst so many rocks. *Addison.*

To form laboriously.—

The gate was adamant ; eternal frame ;

Which, *drawn* by Mars himself, from Indian

quarries came,

The labour of a god. *Dryden's Fables.*

Next unto bricks are prefer'd the square *drawn*

out. *Martimer.*—I now pass my days not studi-

ously idle, rather polishing old works than *draw-*

ing out new. *Pope to Swift.*

HEWER. *n. f.* [from *draw*.] One whose em-

ployment is to cut wood or stone.—At the build-

ing of Solomon's temple there were fourscore thou-

sand *hewers* in the mountains. *Brown.*

HEWSON, William, a very ingenious anat-

omist, was born in 1739. He was assistant to Dr

Keil, and afterwards in partnership with him ;

on their disagreement, read anatomical lec-

tures at his own house, in which he was seconded by

Dr Falconer. He wrote *Inquiries into the Proper-*

ties of the Blood, and the Lymphatic system, 2 vols ;

disputed with Dr Monro the discovery of the

lymphatic system of vessels in oviparous animals.

He died in 1774, in consequence of absorption

of a wound received in dissecting.

HEXACHORD, in ancient music, a concord

of six notes, by the moderns a *sixth*.

(1.) \* HEXAGON. *n. f.* [*hexagon*, Fr. *ἕξ* and

*γωνία*.] A figure of six sides or angles : the most

perfect of all the figures that can be added to

any other without any interstice ; and therefore

cells in honeycombs are of that form.

(2.) HEXAGON, REGULAR, in geometry, a fi-

gure whereof the six sides and angles are equal.

HEXAGONAL. *adj.* [from *hexagon*.] Ha-

ving six sides or corners.—As for the figures of

crystals, it is for the most part *hexagonal*, or six-

angled *Brown*.—Many of them shoot into regu-

lar figures, as crystal and bastard diamonds into

trigonal. *Ray.*

\* HEXAGONY. *n. f.* [from *hexagon*.] A fi-

gure of six angles.—When I read in St Ambrose

of *hexagons*, or sixangular cellars of bees, did I

not conclude that they were mathematicians?

*Bentham against Hobbs.*

HEXAGYNIA, [from *ἕξ*, six, and *γενεα*, a ge-

neration,] an order of plants in the class polyandria,

containing such as have 6 styles. See *BOTANY*, § 122 and 128.

HEXAHEDRON, in geometry, one of the five platonic bodies, or regular solids, being the same with a cube.

(1.) \* HEXAMETER. *n. f.* [*ἕξ* and *μετρον*.] A verse of six feet.—The Latin *hexameter* has more feet than the English heroick. *Dryden.*

(2.) HEXAMETER VERSE. The first 4 feet may be either spondee or dactyls ; the 5th is generally a dactyl, and the 6th always a spondee. Such is the following verse of Horace :

1 2 3 4 5 6  
*Aut prodesse volunt, aut delectare poeta.*

HEXAMILA, a town of European Turkey, in the prov. of Romania, 22 miles S. of Gallipoli.

HEXAMILI, a celebrated wall, built

HEXAMILION, or by the emperor Emanuel

HEXAMILIUM, in 1423, over the isthmus,

of Corinth. It took its name from *ἕξ*, six, and *μίλιον*, which in the vulgar Greek signifies a *mile*, be-

ing six miles long. The design of it was to de-

fend Peloponnesus from the incursions of the bar-

barians. Amurath II. having raised the siege of

Constantinople in 1422, demolished the hexamili-

um, though he had before concluded a peace with

the Greek emperor. The Venetians restored it

in 1463, by 30,000 workmen, employed for 23

days, and covered by an army commanded by

Bertoldo d'Este general of the land forces, and

Lewis Loredano commander of the sea. The in-

fidels made several attempts upon it ; but were

repulsed, and obliged to retire from the neigh-

bourhood thereof : but Bertoldo being killed at

the siege of Corinth, which was attempted soon

after, Bertino Calcinato who took on him the com-

mand of the army, abandoned, upon the approach

of the beglerbeg, both the siege and the defence

of the wall which had cost them so dear : upon

which it was finally demolished.

HEXANDRIA, in botany, [from *ἕξ*, six, and

*ἄνδρῶν*, a man] the 6th class in Linnaeus's sexual

method, consisting of plants with hermaphrodite

flowers, furnished with six stamina of an equal

length. See *BOTANY*, *Index*.

\* HEXANGULAR. *adj.* [*ἕξ* and *γωνία*, Lat.]

Having six corners.—*Hexangular* sprigs or shoots

of crystal. *Woodward.*

HEXAPLA, [from *ἕξ*, six, and *πλάτος*, I unfold]

in church history, a Bible disposed in six columns ;

containing the text, and divers versions thereof,

compiled and published by Origen, with a view

of securing the sacred text from future corrup-

tions, and to correct those that had been already

introduced. Eusebius, (*Hist. Eccl. lib. vi. cap.*

16.) relates that Origen, after his return from

Rome under Caracalla, learned Hebrew, and be-

gan to collect the several versions that had been

made of the sacred writings, and of these to com-

pose his Tetrapla and Hexapla. But others say

that he did not begin till the time of Alexander,

after he had retired into Palestine, about A. D.

231. Besides the translation of the sacred writ-

ings, called the *Septuagint*, made under Ptolemy

Philadelphus, about A. A. C. 280, the Scriptures

had been since translated into Greek by other in-

terpreters. The first of those versions, or (rechen-

ing the Septuagint) the second, was that of Aquila,

K k 2

la,

in a proselyte Jew, the first edition of which he published in the 12th year of Adrian, or about A. D. 128; the 3d was that Symmachus, published, as is supposed, under Marcus Aurelius, but, as some say, under Septimius Severus, about A. D. 200; the 4th was that of Theodotion, prior to Symmachus's, under Commodus, or about A. D. 175. The Greek versions, says Dr Kennicott, were made by the Jews from their corrupted copies of the Hebrew, and were designed to stand in the place of the Seventy, against which they were prejudiced, because it seemed to favour the Christians. The fifth was found at Jericho, in the reign of Caracalla, about A. D. 217; and the 6th was discovered at Nicopolis, in the reign of Alexander Severus, about A. D. 238; lastly, Origen himself recovered part of a 7th, containing only the Psalms. Origen, who had held frequent disputations with the Jews in Egypt and Palestine, observing that they always objected to those passages of Scripture quoted against themselves, and appealed to the Hebrew text; the better to vindicate those passages, and confound the Jews by showing that the Seventy had given the sense of the Hebrew, or rather to show, by a number of different versions, what the real sense of the Hebrew was, undertook to reduce all the several versions into a body along with the Hebrew text, so as they might be easily confronted, and afford a mutual light to each other. He made the Hebrew text his standard; and, allowing that corruptions might have happened, and the old Hebrew copies might and did read differently, he marked such words or sentences as were not in his Hebrew text, nor the latter Greek versions, and added such words or sentences as were omitted in the LXX, prefixing an asterisk to the additions, and an obelisk to the others. For this purpose, he made 3 columns; in the first he gave the Hebrew text in Hebrew characters; in the 2d the same text in Greek characters; the rest were filled with the several versions above mentioned: all the columns answering verse for verse, and phrase for phrase; and in the Psalms there was a 9th column for the 7th version. This work Origen called *Hexapla*, *q. d. sextuple*, or a work of six columns, as only regarding the first six Greek versions. See *TETRAPLA*. Indeed, St Epiphanius, taking in likewise the two columns of the text, calls the work *Octapla*, as consisting of 8 columns. This celebrated work, which Montfaucon imagines consisted of 50 large volumes, perished long ago, probably with the library at Caesarea, where it was preserved in 633; though several ancient writers have preserved pieces of it, particularly St Chrysostom on the Psalms, Philoponus in his *Hexameron*, &c. Some modern writers have earnestly endeavoured to collect fragments of the *Hexapla*, particularly Flaminius Nobilius, Drusius, and F. Montfaucon, in two folio volumes, printed at Paris in 1713.

\* **HEXAPOD.** *n. s.* [*4* and *podis*.] An animal with six feet — I take those to have been the *Hexapoda*, from which the greater sort of beetles come; for that sort of *Hexapoda* are eaten in America. *Ray*.

\* **HEXASTICH.** *n. s.* [*6* and *stich*.] A poem of six lines.

**HEXASTYLE**, in architecture, a building with six columns in front.

**HEXBOLD**, a small river of Northumberland, which runs by Hexham.

**HEXHAM**, a town of Northumberland, with a market on Tuesday. It is seated on the Tyne, and was formerly famous for an abbey and church, one of which is now decayed, and a great part of the other was pulled down by the Scots. Near this place, in 1461, was fought a bloody battle, between the houses of York and Lancaster, in which the latter was defeated. Hexham is noted for its manufactory of tanned leather, shoes, and gloves; and is 22 miles W. of Newcastle, and 284 NNW. of London. Lon. 2. 1. W. Lat. 55. 3. N.

**HEXLEY**, a town in Northumberland, NE of Alawick.

**HEXTON**, a village in Hertfordshire, near Luton.

\* **HEY.** *interj.* [from *high*.] An expression of joy, or mutual exhortation: the contrary to the Latin *bei*.—

Shadwell from the town retires,  
To bless the town with peaceful lyric;  
Then *hey* for praise and panegyrick.

**HEYDAU**, a town of Silesia, in Neisse.

(1.) \* **HEYDAY.** *interj.* [for *high day*.] An expression of frolic and exultation, and sometimes of wonder.—

Thou'lt say anon he is some kin to thee.

Thou spend'st such *heyday* wit in praising him.

'Twas a strange riddle of a lady,

Not love, if any lov'd her, *heyday*! *Field*

(2.) \* **HEYDAY.** *n. s.* A frolic; wildness.

At your age

The *heyday* in the blood is tame, it's humbled  
And waits upon the judgment.

**HEYDECK**, a town of Bavaria, in Neuburg.

\* **HEYDEGIVES.** *n. s.* A wild frolic and Obscene.—

But friendly fairies met with many graces  
And lightfoot nymphs can chase the light  
night

With *heydegives*, and trimly trodden traces.

**HEYDEN**, a town of Westphalia, in Lippe.

**HEYDINGSFELD**, a town of Franconia.

(1.) **HEYDON**, John, who sometimes assumed the name of *Eugenius Theodidactus*, was a pretender to skill in the Rosicrucian philosophy, and the celestial signs, in the reign of king Charles I.; and wrote a considerable number of chemical and astrological works, with very singular titles. This ridiculous author was much resorted to by the duke of Buckingham, who was mistaken with judicial astrology. He employed him to calculate the king's and his own nativity, and was assured that his stars had promised him great things. The duke also employed him in some treasonable and seditious practices, for which he was sent to the Tower. He lost much of his former reputation by telling Richard Cromwell and Thomas who went to him disguised like cavaliers, that the liver would infallibly be hanged by a certain time, which he outlived several years.

(2.) **HEYDON**, a borough in the E. Riding of Yorkshire.

Yorkshire, with a market on Thursday. It is seated on a river, which soon falls into the Humber; and was formerly a considerable town, but is now much decayed. It is six miles W. of Hull, and 131 N. by W. of London. Lon. o. 5. W. Lat. 53. 45. N.

(3, 4.) **HEYDON**. See **AYDON**, and **HEADON**.

(5—7.) **HEYDON**, 3 small towns in the counties of Essex, Gloucester, and Norfolk.

**HEYDUKEN**, a fort of Hungary, near Arad.]

**HEYLIGLAND**. See **ACYANIA**, and **HAIL-GLAND**.

**HEYLIN**, Dr Peter, an eminent English writer, born at Burford, in Oxfordshire, in 1600. He studied at Hart Hall, Oxford; where he took his degrees of M. A. and D. D. and became an able geographer and historian. He was appointed one of the chaplains in ordinary to king Charles I. rector of Hemmingford in Huntingdonshire, a prebendary of Westminster, and obtained several other livings; but of these he was deprived by the parliament, who also sequestered his estate; by which means he and his family were reduced to great necessity. However, upon the Restoration, he was restored to his spiritualities; but never rose higher than to be subdean of Westminster. He died in 1662, and was interred in Westminster, where a neat monument was erected to his memory. His writings are very numerous: the principal of which are, 1. *Miscellanyus*, or a Description of the Great World. 2. *Cosmographie*. 3. *The history of St George*. 4. *Ecclesia Indicata*, the Church of England justified. 5. *Historical and Miscellaneous Tracts*, &c.

**HEYLSEM**, a town of the French republic, in the department of the Dyle, and late prov. of the Brabant: 14 miles SE. of Louvain. Lon. 5. E. Lat. 50. 40. N.

**HEYMERISEN**, a town of Germany, in the electorate of Cologne, on the Erft, now annexed to the French republic by the treaty of 1794. According to the last division of the provinces on the left bank of the Rhine, in June 1794, into four departments, it appears to be included in that of the Rhine and Moselle. It is 5 m. W. of Bonne, and 30 E. of Aix-la-Chapelle. Lat. 51. 24. 35. E. of Ferro. Lat. 50. 46. N.

**HEYNE**, a town of the French republic, in the dept. of Escaut, and ci-devant prov. of Austrian Flanders, 2½ miles N. of Oudenarde.

**HEYPERG**, a mountain of Bavaria.

**HEYRIEUX**, a town of France, in the dep. of Ain, 10 miles NE. of Iser.

**HEYTERSCHEN**. See **HAYTERNSHEIM**.

**HEYESBURY**. See **HARESBURY**.

(1.) **HEYWOOD**, Eliza, one of the most voluminous novel-writers this island ever produced; whom we know no more than that her father was a tradesman, and that she was born about 1740. In the early part of her life, her pen, whether to gratify her own disposition, or the prevailing taste, dealt chiefly in licentious tales, and meditations of personal scandal: the celebrated *Atalapha* of Mrs Manley served her for a model; and *The Court of Carimania*, *The new Utopia*, with many other pieces of a like nature, were the copies of her pen produced. She also attempted dramatic writing and performance, but did not succeed

in either. Whatever it was that provoked the resentment of Pope, he gave full scope to it by distinguishing her as gaining one of the prizes in the games introduced in honour of Dulness, in his *Dunciad*. Nevertheless, it seems undeniable, that there is much spirit, and much ingenuity, in her manner of treating subjects, which the friends of virtue may perhaps wish she had never meddled with at all. But, whatever offence she may have given to delicacy or morality in her early works, she appears to have endeavoured to atone for, in the latter part of her life; as no author then appeared a greater advocate for virtue. Among her riper productions may be specified, *The Female Spectator*, 4 vols; *The history of Miss Betty Thoughtless*, 4 vols; *Jemmy and Jenny Jeffamy*, 3 vols; *The Invisible Spy*, 4 vols; with a pamphlet intitled *A present for a servant maid*. She died in 1759.

(2.) **HAYWOOD**, John, one of our most ancient dramatic poets, was born at North Mimms, near St Alban's in Hertfordshire, and educated at Oxford. From thence he retired to the place of his nativity; where he became acquainted with Sir Thomas More, who had a seat in that neighbourhood. This patron of genius introduced him to the princess Mary, and afterwards to her father Henry VIII. who was much delighted with his wit and skill in music, and by whom he was frequently rewarded. When Mary came to the crown, Heywood became a favourite at court, and continued often to entertain her majesty, *exercising his fancy before her, even to the time that she lay languishing on her death-bed*. On the accession of Elizabeth, being a zealous Papist, he decamped, and settled at Mechlin in Flanders, where he died in 1563. He was a man of no great learning, nor were his poetical talents extraordinary; but he possessed talents of more importance in the times in which he lived, namely, those of a jester. He wrote several plays; 500 epigrams; *A Dialogue in Verse concerning English Proverbs*; and *The Spider and Fly*, a Parable, a thick 4to. Before the title of this last work is a whole-length wooden print of the author; who is also represented at the head of every chapter in the book, of which there are 77. He left two sons, who both became Jesuits and eminent men: viz.

(3.) **HAYWOOD**, Ellis, who continued some time at Florence under the patronage of cardinal Pole, and became so good a master of the Italian tongue, as to write a treatise in that language, intitled *Il Moro*; he died at Louvain about the year 1572; and,

(4.) **HAYWOOD**, Jasper, who was obliged to resign a fellowship at Oxford on account of his immorality. He translated three tragedies of Seneca, and wrote various poems and devices; some of which were printed in a volume entitled *The Paradise of Dainty Devices*, 4to, 1573. He died at Naples in 1597.

(5.) **HAYWOOD**, Thomas, an actor and writer of plays, who died about 1626. He is said to have wrote 120 plays, of which only 24 are extant, and these not much esteemed.

**HEZEKIAH**, or **EZEKIAS**, [הֶזְקִיָּא, Heb. i. e. The strength of Jah or Jehovah,] one of the best kings of Judea, succeeded his father Ahaz, A. M. 3178. His reformation of his subjects from idolatry; his grand and solemn celebration of the passover; his invitation

invitation to the Israelites to assist at it; his throwing off the Assyrian yoke; his miraculous deliverance from the invasion by Sennacherib, after the blasphemous defiance of Rabshakeh; his mortal disease, prophetic prayer, and miraculous recovery, with the fatal consequences of his vanity after it, are recorded in 2 Kings xviii.—xx. 2 Chron. xxxii.—xxxiii. and Isaiah xxxvi.—xxxix. The hymn he composed upon his recovery, (Isa. xxxviii.) entitles him to be ranked among the Types of Christ. He collected a part of Solomon's Proverbs. (See Prov. xxvi.) Upon the miraculous retrogression of the shadow on Ahaz's dial, we need say little. Those who doubt the existence of a Deity, or deny his power over the material world, will not be convinced by any arguments. But those who believe that the Almighty, when he gave existence to matter, and subjected it to certain laws, did not thereby limit his own infinite power, will not think it more incredible, that he who created light by his word should invert the shadow of the gnomon, so as to make it appear to have gone so degrees backward, than that a watchmaker should turn back the hour or minute hand of a clock, in a direction contrary to the natural motion which he himself has given it. *How* this was done, whether by a momentary retrograde motion given to the terrestrial globe, or only by an inversion of the usual motion of the solar rays upon the gnomon, it is neither necessary nor possible to determine. (See AJALON.) The latter supposition seems most probable. Upon the former supposition it must have been observed over one half of the globe. That it was however observed by the Chaldean astronomers at Babylon, seems evident from Mero-dach-Baladan's congratulatory embassy on Hezekiah's recovery. Hezekiah died in the 34th year of his age, and 29th of his reign; A. M. 3307.

HIAMEN, or EMOUR, an island near the SE. coast of China, in the province of Fokien, about 25 miles in circumference; with an extensive port capable of containing several thousands of vessels, protected on one side by the island, and on the other by the main land. The water is so deep that, the largest ships may lie close to the shore without danger. It was much frequented by European ships in the beginning of the 18th century, but the trade is now mostly transferred to Canton. The emperor keeps a garrison of several thousand men on the island. In the entry of the road there is a large rock, several feet above the surface of the water, which divides it nearly as the Mingant divides the harbour of Brek. The island of Hiamen is celebrated for the magnificence of its principal pagod, consecrated to their deity Fo. This temple is situated in a plain, terminated on one side by the sea, and on the other by a lofty mountain. The front is 180 feet long, and its gate is adorned with figures in relief. The entry is a vast portico, with an altar in the middle, on which is placed a gigantic statue of gilt brass, representing the god Fo, sitting cross-legged. Four other statues are placed at the corners of this portico, each 18 feet high, although they represent people sitting. Each of these is formed from a single block of stone. One holds a serpent in its arms, which is twisted round its body in several folds; the 2d has a bent bow and a quiver; the 3d others present, one a bat-

the 4th a kind of guitar. After crossing this portico, you enter a square inner court, paved with large gray stones, the least of which is 10 feet long and 4 broad. At the four sides of this court are four pavilions, terminating in domes, and having a communication with one another by a gallery which runs quite round it. One of these contains a bell ten feet in diameter. In the other is kept a drum of an enormous size, which the bonzes use to proclaim the days of new and full moon. The clappers of the Chinese bells are on the outside, and made of wood in the form of a mallet. The two other pavilions contain the ornaments of the temple, and often serve to lodge travellers, whom the bonzes are obliged to receive. In the middle of this court is a large tower, which terminates also in a dome, to which you ascend by a beautiful stone stair-case that winds round it. This dome contains a temple remarkably neat; the ceiling is ornamented with mosaic work, and the walls are covered with figures in relief, representing animals and monsters. The pillars which support the roof of this edifice are of wood varnished, and, on festivals, are ornamented with small flags of different colours. The pavement of the temple is formed of little tiles, and its different compartments represent birds, butterflies, flowers, &c. The bonzes continue to burn incense upon the altar, and keep the lamp lighted, which hang from the ceiling of the temple. At one extremity of the altar stands a large urn, which when struck sends forth a most full sound; on the opposite side is a hollow machine of wood, of an oval form, used for the same purpose, which is to accompany with its sound their voices when they sing in praise of the tutelary idol of the pagod. The image of POUSSA placed on the middle of this altar, on a flower-gilt brass, which serves as a base, and holds a young child in its arms; several idols of subordinate deities are ranged around him, and show by their attitudes their veneration. The bonzes have carved out on the walls of this temple several hieroglyphical characters in praise of Poussa; there is also to be seen an allegorical painting in fresco, representing a burning lake, in which several men appear to be swimming, some carried by monsters, others surrounded by dragons. In the middle of the gulph rises a steep rock, on the top of which the god is seated, holding in his arms a child who seems to call out to those who are in the flames of the lake; but an old man, with hairy ears and horns on his head, prevents them from climbing to the summit of the rock, and threatens to drive them back with a large club. The bonzes are at a loss to explain this painting. Behind the altar is a library, containing books on the worship of idols. On descending from this dome you cross the court, and enter a kind of gallery, the walls of which are lined with boards; it contains 24 statues of gilt brass, representing 24 philosophers, ancient disciples of Confucius. At the end of this gallery is a large hall, which is the refectory of the bonzes; and after having traversed a spacious apartment, you at length enter the temple of Fo, to which there is an ascent by a large stone stair-case. It is ornamented with vases full of artificial flowers; and musical instruments

The face of the god is not to be seen but through a piece of black gauze, which forms a veil before the altar. The rest of the pagod consists of several large chambers, exceedingly neat, but badly disposed; the gardens and pleasure grounds are on the declivity of the mountain; and a number of artificial grottos are cut out in the rock, which afford an agreeable shelter from the excessive heat of the sun. There are several other pagoda in the island, among which is one called *The Pagoda of Ten Thousand Stones*, because it is built on the top of a mountain where there is a number of rocks, under which the bonzes have formed grottos and covered seats. A certain delightful simplicity reigns here. Strangers are received at these bonzes with great politeness, and may only enter their temples; but they must not attempt to gratify their curiosity fully, nor to enter the apartments into which they are not introduced: for the bonzes, who are forbid under severe penalties, to have any intercourse with women, and who yet often keep them in private, are not without too impertinent a curiosity. Lon. 2. E. of Pekin. Lat. 24. 30. N.

**HARBAS**, in fabulous history, a king of the Indians, who made war against Queen Dido.

**HIATION**. *n. s.* [from *hiu*, Lat.] The act of gaping.—Men observing the continual *hiation*, or gaping open the camelion's mouth, conceive the notion thereof to receive the aliment of air; but this is also occasioned by the greatness of the lungs. *See* *Fulgar Errors*.

**HIATSTOWN**, a town of New Jersey, in Mercer county, 23 miles N.E. of Trenton.

**HIATUS**. *n. s.* [*hiatus*, Lat.] 1. An opening or gaping breach.—Those *hiatus's* are at the bottom of the sea, whereby the abyss below opens and communicates with it. *Woodward*. 2. Opening of the mouth by the succession of an initial to a final vowel.—The *hiatus* should be avoided with more care in poetry than in oratory; I would try to prevent it, unless where the using it off is more prejudicial to the sound than the *hiatus* itself. *Pope*.

3. **HIATUS** is particularly applied to those cases where one word ends with a vowel, and the following word begins with one, and thereby occasions the mouth to be more open, and the sound very harsh. It is also used in speaking of scripts, to denote their defects, or the parts that have been lost or effaced.

**HIATZ**, a town of Hungary.

**HIBERNAL**. *adj.* [*hibernus*, Lat.] Belonging to Winter.—This star should rather manifest strong power in the Winter, when it remains fixed with the sun in its *hibernal* conjunction. *See* *Fulgar Errors*.

**HIBERNIA**, one of the ancient names of Ireland, is derived by some from *hibernum tempus*, winter time, because in that season the nights are there: But it appears more probable that it was derived from *Erim*, the name given to the island by the original inhabitants: whence *JERMA*, given it by Claudian, *IVERNA*, by Ptolemy, and *JOVERNA*, by Juvenal, are evidently so. *See* **IRELAND**.

**HIBISCUS**, SYRIAN MALLOW; a genus of the Malvaceæ order, belonging to the monadelphic

class of plants; and in the natural method ranking under the 37th order, *Columniferae*. The calyx is double, the exterior one polyphyllous, the capsule quinquelocular and polyspermous. Of this genus there are 36 species; the most remarkable are,

1. **HIBISCUS ALBIMOSCHUS**, the musk-seeded *hibiscus*, a native of the West Indies, where the French cultivate great quantities of it. The plant rises with an herbaceous stalk 3 or 4 feet high, sending out 2 or 3 side branches, garnished with large leaves cut into 6 or 7 acute angles, sawed on their edges, having long footstalks, and placed alternately. The stalks and leaves are very hairy. The flowers come out from the wings of the leaves upon pretty long footstalks which stand erect. They are large, of a sulphur colour, with purple bottoms; and are succeeded by pyramidal five-cornered capsules, which open in 5 cells, filled with large kidney-shaped seeds of a very musky odour. It is annual in this country, though biennial in places where it is native. It is propagated by seeds, and must be treated in the manner directed for **AMARANTH**. It is cultivated in the West Indies by the French for the sake of its seeds. These are annually sent to France in great quantities, and form a considerable branch of trade, but the purposes which they answer are not certainly known.

2. **HIBISCUS ESCULENTUS**, the *eatable hibiscus*, rises to 5 or 6 feet; has broad five-parted leaves, and large yellow flowers. The oira or pod is from 3 to 6 inches long, and one inch diameter. When ripe it opens longitudinally in 5 different places, and discharges a number of heart shaped seeds. It is a native of the West Indies, where it is cultivated in gardens and inclosures as an article of food. The whole of it is mucilaginous, especially the pods. "These Dr Wright informs us) are gathered green, cut into pieces, dried, and sent home as presents, or are boiled in broths or soups for food. It is the chief ingredient in the celebrated pepper-pot of the West Indies, which is a rich olla: the other articles are either flesh meat, or dried fish and capicum. This dish is very palatable and nourishing. As a medicine, *okra* is employed in all cases where emollients and lubricants are indicated." This species, as well as the **MUTABILIS**, **ROSA SINENSIS**, and **TILIACUS**, (N<sup>o</sup> 3, 4, & 6.) is propagated by seeds, and must be sown in hot-beds; then transplanted into small separate pots, and treated like other tender vegetables, only allowing them a good share of air.

3. **HIBISCUS MUTABILIS**, the *changeable rose*, has a soft spongy stem, which by age becomes ligneous and pithy. It rises to the height of 12 or 14 feet, sending out branches towards the top, which are hairy, garnished with heart shaped leaves, cut into five acute angles on their borders, and slightly sawed on their edges; of a lucid green on their upper side, but pale below. The flowers are produced from the wings of the leaves; the single are composed of five petals which spread open, and are at first white, but afterwards change to a bluish rose colour, and as they decay turn purple. In the West Indies, all these alterations happen on the same day, and the flowers themselves

selves are of no longer duration; but in Britain the changes are not so sudden. The flowers are surrounded by short, thick, blunt, capsules, which are very hairy; having five cells, which contain many small kidney shaped seeds, having a fine plume of fibrous down adhering to them. See N° 3.

4. *HIBISCUS, ROSA SINENSIS*, the CHINA ROSE, has an arborescent stem, and egg-pointed sawed leaves. It is a native of the East Indies; but the seeds having been carried by the French to their West India settlements, it thence obtained the name of *Martinico rose*. Of this there are the double and single flowering kinds; the seeds of the first frequently produce plants that have only single flowers, but the latter seldom vary to the double kind. See N° 2.

5. *HIBISCUS SYRIACUS*, commonly called *al-thea frutex*, is a native of Syria. It rises with shrubby stalks to the height of 8 or 10 feet, sending out many woody branches covered with a smooth grey bark, garnished with oval spear-shaped leaves, whose upper parts are frequently divided into three lobes. The flowers come out from the wings of the stalk at every joint of the same year's shoot. They are large, and shaped like those of the mallow, having 5 large roundish petals which join at their base, spreading open at the top, in the shape of an open bell. These appear in August; and if the season is not too warm, there will be a succession of flowers till September. The flowers are succeeded by short capsules, with 5 cells, filled with kidney-shaped seeds; but unless the season proves warm, they will not ripen in this country. Of this species there are 4 or 5 varieties, differing in the colour of their flowers: the most common hath pale purple flowers with dark bottoms; another hath bright purple flowers with black bottoms; a third hath white flowers with purple bottoms; and a fourth variegated flowers with dark bottoms. There are also two with variegated leaves, which are by some much esteemed. All these varieties are very ornamental in a garden—They may be propagated either by seeds or cuttings. The seeds may be sown in pots filled with light earth about the end of March, and the young plants transplanted about the same time next year. They succeed in full ground; but must be covered in winter whilst young, otherwise they are apt to be destroyed.

6. *HIBISCUS TILIACEUS*, the MAHO tree, is a native of both the Indies. It rises with a woody, pithy stem, ten feet high dividing into several branches towards the top, which are covered with a woolly down, garnished with heart-shaped leaves ending in acute points. They are of a lucid green on their upper side, hoary on the under side, full of large veins, and are placed alternately. The flowers are produced in loose spikes at the end of the branches, and are of a whitish yellow colour. They are succeeded by short acuminate capsules, opening in 5 cells, filled with kidney shaped seeds. It is propagated by seeds. (See N° 2.) The inner rind is very strong, and of great esteem. Dampier says, "They (the Musketo Indians) make their lines, both for fishing and striking, with the bark of Maho, which is a sort of tree or shrub that grows plentifully all over the West Indies, and whose bark is made up of strings

or threads very strong: you may draw it off either in flakes or small threads, as you have occasion. It is fit for any manner of cordage, and privateers often make their rigging of it." See BARR, § 1, 3.

7. *HIBISCUS TRIONUM*, *Venice mallow*, or *flower of an hour*, is a native of some parts of Italy, and has long been cultivated in the gardens of this country. It rises with a branching stalk a foot and a half high, having many short spines, which are soft, and do not appear unless closely viewed: the leaves are divided into three lobes, which are deeply jagged almost to the midrib. The flowers come out at the joints of the stalks, upon pretty long foot stalks. They have a double calyx; the outer being composed of ten long narrow leaves, which join at their base: the inner of one thin leaf swollen like a bladder, cut into acute segments at the top, having many longitudinal purple ribs, and is hairy. Both these are permanent, and inclose the capsule after the first is past. The flower is composed of 5 obtuse petals, which spread open at the top; the lower forming an open bell-shaped flower. The petals are dark purple bottoms, but are of a pale sulphur colour above. In hot weather the flowers continue but a few hours open, whence the English name; but there is a succession of flowers that open daily for a considerable time. It is propagated by seeds, which should be sown where the plants are designed to remain, for they do not bear transplanting well. They require no other care than to be kept free from weeds, and that they are not where they are too close; and if the seeds are permitted to scatter, the plants will come up full well as if they had been sown.

HIBISI, a town of Asiatic Turkey, in Candia, 80 miles W. of Satalia.

HIBRAHIM, or ST MARY, an island in the Indian ocean, near Madagascar, 50 miles long and 14 broad. Lon. 72. 48. E. of Ferro. Lat. 16. 30. S.

\* HICCIUS DOCCIUS. *n. f.* [Corrupted, I conjecture, from *hic est doctus*, this or here is the learned man. Used by jugglers of themselves.] A word for a juggler; one that plays fast and loose.

An old dull sot, who told the clock

For many years at Bridewell dock,

At Westminster and Hicks's hall,

And *hiccius doctus* play'd in all;

Where, in all governments and times,

H' had been both friend and foe to crimes. *See*

HICCORY. See JUGLANS.

(1.) \* HICCOUGH. *n. f.* [*hicco*, Danish.] A convulsion of the stomach producing soba.—

So by an abby's skeleton of late

I heard an echo supererogate

Through imperfection, and the voice return

As if she had the *hiccough* o'er and o'er. *See*

—Sneezing cureth the *hiccough*, and is profitable unto women in hard labour. *Brown's Vulgar*

—If the stomach be hurt, singultus or hicco follows. *Hyemans's Surgery.*

(2.) HICCOUGH, or HICKUS, is a spasmodic affection of the stomach, oesophagus, and muscles subservient to deglutition, arising sometimes from some particular stimulus acting on the stomach, oesophagus, diaphragm, &c. and sometimes from a general affection of the nervous system. See DYSPEPSIA, *Indes.*

• *Hiccough*. v. n. [from the noun.] To hiccup with convulsion of the stomach.

**HICETAS** of Syracuse, an ancient philosopher and astronomer, who taught that the sun and stars were motionless, and that the earth moved round itself. This is mentioned by Cicero, and probably gave the first hint of the true system to Copernicus. He flourished about A. A. C. 344.

**HICKES**, George, an English divine of extraordinary parts and learning, born in 1642. In 1682 he was made king's chaplain, and two years after dean of Worcester. The death of Charles II. stopped his farther preferment; for though his church principles were very high, he manifested too much against Popery to be a favourite with James II. In the revolution, he with many others was deposed for refusing to take the oaths to K. William and Q. Mary; and soon after, Abp. Sancroft and others, considering how to maintain episcopacy, carried over a list of the deprived clergy to K. James; and with his sanction a private communion was performed, at which it is said lord London was present. Dr Hickes was consecrated bishop of Thetford, and died in 1725. He wrote, 1. *Institutiones Oræmaticæ Anglo-Saxonice et Medio-Gælicæ*. 2. *Antiqua literatura septentrionalis*. 3. Two treatises, one of the Christian priesthood; the other of the dignity of the episcopal order. 4. *Jovian*, or an answer to Julian apostate. 5. Sermons: with many temporary controversial pieces on politics and religion.

**HICKUP**. See *Hiccough*, and *Medicine*.

• *Hickup*. v. n. [corrupted from *hiccuph*.] To hiccup with a convulsed stomach.—

Quoth he, to bid me not to love,  
To forbid my pulse to move,  
To beard to grow, my ears to prick up,  
When I'm in a fit, to *hickup*. *Madlibras*.

**HICKWALL**. } n. s. A bird. *Ainsworth*.

**HICKWAY**. }

**HID**. *HIDDEN*. part. pass. of *hide*.—

Thus fame shall be achiev'd, renown on earth;

And what most merits fame, in silence *hid*. *Milt.*

Other *hiddens* cause

Let them superior. *Milton*.

Nature and nature's laws lay *hid* in night;

Dark said, Let Newton be, and all was light. *Pope*.

**HIDAGE**, } was an extraordinary tax pay-

**HIDAGIUM**, } able to the kings of England

every hide of land. This taxation was levied

only in money, but in provision, armour, &c.;

when the Danes landed in Sandwich in 994,

Ethelred taxed all his lands by hides; so that

7310 hides found one ship furnished, and 7310

hides furnished one jack and one saddle, to

for the defence of the kingdom, &c. Some-

times the word *badage* was used for the being quit

of that tax; which was also called *badegild*, from

*badon*, "a price or ransom paid to save one's

hide from beating."

**HIDALGO**, in modern history, a title given in

to all who are of noble family. The *Hidalgo*

descend from those vallant soldiers who

came into Castile, and the mountains of Asturias,

and into remote parts of Spain, on the invasion

of the Moors, where having fortified themselves,

Vol. XL Part I.

they successively descended into the plains, in proportion to the success of their arms; from the notoriety of their persons, or the lands they became possessed of, they acquired the appellation of *Hidalgos naturales*, *Hidalgos de solar conocido*, or *de casa solariega*. Of these, according to Hernando Mexia, there are 3 sorts; viz. 1. lords of places, villages, towns, or castles, from whence they took their surnames, as the Guzmans, Mendozas, Laras, Quiaras, and others: 2. Those who recovered any fortresses from the Moors, as the Ponces of Leon, and others; and, 3. Those named from the places where they resided, or held jurisdiction, as Rodrigo de Narvaez was called of Antequera, from being Alcaide there. But this definition is not considered as exact or conclusive by Otalora, another civilian, who says that the true meaning of *Hidalgos de solar conocido* is explained by the laws of Castile to be a well known mansion or possession, the nature of which is particularly explained in the laws of *Parduras*, lib. 5. tit. 39. which describe three sorts of tenures called *Druso*, *Solariega*, and *Behetria*. By the first, lands are devised by the ancestor; *Solariega* is a tenure upon another person's manor, and obliges the owner to receive the lord of the fee when necessity obliges him to travel; and *Behetria* is in the nature of an *allodion*. In proportion as these Aborigines gained ground on the Moors, and increased in their numbers, many private persons distinguished themselves by their valour, and obtained testimonies of their services, called *cartas de merced*, which served them as a foundation of their birth and good descent, without which documents their posterity could not make it appear; and if from a lapse of time, or other unavoidable accidents, such proof should happen to be lost or destroyed, the law affords them a remedy; by a declaration, importing, that such persons as are supposed to have had such certificates, may be relieved by making it appear that their ancestors, time immemorial, have always been held and reputed as *Hidalgos*, and enjoyed the privileges of such, from a strong presumption in their favour; the possession of land having equal force to any other document; which is fully set forth in the *Pragmatica* of Cordova. To these executory letters are granted *cartas encartorias*, expressive of their privileges; and for the better regulation of their matters, proper officers are appointed in the chancery courts, called *alcaldes de los hidalgos*, who ought to be *hidalgos* themselves, and hold jurisdiction in these cases, and no others; but even here innovations have taken place; for as these grants flow from the sovereign, who is the fountain of honour, some are declared *Hidalgos de sangre*, by right of descent, and others *de privilegio*, or by office, in which the will of the sovereign has made amends for deficiency of blood. There is a set of people near Segovia, at a place called Zamarramala, who are exempt from tribute on account of the care they take in sending proper persons every night to the castle of Segovia to stand sentinel—One cries out, *Velad, vela, vela!* and the other blows a horn, from whence they have been titled *Hidalgos by the horn*. In Catalonia, those gentlemen who are styled *Hombres de Pareda*, are considered the same as *hidalgos* in Castile, and were so called from the word *paredar*, to equip.

equip, this name being given as a distinction by Boreto the 4th count of Barcelona, at the siege of that city, in 965, who, summoning all his vassals to come to his assistance against the Moors, 900 horsemen well mounted and equipped joined him, and with their aid he took the city; and this appellation has been given in honourable remembrance of this loyal action. These noble hidalgos enjoy many privileges and distinctions: of which the following are the principal. 1. The first and greatest privilege which they hold by law is to enjoy all posts of dignity and honour in the church and state, with liberty, when churchmen, of having a plurality of benefices. They are qualified for receiving all orders of knighthood, and are to be preferred in all embassies, governments, and public commissions. 2. When they are examined as witnesses in civil and criminal cases, their depositions are to be taken in their own houses, without being obliged to quit them to go to those of others. 3. In all churches, processions, and other public acts or assemblies, they are to have the next place of honour and precedency after the officers of justice, conforming themselves to particular customs. 4. They are not obliged to accept of any challenge for combat, supposing such were allowed of, but from those who are their equals. 5. Though it is forbidden to guardians to purchase the estates of minors, this does not extend to hidalgos, in whom the law supposes no fraud, and to they may purchase them publicly. 6. They are allowed to sit in courts of justice in presence of the judges, from the respect and honour due to them. They have also seats in the courts of chancery, in consideration of their birth, which gives them a right to be near the persons of princes. 7. Their persons are free from arrest for debt, nor can any attachment be laid on their dwelling-houses, furniture, apparel, arms, horses, or mules in immediate use: nor can they make a cession of their estates, nor be distressed in suits of law, farther than their circumstances will admit of, but are to be allowed a reasonable and decent maintenance for their support. 8. In cases of imprisonment for crimes, they are to be treated differently from others. They are generally confined to their own houses with a safe guard, or under arrest upon their honour, or allowed the city or town they lived in, and in particular cases are sent into castles. 9. When punishments are inflicted for criminal cases, they are to be less severe to them than to others, as they are not to suffer ignominious punishments, such as public shame, whipping, galleys; nor are they to be hanged, but beheaded, excepting in cases of treason or heresy. In cases that do not imply a corporal punishment, but a pecuniary one, they are treated with more rigour, and pay a larger fine than others. 10. They are not to be put to the rack or torture, excepting for such heinous crimes as are particularly specified by the laws. 11. When there are title deeds or other writings or papers in which two or more persons have an equal right or property, and require a particular charge, they are to be given up by preference to the custody of an hidalgo, if any of the parties are such. 12. The daughter of an hidalgo enjoys every privilege of her birth, though married to a commoner; and a woman who is not

an hidalgo enjoys all these privileges when she is a widow, following the fortune of her husband. But if the widow is an hidalgo, and the late husband was a commoner, she falls into the state of her husband after his death, though she had the privileges of her birth during his life. 13. They are free from all duties, called *Pechos*, *Peñes*, *Alonidas*, *Martingas*, *Contribuciones*, as well as civil, and all other levies whatever, except such as are for the public benefit, in which they are equally concerned; such as the repairing of highways, bridges, fountains, walls, destruction of locusts and other vermin. 14. They are free from personal service, and from going to the wars, excepting when the king attends in person; or then they are not to be forced, but invited, and acquainted that the royal standard is displayed. 15. No persons whatever can be quartered upon or lodged in their houses, except when the king, queen, prince, or infants are on the road, and such cases even the houses of the clergy are exempted. 16. They cannot be compelled to accept the office of receiver of the king's rents, any other employment which is considered as derogatory to their rank. 17. By a particular custom confirmed by royal authority in that part of Castile beyond the Ebro, bastards succeed to the parents, and enjoy their honours, contrary to the royal and common law. 18. If a lady, who marries a commoner, should be a queen, duchess, marchioness, or countess (for they have no bastards in Castile), she not only does not lose her rank but conveys her titles to her husband, who bears them in right of his wife.—These are the great privileges which the hidalgos enjoy; there are some others of less consequence, as well as particular grants to certain persons and families. An ancient and ridiculous custom is said to be observed by noble ladies who are widows of plebeians in order to recover their birthright; for this purpose they carry a pack-saddle on their backs to their husband's grave, then throwing it down and striking it three times, say, 'Villain, take thy villainy, for I will abide by my nobility;' then they recover their privileges again.

**HIDDEKEL**, the 3d river in Paradise. (Gen. ii. 14.) It is supposed to be the same with **TIGRIS**, called *Diglar* by the Arabs. It runs between Assyria on the E. and Mesopotamia on the W. and falls into the Euphrates. It is by Moses to run toward the E. of Assyria, and it does in respect of his situation. On its banks stood the famous cities of Nineveh, Ctesiphon, and Seleucia; and on the ruins of the latter city a dad was built. Daniel had one of his visions on its banks.

\* **HIDDEN**. See **HIN**.

(1.) \* **HIDE**. n. s. [*hyde*, Saxon; *honda*, Dutch.]

1. The skin of any animal, either raw or dressed.  
The trembling weapon pass  
Through nine bull *bides*, each under other's  
On his broad shield.

Pisistratus was first to grasp their hands,  
And spread soft *bides* upon the yellow sands.

2. The human skin: in contempt.—  
Oh, tyger's heart, wrapt in a woman's skin,  
How could'st thou though drain the life-blood of  
child?

His mantle, now his *hide*, with rugged hairs  
Cleaves to his back; a famish'd face he bears.

*Dryden.*

1. A certain quantity of land. [*Hide*, *byde*, French *hid*, barbarous Latin, as much as one plough can till.] *Angeworth*.—One of the first things was a more particular inquiry than had been before of every *hide* of land within the precincts of his sequest, and how they were holden. *Wotton*.

(2.) *HIDE* (§ 1, def. 1.) is particularly applied to those of large cattle, as bullocks, cows, horses, &c. Hides are either raw, that is, just as taken off the carcase: salted, or seasoned with salt, alum, and saltpeter to prevent their spoiling; or curried and tanned. See *TANNING*.

(3.) *HIDE OF LAND*, (§ 1 def. 3.) was as much as would maintain a family; some call it 60, some 100, and others 100 acres.

(4.) \* *To HIDE*. v. a. preter. *hid*; part. pass. *hid* or *bidden*. [*bidan*, Saxon.] To conceal; to withhold or withdraw from sight or knowledge.—

Arise, and quit my sight; let the earth  
Hide thee!

*Shak.*

His reasons are as two grains of wheat *hid* in  
so bushels of chaff. *Shaksp. Merchant of Venice*.

Nile hears him knocking at his sev'nfold gates,  
And seeks his *bidden* spring, and fears his ne-  
phew's fates.

*Dryden.*

Thus the fire of gods and men below;  
What I have *bidden*, hope not thou to know.

*Dryden.*

The sev'ral parts lays *bidden* in the piece;  
Th' occasion but exerted that, or this.

*Dryden.*

Then for my corpse a homely grave provide,  
Which love and me from publick scorn may  
*hide*.

*Dryden.*

Seas *hid* with navies, chariots passing o'er  
The channel, on a bridge from shore to shore.

*Dryden.*

With what astonishment and veneration may we  
look into our own souls, where there are such *hid-*  
den stores of virtue and knowledge, such inexhaust-  
ible sources of perfection? *Addison*.—The crafty  
dog makes a much longer voyage than Ulysses,  
who in practice many more wiles, and *hides* him-  
self under a greater variety of shapes. *Addison*.—

Hell trembles at the sight, and *hides* its head  
In utmost darkness, while on earth each heart  
Is fill'd with peace.

*Rom.*

(2.) \* *To HIDE*. v. a. To lye *hid*; to be con-  
cealed.—A fox, hard run, begged of a country-  
man to help him to some *hiding* place. *L'Estrange*.

Our bolder talents in full view display'd;  
Your virtues open fairest in the shade:

Wied to disguise, in publick 'tis you *hide*,  
Where none distinguish 'twixt your shame and  
pride,

Weakness or delicacy.

*Pope.*

\* *HIDE AND SEEK*. n. s. A play in which some  
hide themselves, and another seeks them.—The  
boys and girls would venture to come and play  
at *hide and seek* in my hair. *Gulliver's Travels*.

\* *HIDEBOUND*. adj. [*hide* and *bound*.] 1. A  
horse is said to be *hidebound* when his skin sticks  
so hard to his ribs and back, that you cannot with  
your hand pull up or loosen the one from the other.  
It sometimes comes by poverty and bad keeping;  
at other times from over-riding, or a farfeit. *Bar-*

*rier's Dist.* 2. [In trees.] Being in the state in  
which the bark will not give way to the growth.  
—A root of a tree may be *hidebound*, but it will  
not keep open without somewhat put into it. *Bacon's Nat. Hist.*

Like stunted *hidebound* trees, that just have got  
Sufficient sap at once to bear and rot. *Swift*.

3. Marsh; untractable.—

And still the harsher and *hidebound*  
The damsels prove, become the fonder. *Hudib.*

4. Niggardly; penurious; parsimonious. *Angew.*  
*HIDEBOUNDNESS*. n. s. See *FARRIAR, PART*  
III, SECT. XIV.

\* *HIDEOUS*. adj. [*hideous*, Fr.] 1. Horrible;  
dreadful; shocking.—If he could have turned him-  
self to as many forms as Proteus, every form should  
have been made *hideous*. *Sidney*.—

Some monster in thy thoughts,  
Too *hideous* to be shewn.

*Shak. Othello*.

I fled, and cry'd out death!  
Hell trembled at the *hideous* name, and sigh'd  
From all her caves, and back resounded death.

*Milton*.

Her eyes grew stiffen'd, and with sulphur burn;  
Her *hideous* looks and hellish form return;

Her curling snakes with hissings fill the place,  
And open all the suries of her face.

*Dryden*.

2. It is commonly used of risible objects: the fol-  
lowing use is less authorized.—'Tis forced through  
the hiatuses at the bottom of the sea with such ve-  
hement force, that it puts the sea into the most horri-  
ble disorder, making it rage and roar with a most  
*hideous* and amazing noise. *Woodward's Natural*  
*History*. 3. It is used by Spenser in a sense not  
now retained; detestable.—

O *hideous* hanger of dominion!

*Spenser*.

\* *HIDEOUSLY*. adv. [from *hideous*.] Horri-  
bly; dreadfully; in a manner that shocks.—

I arm myself  
To welcome the condition of the time;  
Which cannot look more *hideously* on me,

Than I have drawn it in my fantasy. *Shaksp.*

—This, in the present application, is *hideously* pro-  
fane; but the sense is intelligible. *Collier's Defence*.

\* *HIDEOUSNESS*. n. s. [from *hideous*.] Hor-  
ribleness; dreadfulness; terror.

\* *HIDER*. n. s. [from the verb.] He that hides.  
*HIDRA*, a town of Africa, in Tunis.

\* *To HIE*. v. a. [*biegan*, Saxon.] 1. To hasten;  
to go in haste.—

When they had mark'd the changed skies,  
They wist their hour was spent; then each to  
rest him *hie*.

*Perry Queen*.

My will is even this,  
That presently you *hie* you home to bed.

Well, I will *hie*,

And so bestow these papers as you bade me.

*Shak.*

Some to the shores do fly,  
Some to the woods, or whither fear advis'd;

But running from, all to destruction *hie*.

*Daniel*.

The snake no sooner hiss'd,  
But virtue heard it, and away she *by'd*.

*Cromwell*.

Thither, full fraught with mischievous revenge,  
Accurs'd, and in a curst hour, he *bies*.

*Milton*.

Thus he advis'd me, on yon aged tree  
Hang up thy lute, and *hie* thee to the sea.

*Walker*.

The youth, returning to his mistress, *bies*.

*Dryd.*

2. It was anciently used with or without the reci-

procal pronoun. It is now almost obsolete in all its uses.—

Auster spy'd him;

Crud Auster thither spy'd him. *Cromwell.*

**MIELMAR**, a lake of Sweden in Sudermania, 30 miles long, and from 1 to 7 broad; 6 miles W. of Stockholm.

**HIENSOS**, a town of European Turkey in Macedonia, 33 miles SE of Saloniki.

**HIERACITES**, in church-history, Christian heretics in the 3d century: so called from their leader **HIERAX**, a philosopher of Egypt; who taught that Melchisedek was the Holy Ghost, denied the resurrection; and condemned marriage.

**HIERACIUM**, **HAWKWEED**; a genus of the polygamia equalis order, belonging to the syngenesia class of plants; and in the natural method ranking under the 40th order, *Compositæ*. The receptacle is naked, the calyx imbricated and ovate; the pappus simple and setose. The species are,

1. **HIERACIUM AURANTIACUM**, commonly called *Grim the taller*, has many oblong oval entire leaves crowning the root; an upright, single, hairy, and almost leafless stalk, a foot high, terminated by reddish orange-coloured flowers in a corymbus. These flowers have dark oval ash coloured calyces; whence the name. This is the only species cultivated in gardens. It is propagated by seeds, or parting the roots. The seed may be sown in autumn or spring. In June, when the plants are 1 or 3 inches high, they may be picked out and planted in beds, where they must be kept till the next autumn, and then transplanted where they are to remain.

2. **HIERACIUM FILIDELLA**, the *woolf-ear*, has blossoms red on the outside, and pale yellow within; the cups set thick with black hairs. The flowers open at 8 A. M. and close about 1 P. M. It grows commonly in dry pastures in England; it has a milky juice, but is less bitter and stringent than is usual with plants of that class. It is reckoned hurtful to sheep. An insect of the cochineal genus (*Coccus Palonicus*) is often found at the roots (*A3. Upsal. 1751*). Goats eat it; sheep are not fond of it; horses and swine refuse it.

3. **HIERACIUM UMBELLATUM** grows to the height of 3 feet, with an erect and firm stalk, terminated with an umbel of yellow flowers. It is a native of Scotland, and grows in rough stony places, but is not very common. The flowers are sometimes used for dying yarn of a fine yellow colour.

**HIERA** *PICTA*. See **PHARMACY**.

**HIERAPOLIS**, in ancient geography, a town of Phrygia, abounding in hot springs, and having its name from the number of its temples. There are coins exhibiting figures of various gods who had temples here. Of this place was Epictetus the Stoic philosopher. It is now called **PAMPONA**; and is situated near the Scamander, on a portion of Mount Meles, 6 miles from Laodicea. Its site appears at a distance as a white lofty cliff; and upon arriving at it, the view which it presents is so marvellous, that the description of it, to bear even a faint resemblance, ought to appear romantic. See Dr Chandler's *Travels in Asia Minor*, p. 229. See also **BANAYAN** and **PAMPONA**.

\* **HIERARCH**: *n. s.* [*αρχ* and *αγος*; *diverger*,

French] The chief of a sacred order.—

Angels, by imperial summons call'd,  
Forthwith from all the ends of heav'n appear'd,  
Under their *hierarchies* in orders bright. *Milton.*  
\* **HIERARCHICAL**, *adj.* [*hierarchie*, *Fr.*].  
Belonging to sacred or ecclesiastical government.

(1.) \* **HIERARCHY**, *n. s.* [*hierarchie*, *Fr.*] 1.  
A sacred government; rank or subordination of holy beings.—

Out of the *hierarchies* of angels them,  
The gentle Gabriel call'd be from the rest. *Par.*  
He rounds the air, and breaks the hymnic  
notes

In birds, heav'n's choristers, organick throngs  
Which, if they did not die, might seem to be  
A tenth rank in the heavenly *hierarch*. *Dante.*

Jeboah, from the summit of the sky,  
Environ'd with his winged *hierarch*,  
The world survey'd. *Keats.*

These the supreme king  
Exalted to such pow'r, and gave to rule,  
Each in his *hierarch*, the orders bright. *Milton.*

—The blessed of mortal wights, now question  
less the highest saint in the celestial *hierarch*,  
began to be so importuned, that a great part of the  
divine liturgy was addressed solely to her. *Howe.*  
*Paral. Par.* 2. Ecclesiastical establishment.—The  
presbytery had more sympathy with the discipline  
of Scotland than the *hierarch* of England. *Scott.*  
—While the old Levitical *hierarch* continued,  
it was part of the ministerial office to slay the sacri-  
fices. *Saunders.*—Consider what I have written, for  
regard for the church established under the *hierarch*  
of bishops. *Swift.*

(2.) **HIERARCHY**, (§ 1, *def.* 1.) Some of the  
rabbins reckon 4, others ten, orders or ranks of  
angels; and give them different names according  
to their supposed degrees of power and knowledge.

(3.) **HIERARCHY**, (§ 1, *def.* 2.) denotes the  
ordination of the clergy, ecclesiastical polity, or  
the constitution and government of the Christian  
church considered as a society.

(1.) **HIERES**, a town of France, in the dep. of  
Var and late prov. of Provence, seated in a fruitful  
country; but its harbour being choked up, it is now  
much decayed. In no other part of France is nature  
so uniformly beautiful. During a great part of the  
winter, the verdure is as fresh as in the spring;  
and in many gardens, greens may be gathered.  
The winters, however, have been sometimes very  
severe; particularly in 1766, 1768, and 1789. This  
town is the birth-place of M. de Mably, the celebrated  
French preacher. It is 11 miles E. of Toulon, and  
350 S. by E. of Paris. Lon. 6. 20. E. Lat. 43. 5. N.

(2.) **HIERES**, 4 islands of France, on the coast  
of Provence; called *Porquerolles*, *Portofino*, and  
*Bagueres*, which are inhabited, and *Tian*; which  
last is the largest and is capable of cultivation. Be-  
tween these and the continent, is the road of  
Hieres, which is so capacious and excellent, that  
it has afforded shelter for the largest squadrons,  
and no instance of a shipwreck ever occurred in it.  
It is defended by 3 forts.

**HIERKEN**, a town of Norway, in Drontheim.  
**HIERO** I. king of Syracuse succeeded his brother  
Gelon, A. A. C. 478. He made war against  
Theron, tyrant of Agrigentum and took Himacrus.

he gained ; crowns at the Olympic games by horse and chariot racing, for which he is celebrated by Pindar ; whose conversation, with that of other literati rendered him humane and liberal. He died A. A. C. 467.

**HiRO II, K. of Syracuse** was a descendant of Iphis, and was elected king A. A. C. 268. He went on war against the Romans for some time long with the Carthaginians ; but made peace, and continued ever after their firm ally. He was a relation of Archimedes ; and was a prince of great learning and virtue, and encouraged arts and commerce. He died A. A. C. 215.

**HiRO's Crown, in Hydrostatics.** Hiero II. being furnished a goldsmith with a quantity of gold to make a crown, suspected, upon seeing it, that he had been cheated, by his using more quantity of silver alloy than was necessary. He applied to Archimedes to discover the cheat without defacing the crown ; which he did in this experiment : He procured a ball of pure gold and another of silver, each exactly of the same weight with the crown : and judging that if crowns were of pure gold it would be of equal weight, and upon putting it in water, expel an equal quantity of the water with the golden ball ; if of silver, it would expel an equal quantity with the gold one ; but, if of an intermediate quality, the quantity of water expelled would be in exact proportion. Thus upon trial he found to be the case ; by comparing the quantities of water displaced, he discovered the exact proportions of gold and silver in the crown.

**HiROCLAS, a cruel persecutor of the Christians, and a violent promoter of the persecution under Dioclesian, flourished A. D. 302.** He wrote some books against the Christian religion, in which he pretends some inconsistencies in Holy Scriptures, and compares the miracles of the infamous Tyanus to those of our Saviour. He was refuted by Lactantius and Eusebius. The works of his were collected into one volume by bishop Pearson ; and published in 1654, with a learned dissertation prefixed.

**HiROCLAS, a Platonic philosopher of the 4th century, who taught at Alexandria, and was celebrated for his eloquence.** He wrote 7 books on Providence and Fate, dedicated to the philosopher Olympiodorus, who by his embassies did the emperor great services under Honorius and Theodosius II. But these books are lost, and we know them by the extracts in Photius. He wrote also a Commentary upon the golden verses of Pythagoras ; which is still extant, and has been several times published with those verses.

**HiROGLYPH.** } *n. f.* (*hieroglyph*, *Pr.*)  
**HiROGLYPHICS.** } *n. f.* sacred, and  
 to carve. . An emblem ; a figure by which a word was implied. *Hieroglyphics* were the first letters before the alphabet was invented. *Hieroglyphics* is the proper substantive, and *hieroglyphic* the adjective.—This *hieroglyphic* of the goddess was erected for parental affection, made for the protection of her young ones, when she was set on fire. *Brown's Vulgar Errors.* Amongst the Egyptians is the *hieroglyphic* of Mr. Wilkins's *Dedalus*.—The first writing was only the single pictures and

gravings of the things they would represent, which way of expression was afterwards called *hieroglyphic*. *Woodward*.—

Between the statues obelisks were plac'd,  
 And the learn'd walls with *hieroglyphics* grac'd.

*Pope.*

2. The art of writing in picture.—No brute can endure the taste of strong liquor, and consequently it is against all the rules of *hieroglyphics* to assign any animals as patrons of punch. *Swiss.*

(2.) **HiROGLYPHICS** were in use among the Egyptians, and that, as well in their writings as inscriptions ; being the figures of various animals, the parts of human bodies, and mechanical instruments. It was the custom to have the walls, doors, &c. of their temples, obelisks, &c. engraven with such figures. *Hieroglyphics* are properly emblems or signs of divine, sacred, or supernatural things ; by which they are distinguished from common symbols, which are signs of sensible and natural things. *Hermes Trismegistus* is commonly esteemed the inventor of *hieroglyphics* ; he first introduced them into the heathen theology, from whence they have been transplanted into the Jewish and Christian. Sacred things, says *Hippocrates*, should only be communicated to sacred persons. Hence the ancient Egyptians communicated to none but their kings and priests, and those who were to succeed to the priesthood and the crown, the secrets of nature, of their morality and history ; and this they did by a kind of cabbala, which, at the same time that it instructed them, only amused the rest of the people. Hence the use of *hieroglyphics*, or mystic figures, to veil their morality, politics, &c. from profane eyes. This author and many others do not keep to the precise character of a *hieroglyphic*, but apply it to profane as well as divine things. *Hieroglyphics* are a kind of real characters, which do not only denote, but in some measure express, the things. Thus, according to *Clement Alexandrianus*, (*Strom. v*) a lion is the *hieroglyphic* of strength and fortitude ; a bullock, of agriculture ; a horse, of liberty ; a sphinx, of subtilty, &c. Such is the opinion that has generally been embraced, both by ancient and modern writers, of the origin and use of *hieroglyphics*. It has been almost uniformly maintained, that they were invented by the Egyptian priests to conceal their wisdom from the knowledge of the vulgar ; but the late bishop Warburton has with much ingenuity and learning, endeavoured to show that this account is erroneous. He thinks, the first kind of *hieroglyphics* were mere pictures, because the most natural way of communicating our conceptions, by marks or figures, was by tracing out the images of things ; and this is verified in the case of the Mexicans, whose only method of writing their laws and history was by this picture writing. But the *hieroglyphics* invented by the Egyptians were an improvement on this rude and inconvenient essay towards writing, for they contrived to make them both pictures and characters. In order to effect this improvement, they were obliged to proceed gradually, by first making the principal circumstance of the subject stand for the whole ; as in the *hieroglyphics* of *Hurapollon*, which represent a bottle of two armies in array by

by two hands, one holding a shield and the other a bow: then putting the instrument of the thing, whether real or metaphorical, for the thing itself, as an eye and sceptre to represent a monarch, a ship and pilot the governor of the universe, &c.; and finally, by making one thing stand for or represent another, where their observations of nature or traditional superstitions led them to discover or imagine any resemblance: thus, the universe was designed by a serpent in a circle, whose variegated spots denoted the stars; and a man who had nobly surmounted his misfortunes was represented by the skin of the hyena, because this was supposed to furnish an invulnerable defence in battle. The Chinese writing, he observes, was the next kind of improvement in the use of hieroglyphics. The Egyptians joined characteristic marks to images; the Chinese threw out the images and retained only the contracted marks, and from these marks proceeded letters. The general concurrence of different people in this method of recording their thoughts can never be supposed to be the effect of imitation, sinister views, or chance; but must be considered as the uniform voice of nature speaking to the rude conceptions of mankind: for not only the Chinese of the East, the Mexicans of the West, and the Egyptians of the South, but the Scythians likewise of the North, and the intermediate inhabitants of the earth, viz the Indians, Phœnicians, Ethiopians, &c. used the same way of writing by picture and hieroglyphic. He farther shows, that the several species of hieroglyphic writing took their rise from nature and necessity, and not from choice and artifice, by tracing at large the origin and progress of the art of speech. He proceeds to show how in process of time the Egyptian hieroglyphics came to be employed for the vehicle of mystery. They used their hieroglyphics two ways; the one more simple, by putting the part for the whole, which was the *curiologic* hieroglyphic; and the other more artificial, by putting one thing of resembling qualities for another, called the *trophic hieroglyphic*: thus the moon was sometimes represented by a half circle and sometimes by a cynocephalus. They employed their proper hieroglyphics to record openly and plainly their laws, policies, public morals, and history, and all kinds of civil matters: this is evident from their obelisks, which were full of hieroglyphic characters, designed to record singular events, memorable actions, and new inventions; and also from the celebrated inscription on the temple of Minerva at Saïs, where an infant, an old man, a hawk, a fish, and a river horse, expressed this moral sentence: "All you who come into the world and go out of it, know this, that the gods hate impudence." However, the tropical hieroglyphics, which were employed to divulge, gradually produced symbols which were designed to secrete or conceal: thus Egypt was sometimes expressed by the crocodile, sometimes by a burning censer with a heart upon it; where the simplicity of the first representation and the abstruseness of the latter show, that the one was a tropical hieroglyphic for communication, and the other a tropical symbol invented for secrecy. Enigmatic symbols were afterwards formed by the assemblage

of different things, or of their properties, which were less known; and though they might have been intelligible at first, yet when the art of writing was invented, hieroglyphics were more generally disused; the people forgot the significations of them; and the priests, retaining and cultivating the knowledge of them because they were the repositories of their learning and history, at last applied them to the purpose of preserving the secrets of their religion. Sir John Marsham thinks that symbols were the original of animal worship in Egypt: (Cas. Chæm. p. 38.) because in the hieroglyphics was recorded the history of their greatest deities, their kings, and law-givers, represented by animals and other creatures. The symbol of a god was well known and familiar to his worshippers, by means of the popular paintings and engravings on their temples and other sacred monuments; so that the symbol presenting the deity, the god, and that idea exciting sentiments of religion, it was natural for them, in their address to any particular god, to turn to his representative mark or symbol; especially when we consider that the Egyptian priests feigned a divine origin for hieroglyphic characters, in order to excite the veneration of the people for them. It would of course bring on a relative devotion to these symbolic figures, which, when it came to be paid to the living animal, would soon terminate in an ultimate worship. Another consequence of the sacredness of the hieroglyphic characters was, that it disposed the more superstitious to engrave them on gems, and wear them as amulets or charms. This magical abuse seems to have been much earlier than the establishment of the worship of the god Serapis, which happened under the Ptolemies, and was first brought to general knowledge of the world by certain Christian heretics and natives of Egypt, who had mixed a number of Pagan superstitions with Christianity. These gems, called *abraxas*, frequently to be met with in the cabinets of curious, and are engraved with all kinds of hieroglyphic characters. To these *abraxas* belong the *talismans*. See *ABRAXAS*.

**HIEROGLYPHICAL.** *HIEROGLYPHICUS* adj. [*hieroglyphicus*, French; from the *hieroglyphos*.] Charged with hieroglyphical sculpture. In this place stands a stately *hieroglyphical* obelisk of Theban marble. *Sandys's Travels*. v. Ecclesiastical; expressive of some meaning beyond what immediately appears.—

Tu' Egyptian serpent figures time,  
And, knpp'd, returns into his prime;  
If my affection thou would'st win,  
First cast thy *hieroglyphical* skin. *Chaucer*

—The original of the conceit was probably *hieroglyphical*, which after became mythological, by a process of tradition, stole into a *hieroglyphical*, which was but partly true in its morality. *Southey's Fugio Errors*.

**HIEROGLYPHICALLY.** *adv.* [from *hieroglyphical*.] Emblematically.—Others have been emblematically and *hieroglyphically* as the Egyptians, and the phoenix was the hieroglyphical of the sun. *Brown's Fugio Errors*.

**HIEROGRAMMATEI,** } [*hierogrammatæ*,  
**HIEROGRAMMATISTS,** } L. E. July 1801

There were an order of priests among the ancient Egyptians, who presided over religion and learning. They had the care of the hieroglyphics, and were the expositors of religious doctrines. They were regarded as a kind of prophets; and it is said, that one of them predicted to an Egyptian king, that an Israelite, (meaning Moses,) eminent by his qualifications and achievements, would depose the Egyptian monarchy. The hierogram-mats were always near the king, to assist him with their information and counsels. The better to fit him for this, they made use of the knowledge they had acquired in the motions of the celestial spheres, as well as the writings of their predecessors, wherein their function and duties were observed. They were exempted from all civil employments, were reputed the first persons in the empire next the king, and bore a kind of sceptre, the form of a ploughshare. After Egypt became a Roman province, they sunk into neglect.

\* **HIEROGRAPHY**, *n. f.* [*hieros* and *grapho*.] Hierarchy.

**HIEROLOGY**, *n. f.* [*hieros*, sacred, and *logos*, discourse,] a discourse on sacred things. Among the Jews and Greeks it was used for the royal benediction.

**HIEROMANCY**, } [*hieromantis*,] in antiquity,  
**HIEROMANTIA**, } that species of divination which predicted future events from observing the things offered in sacrifice. See **DIVINATION** and **SACRIFICE**.

**HIEROMENIA**, in ancient Greek chronology, the month in which the Nemean games were celebrated, called also **BOROROMION**.

(1.) **HIEROMNEMON**, [*Gr.* from *hieros*, sacred, and *mnemo*, a remembrancer,] an officer in the ancient Greek church, whose principal function was to stand behind the patriarch at the sacraments, exorcisms, &c. and show him the prayers, psalms, &c. which he was to rehearse. He also clothed the patriarch in his pontifical robes, and assigned places of all those who had a right to be admitted to him when seated on his throne, as the master of the ceremonies now does to the pope.

(2.) **HIEROMNEMON**, in Grecian antiquity, a state chosen by lot, and sent to the great council of the Amphictyons, to take care of what concerned religion. The hieromnemones were regarded more honourable than the other members of the assembly, the general meetings of which were always summoned by them, and their names were annexed to the decrees made by that council.

(3.) **HIEROMNEMON** was also the name of a stone used by the ancient Greeks in divination, but no description of it is extant.

**HIERONYMITES**, the hermits of St Jerome, and also **JEONONYMITES**.

**HIERONYMUS**, *ST.* See **JEROME**.

(1.) \* **HIEROPHANT**, *n. f.* [*hieros*, holy, and *phantos*, I appear,] One who teaches rules of religion; a priest.—Herein the counsels of poets, and the crafts of their heads, priests and hierophants, abundantly gratified the fancies of the people. *Hale*.

(2.) **HIEROPHANT**, } [*from hieros*, holy, and *phantos*,  
**HIEROPHANTIA**, or } I appear,] A priest among  
**HIEROPHANTES**, } the Athenians; who was  
properly the chief person that officiated in the **EROMANTIA**. This office was first executed by Eu-

molpus, and continued in his family for near 1200 years, though when any person was appointed to this dignity, he was required always to live in celibacy. St Jerome says, that the hierophantes extinguished the fire of lust by drinking cicuta or the juice of hemlock, or by making themselves eunuchs. Apollodorus observes, that the hierophantes instructed persons initiated into their religion in the mysteries and duties thereof, and hence he derived his name: for the same reason he was called *prophetas*, the prophet. He had officers under him to assist him, who were also called *prophetes* and *exeges*, i. e. explainers of divine things. They dressed and adorned the statues of the gods, and bore them in processions and solemn ceremonies.

**HIEROPHYLAX**, an officer in the Greek church, who was keeper of the holy utensils, vestments, &c. answering to the vestry keeper in the church of England.

**HIEROSCOPIA**, } [*from hieros*, sacred, and *scopo*,  
**HIEROSCOPY**, } *scopos*, to view,] a species of divination by inspecting the victims, the same with **HIEROMANCY**.

**HIERTING**, or **JETTING**, a sea port town of Denmark, in N. Jutland, at the mouth of the Warde, with a good harbour: 22 miles NW. of Ripen. Lon. 8. 22. E. Lat. 55. 29. N.

**HIESMES**, or **EXMAS**. See **EXMAS**.

\* **To HIGGLE**, *v. n.* [*of uncertain etymology*; probably corrupted from *biggle*.] 1. To chaffer; to be penurious in a bargain.—In good offices and due retributions we may not be pinching and niggardly: it argues an ignoble mind, where we have wronged, to *biggle* and dodge in the amends. *Hale*.—

Bafe thou art:

To *biggle* thus for a few blows,  
To gain thy knight an op'lent spouse. *Hudibras*.—Why all this *biggling* with thy friend about such a paltry sum? Does this become the generosity of the noble and rich John Bull? *Arbutnot*. 2. To go selling provisions from door to door. This seems to be the original meaning, such provisions being cut into small quantities.

\* **HIGGLEDY-PIGGLEDY**, *adv.* A cant word corrupted from *biggle*, which denotes any confused mass, as bigglers carry a bundle of provisions together.

\* **HIGGLER**, *n. f.* [*from biggle*.] One who sells provisions by retail.

(1.) \* **HIGH**, *adj.* [*Arab*, Saxon; *hoog*, Dutch.] 1. Long upwards; rising above from the surface, or from the centre: opposed to *deep* or long *downward*.—Their Andes, or mountains, were far *higher* than those with us; whereby the remnants of the generation of men were, in such a particular deluge, saved. *Bacon*.—The *higher* parts of the earth being continually spending, and the lower continually gaining, they must of necessity at length come to an equality. *Burnet's Theory*. 2. Elevated in place; raised aloft: opposed to *low*.

They that stand *high* have many blasts to shake them,

And, if they fall, they dash themselves to pieces.

*Shak. Richard III.*

*High* o'er their heads a mould'ring rock is plac'd,

That

That promises a fall and shaken at ev'ry blast.

*Dryden.*

—Reason elevates our thoughts as *high* as the stars, and leads us through the vast space of this mighty fabric; yet it comes far short of the real extent of even corporeal being. *Locke.* 3. Exalted in nature.—The *highest* faculty of the soul. *Baxter.*

4. Elevated in rank or condition: as, *high* priest.

He wooes both *high* and low, both rich and poor.

*Shak.*

O mortals! blind in fate, who never know

To bear *high* fortune, or endure the low. *Dryd.*

5. Exalted in sentiment.—

Solomon liv'd at ease, nor aim'd beyond

*Higher* design than to enjoy his state. *Milton.*

6. Difficult; abstruse.—

They meet to hear, and answer such *high* things.

*Shak.*

7. Boastful; ostentatious.—His forces, after all the *high* discourses, amounted really but to eighteen hundred foot. *Clarendon.* 8. Arrogant; proud;

lofty.—The governor made himself merry with his *high* and threatening language, and sent him word he would neither give nor receive quarter. *Clarendon.* 9. Severe; oppressive.—When there

appeareth on either side an *high* hand, violent prosecution, cunning advantages taken, and combination, then is the virtue of a judge seen. *Bacon.*

10. Noble; illustrious.—Trust me, I am exceeding weary.—I had thought, weariness durst not have attacked so *high* blood.—It doth me, though it discolours the complexion of my greatness to

acknowledge it. *Shak.* 11. Violent; tempestuous; loud.—Applied to the wind.—

More ships in calms on a deceitful coast,

Or unseen rocks, than in *high* storms are lost.

*Denham.*

—Spiders cannot weave their nets in a *high* wind.

*Duppa.*—

At length the winds are rais'd, the storm blows *high*;

Be it your care, my friends, to keep it up

In its full fury. *Addison's Cato.*

12. Tumultuous; turbulent; ungovernable.—

Not only tears

Rain'd at their eyes, but *high* winds worse within,

Began to rise; *high* passions, anger,

Mistrust, suspicion, discord, hate, shook sore

Their inward state of mind. *Milton.*

Can heav'nly minds such *high* resentment show,

Or exercise their spite in human woe? *Dryden.*

13. Full; complete: apphed to time; now used only in cursory speech.—

*High* time now 'gan it wax for Una fair,

To think of those her captive parents dear.

*Fairy Queen.*

Sweet warrior, when shall I have peace with you?

*High* time it is this war now ended were. *Spens.*

—It was *high* time to do so; for it was now certain, that forces were already upon their march towards the West. *Clarendon.*—It was *high* time for the lords to look about them. *Clarendon.* 14.

Rais'd to any great degree: as, *high* pleasure; *high* luxury; a *high* performance; a *high* colour.—

Solomon liv'd at ease, and full

Of honour, wealth, *high* fare. *Milton.*

—*High* sauces and spices are fetch'd from the In-

dies. *Baker.* 15. Advancing in latitude from

line.—They are forced to take their course either *high* to the North, or low to the South. *Alb.*

*Description of the World.* 16. At the most *high* state; in the meridian, as, by the sun it is *high* noon: whence probably the foregoing expression

*high* time.—It is, yet *high* day, neither is it that the cattle should be gathered. *Gen. xix.*

17. Far advanced into antiquity.—The *high* observation of the several days of the week is

*high*, and as old as the ancient Egyptians, who

med the same according to the seven planets. *Brown.* 18. Dear; exorbitant in price.—It

must be good at so *high* a rate, they know it may be safe at a cheaper. *South.* 19. Capital

great; opposed to little: as, *high* treason, in

position to *petty*.

(1.) *HIGH*, in music, is sometimes used in

the same sense with *loud*, and sometimes in the

sense with *acute*.

(2.) \* *HIGH*, *n. f.* High place; elevation; superior region: only used with *from* and *on*.—

Which when the king of gods beheld *from* *high*

He sigh'd. *Dryd.*

(3.) \* *On HIGH*. Aloft; above; into superi-  
regions.—

Wide is the fronting gate, and rais'd on *high*

With adamant line columns threats the sky. *Edm.*

(4.) \* *HIGH* is much used in composition of  
variety of meaning.

(5.) *HIGH*. See DICTIONARY, § 4.

(6—7.) *HIGHAM*, the name of 7 villages, in  
counties of Derby, Kent, Leicester, Norfolk,

Somerset, Suffolk, and York.

(8.) *HIGHAM*, *COLD*, in Northamptonshire.

(9.) *HIGHAM* *FERRERS*, a borough of Northamptonshire. It is seated on an ascent, on

river Nen, and sends a member to parliament.

had formerly a castle, now in ruins; and is

miles ESE. of Coventry, and 66 NNW. of London. Lon. O. 40. W. Lat. 52. 19. N.

\* *HIGH-BLEST*. *adj.* Supremely happy.—

The good which we enjoy from heav'n's

ascends;

But that from us ought should ascend to heav'n

So prevalent, as to concern the mind

Of God *high-blest*, or to incline his will,

Hard to belief may seem. *Miln.*

\* *HIGH-BLOWN*. Swelled much with wind

much inflated.—

I have ventur'd,

Like little wanton boys that swim on bladders

These many Summers on a sea of glory;

But far beyond my depth: my *high* blows

At length broke under me, and now has left me

Wearied, and old with service, to the mercy

Of a rude stream, that must for ever hide me

From the view of men. *Shak.*

\* *HIGH-BORN*. Of noble extraction.—

Cast round your eyes

Upon the *high-born* beauties of the court;

There chuse some worthy partner of your bed.

*Rowe.*

\* *HIGH-BUILT*. *adj.* 1. Of lofty stature.

I know him by his stride,

The giant Harapha of Gath; his look

Haughty as is his pile, *high-built* and proud.

*Miln.*

2. Covered

breed with lofty buildings.—

In dreadful wars

*high-built* elephant his castle rears,

...down on man below, and strikes the stars.

*Creech.*

*HIGH-COLOURED.* Having a deep or glaring  
—A fever in a rancid oily blood produces  
black fever, with *high-coloured* urine, and  
on the skin. *Floyer.*

*HIGH-DESIGNING.* Having great schemes.—  
His warlike mind, his soul devoid of fear,  
*high-designing* thoughts were figur'd there.

*Dryden.*

*HIGH DUTCH* is the German tongue in its  
purity, as it is spoken at Misnia, &c.

*HIGH FED.* Pampered.—A favourite mule,  
and in the pride of flesh and mettle,  
will be bragging of his family. *L'Estrange.*

*HIGH-FLAMING.* Throwing the flame to a  
height.—

...sacrifices of bulls to Neptune slain,  
*high-flaming*, please the monarch of the main.

*Pope.*

*HIGH-FLIER.* *n. f.* One that carries his opi-  
nions to extravagance.—She openly professeth her-  
self a *high-flier*; and it is not improbable she  
will be a Papist at heart. *Swift.*

*HIGH-FLOWN.* *adj.* [*high* and *flown*, from *fly*.]  
...d, proud.—

...his stiff-neck'd pride nor art nor force can  
bend,

*high-flown* hopes to Reason's lure descend.

*Denham.*

...; extravagant.—This fable is a *high-flown*  
tale upon the miseries of marriage. *L'Estr.*

*HIGH-FLYING.* Extravagant in claims or o-  
pinions.—

Clip the wings

...*high-flying* arbitrary kings. *Dryden.*

*HIGHGATE,* a large village in Middlesex,  
on a hill E. of that of Hampstead; on which  
these two hills have been poetically called

*the hills.* Here lord chief baron Cholmonde-  
ley had a free school in 1561, which was enlarged

by Edwin Sandys, bishop of London,  
who added a chapel to it, which is a chapel of

the two parishes of St Pancras and Horn-  
church. Highgate is 4 miles N. by W. of London.

*HIGHGATE,* a township of Vermont, in  
Franklin county.

*HIGHGATE,* a village in Georgia, 4 miles  
from Savannah.

*HIGH HEAPED.* *adj.* 1. Covered with high  
piles.—

...the plenteous board *high heap'd* with cakes  
and wine,

And o'er the foaming bowl the laughing wine.

*Pope.*

...and into high piles.—

...I saw myself the vast unnumber'd store  
...*high-heap'd* amidst the regal dome.

*Pope.*

*HIGH-HEELED.* Having the heel of the shoe  
raised.—

...these embroider'd *high heel'd* shoes,  
...all be caught as in a snare,

*Swift.*

*HIGH-HUNG.* Hung aloft.—

...By the *high hung* taper's light,  
...XL PART I.

I could discern his cheeks were glowing red. *Dryden.*

*Dryden.*

(1.) \* *HIGHLAND.* *n. f.* [*high* and *land*.]

Mountainous region.—

The wond'ring moon

Beholds her brother's steeds beneath her own;

The *highlands* smok'd, cleft by the piercing rays.

*Addison.*

—Ladies in the *highlands* of Scotland use this dis-  
cipline to their children in the midst of Winter,  
and find that cold water does them no harm.  
*Locke.*

(2.) *HIGHLAND, adj.* Of or belonging to the  
Highlands.

(3.) *HIGHLANDS.* See SCOTLAND.

(4.) *HIGHLANDS,* a mountainous country of  
New York, on the banks of Hudson's river, be-  
tween 40 and 60 miles N. of New York city.

(1.) \* *HIGHLANDER.* *n. f.* [from *highland*.]  
An inhabitant of mountains; mountaineer.—His  
cabinet council of *highlanders*. *Addison.*

(2.) *HIGHLANDERS,* a general appellation for  
the inhabitants of the mountainous parts of any  
country. In Britain, the name is appropriated to  
the inhabitants of the mountainous parts of Scot-  
land, to the N. and NW. including those of the  
Hebrides. They are a branch of the ancient CELTS,  
and are undoubtedly the descendants of the first in-  
habitants of Britain, as appears from the many mo-  
numents of their language, still retained in the most  
ancient names of places in all parts of the island.  
The *Highlanders*, or, as they are often termed by  
ancient authors, the CALEDONIANS, were always  
a brave, warlike, and hardy race of people; and,  
in the remotest times, seem to have possessed a de-  
gree of refinement in sentiments and manners then  
unknown to the other nations that surrounded  
them. This appears not only from their own tra-  
ditions and poems, but also from the testimony of  
many ancient authors. This civilization was prob-  
ably owing in a great measure to the order of the  
bards, or DRUIDS, and some other institutions pe-  
culiar to this people. The ancient *Highlanders* li-  
ved in the hunting state till some time after the e-  
ra of Fingal, who was one of their kings towards  
the close of the 3d century. For some ages after  
that period, they turned their chief attention to the  
pastoral life, which afforded a less precarious sub-  
sistence. Till of late, agriculture in most parts of  
the *Highlands* made little progress. The *High-*  
*landers* always had a king, and enjoyed a govern-  
ment of their own, till Kenneth II. having subdu-  
ed the Pictish kingdom, in 845, transferred thither  
the seat of royalty. This event proved very unfa-  
vourable to the virtues of the *Highlanders*, which  
from this period began to decline. The country,  
no longer awed by the presence of the sovereign,  
fell into anarchy. The chieftains began to extend  
their authority, to form factions, and to foment  
divisions and feuds between contending clans.  
The laws were either too feeble to bind them, or  
too remote to take notice of them. Hence sprung all  
these evils which long disgraced the country, and  
disturbed the peace of its inhabitants. Robbery  
or plunder, provided it was committed on any one  
of an adverse clan, was countenanced; and their  
reprisals on one another were perpetual. Thus  
quarrels were handed down from one generation

On another, and the whole clan were bound in honour to espouse the cause of every individual that belonged to it. The genius of the people was thus greatly altered; and the Highlanders of a few ages back were almost as remarkable for their irregular and disorderly way of life, as their predecessors had been for civilization and virtue. It is from not attending to the distinction between the ancient Highlanders and their posterity in later times, that many have doubted the existence of those exalted virtues ascribed by Ossian to the more ancient inhabitants of the country. But now that the power of the chieftains is again abolished, law established, and property secured, the genius of the people (where it is not hindered by some other extraneous cause) begins again to show itself in its genuine colours; and many of their ancient virtues begin to shine with conspicuous lustre. Justice, generosity, honesty, friendship, peace, and love, are perhaps no where more cultivated than among this people. But one of the strongest features, which marked the character of the Highlanders in every age, was their hospitality and benevolence to strangers. At night the traveller was always sure to find a hearty welcome in whatever house he should go to; and the host thought himself happier in giving the entertainment than the guest in receiving it. Even with regard to their enemies, the laws of hospitality were observed with the most sacred regard. They who fought against each other, in the day, could join in the night feast, and even sleep together, in the same house. From the same principle, they were, in doubtful cases, so faithful to their trust, that they rarely betrayed any confidence reposed in them. A promise they thought as binding as an oath, and held it equally inviolable and sacred. The Caledonians in all ages have been much addicted to poetry and music. The poems of Ossian, so universally repeated, and so highly esteemed by every Highlander, are a strong proof of the early proficiency of this people in the poetical art. Even at this day, notwithstanding the many disadvantages they labour under, the most illiterate of either sex discover frequently a genius for poetry, which often breaks forth in the most natural and simple strains, when love, grief, joy, or any other subject of song, demands it. Wherever their circumstances are so easy as to allow them any respite from toil, or any cheerfulness of spirits, a good portion of their time, especially of the winter nights, is still devoted to the song and tale. This last species of composition is chiefly of the novel kind, and is handed down by tradition like their poems. It was the work of the bards; and proved, while they existed, no contemptible entertainment. But since the extinction of that order, both the Gaelic poems and tales are in a great measure either lost or adulterated.—The genius and character of the Gaelic poetry is well known. It is tender, simple, beautiful, and sublime. Among the ancient Highlanders, the harp was the chief instrument of music. It suited the mildness of their manners, and was well adapted to the peace and quiet which they enjoyed under their own kings. In a later period, however, when the constant quarrels of their chiefs, and the endless feuds of contending

clans, turned all their thoughts to war, it ceased to give place to the bag pipe, an instrument altogether of the martial kind, and therefore suited to the state of the country at that time. Ever since the cause which had brought this instrument in vogue has ceased to operate, the attention to it has been on the decline; so that the harp, with very little encouragement, might again assume the seat from which it was expelled.—The harp, and especially the oldest, of the Highland music, having been composed to the harp, of a soft, tender, and elegiac cast, as best suited to the genius of that instrument. These pieces are generally expressive of the passions of love and grief. Other pieces, which were composed in times of war, and adapted to a different instrument, altogether bold and martial. And many are of a sprightly and cheerful cast, the offspring of merriment and the sport of fancy in the seasons of festivity. Many of these last are of the chorus kind; and sung in almost all the exercises in which a number of people are engaged, such as rowing, reeling, &c. The time of these pieces is adapted to the exercises to which they are respectively sung. They greatly forward the work, and vivate the labour. The particular music, which is generally used by the Highlanders in their dances, is well known by the name of *Strathspey reels*. The language of the Highlanders is still the Gaelic, which, with many of their customs and manners, has been secured to them by their mountain fastnesses, amidst the many revolutions which the rest of the island has undergone in so long a course of ages. That it has been formerly a good deal cultivated, appears from the style of its poems and tales, and from several ancient MSS. that come down to the present times. To the Gaelic has a forbidding aspect, on account of the number of its quiescent consonants, (which are retained to mark the derivation of words and variations in case and tense,) but its sound is constantly musical and harmonious, and its expression strong and masculine. (See GALLIC, § 2.) Highlanders have begun of late years to apply to learning, agriculture, and especially to commerce, for which their country, every where intersected with arms of the sea, is peculiarly favourable. Cattle is the chief staple of the country; but it produces more grain than would supply its inhabitants, if so much of it were not consumed in whisky. That article, however, is thought by physicians to be necessary for the health of the natives, when taken in moderation, on account of the coldness of the climate and the lowness of their stature. The Highlanders are beginning to avail themselves of their mines, woods, wool, and fisheries; and a vigorous application, with due encouragement from government, may become a prosperous and useful people. They are of a quick and penetrating genius, strongly tinged with a thirst for knowledge, which disposes them to learn any thing very readily. They are active, persevering, industrious, and economical. They are brave, bold and adventurous, which qualifies them for being excellent seamen and soldiers. They are generally of a middle size, rather above it than otherwise; their eyes are lively, their features distinct.

ished, and their persons strong and well made. Their countenances are open and ingenuous, and their tempers frank and communicative.

**HIGHLY.** *adv.* [from *high*.] 1. With elevation as to place and situation; aloft. 2. In a high degree.—Whatever expedients can allay heats, which break us into different factions, are but be useful to the publick, and *highly* to its safety. *Addison*.—It cannot but be *highly* requisite for us to enliven our faith, by dwelling on the same considerations. *Atterbury*. *moderately*; arrogantly; ambitiously—

What thou wouldst *highly*,  
 thou wouldst holily; wouldst not play false,  
 yet wouldst wrongly win. *Shak.*

Behold them; with estimation.—Every man among you, not to think of himself more than he ought to think. *Rom. xii. 3.*

**HIGH-METTLED** Proud or ardent of spirit. It is not in these to keep a stiff rein on a wild Pegasus; and takes care not to surfeit as he had done on other heads, by an overabundance. *Garth*.

**HIGH-MINDED.** Proud; arrogant.—  
 My breast I'll burst with straining of my courage,

I will chastise this *high-minded* trumpet. *Shak.*

Mark of unbelief they were broken off, and standest by faith; be not *high-minded*, but low. *1st Cor. xi. 10.*

**HIGHMORE, Joseph, Esq.** an eminent painter, born in London, June 13, 1691, the son of Edward Highmore, coal-merchant. He had an early and strong inclination to painting, and, wishing to gratify him, made a proposal to his uncle, who was serjeant painter to king William III. But this failing, he was articled as an attorney, in 1707; but so much against his inclination, that in 3 years he resolved to imitate his natural disposition to his favourite art; and employed his leisure hours in designing, and studying geometry, perspective, architecture, anatomy, without any instructors except himself. By these exertions, he soon arrived at perfection in his favourite art, that he painted pictures which were not only valued in his own time, but are now the objects of emulation to painters. On the institution of the Academy of painting, sculpture, &c. in London, 1713, he was elected one of the professors. In 1714 he published in 4to. "A critical examination of those two Paintings (by Rubens) on the subject of the Banqueting house at Whitehall, in which Architecture is introduced, so far as relates to perspective; together with the Discussion of a question which has been the Subject of Debate among Painters:—In the solution of this question, it is shewn that Rubens and other great painters are mistaken in the practice, and Mr Kirby and others in the theory. And in vol. 17th of the *Transactions*, he animadverted (anonymously) on Kirby's unwarrantable treatment of Mr Highmore, and detected his errors, even when he exults in his superior science. Mr Highmore, in a large number of 46 years, painted many portraits, of several of which have been engraved. In the historical picture, which was then much less cultivated than

it is at present, we shall only mention *Negor and Ishmael*, a present to the Foundling hospital: *The good Samaritan*; *The finding of Moses*, purchased at his sale by general Lister: *The Harlequin family*, as described in *Clarissa*, now in the possession of T. W. Payler, Esq. *Clarissa* herself; *The Graves unravelling Nature*, drawn by memory from Rubens: *The Clementina of Grandison*, and the queen mother of Edward IV. with her younger son &c. in Westminster-abbey; in the possession of his son. He was the author of various publications which were well received; but his most capital work was his *Praëfix and Perspective, on the principles of Dr Brook Taylor*, &c. in one vol. 4to. 1763. This not only evinced his scientific knowledge of the subject, but by its perspicuity, removed the only objection that can be made to the system of Dr Taylor. His *Epistle to an eminent Painter*, published in the *Genl. Mag.* for 1772, shows that his talents were by no means impaired at the age of 86. Indeed he retained them to the last, and had even strength and spirit sufficient to enable him to ride out daily on horseback the summer before he died. A strong constitution, habitual temperance, and constant attention to his health, in youth as well as in age, preserved his faculties to his 88th year, when he died March 3d, 1780. He was interred in Canterbury cathedral, leaving one son, Anthony, educated in his own profession; and a daughter. His abilities as a painter appear in his works, which are much and justly admired. His tints, like those of Rubens and Vandyck, instead of being impaired, are improved by time, which some of them have now withstood above 60 years. His idea of beauty, when he indulged his fancy, was of the highest kind; and his knowledge of perspective gave him great advantages in family pieces, of which he painted more than any one of his time. He could take a likeness by memory as well as by a sitting, as appears by his picture of the duke of Lorraine (afterwards emperor), which Faber engraved; and those of king George II. (in York assembly-room); queen Caroline, the two Miss Gunnings, &c. Mr Browne, the poet, was his friend.

(2.) **HIGHMORE, Nathaniel**, an eminent English anatomist, born at Fordingbridge, Hants, in 1613. He was the first in England who wrote a systematical treatise on the structure of the human body. He wrote, 1. *Corporis humani disquisitione Anatomica*: 2. *The History of Generation*: 3. *De Passione Hystrica*. He died in 1684, aged 71.

\* **HIGHMOST.** *adj.* [An irregular word.] Highest; topmost.—

Now is the sun upon the *highmost* hill  
 Of this day's journey. *Shak.*

(1.) \* **HIGHNESS.** *n. s.* [from *high*.] 1. Elevation above the surface; altitude; loftiness. 2. The title of princes, anciently of kings.—

Most royal majesty,  
 I crave no more than that your *highness* offer'd. *Shak.*

How long in vain had nature striv'd to frame  
 A perfect princess, ere her *highness* came? *Waller.*

—Beauty and greatness are eminently joined in your royal *highness*. *Dryden*. 3. Dignity of nature; supremacy.—Destruction from God was a terror

your to me, and by reason of his *highness* I could not endure. *Job*, xxi. 23.

(2.) **HIGHNESS**, (*h* 1 *def* 2.) The kings of England and Spain had formerly no other title but that of *highness*; the first till the time of James I. and the second till that of Charles V. The petty princes of Italy began first to be complimented with this title in 1630. In France, the duke of Orleans assumed the title of *royal highness* in 1632, to distinguish himself from the other princes. The princes of the blood in England are each distinguished in the same way.

**HIGH OPERATION**, in surgery, a method of extracting the stone; thus called, because the stone was taken out at the upper part of the bladder, above the pubis. This operation is now, very properly, superseded by one much safer and more successful. See **SURGERY**.

**HIGH PLACES**, were eminences on which the heathens used to worship their gods, chosen for that purpose as being supposed to be nearer heaven, their constant residence. The Jews are frequently blamed for their attachment to high places, after the manner of the Gentiles; though their *profane* were frequently upon mountains with groves planted about them. Where high places are reprobated in scripture, therefore, we should understand them as abused and prostituted to idolatrous purposes. Before the temple was built, there was indeed nothing in the high places very contrary to the law, provided God only was adored there, and that no incense or victims were offered to idols. Under the judges they seem to have been tolerated; and Samuel offered sacrifices in several places besides the tabernacle, where the ark was not present. Even in David's time, they sacrificed to the Lord at Shilo, Jerusalem, and Gibeon; but after the temple was built, and a place prepared for the fixed settlement of the ark, it was no more allowed, to sacrifice out of Jerusalem. Solomon, in the beginning of his reign, went a pilgrimage to Gibeon; but from that time we see no lawful sacrifices offered out of the temple.

**HIGH-PRIEST**. See **PONTIFEX**, and **PRIEST**.

• **HIGH-PRINCIPLED**. Extravagant in notions of politicks.—This seems to be the political creed of all the *high-principled* men I have met with. *Swift*.

• **HIGH-RED**. Deeply red.—Oil of turpentine, though clear as water, being digested upon the purely white sugar of lead, has in a short time afforded a *high-red* tincture. *Boyle on Colours*.

• **HIGH-SEASONED**. Piquant to the palate.—Be sparing also of salt in the seasoning of all his victuals, and use him not to *high-seasoned* meats. *Locke*.

• **HIGH SIGHTED**. Always looking upwards.

Let *high sighted* tyranny range on,

• Till each man drop by lottery. *Shak.*

• **HIGH-SPIRITED**. Bold; daring; insolent.

• **HIGH-STOMACHED**. Obstinate; lofty.—

*High-stomach'd* are they both, and full of ire;  
In rage, deaf as the sea, hasty as fire. *Shak.*

• **HIGHT**. [This an imperfect verb, used only in the preterite tense with a passive signification: *beton*, to call, Saxon; *besen*, to be called, German.] 1. Was named; was called.—

The city of the great king *hight* it well,

Wherein eternal peace and happiness doth dwell.

Within this homestead liv'd without a peer

For crowing loud, the noble Chanticleer,  
So *hight* her cock. *Dryden's N. & T.*

2. It is sometimes used as a participle passive; named. It is now obsolete, except in lesque writings.—

Amongst the rest a good old woman was  
*Hight* mother Hubbard. *Hubbard*;

Hearn he *hight*.

• **HIGH-TASTED**. Gustful; piquant.—

Flattery still in sugar'd words betrays,  
And poison in *high-tasted* meats conveys. *J.*

• **HIGH VICED**. Enormously wicked.—

Be as a planetary plague, when Jove  
Will o'er some *high-vic'd* city hang his plume  
In the sick air.

• **HIGH-WATER**. *n. f.* [*high* and *water*.] utmost flow of the tide.—They have a way of inland that lie below the *high-water*, is something above the low-water mark. *Merr.*

(1.) • **HIGHWAY**. *n. f.* [*high* and *way*.] 1. a road; publick path.—

So few there be

That chuse the narrow path, or seek the  
All keep the broad *highway*, and take the  
With many rather for to go astray. *F.*  
—Two inscriptions give a great light to the  
ries of Appius, who made the *highway*, &c.  
Pabius the dictator. *Addison*.—

Ent'ring on a broad *highway*,

Where power and titles scatter'd lay,

He strove to pick up all he found. *St.*

2. Figuratively a train of action with great consequence.—I could mention more trains have lost, and are in the the *highway* to *Child on Trade*.

(2.) **HIGHWAY** is a free passage for the subjects; on which account it is called 1. a *highway*, though the freehold of the soil belongs to the owner of the land. Those ways that lead one town to another, and such as are direct ways, and are for all travellers in great roads that communicate with them, are *highways*; and as to their reparations, are under the care of commissioners and surveyors.

(1.) • **HIGHWAYMAN**. *n. f.* [*highway* and *man*.] A robber that plunders on the publick road. 'Tis like the friendship of pickpockets and *highwaymen*, that observe strict justice among themselves. *Bentley*.—A remedy like that of giving money to an *highwayman* before he attempts to take it by force, to prevent the sin of robbery. *Swift*.

(2.) **HIGHWAYMEN, REWARDS FOR STOPPING AND HANDING**. A reward of 40*l.* is given by the statute of 4 and 5 W. & M. to be paid within 20 days after conviction by the sheriff of the county, which the statute 8 Geo. II. cap. 16. sup. 40*l.* to be paid by the hundred upon demand of such apprehension.

**HIGHWORTH**, a town of Wilt., on the side of a hill, in a rich plain, near the vale of the Horse; 36 miles N. of Salisbury, and 20 W. of London. Lon. 1. 42. W. Lat. 51. 32. N.

• **HIGH-WROUGHT**. Accurately finished; highly laboured.—

Thou triumph'st, victor of the high-tormented day,  
And the pleas'd dame, soft smiling, lead'st a-  
way.

\* **HIGLAPER.** *n. f.* An herb. *A. q. v. v. v. v. v.*

**HIGSAR**, or **IXAR**, a town of Spain in Arragon, 25 miles from Saragossa.

**HIGUERA**, a town of Spain in Estremadura, 15 miles N. of Xeres de los Caballeros.

**HIGUEY**, or **ALTA GRACIA**, a city of Hispaniola, 120 miles E. of St Domingo. Lat. 18. 30. N.

**HILARIA**, in antiquity, feasts celebrated annually, with great pomp and joy, by the Romans, on the 3. *Kal. April*, or 15th of March, in honour of Cybele. Every person dressed himself as he pleased, and took the badges of whatever dignity or quality he had a fancy for. The statue of the goddess was carried in procession through the streets, accompanied by multitudes in the most splendid attire. The day before the festival was spent in mourning. Cybele represented the earth, which at this time of the year begins to feel the kindly warmth of the spring; so that this sudden transition from sorrow to joy was an emblem of the vicissitude of the seasons. The Romans took this feast originally from the Greeks, who called it *hilaria*, *q. d. ascensus*; the eve of that day they spent in tears and lamentations, and thence denominated it *tristitia*, *descensus*. Afterwards, the Greeks took the name *hilaria* from the Romans; as appears from Photius, in his extract of the life of the philosopher Isidore. Casaubon maintains, that beside this particular signification, the word was also a general name for any joyful or festival day, whether public or private and domestic. But Salmastius does not allow of this. Trifan, (tom. i. p. 481,) distinguishes between *hilaria* and *hilarie*. The former, according to him, were public rejoicings; and the latter, prayers made in consequence thereof; or even of any private feast or rejoicing, as a marriage, &c. The public lasted several days; during which, all mourning and funeral ceremonies were suspended.

**HILARION**, the founder of the monastic life in Palestine, was born at Gaza, A. D. 291, of a pagan family, but embraced Christianity; and having visited St Anthony the Anchorite in Egypt, followed his example, on returning to his own country, and obtained a great number of followers. He returned at last to the island of Cyprus, where he died in 371.

\* **HILARITY.** *n. f.* [*hilaritas*, Latin.] Merriment; gaiety.—Averroes restrained his *hilarity*, and made no more thereof than Seneca commendeth, and was allowable in Cato; that is, a sober asceticism from wine. *Brown.*

**HILARIUS**, an ancient father of the Christian church, who flourished in the 4th century. He was born, as St Jerome informs us, at Poitiers, of a good family; who gave him a liberal education in the Pagan religion. He was advanced to the bishopric of Poitiers A. D. 355, according to Baronius; and became a most zealous champion for the orthodox faith, particularly against the Arians, who were then gaining ground in France. He assembled several councils there, in which the determinations of the synods of Rimini and Seleucia were condemned. He wrote a treatise concerning synods; and a famous work in 12 books on

the Trinity, which is much admired by the orthodox. He died in the end of the year 367. His works have been published; but the last and best edition was given by the Benedictines at Paris in 1693.

**HILARIUSE**, Joseph, an eminent antiquary, born at Enzesfeld, in Austria, in 1737. In 1751, he joined the Jesuits, and became eminent as a teacher of rhetoric and grammar in the college at Vienna, of which he was appointed *Professor vni-*  
*versarius*. To acquire a perfect knowledge of ancient coins he visited Italy; and in 1770, having renounced the vows of his order, he was appointed director of the imperial cabinet of ancient coins; and dean of philosophy and the fine arts. He was a man of a cheerful temper, extensive knowledge and irreproachable morals. He died in 1798.

**HILAKODI**, ancient poets among the Greeks, who went about singing gay songs, somewhat graver than the Ionic pieces, accompanied with some instrument. From the streets they were at last introduced into tragedy, as the *magodi* were into comedy. They appeared dressed in white, and were crowned with gold. At first they wore shoes; but afterwards they assumed the *crepida*, being only a sole tied over with a strap.

(1.) **HILARY.** See **HILARIUS**.

(2.) **HILARY POINT**, a cape of Anglesey Isle.

(3.) **HILARY ST**, a saint of the Roman Calendar, born at Arles, in 401. He succeeded Honoratus as bishop of Arles, and presided in the council at Rome in 441. He wrote, 1. Homilies, under the name of Eusebius of Emesa: 2. The Life of St Honoratus: 3. *Opuscula*. He died in 449, aged 48.

(4.) **HILARY TERM.** See **TERM**.

**HILBERG**, a town of Norway, in Drontheim.

**HILBURGHAUSEN.** See **HILDBURGHAUSEN**.

**HILCHENBACH**, a town of Germany, in Westphalia and Nassau Siegen, 6 miles N. of Siegen.

\* **HILD**, in *Etich's* grammar, is interpreted a lord or lady: so *Hildebert* is a noble lord; *Mahild*, an heroic lady. *Gibson.*

**HILDBURGHAUSEN**, a handsome town of Germany, in the circle of Franconia, and duchy of Saxe-Hildburghausen, separated from Cobourg in 1671. It is seated on the Werra, and the duke of Saxe-Hildburghausen has a palace in it. It is 22 m. N. by W. of Cobourg, and 32 S. of Erfurt. Lon. 11. 3. E. Lat. 50. 19. N.

**HILDEBERT**, Abp. of Tours, was born at Lavardin in France, in the 11th century. In his younger years, he led a very dissolute life, kept concubines, and had several natural children: but becoming afterwards very pious, he was first made bishop of Mans, and afterwards, in 1115, Abp. of Tours, by Pope Honorius II. He wrote a smart letter against the court of Rome, wherein he describes its vices in spirited and elegant language. He is allowed to have been a man of great learning, for the age lived in.

(1.) **HILDESHEIM**, a princely bishopric of Germany, bounded on the N. and E. by the duchies of Lunenburg, Wolfenbittel and Halberstadt, and on the S. and W. by Calenberg; and extending 40 miles from E. to W. and 32 from N. to S. It was founded in 818, by Charlemagne, and contains 12 towns

towns and 248 villages. The inhabitants are partly Lutherans and partly Catholics. The S. part is hilly, and abounds with wood, iron, and salt-mines. The rest is fertile.

(2.) HILDESHEIM, the capital of the above bishopric. It is free and imperial; and in the cathedral is the statue of Herman, the celebrated German chief. It is divided into the old and new towns, each of which has its separate council; and its inhabitants are a mixture of Lutherans and Papists. It is seated on the Irmste, 27 miles SSE. of Hanover. Lon. 10. 10. E. Lat. 51. 10. N.

(3.) HILDESHEIM, or HILLESHEIM, a town of Germany, lately in the electorate of Treves, now annexed to the French republic by the treaty of Lunéville. By the division of the countries on the left bank of the Rhine into 6 departments in 1797, it was included in the dep. of Rhine and Moselle; and by the last division, in June 1801, into four, it appears to be still included in the enlarged department of the same name. It is 38 miles N. of Treves, and 36 W. of Coblenz.

HILDESLEY, Mark, bishop of Sodor and Man, was the son of Mark Hildesley, rector of Houghton, and born at Marston in Kent, in 1698. He was educated at Trinity College, Cambridge, and elected a fellow in 1723. In 1724, he was appointed Whitehall preacher; in 1731, vicar of Hitchen, and in 1735, rector of Holwell. He preached generally from memory, and his exemplary conduct in his vicarage and rectory, not only gained him the character of a truly primitive priest, but recommended him to the D. of Athol, as the most proper successor to the worthy Bp. Wilson, in the see of Sodor and Man; whose philanthropic design of printing a translation of the whole Bible in the Manks language, Bp. Hildesley brought to a happy conclusion, after his consecration in 1755; and died within 10 days of its publication, Dec. 7, 1772.

\* HILDING. *n. s.* [*hild*, Saxon, signifies a lord; perhaps *hilding* means originally a *little lord* in contempt, for a man that has only the delicacy or bad qualities of high rank; or a term of reproach abbreviated from *bunderling*, degenerate. *Hughes's Spang.*] 1. A sorry, paltry, cowardly fellow.—

He was some *hilding* fellow, that had stol'n  
The horse he rode on. *Shakespeare.*  
—If your lordship find him not a *hilding*, hold me  
no more in your respect. *Shakespeare.*—

A base slave,

A *hilding* for a livery, a squire's cloth. *Shakespeare.*  
2. It is used likewise for a mean woman.—

Laura, to his lady, was but a kitchen weach;  
Helen and Hero, *hildings* and harlots. *Shakespeare.*

This idle toy, this *hilding* scorns my power,  
And sets us all at nought. *Romeo's Young Son.*

(4.) HILL, Aaron, a poet of considerable eminence, the son of a gentleman of Malmesbury Abbey in Wiltshire, was born in 1685. His father's imprudence having cut off his paternal inheritance, he left Westminster school at 14 years of age; and embarked for Constantinople, to visit lord Paget the English ambassador there, who was his relation. Lord Paget received him with surprise and pleasure, provided him a tutor, and sent him to travel: by which he saw Egypt, Palestine, and a great part of the east; and returning home with

his noble patron, visited most of the courts of Europe. About 1709, he published his first poem, entitled *Camillus*, in honour of the earl of Peterborough who had been general in Spain; and being the same year made master of Drury-lane theatre, he wrote his first tragedy, *Elfred, or the Fair Isaacant*. In 1710 he became master of the opera-house in the Hay-market; when he wrote an opera called *Rinaldo*, which met with great success, being the first that Mr Handel set to music after he arrived in England. Unfortunately Mr Hill was a projector as well as a poet, and in 1715 obtained a patent for extracting oil from berchnuts; which undertaking miscarried after engaging 3 years of his attention. He was also concerned in the first attempt to settle the colony of Georgia; from which he never reaped any advantage: and in 1728 he made a journey into the Highlands of Scotland, on a scheme of applying the woods there to ship building; in which also he lost his labour. Mr Hill seems to have lived in perfect harmony with all the writers of his time, except Mr Pope, with whom he had a short paper war, occasioned by that gentleman's introducing him in the *Dunciad*, as one of the competitors for the prize offered by the goddess of Dulness, in the following lines:

"Then HILL essay'd; scarce vanish'd out of sight,  
He buoys up instant, and returns to light;  
He bears no token of the sabbler streams,  
And mounts far off among the swans of Thames."  
The, though by far the gentlest piece of satire in the whole poem, and even conveying an oblique compliment, roused Mr Hill to take notice of it; which he did by a poem written during his peregrination in the north, intitled, "The progress of wit, a caveat for the use of an eminent writer;" which he begins with the following lines, in which Mr Pope's too well known disposition is elegantly, yet severely characterized:

"Tuneful ALEXIS on the Thames' fair side,  
The Ladies' play-thing and the Muses' pride;  
With merit popular, with wit polite,  
Easy tho' vain, and elegant tho' light;  
Desiring and deserving others praise,  
Poorly accepts a Fame he ne'er repays;  
Unborn to cherish, sneakingly approves;  
And wants the soul to spread the worth he loves."  
The *sneakingly approves*, in the last couplet, Mr Pope was much affected by; and indeed through the whole controversy afterwards, in which it was generally thought that Mr Hill had much the advantage, Mr Pope seems rather to express his repentance by denying the offence, than to vindicate himself supposing it to have been given. Mr Hill, besides many other poems, wrote one, called *The Northern Star*, upon the actions of Czar Peter the Great; for which he was several years afterwards complimented with a gold medal from the empress Catharine I. according to the Czar's desire. He likewise altered some of Shakespeare's plays, and translated some of Voltaire's. His last production was *Mirage*; which was brought upon the stage in Drury-lane by Mr Garrick. He died on the 8th Feb. 1749, in the very minute of the earthquake; and after his decease, 4 vols of his works in prose and verse were published in 8vo, and his dramatic works in a vol.

(2.) HILL, Joseph, an English divine of the 17th century, born in Leeds, and educated at St John's college, Cambridge. He became fellow of Magdalen college, whence he was ejected for nonconformity, in 1661. He became pastor of a congregation at Rotterdam, where he died in 1707. He published an enlarged edition of Schrevelius's Greek Lexicon.

(3.) HILL, Robert, a self-taught genius of extraordinary merit, born in Hertfordshire in 1699, and bred a tailor. By his own exertions he acquired such a knowledge of the Latin, Greek, and Hebrew languages, as to be able to teach them. He wrote, 1. *Remarks on the Essay on Spirit*; 2. *The Character of a Jew*; 3. *Criticisms on Job*. He died at Buckingham in 1777.

(4.) HILL, Sir John, a voluminous writer, born 1716, originally bred an apothecary; but marrying early, and without a fortune, he soon found he would need other resources than his profession. Having attended the botanical lectures of the company, and being possessed of quick natural parts, he soon made himself acquainted with the theoretical as well as practical parts of botany; and was employed by the duke of Richmond and lord Albemarle, in the arrangement of their botanic gardens. Assisted by the liberality of these noblemen, he executed a scheme of travelling over the kingdom, to collect the most rare plants; which afterwards published by subscription: but after great researches and uncommon industry, this undertaking did not turn out to his expectation. The next year appeared a soil in which genius might stand a chance of flourishing; but after a few unsuccessful attempts, it was found he had no pretensions to the sock or buskin; so he returned more to his botanical pursuits, and his business as an apothecary. At length, about 1746, he translated from the Greek, Theophrastus's *History of Gems*, which he published by subscription; and which, being well executed, procured him friends, reputation, and money. Encouraged by this, he engaged in works of greater extent and importance. The first was *A general natural history*, in 3 vols. folio. He next engaged with George Lewis Scott, Esq. in furnishing a *Supplement to Chambers's Dictionary*. He at the same time started the *British Magazine*; and while he was engaged in a great number of these and other works, some of which seemed to require the constant attention of a whole life, he carried on a literary essay, under the title of *The Inspector*. Amidst this hurry of business, Mr Hill was so laborious and ready in all his undertakings, and was so exact an economist of his time, that he never missed a public amusement for many years; where, while he relaxed from the severer duties of study, he gleaned up articles for his literary works. It would not be easy to trace his progress (for he had now procured a diploma from the University of St Andrew's), through all his various pursuits. Being refused admission as a member of the Royal Society, he ridiculed that body, in *A review of the works of the Royal Society of London*, 4to, 1751. This, together with his over-writing himself upon all subjects without reserve, made him sink in the estimation of the public nearly in the same proportion he had as-

ceeded. He found as usual, however, resources in his own invention. He applied himself to the preparation of certain simple medicines; such as the essence of water dock, tincture of valerian, balsam of honey, &c. The well-known simplicity of these medicines made the public judge favourably of their effects, inasmuch that they had a rapid sale, and once more enabled the doctor to figure in that style of life congenial to his inclination. Soon after the publication of the first of these medicines, he obtained the patronage of the earl of Bute, through whose interest he acquired the management of the royal gardens at Kew, with a handsome salary; and to wind up the whole of an extraordinary life, having, a little before his death, seized an opportunity to introduce himself to the knowledge of the king of Sweden, that monarch invested him with one of the orders of his court. He died in 1775.

(5.) HILL, William, an English critic, fellow of Merton College, Oxford, and afterwards master of a school in Dublin. He prepared an edition of *Dionysius Periegetes*, with learned notes, which was published in 1688. He died at Dublin in 1667.

(6.) \* HILL *n. s.* [*bill*, Sixoo.] An elevation of ground less than a mountain.—

My sheep are thoughts, which I both guide and serve;

Their pasture is fair *hills* of fruitless love. *Sida.*

Jerusalem is seated on two *hills*,

Of height unlike and turned side to side. *Fairf.*

Three *sides* are sure imbar'd with crags and *hills*,

The rest is easy, scant to rise espy'd;

But mighty bulwarks fence the plainer part:

So art helps nature, nature strengthneth art.

*Fairfax.*

When our eye some prospect would pursue,  
Descending from a *hill*, looks round to view.

*Granville.*

—A *hill* is nothing but the nest of some metal or mineral, which, by a plastic virtue, and the efficacy of subterranean fire, converting the adjacent earths into their substance, do increase and grow. *Coryne.*

(7.) HILL. See MOUNTAIN.

HILLARY, a town of Sweden, in Smaland.

HILLEBECK, a town of Norway.

HILLEBRUN, a town of Sweden, in Gestrícia.

(1.) HILLEL, senior, of Babylon, president of the sanhedrim of Jerusalem. He formed a celebrated school there, in which he maintained the oral traditions of the Jews against Shamai, his colleague, whose disciples adhered only to the written law; and this controversy gave rise to the sects of Pharisees and Scribes. He was likewise one of the compilers of the TALMUD. He also laboured much at giving a correct edition of the sacred text; and there is attributed to him an ancient MS. bible, which bears his name. He flourished about A. A. C. 30. and died in a very advanced age.

(2.) HILLEL, the nabi, or prince, another learned Jew, the grandson of Judas Hakkadoth, or the Saint, the author of the Mishna, lived in the 4th century. He composed a cycle; and was one of the principal doctors of the Gemara. The greatest number of the Jewish writers attribute to him the

the correct edition of the Hebrew text which bears the name of *Hillel*, mentioned above. (See N° 1.) There have been several other Jewish writers of the same name.

**HILLEROD**, a town of Denmark, in Zealand, 24 miles NNW. of Copenhagen. It was burnt in 1733.

**HILLESHEIM**. See **HILDESHEIM**, N° 3.

**HILLEVENSTEDT**, a town of Holstein.

**HILLIA**, in botany; a genus of the monogynia order, belonging to the hexandria class of plants; and in the natural method ranking with those of which the order is doubtful. The calyx is hexaphyllous; the corolla cleft in six parts, and very long; the berry inferior, bilocular, and polyspermous.

**HILLIGEN-HAVEN**. See **HEILEGEN-HAVE**.

**HILLING**, a town of Austria, 7 m. S. of Greiz.

\* **HILLOCK**. *n. s.* [from *hill*.] A little hill.—

Yet weigh this, alas! great is not great to the greater:

What, judge you, doth a *hillock* show by the lofty Olympus?

Sometime walking not unseen

By hedge row elms, on *hillocks* green. *Milton*.

—This mountain, and a few neighbouring *hillocks* that lie scattered about the bottom of it, is the whole circuit of these dominions. *Addison on Italy*.

**HILLSBACH**, a town of Germany, in the palatinate of the Rhine, 20 miles E. of Spire.

(1.) **HILLSBOROUGH**, a borough, fair, and post town of Ireland, in the county of Down, Ulster, 69 miles from Dublin. The earl of Hillsborough has a fine seat here. The town is pleasantly situated and well built, in view of Lisburn, Belfast, and Carrickfergus bay; the church is magnificent, having an elegant spire, as lofty as that of St Patrick's in Dublin, and 7 painted windows. There is an excellent inn here, and a thriving manufacture of muslins. It has 3 fairs, and sent two members to the Irish parliament, before the Union. Lon. 6. 20. W. Lat. 54. 30. N.

(2.) **HILLSBOROUGH**, an island on the E. coast of Labrador. Lon. 61. 20. W. Lat. 57. 20. N.

(3.) **HILLSBOROUGH**, a fertile district of N. Carolina, bounded on the E. by Halifax district; S. by Fayette; W. by Salisbury, and N. by Virginia; containing 7 counties, 46,477 citizens, and 13,506 slaves, in 1795.

(4.) **HILLSBOROUGH**, the capital of the above district, (N° 3.) is seated on the Eno, in Orange county, 195 miles NW. of Newbern. Lon. 79. 12. W. Lat. 36. 6. N.

(5.) **HILLSBOROUGH**, a county of New Hampshire, bounded on the E. by Rockingham, S. by Massachusetts, W. by Cheshire, and N. by Grafton county: 58 miles long from N. to S. and 29 broad from E. to W. containing 38 townships, and 32,871 citizens, in 1795, but not one slave.

(6.) **HILLSBOROUGH**, a town of Maryland, on the Eastern Shore, in Caroline county, 7 miles SE. of Denton, and 27 SSW. of Chester.

(7, 8.) **HILLSBOROUGH**, a river and bay, on the N. coast of Hispaniola.

\* **HILLY**. *adj.* [from *hill*.] Full of hills; unequal in the surface.—Towards the *hilly* corners of Druma remain yet her very Aborigines, thrust amongst an assembly of mountains. *Howell*.—

Climbing to a *hilly* steep,

He views his herds in vales afar. *Dryden*.

Lo! how the Norick plains

Rise *hilly*, with large piles of slaughter'd knights. *Philips*.

—*Hilly* countries afford the most entertaining prospects, tho' a man would chuse to travel through a plain one. *Addison*.

**HILPOLTSTEIN**, a town of Bavaria.

\* **HILT**. *n. s.* [from *hilt*, Sax. from *bealdan*, to hold.]

The handle of any thing, particularly of a sword.

Now sits expectation in the air,

And hides a sword from *hilt* unto the point.

With crowns imperial; crowns and coronets. *Shakespeare*.

Take thou the *hilt*,

And when my face is cover'd, as 'tis now,

Guide thou the sword. *Shak. Julius Cæsar*.

Be his this sword, whose blade of brass displays

A ruddy gleam; whose *hilt*, a silver blaze. *Pope*.

**HILTERS**, a town of Franconia, in Fulda.

**HILUM**, in botany, the eye of a bean.

\* **HIM**. [*him*, Saxon.] 1. The oblique case. — Me he restored unto my office, and *him* changed. *Gen. xli.* 2. *Him* was anciently used in a natural sense. — The subjunctive mood is evermore some conjunction joined with *him*. *Cicero*.

**HIMBERG**, a town of Austria, 6 m. S. of Vienna.

**HIMERA**, in ancient geography, the name of two rivers in Sicily: viz.

1. **HIMERA** running into the Tuscan sea, now called *Fiume di Termini*.

2. **HIMERA** runs into the Lybian sea, dividing Sicily into two parts, being the boundary between the Syracusans to the E. and Carthaginians to the W. These rivers rise from different springs.

3. **HIMERA**, an ancient town of Sicily, at the mouth of the Himera, (N° 1.) on its left or side. It was a colony of Zancle, and afterwards destroyed by the Carthaginians. *Diod. Sic.*

**HIMERENSES THERMÆ**, in ancient geography, a town of Sicily, on the E. side of Himera, N° 1. After the destruction of the town of Himera (N° 3.) by the Carthaginians, such of the inhabitants as remained, settled in the same territory, near the ancient town, now called **TERMINI**. It was made a Roman colony by Augustus.

**HIMIOLA**, a town of Spain, in Jaen province.

**HIMMALEH**, a vast chain of mountains in Asia, which extends from Cabul along the N. of doctan, and appears to be the general boundary of Thibet, through the whole extent from Ganges to the river Teesta; inclosing between and Indostan, a tract of country, from 100 to 200 miles in breadth, divided into a number of states, none of which are either tributaries or dependencies of Thibet; such as Sirinagar, Napaul, &c. This ridge was by the ancients named *Imaus*, or the *Indian Caucasus*. The natives now call it *Himoo-Ko* (i. e. the Indian mountains) as well *Himmalch*; which last is a Sanscrit word, signifying *juocus*; its summit being covered with snow. See **GANGES**, and **GOGRA**.

**HIMMELKRON**, a town of Franconia.

**HIMS**, or **HAMS**, a town of Asiatic Turkey, Syria, at the foot of mount Libanus, near

niss of an ancient castle, built by one of the kings of Assyria. Its chief trade is in silk. It is 90 miles S. of Aleppo, and 93 N. of Damascus.

(1.) \* **HIMSELF.** *pron.* [*him* and *self*.] 1. In the nominative the same as *he*, only more emphatical, and more expressive of individual personality.—It was a sparing speech of the ancients to say, that a friend is another *himself*; for that a friend is far more than *himself*. *Baron.*—

With shame remembers, while *himself* was one  
Of the same herd, *himself* the same had done.

*Denham.*

It is added to a personal pronoun or noun, by way of emphatical discrimination—*He himself* repeated again. *Judges.*—God *himself* is with us for our captain. *Chron.* 3. In ancient authors it is used neutrally for *itself*.—

She is advanc'd  
Above the clouds as high as Heav'n *himself*.

*Shakespeare.*

In the oblique cases it has a reciprocal signification.—David hid *himself* in the field. *Samuel.* It is sometimes not reciprocal.—I perceive it is not altogether your brother's evil disposition to seek his death; but a provoking merit, to work by a reproveable badness in *himself*.

*Shakespeare.*—Nothing in nature can so peculiarly show the noble dispositions of humanity, as for a man to see another so much *himself* as to sigh for his griefs, and groan his pains, to sing his joys, and do and feel every thing by sympathy. *South.*

(2.) \* **By HIMSELF.** Alone; unaccompanied.—*He went one way by himself.* *Kings.*

(3.) \* **HIN.** *n. s.* [*hin*.] A measure of liquids among the Jews, containing about ten pints.—With one lamb a tenth deal of flour, mingled with fourth part of an *hin* of beaten oil. *Ex. xxix. 40.*

(4.) **The Hin** contained the 6th part of an ephah. **HINCHINBROOK**, one of the New Hebrides. Lon. 168. 33. E. Lat. 17. 25. S.

**HINCKLEY**, a town of Leicestershire, with a spire on Monday. It has a large handsome church, with a lofty spire; and a considerable spinning manufactory. It is 12 miles SW. of Leicester, and 91 NNW. of London. Lon. 1. 20. W. Lat. 53. 34. N.

**HINCMAR**, or ? Abp. of Rheims, A. D. 845. **HINCMARUS**, } was a zealous defender of the rights of the Gallican church, but was obliged to fly from Rheims, when the Normans invaded the province. He died at Epernay in 881. His works were printed, in 1645, in 2 vols. fol.

(5.) \* **HIND.** *adj.* compar. *binder*; superl. *bind*. [*hinda*, Saxon.] Backward; contrary in position to the face; as, *bind* legs. See **HINDER** and **REAR**.—Bringing its tail to its head, it bends back so far till its head comes to touch its *hind* legs, and so with its armour gathers itself into a ball. *Ray.*—

The stag

Hears his own feet, and thinks they sound like  
more,

And fears his *hind* legs will o'ertake his fore.

*Pope.*

(6.) \* **HIND.** *n. s.* [*hinde*, Saxon, from *hinnus*, *hind*.] 1. The she to a stag, the female of red deer.—

How he flew, with glancing dart amiss,  
61. XI. PART. I.

A gentle *hind*, the which the lovely boy  
Did love as life.

*Fairy Queen.*

—Can'st thou mark when the *hinds* do calve? *Job.*

Nor Hercules more lands or labours knew,

Not though the brazen footed *hind* he flew. *Dryd.*

2. [*hinc*, Saxon.] A servant.—A couple of Ford's knaves, his *hinds*, were called forth by their mistress to carry me in the name of foul cloaths to Datchet lane. *Shakespeare.* 3. [*bineman*, Saxon.] A peasant; a boor; a mean rustick.—

The Dutch who came like greedy *hinds* before,  
To reap the harvest their ripe years did yield,  
Now look like those, when rolling thunders

roar,

And sheets of lightning blast the standing field.

*Dryden.*

He cloath'd himself in coarse array,

A lab'ring *hind* in shew. *Dryden's Fables.*

(3.) **HIND.** See **CERVUS**, N. I, § vi.

(4.) \* **HINDBERRIES.** *n. s.* The same as raspberries. *Ainsworth.*

(5.) **HIND-BERRIES.** See **RUBUS**.

**HIND-CASTLE**, in sea language, the elevation on the Stern over the last deck, where the officers cabins and places of assembly are.

**HINDECK**, a town of the Helvetic republic, in the canton of Bern, 15 m. SE. of Interlaken.

**HINDELBANK**, a town of the Helvetic republic, in Bern, 9 miles NNE. of Bern.

**HINDELOPEN**, or **HINLOPEN**, a seaport of the Batavian republic, in the dep. of the Eeme, and late province of Friesland, on the Zuider Zee, between Staveren and Warcum. Lon. 5. 30. E. Lat. 53. 2. N.

\* **HINDER.** *adj.* [from *hind*.] That which is in a position contrary to that of the face: opposed to *fore*.—Bears, fighting with any man, stand upon their *binder* feet, and so this did, being ready to give me a shrewd embracement. *Sidney.*—As the *binder* feet of the horse stuck to the mountain, while the body reared up in the air, the poet with great difficulty kept himself from sliding off his back. *Addison.*

(1.) \* **To HINDER.** *v. a.* [*hindrian*, Saxon.] To obstruct; to stop; to let; to impede.—*Hinder* me not, seeing the Lord hath prospered my way. *Gen. xxiv. 36.*—The whole world shined with clear light, and none were *hindered* in their labour. *Wisd. xvii. 30.*—If the alms were *hindered* only by entreaty, the hinderer is not tied to restitution, because entreaty took not liberty away from the giver. *Taylor's Rule of living holy.*—Solitude damps thought and wit; too much company dissipates and *binders* it from fixing. *Temple*—What *binders* younger brothers, being fathers of families, from having the same right? *Locke.*

(2.) \* **To HINDER.** *v. n.* To raise hinderances; to cause impediment.—

You minimus of *binding* knot grass made! *Sh.*—This objection *binders* not but that the heroick action of some commander, enterprised for the Christian cause, and executed happily, may be written. *Dryden.*

**HINDERAA**, a town of Norway.

\* **HINDERANCE.** *n. s.* [from *binder*.] Impediment; let; stop; obstruction: with *of*, sometimes with *so*, before the thing hindered; with *to* before the person.—False opinions, touching the

will of God to have things done, are wont to bring forth mighty and violent practices against the *hinderances* of them, and those practices new opinions more pernicious than the first: yea, most extremely sometimes opposite to the first. *Hooker*.—They must be in every Christian church the same, except mere impossibility of so having it be the *hinderance*. *Hooker*.—What *hinderance* have they been to the knowledge of what is well done? *Dryd.*

Have we not plighted each our holy oath,

One soul should both inspire, and neither prove

His fellow's *hind'rance* in pursuit of love? *Dryd.*

—He must conquer all these difficulties, and remove all these *hinderances* out of the way that leads to justice. *Atterbury*.

**HINDERER.** *n. f.* [from *binder*] He or that which hinders or obstructs.—

Brakes, great *hinderers* of all plowing, grow.

*May.*

• **HINDERLING.** *n. f.* [from *bind* or *binder*.]

A paltry, worthless, degenerate animal.

• **HINDERMOST.** *adj.* [This word seems to be less proper than *hindmost*.] Hindmost; last; in the rear.—He put the handmaids and their children foremost, and Leah and her children after, and Rachel and Joseph *hindmost*. *Genesis*—

Like to an enter'd tide they all rush by,

And leave you *hindmost*.

*Shakespeare.*

(1.) **HINDIA**, a district of Hindoostan, in the province of Candisht.

(2.) **HINDIA**, a town in the above district, on the Nerbudda, 6 miles ESE. of Indore, and 90 NNE. of Burhampour. Lon. 77. 10. E. Lat. 22. 25. N.

• **HINDMOST.** *adj.* [*bind* and *most*.] The last; the lag; that which comes in the rear.—

'Tis not his wont to be the *hindmost* man,

Whate'er occasion keeps him from us now.

*Shakespeare's Henry VI.*

—He met thee by the way, and smote the *hindmost* of thee, even all that were feeble behind. *Deut. xxv. 12*—

Let him retire, betwixt two ages cast,

The first of this, and *hindmost* of the last,

A losing gamester.

*Dryden.*

The race by vigour, not by vaunts is won;

So take the *hindmost*, hell—he said, and run. *Pope.*

**HINDON**, a small town of Wiltshire, which sends two members to parliament, Lon. 2. 14. E. Lat. 51. 12. N.

**HINDOO KHO**, or **INDIAN CAUCASUS**, a part of a long ridge of mountains in Asia, which separate Cabul from Balk.

(1.) **HINDOOS**, or **GENTOOS**, the inhabitants of that part of India known by the names of *Hindoostan*, *Indostan*, or the *Mogul's empire*, who profess the religion of the *Bramins*. See § 13.

(2.) **HINDOOS**, **DISTINCTION OF RANKS AMONG THEM**. From the earliest period of history, these people seem to have maintained the same religion, laws, and customs, which they do at this day: and indeed, they and the Chinese are examples of perseverance in these respects altogether unknown in the western world. But the reason is obvious. The arbitrary form of both governments obliges the people to believe, or profess to believe, as their fathers did. In the time of Diodorus Siculus they are said to have been divided into 7 *casts*

or tribes; but the intercourse betwixt Europe and India was in his time so small, that we may well suppose the historian to have been mistaken, and that the same tenacity for which they are so remarkable in other respects has manifested itself also in this. At present they are divided only into 4 tribes; 1. The *Bramin*; 2. The *Khatry*, or *Chatteree*; 3. The *Bhyse*, or *Bice*; and, 4. The *Soondra*. (See **GENTOOS**.) All these have distinct and separate offices, and cannot, according to their laws, intermingle with each other; but for certain offences they are subject to the loss of their cast, which is reckoned the highest punishment they can suffer; and hence is formed a kind of fifth cast named *Pariahs* on the coast of Coromandel, but in the Sanscrit language, *Chandalas*. These are esteemed the dregs of the people, and are never employed but in the meanest offices. There is besides a general division which pervades the four casts indiscriminately; and which is taken from the worship of their gods *Vishnou* and *Shivah*; the worshippers of the former being named *Vishnou bhakt*; of the latter, *Shivah bhakt*—these four casts the bramins are accounted the principal in every respect; (See **BRAMINS**.) and all the laws have such an evident partiality towards them, as cannot but induce us to suppose, that they have had the principal hand in framing them. They are not, however, allowed to assume the sovereignty; the religious ceremonies and the instruction of the people being their peculiar province. They alone are allowed to read the *Vedas* or sacred books; the *Khatrys* being only allowed to hear them read; while the other two casts only read the *Sastras*, or commentaries upon them. As for the poor *Chandalas*, they dare not enter temple, or be present at any religious ceremony. In point of precedence the bramins claim a superiority even to the princes; the latter being cast out of the *Khatry* or second cast. A *bramin* will receive with respect the food that is prepared by a *bramin*, but the latter will eat nothing that has been prepared by any member of an inferior cast. The punishment of a *bramin* for any crime is much milder than if he had belonged to another tribe; and the greatest crime that can be committed is the murder of a *bramin*. No mortal must desire the death of one of these sacred persons, or cut off one of his limbs. They must be readily admitted into the presence even of princes whenever they please: when passengers in a boat they must be the first to enter and go out; the waterman must besides carry them for nothing; every one who meets them on the road is likewise obliged to give place to them. The priests are chosen from among this order, as are not admitted to the sacerdotal functions, being employed as secretaries and accountants. These can never afterwards become priests, continue to be greatly revered by the other casts. The *KHATRY*, or 2d cast, are those among whom the sovereigns are chosen. *Bhyse*, or *Banians*, who constitute the 3d cast, have the charge of commercial affairs; (See **NIANS**.) and the *SOONDRA*, or 4th cast, the numerous of all, comprehend the labourers and artificers. These last are divided into as many sects as there are followers of different arts; and

ren being invariably brought up to the profession of their fathers, and it being absolutely unlawful for them ever to alter it afterwards. No Hindoo is allowed to quit the cast in which he was born upon any account.

**HINDOOS, EDUCATION OF THE.** Boys are taught to read and write by the bramins, who are the only school for that purpose throughout the country. They use leaves instead of books, and write with a pointed iron instrument. The leaves are usually those of the palm tree, which being thick and hard, and having a thick substance, are kept for almost any length of time, and the letters are not subject to be effaced. The leaves are cut into slips about an inch broad, and the books consist of a number of these tied together by means of a hole in one end. Sometimes the leaves are rubbed over with a black powder, to render them more legible. When they write on paper, they use a small reed. Sometimes they are initiated in writing by making letters in the sand strewn on the floor; and they are taught arithmetic by means of a number of small beads. The education of the girls is much more confined; it seldom extending farther than the articles of religion.

**HINDOOS, FOOD OF THE.** All the Hindoos are scrupulous with regard to their diet; but the Brahmins much more so than any of the rest. They eat no flesh, nor shed blood; which we are informed by Porphyry and Clemens Alexandrinus was the case in their time. Their ordinary food consists of rice and other vegetables, dressed with ghee (a butter melted and refined so as to be capable of being kept for a long time), and seasoned with pepper and other spices. The food which they esteem, however, is milk from the cow; for which they have the most extravagant veneration, inasmuch that it is enacted in the laws of Cantoa, that any one who exacts labour from a bullock that is hungry or thirsty, or obliges him to labour when fatigued or distressed, is liable to be fined by the magistrate. The other casts, though less rigid, abstain scrupulously from what is forbidden them; nor do they eat any thing provided by a person of an inferior cast, or of a different religion. They may eat some kinds of flesh and fish, but it is counted a virtue to abstain from them all. They are allowed to taste intoxicating liquors of any kind. Q. Curtius indeed mentions a wine made use of by the Indians in his time; but it is supposed to have been no other than the unfermented juice of the cocoa nut. When fermented, it affords a spirit of a very inferior quality; but it is drunk only by the Brahmins and the lower class of Europeans in the country. So exceedingly bigoted and superstitious are they in their absurd maxims with regard to food and drink, that some sepoy in a British army expended all the water appropriated for his use, would have suffered himself to die for thirst rather than taste a drop of that which was used by the ship's company.

**HINDOOS, HEROIC INTREPIDITY OF THE.** The Hindoos, though naturally mild and timid, on many occasions meet death with the most intrepidity. An Hindoo who lies at the

point of death, will talk of his decease with the utmost composure, and, if near the river Ganges, will desire to be carried out, that he may expire on its banks. Such is the excessive veneration they have for their religion and customs, that no person will infringe them even to preserve his life. An Hindoo, we are told, being ill of a putrid fever, was prevailed upon to send for an European physician, who prescribed him the bark in wine; but this was refused with the greatest obstinacy even to the very last, though the governor himself joined in his solicitations, and in other matters had a considerable influence over him. In many instances these people, both in ancient and modern times, have been known, when closely besieged by an enemy whom they could not resist, to kill their wives and children, set fire to their houses, and then violently rush upon their adversaries till every one was destroyed. In the late war, some Sepoys in the British service, having been concerned in a mutiny, were condemned to be blown away from the mouths of cannon. Some grenadiers cried out, that as they had all along had the post of honour, they saw no reason why they should be denied it now; and therefore desired that they might be blown away first. This being granted, they walked forward to the guns with composure, begged that they might be spared the indignity of being tied, and, placing their breasts close to the muzzles, were shot away. The commanding officer was so much affected with this instance of heroism, that he pardoned all the rest.

(6.) **HINDOOS, HORRID CUSTOM AMONG THE.** Among these people the custom of *burning the dead* prevails universally; and the horrid practice of wives burning themselves along with their deceased husbands was formerly very common, but now much less so. At present it is totally prohibited in the British dominions; and even the Mohammedans seem to discountenance a practice so barbarous, though many of their governors are accused of conniving at it, through motives of avarice. It is most common in the country of the Rajahs, and among women of high rank. This piece of barbarity is not enjoined by any law; it is only said to be *proper*, and rewards are promised in the next world to those who do so. But though a wife chuses to outlive her husband, she is in no case whatever permitted to marry again, even though the marriage with the former had never been completed. It is unlawful for a woman to burn herself, if she be with child at the time of her husband's decease, or if he died at a distance from her. In the latter case, however, she may do so, if she can procure his girdle or turban to be put on the funeral pile along with her. These enthusiasts, who devote themselves to this dreadful death, suffer with the greatest constancy; and Mr Holwel gives an account of one, who, being told of the pain she must suffer (with a view to dissuade her), put her finger into the fire and kept it there for a considerable time; after which she put fire on the palm of her hand, with incense upon it, and fumigated the bramins who were present. Sometimes a chapel is erected on the place where one of these sacrifices has been performed; sometimes it is inclosed, flowers planted upon it, and images set up. In some few places the Hindoos

bury their dead; and some women have been known to suffer themselves to be buried alive with their deceased husbands: but the instances of this are still more rare than those of burning. No woman is allowed any inheritance among the Hindoos; so that if a man dies without male issue, his estate goes to his adopted son, or to his nearest relation.

(7.) HINDOOS, HOUSES OF THE. The houses of the Hindoos make a worse appearance than could be supposed from their ingenuity in other respects. In the southern parts of the country, the houses are only of one story. On each side of the door, towards the street, is a narrow gallery covered by the slope of the roof which projects over it, and which, as far as the gallery extends, is supported by pillars of brick or wood. The floor of this gallery is raised about 30 inches above the level of the street; and the porters, or bearers of palanquins, with the foot soldiers named *Ponrs*, who commonly hire themselves to noblemen, often lie down in this place. This entrance leads into a court, which is also surrounded by a gallery like the former. On one side of the court is a large room, on a level with the floor of the gallery; open in front, and spread with mats and carpets covered with white cotton cloth, where the master of the house receives visits and transacts business. From this court there are entrances by very small doors to the private apartments. In the northern parts, houses of 2 or 3 stories are commonly met with. Over all the country also, ruins of palaces are to be seen, which evidently show the magnificence of former times.

(8.) HINDOOS, HUSBANDRY, &c. OF THE. The chief article of food throughout all Hindoostan, being rice, the cultivation of it forms the principal object of agriculture. In this the most important requisite is plenty of water: and when there happens to be a scarcity in this respect, a famine must be the consequence. To prevent this as far as possible, a vast number of tanks and water courses are to be met with, throughout the country, though in some places these are too much neglected, and gradually going to decay. After the rice is grown to a certain length, it is pulled up, and transplanted into fields of about 100 yards square, separated from each other by ridges of earth; which are daily supplied with water let in upon them from the neighbouring tanks. When the water happens to fall below the level of the channels appointed to receive it, it is raised by a simple machine called *pirahi*, the construction of which is as follows. A piece of timber is fixed upright in the ground, and forked so as to admit another piece to move transversely in it by means of a strong pin. The transverse timber is flat on one side, and has pieces of wood across it in the manner of steps. At one end of this timber there is a large bucket, at the other a weight. A man walking down the steps throws the bucket into the well or tank; by going up, and by means of the weight, he raises it; and another person standing below empties it into a channel made to convey the water into the fields. The man who moves the machine may support himself, by long bamboos, that are fixed in the way of a railing

from the top of the piece of upright timber towards the wall. A number of other kinds of grain are to be met with in Hindoostan, but wheat is not cultivated farther south than 18° latitude. It is imported, however, to every part of the country by the *Benjaries*. These are a set of people belonging to no particular cast, who live in towns and travel in separate bodies, each of which is governed by its own regulations. They often visit towns on the sea coast, with bullocks loaded with wheat and other articles; carrying away, in exchange, spices and cloths, but especially salt, to the inland parts of the country. Some of the parties have several thousand oxen belonging to them. They are rarely molested, even in times of war, otherwise than by being sometimes pressed into the service of an army to carry baggage and provisions; but for this they are paid, and dismissed as soon as the service is over. The Hindoos themselves are prohibited from going out of the country under the severest of all penalties, that of losing their cast. Notwithstanding this, it is certain that they do settle in foreign parts, in the character of merchants and bankers. Perhaps they may have a toleration from the principal branch, or there may be an exemption for people of the profession. But wherever they go, they are invariably attached to their religious ceremonies, and refuse to eat what is prohibited by their religion. The *Ryots*, or people who cultivate the ground, are in many places in the most miserable situation; their only food being some corn and pepper, for which they are obliged to endure all the inclemencies of a burning sun, and the inconveniences which attend alternately sitting in water and walking with the bare feet on ground heated intensely by the solar rays; which they are frequently blistered in a miserable manner. All this, however, they submit to with the utmost patience, and without making complaint, expecting to be released from their sufferings by death; though even then their religion teaches them to hope for nothing more than that they call *absorption into the essence of the Deity*, a state almost synonymous with what we call ANNIHILATION. See that article, § 3.

(9.) HINDOOS, JUGGLERS AMONG THE. The jugglers among the Hindoos are so expert, that many of the missionaries have ascribed their skill to supernatural power; and even so late a traveller as Mr Grose seems not to be of a different opinion. Like the Egyptians, they seem to have the power of disarming serpents of their poison: the jugglers go about with numbers of these animals in bags, having along with them a small bag called *magouty*, which they pretend is used for bringing them from their lurking places. They take serpents of the most poisonous kinds, out of the bags with their naked hands, and throw them on the ground, where they are taught to rear and move about to the sound of their music. To say that this is accomplished by certain incantations.

(10.) HINDOOS, LEARNING, ARTS, AND SCIENCES, AMONG THE. The brahmins of India were anciently celebrated for their learning, tho' they now make a very inconsiderable figure in com-

like with the Europeans. According to Philo-  
 sophers the Gymnosophists of Ethiopia were a co-  
 munity of brahmins, who, being obliged to leave In-  
 dia on account of the murder of their king near  
 the banks of the Ganges, migrated into that coun-  
 try. The ancient brahmins, however, may be sup-  
 posed to have cultivated science with much great-  
 er success than their descendants can boast of, con-  
 sidering the ruinous wars and revolutions to which  
 the country has been subjected. Metaphysics, as  
 well as moral and natural philosophy, appear to  
 have been well understood among them; but at pre-  
 sent all the Hindoo knowledge is confined to those  
 whom they call *Pundits*, i. e. doctors, or learn-  
 ers. These only understand the language cal-  
 led *Sanscrit* or *Sanferit*, (from two words signi-  
 fying perfection); in which the ancient books  
 are written. The METAPHYSICS of the brahmins  
 is the same with that of some ancient Greek phi-  
 losophers. They believe the human soul to be an  
 emanation from the Deity, as light and heat from  
 the sun. Govtama, an ancient metaphysician, dis-  
 tinguishes two kinds of souls, the divine and vital.  
 The former resembles the eternal spirit from  
 which it came, is immaterial, indivisible, and with-  
 out passions; the vital soul is a subtle element  
 which pervades all things, distinct from organized  
 matter, and which is the origin of all our desires.  
 External senses, according to him, are repre-  
 sentations of external things to the mind, by which  
 it is furnished with materials for its various opera-  
 tions; but unless the mind act in conjunction with  
 these, the operation is lost, as in that of ab-  
 straction of mind which takes place in deep contem-  
 plation. He treats likewise of reason, memory,  
 opinion, &c. He is of opinion, that the world  
 does not exist without a first cause; chance be-  
 ing but the effect of an unknown cause;  
 and he is, however, that it is folly to make any  
 inquiries concerning the beginning or duration  
 of the world. In treating of providence, he de-  
 nies any immediate interposition of the Deity;  
 saying that the Supreme Being, having created  
 the system of nature, allows it to proceed ac-  
 cording to the laws originally impressed upon it,  
 and to follow the impulse of his own desires,  
 directed and conducted by his reason. His doc-  
 trine concerning a future state is not different from  
 that of the Hindoos in general. (See § 13.)  
 According to Bp. Wilkins, many of them believe  
 that the world is a state of rewards and punish-  
 ment, as well as of probation; and that the good  
 and bad fortune are the effects of good or evil ac-  
 tions committed in a former state. The science  
 which the brahmins, however, were most re-  
 markable in, is that of ASTRONOMY; and in this  
 the progress was so great, as even yet to furnish  
 matter of admiration to the moderns. See ON  
 ASTRONOMY. The progress of the Hindoos in  
 astronomy has been very great in ancient times.  
 The most remarkable instance is given by  
 the astronomers, in their finding out the proportion  
 of the circumference of a circle to its diameter to  
 a degree of accuracy. This is determined,  
 according to the *Ayem Akbary*, to be as 3927 to 1250; and  
 to do it arithmetically, in the simplest man-  
 ner possible, would require the inscription of a  
 circle of 768 sides; an operation which cannot

be performed without the knowledge of some ve-  
 ry curious properties of the circle, and at least 9  
 extractions of the square root, each as far as 10  
 places of decimals. This proportion of 1250 to  
 3927 is the same with that of 1 to 3.1416; and  
 differs very little from that of 123 to 355 discover-  
 ed by Metrus. He and Vieta were the first who  
 surpassed the accuracy of Archimedes in the so-  
 lution of this problem; and it is remarkable that  
 these two mathematicians flourished at the very  
 time that the *Ayem Akbary* was composed a-  
 mong the Hindoos. In geography, however,  
 they are much deficient; and it is very difficult,  
 to find out the true situation of the meridians,  
 mentioned by their authors, from what they have  
 said concerning them. The art of PAINTING a-  
 mong the Hindoos is in an imperfect state; nor  
 are there any remains of antiquity which evince  
 its ever having been more perfect. Their princi-  
 pal defect is in drawing, and being almost totally  
 ignorant of the rules of perspective. They are  
 much better skilled in colouring; and some of  
 their pictures are finished with great nicety. Their  
 SCULPTURES are likewise rude, and greatly resem-  
 ble those of the Egyptians. They are principal-  
 ly remarkable for their immense size, which gives  
 them an air of majesty and grandeur. The Mu-  
 sic of the Hindoos is little known to Europeans,  
 and the art seems to have made but little progress  
 among them, in comparison with what it has done  
 in the western countries; though some of the In-  
 dian airs are said to be very melodious. Their  
 musical instruments are very numerous; in war  
 they use a kind of great kettle drum, named *na-  
 gar*, carried by a camel, and sometimes by an e-  
 lephant. The *dole* is a long narrow drum slung  
 round the neck; and the *tam-tam* is a flat kind of  
 drum resembling a tabor, but larger and louder.  
 They use also the cymbal, which they name *sa-  
 lan*; and they have various sorts of trumpets, par-  
 ticularly a great one named *tary*, which emits a  
 most doleful sound, and is always used at funerals,  
 and sometimes to announce the death of persons  
 of distinction. The use of fire-arms appears to  
 have been of great antiquity in India. They are  
 prohibited by the code of Gentoo laws, which is  
 certainly of very ancient date. The phrase by  
 which they are denominated is *agrasakker*, or wea-  
 pons of fire; and there is mention made of *shut  
 agar*, or the weapon that kills 100 men at once.  
 It is impossible to guess at the time when those  
 weapons were invented among the Hindoos; but  
 we are certain, that in many places of the east,  
 which have neither been frequented by Moham-  
 medans nor Europeans, rockets are almost uni-  
 versally made use of as weapons of war. The  
 Hindoo books ascribe the invention of fire-arms to  
*Baishnabherma*, who formed all the weapons made  
 use of in a war betwixt the good and evil spirits.  
 Fire-balls or blue lights, employed in besieged pla-  
 ces in the night, to observe the motions of the be-  
 siegers, are met with every where through Hin-  
 doostan, and are constructed in as great perfec-  
 tion as in Europe. Fire-works are also met with  
 in great perfection; and from the earliest ages,  
 have constituted a principal article of amusement  
 among the Hindoos. Gun-powder, or a compo-  
 sition resembling it, has been found in many o-  
 ther

ther places of the east, particularly China, Pegu, and Siam; but there is reason to believe that the invention originally came from Hindoostan. Poisoned weapons are forbidden. The Hindoos are remarkable for their ingenuity in all kinds of handicraft; but their utensils are simple, and in many respects inconvenient, so that incredible labour and patience are necessary for the accomplishment of any piece of work; and for this the Hindoos are very remarkable. Lacquering and gilding are used all over the country, and must have been used in very early ages; though in some places the lacquering is brought to greater perfection than in others.

(11.) HINDOOS, MANNERS, DRESSES, &c. OF THE. In ordinary life, the Hindoos are cheerful and lively; fond of conversation and amusements, particularly dancing. They do not, however, learn or practise dancing themselves, but have women taught for the purpose; and in beholding these they will spend whole nights. They disapprove of many parts of the education of European ladies, as supposing that they engage the attention too much, and draw away a woman's affection from her husband and children. Hence there are few women in Hindoostan who can either read or write. In general they are finely shaped, gentle in their manners, and have soft and even musical voices. The women of Kashmere, according to Mr Forrester, have a bright olive complexion, fine features, and delicate shape; a pleasing freedom in their manners, without any tendency to immodesty. The dress of the modest women in Hindoostan consists of a close jacket, which covers their breasts, but perfectly shows their form. The sleeves are tight, and reach half way to the elbows, with a narrow border, painted or embroidered round the edges. Instead of a petticoat, they have a piece of white cotton cloth wrapped round their loins, and reaching near the ankle on the one side, but not quite so low on the other. A wide piece of muslin is thrown over their right shoulder; which, passing under the left arm is crossed round the middle, and hangs down to the feet. The hair is usually rolled up into a knot or bunch towards the back part of the head; and some have curls hanging before and behind the ears. They wear bracelets on their arms, rings in their ears, and on their fingers, toes and ankles; with sometimes a small one in the nostril. The dress of the dancing women, who are deemed votaries of Venus, is very various. Sometimes they wear a jama, or long robe of wrought muslin, or gold and silver tissue; the hair plaited and hanging down behind, with spiral curls on each side of the face. They are taught every accomplishment which can be supposed to captivate the other sex, form a class entirely different from the rest of the people, and live by their own rules. Their clothes, jewels, and lodging, are considered as implements of their trade, and must be allowed them in cases of confiscation for debt: they may drink spirituous liquors, and eat any kind of meat except beef: their dances are said to resemble those of the ancient Bacchanals represented in some of the ancient paintings and bas-reliefs. In some of their dances, they attach gold and silver bells to the rings of the same metals they wear on their ankles. The men generally shave their heads

and beards, leaving only a pair of small whisks and a lock on the back part of their heads, which they take great care to preserve. In Kashmir and some other places, they let their beards grow to the length of two inches. They wear turbans on their heads, but the bramins, who officiate in the temples, commonly go with their heads covered, and the upper part of the body also round their shoulders they hang the sacred thread called *Zinnar*, made of a kind of perennials and composed of a number of threads of a determined length. The Libatries wear also a turban of this kind, but composed of fewer threads; the Bhayls have one with still fewer threads, but the Sudras are not allowed to wear any. The other dress of the bramins consists of a piece of white cotton cloth wrapped about the body, descending below the knee, but lower on the left than on the right side. In cold weather they sometimes put a red cap on their heads, and wear a shawl round their bodies. The Khairis, and most other inhabitants of this country, wear pieces of cotton cloth wrapped round their bodies, which cover the upper as well as the lower part of the body. Ear-rings and bracelets are worn by the men as well as women; and they are fond of ornamenting themselves with diamonds, rubies, and other precious stones, when they can get them. They wear slippers on their feet of woollen cloth or velvet, frequently embroidered with gold and silver; those of princes being sometimes adorned with precious stones. The lower classes wear sandals or slippers of coarse cloth or leather. These slippers are always worn on going into any apartment, being left outside the door, or given to an attendant; nevertheless the Hindoos make no complaints of the European for not putting off their shoes when they come to their houses, which must certainly appear uncouth to them. Hindoo families are always governed by the eldest male, to whom great respect is shown. Filial veneration is carried to such a height among them, that a son will not sit in the presence of his father until ordered to do so. Mr Forrester observes, that during the whole of his residence in India, he never saw a single instance of undutifulness to parents; and this is related by other writers.

(12.) HINDOOS, MARRIAGE CEREMONIES. Among the Hindoos, marriage is considered as a religious duty; and parents are commanded to marry their children by the time they arrive at 15 years of age, at farthest. Polygamy is allowed; but this licence is seldom made use of, unless there should be no children by the first wife. In case the second wife also proves barren, they commonly adopt a son from among the Brahmans. The Hindoos receive no dowry with their wives; but, on the contrary, the intended husband makes a present to the father of his bride. Nevertheless, in many cases, a rich man will make a poor relation for his daughter; in which case the bride's father is at the expence of the wedding, receives his son-in-law into his house, or gives him a part of his fortune. The bridegroom then resides in the dwelling of his parents with certain ceremonies, and lives with his father-in-law. Many disputes take place between the parties, even

which is agreed upon; and the celebration of the marriage is attended with much expence; magnificent processions are made, the bride and bridegroom in the same palanquin, attended by friends and relations; some riding in palanquins, some on horses, and others on elephants. It is their vanity indeed on such occasions, that they will borrow or hire numbers of these animals to do honour to the ceremony. The feasts last several days; during the evening, fireworks and illuminations are displayed, and dancing women perform their feats; concluding with alms to the poor and presents to the Bramins and principal guests, consisting of shawls, pieces of muslin, and the like. A number of other ceremonies are performed when the parties come of age, and are to cohabit together. The same are repeated when the young wife becomes pregnant; when she is delivered of her child the 9th month without any accident; when she is delivered of her child. The relation on the 10th day after the birth, to the ceremony of naming the child; but if it should be of opinion, that the aspect of the stars at that time unfavourable, the ceremony is deferred, and prayers offered up to avert the evil. When the lucky moment is discovered, they fill as many pots with water as there are stars, and offer a sacrifice to them; afterwards sprinkle the head of the child with water, the bramin gives it such a name as he thinks adapted to the time and circumstances; the ceremony concludes with prayers, presents to the poor, and alms to the poor. Mothers are not allowed to suckle their own children; nor can they be dispensed with, except in cases of sickness. Several ceremonies, with presents to the bramins take place, when a boy comes of age to receive the string, which the three first casts wear on their waist.

**HINDOOS, RELIGION OF THE.** The religion of the Hindoos is supposed to be the same as that of the ancient GYMNOSOPHISTS. (See article.) It is contained in certain books called *Vedas*, or *Books*, written in a language called *Sanskrit*, which is now known only among them. The books are supposed to have been the work, not of the supreme God, but of an inferior deity, named *Brama*. They inform us that Brama, or Brahman, the supreme God, having created the world out of his mouth, formed a female deity named *Devi*, who in an enthusiasm of joy and delight brought forth 3 eggs. From these were formed three male deities, named *Brimha*, *Vishnou*, and *Sheevah*. *Brimha* was endowed with the power of creating the things of this world, *Vishnou* with that of cherishing them, and *Sheevah* with that of restraining and correcting them. Thus became the creator of man; and in this manner he formed the four casts from different parts of his own body, the Bramins from his head, the Khattrys from his arms, the Banians from his thighs and hips, and the Sooderas from his feet. Hence, say they, these 4 different casts were formed, and different offices assigned them, the Bramins to teach; the Khattrys to defend and govern; the Banians to enrich by commerce and agricul-

ture; and the Sooderas to labour, serve, and obey. Brama himself endowed mankind with passions, and understanding to regulate them; while *Brimha*, having created the inferior beings, proceeded to write the *Vedas*, and delivered them to be read and explained by the Bramins. The religion of the Hindoos, though involved in superstition and idolatry, seems to have been originally pure; inculcating the belief of an eternal and omnipotent Being; their subordinate deities *Brimha*, *Vishnou*, and *Sheevah*, being only representatives of the wisdom, goodness, and power of the supreme God Brama. All created things they suppose to be types of the attributes of Brama, whom they call the *principle of truth*, the *spirit of wisdom*, and the *supreme being*; so that it is probable that all their idols were at first only designed to represent these attributes. There are various sects among the Hindoos; the worshippers of *Vishnou* and those of *Sheevah* distinguish themselves remarkably, the former by painting their faces with an horizontal line, the latter by a perpendicular one. There is, however, very little difference in point of religion between these or any other Hindoo sects. All of them believe in the immortality of the soul, a state of future rewards and punishments, and transmigration. Charity and hospitality are inculcated in the strongest manner, and exist among them both in theory and practice. "Hospitality (say they) is commended to be exercised even towards an enemy, when he cometh into thine house; the tree doth not withdraw its shade even from the wood cutter. Good men extend their charity even to the vilest animals. The moon doth not withhold her light even from the Chandalah." These pure doctrines, however, are intermixed with some of the vilest and most absurd superstitions; and along with the true God they worship a number of inferior ones, each distinguished by a name indicative of his particular attribute. But besides these inferior deities, the Hindoos have a multitude of demigods, who are supposed to inhabit the air, the earth, and the waters, and in short the whole world; so that every mountain, river, wood, town, village, &c. has one of these tutelar deities, as was the belief of the western heathens. By nature these demigods are subject to death, but are supposed to obtain immortality by the use of a certain drink, named *Amrac*. Their exploits in many instances resemble those of Bacchus, Hercules, Theseus, &c. and in a beautiful epic poem named *Ramayna*, we have an account of the wars of *Rama*, one of the demigods, with *Ravana* tyrant of Ceylon. All these deities are worshipped, by going to their temples, fasting, prayers, and the performance of ceremonies to their honour. The Hindoos pray thrice a day, at morning, noon, and evening, turning their faces towards the east. They use many ablutions, and always wash before meals. Running water is preferred for this purpose to such as stagnates. Fruits, flowers, incense, and money, are offered in sacrifice to their idols; but for the dead they offer a kind of cake, named *Penda*; and offerings of this kind always take place on the day of the full moon. Nothing singular is known in the worship of the Hindoos at present, though there is a tradition that it was formerly of this kind; nay, that even

even human sacrifices were offered; but if such a custom ever did exist, it must have been at a very distant period. Their sacred writings indeed mention bloody sacrifices of various kinds and even those of the human race: but so many peculiarities are mentioned with regard to the proper victims, that it is almost impossible to find them. The only instance of bloody sacrifices we find on record among the Hindoos, is that of the buffalo to Bawany, the mother of the gods. The Hindoos have two kinds of worship, viz. that of the invisible God and that of idols. The worshippers of the invisible God are, strictly speaking, deists: the idolaters perform many absurd and unmeaning ceremonies, too tedious to mention, all of which are conducted by a Bramin; and during the performance of these rites, the dancing women perform in the court, singing the praises of the Deity in concert with various instruments. All the Hindoos seem to worship the fire; at least they pay a great veneration to it. Sp. Wilkins says, that they are enjoined to light up a fire at certain times, which must be produced by the friction of two pieces of wood of a particular kind; and the fire thus produced is made use of for consuming their sacrifices, burning the dead, and in the ceremonies of marriage. The greatest singularity in the Hindoo religion, however, is, that so far from persecuting those of a contrary persuasion, they absolutely refuse even to admit of a proselyte. They believe all religions to be equally acceptable to the Supreme being: and insist that if the Author of the universe preferred one to another, it would have been impossible for any other to have prevailed, than that which he approved. Every religion, therefore, they conclude to be adapted to the country where it is established; and that all in their original purity are equally acceptable.

(24.) HINDOOS, SUPERSTITIONS AMONG THE. Great numbers of devotees are to be met with every where throughout Hindoostan. Every cast is allowed to assume this way of life, excepting the Chandalahs. Those held most in esteem are named *Seniassees* and *Yogees*. The former are allowed no other clothing but what will cover their nakedness, nor have they any worldly goods besides a pitcher and staff; but though they are strictly enjoined to meditate on the truths contained in the sacred writings, they are expressly forbidden to argue about them. They must eat but once a day, very sparingly, of rice or other vegetables; they must also show the most perfect indifference about hunger, thirst, heat, cold, or any thing whatever relative to this world; looking forward with continual desire to the separation of the soul from the body. Should any of them fail in this extravagant self-denial, he is rendered so much more criminal by the attempt, as he neglected the duties of ordinary life for those of another which he was not able to accomplish. The *Yogees* are bound to much the same rules, and both subject themselves to the most extravagant penances. Some keep their arms constantly stretched over their heads till they become quite withered and incapable of motion; others keep them crossed over their breast during life; while others, by keeping their hands constantly shut, have them

quite pierced through by the growth of their nails. Some chain themselves to trees or particular spots of ground, which they never quit; others resolve never to lie down, but sleep leaning against a wall; but the most curious penance perhaps on record is that of a *Yogey*, who measured the distance between Benares and Jaggernaut with the length of his body, lying down and rising alternately. Many of these enthusiasts throw themselves in the way of the chariots of Vishnou or Sheevah, which are brought forth in procession to celebrate the festival of a temple, and drawn by several hundred men. Thus the wretched devotees are often crushed to death. Others devote themselves to the flames, to show their regard to some of the idols, or to appease the wrath of one whom they suppose to be offended. A certain set of devotees are named *PANDARAMS*; and another on the coast of Coromandel are named *Cary-Patra Pandarams*. The former rub themselves all over with cow dung, running about the country singing the praises of the god Sheevah whom they worship. The latter go about asking charity at doors by striking their hands together, for they never speak. They accept of nothing but what they want, and when they have got as much as will satisfy their hunger, never give themselves any trouble about more, but pass the rest of the day in shade, in a state of such supine indolence as to look at any object whatever. The *Takis* are another set of mendicants, who sing the carnations of Vishnou. They have hollow rings round their ankles, which they fill with pebbles; so that they make a considerable noise as they walk; they beat likewise a kind of tabour.

(1.) HINDOOSTAN, HINDUSTAN, or *Indu-tan*, a celebrated and extensive country of Asia, bounded on the N. by Great and Little Tibet, on the S. by the Indian peninsula of India, on the W. by the Indian Sea, and Bay of Bengal; on the E. by Persia; and on the E. by Thibet and the Chinese peninsula. It is situated between  $24^{\circ}$  and  $36^{\circ}$  of lat. N. and between  $51^{\circ}$  and  $136^{\circ}$  of lat. E. being about 1204 miles long, and 660 broad; but in some places much less. This country was early times distinguished among the Greeks by the name of *India*, the most probable derivation of which is from the river *Indus*, though others derive it from *Hind* the Persian name. We are assured by Mr Wilkins, that no such words as *Indus* or *Hindoo* exist in the Sanscrit or *Indic* language of the country; in which it is named *Bharata*, a word totally unknown to Europeans.

(2.) HINDOOSTAN, CLIMATE, SOIL, &c. Towards the north, Hindoostan is very cold and barren; but towards the south, very hot, and fertile in corn, rice, fruits, and other vegetables. The northern provinces are very mountainous and sandy; while the southern are for the most part level, and well watered with several rivers. The weather and seasons are, in general very regular, the winds blowing constantly for six months from the N. with very little variation. April, May, and the beginning of June, till the rains fall, are extremely hot, that the reflexion from the ground is apt to blister the face; and but for the breeze, small gale of wind, which blows every day, there would be no living in that country for people here.

...thern climates; for, excepting in the rainy season, the coldest day is hotter there at noon, than the hottest day in England. However, very rapid changes of heat and cold sometimes happen in a few hours; so that a stifling hot day is cooled by a night cold enough to produce a rime on the water, and that night by a noon as hot as the preceding. Sometimes, in the season, before the rains, the winds blow with violence, that they carry vast quantities of red sand into the air, which appear black, and are charged with rain; but fall down in showers, filling the eyes, ears, and nostrils of those among whom they descend, and entering either at the cabinet or cupboard, in the houses or by the key-holes and crevices. From Surat, and beyond, it seldom or never rains, except in one season of the year; viz. from the end of June to the middle of Sept. These rains generally begin and end with furious storms of thunder and lightning. During these 3 months it usually every day, and sometimes for a week together without intermission; by which the country is enriched, like Egypt by the Nile. Although it looks before like the barren lands of the Arabian deserts, yet, in a few days after those rains begin to fall, the surface appears covered with verdure. When the rainy season is over, the country becomes perfectly serene again, and scarce one shower appears all the other 9 months: however, a few dew falls every night during that dry season, which cools the air and cherishes the

vegetation, but he derived little benefit from them; Nadjib being the real master, and keeping possession of them till his death, which happened in 1781: and since that time these countries have been involved in continual anarchy and bloodshed. (See DELHI, N° 1 and 2.) 4. Next to the provinces of Delhi are the dominions of the independent *rajahs*, which lie contiguous to one another. The principal are those of Joinagar or Jaipur, Jodhpour or Marwar, Oudipour or Chetore, and Jalsure. These countries are under a kind of feudal constitution, and every village is obliged to furnish a certain number of horsemen at the shortest warning. The people are brave, hardy, and very much attached to their respective chiefs; and their army is very formidable, amounting to about 150,000 horsemen. 5. The *Jatts* were a tribe who followed the occupation of agriculture in the northern parts of Hindoostan. About 40 years ago they were formed into a nation by Tackra Surajemul, proprietor of an inconsiderable district. After making himself master of all the countries dependent on Agra, of the town itself, (see AGRA, N° 3 and 4.) and many other important places, he was killed in battle with Nadjib ul Dowlah, the Rohilla chief, in 1763. Since that time the power of this people has been so much reduced by domestic contentions and foreign wars, that the present *rajah* possesses only a small territory named *Berapour*, with a small district around it. 6. The most considerable of all the Hindoo powers are the *Marhattas*, with whom the Europeans first became acquainted in their original territories of *Maahar*. See MALABAR, and MARHATTAS. Their territories extend about 1000 miles in length and 700 in breadth; and they are governed by a number of separate chiefs, all of whom acknowledge the *Ram Rajah* as their sovereign, and all except *Moodajee Bonslah* acknowledge the *Paishwa* as his vicergerent. The capital of the sovereign was *Sattarah*; but the *Paishwa* generally resides at *Poonah*, one degree to the southward, and about 100 miles distant from Bombay. The country extends along the coast nearly from *Goa* to *Cambay*. On the S. it borders on the cinderant territories of *Tippoo Saib*, now in the possession of the British; on the E. it has those of the *Nizam* and the *rajah* of *Berar*; and on the N. those of the *Mahratta* chiefs *Sindia* and *Holkar*. 7. The *Rajah* of *Berar*, besides that country, has the greatest part of *Orissa*. (See *BARAR*, and *ORISSA*, N° 1.) His dominions extend about 600 miles in length from E. to W. and 200 from N. to S. The eastern part of *Orissa* extends along the sea-coast for about 150 English miles, and divides the British possessions in *Bengal* from those commonly called the *Northern Circars*. On the W. his territories border upon those of the *Paishwa*; on the S. upon those of the *Nizam*, *Mahomet Hyat* a *Patan* chief, *Nizam Shah*, and *Ayd Sang*. The *rajah* himself resides at *Nagarpour*, about midway betwixt *Calcutta* and *Bombay*. 8. *Mudajee Sindia* has (or lately had) the greatest part of the government of *Malwa*, together with the province of *Cardesh*. The remainder is under the government of *Holkar*; who, as well as *Sindia*, pretends to be descended from the ancient kings of *Malwa*. The principal residence of *Sindia* is at *Ugein* near the city of *Blundo*, formerly

**HINDOOSTAN, DIVISION OF.** This vast country is at present divided among the following powers: 1. *Timar Shah*, son of *Ahmed Shah*, or *Shah*, possesses an extent of territory to the west where we come to the *Indus*. This country extending all the way betwixt *India* and *Persia* is known by the name of *Duran*, or *Turan*; and is possessed by the *Afghans*, of whom *Abdullah* became the sovereign. See *AFGHANS*, and *INDIA*. 2. The dominions of this prince extend a considerable way to the northward of the *Indus*; he possesses nothing in *Hindooostan* except the province of *Kashmir*. (See *CASHMIRE*.) 3. *Shah* inhabit a country on the other side of the *Indus*, which is a part of *Hindooostan* proper. 4. The provinces of *DELHI* and *Bihar* in the course of a few years, frequently change their masters, but have scarce at any period been under the authority of one power. Their last governor was *Nadjib Khan*, who bore the title of generalissimo of the empire; he was involved in the ruin of *Mohammedan*, cousin to *Soujah ul Dowlah*; and he went to *Cosim Aly Khan* nabob of *Bengal*, whose expulsion he retired with a view to *Bundekund* into the service of *Shah Sing*. He next joined the *English*; and became the general of *Shah Alium*, a party of *English* sepoys who had been put under his command, and some other troops whom he had taken into his service, he subdued the province of *Delhi*, conquered almost all the provinces of the *Jatts*, reducing the cities of *Agra* and other principal towns. These conquests were indeed effected in the name of the *British*.

merly the capital of these kings. Holkar resides at Indoor, a town little more than 30 miles to the westward of the former. The dominions of these, and some other princes of smaller note, extend as far as the river Jumna. The two last mentioned princes, though properly Mahrattas, owe no allegiance to the Ram Rajah, or great chief to whom the main body are nominally subject. 9. The DECCAN, as left in 1748 by Nizam al Mulk, was by far the most important and extensive soubadary or viceroyship in the empire. It then surpassed in size the largest kingdom in Europe; but since that time many provinces have been conquered by the Mahrattas, and the northern Circars by the British. The possessions of the Nizam are also diminished by the cession of the Carnatic to the nabob of Arcot; great part of the territories of the late Tippoo Saib; and many provinces of less note. Still, however, the Nizam possesses very considerable territories; (see DECCAN, N° 1. but his finances are in such a bad state, and his provinces so ill governed, that he is accounted an inconsiderable prince, tho' otherwise one of the most powerful in Hindoostan. 10. The cr-devant dominions of Tippoo Saib, the son of Hyder Ali, were bounded on the N. by the territories of the Paishwa; on the S. by Travancore, the territory of an independent Hindoo prince; on the W. by the sea; and on the E. by a great ridge of mountains, which separate them from the territories of the nabob of Arcot. The country lying E. of these mountains is called the Carnatic *Paya Ghat*, and that to the W. the Carnatic *Bhalla Ghat*. The latter belonged to Tippoo Saib, but was taken by the British in 1798, when Tippoo himself was killed, at the capture of SERINGAPATAM. The mountainous part of this country has been since restored to the heir of the ancient sovereigns, against whom Hyder Ali rebelled: and the rest is retained by the British government. The two together make up the country formerly called the Carnatic, though the name is now restricted to the *Paya Ghat*. The situation of the Bhalla Ghat is considerably more elevated than the other; by which means the air is colder.

(4.) HINDOOSTAN, GOVERNMENT OF. With regard to the government of Hindoostan, the sovereigns of the different kingdoms into which it is divided, however they may differ in other respects, seem all to agree in despotism and oppression of their subjects. The British territories in the East Indies were originally under the jurisdiction of a governor and 23 members; but this number has fluctuated occasionally from 14 to 4, at which it was fixed by act of parliament. In this council, all matters relating to peace or war, government or commerce, were debated, the governor having no other superiority than the casting vote. But the whole executive power was lodged in his hands, and all the correspondence with the native princes of India was carried on by his means, the dispatches to them being signed by him singly; and all the princes and great men who visited the presidency were first received by him, and then introduced to the counsellors. He was military governor of Fort William, and commander in chief of the presidency; whence, as by his office he was invested with a considerable degree of power, he became an object of envy and jealousy to

the members of the council and other considerable people. This circumstance occasioned the government to be divided into two parties, one siding with the governor, and the other opposing him in consequence of which, the debates were frequently carried on with an indecent degree of heat and violence. This indeed may be laid upon as one principal cause why the reputation of the British government in the eastern parts of the world has suffered; for, as there were very frequently opinions diametrically opposite to one another recorded upon the same subject, the warring parties in the British parliament had ways sufficient authority for what they said, and then take which side they would; and thus the characters of all concerned in the East India government were, with great appearance of justice set forth in the most opprobrious light. (See EAST INDIA, § 116—117.) Another source of reproach was, that the court of directors in England became infected with the same spirit of party which pervaded all other departments of the government, and hence arose innumerable disputes highly ungraceful to those concerned. With regard to the administration of British affairs in the East Indies it must indeed be remarked, that the company now act in a very different capacity from what they originally did. From a society of merchants they are now become sovereigns of the countries in which they trade. The latter character was foreign to them; and they have accordingly laid upon that of merchants as the principal, while that of sovereigns was to be only a kind of appendage to it. Thus, instead of acting for the interest of the country they govern, and what as sovereigns they naturally ought to do, they acted in many cases directly opposite to it, while as merchants, is also their natural interest. It is also, when the administration in India did nothing in obedience to the orders of the directors, which being dictated by merchants were peculiar to the interests of the country, that injury has been sometimes unjustly attributed to the directors, who acted merely in obedience to the orders they received. On the other hand, when the India administration acted with the generosity of sovereigns, they were sometimes blamed by the directors, who judged as merchants, and sometimes by the ministry, who were always ready upon the smallest pretence, to interfere in their affairs. At the time when the British administration first commenced in Hindoostan, the Hindoo vernal were universally named *Rajahs*; but many of the Hindoo families yet bear that title does not appear to resemble, in any respect, the titles of nobility, or to be a dignity which can be conferred by any of the princes, or even by the Mogul himself. There are no ancient soldiers the titles being conferred merely by usurpers, who have neither right nor title derived from any other but violence. See RAJA, N° 1. ZEMINDARS. From the consultations of the select committee 1769, we are informed that the Zemindars had power of levying fines at pleasure; that they received large sums from duties collected in the markets, and that they frequently oblige the ryots or husbandmen to work for nothing. In short, the claims made by the European barons on their

the times of the feudal system, are now to be the Zemindars on the common people of Hindoostan. If one of them is to be married, a child born, if honours are to be conferred upon him; nay, if he is even to be fined for misconduct, the poor ryot must also contribute his share. Mr Scrafton, in his *History of Hindoostan*, sets forth the situation of the Zemindars in the following words:—"Unhappily the Zemindars, themselves are made the ministers of oppression over each other: the Moor men, the Rajas, and the Rajpoots, make them, of whom they have no jealousy, the ministers of their oppression, which further answers the end of dividing them, and prevents their uniting to fling off the yoke; and by the strange intoxication of power, they are found still more rapacious and cruel to their foreign masters: and what is more extraordinary, the Bramins still exceed the rest in the abuse of power, and seem to think, if they are rewarded by bestowing a part of their plunder on the Rajas and Rajpoots, their iniquities will be pardoned. From this account of the situation of the Zemindars of Hindoostan under their native rulers, it is probable that they could make a worse example, by falling under the jurisdiction either of the Mohammedans or Europeans. A notion indeed has been propagated, that the British government has behaved with the greatest cruelty in collecting the revenues, and that they have even inflicted tortures to make the rich people discover their treasures; but on examining the matter impartially, the reverse of this is said to be the case. At the time that the British government entered in the affairs of Hindoostan, the provinces were in a ruinous state, in consequence of wars which had taken place in the country. In the most settled state, and when the administration was most regular, the government was altogether despotic, and the mode of collecting the revenues extremely arbitrary; the punishments inflicted very cruel; and the whole system of government such as would be reckoned quite barbarous in Europe. It is only within these few years that the British could effectually interpose on behalf of the natives; and in that short time it has produced a very considerable reformation. It is true, that the British government has discontinued oppressive measures as much as possible; and has abolished the cruel modes of punishment used by the Mohammedans; and by instituting a more regular plan of justice, has procured ease and security to the natives, and preserved them in a state of tranquillity altogether unknown before. A great objection, however, to the India government is, that the English law, which undoubtedly is better calculated than any other for securing the liberties of the people, has not yet been established in India; whence it is thought that the British servants have still shown a disposition to oppress, rather than to relieve, the oppressed people of Hindoostan. But in answer to this it is said, that the difference betwixt the laws of the two countries is so great, that there can be no comparison betwixt the one and the other, nor can the constitution of England be in any degree compared to that of the other. The religion, laws, and customs, of both Hindoos and Mo-

hammedans, are so essentially different from those of this country, that it is impossible to assimilate them, should ever any thing of the kind be attempted. The only true method, therefore, of judging whether the present state of Hindoostan is preferable to what it formerly was, is to compare it with what it was under the best Mogul emperors; and in this comparison it must certainly appear, that the preference is greatly in favour of the British administration. In Major Rennel's work we are informed, that during the reign of Akbar, whom he styles "the glory of the house of Timur," the country had never enjoyed so much tranquillity; "but this tranquillity would hardly be deemed such in any other quarter of the world, and must therefore be understood to mean a state short of actual rebellion, or at least commotion." The same author, speaking of the state of the British empire there, uses the following words:—"The Bengal provinces, which have been in our actual possession near 23 years, have, during that whole period, enjoyed a greater share of tranquillity than any other part of India, or indeed than those provinces had ever experienced since the days of Aurengzebe." To this we may add, that the provinces have not only experienced a perfect freedom from external invasions, but likewise enjoyed a degree of internal tranquillity altogether unknown before, by the subjection and civilization of a set of banditti who inhabited the hills of Rajmahal, and infested travellers; a wandering tribe of religious mendicants, who were wont to commit the greatest enormities. Another advantage the inhabitants of this country reap from the British government, is the security from violence and oppression, either by their Mohammedan superiors, or by one another. Under the article Hindoos, (§ 2,) we have mentioned, that these people are liable to the punishment of losing their cast, from a variety of causes, and that this is looked upon by them to be the most grievous calamity they can suffer. The Mohammedan governors often took advantage of their superstition in this respect to oppress them; and this circumstance alone frequently produced the most horrid confusion. In the instructions given to the supervisors, Mr Verelst informs them, that "it is difficult to determine whether the original customs, or the degenerate manners of the Mussulmen, have most contributed to confound the principles of right and wrong in these provinces. Certain it is (adds he), that almost every decision of theirs is a corrupt bargain to the highest bidder. Compensation was frequently accepted of even for capital crimes, and fines became at last an intolerable grievance; nay, so venal were the judges, that it became at last a settled rule, to allow each of them a 4th part of any property in dispute, as a compensation for his trouble. It cannot be supposed that such monstrous abuses continue under the British government. On the contrary, the governors themselves assert, that immediately after the provinces fell under British jurisdiction, both Hindoos and Mohammedans have been left to the free exercise of their religion, laws, and customs. The Hindoos themselves acknowledge this, and are as well pleased with the mildness of the British government, as they are displeased with the superstition and cruelty of the Mohammedans.

Under the British government, commerce, to which the inhabitants of this country are so much addicted is much more encouraged than by the avaricious and haughty Mohammedans. The latter had imposed so many restraints upon trade of all kinds, by the multitude of taxes collected at the landing places, watch-houses, markets, &c. that it was almost impossible to carry it on with any advantage. Among other salutary regulations, however, enacted by the British government in 1793, many of those taxes upon commerce were abolished, and a plan laid for effectually liberating the inhabitants, from those shackles by which their commerce had so long been fettered. Regard has also been paid to the instruction of the people in useful knowledge; and the seminary established at Calcutta, by Sir William Jones, certainly does much honour to the founder. Some regard had indeed been paid to this by the Mohammedan emperors; but at the time that the British government commenced, these had been entirely neglected, their endowments resumed by government, and even the buildings fallen into ruin. From a comparison of any government to which the Hindoos have hitherto been subject, with that of Britain, indeed, it is evident that the preference must be greatly in favour of the latter. At the time when the British first visited that country, they were not under the jurisdiction of their native sovereigns, nor had they been so for a long time before. The Moguls were not only foreigners, but a most cruel and detestable race; and it was by usurpations of their own rebellious subjects, that the anarchy and confusion was introduced, in which the country was involved for so long a time. The British are foreigners as well as the Moguls; but the latter, who profess the intolerant superstition of Mohammed, suffer their conduct to be influenced by it in such a manner, as to treat the natives with the utmost cruelty. The greatest evil perhaps, which results from the British government, is, the exportation of great sums of money to a foreign country; but this evil, with respect to the provinces possessed by the British, existed also under the Mohammedan government. The Mogul emperors resided at Delhi, which is far distant from Bengal, Bahar, and Orissa, the territories now possessed by Britain; so that the greatest part of the treasure sent to that capital was totally lost to them. In the time of Aurengzebe, the emperor's tribute amounted to three millions sterling; of this a considerable part was specie; but since that time the tribute was fixed at only 1,370,000l. and even this was a vast sum; to which if we add that carried out of the country by commanders of mercenary troops who were all foreigners, it is not unreasonable to suppose that under the Mogul government matters were still worse, even in this respect, than under that of Britain.

(5.) HINDOOSTAN, HISTORY OF. See INDIA.

(6.) HINDOOSTAN, MOUNTAINS AND RIVERS OF. The most remarkable mountains are those which surround it on three sides. Those on the W. separating it from Persia, called, in general, *Salyman Key*, or *the mountains of Salyman*, are of a vast height as well as breadth, and are only passable in certain places, through which roads have been made for the sake of commerce. The

chief are those which lead to Kabul, Gurga, and Kandahar. This great chain of mountains is inhabited by different nations, the principal of which are the Afghans, or Patans, and the Beluchis, who have extended themselves on the side of India, as well as Persia. The mountains on the E. are called *Nagradut*, *Hima*, or *Mis Ydz*, which has an affinity with *Immis*, and by other names, which are given also in common to the mountains on each side, separating Hindoostan from Tibet. The very prospect of these mountains is frightful, being nothing but hideous precipices, perpetually covered with snow, and not to be crossed without the greatest danger and difficulty. The principal rivers of Hindoostan are the Indus and the Ganges. (See these articles, and *Bussanpoort*.) The Ganges, or Ganga, enters Hindoostan about lat. 30°, it runs first south eastward by the cities of Bikaner, Minapor, Halabas, Benares, and Patna, to Rajah Muhl, where it divides into two branches. The eastern having passed by Dacca, the capital of Bengal, enters the gulph of Bengal about Chatigan. The western, descending by Koffum-Bazar and Hugly, falls into the gulph below Chandernagor towards Pipeli. The Indians have the greatest reverence for its waters, from a persuasion that they wholly obliterate the spot of sin; and that it does not rise from the earth but descends from heaven into the paradise of Devendre, and from thence into Hindoostan. Nothing is more childish than the fables of the Indians on this subject, yet the people believe them all. The Mogul and the prince of Goleonda drink no other water than that of the Ganges: foreigners, on the contrary, allege that it is very unwholesome, and that it cannot be safely drunk till it is first boiled. There is a great number of superb pagodas on the banks of the Ganges, which are immensely rich. At certain festivals, there has been sometimes a concourse of 100,000 people who came to bathe in it. But what principally distinguishes this river, besides its greatness and rapidity, is the gold it brings down in its floods, and throws on its banks; and the precious stones and pearls it produces, not only in itself, but in the gulph of Bengal, into which it discharges its waters, and which abound therewith. The Chou, or Jemma, the Ouderasu, the Persilla, Lakia, and several other rivers, discharge themselves into it during its course.

(7.) HINDOOSTAN, POPULATION OF. The total number of inhabitants in this extensive country, exclusive of Europeans, is estimated at 120 millions. Of these, 10 millions are Mohammedans, and 100 millions Gentooes. See GENTOOES & HINDOOS.

(8.) HINDOOSTAN, PRODUCE OF. Hindoostan is very rich in every kind of productions, whether fossil, vegetable, or animal. Besides other precious stones, there is a diamond mine at the town of Soumelpur in Bengal. Quarries of Turban stone are so plentiful in the Mogul's empire, that there are both mosques and pagoda built entirely of it. Travellers tell us, there are mines of lead, iron, and copper, and even silver; but those of the last, if there be any, need not be opened, for the bullion of all nations is sunk in this empire, which takes nothing else in exchange for its commodities, and prohibits the exporting it again.

The people till the ground with oxen and crops, sowing in May and the beginning of June, that all may be over before the rains, and in Nov. and December, which with them are the most temperate months in the year. The soil is here inclosed, excepting a little near the villages. The grass is never mowed to any purpose, but cut off the ground, either green or dried, as they have occasion to use it. Rice, barley, and other grain, grow here in great plenty, and are very good. The country also yields in fruits, as pomegranates, citrons, almonds, and cocoa nuts; plums, those which are called *mirabelles*; plantains, which in some places are a slender cucumber, and in taste resemble the Norwich pear; mangoes, an excellent fruit, resembling an apricot, but larger; ananas, or pine apples, lemons and oranges, but not so good as in our countries; variety of pears and apples in the mountains; and the tamarind tree, the fruit of which is contained in a pod resembling those of the cotton and mulberry, on account of which they bring the natives from the mountains to the country. They plant abundance of sugar canes here, as well as tobacco; but the soil is not so rich and strong as that of our country, as they know not how to cure and order it. Hindoostan affords also plenty of ginger, with carrots, potatoes, onions, garlic, and other roots known to us, besides small roots which are used for salads; but their flowers, though they look at, have no scent, excepting some few other kinds.

**HINDOOSTAN PROPER.** Mr Rennel observes, that though, by the modern Europeans, Hindoostan has been understood to mean the tract situated between the rivers Indus and Ganges on the E. and the mountains of Thibet and Tartary on the N. and the ocean on the S. yet the extent of the country, properly so called, is much more circumscribed; and the name ought only to be applied to that part which lies N. of 21° or 22° lat. The southern boundary of Hindoostan is the Godavari river as far as it goes, and the northern limits of Bengal and Bahar compose the N. and E. The countries to the S. of this line are called Deccan by the Indian geographers, and extend about one half of the territory generally comprehended by the name of the *Mogul Empire*. Our geographers therefore distinguish the northern part of the country by the name of *Hindoo Proper*; which has its limits in the Indus and mountains of Thibet and Tartary for its western and northern boundaries; but the Godavari river is rather to be considered as its southern boundary than the Ganges; the latter being some of the richest provinces in the country. (See **BURRAMPOOR**.) Upon this principle Hindoo Proper equals in size the countries of France, Germany, Bohemia, Hungary, Poland, Italy, and the Low Countries; the whole peninsula being about equal in size to the islands of Spain, and European Turkey.

**HINDOOSTAN, QUADRUPEDS OF.** There is a great variety of quadrupeds in this country, and all tame; among the former are elephants, crocodiles, lions, tigers, leopards, wolves,

jackals, and the like. The jackals dig up and eat dead bodies, and make a hideous noise in the night. The rhinoceros is not common in the Mogul's empire; but the elephants are very numerous, some 12, 14, or 15 feet high. There is plenty of venison, and game of several kinds; as red deer, fallow deer, elks, antelopes, kids, hares, and such like. None of these are imparked, but all in common, and may be any body's who will be at the trouble to take them. Among the wild animals also may be reckoned the musk animal, apes, and monkeys. Hindoostan affords variety of beasts for carriage, as camels, dromedaries, mules, asses, horses, oxen, and buffaloes. Most of the horses are white, and many curiously dappled, pied, and spotted all over. The flesh of the oxen is very sweet and tender. Being very tame, many use them as they do horses to ride on. Instead of a bit, they put one or two small strings through the gristle of the nostrils, and fastening the ends to a rope, use it instead of a bridle, which is held up by a bunch of gristly flesh which he has on the fore part of his back. They saddle him as they do a horse; and, if spurred a little, he will go as fast. These are generally made use of all over the Indies; and with them only are drawn waggons, coaches, and chariots; Some of these oxen will travel 15 leagues in a day. They are of two sorts; one six feet high, which are rare; another called *dwarfs*, which are only three. In some places, where the roads are stony, they shoe their oxen when they are to travel far. The buffalo's skin makes excellent buff, and the female yields very good milk; but their flesh is neither so palatable nor wholesome as beef. The sheep of Hindoostan have large heavy tails, and their flesh is very good, but their wool coarse.

**(11.) HINDOOSTAN, REPTILES AND INSECTS OF.** This country is much infested with reptiles and insects; some of a noxious kind, as scorpions, snakes, and rats; but the lizards, which are of a green colour, are not hurtful. Snakes and serpents, we are told, are sometimes employed to dispatch criminals, especially such as have been guilty of very atrocious crimes, that kind of death being attended with the most grievous torture. The most troublesome insects in this hot country are flies, musketoes, and chinchies or bugs.

**(1.) HINDOW,** a territory of Hindoostan, bounded by Delhi and Agra on the N. and E.; and by Ameer on the S. and W.

**(2.) HINDOW,** the capital of the above territory. The people boast their descent from the original inhabitants of India. Lon. 78. 5. E. Lat. 26. 50. N.

**HINDRINGHAM,** a town in Norfolk.

**HINDUSTAN.** See **HINDOOSTAN**, & **INDIA**.

**HINE,** or **HIND**, *n. s.* a husbandman's servant. The person who oversees the rest, is called the master's hine.

\* **HINGE.** *n. s.* (or *hingle*, from *hangle* or *hang*.) 1. Joints upon which a gate or door turns.

At the gate

Of heav'n arriv'd, the gate self open'd wide,  
On golden hinges turning. *Milton.*

Then from the hinge their strokes the gates  
divorce,

And where the way they cannot find, they force.  
*Drummond.*  
*Heaven's*

Heav'n's imperious queen shot down from high;  
At her approach the brazen hinges fly,  
The gates are forc'd. *Dryden.*  
2. The cardinal points of the world, East, West,  
North, and South —

If when the moon is in the *binge* at East,  
The birth breaks forward from its native rest;  
Full eighty years, if you two years abate,  
This station gives. *Creech.*  
3. A governing rule or principle.—The other *binge*  
of punishment might turn upon a law, whereby  
all men who did not marry by the age of five and  
twenty, should pay the third part of their reve-  
nue. *Temple.* 4. To be off the HINGERS. To be  
in a state of irregularity and disorder.—The man's  
spirit is out of order and off the hinges; and till  
that be put into its right frame, he will be perpe-  
tually disquieted. *Tillotson.*—

Methinks we stand on ruins, Nature shakes  
About us, and this universal frame  
So loose, that it but wants another push  
To leap from off its hinges. *Dryden.*

\* To HINGE. v. a. [from the noun.] 1. To  
furnish with hinges. 2. To bend as an hinge.—

Be thou a flatt'rer now, and *buge* thy knee;  
And let his very breath, whom thou'lt observe,  
Blow off thy cap. *Shak.*

HINGEON, a town of the French republic, in  
the dep. of Sambre and Meuse, and ci-devant coun-  
ty of Namur; 8 miles NW. of Namur.

(1.) HINGHAM, a market town of Norfolk,  
12 miles SW. of Norwich, and 97 NE. of Lon-  
don. Lon. 1. 4. E. Lat. 52. 43. N.

(2.) HINGHAM, a town of the United States,  
in Massachusetts, 10 miles SE. of Boston.

HING-HOA, a city of China of the first rank,  
in the prov. of Fo-kien, near the sea-coast. The  
walls are very thick, and the streets well paved.  
The city is adorned with several triumphal arch-  
es, and majestic public buildings. Silk and rice  
are its chief commodities. It is 900 miles S. of  
Pekin. Lon. 136. 42. E. of Ferro. Lat. 25. 28. N.

HINIGAN, a town of Turkey, in Irak Arabic.

HINKA, a lake of Chinese Tartary, 108 miles  
in circumference. Lon. 130. 15. E. of Ferro. Lat.  
45. 35. N.

HINKAN, a chain of mountains in Chinese  
Tartary, extending from Lon. 152° to 155° E. of  
Ferro; and from Lat. 53° to 54° N.

HINNOM. See BEN-HINNOM and GEHENNA.

HINOJARES, a town of Spain, in the prov. of  
Jaen, 15 miles SE. of Ubeda.

HINOJOSA, 4 towns of Spain: 1. in Estrema-  
dura, 16 miles N. of Lerena: 2. in Leon, 25 m.  
NNW. of Ciudad Rodrigo: 3. in Castile, 10 m.  
N. of Molina: and 4. in ditto, 36 miles S. of  
Huelva.

HINSCHENFELD, a town of Holstein.

\* HINT. n. s. [from the verb.] 1. Faint no-  
tice given to the mind; remote allusion; distant  
insinuation.—Let him strictly observe the first stir-  
rings and intimations, the first *bents* and whispers  
of good and evil, that pass in his heart. *South.* 2.  
Suggestion; intimation.—

On this *bent* I spake,  
She lov'd me for the dangers I had past. *Shak.*  
—Actions are so full of circumstances, that, as  
men observe some parts more than others, they

take different *bints*, and put different interpre-  
tions on them. *Addison.*

(1.) \* To HINT. v. a. [enter, French. *Sticker*.]  
To bring to mind by a slight mention or remote  
allusion; to mention imperfectly.—

Willing to wound, and yet afraid to strike,  
Just *bint* a fault, and hesitate dislike. *Ap-*

In waking whispers, and repeated dreams,  
To *bint* pure thought, and warn the favour-  
foul. *Töndel*

(2.) \* To HINT AT. To allude to; to touch  
slightly upon.—Speaking of Augustus's actions,  
still remembers that agriculture ought to be  
way *binted at* throughout the whole poem. *Ad-*  
son on the Georgicks.

HINTERSEE, a lake of Bavaria.

HINTON, the name of 12 villages; viz. of  
each in Berks, Dorsetshire, Hants, Oxford, So-  
folk, and Wilts; and of 5 in Gloucestershire.

HINZUAN, or JOANNA. See JOANNA.

HIO, a town of Sweden, in W. Gothland,  
situated on the Lake Wetter, 145 m. SW. of Stock-  
holm. Lon. 14. 0. E. Lat. 57. 53. N.

HIONG-NOU. See HAMI, N° 2.

HIONG-TCHUEN, a town of Corea.

HIORRING, a town of Denmark, in N.  
land, 27 miles NNW. of Aalborg. In 1692  
was burnt.

HIORTED, a town of Sweden, in Småland.

(1.) \* HIP. a. [bype, Saxon.] 1. The  
of the thigh.—How now, which of your *bips*  
the most profound sciatica? *Shak.*—Hippoc-  
rass affirmeth of the Scythians, that, using con-  
riding, they were generally molested with the  
atica, or *bip* gout. *Brown.* 2. The haunch;  
flesh of the thigh.—

So shepherds use  
To set the same mark on the *bip*  
Both of their sound and rotten sheep. *Shak.*  
Against a stump his tusk the monster grinds  
And ranch'd his *bips* with one continu'd wound. *Dry-*

3. To have on the HIP. [A low phrase.] To  
an advantage over another. It seems to be  
from hunting, the *bip* or *bouch* of a deer  
the part commonly seized by the dogs.—

If this poor brach of Venice, whom I chide  
For his quick hunting, stand the putting off  
I'll have our Michael Cassio on the *bip*. *Shak.*

(2.) \* HIP. n. s. [from *bropa*, Sax.] The  
of the briar or dogrose.—

Eating *bips* and drinking watery foam.

Why should you want? Behold, the  
hath roots;  
The oaks bear masts, the briars scarlet *bips*.

—Years of store of baws and *bips* do come  
portend cold winters. *Bacon.*

(3.) HIP, in the materia medica, the fruit  
the dog rose or wild briar. See ROSA, N° 1.

3. It contains an acidulous, yet sweetish pul-  
with a rough prickly matter inclosing the  
from which the pulp ought to be carefully  
rated before it be taken internally. The Witten-  
berg college observes, that from a neglect of  
pulp of hips sometimes occasions a pruritus  
uneasiness about the anus; and the consequent

horse and half man.—How are poetical fictions, how are *hippocentaurs* and chimeras to be imaged, which are things quite out of nature, and whereof we can have no notion? *Dryden*.

(2.) **HIPPOCENTAURS**, [from *hippos*, a horse, *centauros*, 1 spur, and *centauros*, a bull.] a people of Thessaly, inhabiting near mount Pelion, became thus denominated, because they were the first that taught the art of mounting on horseback; which occasioned some of their neighbours to imagine, that the horse and man were but one animal. The hippocentaurs should seem to have differed from the centaurs, in this, that the latter only rode on bullocks, and the former on horses, as the names intimate. See **CENTAUR**, § 1, 3.

(3.) \* **HIPPOCRAS**, *n. f.* [*hypocras*, French; *quasi vinum Hippocratis*.] A medicated wine.—Sack and the well-spiced *hippocras*, the wine, Waffail the bowl, with ancient ribbands fine

*King*.

(4.) **HIPPOCRAS** is composed of wine, with spices and other ingredients; and is much used in France, as a cordial after meals. There are various kinds of it, according to the kind of wine and other ingredients used: as *white*, *red*, *claret*, and *strawberry* hippocras; *hippocras without wine*; *cyder* hippocras, &c. The London Dispensatory directs it to be made of cloves, ginger, cinnamon and nutmegs, grossly powdered, and infused in canary with sugar; to this infusion may be added, milk, a lemon, and some slips of rosemary, and the whole strained through flannel. It is recommended as a cordial, and in paralytic and nervous cases.

**HIPPOCRATEA**, in botany; a genus of the monogynia order, belonging to the tetrandria class of plants; and in the natural method ranking with those of which the order is doubtful. The calyx is quinquepartite; the petals 5; the capsules 3, and of an obovate shape.

(1.) **HIPPOCRATES**, the greatest physician of antiquity, was born in the island of Coos, in the 80th Olympiad, and flourished during the Peloponnesian war. He was the first on record, who laid down precepts concerning physic; and, according to his biographer Soranus was descended from Hercules and *Æsculapius*. He was first a pupil of his father Heracleides, then of Herodicus, then of Gorgias of Leontium the orator, and, according to some, of Democritus of Abdera. After being instructed in physic and the liberal arts, and losing his parents, he left Coos, and practised physic all over Greece; where he was so much admired for his skill, that he was publicly sent for with Euryphon, a man superior to him in years, to Perdiccas king of Macedonia, who was then thought to be consumptive. But Hippocrates, as soon as he arrived pronounced the disease to be entirely mental. For upon the death of his father Alexander, Perdiccas fell in love with Phias, his father's mistress; which Hippocrates discerning by the great change in her presence always wrought upon him, a cure was soon effected. Being entreated by the people of Abdera to come and cure Democritus of a supposed madness, he went; but, upon his arrival, instead of finding Democritus mad, he pronounced all his fellow citizens so, and Democritus the only wise man among

them. He heard many lectures, and learned much philosophy from him; which made Celsus and others imagine, that Hippocrates was the disciple of Democritus, though it is probable they never saw each other till this interview. Hippocrates kept public invitations to other countries. Thus, when plague invaded the Illyrians and Pæonians, the kings of those countries begged him to come for their relief: he did not go; but learning from messengers the course of the winds there, he concluded that the distemper would come to Athens, and, foretelling what would happen, applied himself to take care of the city and the students. It was indeed such a lover of Greece, that when plague had reached as far as Persia, and Artaxerxes entreated him, with a promise of great reward to come to him, he refused to go. He also saved his own country from a war with the Athenians, that was just ready to break out, by persuading the Thessalians to come to their assistance for which he received very great honours from the Coans. The Athenians also honoured him greatly; they admitted him next to Hercules the Eleusinian ceremonies; gave him the freedom of the city; and voted a public maintenance for him and his family in the *peytaneum* at Athens where none were maintained but such as had done signal service to the state. He died among the Larissians, some say in his 90th year, some in 85th, others in his 104th, and some in his 110th. The best edition of his works is that of Foesius in Greek and Latin. Hippocrates wrote in the Ionian dialect. His aphorisms, prognostics, and that he has written on the symptoms of diseases, are justly pass for masterpieces.

(2.) \* **HIPPOCRATES'S SLEEVE**, *n. f.* A linen bag, made by joining the two opposite sides of a square piece of flannel, used to strain syrups and decoctions for clarification. *Quincy*.

**HIPPOCRENE**, in ancient geography, a fountain of mount Helicon, on the borders of Boeotia sacred to the Muses. Ovid makes Hippocrene Agæippe the same. See **AGANIPPE**, and **HELICON**.

**HIPPOCREPIS**, COMMON HORSE-SHOEVE in botany; a genus of the decandria order, belonging to the diadelphica class of plants; and in the natural method ranking under the 3d order *Papilionaceæ*. The legumen is compressed and crooked, with many incisions on the interior side. There are 3 species, two natives of the warm parts of Europe, and one of Britain. They are all herbaceous trailing plants, with yellow flowers. They are propagated by seeds; but having great beauty are seldom kept in gardens.

**HIPPODAMIA**, the daughter of Oenone and wife of Pelops. See **PELOPS**.

**HIPPODROME**, or *ἵπποςδρομος* [from *hippos*, a horse, *δρομος*, 1 course,] in antiquity, a course wherein chariot and horse races were performed, and horses exercised. See **CHARIOTRACON**. The Olympian hippodrome or horse-course was a space of ground 600 paces long, surrounded with a wall, near Elis, on the bay of the Alpheus. It was uneven, and in some parts gree irregular, on account of the situation; in other part was a hill of a moderate height, and the circuit was adorned with temples, altars, and other embellishments.

**hippodrome.** See **STADIUM**. There is a famous hippodrome at Constantinople, which was begun by Alexander Severus, and finished by Constantine. The circus, called by the Turks *atmirim*, is 400 paces long, and above 100 paces wide. At the entrance there is a pyramidal obelisk of granite in one piece, about 50 feet high, terminating in a point, and charged with hieroglyphics. The Greek and Latin inscriptions on its base show, that it was erected by Theodosius; the machines which were employed to raise it are represented upon it in basso relievo. There are some vestiges in the neighbourhood of the hippodromus, in which the ancient inhabitants of that country performed their races; the most remarkable is that near Stonehenge, which is a long tract of ground, about 350 feet, 1500 druid cubits wide, and more than a mile, or three quarters, or 6000 druid cubits, in length, enclosed quite round with a bank of earth, extending directly E. and W. The goal and career are at the east end. The goal is a high bank of earth, raised with a slope inwards, on which the judges are supposed to have sat. The metes are two tufts, or small barrows, at the west end of the race. These hippodromes were called in the language of the country *rhedagun*, the racer *rhedagur*, the carriage *rbeda*, &c. the British word *rhe-* "to run." One of these hippodromes, about a mile S. of Leicester, retains evident traces of the old name *rhedagun*, in the corrupted one of *redes*. There is another, says Dr Stukely, at Dorchester; another on the banks of the river, near Penrith in Cumberland; and another in the valley, just without the town of Ryshton.

**HIPPOGLOSSUS.** See **PLEURONECTES**, § 1.  
**HIPPOGRIFP.** *n. f.* [from *ἵππος* and *γρύψ*; *hippos*, French.] A winged horse; a being imagined by Aristotle.—

He caught him up, and without wing  
 Hippogriff bore through the air sublime. *Milt.*  
**HIPPOLYTE**, in fabulous history, a queen of the Amazons, who was conquered by Hercules, married to Theseus: by whom she had  
**HIPPOLYTUS**, famous in fabulous history for his virtue and his misfortune. His step mother Phaedra fell in love with him, and when he refused to pollute his father's bed, she accused him to Theseus of doing violence to her person. Her accusation was believed, and Theseus entreated Neptune with the incontinence of his son. Hippolytus fled from the resentment of his father; and as pursued his way along the sea shore, his horse were so frightened at the noise of sea calves which Neptune had purposely sent there, that they ran among the rocks till his chariot was broken and his body torn to pieces. Temples were raised to his memory, particularly at Troezen, where he received divine honours. Diana is said to have restored him to life.

**HIPPOMANE**, the **MANCHIKILL TREE**, a genus of the monadelphia order, belonging to the monochlamydeous plants; and in the natural method ranked under the 38th order, *Tricocco*. The male has an inferior and bifid perianthium, without any corolla; the female perianthium is trid; there is no calyx; the stigma is tripartite; and the plum or capsule is three-celled. See *Pl. CLXXXI*. The species are,  
 1. **HIPPOMANE BIOLANDULOSA**, with oblong

bayleaves, is a native of South-America; and grows to as large a size as the **MANCHIKILL**, from which it differs mostly in the shape of its leaves.

2. **HIPPOMANE MANCHIKILL**, with oval sawed leaves, is a native of all the West India islands. It hath a smooth brownish bark; the trunk divides upward into many branches, garnished with oblong leaves about three inches long. The flowers come out in short spikes at the end of the branches, but make no great appearance, and are succeeded by fruit of the same shape and size with a golden pippin. The tree grows to the size of a large oak. Strangers are often tempted to eat the fruit of this species; the consequences are, an inflammation of the mouth and throat, pains in the stomach, &c. which are very dangerous unless remedies are speedily applied. The wood is much esteemed for making cabinets, book-cases, &c. being very durable, taking a fine polish, and not being liable to become worm eaten: but as the trees abound with a milky caustic juice, fires are made round their trunks, to burn out this juice; otherwise those who fell the trees would be in danger of losing their sight by the juice flying in their eyes. This juice raises blisters on the skin wherever it falls, turns linen black, and makes it fall out in holes. It is also dangerous to work the wood after it is sawn out; for if any of the saw-dust happens to get into the eyes of the workmen, it causes inflammation; to prevent which, they generally cover their faces with fine lawn during the time of working the wood. It is with the juice of this tree that the Indians poison their arrows.

3. **HIPPOMANE SPINOSA**, with holly leaves, is a native of Campeachy, and seldom rises above 10 feet high; the leaves greatly resemble those of the common holly, and are set with sharp prickles at the end of each indenture. They are of a lucid green, and continue all the year. These plants being natives of very warm climates, cannot be preserved in this country without a stove; nor can they by any means be made to rise above 3 or 6 feet high, even with that assistance. They are propagated by seeds; but must have very little moisture, or they will certainly be killed by it—These trees have all a very poisonous quality, abounding with an acrid milky juice of a highly caustic nature.

**HIPPOMANES**, [from *ἵππος*, a horse, and *μανη*, madness.] a sort of poison famous among the ancients as an ingredient in amorous philters or love charms. Authors are not agreed about the nature of the hippomanes. Pliny describes it as a blackish cancrule found on the head of a new born colt; which the dam bites off and eats as soon as she is delivered. He adds, that if she be prevented herein by any one's cutting it off before, she will not take to nor bring up the young. Virgil, and after him Servius and Columella, describe it as a poisonous matter trickling from the pudendum of a mare when proud, or longing for the horse. At the end of Mr Bayle's Dictionary is a very learned dissertation on the hippomanes, and all its virtues real and pretended.

**HIPPOMENES.** See **ATALANTA**, N° 1.

**HIPPON.** See **HIPPO**, N° 1. 3.

**HIPPONA**, [from *ἵππος*, a horse.] or **EPONA**, in ancient mythology, the goddess of horses. *Juv. viii.* See **EPONA**, N° 1.

**HIPPONAX**, a Greek poet, born at Ephesus, A. A. C. 540. He cultivated the same satirical poetry as Archilochus, and was not inferior to him in the beauty and vigour of his lines. His satirical raillery obliged him to fly from Ephesus. As he was naturally deformed, two brothers, Bupha'us and Anthermus, made a statue of him; which, by the ugliness of its features, exposed the poet to universal ridicule. Hipponax, resolving to revenge the injury, wrote such bitter invectives and satirical lampoons against them, that they hanged themselves in despair. *Cic. ad Famil. vii. ep. 24.*

**HIPPONENSIS SINUS.** See **BISERTA**, N° 2.

**HIPPOPEDFS.** See **HIPPORODES**.

**HIPPOPHAE**, SEA-BUCKTHORN; a genus of the tetrandria order, belonging to the diœcia class of plants; and in the natural method ranking under the 16th order, *Calycifera*. The male calyx is bipartite; there is no corolla: the female calyx is blind; there is no corolla; there is one style, and a monospermous berry. The species are,

1. **HIPPOPHAE CANADENSIS** with a shrubby brown stem, branching 8 or 10 feet high, with oval leaves, and male and female flowers on different plants.

2. **HIPPOPHAE RHAMNOIDES**, with a shrubby stem, branching irregularly 8 or 10 feet high, having a dark brown bark. It is armed with a few thorns, hath spear-shaped, narrow, sessile leaves, of a dark green above, and hoary underneath. Both these species are very hardy, and may be propagated in abundance by suckers from the roots, by layers, and by cuttings of their young shoots. They are retained in gardens on account of their two-coloured leaves in summer; and in winter, on account of the appearance of the young shoots, which are covered with turgid, irregular, scaly buds. Goats, sheep, and horses, eat this species; cows refuse it.

**HIPPOPHAGI**, in ancient geography, a people of Scythia, so called from their living on horse-flesh; the fate at this day of the Tartars their descendants. Also a people of Persia. *Ptolemy.*

**HIPPPODE**, or } [from *ippos*, a horse, and

**HIPPPODIE** } *pus*, a foot,] in ancient

geography, an appellation, given to a certain people situated on the banks of the Scythian sea, who were supposed to have had horses feet. The hippopodes are mentioned by Dionysius, *Geogr. v. 310.* *Mela, lib. iii. cap. 6.* *Pliny, lib. iv. cap. 23.* and *St Augustine, De Civit. lib. xvi. cap. 3.* It is conjectured, that they had this appellation given them on account of their swiftness or lightness of foot. Mr Pennant supposes them to have been the inhabitants of the Bothnian Gulph, and that they were the same sort of people as the *Fenni Lignipedes* of Olaus. They wore snow shoes; which he thinks might fairly give the idea of their being, like horses, hooved and shod.

(1.) **HIPPOTAMUS.** n. f. [from *ippos* and *tamus*.] The river horse. An animal found in the Nile.

(2.) **HIPPOTAMUS**, the RIVER HORSE, is a genus of quadrupeds belonging to the order of beluæ, the characters of which are these: It has 4 fore-teeth in the upper jaw, disposed in pairs at a distance from each other; and 4 prominent fore-teeth in the under jaw, the intermediate ones be-

ing longest. There are two tusks in each jaw, those of the under one very long and obliquely truncated; in both they stand solitary, and are recurvated. The feet are hooved on the edges. There is but one known species, viz. the

**HIPPOTAMUS AMPHIBIUS**, or river horse. See plate 181. The head of this animal is of an enormous size, and the mouth vastly wide. The ears are small and pointed, and lined within very thickly with short fine hairs. The eyes and nostrils are small in proportion to the bulk of the animal. On the lips are some strong hairs, scattered in patches here and there. The hair on the body is very thin, of a whitish colour, and scarcely discernible at first sight. There is no mane or neck, as some writers assert, only the hairs of that part are rather thicker. The skin is very thick and strong, and of a dusky colour. The tail is about a foot long, taper, compressed, and naked. The hoofs are divided into 4 parts. The legs are short and thick. In bulk it is secondly to the elephant. The length of a male has been found to be 17 feet, the circumference of the body 15, the height near 7, the legs near the head above 3½, and the girth near 9. The mouth, when open, is above two feet wide; furnished with 44 teeth of different figures (including the cutting teeth and the canine). The cutting, and particularly the canine teeth of the lower jaw, are very long, and so hard and strong that they strike fire with steel. This circumstance it is probable, gave rise to the fable of the animals, that the hippopotamus vomited fire from his mouth. The substance of the canine teeth is so white, so fine, and so hard, that it is comparable to ivory for making artificial teeth. The cutting teeth, especially those of the under jaw, are very long, cylindrical, and chamfered. The canine teeth are also long, crooked, pointed, and sharp, like the tusks of the wild boar. The grinders are square or oblong, like those of a horse, and so large that a single tooth sometimes weighs three pounds. The tusks, according to Dr Martini, are 17 inches long. With such powerful arms, and such a prodigious strength of body, the hippopotamus might render himself formidable to every other animal. But he is naturally of a mild disposition, and is only formidable when provoked. His bulk is so great, that it has been found necessary to draw one which had been shot in a river above the Cape of Good Hope, and Hasselquist says, its hide is a load for a camel. Though he delights in the water, and moves as freely as upon land; yet he has not, like the beaver or otter, membranes between his toes. The great size of his belly renders his specific gravity nearly equal to that of water, and enables him swim with ease. These animals inhabit the rivers of Africa, from the Niger to Berg River. Many miles N. of the Cape of Good Hope. They formerly abounded in the rivers nearer the Cape, but are now almost extirpated; and to preserve the few which are left in Berg River, the government has absolutely prohibited the shooting of them without particular permission. They are found in any of the African rivers which run into the Mediterranean, except the Nile, and even only in Upper Egypt, and in the seas and lakes

sp. 2, which that river passes through. From the swiftness of his body and the shortness of his legs, the hippopotamus is not able to move upon land, and is then extremely timid. When pursued, he takes to the water, plunges in, to the bottom, and is seen walking there at ease; he cannot, however, continue there without often rising towards the surface; the daytime is so fearful of being discovered, when he takes in fresh air, the place is hard to accept, for he does not venture even to show his nose out of the water. In rivers unfrequented by mankind, he is less cautious, and shows his whole head out of the water. If wounded, he will rise and attack boats or canoes with fury, and often sink them by biting large holes in the sides; and frequently people are killed by these animals; for they are as bold in water as they are timid on land. It is reported that they will at once bite a man in two. In the rivers the hippopotamus makes deep holes in the bottom, in order to conceal his great body. When he quits the water, he usually puts his body at once, and smells and looks about, but sometimes rushes out with great impetuosity, and tramples down every thing in his way. During the night he leaves the rivers in search of pasture; when he eats sugar canes, rushes, &c. &c. consuming great quantities, and does much damage in the cultivated fields. But as he is timid on land, it is not difficult to drive him off. The Egyptians (Mr Hasselquist informs us) use a curious manner of freeing themselves in some places from this destructive animal. They remove the places he frequents most, and there lay a great quantity of pease; when the beast comes hungry and voracious, he falls to eating, and nearest him; and filling his belly with the pease, they occasion an unsupportable thirst: he rushes immediately into the river, and drinks these dry pease large draughts of water, which suddenly causes his death; for the pease swells to swell with the water, and not long after the Egyptians find him dead on the shore, as it killed with the strongest poison." The river horse also feeds on roots of trees, which he cuts with his great teeth; but never eats what is asserted by Dampier. It was reported by Hasselquist, that he is an inveterate enemy to the crocodile; and kills it whenever he meets it; that this, with some other causes, contribute much to the extirpation of the crocodile; but otherwise, considering the many eggs they lay, would utterly destroy Egypt. But Mr Dampier treats the alleged enmity of the hippopotamus and crocodile as a vulgar error; an eye-witness, says he had seen them swimming together without any disagreement. The hippopotami live in the reedy islands in the middle of the Nile, and on these they bring forth their young. The females have but a single male: they bring the young at a time, and that on the land, and then swim in the water. They are capable of being tamed. Belon says, he has seen one so tame as to be let loose out of a stable and fed by a boy, without attempting to injure any one. They are generally taken in pitfalls, and the poor natives eat the flesh. In some parts the natives

place boards full of sharp irons in the corn grounds; which these beasts strike into their feet, and so become an easy prey. Sometimes they are struck in the water with harpoons fastened to cords, and 10 or 12 canoes are employed in the chase. The hippopotamus was known to the Romans. Scaurus treated the people with the sight of five crocodiles and one hippopotamus during his ædileship, and exhibited them in a temporary lake. Augustus produced one at his triumph over Cleopatra. This animal is the BAHAMORN of Job; who admirably describes its manners, its food, and its haunts: chap. xl. verse 15.—24. Ver. 15th, the learned Bochart observes, implies the locality of its situation; being an inhabitant of the Nile, in the neighbourhood of Uz, the land of Job. The 16th describes its great strength, and the 18th the peculiar hardness of its bones: The 21st and 22d indicate its residence amidst the vast reeds of the Nile and other African rivers overshadowed with thick forests: The 23d the characteristic wideness of its mouth; which is hyperbolically described as large enough to exhaust the Jordan. An entertaining account of the hippopotamus is given in Sparman's *Voyage to the Cape of Good Hope*, where these animals are called SEA COWS. After giving a particular narrative of a hunting expedition, for two days, upon which he and Mr Immielman, had set out, on the 24th Jan. 1776, accompanied by other 3 Europeans and a Hottentote, and wherein he himself was once in imminent danger of his life, from one of these animals; Mr Sparman proceeds as follows:—"The same night (the 26th) we betook ourselves again to our posts; and at half after 8, it being already very dark, a sea cow began at intervals to put its head up above the water, and utter a sharp, piercing, and very angry cry, which seemed to be between grunting and neighing. Perhaps this cry may be best expressed by the words *brubb, brubb, bub-bub*; the two first being uttered slowly, in a hoarse, but sharp and tremulous sound, resembling the grunting of other animals; while the 3d or compound word, is sounded extremely quick, and is not unlike the neighing of a horse. It is true, it is impossible to express these inarticulate sounds in writing; but perhaps one may make nearer approaches to it than to the guttural-palatal sounds of the Hottentot language. At 11 o'clock came the same or some other hippopotamus, and visited the posts we occupied. He did not, however, dare to come up, though we heard him nibble the boughs, which hung over the surface of the water, as well as a little grass and a few low shrubs, which grew on the inside of the river's banks. We were however, in hopes, that this way of living would not long suffice animals, one of which only require almost a larger portion than a whole team of oxen. Thus far at least is certain, that if one should calculate the consumption of provisions made by a sea cow from the size of its fauces, and from that of its body and belly, which hangs almost down to the ground, together with the quantity of grass, which I have at different times observed to have been consumed by one of them, in spots whether it has come over night to graze, the amount would appear almost incredible. We passed the

following night at the same place, the sea cows acting much as before. On the 8th after sunrise, just as we were thinking of going home to our waggons, there comes a female hippopotamus, with her calf, from some other pit or river, to take up her quarters in that which we were then blockading. While she was waiting at a rather steep part of the river's banks, and looking back after her calf, which was lame, and came on but slowly, she received a shot in her side, upon which she directly plunged into the river, but was not mortally wounded; for Flip, the farmer's son, the droughest of all sublunary beings, who had shot her, and that instant could hardly be awakened by two Hottentots, was still half asleep when he fired his piece. And happy was it for him, that the enormous beast did not make towards his hiding or rather sleeping place, and send him into the other world to sleep for ever. In the mean while his shot was so far of service, that one of my Hottentots ventured to seize the calf, and hold it fast by its hind legs, till the rest of the hunting party came to his assistance. Upon which the calf was fast bound, and with the greatest joy born in triumph to our waggons; though while they were taking it over a shallow near the river, the Hottentots were very much alarmed, lest the wounded mother, and the other sea cows should be induced by the cries of the calf to come to its rescue; the creature as long as it was bound making a noise a good deal like a hog that is going to be killed, or has got fast between two posts. The sound, however, proceeding from the hippopotamus calf was more shrill and harsh. It showed likewise a considerable share of strength in the attempt it made to get loose, and was quite unmanageable and unwieldy; the length of it being 3½ feet and the height a foot; though the Hottentots supposed it to be no more than a fortnight, or at most 3 weeks old. When at last it was turned loose it ceased crying; and when the Hottentots had passed their hands several times over its nose, in order to accustom it to their effluvia, it began directly to take to them. While the calf was yet alive (adds he) I made a drawing of it, a copy of which may be seen in the *Swedish Transactions* for 1778. After this it was killed, dissected, and eaten up in less than three hours time. The reason of this quick dispatch was partly the warmth of the weather, and partly our being in absolute want of any other fresh provisions. We found the flesh and fat of this calf as flabby as one might have expected from its want of age, and consequently not near so good as that of the old sea cows; of which I found the flesh tender, and the fat of a taste like marrow, or at least not so greasy and strong as other fat. It is for this reason likewise that the colonists look upon the flesh and fat of the sea cow as the wholesomest meat that can be eaten; the gelatinous part of the feet in particular, when properly dressed, being accounted a great delicacy. The dried tongues of these animals are also considered, even at the Cape, as a rare and favourite dish. On my return to Sweden, I had the honour to furnish his majesty's table with a dried sea cow's tongue, 2 feet and 8 inches long. With respect to form, the tongue of a full

grown hippopotamus is very blunt at the tip, and is in fact broadest at that part; if at the same time it is flanted off towards one side, and marked with lutes, as I was informed it is, this circumstance may, perhaps, proceed from the friction it suffers against the teeth, towards the side on which the animal chiefly chews; at least some traces of this oblique form were discoverable on the dried tongue I am speaking of. The hide of the adult hippopotamus bears a great resemblance to that of the rhinoceros, but is rather thicker. Whips likewise made of this hide are stronger, and, after being used some time, are more pliable than those made of the hide of the rhinoceros usually are, though they are not so transparent as these latter are when new. The food of the hippopotamus consists entirely of herbs and grass, a circumstance of which we are informed by Father Lobo; and which may partly be inferred from what I have already said on the subject, as well as from the figure of the stomach belonging to the fetus of a hippopotamus, given in Messrs de Buffon and Daubenton's elegant work. I therefore do not look upon it as very probable, that these animals, agreeably to the assertions of M. de Buffon, p. 91. or of Dampier in his *Voyage*, should hunt after fish by way of preying upon them; especially as in some of the rivers of the southern part of Africa, where the sea cows are seen daily and in great abundance, there is not a fish to be seen; and in others only a few bastard springers, as they are called (*cyprius gonorymbus*) which are scarcely as big as a common herring. It is said, that a small species of carp is still more rarely to be met with here. It is true, that the sea cows sometimes frequent the mouths of the rivers here, which are full of sea fish, and even sometimes the sea itself: we know, however, that these huge quadrupeds are notwithstanding thus obliged to go from thence upon dry land in quest of food. Neither is it probable that they can drink the sea water; as an instance was related to me of the contrary in a hippopotamus, which having been disturbed in the rivers, had taken refuge in the sea, and yet was obliged to go ashore every night and drink fresh water from a well in the neighbourhood, till at last it was shot by some people that lay in wait for it there. That the hippopotamus actually lived in salt water, have seen evident proofs, at the mouths both of the *Kromme* and *Comour* rivers, particularly in the latter, on my journey homewards; where many of these animals blowed themselves in broad daylight, and thrust their heads up above the water, and one of them in particular, which had been wounded by an ill directed shot on the nose neighed from anger and resentment. In Krakekamma I saw on the beach manifest traces of a hippopotamus which had come out of the sea but had retired thither again directly. That very attentive navigator Captain Burtz informed me that he had frequently seen on the eastern coast of Africa sea horses (meaning probably the hippopotamus) raise their heads above the surface of the water in order to blow themselves and neigh. I have been induced to be rather circumstantial on this subject, as M. Adanson had taken it into his head, in his *Voyage au Senegal*, to limit the abun-

hippopotamus to the fresh water rivers on Africa; and M. de Buffon has taken upon himself to support this opinion, and to render Kolbe's opinion to the contrary liable to suspicion. An experienced huntsman told me, that he had seen two hippopotamuses copulate, and they did in the same manner as common.

On this occasion the beasts stood in a part of the river, where the water reached to their knees. The method of catching a hippopotamus consists (besides shooting it) in pursuing it, in those parts which the animal takes his way to and from the river: but this is peculiar to the Hottentots; and is only used by them in the rainy season, as the summer is too hard for that purpose. That they have never succeeded in killing an aquatic animal with poisoned darts, this way of killing game is practised with great success by the Hottentots for the destruction of the elephant and rhinoceros. The colonists were not entirely unacquainted with the method mentioned by M. Hasselquist, as he has mentioned in Egypt, viz. to strew on the ground a cake of grease or beans as the animal can possibly reach it, which means it bursts its belly and dies. This method is very expensive, and they rarely have this animal for a single charge of powder and a tin ball, shot in a proper direction; chiefly and almost solely have recourse to the former expedient. The hippopotamus is as quick in its pace on land as the general quadrupeds, though perhaps it is not so swift and heavy as M. de Buffon describes it to be; both the Hottentots and Colonists consider it as dangerous to meet a hippopotamus in the water; especially as, according to report, they had had a recent instance of one of these animals, which, from certain circumstances, was said to be in rut, having for several hours been pursued by a Hottentot, who found it very difficult to escape. The people of this country entertain that opinion of the medicinal value of the hippopotamus, as they did of certain parts of the elephant and rhinoceros; except the colonists, who imagined he had found the use of this animal, reduced to powder and mixed with a quantity of oil, to be a good quantity that would lie on the point of a stick, excellent for convulsions (*Agrippa*) in children. That the flesh is reckoned very wholesome, I have already mentioned. Having exceeded the limits I had prescribed to myself, I do not intend to dwell here on the anatomy of the hippopotamus we caught, particularly the internal conformation of the calves, which is different from that of the adult animal. I shall therefore only briefly mention the particulars: the stomachs were 4 in length, and consequently one more than in the stomach examined by M. Daubenton, which was 3 in length. Compare Buffon, tom. xii. tab. 1. The two first stomachs were each of 7 inches long and 3 inches in diameter; the 3d was 9 inches in length, and a little more than the two former; the 4th was 7 inches long, and at the upper part 5 inches broad, but it tapered by degrees on one side till it terminated in a point, which had an aperture an inch in

width, being about half as wide again as the cardia. I did not observe any such valves as M. Daubenton has delineated. The first stomach we found mostly empty, it containing only a few lumps of cheese or curd; it likewise differed from the rest by the superior fineness of its internal coat. The internal membrane of the 2d stomach was rather coarser, and had many small holes in it; it likewise contained several clods of caseous matter, together with a great quantity of sand and mud. The 3d stomach had very visible folds, both longitudinal and transversal, on the inside of it, and contained caseous lumps of a yellow colour and harder consistence than the others, together with several leaves quite whole and fresh, and at the same time some dirt. The interior membrane of the 4th stomach was very smooth, though it was not without folds; in the stomach itself there was a good deal of dirt, with a small quantity of curds, which were whiter than they were in any of the other stomachs. This 4th stomach in a great measure covered the rest, being situated on the right side of the animal, and was found to have the upper part of the meat adhering to its superior and interior edge. This latter viscus, which was 1 foot long and 3 inches broad, diverged from it downwards on the left side. The intestinal canal was 100 feet long; the liver measured 14 inches from right to left, and 7 or 8 from the hind part to the fore part. On its anterior edges it had a large notch, being in other respects undivided and entire; it was of an oblique form, being broadest towards the left side, where I discovered a gall bladder 5 inches in length. In the uterus there was nothing particularly worthy of observation. I found two teats, and the heart surrounded with much fat; the length of this muscle was 5 inches, and the breadth about 4½ inches. The communication between the auricles, called the *foramen ovale*, was above an inch in diameter. Each lung was 11 inches long, and undivided: but at the superior and exterior parts of the right lung, there were two globules or processes, elevated half an inch above the surface; and on the side corresponding to it, in the left lung, and in the upper part of it, there was a little excrescence, terminating in a point: somewhat below this, yet more forwards, there was found likewise a process half an inch in height. Directly over the lower part of the communication formed between the right and left lung, there was a kind of crest or comb, measuring an inch from the top to the base. One of my brother sportsmen said, he had once observed a peculiar kind of vermin on the body of one of these amphibious animals; but on the calf we caught we found nothing but a species of leech, which kept only about the anus, and likewise a good way up in the strait gut, where, by a timely abstraction of the blood, they may be of use to these large amphibious animals; and particularly may act as preservatives against the piles, repaying themselves for their trouble in kind. Most of them were very small; but on the other hand there was a considerable number of them. The only large one I saw of this species, being somewhat more than an inch in length, I described and made a drawing of: this is inserted by the name of the *Hirudo* *Ca-*

*genua, corpora supra nigricante, medio longitudinaliter sub-rumore, subius pallide fusco*, in the elegant Treatise on Worms, which M. Adolphus Nodeer, fir's secretary of the Patriotic Society, is preparing for the press. Instead of the lighter coloured streak upon the back, there was discoverable in some of these leeches one and sometimes two longitudinal brownish lines, which grew fainter and fainter towards the extremities. This huge animal has doubtless obtained its present name, merely in consequence of the neighing sound it makes; as otherwise in its form it bears not the least resemblance to a horse, but rather to a hog. Neither does it in the least resemble the ox; so it could be only the different stomachs of this animal which could occasion it to be called *sea-cow* at the Cape; and perhaps it is for the same reason that the Hottentots call it the *i'gua*, which nearly approaches to *i'hau*, the name by which the buffalo is known among these people. From the account given by Bellonius of a tame hippopotamus, which he describes as a beast of a very mild and gentle nature, as well as from the disposition of the calf we had just caught, that this animal might be easily brought over to Europe, where it has been formerly exhibited at two different times in the public spectacles at Rome. For this purpose, the capture might easily be made at Konaps-river, where these animals, according to the accounts given me by the Caffres, reside in great abundance; and milch cows might be kept ready at hand, in order to rear the calf in case it was a suckling. Indeed I am apt to suppose, that one a little older than this would not be very nice in its food; as that which we caught was induced by hunger, as soon as it was let loose near the waggon, to put up with something not extremely delicate, which had been just dropped from one of our oxen. This perhaps may appear very extraordinary in an animal with four stomachs; but there have been instances of this kind known in common cattle, which in Herjedal are partly fed with horse dung. Vide *A. A. Hulpers's Beschreibung von Norrland*, 3: *je Saml. om Herjedalen* (*Hulper's Description of Norway*) p. 27--87. I have been likewise assured, that this method of feeding cattle has been practised with great advantage in Uplandia, when there has been a scarcity of fodder; and that afterwards these same cattle, even when they have not been in want of proper fodder, have taken to this food of their own accord, and eaten it without any thing else being mixed with it."

**HIPPURIS**, **MALE'S-TAIL**; a genus of the monogynia order, belonging to the monandria class of plants; and in the natural method ranking under the 15th order, *Imundata*. There is no calyx, nor any petals; the stigma is simple; and there is one seed. There is only one species, a native of Britain, and which grows in ditches and stagnant waters. The flower of this plant is found at the base of each leaf, and is as simple as can be conceived; there being neither empalement nor blossom; and only one chive, one pointal, and one seed. It is a very weak astringent. Goats eat it; cows, sheep, horses, and swine, refuse it.

**HIPPUS**, an affection of the eyes, that makes

them represent objects in the like kind of manner as when on horseback.

\* **HIPNOT.** *adj.* [*hyp* and *not.*] Sprained or dislocated in the hip.—Why do you go nodding and wagging so like a fool, as if you were *hip-not*? says the goose to the gosling. *L'Estrange.*

\* **HIPWORT.** *n. f.* [*hyp* and *wort.*] A plant.

**HIR**, a town of Persia, in the prov. of Kerman.

**HIRÆA**, in botany; a genus of the trymneridæ, belonging to the decandria class of plants. The calyx is pentaphyllous; the petals must be five, and unguculated; there are three bilabiated seeds.

(1.) **HIRAM**, a king of Tyre, contemporary with Solomon, whom he supplied with gold, silver, and other materials for building the temple. He died A. A. C. 1000.

(2.) **HIRAM**, an artist of Tyre, who assisted the erection of Solomon's temple, and other public buildings at Jerusalem, flourished A. A. C. 1000.

**HIRCANIA.** See **HYRCANIA**.

**HIRCH-HORN**, a town of Germany, in the circle of the Lower Rhine, with a strong castle seated on the side of a hill on the Neckar, and the palatinate. Mr Cruttwell places it in the electorate of Mentz, 7 miles E. of Heidelberg, 23 S. of Erbach. Lon. 9. 0. E. Lat. 49. 14 N.

**HIRCHSTEIN**, a town of Germany, in the circle of the Lower Rhine, and electorate of Mentz, 5 miles SSE. of Hanau.

(1.) **HIRCUS**, in astronomy, a fixed star of first magnitude, called also **CAPSELLA**.

(2.) **HIRCUS** is also used for a comet, encompassed with a mane, seemingly hairy.

(1.) **HIRÉ**, Philip DE LA, an eminent French mathematician and astronomer, born at Paris 1640. His father, who was painter in ordinary to the king, designed him for the same profession, but he devoted himself to mathematical studies, and was nominated together with M. Picard to make the necessary observations for a new map of France, by the directions of M. Colbert. In 1670 he was employed in continuing the famous meridian line begun by M. Picard; and was afterwards engaged in constructing the grand aqueduct projected by Lewis XIV. He died in 1718, after he had written a great number of works, besides several occasional papers dispersed in Journals, and Memoirs of the Academy of Sciences.

(2.) \* **HIRE.** *n. f.* [*hyre*, Saxon.] 1. R. or recompence paid for the use of any thing. 2. Money paid for service.—

Great thanks and goodly meed to that good man. He thence departing gave for his pains *hire*.

I have five hundred crowns,  
The thrifty *hire* I sav'd under your father.  
Tho' little was their *hire*, and light their wages,  
Yet somewhat to their share he threw. *Dryden.*  
All arts and artists Thesens could command  
Who sold for *hire*, or wrought for better gain. *Dryden.*

\* **To HIRE.** *v. a.* [*hyres*, Sax.] 1. To put any thing for temporary use at a certain price.

His sordid avarice takes  
In excrements, and *hires* the jakes. *Dryden.*  
2. To engage a man in a temporary service for wages.—They weigh silver in the balance,

in a goldsmith, and he maketh it a god. *Isaiah* vi. 8.—

I cannot strike at wretched kerns, whose arms  
Are bir'd to bear their slaves. *Shakespeare.*  
To bribe.—

Themetes first, 'tis doubtful whether bir'd,  
Or so the Trojan destiny requir'd,  
Mov'd that the ramparts might be broken down.

*Dryden.*

To engage for pay : with the reciprocal word.  
They that were full, *bird* out themselves for  
aid ; and they that were hungry, ceased. 1 *Sam.*  
3. 5. To let ; to set for a time at a certain  
ice. This, to prevent ambiguity, has some-  
times the particle *out* ; as, he *bird out* his house  
to strangers.

(1.) \* **HIRELING.** *adj.* [from *hire*.] ' Serving  
hire ; venal ; mercenary ; doing what is done  
for money.—

Then trumpets, torches, and a tedious crew  
Of *hireling* mourners for his funeral due. *Dryd.*

(2.) \* **HIRELING.** *n. s.* 1. One who serves for  
ages.—

The *hireling* longs to see the shades descend,  
That with the tedious day his toil might end,  
And he his pay receive. *Sandys.*

In the framing of Hiero's ship there were three  
hundred carpenters employed for a year, besides  
my other *hirelings* for carriages. *Wilkins's Dred.*

'Tis frequent here to see a freeborn son  
On the left hand of a rich *hireling* run. *Dryd.*  
A mercenary ; a prostitute.—

Now she shades thy evening walk with bays,  
No *hireling* she, no prostitute to praise. *Pope.*

\* **HIRER.** *n. s.* [from *hire*.] 1. One who uses  
by thing paying a recompence : one who employs  
others paying wages. 2. In Scotland it denotes  
he who keeps small horses to let.

**IRGUM**, a river of Wales, which runs into  
the Avon, 4 miles below Dolgelly.

**IRING.** See **BORROWING** AND **HIRING**.

**IRMUND**, a river of Asia, which rises in Hin-  
do Kho, and runs into a lake in Chorasan.

**IRPINI**, in ancient geography, a people of  
Italy, next to the Samnites, to the SE. and de-  
scendants from them ; situated to the N. of the  
Kamini, and to the W. of the Apuli, having on  
the N. the Apennine and a part of Samnium. The  
name is from *Hirpus*, a term denoting a wolf in  
their language ; either because under the conduct  
of this animal the colony was led and settled, ac-  
cording to Strabo ; or because, like that prowling  
beast, they lived on plunder, according to Servius.

**IRSAC**, a town of France, in the department  
of Carente, 7 miles W. of Angoulesme.

**IRSBERG**, a town of Silesia, famous for its  
thermal baths, seated on the Bular, 44 miles SW.  
of Breslaw.

**IRSCHAU**, a town of Bavaria.

**IRSCHBACH**, a town of Austria.

(1.) **IRSCHBERG**, a town of Bohemia.

(2.) **IRSCHBERG**, a town of Franconia.

(3.) **IRSCHBERG**, a town of Upper Saxony.

(4.) **IRSCHBERG**, a town of Silesia, in the  
principality of Jauer, famous for its trade and ma-  
nufactures. In 1549, it was burnt : in 1663 pillar-  
ed by the Saxons ; and in 1634 burnt by the Im-  
perials. It is 32 miles SE. of Buntzlau.

**IRSCHFELD.** See **HARSFELD**.

**IRSCHOLM**, a town of Denmark, in Zee-  
land, 12 miles N. of Copenhagen.

**IRSON**, a town of France, in the dept. of  
Aisne, 8 miles NE. of Vervins, and 17 of Laon.

\* **IRSUTE.** *adj.* [*birfute*, Lat.] Rough ; rug-  
ged.—There are bulbous, fibrous, and *birfute*  
roots : the *birfute* is a middle sort, between the  
bulbous and fibrous ; that, besides the putting  
forth sap upwards and downwards, putteth forth  
in round. *Bacon's Natural History.*

**IRTELLA**, in botany ; a genus of the mono-  
gynia order, belonging to the pentandria class of  
plants ; and in the natural method ranking with  
those of which the order is doubtful. There are  
5 petals ; the filaments are very long, persisting,  
and spiral ; the berry is monospermous ; the style  
lateral.

**IRUDO**, the **LEECH** ; a genus of insects be-  
longing to the order of vermes intestina. The body  
moves either forward or backward. There are  
several species, principally distinguished by their  
colour. See **PLATE CLXXXI**. The most remark-  
able are the following :

1. **IRUDO CAPENSIS.** See **HIPPOPOTAMUS**.

2. **IRUDO GEOMETRA**, the *geometrical leech*,  
grows to an inch and a half in length ; and has a  
smooth and glossy skin of a dusky brown colour,  
but in some seasons greenish spotted with white.  
When in motion, its back is elevated into a kind  
of ridge : and it then appears as if measuring the  
space it passed over like a compass, whence its  
name. Its tail is remarkably broad ; and it holds  
as firmly by it as by the head. It is common on  
stones in shallow running waters ; and is often  
found on trout and other fish after spawning time.

3. **IRUDO MEDICINALIS**, the medicinal leech,  
the form of which is well known, grows to the  
length of two or three inches. The body is of a  
blackish brown colour, marked on the back with  
six yellow spots, and edged with a yellow line on  
each side ; but both the spots and the lines grow  
faint, and almost disappear, at some seasons. The  
head is smaller than the tail, which fixes it'self very  
firmly to any thing the creature pleases. It is vi-  
viparous, and produces but one young one at a  
time, which is in July. It is an inhabitant of clear  
running waters, and is well known for its use in  
bleeding. The organs of generation in leeches are  
formed like those of the sea and land snails. See  
**HELIIX**, N° V, § 1, 3. The leech's head is armed  
with a sharp instrument that makes three wounds  
at once. They are three sharp tubercles, strong  
enough to cut through the skin of a man, or even  
of an ox or horse. The mouth is as it were the  
body of the pump, and the tongue or fleshy nip-  
ple the sucker ; by the working of this piece of  
mechanism, the blood is made to rise up to the  
conduit which conveys it to the animal's stomach,  
which is a membranaceous skin divided into 24  
small cells. The blood which is sucked out is  
there preserved for several months almost without  
coagulating, and proves a store of provision to the  
animal. The nutritious parts, pure and already  
digested by animals, require not to be disengaged  
from the heterogeneous substances ; nor indeed is  
there any thing like an anus discoverable in the  
leech ; mere transpiration seems to be all that it

( . . . ) Perspirans,

perform the matter fixing on the surface of its body, and afterwards coming off in small threads. Of this an experiment may be tried by putting a leech into oil, where it keeps alive for several days; upon being taken out and put into water, there appears to loosen from its body a kind of slough shaped like the creature's body. The organ of respiration seems to be situated in the mouth; for if, like an insect, it drew its breath through vent holes, it would not subsist in oil, as by it they would be stopped up. (*Barbat's Genera Vermium*, p. 21.) This is the only species that is used in medicine; being applied to the skin to draw off blood. With this view they are employed to phlebotomize young children. If the leech does not fasten, a drop of sugared milk is put on the spot it is wished to fix on, or a little blood is drawn by means of a slight puncture, after which it immediately settles. The leech when fixed should be watched, lest it should find its way into the anus when used for the hemorrhoids, or penetrate into the oesophagus if employed to draw the gums; otherwise it would make great havoc in the stomach or intestines. In such a case, the best and quickest remedy is to swallow some salt; the application of which makes it quit its hold when it sucks longer than is intended. Salt of tartar, volatile alkali, pepper, and acids, make it also leave the part on which it was applied. Cows and horses have been known to receive them, in drinking, into the throat. The usual remedy is to force down some salt, which makes them fall off. If, on the contrary, it is intended that the leech should draw a larger quantity of blood, the end of its tail is cut off; and it then sucks continually to make up the loss it sustains. The discharge occasioned by the puncture of a leech is usually of more service than the process itself. When too abundant, it is easily stopped with brandy, vinegar, or other styptics, or with a compress of dry linen rag bound strongly on the bleeding orifice.

4. *HIRUDO MURICATA*, the *muricated leech*, has a taper body, rounded at the greater extremity, and furnished with two small tentacula, or horns, strongly annulated and rugged upon the rings, the tail divided. It inhabits the Atlantic Ocean, and is by the fishermen called the *sea-leech*. It adheres to fish, and generally leaves a black mark on the spot.

5. *HIRUDO SANGUI-SUGA*, the *HORSE-LEECH*, is of a larger size than the medicinal leech. (N° 2.) Its skin is smooth and glossy; the body is depressed; the back is dusky; and the belly is of a yellowish green, having a yellow lateral margin. It inhabits stagnant waters.—At Ceylon, travellers who walk bare-legged are molested by the great numbers of leeches concealed under the grass. All leeches vary in their colours at some seasons, but they are generally of a dusky greenish brown or yellow, and often variegated. They are very restless before a change of weather, if confined in glasses.

6. *HIRUDO*. A new species of *hirudo*, to which no distinct name has yet been given, was lately discovered in the S. Pacific Ocean by Le Martiniere the naturalist, who accompanied M. Peyrouse in his voyage of discovery. He found it buried about half an inch in a shark's liver, but could not

conceive how it had got thither. It was something more than an inch long, of a whitish skin, and composed of several rings similar to those of the tænia. The superior part of its head was furnished with 4 small ciliated mamillæ, by which it took its food; under each mamilla on both sides was a small oblong pouch, in the form of a cap, and in the form of its *instrumenta cibaria*, it nearly resembles the animal which has been supposed to be the cause of measles in swine. These species are referable to the genus *Ampelis*, the characters of which, as given by Linnaeus, he (says Martiniere) is in need of reformation.

*HIRUNDO*, in ornithology, a genus of birds of the order of *passeres*. See *PLATE CLXXX*. There are 37 species, chiefly distinguished by the colour. The most remarkable are the following.

1. *HIRUNDO AMEROSIACA*, the *AMBERGRASS*. It is about the size of a wren, with a green plumage and a very forked tail; the bill is blackish, and the legs are brown. It inhabits Scythia and is said to smell very strong of ambergris.

2. *HIRUNDO APUS*, the *SWIFT*, is a large species, being near 8 inches long, with an extended wing near 18 inches, though the weight of the bird is only one ounce. Their feet are so small that the action of walking and rising from the ground is extremely difficult, but they have compensation, being furnished with ample means for an easy and continual flight. It is more on wing than any other swallow; its flight is rapid, and that attended with a shrill scream. It rests by clinging against some wall, or other body; from whence Klein styles this species *hirundo muraria*. It breeds under the eaves of houses, in steeples, and other lofty buildings; it makes its nest of grasses and feathers. Its feet are of a particular structure, all the toes standing forward: the least consist of only one bone; the others of an equal number, viz. two each; in which they differ from those of all other birds: a construction, however, nicely adapted to the purpose in which their feet are employed. The *swift* is a summer inhabitant of these kingdoms. It comes the latest, and departs the soonest, of any of the tribe, not always staying to the middle of August, and often not arriving before the beginning of May. A pair of these birds were found adhered by their claws, and in a torpid state, in Feb. 1791, under the roof of Longnor chapel, in Shropshire, on being brought to a fire, they revived, and were about in the room. "The fabulous tale of the *MANUCUDIATA*, or *bird of paradise* (see Mr Pennant), is, in the history of this species, a great measure verified. It was believed to have no feet; to live upon the celestial dew; to be perpetually on the atmosphere; and to perform all its functions in that element. The *swift* actually performs what has been in these enlightened times disproved of the former, except the time it takes in sleeping, and what it devotes to incubation; every other action is done on wing. The materials of its nest it collects either as they are carried about by the winds, or picks them up from the surface in its sweeping flight. Its food is undeniably the insects that fill the air. Its drink is taken in transient sips from the water's surface. Even its amorous rites are performed on high. Feb

Fig. 8.

Fig. 9.

few persons who have attended to them on a fine summer's morning, but must have seen them make her aerial courtes at a great height, encircling a certain space with an easy steady motion. On a sudden they fall into each others embraces, then drop precipitate with a loud shriek for numbers of yards. This is the critical conjuncture; and to see no more wondered at, than that insects (a familiar instance) should discharge the same duty in the same element. The swift is a most alert bird, rising very early, and retiring to roost very late; it is on the wing in the height of summer at all hours. In the longest days it does not withdraw to rest till a quarter before 9 P. M. being the latest of all day birds. Just before they retire, whole groups of them assemble high in the air, and squeak, and shoot about with wonderful rapidity. But this bird is never so much alive as in stormy thundery weather, when it expresses great activity, and calls forth all its powers. In hot suns, several, getting together in little parties, round the steeples and churches, squeaking they go in a very clamorous manner: these, by the observers, are supposed to be males serenading the sitting hens; and not without reason, since they seldom squeak till they come close to the eaves or caves, and since those within utter at the same time a little inward note of complacency. When the hen has sitten hard all day, she rushes in just as it is almost dark, and stretches and jerks her weary limbs, and snatches a scanty nap for a few minutes, and then returns to her duty of incubation. Swifts, when wantonly and idly flown while they have young, discover a little plump of insects in their mouths, which they catch and hold under their tongue. In general, already observed, they feed in a much higher and further distance than the other species; they also range to great distances; since locomotion is no labour to them, who are endowed with such wonderful powers of wing. At some certain times in the summer, however, they have been observed hovering very low for hours together over pools and ditches; and upon inquiring into the object of this pursuit that induced them to descend so far below their usual range, it has been found that they were taking *phryganea*, *ephemera*, and *dobson* (caddis-flies, may-flies, and dragon-flies), which were just emerged out of their aurelia state. It appeared then no longer a wonder that they should be so willing to stoop for a prey that afforded them such plentiful and succulent nourishment. Swifts sometimes pursue and strike at insects that come in their way; but not with that violence and fury that swallows express on the same occasion. They are out all day long, even in wet, feeding and disregarding the rain; whence two things may be gathered; first, that many insects abide high in the air, even in wet; and next, that the feathers of these birds are well preened to resist so much wet. Windy weather, and particularly with heavy showers, they dislike; and on such days withdraw, and are rarely ever seen. There is a circumstance relating to the colour of swifts (Mr White remarks), which seems not to be unworthy our attention. When they arrive in the spring, they are all over a glossy dark soot-colour, except their chins,

which are white; but, by being all day long in the sun and air, they become quite weather beaten and bleached before they depart, and yet they return glossy again in the spring. Now, if they pursue the sun into lower latitudes, as some suppose, in order to enjoy a perpetual summer, why do they not return bleached? Do they not rather perhaps retire to rest for a season, and at that juncture moult and change their feathers, since all other birds are known to moult soon after the season of breeding? Swifts are very anomalous in many particulars, dissenting from all their congeners not only in the number of their young, but in breeding once in a summer; whereas all the other British hirundines breed invariably twice. It is past all doubt that swifts can breed but once, since they withdraw in a short time after the flight of their young, and some time before their congeners bring out their second broods. We may here remark, that, as swifts breed but once in a summer, and only two at a time, and the other hirundines twice, the latter, who lay from 4 to 6 eggs, increase at an average five times as fast as the former. But in nothing are swifts more singular than in their early retreat. They retire, as to the main body of them, by the 10th of August, and sometimes a few days sooner; and every straggler invariably withdraws by the 10th, while their congeners, all of them, stay till the beginning of October; many through all that month, and some occasionally to the beginning of November. This early retreat is mysterious and wonderful, since that time is often the sweetest season in the year. But, what is more extraordinary, they begin to retire still earlier in the most southerly parts of Andalusia, where they can be no ways influenced by any defect of heat; or, as one might suppose, defect of food. Are they regulated in their motions with us by a failure of food, or by a propensity to moulting, or by a disposition to rest after so rapid a life, or by what? This is one of those incidents in natural history, that not only baffles our searches, but almost excludes our guesses!" Swifts never perch on trees or roofs, and so never congregate with their congeners. They are fearless while haunting their nesting-places, and are not to be scared with a gun; and are often beaten down with poles and cudgels as they stoop to go under the eaves. Mr White informs us, that having untied part of a roof over the nest of a swift, the dam notwithstanding sat in the nest; so strongly was she affected by natural affection for her brood, which she supposed to be in danger, that, regardless of her own safety, she would not stir, but lay fullenly by them, permitting herself to be taken in hand. Swifts are much infested with those pests to the genus called *Aspilota* *hirundinis*; and often wriggle and scratch themselves, in their flight, to get rid of that clinging annoyance. And young ones, over-run with these insects, are sometimes found under their nests, fallen to the ground; the number of vermin rendering their abode insupportable. Swifts have only one harsh screaming note; yet there are ears to which it is not displeasing, from an agreeable association of ideas, since that note never occurs but in the most lovely summer weather. They never settle on the ground but through accident; neither can they walk, but only crawl; but they

have a strong grasp with their feet, by which they cling to walls. Their bodies being flat, they can enter a very narrow crevice; and where they cannot pass on their bellies, they will turn up edgewise. In London a party of swifts frequents the Tower, playing and feeding over the river just below the bridge: others haunt some of the churches of the Borough next the fields; but do not venture, like the house martin, into the close crowded part of the town. The Swedes have bestowed a very pertinent name on this swallow, calling it *ring-swala*, from the perpetual rings or circles that it takes round the scene of its nidification. As these birds are apt to catch at every thing on the wing, many have taken them by a bait of a cockchafer tied to a thread, which they have swallowed as freely as a fish their. In the Isle of Zant, the boys are said to get on an elevated place, and merely with a hook baited with a feather, have caught five or six dozen of them in day. Besides our island, the swift is known to inhabit the whole of the European continent; and has also been noticed at the Cape of Good Hope, and Carolina in North America. Hence, most likely, it is a general inhabitant of both the old and new continent.

3. *HIRUNDO BORRIONICA*, the *wheat swallow*, is about the size of the swift: the plumage above is blackish brown; beneath grey, marked with longitudinal brown spots: the tail is even at the end: the bill and legs are black. This species inhabits the Isle of France; frequenting places sown with wheat, and glades of woods; affecting elevated situations, and frequently seen perched on trees and stones. It follows herds of cattle for the sake of the flies which surround them; and is frequently seen in the wake of ships in great numbers, in the road near the isle, for the same purpose. It is often observed in the evenings about the clefts in the mountains, where it is said to pass the night; and where it makes its nest, which is composed of straw and feathers. It lays two eggs, of a grey colour dotted with brown.

4. *HIRUNDO CAYENNENSIS*, the *white coloured swallow*, is about the size of the martin: the head and bill are black; the chin and throat white, passing from the last in a narrow collar round the neck; between the bill and eye is a streak of white, which forks off into two; one passing a little above and the other a little way beneath the eye: the rest of the plumage is black, with a gloss of violet; but the greater coverts, nearest the body, are brown, edged with white; the quills and tail are black; the last forked: the legs are black; and all the four toes placed before as in the swift, and covered with feathers to the claws. This bird makes its nest in the houses at Cayenne. It is of a large size, in shape of a truncated cone; 3 inches one way by 3 the other, and 9 inches in length. It is composed of the down of dog's hair, which is woven together; the cavity divided obliquely about the middle, lengthways, by a partition, which spreads over that part of the nest where the eggs lie, which is pretty near the base: a small parcel of the same soft down, forming a kind of plug, is placed over the top, serving to keep the young brood from the impression of the air; whence we may suppose them to be very tender.

(5.) *HIRUNDO DOMINICENSIS*, the *St Doming*

*swallow*, is 9 inches in length, and wholly black with the gloss of polished steel, except the belly and under tail coverts, which are white: the tail is very little forked: the legs, bill, and claws are brown. It inhabits St Domingo, and other of the West India Islands, in May, June, and July, and is said to imitate a lark in its song. See *fig. 1.*

6. *HIRUNDO SETHROCEPHALA*, the *red headed swallow*, has a red head, with a short black bill: the back is dusky, the feathers edged with white: the under parts of the body are white, the tail-coverts pale brown: the wings both dusky; as is also the tail, which is a little forked. It inhabits India; and is only the size of a small humming bird.

7. *HIRUNDO ECULENTA*, the *edible swallow*, according to Buffon, is less than the wren, only two inches and a quarter in length. The head is black; the upper parts of the body are black, the under whitish; the tail is forked, and the feather of it tipped with white: the legs are black. See *fig. 2.* Mr Latham thinks, that the first above described is by much too small, as Mr Latham says that the bird "appears to be the common martin;"—"and (says Mr Latham) we are much inclined to think that it is at least of the size, from the eggs which accompany the first of the British Museum, which are as big as those of the martin, and of the same colour." This conjecture of Mr Latham's is now confirmed by the description lately given in the *Transactions of the Linnean Society in the Island of Java*, vol. 1. "The *hirundo eculenta* is of a blackish green colour, inclining a little to green; but on the head to the tail, as well as on the belly, this black colour gradually changes into a mouse colour. The whole length of the bird from the bill to the tail is about 4½ inches, and its height from the tail to the extremity of the middle toe 1½. The distance from the tip of the one wing to that of the other, when extended, is 10½. The longest feathers of the wings are about 4 inches in length. The head is flat; but, on account of the thickness of the feathers, appears round, and to be of a large size in proportion to the rest of the body. The bill is broad, and ends in a sharp point, bent downwards, in the form of an S. The width of it is increased by a naked piece of skin, somewhat like parchment, which, when the bill is shut, lies folded together; but when the bill opens, is considerably extended, and enables the bird to catch with greater ease. On the wing, the insects which serve it for food. The eyes are black, and of a considerable size. The tongue, which is not forked, is shaped like a row. The ears are flat, round, naked spots, small oblong openings, and are entirely covered under the feathers of the head. The neck is short, as well as the legs and the bones of the wings. The thighs are wholly covered with feathers; and the very tender lower parts of the legs, and the feet themselves, are covered with skin like black parchment. Each foot has 3 toes of which are before and one turned backwards. They are all detached from each other at the roots; and the middle one, together with the claw, is fully as long as the lower part of the foot. Each toe is furnished with a black, sharp, crooked

is of a considerable length, by which the animal can with great facility attach himself to crags and rocks. The tail is fully as long as the body, and is equal to the neck and the head. When extended it has the form of a wedge, and consists of large feathers. The 4 first on each side are long, and, when the tail is closed, extend almost beyond the rest. The other feathers decrease towards the middle of the tail, and are equal to about the length of the body."—The bird is described by Buffon, seems to be a variety of species. But the most curious part of the natural history of this bird consists in the nest, which is composed of such materials as render it not only edible, but one of the greatest dainties of Asiatic epicures. These nests (see BIRDS NESTS, &c.) are found in vast numbers in certain caverns, in the Soolo Archipelago, situated between 117° and 120° and lat. 3° and 7° particularly in three small isles, or rather rocks; in the two of which the nests are found fixed to the rocks in astonishing numbers. They are also found in great quantities on a small island called Tar, in the Straits of Sunda; the caverns of which are filled with the nests: but nowhere in greater abundance than about Croce, near the S. end of Sumatra, 4 miles up a river of that name. But they are peculiar to the above places: for they are likewise common from Java to CochinChina on the N. from the point of Sumatra W. to New Guinea on the E. where the sea is said to be covered with a viscid substance like half melted glue, which the bird is supposed either to take up from the surface with its bill during flight, or to pick it from the rocks when left there by the waves. Of these nests the Dutch alone export from Batavia 1000 pickles, upwards of 1300 lb. English weight, every year, which are brought from the N. of CochinChina, and those lying to the E. of it. It is surprising, that, among other luxuries imported from the east, these nests should not be found a way to our tables; being yet so common in England as to be kept as rarities in the collections of collectors. The bird itself at Sumatra is called *Laronglayang*.

*Hirundo Paucica*, the *grey-rumped swallow*, is in length  $4\frac{1}{2}$  inches; having the upper part of the body blackish, the rump and under parts white or grey. This species inhabits the isle of Java, but not in great numbers. It is found only near fresh waters. It flies swift; and is often observed to perch. It is supposed to rest in the woods at night, being seen about the skirts of them towards evening. It is generally very tame, and not good food.

*Hirundo alba*, the *white-bellied swift*, is in length  $8\frac{1}{2}$  inches, and weighs 2 oz. 4 dr.; the bill is half an inch long, somewhat bent, and black; the upper parts of the body are of a grey brown; the wings and tail deepest, with a gloss of red and brown in some lights: the throat, breast, and belly are white; on the neck is a collar of grey brown, mixed with black: the sides are dusky, and spotted; lower part of the belly and under the coverts, the same as the back: the legs are flesh-coloured, and covered with feathers on the front part and inside: all the toes are placed forward, as in our swift. This bird inhabits the

mountainous parts of Spain; building in the holes of rocks. It is found also on the borders of the Rhone, in Savoy, the isle of Malta, Alps of Switzerland, and rock of Gibraltar. It comes into Savoy the beginning of April, and frequents the ponds and marshes for 15 or 20 days; after which it retires to the mountainous parts to breed. It flies higher than our swift; but feeds on the same food, and its flesh is accounted a delicate morsel. This species is not numerous. Scopoli says it builds on the summit of the mountains of Tyrol.

10. *Hirundo montana*, the *crag swallow*, is about the size of the martin, and in its upper plumage like the sand martin: the under part of the body is rufous; the tail is scarcely forked; the legs are covered with grey down mixed with brown; the bill and the claws are black. These birds inhabit the rocks and crags about Mont Blanc, (ci-devant Savoy;) arriving there the middle of April, and departing the 15th Aug. for the most part; sometimes a few stragglers remain till the 10th Oct. This species is also found in the mountains of the late French provinces of Auvergne, and Dauphiné; and specimens have been received from Gibraltar.

11. *Hirundo nigra*, the *black swallow*, measures near 6 inches in length: the colour of the bird is wholly black, and the tail is forked. It inhabits St Domingo and Cayenne; but it is not numerous. It is often seen to perch on dead trees, and only inhabits dry savannahs inland. It scorns out a hole in the earth, half a foot long, with the mouth very small, so as just to permit entrance: in this cavity it constructs the nest and rears its young.

12. *Hirundo pelagica*, the *acurved swallow*, is somewhat less than our chimney swallow: its plumage is brown, but at the throat whitish, and all the tail feathers are terminated by a bare pointed shaft. It inhabits Carolina and Virginia in the summer time, and builds in dry situations in the chimneys of houses and cottages.

13. *Hirundo purpurea*, the *purple swallow*, is in length 7 inches, and the whole body is of a deep violet, very glossy: the quills and tail are of the same colour, but still deeper, and the last forked: the legs and claws are blackish; and the bill is black. The colour of the female is dusky brown, with a slight tinge of violet. This species is found in Summer in Carolina and Virginia; coming in May, and retiring at the approach of winter. The people are very fond of them; and make little conveniences of boards on the outside of their houses for the birds to build in, as is done for sparrows in England; being desirous to keep them near, as they are of much use in alarming the poultry of the approach of the hawk and other birds of prey; not only shrieking violently on the appearance of these enemies, but attacking them with all the efforts of our martins in Europe. See fig. 3.

14. *Hirundo riparia*, the *sand martin*, or *shore bird*, is  $4\frac{1}{2}$  inches in length, with the whole upper parts of the body of a mouse-colour, the throat and under parts white, the bill and legs blackish. It is common about the banks of rivers and sand-pits, where it celebrates a round and regular hole in the sand or earth, which is serpentine, horizontal, and about two feet deep. At the inner end of this burrow does the bird deposit, in a good degree of safety, her rude nest, consisting of fine grasses

grasses and feathers, usually goose feathers, very artificially laid together. " Though at first (says Mr. White) one would be disinclined to believe that this weak bird, with her soft and tender bill and claws, should ever be able to bore the stubborn sand bank without entirely disabling herself; yet with these feeble instruments have I seen a pair of them make great dispatch; and could remark how much they had scoured that day by the fresh sand which ran down the bank, and was of a different colour from that which lay loose and bleached in the sun. In what space of time these little artists are able to mine and finish these cavities, I have never been able to discover; but it would be a matter worthy of observation, where it falls in the way of any naturalist to make his remarks. This I have often taken notice of, that several holes of different depths are left unfinished at the end of summer. To imagine that these beginnings were intentionally made in order to be in the greater forwardness for next spring, is allowing perhaps too much foresight and *verum prudentia* to a simple bird. May not the cause of these *latheas* being left unfinished arise from their meeting in those places with strata too harsh, hard, and solid, for their purpose, which they relinquish, and go to a fresh spot that works more freely? Or may they not in other places fall in with a soil as much too loose and mouldering, liable to founder, and threatening to overwhelm them and their labours? One thing remarkable is, that, after some years, the old holes are forsaken and new ones bored; perhaps because the old habitations grow foul and fetid from long use, or because they may so abound with fleas as to become untenable. This species of swallow is strangely annoyed with fleas: and we have seen fleas, bed fleas (*pulex irritans*), swarming at the mouths of these holes, like bees on the stools of their hives. The sand martin arrives much about the same time with the swallow; and lays, as she does, from four to six white eggs. But as this species is *cryptogame*, carrying on the business of nidification, incubation, and the support of its young in the dark, it would not be easy to ascertain the time of breeding, were it not for the coming forth of the broods, which appear much about the time, or rather somewhat earlier than those of the swallow. The nestlings are supported in common, like those of their congeners, with gnats and other small insects; and sometimes they are fed with *libellula* (dragon flies) almost as long as themselves. This hirundo is said to lay only once in a year, and to produce its young more early than the rest of its tribe: though from this last circumstance it would seem probable that they breed at least a second time, like the house martin and swallow. It does not always take pains to make an hole for a nest; frequently laying in cavities of quarries, and in hollows of trees, where it is convenient. When they happen to breed near bridges and inclosures, they are often dispossessed of their breeding-holes by the house sparrow, which is on the same account a fell adversary to house martins. These *hirundines* are no songsters, but rather mute, making only a little harsh noise when a person approaches their nests. They seem not to be of a sociable turn, never with us congregating with their congeners in the autumn. They have a pe-

culiar manner of flying; sitting about with odd jerks and vacillations, not unlike the motions of a butterfly. Doubtless the flight of all *hirundines* is influenced by and adapted to the peculiar sort of insects which furnish their food. Hence (says Mr. White) it would be worth inquiry to examine what particular genus of insects affords the principal food of each respective species of swallow.

15. *Hirundo rustica*, the *rufous bellied swallow* is of the same size with the martin, and has the upper parts of the body of a glossy black; the under rufous growing paler towards the vent; the forehead is whitish; and the bill and legs dusky. These are found at Cayenne, and also as far N. as New York. They build in holes without any mixture of mud; fabricating the nest with moss, dried plants, and short bits of sticks all united with a sort of gum, so as scarce to be broken, and lined with feathers, suspending it from the beams and rafters, sides of walls, or eaves of houses. It is sometimes a foot and a half in length; and is sturd by one of its sides, the opening being made near the bottom. The female lays 4 or 5 eggs; and the young go out as fast as their legs will support them.

16. *Hirundo rustica*, the common or *chimney swallow*, is distinguished from all the other species by the superior forkiness of its tail, and by the red spot on the forehead and under the chin. The crown of the head, the whole upper part of the body, and the coverts of the wings, are black glossed with a rich purplish blue, and most splendid in the male; the breast and belly white and in the male tinged with red: the tail is black the two middle feathers are plain, the others marked transversely near the ends with a white spot the exterior feathers of the tail are much longer in the male than in the female. The food is the same with that of all the genus; viz. insects. For taking these in their swiftest flight, their parts are admirably contrived; their mouths are very wide to take in flies, &c. in their quickest motion their wings are long, and adapted for distant and continual flight; and their tails are forked, to enable them to turn the readier in pursuit of their prey. This species is the first comer of all the British *hirundines*; and appears in general on or about the 15th of April, though now and then a straggler seen much earlier. This species, though called the *chimney swallow*, by no means builds strictly in chimneys, but often in barns and out houses against the rafters; as Virgil long ago remarked (*Georg. lib. iv. 306.*) In Sweden she builds in barns and is called *lada fvala*, the barn swallow. In the warmer parts of Europe, where there are no chimneys to houses except they are English built, she constructs her nest in porches, gate-ways, galleries, and open halls. But in general, with us, this species breeds in chimneys; and haunts those stacks where there is a constant fire, for the sake of warmth; generally preferring one adjoining to the kitchen, and disregarding the perpetual smoke of that funnel. Five or six or more feet down the chimney, does this little bird begin to form her nest about the middle of May, which consists, like that of the house martin, of a crust or shell composed of dirt or mud, mixed with short pieces of straw to render it tough and permanent; with the

different

fact, that, whereas the shell of the martin is spheroidal, that of the swallow is open at the top, and like half a deep dish. This nest is lined with dry grasses, which are often collected as they fall from the air. Wonderful is the address (Mr White says) which this adroit bird shows all day long in hovering and descending through so narrow a passage, the motion of her wings acting on the confined air, and producing a rumbling noise like thunder. It is so low in the shaft, in order to secure her from rapacious birds, and particularly from cats, which frequently fall down chimneys, attempting to get at these nestlings. This bird lays from 4 to 6 white eggs, dotted with red, and brings out her first brood about the middle of June, or the first of July. The method by which the young are introduced into the world is very curious: First, they emerge from the shaft with difficulty enough, and often fall on the chimney top, and are then taken to the dead leafless bough of some tree, where, sitting in a row, they are attended with great care, and may then be called *perchers*. In a day or two they become flyers, but are still unable to take their own food: therefore they play about the place where the dams are hawking; and, when a mouthful is collected, at a signal given, the dam and the nestling advance towards each other, and meeting at the mouth of the shaft the young one all the while uttering a quick note of gratitude and complacency, at one must have paid very little regard to the laws of Nature, who has not remarked this. The dam betakes herself immediately to the care of a second brood, as soon as she is disengaged from the first; which she at once associates with the first brood of house martins; and with them flies, clustering on sunny roofs, towers, &c. She brings out her second brood towards the middle and end of August. All the while the swallow is a most instructive pattern of unwearied industry and affection; for during the day, while there is a family to feed, she spends the whole in skimming the ground, and exerting the most sudden and quick evolutions. Avenues, and walks under hedges, and pasture fields, and meadows where cattle graze, are her haunts, especially if there are trees interspersed; in such spots insects most abound. When taken, a smart snap from her bill is heard, and the noise at the shutting of a watch; the motion of the mandibles is too quick to be seen. The swallow, probably the male, is the excubitor to house martins and other birds, announcing the approach of birds of prey, or as soon as an hawk appears, with a shrill note he calls all the swallows and drives them; who pursue in a body, and strike their enemy till they have driven him from the village, darting down from above on him, and rising in a perpendicular line in his vicinity. This bird will sound also the alarm, when they climb on the roof, or otherwise approach the nests.

Every species of *hirundo* drinks as it flies along, dipping the surface of the water; but the swallow alone washes on the wing, by dropping into a pool for many times together; in very hot weather house martins and bank martins dip and wash a little. The swallow is a delicate songster, and in soft sunny weather sings both perching and flying, on trees in a kind of concert, and on chimney tops; it is also a bold flyer, ranging to distant towns and commons even in windy weather, which the other species seem much to dislike; nay, even frequenting sea port towns, and making little excursions over the salt-water. Horsemen on wide downs are often closely attended by a little party of swallows for miles together, which play before and behind them, sweeping around, and collecting all the sculking insects that are roused by the trampling of the horses' feet: when the wind blows hard, without this expedient, they are often forced to settle to pick up their lurking prey. This species feeds much on little coleoptera, as well as on gnats and flies; and often settles on dug ground, or paths, for gravel to grind and digest its food. Mr White informs us, that before they depart, for some weeks, they all forsake houses and chimneys, and roost in trees; and usually withdraw about the beginning of October; though some few stragglers may be seen at times till the first week in November. Mr Pennant says, that for a few days previous to their departure, they assemble in vast flocks on house-tops, churches, and trees, from whence they take their flight. See MIGRATION and SWALLOW. They are supposed to take up their winter quarters in Senegal and parts adjacent; and seem to possess in turn the whole of the old continent, being known from Norway to the Cape of Good Hope on the one hand, and from Kamtschatka to India and Japan on the other. They are also found in all parts of North America, migrating N. and S. as with us. Kalm says, that in America they build in houses and under the outsides of the roofs; also on the mountains, in such parts of them as project beyond the bottom, as well as under the corners of perpendicular rocks.

17. *HIRUNDO TANTICA*, the *Otaheite swallow*, is 5 inches long; its body is of a brown-black colour; with a shining blueish gloss, the breast of a fulvous purple, the abdomen of a sooty brown; the bill, tail, and legs are black. It inhabits the mountainous parts of Otaheite. See fig. 4.

18. *HIRUNDO URICA*, the *MARTIN*, is inferior in size to the chimney swallow, and its tail much less forked. The head and upper part of the body, except the rump, are black glossed with blue: the breast, belly, and rump are white: the feet are covered with a short white down. This is the second of the swallow kind that appears in our country; and of its manners and economy we have the following curious account in the rev. Mr White's Natural History of Selborne. "They begin to appear about the 16th of April; and for some time they in general pay no attention to the business of nidification: they play and sport about, either to recruit from the fatigue of their journey, if they do migrate at all; or else that their blood may recover its true tone and texture after it has been so long benumbed by the severities of winter. About the middle of May, if the weather

As yet be fine, the martin begins to think in earnest of providing a mansion for its family. The crust or shell of this nest seems to be formed of such dirt or loam as comes most readily to hand, and is tempered and wrought together with little bits of broken straws to render it tough and tenacious. As this bird often builds against a perpendicular wall without any projecting ledge under, it requires its utmost efforts to get the first foundation firmly fixed, so that it may safely carry on the superstructure. On this occasion the bird not only clings with its claws, but partly supports itself by strongly inclining its tail against the wall, making that a fulcrum; and thus steadied, it works and plasters the materials into the face of the brick or stone. But then, that this work may not, while it is soft and green, pull itself down by its own weight, the provident architect has prudence and forbearance enough not to advance her work too fast; but by building only in the morning, and by dedicating the rest of the day to food and amusement, gives it sufficient time to dry and harden. About half an inch seems to be a sufficient layer for a day. Thus careful workmen, when they build mud-walls (informed at first perhaps by this little bird) raise but a moderate layer at a time, and then desist; lest the work should become too heavy, and so be ruined by its own weight. By this method in about 10 or 12 days is formed an hemispheric nest, with a small aperture towards the top, strong, compact, and warm; and perfectly fitted for all the purposes for which it was intended. But then nothing is more common than for the house sparrow, as soon as the shell is finished, to seize on it as its own, to evict the owner, and to line it after its own manner. After so much labour is bestowed in erecting a mansion, as nature seldom works in vain, martins will breed on for several years together in the same nest, where it happens to be well sheltered and secure from the injuries of the weather. The shell or crust of the nest is a sort of rustic work, full of knobs and protuberances on the outside: nor is the inside of those that I have examined smoothed with any exactness at all; but it is rendered soft and warm, and fit for incubation, by a lining of small straws, grasses, and feathers; and sometimes by a bed of moss interwoven with wool. In this they tread or engender, frequently during the time of building; and the hen lays from 3 to 5 white eggs. At first, when the young are hatched, and are in a naked and helpless condition, the parent birds, with tender assiduity, carry out what comes from their young. Were it not for this affectionate cleanliness, the nestlings would soon be burnt up and destroyed in so deep and hollow a nest, by their own caustic excrement. In the quadruped creation the same neat precaution is made use of, particularly among dogs and cats, where the dams lick away what proceeds from their young. But in birds there seems to be a particular provision, that the dung of nestlings is enveloped in a tough kind of jelly, and therefore is the easier conveyed off without soiling or daubing. Yet, as nature is cleanly in all her ways, the young perform this office for themselves in a little time, by thrusting their tails out at the aperture of their nest. As the young

of small birds presently arrive at their full growth, they soon become impatient of confinement, and sit all day with their heads out at the orifice, where the dams, by clinging to the nest, supply them with food from morning to night. For a time the young are fed on the wing by the parents; but the feat is done by so quick and most imperceptible a flight, that a person who has attended very exactly to their motions, before he would be able to perceive it. As soon as the young are able to shift for themselves, the dams immediately turn their thoughts to the business of a second brood: while the first flight, taken off and rejected by their nurses, congregates in great flocks, and are the birds that are seen entering and hovering, on sunny mornings and evenings, round towers and steeples, and on the roofs of churches and houses. These congregations usually begin to take place about the first week of August; and therefore we may conclude that that time the first flight is pretty well over. The young of this species do not quit their parents together; but the more forward birds get off some days before the rest. These approach the eaves of buildings, and playing about them, make people think that several old ones tend one nest. They are often capricious in leaving on a nesting-place, beginning many others and leaving them unfinished; but when a nest is completed in a sheltered place, it lasts several seasons. Those which breed in a finished house, get the start in hatching, of those that build new, by 10 days or a fortnight. These industrious artificers are at their labour many long days before four in the morning: when they fix their materials, they plaster them on with their bills, moving their heads with a quick vibration. They dip and wash as they fly in some hot weather, but not so often as swallows. They love to frequent towns, especially if there are lakes and rivers at hand. They are by far the agile of the British hirundines; their wing-tails are short, and therefore they are not subject to such surprising turns, and quick and evolutions as the swallow. Accordingly, they make use of a placid easy motion, in a single gliding of the air, seldom mounting to any height, and never sweeping long together on the surface of the ground or water. They do not wander far for food; but affect sheltered places over some lake, or under some hanging vine in some hollow vale, especially in windy weather. They breed the latest of all the swallow tribe; in 1773, they had nestlings on to October 10th, and are never without young as late as March. As the summer declines, the number of flocks increase in numbers daily, by the accession of the second broods; till at last a vast swarm in myriads upon myriads round them on the Thames, darkening the face of the sky, they frequent the aisles of that river, where they roost. They retire, the bulk of them I have seen in vast flocks together about the beginning of September: but have appeared of late years in a considerable flight in this neighbourhood, for one or two, as late as November the 3d and 6th, they were supposed to have been gone for more than a fortnight. They therefore winter

the last of any species. Unless these birds are short-lived indeed, or unless they do not return to the district where they are bred, they must undergo vast devastations somehow, and therefore; for the birds that return yearly bear a manner of proportion to the birds that retire."

**HISZHOIMEN**, or **HISTZHOIM**, a small town of Denmark, in the Cattegat, 4 miles NE. of Aarsland, inhabited chiefly by fishermen. Lat. 56. 14. E. Lat. 57. 31. N.

**HIS**, *primum possessive*. [*his*, Saxon.] 1. *primum possessive*. Belonging to him that is before mentioned.—

England *his* approaches makes as fierce  
As waters to the sucking of a gulph. *Shak. H. V.*  
If much you note him,  
You shall offend him, and extend *his* passion. *Shak. Macb.*

Heav'n and yourself  
Fell part in this fair maid; now heav'n hath all,  
And all the better is it for the maid:  
Your part in her you could not keep from death;  
But heav'n keeps *his* part in eternal life. *Shak.*  
His father carry authority with such disposition  
As he bears this last surrender of *his*, it will  
Send us. *Shak. Temp.*—He that is nourished by  
Others be picked up under an oak in the wood,  
Appropriated them to himself: nobody can  
But the nourishment is *his*. *Lacke.*

Where'er I stoop, he offers at a kiss;  
And when my arms I stretch, he stretches *his*. *Addison.*  
It was anciently used in a neutral sense, where  
we say *his*.—

Who can impress the forest, bid the tree  
Unfix its earth-bound root? *Shak. Macb.*

Not the dreadful spot,  
But dizzy with more clamour Neptune's ear  
Is descent. *Shak. Troilus and Cressida.*  
There's not the smallest orb, which thou be-  
hold'st,

Whose motion like an angel sings,  
Quiring to the young ey'd cherubims. *Shak.*  
The rule is not so general, but that it admit-  
tes exceptions. *Carver's Survey of Cornwall.*  
In loath some of *his* poisonous quality if  
Expoused out, mingled with spirit of wine.

3. It is sometimes used as a sign of the  
possessive; as *the man his ground*, for *the man's*  
ground. It is now rarely thus used, as its use  
arose probably from a false opinion, that the  
case of the genitive was *his* contracted.—

Where is this mankind now? who lives to age  
To be made Methusalem *his* page? *Dante.*  
In my fond consort, by thy father's cares,  
Young Telemachus *his* blooming years. *Pope.*  
It is sometimes used in opposition to *this man's*.

Were I king,  
I would cut off the nobles for their lands,  
And give *his* jewels, and this other's house. *Shak.*  
I recently before *self*.—Every of us, each for  
his, laboured how to recover him. *Sidney.*

**HJOLT**, a town of Sweden, in Smaland.  
**HJINGEN**, an island near the coast of Swe-  
den at the mouth of the Gotha, 16 miles long  
and broad, containing 7 parishes. Lon. 22. 48.  
Lat. 57. 45. N.

**HISKIR**, one of the **HISRIDES**. Seals have  
been found on it 12 feet long.

**HISMO**, a river and town of European Tur-  
key, in Albania, 16 miles NNE. of Durazzo.

**HISPA**, in zoology; a genus of insects belong-  
ing to the coleoptera order, the characters of  
which are these: The antennae are fusiform, grow-  
ing gradually larger from each extremity towards  
the middle; and are situated between the eyes:  
the thorax and elytra are covered with protube-  
rances or spines. The larva of this insect seems  
to be yet wholly unknown. There are but two  
species of the perfect animal met with in Europe;  
one of which, the

**HISPA ARA**, is found in Britain; is all over of  
a deep unpolished black, and has the upper part  
of its body entirely covered with long and strong  
spines, which render it bristly like the shell of a  
chestnut. There is even a spine at the base of the  
antennae; the thorax has a row set transversely,  
which are forked; and the elytra are furnished  
with a very great number that are single. Its  
being thus covered with spines, makes it resemble  
a hedge-hog in miniature. It is rather hard to  
catch, letting itself fall down on the ground as  
soon as approached. It bears its antennae upright  
before it. See *Plate 182, fig. 5.*

**HISPALIS**, in ancient geography, a town of  
Bætica, in Hispania Ultra, an ancient mart or trad-  
ing town on the Bætis, navigable quite up to it for  
ships of burthen, and thence to Corduba for river  
barges. It was also called *Colonia Romulensis*. It  
had also a *conventus juridicus*, a court of justice  
or assizes, *Pliny*. It is now called **SEVILLE**.

**HISPANIA**, in ancient geography, a country  
or kingdom of Europe, now called **SPAIN**; called  
**HESPERIA ULTIMA**, by Horace, because the west-  
most part of Europe; also **IBERIA**, from the river  
Iberus. Its name *Hispania*, or *Ierna*, is of Phœni-  
cian original, from its great number of rabbits;  
the Phœnicians, who settled several colonies on  
the coast, calling it *Spanjah*, from these animals.  
It has the sea on every side, except on that next  
to Gaul, from which it is separated by the Pyrenees.  
The Romans first divided it into *Hispania Citerior*  
and *Ultra* under two prætors. In that state it conti-  
nued down to Augustus; who divided the Farther  
Spain in Bætica, which he left to the people to  
be governed by a præconsul; and into Lusitania,  
which he added to his own provinces; calling the  
Nearer Spain *Tarracensis*. Hispania was ancient-  
ly much celebrated for its fertility, of which it has  
greatly fallen short in modern times. Strabo says,  
the people were of a warlike turn; and their bod-  
ies being formed for hardships and labour, they  
ever preferred war to peace, and were remarkably  
prodigal of life. See *Justin*, and *Sil. Italicus*. Spain  
produced several great men, both in a literary and  
a political capacity. See **SPAIN**.

(1.) **HISPANIOLA**, or **ST DOMINGO**, the lar-  
gest of the Antilles or Caribbee islands, in the W.  
Indies. It lies between 17° 55' and 20° of N. lat.  
and between 67° 35' and 74° 15' W. lon. It is 60  
miles NW. by W. of Porto Rico, 66 SE. of Cu-  
ba, 115 EN. of Jamaica, and 3,500 from the  
Land's End of England.

(2.) **HISPANIOLA**, CLIMATE OF. The climate  
is

is hot, but not reckoned unwholesome; and some of the inhabitants are said to arrive at the age of 120. It is sometimes refreshed by breezes and rains; and its salubrity is likewise in a great measure owing to the beautiful variety of hills and valleys, woods and rivers, which every where present themselves. It is indeed reckoned by far the finest and most pleasant island of the Antilles, as being the best accommodated to all the purposes of life when duly cultivated. In the plains, the heat is nearly uniform, but varies in proportion to the distance from the mountains. The thermometer is sometimes at 49. In the mountains it rarely rises above 70, or 77. There the nights are cool enough to render a blanket welcome; and there are mountains where even a fire is necessary in some evenings. The contrast of violent heats and heavy rains renders St Domingo humid; hence the tarnished appearance of almost all metals, however brilliant the polish they may originally have had. This is particularly observable on the sea shore, which is more unhealthy than the interior parts of the island. The southern part of the island is pretty much subject to hurricanes, called here *southern gales*, because they are not attended with such dreadful consequences as the hurricanes in the windward islands.

(3.) **HISPANIOLA, EXTENT OF.** This island is surrounded by Turtle Island, Samana, Gouaya, the Caimites, Heifer Island, Saone, and several others, which altogether are conjoined with it in one French Colony. Exclusive of these, its extent is estimated at 420 miles in length from E. to W. and 140 in breadth, where broadest, from N. to S. But Dr Morse, in his *American Gazetteer*, makes it 480 miles, or 160 leagues long, and from 60 to 70 leagues broad.

(4.) **HISPANIOLA, HISTORY OF.** This island, was discovered by Chr. Columbus, on the 9th of Dec. 1492. It then formed 3 kingdoms, called *Maqua*, *Marion*, *Hugoy*, *Maguana*, and *Xaragway*, each governed by sovereigns called caciques. The Spaniards had possession of the whole of it for 120 years. This island, famous for being their earliest settlement in the world, was at first in high estimation for the quantity of gold it supplied. This wealth diminished with the inhabitants of the country, whom they obliged to dig it out of the bowels of the earth; and the source of it was entirely dried up, when they were exterminated, which was quickly done, by a series of the most shocking barbarities that ever disgraced the history of any nation. Benzoni relates, that of two millions of inhabitants, contained in the island when discovered by Columbus in 1492, scarce 153 were alive in 1543. Bp. Las Casas makes the extermination of the natives by his countrymen still greater, and more rapid. He states the original number at 3,000,000, and says they were reduced to 60,000 within 25 years. A vehement desire of opening again this source of wealth inspired the thought of getting slaves from Africa; but, besides that these were found unfit for the labours they were destined to, the multitude of mines, which then began to be wrought on the continent, made those of Hispaniola no longer of any importance. An idea now suggested itself, that their negroes, which were healthy, strong, and patient, might

be usefully employed in husbandry; and they adopted, through necessity, a wise resolution, which had they known their own interest, they would have embraced by choice. The produce of this industry was at first extremely small, because the labourers were few. Charles V. who, like most sovereigns, preferred his favourites to every thing, had granted an exclusive right of the slave trade to a Flemish nobleman, who made over his privilege to the Genoese. Those avaricious republicans conducted this infamous commerce as monopolies are conducted: they resolved to be dear, and they sold but few. When time of competition had fixed the prices of slaves, the number of them increased. It may easily be imagined, that the Spaniards, who had been accustomed to treat the Indians as beasts, did not entertain a higher opinion of these negro Africans whom they substituted in their place. Deprived still farther in their eyes by the price they paid for them, even religion could not restrain them from aggravating the weight of their servitude. It became intolerable, and these wretched beings made an effort to recover the unalienable rights of mankind. Their attempt proved unsuccessful, but they reaped this benefit from their defeat, that they were afterwards treated with less severity. This moderation (if tyranny cramped the apprehension of revolt can deserve that name) was attended with good consequences. Cultivation was pursued with some degree of industry. Soon after the middle of the 16th century, it drew annually from this colony ten millions worth of sugar, a large quantity of wood for dyeing; tobacco, cocoa, cassia, ginger, cotton, and pepper in abundance. One might imagine, that such favourable beginnings would have given both desire and the means of carrying them further; but a train of events, more fatal each than the other, ruined these hopes. The first misfortune rose from the depopulation of the island. Spanish conquests on the continent should naturally have contributed to promote the success of an island, which seemed to have been formed to be the centre of that vast dominion arising from it, to be the staple of the different colonies. It fell out quite otherwise: on a view of the immense fortunes raising in Mexico, and other parts, the richest inhabitants of Hispaniola began to spurn their settlements, and quitted the trade for riches, which is on the surface of the earth, to go and ransack the bowels of it for veins of gold, which are quickly exhausted. The government endeavoured in vain to put a stop to this emigration; the laws were always either artfully eluded or openly violated. The weakness, which was a necessary consequence of such conduct, left the coasts without defence, encouraged the enemies of Spain to ravage them. (See BUCCARUT § 3—4.) Even the capital of this island was taken and pillaged by that celebrated English pirate Sir Francis Drake. The cruisers of less consequence contented themselves with intercepting vessels in their passage through those latitudes, which were the best known at that time of the new world. To add to these misfortunes, the Catalians themselves commenced pirates. They attacked no ships but those of their own nation.

which were more rich, worse provided, and worse defended, than any others. The custom they had of fitting out ships clandestinely, to procure lives, prevented them from being known; and the assistance they purchased from the ships of war, commissioned to protect the trade, insured to them impunity. The foreign trade of the colony was its only resource in this distress; and that was illicit: but as it continued to be carried on, notwithstanding the vigilance of the governors, or, perhaps, by their connivance, the policy of an exasperated and short sighted court exerted itself in demolishing most of the settlements, and driving the miserable inhabitants into the inland country. This act of violence threw them into a state of dejection; which the incursions and settlement of the French on the island afterwards carried to the utmost pitch. The latter, after having made some unsuccessful attempts to settle on the island, had part of it yielded to them, in 1697, by the Spaniards. The court of France, totally taken up with that vast empire which they had formed on the continent, used no pains to dissipate this lethargy. They even refused to listen to the solicitations of their Flemish subjects, who earnestly pressed that they might have permission to clear those fertile lands. Rather than run the risk of seeing them carry on a contraband trade on the coasts, they chose to bury in oblivion a settlement which had been of consequence, and was likely to become so again. The colony, which had no longer any intercourse with the mother country but by a single ship, of great burthen, that arrived from thence every year, consisted, in 1717, of 12,410 inhabitants, including Spaniards, Mulattoes, Negroes, and Indians. The complexion and character of these people differed according to the different proportions of American, European, and African blood they had received from that natural and transient union, which restores all races and conditions to a same level. These demi-savages, plunged in the extreme of sloth, lived upon fruits and roots, in huts or cottages without furniture, and most of them without clothes. The few among them, however, whose indolence had not totally suppressed the sense of decency and taste for the conveniences of life, purchased clothes of their neighbours, the whites, in return for their cattle, and the money lent to them for the maintenance of two hundred priests, the priests, and the government. The company, formed at Barcelona in 1717, with extensive privileges for the re establishment of St Domingo, never made any considerable progress. They sent out only two small vessels annually, which were freighted back with 6000 hides, and other commodities of little value. Mean time the French inhabitants of the west part of the island devoted their grounds with their usual activity, and on considerable trade, and raised several thriving towns; particularly Port au Prince, the capital, St Mark, Port Dauphine, Leogane, Petit Port, Jeremie, Les Cayes, St Lewis, Cape Francois, Jacmel, and others of less note. Previous to the French revolution, in 1789, the government was administered by an Intendant and a Governor General, both appointed by the Crown, for 3 years, and their powers in some cases distinct, in others un-

limited: but though their powers were almost absolute, yet as they were seldom abused, the colony was in a very prosperous condition, in 1788; its towns were opulent, the markets plentiful, and commerce extensive. But soon after the revolution in 1789, a most dreadful reverse took place. At this period, says Mr Bryan Edwards, (in his *Historical Survey of the French Colony in St Domingo*. Lond. 4to. 1797.) "the Mulattoes were in a situation more degrading and wretched, than that of the enslaved negroes in any part of the W. Indies.—No law allowed the privileges of a white person to any descendant of an African, however remote."—"The laws (he adds) were dreadfully unequal." In such a situation it is not to be wondered at, that they should have listened with pleasure to the news of the French revolution, and to the acts of the Assembly, which abolished slavery, and established equality of rights. A colonial assembly met at St Mark, on the 16th April 1790, composed of 213 members, which (says Mr Edwards) "fairly, and fully represented the inhabitants." "They passed acts of indulgence, and rectified gross abuses. But persons interested in the continuance of these abuses were displeased. They counteracted the proceedings of the assembly, and misrepresented their intentions. M. Peynier, the governor, attempted to restore the old despotic system: whereupon 85 members of the assembly embarked for France;" as did also M. Peynier, who resigned, in Nov. 1790. "The pride of power, (adds Mr Edwards) the rage of reformation, the contentions of party, and the conflict of opposing interests, now produced a tempest, that swept every thing before it." In Oct. 1790, Jean Ogé, a free mulatto, who had been at Paris, and who is characterised by Mr Edwards, as "an enthusiast for liberty, but mild and humane," returned from France, and put himself at the head of the insurgent negroes and people of colour; but being defeated, in March 1791, was betrayed by the Spaniards, to whom he had fled for refuge, and, with Mark Chavane his lieutenant, broke alive on the wheel;—"a sentence" (says Mr Edwards) "on which it is impossible to reflect, but with mingled emotions of shame, sympathy, indignation, and horror." The 85 members of the colonial assembly were arrested at France, and their Act of 13th Oct. 1790, annulled. In March 1791, 8000 troops arrived from France; and Mauduit the new governor was murdered by his own soldiers, with circumstances of horrible barbarity. By a decree of the National Assembly, of the 15th May 1791, people of colour were declared eligible to seats in the colonial assembly. And on the 18th Sept. a concordat, or truce, was signed between the whites and mulattoes. "But the operation of this truce, (says Mr Edwards) was destroyed by the absurd decree of the National Assembly of the 14th Sept. repealing the decree of the 15th May, whereby in the very moment when the justice and necessity of this decree were acknowledged, and its faithful observance promised by the colonial assembly, its repeal was pronounced by the Legislative Assembly in the mother country. To such repugnancy and absurdity must every government be driven, that attempts to regulate and direct the local concerns of a country

3000 miles distant.—Open war in all its horrors was now renewed. All the soft workings of humanity were now absorbed, in the raging and insatiable thirst of revenge, which inflamed each class alike. It was no longer a contest for mere victory, but a diabolical emulation which party could inflict the most abominable cruelties on the other." On the 23d Aug. 1791, Cape Francois was burnt, and in the space of two months it was computed, that upwards of 3000 white persons perished by these horrible massacres; and that of the mulattoes and negroes not fewer than 10,000 died by famine and the sword, besides several hundreds that suffered by the executioner. Mean time citizens Santhonax, Polverel and Ailhaud, arrived from France as commissioners, accompanied by 6000 of the national guards; and citizen Galbaud was appointed governor. Their attempts however, to stop these enormities proved fruitless, though they proclaimed the total abolition of slavery, and a general indemnity. In Oct. 1793, a body of British forces under Col. Whitlock, were landed, and took possession of Tiburon, Tereve, Jeremie, Leogane, Cape Nicolas Mule, and upwards of 90 miles of the eastern coast with little opposition. But though the loss of the British in these engagements, or rather skirmishes, did not exceed 100 men, yet the victims of disease, within 6 months after their arrival, was upwards of 6000, among whom were 150 officers. Leogane was soon after retaken by the negroes, who now amounted to above 100,000, under their general Touissant Louverture; and Tiburon was taken by the French under Gen. Rigaud. To remedy these disasters, and to supply the Mole with provisions, an expedition was undertaken against the fort of Bombarda, but the reduction of it, (which was not accomplished till the 18th June 1796,) cost an immense number of men, and after it was taken, instead of being able to supply the Mole, it was found necessary to supply it from thence, at a vast expence, and with the loss of many brave troops. These and similar losses, with the death of Lieut. Cols. Brisbane and Markham, who were killed in 1795, together with the faithlessness of the French emigrants, upon whose suggestions this expedition had been undertaken, at last determined the British commander to surrender Jeremie, Port au Prince, and Cape Nicolas Mule, the only places remaining in the hands of the British, to Gen. Heustonville, by capitulation, 11 Aug. 1798; and on the 1st of Oct. the island was totally evacuated by the British. The name of Port au Prince was changed to *Port Republicain*; and the Spanish part of the island, having been ceded to the French by treaty in 1791, was taken possession of by Gen. Louverture in 1800. The white colonists having been mostly either expelled or extirpated, Gen. Touissant Louverture has since been employed in forming a kind of Negro and mulattoe republic, in connection with the mother country. Peace is now so completely restored to this unfortunate island, that in 1801, a new constitution was formed and agreed to. See § 7.

(5.) **HISPANIOLA, MOUNTAINS OF.** The two great chains of mountains which extend from E. to W. and their numerous spurs, give the island an aspect, at a distance, not so favourable as it

deserves. They are, however, the cause of the fertility of the island. They give rise to innumerable rivers, repel the violence of the winds, vary the temperature of the air, and multiply the resources of human industry. They abound with excellent timber, and mines of iron, lead, copper, silver, gold, some precious stones, and even mercury.—The mountains of *Cabeo, Seile, and Soto*, are reckoned 1000 fathoms above the level of the sea. In the bowels of the first, the cruel Spaniards condemned thousands of the natives, to sacrifice their lives, in search of gold. The mines are now worked, although Valverde thinks that they might still be wrought to advantage.

(6.) **HISPANIOLA, NAMES OF.** The original inhabitants called this island *Hayti*, i. e. high or mountainous land. Charlevoix says, it was called *Quisqueya*, that is, great country, or many countries. Others say it had the name of *Aiti*, which means a country full of habitations and villages. Columbus called it *HISPANIOLA*, or *Little Spain*, which name the Spaniards still retain, but *St Domingo* is the name commonly used by other nations; so called from *St Domingo*, the capital of the Spanish part; which was thus named by Columbus in honor of his father.

(7.) **HISPANIOLA, NEW CONSTITUTION OF.** The new constitution of St Domingo, composed of the delegates from the different departments in 1801, though it agrees in its general principles with that of the French republic, differs in some particulars. A few of its most striking outlines may suffice as a specimen. By the 1st. article "St Domingo, or Hispaniola, as well as *Santo Domingo*, *Turtle Island*, *Gouava*, the *Caimire*, *Heller Island*, *Saone*, and the other adjacent isles, form a French colony, which is a part of the French empire, but governed by particular laws. The territory is divided into departments, districts, and parishes. II. Slaves are not permitted. Slavery is abolished for ever. All men born in the country, live and die free, and Frenchmen. Every man of whatever colour, is eligible to all places. There is no distinction but what is made by virtue and talents: No superiority but what is conferred by the exercise of some public function. The law is the same to all, whether it protects or punishes. III. The holy Roman Apostolic religion is the only one publicly professed. Each parish must pay the expences of its own worship and ministers. IV. Divorces are not permitted. The condition of natural children is to be determined according to the laws of justice. V. Personal liberty and property is guaranteed. The VI. article relates to agriculture and commerce: The VII. to legislation. The Central Assembly is composed of a deputies from each department, who, if eligible must be 30 years of age, and 3 years resident in the colony. No person can sit in it 2 years in succession. The first general election took place on the 1st of March, in the 1st year (1801) of the French republic. Vacancies by death, or resignation are to be filled up by the governor. The assembly adopts or rejects the laws proposed by the governor, who may call extraordinary meetings. The sittings are not to be public. The assembly meets annually on the 1st of March, and cannot continue above 3 months. The

governor presents a state of expences and receipts monthly, and the assembly determines the proportion, duration, and mode of collecting the taxes. These are to be printed. VIII. The government is to be entrusted to the governor, who corresponds with the government of the mother country. His appointment is fixed at 300,000 francs. Citizen Touffaint Louverture is named governor, and in consideration of the very great and important services he has performed to the colony during the revolution, the reins of government are entrusted to him, for the whole of his *glorious* life. In future, every governor will be appointed for 6 years, and if his conduct is approved, he may be continued. From the high confidence the colony places in Citizen Louverture, he is empowered to nominate his successor, in a sealed packet to be opened after his death." The remaining articles relate to the tribunals, municipal administration, armed force, finances, &c. but contain nothing peculiarly striking.

(8.) HISPANIOLA, NUMBER OF CATTLE IN. The number of 300,000 head of cattle was stated in the general census taken by order of the president in 1780, and if we count those exempted from tribute, they may amount to 350,000; without comprehending horses, mules, and asses, which, with an augmentation estimated since 1780, would make a stock of 300,000 head, and an annual production of 60,000.

(9.) HISPANIOLA, POPULATION OF. Before the revolution, the population of the French part of St Domingo was estimated at 43,000 white people, 44,000 free people of colour, and 600,000 slaves. Of these, two thirds have lost their lives, during the dreadful convulsion that has since taken place.

(10.) HISPANIOLA, PRODUCE OF. Before the war, St Domingo is said to have produced as much sugar alone, as all the British W. India possessions united, besides immense quantities of cotton, coffee, and indigo. The exports from the French part of the island, in 1789, were 47,516,531 lb. white sugar; 93,773,300 lb. brown sugar; 76,835,339 lb. coffee; 7,004,274 lb. cotton; and 358,418 lb. indigo; besides tanned hides, molasses, spirits, &c. to the value of 46,873 livres. The coffee is excellent; each tree in a state of bearing will produce on an average a pound weight, and is sometimes equal to that of Mocha. Cotton grows naturally, of an excellent quality, even without care, in stony land, and in the crevices of the rocks. The numerous roots of indigo are the only obstacles to the feeble cultivation of the fields, where it grows spontaneously. Tobacco, says Valverde, has here a larger leaf than in any other part of America; it grows every where, and equals sometimes that of Cuba or the Havannah. The kernel of the cocoa nut of St Domingo is more acidulated than that of the cocoa nut of Venezuela and Caraca, to which it is not inferior; and experience proves, that the chocolate made of the two cocoas has a more delicate flavor than that made of the cocoa of Caraca alone.

\* HISS. *s. f.* [from the verb.] 1. The voice of a serpent, and of some other animals.—

He *hiss* for *hiss* return'd, with forked tongue  
To forked tongue. *Milton.*

2. Censure; expression of contempt used in theatres.—

He heard

On all sides, from innumerable tongues,  
A dismal universal *hiss*, the sound  
Of publick scorn. *Milton.*

Fierce champion fortitude, that knows no fears  
Of *hisses*, blows, or want, or loss of ears. *Pope.*  
(1.) \* To HISS. *v. n.* [*biscan*, Saxon.] 1. To condemn by hissing; to explode.—Every one will *hiss* him out to his disgrace. *Becluf. xlii. 2.*—She would so shamefully fail in the last act, that, instead of a plaudite, she would deserve to be *hiss'd* off the stage. *Mere.*—I have seen many successions of men, who have shot themselves into the world, some bolting out upon the stage with vast applause, and others *hiss'd* off, and quitting it with disgrace. *Dryden.*—Will you venture your all upon a cause, which would be *hiss'd* out of all the courts as ridiculous? *Collier on Duelling.* 2. To procure hisses or disgrace.—

Thy mother plays, and I  
Play too; but so disgrac'd a part, whose issue  
Will *hiss* me to my grave. *Shak.*

What's the newest grief?

—That of an hour's age doth *hiss* the speaker,  
Each minute seems a new one. *Shak.*

(2.) \* To HISS. *v. n.* [*bissen*, Dutch.] 1. To utter a noise like that of a serpent and some other animals. It is remarkable, that this word cannot be pronounced without making the noise which it signifies.—In the height of this bath, to be thrown into the Thames and cooled glowing hot, in that surge, like a horseshoe; think of that, *hissing* hot. *Shak.*—The merchants shall *hiss* at thee. *Bachin, xxvii. 36.*

See the furies arise;

See the snakes that they rear,  
How they *hiss* in their hair. *Dryden.*

Against the steel he threw

His forceful spear, which, *hissing* as it flew,  
Pierc'd through the yielding planks. *Dryden.*  
2. To condemn at a publick exhibition; which is sometimes done by *hissing*.—

Men shall pursue with merited disgrace;

*Hiss*, clap their hands, and from his country  
chace. *Sandys.*

HISSAR, a district of Hindoostan, in Delhi: with its capital. The latter lies near the Sursooty, 118 miles WNW. of Delhi. Lon. 75. 40. E. Lat. 29. 5. N.

\* HIST. *interj.* [Of this word I know not the original: some thought it a corruption of *hush*, *hush* it, *hush* it, *hush*; but I have heard that it is an Irish verb commanding silence.] An exclamation commanding silence.—

Mute silence *hiss* along:

'Less Philomel will deign a song,  
In her sweetest saddest plight,  
Smoothing the rugged brow of night. *Milton.*  
—*Hiss*, *hiss*, says another that stood by, away, doctor; for here's a whole pack of dismals coming. *Swift.*

HISTER, in entomology, a genus of the coleoptera order of insects. See Plate 181. The first articulation of the antennæ is compressed and curved; the last is considerably larger than the others,

there, and appears to be a solid knob: the head is drawn within the body; the mouth is forcipated: the elytra are shorter than the body; and the fore-legs are dentated. The body is polished and very shining, and its form almost square; the thorax large, and highly polished: anteriorly it is made with a slope, in the cavity whereof is lodged the head, the position of which is often only discovered by the projection of the maxillæ; for the head, for the most part, is so drawn under the thorax, that the insect looks as if it had none. The elytra are as it were cut off towards the extremity, and do not cover the whole of the abdomen. They are extremely smooth, and only have a few striae, scarce perceptible towards their outward side. Lastly, the hinder part of the abdomen, which projects beyond the elytra, is round and blunt. These insects are sometimes found in cow-dung, and often on sand. They vary prodigiously in size; but differ very little either in form or colour, being all very dark. The larvæ, as well as the perfect insects, are frequently met with in the dung of horses, cows, &c.

**HISTO**, a town of Spain in New Castile, 24 miles SW. of Cuenca.

\* **HISTORIAN**. *n. f.* [*historicus*, Lat. *historien*, French.] A writer of facts and events; a writer of history.—

What thanks sufficient, or what recompence  
Equal, have I to render thee, divine  
*Historian!* *Milton.*

—Our country, which has produced writers of the first figure in every other kind of work, has been very bad in good *historians*. *Addison.*—

Not added years on years my task could close,  
The long *historian* of my country's woes. *Pope.*

\* **HISTORICAL**. **HISTORICK**. *adj.* [*historique*, French; *historique*, Lat.] 1. Containing or giving an account of facts and events.—Because the beginning seemeth abrupt, it needs that you know the occasion of these several adventures; for the method of a poet *historical* is not such as of an *historiographer*. *Spenser.*—In an *historical* relation we use terms that are most proper and best known. *Burnet's Theory.*—

Here rising bold the patriot's honest face;  
There warriors frowning in *historick* brass. *Pope.*  
2. Suitable or pertaining to history or narrative.—  
With equal justice and *historick* care,  
Their laws, their toils, their arms with his  
compare. *Prior.*

\* **HISTORICALLY**. *adv.* [from *historical*] In the manner of history; by way of narration.—The go-sels, which are weekly read, do all *historically* declare something which our Lord Jesus Christ himself either spoke, did, or suffered in his own person. *Hooker.*—When that which the word of God doth but deliver *historically*, we construe as if it were legally meant, and so urge it further than we can prove it was intended, do we not add to the laws of God? *Hooker.*—After his life has been rather invented than written, I shall consider him *historically* as an author, with regard to those works he has left behind him. *Pope's Essay on Homer.*

\* **To HISTORIFY**. *v. a.* [from *history*.] To relate; to record in history.—

O, muse, *historify*

Her praise, whose praise to learn your skill hath  
framed me. *Sidney.*

—The third age they term *historicon*; that is, such wherein matters have been more truly *historified*, and therefore may be believed. *Brown.*

(1.) \* **HISTORIOGRAPHER**. *n. f.* [*historiographus*, Greek; *historiographe*, French.] An historian; a writer of history.—The method of a poet *historical* is not such as of an *historiographer*. *Spenser.*—

What poor ideas must strangers conceive of persons famous among us, should they form their notions of them from the writings of those our *historiographers*? *Addison.*—I put the journals into a strong box after the manner of the *historiographers* of some eastern monarchs. *Arbutnot's John Bull.*

(2.) **HISTORIOGRAPHER TO HIS MAJESTY** is an officer under the lord chamberlain, who has a salary of L. 200 per annum. There is a similar office in Scotland, with the same salary.

\* **HISTORIOGRAPHY**. *n. f.* [*historiographia*, Greek] The art or employment of an historian.

## H I S T O R Y.

### DEFINITIONS and INTRODUCTORY OBSERVATIONS.

**HISTORY** is, thus defined by Dr Johnson:

\* **HISTORY**. *n. f.* [*historia*, Lat. *histoire*, Fr.] 1. A narration of events and facts delivered with dignity.—

Justly Cæsar scorns the poet's lays;

It is to *history* he trusts for praise. *Pope.*

2. Narration; relation.—The *history* part lay within a little room. *Wifeman.*—

What *histories* of toil could I declare?

But still long-weary'd nature wants repair. *Pope.*

3. The knowledge of facts and events.—*History*, in 'a' as it relates to the affairs of the Bible is necessary to divines. *Harris.*

**HISTORY** may, in general, be defined an account of the most remarkable events which have occurred in the world, arranged in the true order in which they actually happened, together with the causes from which they originated, and the different effects they produced, as far as could be discovered. The word *historia*, literally denotes a search for curious things, or a desire of knowing, or even a rehearsal of things we have seen; being formed from the verb *historia*, which properly signifies to know a thing by having seen it. But the idea is now much more extensive, and is applied to the knowledge of things taken from the report of others. It is derived from the verb *historia*, I know; and hence among the ancients, several of their great men were called *polyhistores*, i. e. persons of various and general knowledge.

The

The word *history* is, however, sometimes used for a description of things, as well as an account of facts. Thus Theophrastus calls his work the nature and properties of plants, an *history* of plants; and we have a treatise of Aristotle, in which he calls his *history of Animals*; and to this day the history of plants, animals, and minerals, are denominated by the general name of NATURAL HISTORY. That which chiefly merits the name of HISTORY, and is here considered as such, is an account of the principal transactions of mankind from the beginning of the world. This subject is generally divided into two parts, viz. CIVIL and ECCLESIASTICAL. The first contains the history of mankind in their various relations to one another, and their behaviour, for their own emolument, or that of others, in common life; the second considers mankind as acting, or pretending to act, in obedience to what they believe to be the will of the Supreme Being. Civil history, therefore, includes an account of all the different states that have existed in the world, and likewise of those men who in different parts of the world have most eminently distinguished themselves, either for their good or evil actions. This last part of civil history, however, is a distinct branch usually styled BIOGRAPHY. It is justly esteemed a very considerable branch of polite literature. Few accomplishments are more valued than an accurate knowledge of the annals of different nations; and scarce a literary production is more regarded than a well written history of any nation: although the truth of this is confirmed by a remark in his History of England, that "it is acknowledged with respect to those nations; viz. that 'history is generally little more than the register of human contention and dissension.'"

In the study of history, we must consider, first, the revolutions which have happened in the world, and have been owing to two causes. 1. The various transactions between the different states existing in the world at the same time, or their various situations with regard to one another; 2. The different characters of the people who have constituted these states, their different manners and dispositions, &c. by which they were prompted to undertake such and such actions, or were easily induced to it by others. A person who would study history, therefore, must first make himself acquainted with the general state of the world in general in all different ages; and then, when he considers the different nations which inhabited the different parts of it; and the extent of territory was; at what particular time they arose, and when they declined. He must next inform himself of the various revolutions which have happened to each particular nation, and thus he will discover many of the causes of those revolutions, which before he only knew the facts.

For instance, a person may know the Roman history from the time of Romulus, without knowing why the city of Rome happened to be founded at that time. This cannot be understood without a particular knowledge of the former state of Italy, and even of Greece and Asia; seeing the origin of the Romans is commonly traced as high as the Trojan war, and the heroes of Troy. But when all this is done, which indeed requires no small la-

bour, the historian has yet to study the genius and dispositions of the different nations, the characters of those who were the principal directors of their affairs, whether kings, ministers, generals, or priests; and when this is accomplished, he will discover the causes of those transactions in the different nations, which have given rise to the great revolutions above mentioned: after which, he may assume the character of one who is well versed in history.

The first outline of history may be easily obtained by the inspection of an historical chart, such as that subjoined to the present treatise. See *Plate CLXXXIII.* and the explanation at the end of this treatise. Along with this it will be proper to peruse a short abridgement of general history, from the creation of the world to the present time. The following is collected from the best authorities, and may serve to assist the student in acquiring a knowledge of general history.

## PART I.

### OF CIVIL HISTORY.

#### INTRODUCTION.

CIVIL HISTORY, though it might seem incapable of any natural division, except that of arranging it according to the different States whose transactions it describes, may yet be very properly divided into the following periods, at each of which a great revolution took place, either with regard to the whole world, or a very considerable part of it: viz.

1. The creation of man.
2. The flood.
3. The commencement of profane history, i. e. when, leaving the fabulous relations of heroes, demi-gods, &c. to the poets, men began to relate facts with some regard to truth and credibility.
4. The conquest of Babylon by Cyrus, and the destruction of the Babylonian empire.
5. The reign of Alexander the Great, and the overthrow of the Persian empire.
6. The destruction of Carthage by the Romans, when the latter had no longer any rival capable of opposing their design of universal empire.
7. The reign of Trajan, when the Roman empire was brought to its utmost extent.
8. The division of the empire under Constantine.
9. The destruction of the western empire by Odoacer, and the settlement of the different nations of Europe.
10. The rise of Mahomet and the conquests of the Saracens and Turks.
11. The crusades, and all the space intervening between that time and the American War.
12. The last but not the least important era, from the commencement of the American war, to the conclusion of the French revolution, by the peace in 1801.

With regard to the number of years which have elapsed since the creation of the world, there have been many disputes. The compilers of the Universal History determine it to have taken place in the year 4305 B. C. so that, according to them, the world is now in the 6106th year of its age. Others think it was created only 4000 years B. C. so that it is not yet 5103 years old. Be this as it will, however, the whole account of the creation rests on the truth of the Mosaic history; and which we must of necessity accept, because we can find

no other, which does not either abound with the grossest absurdities, or lead us into absolute darkness. The Chinese and Egyptian pretensions to antiquity are so absurd and ridiculous, that the bare reading of them must be a sufficient confutation of them to every reasonable person. See CHINA, § 6, 7; and EGYPT, § 8.

Some historians and philosophers are inclined to discredit the Mosaic accounts, from the appearances of volcanoes, and other natural phenomena; but their objections are by no means sufficient to invalidate the authority of the sacred writings; not to mention that every one of their own systems is liable to insuperable objections. It is therefore reasonable for every person to accept of the Mosaic account of the creation as truth: but an historian is under an absolute necessity of doing it, because, without it, he is quite destitute of any standard or scale by which he might reduce the chronology of different nations to any agreement; and, in short, without receiving this account as true, it would be in a manner impossible at this day to write a general history of the world.

#### SECT. I. *From the CREATION to the DELUGE.*

THE transactions during this period are very little known, nothing indeed being recorded of them but what is to be found in the first six chapters of Genesis. In general, we know, that men were not at that time in a savage state; as poets and even historians have supposed; that they had some progress in the arts, had invented music, and found out the method of working metals. They seem also to have lived in one vast community, without any of those divisions into different nations which have since taken place, and which evidently proceeded from the confusion of languages.

The most material part of their history, however, is, that having once begun to transgress the divine commands, they proceeded to greater and greater lengths of wickedness, till at last the Deity thought proper to send a flood on the earth, which destroyed the whole human race, except 8 persons, viz. Noah and his family.

This terrible catastrophe happened, according to the Hebrew copy of the Bible, 1656 years after the creation; according to the Samaritan copy, 2307. For the different conjectures concerning the natural causes of the flood, see the article DELUGE, § 8, 9.

#### SECT. II. *From the DELUGE to the COMMENCEMENT of PROFANE HISTORY.*

FOR the history of this period we must again have recourse to the Scriptures, almost as much as for that of the first. We now find the human race reduced to 8 persons possessed of nothing but what they had saved in the ark, and the whole world to be stored with animals from those which had been preserved along with them. In what country their original settlement was made, is uncertain. The ark rested on Mount Ararat in Armenia, but it is impossible to know whether Noah and his sons made any stay in the neighbourhood of this mountain or not. Certain it is, that, some time after, the whole or the greatest part of the human race were assembled in Babylonia, where

they engaged in building a tower, with the foolish and impious intention, as it would seem, of ascending to heaven. The Deity punished them by confounding their language; whence the division of mankind into different nations.

It is a common opinion, that Noah, when dying, left the whole world to his sons, giving Asia to Shem, Africa to Ham, and Europe to Japhet. But it has not the smallest foundation in Scripture. By the most probable accounts, Gomer the son of Japhet was the father of the Gomerians or Celts, that is of all the barbarous nations who inhabit the northern parts of Europe, under the names Gauls, Cimbrians, Goths, &c. and who afterwards migrated into Spain, where they were called Celtiberians. From Magog, Meshech, and Tubal, 3 of Gomer's brethren, proceeded the Sythians, Scythians, Tartars, and Moguls. The other 5 sons of Japhet, Madai, Javan, and Tiras, are supposed to have been the fathers of the Medes, the Ionians, Greeks, and Thracians.

The children of Shem were Elam, Assur, Arphaxad, Lud, and Aram. The first settled in Asia, where he became the father of that nation: The descendants of Assur peopled Assyria; Arphaxad settled in Chaldaea. Lud is supposed by Josephus to have taken up his abode in Lydia: though this is controverted. Aram, with more certainty, is believed to have settled in Mesopotamia and Syria.

The children of Ham were Cush, Mizraim, and Canaan. Cush is thought to have settled in Babylonia, and to have been king of the eastern parts of it, afterwards called *Chusistan*. His descendants are supposed to have removed into the eastern parts of Arabia; from whence they afterwards migrated into the corresponding part of Africa. Mizraim peopled Egypt, Ethiopia, Lybia, and the rest of the northern parts of the same continent. The place where Canaan settled is not known: but Canaan is universally allowed to have settled in Phœnicia; and to have founded those nations who inhabited Judea, which were afterwards mostly exterminated by the Assyrians.

Almost all the countries of the world, and of the eastern continent, being thus furnished with inhabitants, it is probable that for many years there would be few quarrels between the different nations. The paucity of their numbers, their distance from one another, and their diversity of language, would contribute to keep them from having any communication with each other. Hence, arising to the different circumstances in which various tribes were placed, some would be civilized, and others more barbarous. In this way also, the different nations probably acquired different characters, which afterwards they naturally retained, and manifested on all occasions; hence the propensity of some nations to monarchy, as the Asiatics, and the enthusiastic spirit of the Greeks for liberty and republicanism.

Monarchical government began very early; Nimrod the son of Cush having procured himself made king of Babylonia. Assur soon afterwards migrated from the new kingdom; built Nineveh, afterwards capital of the Assyrian empire; and other cities, called *Resen* and *Rebelsa*, of the

of which we are now ignorant. Whether Adam at this time set up as king for himself, or whether he sold those cities as vassal to Nimrod, is not known. It is probable, however, that about this time various kingdoms were founded in different parts of the world; and which were great and powerful according to circumstances. Thus the Bible mentions the kings of Egypt, Gerar, and Gomorrah, &c. in the time of Abraham; we may reasonably suppose, that these kings were of various nations which had existed for some time.

The most considerable revolution we read of, is the driving of the Israelites out of Egypt, and their settlement in the land of Canaan. For the history of these transactions we must refer to the Old Testament, where the reader will see that it was attended with the most terrible catastrophe to the Egyptians, and with the utter extermination of the Canaanites, the descendants of Ham, who inhabited the land. Whether the overthrow of Pharaoh at the Red Sea could affect the Egyptian nation in such a manner as to deprive them of the greatest part of their former learning, and to keep them for many ages after in a barbarous state, is not easily determined; but unless this was the case, it is exceedingly difficult to account either for the total silence of their records concerning this remarkable event, or for the general confusion and obscurity in which the early history of Egypt is involved. The settlement of the Jews in the land of Canaan is supposed to have happened about 1500 B. C.

About 100 years after this period we find no mention of any other nations than those mentioned in Scripture. About 1280 B. C. the Greeks began to make other nations feel the effects of their rising and martial spirit for which they were remarkable, and which they had undoubtedly derived upon one another long before. Their enterprise was an invasion of Colchis, for the recovery of the golden fleece. Whatever was the result of this expedition, it is probable they succeeded; and that this specimen of the produce of Asia inclined them to Asiatic expeditions hereafter. All this time we are totally ignorant about the state of Asia and Africa, except what can be conjectured from Scripture. The great empires of Babylon, Assyria, and Persia probably still continued in the former condition. Egypt and Ethiopia seem to have been powerful kingdoms in the latter.

About 1184 years B. C. the Greeks again distinguished themselves by their expedition against the city of Phrygia Minor; which they planned and burnt, massacring the inhabitants with unrelenting cruelty. Æneas, a Trojan, escaped with some followers into Italy, and became the remote founder of the Roman Empire. At this time Greece was divided into a number of small principalities, most of which had been in subjection to Agamemnon, king of Mycenæ. In the reign of Atreus, the father of Agamemnon, the Heracidae, who had been expelled by Eurytheus, were again obliged to leave this country. Under their champion Hyllus they claimed the kingdom of Mycenæ as their right, pretending that it belonged to their ancestor

Heracles, who was unjustly deprived of it by Eurytheus. (See HERACLES and HERCULES.) The controversy was decided by single combat; but Hyllus being killed, they departed, under a promise of not returning for 50 years.

About the time of the Trojan war, also, we find the Lydians, Mysians, and some other nations of Asia Minor, first mentioned in history. The names of the Greek states mentioned during this uncertain period are: 1. Sicyon. 2. The Leleges. 3. Messina. 4. Athens. 5. Crete. 6. Argos. 7. Sparta. 8. Pelasgia. 9. Thessaly. 10. Attica. 11. Phocia. 12. Locria. 13. Ozolia. 14. Corinth. 15. Eleusis. 16. Elis. 17. Pilus. 18. Arcadia. 19. Ægina. 20. Ithaca. 21. Cephalenia. 22. Phthia. 23. Phocidia. 24. Ephyra. 25. Æolia. 26. Thebes. 27. Callista. 28. Ætolia. 29. The Dolopes. 30. Oechalia. 31. Mycenæ. 32. Eubœa. 33. Mynia. 34. Doria. 35. Phœræ. 36. Ionia. 37. Trachinæ. 38. Theoprotia. 39. Myrmidonia. 40. Salaminæ. 41. Scyros. 42. Hyperia or Melitæ. 43. The Vulcanian isles. 44. Megara. 45. Epirus. 46. Achaia. 47. The isles of the Egean Sea. Concerning many of these we know little or nothing; the most remarkable particulars respecting the rest may be found under their names.

About 1048 B. C. the kingdom of Judea under king David approached its utmost extent of power. In its most flourishing condition, however, it never was remarkable for the largeness of its territory. In this respect it scarce exceeded that of Scotland; though according to the accounts given in Scripture, the magnificence of Solomon was superior to that of the most potent monarchs then on earth. This extraordinary wealth was owing partly to the spoils amassed by David in his various conquests, and partly to the commerce with the East Indies which Solomon had established. Of this commerce he owed his share to the friendship of Hiram king of Tyre, a city of Phœnicia, whose inhabitants were now the most famous for commerce and skill in maritime affairs of any in the world.

After the death of Solomon, which happened about 975 B. C. the Jewish empire began to decline, and soon after many powerful states arose in different parts of the world. The disposition of kings and warlike nations seems now to have taken a new turn. In former times, whatever wars took place between neighbouring nations, we have no account of any extensive empire in the whole world, or that any prince undertook to reduce far distant nations to his subjection. The empire of Egypt indeed is said to have been extended immensely to the east, even before the days of Sesostris. Of this country, however, our accounts are so imperfect, that scarce any thing certain can be concluded from them. But now we find almost every nation aiming at universal monarchy, and refusing to let any bounds whatever to its ambition.

The first shock given to the Jewish grandeur was the division of the kingdom into two, through the imprudence of Rehoboam. This rendered it more easily a prey to Shishak king of Egypt; who 5 years after came and pillaged Jerusalem, and all the fortified cities of the kingdom of Judah. The commerce

commerce to the East Indies was now discontinued, and consequently the sources of wealth in a great measure stopped; and this, added to the perpetual wars between the kings of Israel and Judah, contributed to that remarkable and speedy decline which had now taken place in the Jewish affairs. Whether this king Shishak was the Sesostris of profane writers or not, his expedition against Jerusalem, as recorded in Scripture, seems very similar to the desultory conquests ascribed to Sesostris. His infantry is said to have been innumerable, composed of different African nations; and his cavalry, 60,000, with 1200 chariots; which agrees pretty well with the mighty armament attributed to Sesostris. Indeed his cavalry are said to have been only 24,000; but the number of his chariots has also been reckoned at 27,000; which last may not unreasonably be deemed an exaggeration, and these supernumerary chariots may have been only cavalry: but unless we allow Sesostris to be the same with Shishak, it seems impossible to fix on any other king of Egypt who can be supposed to have undertaken this expedition in the days of Rehoboam.

Though the Jews obtained a temporary deliverance from Shishak, they were quickly after attacked by new enemies. In 941 B. C. Zerah the Ethiopian invaded Judea with an army of a million of infantry and 300 chariots; but was defeated with great slaughter by Asa king of Judah, who engaged him with an army of 580,000 men. About this time also the Syrians had become a considerable people, and bitter enemies both to the kings of Israel and Judah; aiming in fact at the conquest of both nations. Their kingdom commenced in the days of David, under Hadadezer, whose capital was Zobah, and who probably was at last obliged to become David's tributary, after having been defeated by him in several engagements. Before the death of David, however, Rezon, who had rebelled against Hadadezer, having made himself master of Damascus, erected there a new kingdom, which soon became very powerful. The Syrian princes being thus in the neighbourhood of the two rival states of Israel and Judah, found it an easy matter to weaken them both, by pretending to assist the one against the other; but a detail of the transactions between the Jews and Syrians is only to be found in the Old Testament, to which we refer. In 740 B. C. however, the Syrian empire was totally destroyed by Tiglath-Pileser king of Assyria; as was also the kingdom of Samaria by Shalmaneser his successor in 721. The people were either massacred, or carried captives into Media, Persia, and the countries about the Caspian Sea.

While the eastern nations were thus destroying each other, the foundations of very formidable empires were laid in the west, which in process of time were to swallow up almost all the eastern ones. In Africa, Carthage was founded by a Tyrian colony, about 849 B. C. according to those who ascribe the highest antiquity to that city; but, according to others, it was founded only in 769 or 770 B. C. In Europe a very considerable revolution took place about 900 B. C. The Heraclidae, after several unsuccessful attempts, at last

conquered the whole Peloponnesus. From that time the Grecian states became more civilized, and their history becomes less obscure. The institution, or rather the revival and continuance of the Olympic games, in 776, B. C. also greatly facilitated the writing not only of their history, but that of other nations; for as each Olympiad consisted of 4 years, the chronology of every important event became indubitably fixed by referring it to such and such an Olympiad. In 753 B. C. or the last year of the 7th Olympiad, the foundation of Rome was laid by Romulus; and 43 years after, the Spartan state was new modelled, and received from Lycurgus those laws, observing of which it afterwards arrived at the pitch of prosperity.

SECT. III. *From the COMMENCEMENT OF PROFANE HISTORY to the DESTRUCTION of the ASSYRIAN EMPIRE by NABUCHADNEZZAR.*

WITH the beginning of the 18th Olympiad, 568 B. C. commences the third general period above mentioned, when profane history becomes somewhat clear, and the relations concerning different nations may be depended upon with a degree of certainty. The general state of the world was as follows:

The northern parts of Europe were either uninhabited, or filled with unknown and barbarous nations, the ancestors of those who afterwards destroyed the Roman empire. France and Britain were inhabited by the Gomerians or Celts. Italy was divided into a number of petty states, some partly from Gaulish and partly from Grecian colonies; among which the Romans had already become formidable. They were governed by the 6th king, Servius Tullius; had increased their territory by the demolition of Alba Longa, and the removal of its inhabitants to Rome; and had extended their dominions by several cities taken from their neighbours.

Greece was also divided into a number of states, among which the Athenians and Spartans being the most remarkable, were rivals to each other. The former had, about 599 B. C. received an excellent legislation from Solon, and were enriching themselves by navigation and commerce; the latter were become formidable by the institutions of Lycurgus; and having conquered Messenia, and added its territory to their own, were justly esteemed the most powerful power in Greece. The other states of most consideration were Corinth, Thebes, Argos, and Arcadia.

In Asia great revolutions had taken place. The ancient kingdom of Assyria was destroyed by Medes and Babylonians, its capital city Nineveh utterly ruined, and the greatest part of its inhabitants carried to Babylon. Even the materials which it was built were carried off, to adorn and strengthen that stately metropolis, which was undoubtedly the first city of the world. Nebuchadnezzar, a wise and valiant prince, now sat on the throne of Babylon. By him the kingdom of Media was totally overthrown in 557 B. C. Ten years before this he had taken and razed the city of Tyre, and over-run all the kingdom of Syria. He is even said by Josephus to have conquered

and reigned there 9 years, after which he joined it to the Carthaginians; but this seems probable.

The extent of the Babylonian empire is not certainly known: but, from what is recorded of it, we may conclude that it was not at all inferior to this respect to any that ever existed; as the stories tell us it was superior in wealth to any succeeding ones. It comprehended Phœnicia, Palestine, Syria, Babylonia, Media, and Persia, and probably India also. From a consideration of this vast extent of territory, and the riches which every one of these countries abounded in, we may form some idea of the wealth and greatness of this monarch. When we consider also, the whole strength of this mighty empire was employed in beautifying the metropolis, we cannot but be upon the wonders of that city, as related by Herodotus, to be at all incredible. As to what was in the republic of Carthage about this time, we are quite in the dark; there being a chasm in history for no less than 300 years.

ECT. IV. *From the ERECTION of the BABYLONIAN EMPIRE to its OVERTHROW by CYRUS.*

THIS 4th general period of history is very short, lasting only 32 years. This sudden revolution was occasioned by the misconduct of Evil-merodach, Nebuchadnezzar's son, even in his father's reign. For having, in a great hunting match, occasion of his marriage, entered the country of Media, and some of his troops coming up some time to relieve the garrisons in those parts, he joined them to those already with him, without the least provocation began to plunder and waste the neighbouring country. This occasioned an immediate revolt, which quickly extended over all Media and Persia. The Medes, led by Astyages and his son Cyaxares, drove Evil-merodach and his party with great slaughter; nor doth it appear that they were afterwards reduced even by Nebuchadnezzar himself. The new empire continued daily to gather strength; and at last Cyrus, Astyages's grandson, a prince of great prudence and valour, being made commander of the Median and Persian forces, took Babylon itself, in the year 538 B. C. See BABYLONIA, § 2.

The Romans, during this period, increased in power under the wise government of their king Tullius, a pacific prince, who rendered his people more formidable by a peace of 20 years, than his predecessors had done by all their victories. The Greeks, even at this early period, began to interfere with the Persians, on account of the Ionia, or Grecian colonies in Asia Minor. These had been subdued by Crœsus king of Lydia in the year 562, the time of Nebuchadnezzar's reign. Whether the Lydians had been subdued by a Babylonish monarch or not, is not ascertained; though it is probable that they were either in subjection to him, or greatly awed by his power, so that after his death nothing considerable was undertaken by them. It is also very probable, that at the infancy of Nebuchadnezzar, spoken of by Herodotus, the affairs of his kingdom would fall into confusion; and many of those princes whom he formerly retained in subjection would set up for themselves.

Certain it is, however, that if the Babylonians did not regard Crœsus as their subject, they considered him as a very faithful ally; inasmuch that they celebrated an annual feast in commemoration of a victory obtained by him over the Scythians. After the death of Nebuchadnezzar, Crœsus subdued many nations in Asia Minor, and among the rest the Ionians. They were, however, greatly attached to his government; for, though they paid him tribute, and were obliged to furnish him with some forces in time of war, they were yet free from all kind of oppression.

When Cyrus therefore was proceeding in his conquests of different parts of the Babylonish empire, before he proceeded to attack the capital, he offered very advantageous terms to the Ionians, but they refused to submit to him. But soon after, Crœsus himself being defeated and taken prisoner, the Ionians sent ambassadors to Cyrus, offering to submit on the terms formerly proposed. These were now refused; and the Ionians, being determined to resist, applied to the Spartans for aid. Though the Spartans at that time could not be prevailed upon to give their countrymen any assistance, they sent ambassadors to Cyrus with a threatening message; to which he returned a contemptuous answer, and then forced the Ionians to submit at discretion, 5 years before the taking of Babylon.

Thus commenced the hatred between the Greeks and Persians; and thus we see, that in the two first great monarchies the seeds of their destruction were sown even before the monarchies themselves were established. For while Nebuchadnezzar was raising the Babylonish empire to its utmost height, his son was destroying what his father built up; and at the very time when Cyrus was establishing the Persian monarchy, by his ill-timed severity to the Greeks he made that warlike people his enemies, whom his successors were by no means able to resist, and who would probably have overcome Cyrus himself, had they united to attack him. The transactions of Africa during this period are almost entirely unknown; though we cannot doubt that the Carthaginians enriched themselves by means of their commerce, which enabled them afterwards to attain to such a considerable share of power.

ECT. V. *From the ERECTION of the PERSIAN EMPIRE to its OVERTHROW by ALEXANDER; and to the DIVISION of the GRECIAN EMPIRE, upon his DEATH.*

CYRUS having now become master of all the east, the Asiatic affairs continued for some time in a state of tranquillity. The Jews obtained leave to return to their own country, rebuild their temple, and re-establish their worship, of all which an account is given in the sacred writings. Cambyses, the successor of Cyrus, added Egypt to his empire, which had either not submitted to Cyrus, or revolted soon after his death. He intended also to have subdued the Carthaginians; but as the Phœnicians refused to supply him with ships to fight against their own countrymen, he was obliged to lay this design aside.

In 517 B. C. the Babylonians finding themselves grievously oppressed by their Persian masters, re-

solved to shake off the yoke, and set up for themselves. For this purpose, they stored their city with all manner of provisions; and when Darius Hystaspes, then king of Persia, advanced against them, they took the most barbarous method that can be imagined, of preventing an unnecessary consumption of those provisions, which they had so carefully amassed. Having collected all the women, old men, and children, into one place, they strangled them without distinction, whether wives, fathers, mothers, brothers, or sisters; every one being allowed to save only the wife he liked best, and a maid servant to do the work of the house. This cruel policy did not avail them: their city was taken by treachery (for it was impossible to take it by force); after which the king caused the walls of it to be beat down from 200 to 50 cubits height, that their strength might no longer give encouragement to the inhabitants to revolt.

Darius then turned his arms against the Scythians; but finding that expedition turn out both tedious and unprofitable, he directed his course eastward, and reduced all the country as far as the Indus. In the mean time, the Ionians revolted; and being assisted by the Greeks, a war commenced between the two nations, which was not thoroughly extinguished but by the destruction of the Persian empire in 330 B. C. The Ionians, however, were for this time obliged to submit, after a war of six years: and were treated with great severity by the Persians. The conquest of Greece itself was then projected: but the expeditions for that purpose ended most unfortunately for the Persians, and encouraged the Greeks to make reprisals on them, in which they succeeded to their utmost wishes; and had it only been possible for them to have agreed among themselves, the downfall of the Persian empire might have happened much sooner than it did. See ATTICA, PERSIA, and SPARTA.

In 459 B. C. the Egyptians attempted to recover their liberty, but were reduced after a war of six years. In 413 B. C. they revolted a second time; and, being assisted by the Sicilians, drew upon the latter that terrible destruction foretold by the prophets; while they themselves were so thoroughly humbled, that they never after made any attempt to recover their liberty.

The revolt of Cyrus the younger, against his brother Artaxerxes Mnemon, in which, through his own rashness, he miscarried, and lost his life at the battle of Cunaxa, in the province of Babylon, happened in the year B. C. 401 or 403. See CYRUS, N° 1. Ten thousand Greek mercenaries, who served in his army, made their way back into Greece, though surrounded on all sides by the enemy, and in the heart of a hostile country. In this retreat they were commanded by XENOPHON, who has received the highest praises on account of his conduct and military skill in bringing it to a happy conclusion. Two years after, the invasion of Agesilaus king of Sparta threatened the Persian empire with total destruction; from which, however, it was relieved by his being recalled to defend his own country against the other Grecian states; and after this the Persian affairs continued in a more prosperous way till the time of Alexander.

During all this time, the volatile and giddy tem-

per of the Greeks, with their enthusiastic desire of romantic exploits, were preparing letters for themselves, which indeed seemed to be necessary to prevent them from destroying one another. A zeal for liberty was what they all avowed; but, on every occasion, it appeared that this love of liberty was only a desire of dominion. No state in Greece could bear to see another equal to itself; and hence their perpetual contests for pre-eminence, which could not but weaken the whole body, and render them an easy prey to an ambitious and politic prince, who was capable of taking advantage of those divisions. Being all impatient of restraint, they never could submit long to any regular government; and hence their determinations were often nothing but the decisions of a mere mob, which they had afterwards almost constantly reason to repent. Hence also their base treatment of those eminent men whom they ought most to have honoured; as Miltiades, Aristides, Themistocles, Cimon, Alcibiades, Socrates, Phocion, &c.

The various transactions between the Grecian states, though they make a very considerable figure in particular history, make but a very small one in a general sketch of the history of the world. We shall therefore only observe, that in 404 B. C. the Athenian power was totally broken by the taking of their city by the Spartans. See ATTICA § 13, 14. In 370 that of the Spartans received a severe check from the Thebans at the battle of Leuctra; and 8 years after was still further reduced by the battle of Mantinea. Epaminondas, the great enemy of the Spartans, was killed; but only proved a more speedy means of subjugating the states to a foreign, and at that time despotic power. The Macedonians, a barbarous and lying to the N. of the states of Greece, were, 15 years after the death of Epaminondas, reduced to the lowest condition by the Illyrians, another nation of barbarians in the neighbourhood. The king of Macedon being killed in an engagement, Philip his brother departed from Thebes, where he had studied the art of war under Epaminondas, to take possession of his kingdom. Being a man of great prudence and policy, he quickly settled his own affairs; vanquished the Illyrians; and being no stranger to the weakened situation of Greece, began almost immediately to meditate the conquest of it.

The particulars of this enterprise will be better related under the article MACEDON. Here it is sufficient to mention, that by first attacking those whom he thought it dangerous to attack, he was sure he could overcome, by corrupting those whom he thought it dangerous to attack, by sometimes pretending to assist one state, and by imposing upon all the rest. He at last put it out of the power of the Greeks to make any resistance, least such as could keep him from gaining his end. In 338 B. C. he procured himself to be elected general of the Amphictyons, or council of the Grecian states, under pretence of settling some troubles at that time in Greece; but having once obtained liberty to enter that country with an army, he quickly convinced the states that they must submit to his will. He was opposed by the Athenians and Thebans; but the intestine wars of Greece had cut off all her great men, and so great

and was now to be found capable of opposing Philip with success.

Philip, being now master of all Greece, proposed the conquest of Asia. To this he was encouraged by the ill success which had attended the Persians in their expeditions against Greece, the success of the Greeks in their invasions, and the retreat of the 10,000 under Xenophon. All these events showed the weakness of the Persians, their vast inferiority to the Greeks in military skill, and how easily their empire might be overthrown by a proper union among the states. Philip was going to enter upon his grand design, when he was murdered by some assassins.

Alexander his son was possessed of every qualification necessary for the execution of so great a plan: his impetuosity of temper made him execute with a rapidity unheard of either before or after. It must be confessed, indeed, that the Macedonian empire was now ripe for destruction, and could not in all probability have withstood an enemy much less powerful than Alexander. Asiatics have in all ages been much inferior to the Europeans in valour and military skill; they were now sunk in luxury and effeminacy; and what was worse, they seem at this period to have been seized with that insatiation and distraction of counsels which scarce ever fails to be a precursor of the destruction of any nation. The Macedonian ministers persuaded their sovereign to reject the prudent advice that was given him, of dissuading Alexander by laying waste the country, thus forcing him to return for want of provisions. Nay, they even prevented him from engaging the enemy in the most proper manner, by dissuading his forces; and persuaded him to put to death the Athenian to death, who had proposed, with 100,000 men, of whom one third were veterans, to drive the Greeks out of Asia.

At length, Alexander met with only two checks to his Persian expedition. The one was from the city of Tyre, which for 7 months resisted his utmost efforts; the other was from Memnon the Persian, who had undertaken to invade Macedonia. The first of these obstacles Alexander at last overcame, and treated the governor and inhabitants with the utmost cruelty. The other was scarce felt, for Memnon died after reducing some of the Asiatic islands, and Darius had no other general capable of conducting the undertaking. The power of the Persian empire was totally broken; and the army gained over Darius at Arbela, in the year 331 B. C. and next year a total end was put to it by the murder of the king by Bessus one of his officers.

Alexander's ambition was not to be satisfied with the possession of the kingdom of Persia, or of any other on earth. Nothing less than the total subjection of the world itself seemed content; and therefore he was prompted to invade every country of which he could only learn the name, whether it had belonged to the Persians or not. In consequence of this boundless ambition, he invaded and reduced Hyrcania, Bactria, Sogdiana, and all that vast tract of country now called *Thurania*. At last, having entered India, he found all the nations to the river Hyphasis, one of the branches of the Indus. But when he would

have proceeded farther, and extended his conquests quite to the eastern extremities of Asia, his troops positively refused to follow him, and he was constrained to return.

While the Grecian empire thus suddenly sprang up in the east, the rival states of Rome and Carthage were making considerable advances in the west. The Romans were establishing their empire on the most solid foundations; to which their particular situation naturally contributed. Being originally little better than a parcel of lawless banditti, they were despised and hated by the neighbouring states. This soon produced wars; in which, at first from accidental circumstances, and afterwards from their superior valour and conduct, the Romans proved almost constantly victorious. The jealousies which prevailed among the Italian states, and their ignorance of their true interest, prevented them from combining against that aspiring nation, and crushing it in its infancy, which they might easily have done; while in the mean time the Romans, being kept in a state of continual warfare, became at last such expert soldiers, that no state on earth could resist them. During the time of their kings, they had made a very considerable figure among the Italian nations; but after their expulsion, and the commencement of the republic, their conquests became much more rapid and extensive. In 504 B. C. they subdued the Sabines; 8 years after, the Latins; and in 393 the city of Veii, the strongest in Italy excepting Rome itself, was taken after a siege of ten years. But in the midst of their successes a sudden irruption of the Gauls had almost put an end to their power and nation at once. The city was burnt to the ground in 381 B. C. and the capitol on the point of being surprised, when the Gauls, who were climbing up the walls in the night, were accidentally discovered and repulsed.

Rome was soon rebuilt with much greater splendour than before, but now a general revolt and combination of the nations formerly subdued took place. The Romans, however, still got the better of their enemies; but, even at the celebrated Camillus's death, which happened about 352 B. C. their territories scarce extended 6 or 7 leagues from the capital. The republic from the beginning was agitated by those dissensions which at last proved its ruin. The people had been divided by Romulus into two classes, namely *Patricians* and *Plebeians*, answering to our nobility and commonalty. Between these two bodies were perpetual jealousies and contentions; which retarded the progress of the Roman conquests, and revived the hopes of the nations they had conquered. The tribunes of the people were perpetually opposing the consuls and military tribunes. The senate had often recourse to a dictator endowed with absolute power; and then the valour and experience of the Roman troops made them victorious; but the return of domestic seditions gave the subjugated nations an opportunity of shaking off the yoke. Thus had the Romans continued for near 400 years, running the same round of wars with the same enemies, and reaping little advantage from their conquests, till at last matters were compounded by choosing one of the consuls from among the plebeians; and from this time

chiefly we may date the prosperity of Rome, so that by the time that Alexander the Great died they were held in considerable estimation among foreign nations. The Carthaginians in the mean time continued to enrich themselves by commerce; but, being less conversant in military affairs, were by no means equal to the Romans in power, though they excelled them in wealth.

A new state, however, made its appearance during this period, which may be said to have taught the Carthaginians the art of war, and, by bringing them into the neighbourhood of the Romans, proved the first source of contention between these two powerful nations. This was the island of Sicily. At what time it was first peopled cannot be ascertained. In the 3d year of the 17th Olympiad, or 710 B. C. some Greek colonies are said to have arrived on the island, and in a short time founded several cities, of which Syracuse was the chief. The Syracusans at last subdued the original inhabitants; though it does not appear that the latter were ever well affected to their government, and therefore were on all occasions ready to revolt.

The first considerable monarch of Syracuse, was Gelon, who obtained the sovereignty about the year 483 B. C. At what time the Carthaginians first carried their arms into Sicily is not certainly known; only it is certain, that they possessed some part of the island as early as 505 B. C. For in the time of the first consul, the Romans and Carthaginians entered into a treaty chiefly in regard to matters of navigation and commerce; by which it was stipulated, that the Romans who should touch at Sardinia, or that part of Sicily which belonged to Carthage, should be received there in the same manner as the Carthaginians themselves. Whence it appears, that the dominion of Carthage already extended over Sardinia and part of Sicily; but in 28 years after, they had been totally driven out by Gelon. The Carthaginians made many attempts to regain their possessions in this island, which occasioned long and bloody wars between them and the Greeks.

The island also proved the scene of much slaughter and bloodshed in the wars of the Grecian states with each other. Before the year 313 B. C. however, the Carthaginians had made themselves masters of a very considerable part of the island; from whence all the power of the Greeks could not dislodge them. After the destruction of Tyre by Alexander the Great, almost all the commerce in the western part of the world fell to the share of the Carthaginians. Whether they had at this time made any settlements in Spain, is not known. It is certain, that they traded to that country for the sake of the silver, in which it was very rich; so they probably also did to Britain for tin. In the year 313 B. C. Alexander the Great died at Babylon, without settling the affairs of his vast extended empire, or even naming a successor: in consequence of which it fell to pieces, and four new empires arose out of it.

**SECT. VI. From the DIVISION of the GRECIAN EMPIRE, to the DESTRUCTION of the CARTHAGINIAN REPUBLIC by the ROMANS.**

THE beginning of the 6th period presents us

with a state of the world entirely different from the foregoing. We now behold all the eastern part of the world, from the confines of India to the Indus, and beyond it, newly united into one vast empire, and at the same time ready to fall in pieces for want of a proper head; the whole world filled with fierce and savage nations, and the rival republics of Carthage and Rome preparing to enslave as fast as they could. The first remarkable events took place in the Macedonian empire—Alexander had left behind him a victorious, and, we may say, invincible army, commanded by most expert officers, all equally ambitious of supreme authority. Peace could not exist in such a situation. For a number of years nothing was to be seen or heard of but the most horrid murders; until at last the mother, wife, children, brothers, and even sisters of Alexander were cut off; not one of the family of that conqueror being left alive, within 30 years of his death.

When matters were a little settled, 4 new empires, each of them of no small extent, had sprung out of the empire of Alexander. Cassander, son of Antipater, had Macedonia and all Greece; Antigonus, Asia Minor; Seleucus had Babylon, the eastern provinces; and Ptolemy, Egypt, the western ones. One of these empires, however, soon fell; Antigonus being defeated and killed by Seleucus and Lyfimachus at the battle of Ipsus in 301 B. C. The greatest part of his dominions then fell to Seleucus: but several provinces took the opportunity of these confusions to shake off the Macedonian yoke altogether; and thus were formed the kingdoms of Pontus, Bithynia, Paphlagonia, Armenia, and Cappadocia.

The two most powerful and permanent empires, however, were those of Syria founded by Seleucus, and Egypt by Ptolemy Soter. The kings of Macedon, though they did not preserve the same authority over the Grecian states that Alexander, Antipater and Cassander had done, effectually prevented them from doing any harm upon one another, for which they had been so remarkable. Indeed it is difficult to determine, whether their condition was better or worse, than before they were conquered by Philip; since, though they were now prevented from destroying one another, they were most grievously oppressed by the Macedonian tyrants.

While the eastern parts of the world were lacerated with blood, and the successors of Alexander were pulling to pieces the empire which he had established; the Romans and Carthaginians proceeded in their attempts to enslave the west of the world. The Romans, ever engaged in conquering one city and state after another, about the year 253 B. C. when they had made themselves masters of almost the whole of Italy. During all this time they had met only one single check in their conquests; and that was the invasion by Pyrrhus king of Epirus. That valiant and sickle monarch had projected the conquest of Italy, which he fancied would be no great matter. Accordingly, in 271 B. C. he crossed that country, and maintained a war with the Romans for six years; till at last, being utterly

aged by Curius Dentatus, he was obliged to

The Romans had no sooner made themselves masters of Italy, than they wanted only a pre-  
text to carry their arms out of it; and this soon  
found. Being invited into Sicily to assist the  
Syracusans against Hiero II. king of Syracuse and  
the Carthaginians, they immediately commenced  
war with the latter, which continued with the  
same fury for 23 years. The war ended great-  
ly to the disadvantage of the Carthaginians, chief-  
ly owing to the bad conduct of their generals;  
of whom, Hamilcar Barca excepted, seem  
never to have been possessed of any degree of military  
skill; and the state had suffered too many mis-  
fortunes before he entered upon the command,  
him or any other to retrieve it at that time.  
The consequence of this war was the entire loss  
of Sicily to the Carthaginians; and soon after, the  
Romans seized on Sardinia.

Hamilcar perceiving that there was now no al-  
ternative, but that in a short time either Carthage  
would conquer Rome, or Rome would conquer  
Carthage, thought of a method by which his  
country might become at least equal, if not super-  
ior to that haughty republic. This was by re-  
conquering all Spain, in which the Carthaginians had  
many considerable possessions, and from the  
treasures of which they drew great advantages. He  
therefore, no sooner finished the war with  
Syracuse, which succeeded that with the  
Romans, than he set about the conquest of Spain.  
He, however, he did not live to accomplish,  
though he made great progress in it. His son As-  
drubal continued the war with success; till at last,  
the Romans, jealous of his progress, persuaded  
him to enter into a treaty with them, by which  
he engaged to make the river Iberus the boundary  
of his conquests. This treaty probably was ne-  
gotiated by the senate of Carthage; nor,  
though it had, would it have been regarded by  
Rome, who succeeded Asdrubal in the com-  
mand, and had sworn perpetual enmity with the  
Carthaginians.

The transactions of the second Punic war are perhaps  
the most remarkable recorded in history. Certain it  
is, that nothing can show more clearly the slight  
estimation upon which the greatest empires are  
founded. We now see the Romans, the nation most  
celebrated for their military skill in the whole  
world, and who, for more than 500 years, had  
been constantly victorious, unable to resist the ef-  
forts of one single man. At the same time we  
see a man, though evidently the first general in  
the world, lost solely for want of a little support.  
In former times, the republic of Carthage had  
sent her generals into Sicily with hundreds of  
ships, though their enterprises were almost  
always unsuccessful; but now Hannibal, the  
greatest general of Italy, was obliged to abandon his  
country, chiefly for want of 20 or 30,000 men.  
His degeneracy and infatuation, which never  
was overcome by a falling nation, or rather  
which was the cause of its fall, had now infected  
the council of Carthage, and the supplies were  
cut off.

It was Carthage the only infatuated nation  
in the world. Hannibal, whose prudence never

forsook him either in prosperity or adversity, in  
the height of his good fortune had concluded an  
alliance with Philip VI. king of Macedon. Had  
that prince sent an army to the assistance of the  
Carthaginians in Italy immediately after the battle  
of Cannæ, there can be no doubt but the Romans  
would have been forced to accept of that peace  
which they so haughtily refused; and indeed, this  
offer of peace, in the midst of so much success, is  
an instance of moderation which perhaps does  
more honour to Hannibal, than all the military  
exploits he performed. Philip, however, could  
not be roused from his indolence, nor led to see  
that his own ruin was connected with that of  
Carthage. The Romans had now made them-  
selves masters of Sicily; after which they recalled  
Marcellus, with his victorious army, to be em-  
ployed against Hannibal; and the consequence at  
last was, that the Carthaginian armies, unsupport-  
ed in Italy, could not conquer it, but were re-
